PETS AND THEIR INFLUENCE.—No. 1.

BY G. O. BROWN.

"There is that in every animal's eye, a dim image and gleam of humanity, a flash of strange light through which their life looks out and up to our great mystery of control over them, and claims the fellowship of the creature, if not the soul."

How many kinds of pets there are, would indeed be difficult to enumerate. Tastes or admiration of pets differ most wonderfully. What one favors another may dislike, yet that is but human nature, for none of us see everything precisely alike. A gentleman once, during a discussion, proved emphatically how tastes differ, when he exclaimed, as a clincher to his argument, "that every one has not the same taste or opinion; did they have, why, all would have wanted my wife." "Yes," exclaimed his opponent, "and if they were of my opinion none would have had her." Thus is it with pets.

Mrs. Dorgster will fondle and caress a small poodle which may, perhaps, strongly resemble a first-class window scrubbing-brush, and will indulge in a most fashionable hysterical scream at the sight of one of Miss Tabbyrinth's little white kittens, "the horrid thing"—the kitten. Miss Tabbyrinth fairly "doats" on her three little white kittens with blue ribbons around their necks, and at sight of a poodle will mount a chair or table with more haste than grace. Nevertheless, pets play an important part during the life of nearly every one; even commencing with the prattling child to the time-honored age of grandfatherhood, considerable might be said relative to the pets of the human family, but as they do not bear petting as well as the lower creation, and for fear some reader might get in a *pet* at the length of this article, we will, without further *pet-tifoggery*, proceed—to begin again.

That pets possess an important influence upon the morals is certainly undeniable. One who is fond of pets, rarely ever is evil disposed. It is a noteworthy fact that the worst criminals *never* owned nor cared for pets of any description. The possession of a pet not only gives one a pleasant occupation for both mind and body, but they keep a tender spot ever fresh in the heart that, while keeping open the well-spring of mercy, begets confidence, and to one who really loves to administer to one of God's little creatures, and enjoys promoting its happiness, has an influence that will avail more for their good than can be found in many phases of society. A child that displays a love for pets should be indulged and encouraged, for in such a child's breast, kindness and mercy have commenced to germinate, and, if duly favored, will take root sufficiently strong to nobly encounter and overcome many of life's temptations. Pets, while thus encouraging the finer and purer instincts, also give employment where an idle brain might otherwise be engaged for

no good. Who has not seen a mother's eyes sparkle with pride and delight as she listens to the prattle of her dear child? Who has not observed the wan face of the invalid illumine with a happy smile as some favorite pet has momentarily caused him to forget his suffering? Who has not noted how soon our pets learn our very step, how quickly they show their confidence and gratitude?

Pets afford us all an ever-varying pleasure; they smooth down many of life's rugged ways.

In many instances brute instinct has exhibited a degree of sense almost human. Instances of attachment might be mentioned of dogs, for their masters, which hardly seem credible. Let us give an illustration of what Mr. Squegee experienced, and called an *undue* attachment. It was in his younger days, when he was basking in the sunshine of Arabella's affection. A *cousin*, on a visit to Arabella and her fond parents, caused Squegee many nights of divers trouble. In fact, the pangs of jealousy in his breast so worked on his imagination, that one night he determined to satisfy himself that Arabella was either true or false. He stationed himself in a tree that commanded a full view of the parlor through a side window. It was a decidedly sharp night, and he shiveringly awaited and watched. He saw sufficient to convince him that this "cousin" was decidedly of the French order, and that Arabella was either false to him or a coquette. The distant town clock measuredly pealed out the hour of ten, and Squegee, full of revengful thoughts and *frost*, commenced to descend; but, to his astonishment and disgust, a large dog bounded up in a persuasive manner, as if he was anxious to assist him in coming down. He was in a cool fix. Evidently he concluded it was Jones' vicious bull-dog. He dare not descend, and to cry for assistance would discover him to the household, so he determined to *freeze* the dog out. He rubbed his feet, hands, and nose, until daylight began to streak the East, when he discovered it was *his own* faithful dog, who had been there *all night*. His feelings were—well considerable, if not more—and to this day, although that faithful animal saved him from a terrible fate, he says he never can forgive that dog. This reminds us of an instance that will illustrate what a person will *undergo* to even have the satisfaction of gazing at pets they cannot own. In Waverly, N. Y., a dozen years ago, there was a tame bear which a countryman was anxious to inspect. Arriving in town and inquiring for the "bar," he was sent to a butcher, a great practical joker. The butcher was sorry, but he had just the day before sent him up to Mr. Somebody—about a mile—but there in the corner was a bull's head he was going to send up to feed him, and if the stranger desired he could carry it up, and save his quarter—for they charged that much to see him—and see the old fellow eat it. August weather daunted him

not, and perspiring as freely as a "harvest hand," he arrived at Mr. Somebody's, informing him that the butcher had sent up the bull's head, and that he was to see him free, etc. He was sorry—was this Mr. Somebody—but Mr. Whatsiname wanted him for a few days, and he would find him up there. Again shouldering the head "country" proceeded, but finding the bear had been from there sent to Whatyoucalles, he threw down his burden and went home. A year after, the butcher was in the country looking for fat cattle and met his "victim," but did not recognize him. In answer to the butcher's inquiries, victim knew just where he could buy three very nice, fat cattle which the owner was anxious to sell—it was about seven miles—but if he wanted something good, they were worth going after. The butcher was directed. Nearly six o'clock in the evening the parties met again, about five miles from town. The butcher cried out, "Look here, you ———, what do you mean by sending me on a Tom fool's errand? No one lives there." "I know it," said victim. "Didn't see anything of the bar up thar, did yer?"

(To be continued.)

POULTRY DEPARTMENT.

(For *Fanciers' Journal*.)

OUR POULTRY AND OUR SHOWS.

"Whatever is permitted will probably continue to be done: if for good, going up to better; if for bad, going down to worse."

In No. 38 of your *Journal* we read, "Shall we award premiums according to merit, as decided by the points in the Standard of Excellence, or shall we award them by the old method of comparison?" And again, "Dominiques of to-day cannot be compared with those of a quarter of a century ago."

These two quotations embody in brief the whole substance of the poultry interest, namely, the improvement of breeds, and the method of determining such improvement. With regard to these two points there is a great diversity of opinion among fanciers the world over, and upon these points they will probably continue to disagree. There are, however, some things in this connection which are continually brought to our notice, from which we cannot turn away unless we choose "to walk in darkness rather than in the light."

Your correspondent tells us only a half truth when he says, "Dominiques of to-day cannot be compared with those of a quarter of a century ago;" for the statements will apply with equal force to several varieties of our fowls. We should judge it an act of folly to maintain that the Spanish of to-day could be compared with those exhibited at the early shows of the New England Society, and we think we are within bounds in saying that the Leghorns at those early exhibitions have never been equaled, certainly never sur-

passed. We are also of opinion that there has been a falling off in our Brahmas; but we do not expect much encouragement from the "fancy" in this theory. Yet Mr. Williams has told us that we have lost our faculty of breeding the dark variety, and that we cannot now show specimens which will compare favorably with those of four or five years ago. Why is this? Why, with our past experience, aided as it has been by all the skill and the science which has been brought to bear upon the subject of breeding, should our poultry deteriorate in our hands? It will be our purpose in this paper to try and answer these questions, and point out as well as we can the only method, as it appears to us, by which we can recover our lost ground, or hope to attain any permanent success in the future. The subject will undoubtedly appear a hackneyed one to many of your readers, but it contains elements important to the poultry fraternity, which have not been sufficiently emphasized by our writers upon poultry subjects, and too much ignored by our fanciers and breeders.

In approaching the subject two important considerations present themselves: "What do we require of our poultry?" or in other words, "What is the object to be attained in rearing poultry?" and "How shall we best attain that object?" If we turn to our poultry societies and their schedules of prizes for an answer, we should say without hesitation that the object was the most perfect bird in shape, color, size, and style. This is evidently the purpose for which these societies are working, namely, to produce the most perfect specimens in all their external features in each class. This is the answer from the standpoint of the exhibition; but is this all we require in our poultry? Is beauty of form and of plumage a sufficient guaranty for one who desires to embark in the mystery and uncertainty of breeding for the exhibition? Will size and style meet the increasing demand in a commercial point of view? These are questions which must be met, and which will require all the thought and judgment we can give if we hope to keep our poultry interest abreast the world in its other branches of rural economy.

This breeding for the exhibition or for "the fancy," as it is called, is very commendable so long as it is kept within proper bounds, for it is the means by which we are able to produce and perfect individual specimens; but there is a point in breeding beyond which we cannot go without deterioration in some essential qualities.

So far we have looked at this subject from the exhibition standpoint only; let us turn for a moment to the commercial standpoint. "Fowls," says Mr. Tegetmeier, "are either kept for the table or for eggs." Here, then, is an important consideration, and well worthy our attention. Before the existence of poultry shows, we possessed certain varieties of fowls more or less valued for health and hardihood, as layers and table fowls, sitters and non-sitters. A desire to improve these different varieties sprung up in the community, and poultry societies were organized for the purpose of creating an interest in the subject; but, with the growth of the poultry interest, there has also developed a fancy point bauble, in the pursuit of which our fanciers have wandered far away from the true ideal of improvement. They have turned their backs upon the idea that the breeding and rearing of poultry was for the purpose of placing in our markets and on our tables a cheap and nutritious article of food.

The demand for eggs and good poultry for the table was

never more imperative than now, and yet our poultry societies have made no important move to meet this demand. Their sole object, as expressed by their schedules and their arbitrations, has been to encourage the breeding of individual specimens up to the points required by an artificial standard rather than to develop the best qualities of our poultry.

A distinguished writer has said, "that notwithstanding the universal rage that prevailed a few years since, in regard to the rearing of poultry, the people seem to have acquired no useful experience." Fallacious ideas still exist in relation to breeds, and a prejudice in favor of those which will win rather than those upon which we must depend for the market or for profit. We are also constantly reminded of the fact that some of the best varieties of ten, fifteen, and twenty years ago, prized for their hardihood, the excellent quality of their flesh, or their productiveness, have so far deteriorated as to be dropped from our lists, or to make but a poor show therein, and their places supplied by others of delicate constitutions, questionable quality, and decidedly inferior as layers.

We have been for some time convinced that our poultry were deteriorating under the severe tests of our exhibition standards, and we are sometimes led to ask whether, in the light of past experience, we have made any advance in "poultry," and whether our poultry societies have in reality been of much service in advancing its true interest. That they have brought the subject more prominently before the community we are quite ready to admit; but whether they have been the instruments through which we have received better stock, more stamina and productiveness, or a better quality of flesh in our poultry, are questions which we are disposed to think will admit of considerable doubt. We can account for this degeneracy in our poultry only by the assumption that the strife for prizes, which has led to breeding exclusively for fancy points, has so changed a majority of our breeds of fowls from hardy and productive stock to petted favorites, that they have become utterly worthless for any purpose except the show pen. To a certain extent our poultry societies are responsible for this state of things. This strife for fancy points, which they have encouraged, can only be maintained at the cost or sacrifice of other points more or less valuable. In this respect our societies are doing a decided injury to the true poultry interest, and sowing the seed from which sooner or later we must inevitably reap a most disastrous harvest. In offering their prizes nominally to the best specimens, and taking the standard of excellence as their ideal, they overlook the fact, that our standard and the values attached to the several points therein laid down, are, at the best, but artificial expressions of our ideas, and that they do not, and cannot, fairly represent a perfect fowl, because they do not, and cannot, from the necessities of the case, take cognizance of the most important elements in our poultry,—hardihood, quality of flesh, and productiveness.

These are entirely ignored, but without these elements the most perfect fowl in shape, color, and style, becomes valueless, except for the exhibition. Hence, we cannot accept the counsel of your correspondent to continue our judging by the Standard of Excellence, for the reason that we believe our standards as now constructed do not represent the true ideal of what our poultry should be, and to judge them by such standards is to give encouragement to that which is artificial, useless, and false, instead of rewarding what is good, useful, and true.

Assuming, then, that a strict adherence to the require-

ments of our standards of excellence, or breeding up to exhibition points, is an undeniable cause of deterioration in our poultry, we believe the only method which will bring us back to a healthy condition of things and insure our future success is to retain and perpetuate the best qualities in our fowls at any cost, and, if necessary, make our standard conform to this end, and then if we choose to breed for the exhibition, well and good; but if the size of the comb, the increase of the white in the face or the ear-lobes, or the straining of any point, decreases the stamina, the quality of the flesh, or the productiveness of any breed, we must give less value to these points, or we are "paying too dear for our whistle," and will inevitably sacrifice our fowls.

We are well aware that beauty of form and of plumage are very attractive, but they are purchased at the cost of other points more or less valuable. So with size, which has many admirers and advocates; but size can only be obtained at the expense of symmetry, and too often at a sacrifice of quality. To those who believe that the exhibition and the prize-lists are the only objects of their ambition, we have but little to say; but to those who desire good and profitable poultry, we can and do say from our own experience, that beauty of plumage is no criterion of productiveness, nor size any indication of quality, and that standard fowls are not *always* the most profitable.

(For *Fanciers' Journal*.)

FOWLS IN THE GARDEN.

I HAVE been counting up the profit and loss on letting fowls run in the garden, and this is the conclusion which I have arrived at. The loss is sometimes serious, and the trouble is a great annoyance. At the time of planting and during the early and tender growth of plants, the fowls may do a great deal of damage, and should be absolutely shut out of the vegetable garden, except to take a hasty run early in the morning to pick up insects, or just at evening for the same purpose; always under the eye of the gardener, to see that they do not stop to scratch up seed or pick off tender plants. When I am working fresh garden ground, my fowls attend me closely, and pick up a host of vermin, which do the fowls good, and rid the land of these pests. But I do not allow the fowls to stop and wallow, which they are apt to do at mid-day. As soon as they cease to busy themselves in hunting, they are sent out of the garden. When the plants are well grown, the fowls may be left more at liberty, provided they do not go to picking green peas and such.

In the fruit garden there is less danger of harm from the presence of fowls during a portion of the season, while the benefit of their foraging is quite as valuable as in the vegetable garden. In the flowery season of small fruits, the fowls may take to picking off the blossoms of currants and the like; but they are more likely to pick off the fruit in all stages of its growth, so I would not trust them among currants or raspberries or strawberries after they were done hunting for worms and insects, and when they began to look up for higher forage. In the destruction of insects for the last two *very buggy* seasons in my garden, I believe my fowls have paid for their whole keeping. In a fruit garden of an acre, the past season a couple of dozen fowls kept the premises clear of everything except potato-bugs—they decline to have anything to do with either of the two breeds of these numerous pests. While the lands of my neighbors were

swarming with grasshoppers, it was as much as a grasshopper's life was worth for him to venture on my premises; and the numerous moths of the army-worm met the same fate.

My fowls are Golden Polands, which are as spry as crickets and keen-sighted as hawks, and the little chicks learn to hunt with the mother as soon as they get the shells off. One of my hens marshalled a brood of eighteen, which followed her like a swarm of bumble-bees, and it was funny to see them tumbling over each other in chase of grasshoppers. For real pets I do not know of any breed of fowls equal to Golden Polands, and they are excellent layers too. Last year I could not get one hen to sit, but this year several of my yearling pullets went to sitting and behaved well, and nearly all the eggs are sure to hatch, if they have been well cared for. I would not have any of the big, lazy Asiatics in my garden.

HUDSON, OHIO.

(From Journal of Horticulture.)

THE EXHIBITION DORKING—No. 6.

BY T. C. BURNELL.

DORKING chickens grow and mature faster than any other known variety, and it is for this reason that they are always kept where there is a regular large demand for early chickens of the finest quality. Hamburgs will excel them as layers, but it is very doubtful whether the large size of the Dorking egg does not more than compensate for any deficiency in numbers; and in this as in all other breeds hens vary as layers, but average Dorking hens lay eighty or ninety eggs in the year, besides hatching and rearing a couple of broods of chickens in the most exemplary manner, and notwithstanding all the tall talk to the contrary, I very much doubt if any other breed will do any better. I have heard several complaints this unusually severe winter of people being without eggs; but although I only keep a small number of hens, I have not known what it is to be without them. However, it is on their merits as chickens for the table that Dorkings must rise or fall, and to this I will now confine my remarks.

With prize stock, as with poultry, the desideratum is to produce as large as possible a quantity of the best meat in the shortest possible time—that is, to combine excellence of flesh with early maturity.

What the Shorthorn is to cattle the Dorking is to poultry, that is, not only will this fowl come to maturity sooner than any other, but when matured the principal portion of the meat will be found in the most desirable places—viz., on the breast, wings, and merrythought, instead of on the legs, as is generally the case with Cochins and Brahmas. The advantage this peculiarity gives to the Dorking is very great, and it is for this reason, independently of their white flesh, that they are so much sought after by bigglers and dealers; the only fowl which can compete with them in this respect being the French Dorking, the Houdan, but as this variety is a non-sitter it is not generally suited for domestic purposes.

If it is only desired to rear chickens for the table we cannot well hatch them too early in the year, provided they can be kept out of the wet and damp, as the earlier they are the more valuable they will be. But if we hatch out a brood of Dorkings with the hope of finding some prize birds among them, it is very doubtful if anything is gained by beginning too soon.

I never hatch any chickens till February, and often not

then. The early birds if not stunted by the cold will doubtless win at the summer shows, and it is for this reason people are so anxious to get them out; but the March and April birds, which have the whole summer to grow in without a check, always make the finest in the end, and it is a common thing to see an April-hatched Dorking winning in November against January and February birds. But not so with Asiatics: it is well known they take nine or ten months to mature, while a Dorking, if pure bred, will be as far advanced at six or seven.

The careful breeder will always like to be certain of having his chickens bred from certain cocks and certain hens, in order to supply on the one side what is wanting on the other, for perfect birds are hardly ever seen except in poultry books. To make sure of this the sexes must be separated in the winter, and the desired birds mated-up again at least a month before we think of setting their eggs.

It is commonly supposed that the strongest chickens are obtained from a cockerel mated with hens, or an old cock mated with pullets. But owing to Dorkings maturing so much earlier than any other breed, this rule I think hardly applies to them. I have certainly bred some of my finest chickens from cockerels and pullets running together, and if the latter are early-hatched birds of the previous year they will be at least ten months old and fully matured, and I cannot see that any harm will ensue. It is not advisable to sit the first few eggs of a pullet, as such, besides being small, seldom hatch; but a March or April pullet will, if well fed, be nearly sure to lay in the autumn, and will thus be to all intents and purposes a hen in February or March, and her eggs may be safely trusted.

I have laid great stress on the Dorking maturing so early, but we must also bear in mind that early maturity means early decay. Dorkings are not long-lived birds, the large show cocks seldom get over their fourth winter. I know several birds in a neighboring farmyard which are for certain twice that age. However, I am not now speaking about the common barndoor Dorking but the larger bird of the show pen, and I am justified in saying they are short-lived compared with some breeds, as I can hear of no instance of a well-known show cock lasting more than three seasons, while Cochins and Brahmas frequently hold out to five and six. The hens do better, though, and I now know a Dark Dorking hen which has twice won the cup at the Crystal Palace show, and which is still flourishing and winning, though certainly over eight years old.

It is for this reason—their comparatively short life, that fanciers will not be justified in giving the extraordinarily high prices for Dorkings which Cochins and Brahmas sometimes fetch. We may reasonably expect to have several years service and many shows out of these latter, but anyone who gives a high price for a Dorking cock, thinking to exhibit and win with him through the season, as is often done in some breeds, will find he is reckoning erroneously, as no Dorking, however carefully attended to, can stand knocking about from show to show, and certainly not for two or three seasons running.

To return to the mating of our birds. If we have an old cock which has not been overshown, and which we desire to use for stock purposes, put him with three or four pullets; but if we have only a nine-months cockerel there will not be the least reason to doubt the probable excellence of his chickens, even though mated with pullets. Besides, we are often compelled to breed from the latter, as it is seldom we

can get the old hens to lay soon enough for their eggs to be set for early chickens. In April and May seven or eight hens may be allowed to one cock, put in the early months it will be better not to allow more than four. When the birds have once been mated-up they should not be separated, as it is hopeless to expect to rear prize chickens if we keep on knocking the parents about from show to show. I should like to see the great winter shows end with December, when we could exhibit our best birds two or three times and afterwards breed from them, but I am afraid there is but very little chance of this coming to pass.

The eggs for sitting should be collected every afternoon, and if they have to be kept should be stored in chaff or bran, and turned every day. I do not believe there is any advantage to be derived from storing the eggs large or small end up, and most certainly a hen if she steals her nest does not do so, but eggs cannot be left for three or four days in one position with impunity. I should not care to sit eggs more than ten days old, and if they have to go a journey they should certainly not be more than two or three. If we wish the chickens to hatch out together the eggs should be as nearly as possible of the same age, as the staler the eggs are the longer will the chickens be in coming out. Dorking eggs are generally very large, and ten or eleven are quite enough for any hen to cover; in fact, nine will be better in the winter months.

The nests may be made either on the ground, in a manger, or in any other convenient place which the hen may select. But if we desire to rear a large number of chickens it will be found more convenient to set the hens in boxes or hampers with lids to each, and to take the hens off and to put them on again every day after feeding—the plan which is generally adopted by keepers, as by this means we shall avoid disappointment caused by the stupidity of the hens in getting on the wrong nests.

(For Fanciers' Journal.)

JUDGING AT EXHIBITIONS.

THERE is scarcely a topic that could be presented to-day that is of more interest to the breeder of poultry than the one under consideration. Many persons disappear after a year or two from the field as breeders from this very cause. They buy high-priced fowls, and often very nice ones, breed them carefully a year, and then exhibit them in competition with their neighbors and friends, some of whom have nice birds also, and, standard in hand, same as have bred by, look the thing over.

They have spent a great deal of time and money in studying up the peculiarities of their pets, and think they can read understandingly and apply their knowledge in a straightforward, conscientious manner, and after going carefully over the exhibition, conclude their birds are at least second best. Then they take their friends and others, who are breeding and perhaps exhibiting the same breeds around, and their judgments vary from first to third; all admitting that the birds show points of blood and careful breeding.

Time passes on; our friend is a worker in this busy world, and goes to his place of business for the day. In the morning, soon after he leaves, the judges arrive, and who are they? Sometimes men of sense and honor; but too often men chosen by the "ring" who manage the society, because they are easily managed, and will trample on rules and regulations of the organization; yea! on the very standard

itself, to please their employers. Like the judge of a court we read of, their decision was brought with them, and they make quick work.

Evening comes, and our friend returns to care for his pets, and, to his astonishment, he finds they have entirely escaped the eyes of the judges. If he has been brought up in pleasant ways, he submits patiently and quietly, leaves a business that he might have made pleasant and profitable, and been an ornament in; and we know him no more as an exhibitor. He may continue to breed poultry and sell it to those who are in the ring to take premiums on, but generally he becomes disgusted with the whole business, when he sees the man who took first premium on his disqualified stock, sell them, by virtue of said premium, for "fancy prices."

But, if our friend happens to be of a combative nature, descended from some old Scotch or Irish ancestry, you will hear from him immediately, and constantly, and at last will compel dishonesty to yield to right, and save "not the Commonwealth" but the poultry society.

There was a time when some people expected that the American Poultry Association would be able to assist in the matter; that, through their instrumentality, judges of competency and honesty would be selected. In some localities it may prove so, but in most cases persons will have to belong to the miserable rings to be able to get an appointment. Of course there will be a great many honest men appointed, but the evil of misjudging will still continue until poultry and agricultural papers allow free discussions in relation to awarding premiums to disqualified and unworthy birds.

It is the duty of reporters to inform themselves in relation to the various breeds of poultry, and then after reporting the premiums as given by the societies, criticise them and the judges as they may deserve; being able to prove any flagrant case of misjudging, if necessary. F. J. KINNEY.

A ROOSTER'S SUICIDAL MANIA.

THE *San Francisco Bulletin* is responsible for the following: Thomas Roach, keeper of a chicken ranch on the old San Jose road, purchased, several months ago, a lot of fine topknots, which he kept aloof from his less aristocratic fowls in a small yard. The chief of this family was a large black bird of an exceedingly haughty disposition. He was monarch of all he surveyed till about a week since, when Roach procured a white bird of the same breed and turned it into the yard of topknots. The two male birds immediately joined in battle, which, after a gallant display of courage by both contestants, resulted in the defeat of the black topknot. The unsuccessful bird took its defeat sorely to heart. In fact, life was no longer worth possessing since honor had departed. The bird was seen trying to kill itself with its own spurs. Not succeeding, it tried to jam its head under a gate, but again failed. It flew upon a barrel half filled with rain water, and after carefully surveying the situation plunged into the cask. Roach ran out and found the bird with its wings closely folded to its side, its beak open, and apparently endeavoring to repress the natural struggles at self-preservation. It was speedily rescued from its dangerous situation, but refused to take any further interest in life; and after a few days of mental torture and physical suffering it entered that eternal rest which was the one remaining desire of its heart.

"ENGAGED for every set—a hen."

(For Fanciers' Journal.)

HÉRÉDITÉ.

THE subject of *hérédité* is a vast one; while much study and research have been given it by eminent thinkers and scientists, yet their writings show not many satisfactory results. And I do not know that the writers of the *Journal* are helping us much to a clearer knowledge of the subject by giving us the extreme cases of the books, or maybe a book together with their individual experience, some of which ought soon to lose their individuality from having been so oft quoted. Through my little reading of the subject, I have become interested in it, and therefore would like M. H. C. to enlighten us a little more on his Berkshires and Lancashires. I do not comprehend—I may be very dull—whether he “got the fine form of the Lancashire with the Berkshire color and stamina” from “the *hérédité* of influence,” or how. Would he please inform us? I am sorry for the University of Pennsylvania to have a professor to make the assertion he did in regard to many Jewish children. It seems to be simply an assertion, because medical men of the Jewish faith—and it seems to me they ought to know—deny it as a fact. In regard to the “child about to be born” mutilated, and was not a surprise when “found so,” I would like to know if it is cited as a case of *hérédité*? If so, from whom was the mutilation inherited, and under what law of *hérédité* classed? CRESHEIM.

By a blunder of the telegraph, a Springfield poultry dealer received 2000 pounds of each of turkeys and chickens from Boston, when he only wanted 200 pounds. The manager of the telegraph office now devotes his spare time to selling the remainder.

**SPORTSMAN'S DEPARTMENT.****MR. ALBERT BRASSEY'S HOUNDS.**

WHILE on a visit to the town of Chipping Norton, Oxfordshire, Colonel Forney examined the large kennel of hounds owned by Mr. Albert Brassey, son of the famous contractor, and “Master of the Hounds” for his district. The hounds, all of the black-and-tan species, were confined in their kennels, each one opening into a yard with stone walls, over which it was easy to look. There were in all seventy-four couples. Mr. Hazleton, the huntsman, would stand at the door of the kennel, after having driven the dogs into the yard, and call them by name, to which they would each directly answer. For instance, in the ladies’ pack he would ask for “Sparkle,” “Fanny,” “Dew Drop,” “Rosy,” “Charmer,” etc., all through the catalogue, and each would spring up and pass under his hand into the kennel; and the same with the gentlemen’s pack of the canine household, who responded with equal alacrity to their appellations.

(For Fanciers' Journal.)

THE ADVENTURES OF A POT-HUNTER.

CHAPTER III.—In which Pot-hunter goes squirrel hunting.

OF course, now that I was the owner of a gun, I must go gunning.

Soon after my visit to the city, one evening I was sitting in the village store relating to an attentive audience the wonderful adventures which had befallen me in the city of Brotherly Love and Cheating Jews, when a youth of twenty, with sandy hair and a face covered with immense freckles, came swaggering up to me and, thrusting his hands deep into his pockets, interrupted my discourse by saying: “Paul, I hear you bought a new gun when you was up to Philamaclink.” (Philamaclink, you know, was a rollicking way this gushing youth had of signifying Philadelphia. The speaker was one Eureka Clam, by name, and the boys of the village called him “I have found it” Clam. He was a great liar, though a good-hearted fellow.)

“Yes,” I replied, “I did.”

“A bran-splinter new one?” I told him that the man of whom I had bought told me that it was.

“Well, Ben Thomaskittin, that married sister Suky, sent me down, the other day, a dog that is sartin death on squirrels. S’pose we go squirrel shootin to-morrow? That piece of swamp back of Squire Dauphin’s is chuck full of the biggest kind of gray squirrels.”

Though I knew Eureka to be a tremendous liar, and that very likely there was not a squirrel in the Squire’s swamp—it was all guess work with Eureka; yet so anxious was I to try my new gun, that I eagerly embraced his proposal and made arrangements for meeting the next morning before sunrise.

“Whose gun are you going to get, Eureka?” I inquired, for I knew that he had none.

“A-hem! Well, I guess I won’t take any. I’m gist goin’ along to work the dog. O, he’s a rouser is that dog. Brother Ben wrote me that, out in Pennsylvania, that dog just treed forty-nine squirrels and two grizzlies inside of an hour. O, he’s sartin death on treelin’ animals.”

I left Eureka relating the exploits of that wonderful dog to an unbelieving crowd, and went home to oil my gun for the next day’s sport.

Before sunrise the next morning, Eureka was waiting at the gate with his paragon of dogs. The dog was certainly the most curious looking canine I ever had seen. The body of the creature was nearly devoid of hair, and when I remarked this fact to its master, he replied in a mysterious whisper: “Part Chinee. Its mother was imported direct. Was once owned by the Emperor of the Chinee. I would not have anybody but you to know of it for ten dollars; they’d steal him before I had him a week.”

“And what was its father?” I inquired.

“Alas,” replied Eureka, shaking his head mournfully, “the imported Chinee married beneath her—united herself to a butcher’s cur. Come here Ketchem,” and Eureka gently caressed the part-Chinee.

Despite the confidence reposed in me, and though Mr. Clam ingeniously accounted for the lack of hair on Ketchem’s hide, I could not help suspecting that fleas had more to do with his hairless condition than his heathenish blood.

We started for the Squire’s swamp, Ketchem trotting dutifully behind, and after an hour’s walking through the dew-laden grass, reached its outskirts. Ketchem darted quickly into the thick underbrush and was soon lost to sight.

Eureka and I made our way more slowly, the briars catching hold of our clothing most unpolitely. Soon we heard a quick bark in the distance. Eureka shouted, "He's treed one! He's treed one," and off we both started, making our way as rapidly as possible. I soon lost sight of Eureka.

Guided by the barking of the part-Chinee, which all the time kept up an incessant howling, with blood trickling down my face where the briars had scratched me, I reached the tree, at the foot of which Ketchem was howling. Eureka had not yet arrived. Cocking my gun, I placed it in readiness to my shoulder, and looked cautiously up into the tree to discover the fated squirrel. I did not see a squirrel.

The tree was an oak which, some years previous, had been struck by lightning, and the branches were destitute of foliage. On the lowest limb of this unfortunate tree sat a species of small woodpecker (sap-suckers we, of Jersey, called them) hammering away at the rotten wood most industriously.

I was mad, and my anger boiled over when I discovered that, in making my way through the briars, the stopper of my powder-horn had fallen out and the powder was gone. I drew "bead" on the part-Chinee, who, with eyes starting from their sockets, was making most praiseworthy efforts to climb the tree.

Just as I was going to pull the trigger, Eureka, with his clothing torn in tatters, laid his hand on my shoulder and shouted: "Thunderation, Paul! what you trying to do?" I did not pull the trigger, because Eureka was a stronger youth than I and might thrash me if I shot his dog. But I formed, then and there, a most diabolical plan for vengeance. It was this: "I would, at some future time, borrow Ketchem, take him into the depths of a lonely swamp, tie him to a tree, and shoot him with number twelve shot until he was half dead, and then finish him with buckshot. I would tell Eureka that the part-Chinee went mad and I had to shoot him in self-defence." Of course, that would be a lie, but then, you know, a pot-hunter is not troubled with a machine inside of him that is always whispering "that is wrong," "you will get caught." The "you will get caught" always being obeyed quicker than the "that is wrong."

That day the part-Chinee treed everything, from a humble bee to a boy up a tree bird-nesting. Occasionally he treed a mosquito; but I could forgive him that, because a Jersey mosquito is of the size, and greatly resembles a pheasant (?), and to tree such an insignificant thing as a

sap-sucker—ugh! We (Eureka, I, and Ketchem) tramped through the Squire's swamp, sometimes up to our middles in mud, and, at other times, making slow progress through briars which tore our clothing into shreds. Of course, you understand that Ketchem did not encounter these difficulties. He swam through the mud and water and crawled under the briars. Not a squirrel did we see. At length, Eureka offered to take the dog and hunt after squirrels while I sat under a tree and rested myself; when I heard the dog bark I was to hurry to him and shoot the treed animal. To this I agreed.

As soon as Eureka and the part-Chinee had disappeared among the scrub-oaks, I drew the top wad out of the left-hand barrel, emptied the shot upon the ground, substituted a mass of well-chewed paper, and stole noiselessly after Eureka.

Soon I espied his back through the thick bushes. "Now," said I to myself, "I'll pay you for bringing a fellow into swamps where squirrels never were known, just to try that wretched cur of yours," and aiming three inches below the small of his back I pulled the trigger. Eureka threw up his arms and shouted, "My God! I'm shot," and fell senseless upon the ground. At the report of the gun, the part-Chinee rushed madly around in a circle several times and then struck a tangent for home.

When I reached Eureka, he was lying upon his back, and his face was so deadly pale that I thought I had pulled the wrong trigger and had really shot him. I turned him over rather nervously, but the soft paper spattered over his back soon reassured me. I dashed liquid mud into his face until he opened his eyes.

After gazing reproachfully at me for some time, he cried piteously, "Oh, Paul, how could you s-h-o-o-t m-e-e, just as the circus was coming to-o." I explained to him that the shooting was accidental (I had no conscience). Then I put on a most solemn resurrection-like look.

"Heavens!" he screamed, "Am I shot bad—dangerous!" I looked more solemn yet. "Don't keep the truth from me!" he fairly shrieked. "Tell me the worst, I can bear it." I gave him the soothing information that there was a hole in his back big enough to run my fist in. "Oh," he whispered, "I'll die, oh, I'll die, I know I shall." I told him that very likely he would (I mentioned no specified time); when he fainted, and I dashed liquid mud in his face until he revived.

(To be continued.)

THAT YELLOW DOG.

BY WILL O. GAUNT.

THAT yellow dog was given to me

When I was but a boy;
He was a puppy full of glee,
A little wild and coy.

When he was home a day and night
He to the pantry went,
And stole the cherry pie so light,
The Smiths to granny sent.

Alas! poor dog! he ate it all,
All that the Smiths did bake;
He could not come when I did call,
He had the stomach ache.

We clipped his ears and bobbed his tail,
To make him look more smart,
And then he sung a horrid wail,
And howled with perfect art.

That yellow cur, he was a trump,
He barked and yelped, too;
He raised old granny to a jump
By biting through her shoe.

And then he killed the chickens young,
To keep the garden clear,
And father said he should be hung,
'Cause Brahmas were so dear.

He worried hogs and scared the cow,
And ran the horses round,
For he did often bow-wow-wow,
With an infernal sound.

His cropped ears stood up before,
His tail stood out behind,
He always lay just by the door
To tell our friends his mind.

The boys did tie a pan one day,
On to his stumpy tail,
And then 'twas catch that dog who may,
Until his strength did fail.

He used to dream of that long race,
When he was fast asleep;
He'd wake and howl at such a pace,
You'd think him anguished deep.

And yet he would not stay at home
Until he killed a sheep,
And oft at night he'd go and roam,
His vigil for to keep.

And so one night he pick-ed up,
A sausage neatly trimmed,
To him it was a bitter sup,
And soon his eyes were dimmed.

JOSEPH M. WADE, Editor and Proprietor,

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES,
IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

THE EASTON POULTRY AND PIGEON SHOW.

FROM many letters received from leading fanciers, mostly in this State, the indications are that the initial show at Easton will be a first-class affair. This comes of a liberal premium list and from the fact that Messrs. McKeen & Hulick, who are the prime movers in getting up this exhibition, are determined to make it a success, financially and otherwise. The great sale of fine stock will take place on Tuesday, January 11, 1876, when a large amount will no doubt change hands.

TO MANY OF OUR READERS

BILLS will be sent in this number of the *Journal*, and to all such, and others who are indebted to us, we earnestly request a prompt remittance. By referring to our advertising pages a change will be noticed in the width of column, also a great reduction in the rates of advertising, which places the use of our columns within the reach of all. Our terms will be only ten cents per line, and cash payments.

WELL ENOUGH.

MESSRS. MCKEEN & HULICK exhibited sixteen coops of fowls and chickens at Allentown and took fifteen premiums; on twelve pairs of pigeons they took eleven premiums; and yet they are "not happy," but are ambitious to make Easton the best show held in this State during the present season, always excepting Pittsburg.

THE DETROIT SHOW.

By a letter just received from Mr. E. C. Skinner, we are informed that "after all, they are going to have a fair, as first stated, but in a different place." They are having good luck in raising specials, and hope to carry through a successful show. It will open January 31 and close February 7, 1876.

THE DOYLESTOWN SHOW.

THE Eastern Pennsylvania Poultry Association held their third annual exhibition, in Masonic Hall, Doylestown, Pa., last week, December 21 to 24. The display was not as large as last year, though this seems to be the rule this season, and is accounted for on the score of "hard times."

The whole number of entries was about two hundred, though the most of the stock was high class in quality, which went far to make up for the small numbers, when compared with former shows made by this association.

McKeen & Hulick, of Easton, Pa., exhibited largely in Asiatics. Their display of Partridge and Buff Cochins was particularly fine; some of their Whites were also good. In Partridges and Buffs these gentlemen carried away most of the awards, while in Whites the prizes were divided between them and Mr. J. J. Berry, of Hackensack, N. J.

The display of Brahmas, both Light and Dark, was small, but the birds were fine. Mr. Flower, of Shoemakertown, carried away first on fowls, and Chas. Shoener, of Tamaqua, won first prize with a magnificent pair of chickens. In Darks, D. R. Jameson, of Quakertown, took first on fowls, and McKeen & Hulick first on chickens.

Plymouth Rocks were shown in greater numbers than ever before at a Pennsylvania show. This variety is fast pushing its way to the front, and seemed to attract a great deal of attention from visitors and fanciers. In this variety Dr. Dickie took first on fowls and chickens. The remaining awards being divided between Mr. Berry and Edwin Johnson, of Dolington, Pa. In Dominiques, there were several entries. Some of the pens contained very good birds.

Doylestown was always strong in Hamburgs, and its credit is fully sustained in this class, this year. In both Silver and Golden-penciled birds the display was very fine. The competition was close, but Mr. Rogers carried off first honors in both fowls and chickens in the Silver variety, followed very closely by Mr. Hurst, of Germantown. In Golden-penciled, Mr. Hurst was first on fowls; while Howard Twining took all on chickens. In Spangled birds, both Silver and Golden, there was a fine display, but we do not know who were the winners.

In the Game class, there were several first-class pens. Competition was sharp, but the awards were fairly made; though, perhaps, not entirely satisfactory to the owners. It may seem a little strange that only B. B. Reds were exhibited, none of the other varieties being represented.

The Leghorn class was much behind the show of last year. Of Whites, there were some good birds shown, but in Browns and Dominiques there was nothing above second-class pens in competition. In Polish, there was a meritorious display, especially of White-crested White. The honors in this class were divided between Messrs. Stone and Taylor.

The French class was represented by but two entries of Houdans, exhibited by Mr. Gross. Two coops of Black Russians were entered, which attracted considerable attention from their novelty.

The display of Bantams, both Game and other, was only moderate, though the specimens in both classes were fair. In the Miscellaneous class, there were several entries; but in the rabbit and minor pet class, there was a wonderful falling off from last year.

The show was noticeably strong in Pekin Ducks. There were a number of competing pens, all nearly equal in feather and condition. The awards were made upon the weight, which seemed to be the fairest way of testing birds so near alike in appearance. One fact was developed at this show which will, perhaps, not be particularly relished by breeders of Pekins. After weighing them, the judges, out of curiosity and for purposes of comparison, weighed a few pairs of Rouens. To the surprise of everyone, the Rouens out-

weighed the *Pelkins* three pounds to the pair. Breeders of both may put this item in their pipes and smoke it. In summing up the Doylestown show, the strong features were Cochins, Hamburgs, Plymouth Rocks and Games. We should call it a nice little show, but are in doubt whether it will be a financial success.

On Wednesday evening, at seven o'clock, a meeting of fanciers was convened to discuss the project of an association or combination of the different local societies, in the eastern part of the state, with a view to the organization of a large strong society, which shall be able to compete with the foremost societies in the country. After a full discussion, on motion, a committee of three, viz., Dr. Dickie, W. T. Rogers, and T. P. Harvey, was appointed to confer with the officers of the surrounding local societies in reference to the matter. There seemed to be a complete unanimity of sentiment on the part of all present in favor of the association.

THE Penn Book and Periodical Agency of Shoemakertown, Pa., have issued a new catalogue of over five hundred first class newspapers and magazines, on which they offer inducements to subscribers, for the Centennial year. We would advise all our readers to get a copy before ordering for 1876.

They also publish the *Penn Record* a monthly journal devoted to literature and its production, at twenty-five cents per annum.

CENTRAL NEW YORK POULTRY ASSOCIATION.

We have just received the advertisement of the above society, which we are informed will hold an exhibition only second to Chicago. They also intend to offer premiums for single birds, both old and young, as far as possible. Their premium list, which is nearly ready, will be very liberal, and can be had after January 1st, by addressing Newton Adams, Recording Secretary, Utica, N. Y.

TO PIGEON FANCIERS.

THERE having been considerable talk recently concerning the formation of a standard of excellence for pigeons, it is suggested that a movement towards the accomplishment of that object be made during the forthcoming national exhibition at Chicago. There will undoubtedly be a large number of pigeon fanciers in attendance as exhibitors, and we hope to see, in addition, all who are interested in the formation of a standard.

DR. HORACE ENOS,

Superintendent Pigeon Department.

CHAS. P. WILLARD,

Secretary and Treasurer.

EDW. L. LAMB,

President.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Why were the squirrels taken from our public squares? PHILADELPHIAN.

—D. MOORE.—This office, wishes to correspond with persons interested in the marine aquarium.

—A friend mentioned to me that she one day killed with a broom a house mouse which had a perfect cross on the centre of its face; the cross was perfect in shape.

DANTE.

—THE GRAY SQUIRREL (*Sciurus Migratorius*).—Is it known to naturalists that Gray Squirrels castrate each other? I have examined a great many, and nine out of every ten are thus mutilated. The operation is performed by the old males upon the young while in the nest.

J. M. McCANN.

—I mentioned the query of N. A. —“Why is it that the fish will not take the hook during the prevalence of an easterly wind?”—to an old sailor. His reply I give as nearly as possible in his own words: “Well,” he said, “fish won’t take a hook no time ’cept when ’tis baited; but the reason that they won’t take the bait when the wind comes out in the north’ard is because the wind riles the water so they can’t see the bait.”

L. P.

—Huron, writing of arrivals at the Zoological Garden, says, in note, page 710, December 9: “The nest of the hare is open and constructed without care, and has no fur lining.” Now the nest of the hare is simply a hole in the ground, and always lined with its own fur, and carefully covered over with grass or leaves. I have examined quite a number and have never yet found one not lined with fur. The young are from three to eight in number, and are usually born in April.

J. M. McCANN.

—CROSS BETWEEN A PIGEON AND A RING DOVE.—I heard a person—a stranger to me—state that a veteran poultry fancier of Pennsylvania, had succeeded in mating a cock pigeon of a small breed to a ring-dove, and during the last season had succeeded in rearing several young ones, which greatly resembled the ring-dove in appearance. T. H.

[Though we greatly doubt the above statement, we give it hoping that the “veteran poultry fancier of Pennsylvania,” will acknowledge or deny the statement.—Ed.]

—“Gamble’s Partridge is an inhabitant of Texas, and was first discovered by Dr. William Gamble in 1841. For beauty of plumage, it probably far surpasses any other species. The rich chestnut colored feathers which cover the sides, the white markings upon the face and sides of the head, and the singular plumes with which the head is ornamented, give it a very sprightly and pleasing appearance.”

[If any of our southwestern readers are familiar with the above bird, or have the means of supplying them, we should be pleased to hear from them.]

—The two thousand bats in the natural history collections of the British Museum have recently been rearranged and classified, and within the past year numerous additions have been made in the various animal groups, comprising over thirty thousand new specimens, of which, however, a large proportion are insects. Among the more interesting acquisitions are fresh-water dolphins, extremely rare, from the rivers Indus and Ganges; a fresh-water shark from the Tigris; a perch which lives in hot springs; and a new species of pheasant from Borneo, larger than the ordinary bird, with a glossy black body, and a long, lyre-shaped, snow-white tail.

—CRAW FISH.—I have a craw fish in my fresh-water aquarium which is a constant source of amusement to me. He seems to be nocturnal in his habits, and during the night wanders about the tank committing depredations of various kinds, hiding during the day in a clump of water-plants. He digs the sand and gravel away from the corners, and throws the level bottom of the tank into heaps and hollows; so that each morning I have to level the surface, only for the craw-fish to repeat his outrages again during the night. I have seen him lift quite large stones by means of his claws. When frightened by being touched with a stick, the craw jumps backward with great velocity.—*Lobster*.

—RABBIT ON THE WALL.—Thinking some of the little folks would like to know how to make the above, I will try to inform them. First, place the hands back to back, with the right hand under. Now lock the two little fingers at the ends; pass the fore-finger of the right hand and place it on the fore-finger of the left hand, with the two middle fingers inclining down. Now place the thumb of the left hand on the two fore-fingers, with the middle fingers nearly in an upright position, which will represent the ears; while the under fingers and thumb will represent the legs. Now place yourself near the wall, with a lamp, and by a little practice you will be able to form the “rabbit on the wall.”

S. B. K.

—"EUROPEAN HOUSE SPARROWS AGAIN."—The article in our last with the above heading should have been credited to the *Germantown Telegraph*.

—"Leaves" can easily preserve autumn leaves by sprinkling wax over the leaves, and then ironing them with a heated iron. S.

—"FISH IN AQUARIUM."—In last number of the *Journal*, a correspondent signing himself "L" desires to know why the fish in his aquarium, are incessantly swimming up and down the glass sides. I have noticed the same with the fish in my aquarium, and have always supposed it arose from their efforts to get at the image of themselves, which they saw swimming in water of immense length and breadth. A friend suggests another reason, it is to devour the air bubbles that cling to the glass. AQUA.

—"MR. EDITOR: You ask, in your last number, if it is true that a "bull terrier whose pups were taken from her" does duty as a nurse to two lion cubs in the Central Park (New York) menagerie?

Why not? Every menagerie manager will tell you that it can be true; and Mr. Nash, head keeper in the Philadelphia Zoological Society's garden, informed the writer that in case the lioness under his charge should present him with a cub or two, he was prepared to substitute a dog nurse, as he had found from experience that the lioness was unfit to do duty as a mother in that respect. HUON.

—"LIME WATER FOR FOWLS."—The Watertown, N. Y., *Dispatch* says: "In caring for your fowls provide them with a vessel of lime water for an occasional drink. It is prepared by pouring hot water over quick lime, and after the water is settled and the water covering it has become clear, pour it off. It will keep fit for use for a considerable time."

[If the above could be given in proper doses, it might do good; but to place it before fowls, and compel them to drink it whether they desire to or not, would do more hurt than good. We would much prefer to give lime in some other form. That is if the fowls are confined. If at large, all such nostrums are unnecessary.—ED.]

—"DESTRUCTION OF BIRDS AT THE SHRINE OF FASHION."—It is said that owing to the present style of decoration for ladies' hats, that some varieties of small birds are likely to be entirely exterminated. In England, the household robin is becoming scarce from this cause, while the kingfisher, finches and yellow hammers are scarcely procurable. The seagull has furnished an almost countless number of wings, with which to complete the saucy-looking hat of the stylish belle, who never thinks that she is wearing the price of a life. An exchange recommends that, if ladies must wear feathers in their hats, they should stick to the ostrich feather, as those, being in perfection only when the season of moulting comes, are dropped with no injury to the bird; and now that domestication of the ostrich is made a practicable project, the supply can be made equal to the demand.—*Spirit of the Times*.

—"FLYING SQUIRRELS (*Pteromys Volucella*) are found from the Gulf of Mexico to Upper Canada. They are about ten inches long, from tip to tip, are of a brown color above, white beneath, a black ring surrounds the orbit of each eye. Their home is the hollow of trees, often in the open fields, far from woodland or water. They seek their food only at night, which consists of nuts, the young shoots of trees, and all kinds of grain; they are said also to be carnivorous, feeding on small birds and animals. They are gregarious, living twenty or thirty together. In gliding from tree to tree, their flight is a descending one, until near the tree they desire reaching; they then wheel rapidly upwards, alighting lower on the tree than they were on the one when starting. They can fly from two to three hundred yards with ease, though naturalists say only about fifty feet. Varieties of the Flying Squirrel are found in almost every part of the globe. I have often found them living in the same tree with the Gray Squirrel. They are easily domesticated and make interesting pets. J. M. McCANN.

—"SQUIRRELS IN WINTER."—Where do you keep your Squirrels during the winter? I have tried several ways, but the best I ever found was to give them a large box (the one I had was 3x4x4 feet high) with a wire front, with gravel or dirt for covering the bottom (renewing it several times during the winter), then take a section of a hollow tree, so as to give them a place about the size of a peck measure, for a nest (for two) put in a false bottom of coarse twigs first, then fine moss with a little hair, make a hole in the side for them. Do not cover the top, leave it open for ventilation. I always give moss enough to cover them up well, and make them a large nest. I think one reason so many lose their Squirrels in the winter, is that their nest, which is generally of rags, becomes damp and frosty from want of proper ventilation. So much for the nest. Now do not give them all the rich nuts they can eat, but give them plain food, and try to have a variety. Then occasionally put in fresh cut limbs of different trees, and see how they love to know them, as well as to climb around on them. This furnishes work and play—in other words keep them employed, and they will be healthier and more contented. It is not always practicable for us to give our pets as much room during the winter as they need, but with the Squirrel fixed as above, they will do best away from artificial heat. EDWARD BASSET.

CORRESPONDENCE.

PIGEON PREMIUM LISTS.

I NOTICE in some of the premium lists of shows premiums offered on best display of one variety. Does this mean the best display in different colors of one variety? For instance: Would a number of pairs of one color of one variety win over one pair of each color of same variety?

D. E. NEWELL.

[If the birds were equally good, the five different colorings would certainly win. But another question arises: Suppose the collection to be Fantails. A. shows five pairs of Whites, which, if they are really fine, it would be impossible for B. to show five pairs of different colorings of Fantails that would beat them, presuming the Whites to be the best to be had,—as Yellows, Reds, and Blacks are very rarely as good as White,—and yet the collection of five colorings would be the most rare, valuable, and would be the most interesting to visitors. In this case, would it be fair for the owner of five pairs of White Fantails to take first over the colored collection? We hardly think it would. We are directly opposed to collection premiums of any kind, as they lead to dishonesty in all its various forms. This was so apparent at the two large shows at Philadelphia, in 1867 and 1868, and at the Rink show in New York, that we have been ever since a strong advocate of single-bird premiums, as far as practicable.—ED.]

CORRECTION.

JOS. M. WADE, Esq.

DEAR SIR: In my report of the Venango County Poultry Association's exhibition in the *Fanciers' Journal* of last week, the number of entries reads "thirty-five or forty," when it should be *one hundred and thirty-five or forty*.

BANTAM.

A MISTAKE.

THE Venango County Poultry Association held their exhibition in the same building that the democratic paper is published, and during the show had a large sign with a "rooster" painted on it suspended from a window. The first morning after it was put up, a local "politition," whose brain was a little "befuddled," espied it, and called out to a friend, "Hallow there, Bill! there's another democratic victory, Whitticker has his 'rooster' out." BANTAM.

IMPORTATION.

Mr. J. Neale Plumb, of New York, has received, per steamer "Canada," (about) eleven Aylesbury ducks, and thirteen Embden geese, all fine birds. MANHATTAN.

GENESEE POULTRY ASSOCIATION.

MR. EDITOR: The first annual show of the Genesee Poultry Association will be held at Batavia, N. Y., February 29 to March 4, inclusive. The following is a list of officers:

President—Henry Todd.

Vice President—J. Z. Terry.

Recording Secretary—Henry A. Cross.

Corresponding Secretary—A. N. Henshaw.

Treasurer—Henry T. Cross.

Executive Committee—Henry Todd, J. Z. Terry, Henry A. Cross, A. N. Henshaw, Henry T. Cross, W. H. Bradish, E. N. Crossman,

Yours respectfully,

A. N. HENSHAW,

BATAVIA, N. Y., Dec. 17, 1875.

Cor. Secretary.

NEW ENGLAND COLUMBARIAN SOCIETY.

MR. WADE.

DEAR SIR: At an adjourned meeting of this society, held Wednesday afternoon, December 31, 1875, an election was held, which resulted as follows:

President—Henry S. Ball, Shrewsbury, Mass.

Vice-Presidents—Philander Williams, Taunton; Dr. J. D. Mason, Arlington; Charles H. Adams, Boston; Albert Noyes, Bangor, Me.

Secretary—J. F. Movar, Hyde Park.

Auditor—W. F. Bacon, Lexington.

Treasurer—D. Frank Ellis, Cambridge.

Executive Committee—W. E. Shedd, Waltham; E. C. Aldrich, Hyde Park; D. C. Cooper, Franklin; P. N. Sprague, Hingham Centre; Charles G. Reed, Worcester; Jacob Graves, Boston; George F. Seavey, Cambridgeport; John Phillips, Fitchburg; H. F. Felch, Natick; D. H. Hayward, North Cambridge.

In haste.

D. FRANK ELLIS,

BOSTON, December 31, 1875,

Secretary of Meeting.

ADVICE TO COMBATANTS.

JOS. M. WADE.

DEAR SIR: The *Journal* has become a much-expected friend to me, and if it is not on time (which does not happen often) I am at a loss how to spend the Sunday afternoon. Your Christmas sermon in the last number has been read with a great deal of interest, and I hope that the contending parties will read it and take therefrom the true standpoint of the brotherhood of fanciers, and with the new year bury the hatchet and live henceforth in peace and good companionship. But I have already taken too much of your time, and in closing I will say that I shall do all in my power for the *Journal* to increase its circulation, and wishing it a hearty success and a long life and yourself a happy new year, I am, respectfully,

W. H. Z.

EAST SAGINAW, MICH., December 28, 1875.

THE habit of a Boston dog was to put his fore paws on people, and tables, and other things, and sniff until he was satisfied with his investigation. At last he tried it on a loaded gun that stood in a corner, and now he has no nose with which to sniff.

SMALL PET DEPARTMENT

AND YOUNG FOLKS' CORNER.

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS.

Philadelphia, for the week ending January 5, 1876.

- 1 Small Owl (*Nictale acadia*). Presented by Frederick Brown, Philadelphia.
- 1 Weeper Capuchin (*Cebus apella*). Presented by Dr. O'Connor, Harrisburg, Pa.
- 1 Green Monkey (*Cercopithecus callitrichus*). Presented by Dr. O'Connor, Harrisburg, Pa.
- 2 Snowy Owls (*Nictale nivea*). Purchased.
- 1 *Great Kangaroo (*Macropus giganteus*). Born in the Garden. HUON.

*The Kangaroo at birth is but little more than an inch in length, about as thick as your finger, and resembles a transparent earth-worm much more than a four-legged animal. Very few naturalists, with all their care and patience in watching and waiting, have been rewarded with the satisfaction of being present at the birth of a "Joey," hence, it has not been positively settled as to how, or at what moment, the little thing gets into the mother's pouch. An extended notice of the marsupial animals will shortly appear in the Zoo Notes of the *Fancier*.

THREE years ago two young ladies of Oakland, California, started a bee farm at Los Angeles, and this season they have sent 3500 pounds of honey to market.

SHOOTING BULLFROGS.—A Reading paper says: Charles V. Dauth, although old in years, is young in spirit and still fond of gunning and fishing. He and Philip McGovern, of this city, rode in the cars to Leesport lately and from there took a stroll into the country, carrying guns and fishing tackle. After walking about ten miles, and visiting numerous meadows and small streams, they returned with twenty-two bullfrogs, which they shot, and a fine mess of catfish, which they caught with hook and line.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words, describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

For "TO EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstance be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

CHAS. W. HOITT, P. O. Box 425, Nashua, N. H., will exchange White Frizzles, Golden-penciled Hamburgs (from imported stock), and Plymouth Rocks (Gilmann's strain)—for good Red Pyle Bantams or Fancy Pigeons. I have good stock and want same. What offers?

B. HULSE, Box 23, Allentown, N. J., will exchange Essex Pigs, 5 months old; Shepherd sluts, Light Brahma hens, Brown Leghorn cockerels, two White Jacobin hens, One White Calcutta Fan hen, Red Mottled Fans—for Solid Black Fan cock, White Carrier cock, Gold-laced and Silver-laced Sebrights, and Duckwing Game Bantams. What offers?

V. M. JEPSON, Webster, Mass., will exchange one pair each of Red Barbs, Black Magpies, White Carriers—for one pair of Black, Red or Yellow Fans. Have Blue Fan and Blue Spot cocks, Yellow Spot and Yellow Jacobin hen; will exchange either two of these for mates to other two.

FRANK PEPPARD, Box 114, Basking Ridge, N. J., will exchange one trio of White Cochins, one Scroll Saw, (foot power), one Stevens' new Model Target Rifle (pocket)—for Printing Presses, Printing Material, or Electricity Engine. Speak quickly!

ANDREW RAMSEY, Manor Station, Pa., will exchange Houdans, three pullets and one cockerel, for Silkies. One Silver-laced Bantam pullet, weighs 12 ounces; one Black Cochins and three Partridge Cochins cockerels—for Silkies, Black Cochins pullets or hens, or Lop-eared Rabbits.

H. BURCHARD, Corry, Erie Co., Pa., will exchange a trio of first-class Dark Brahmans, mated for breeding; cock, solid black breast; pullets, well marked—for two Plymouth Rock hens equally as good. No disqualified birds wanted.

JEREMIAH HARMAN, Middletown, Dauphin Co., Pa., will exchange one Partridge Cochin cockerel for Rouen Ducks; one pair Brown Leghorns for one pair White-crested Black Polish; one pair Silver-spangled Hamburgs for one Partridge Cochin hen; one Dark Brahma cockerel for one Black Cochin hen. Must be A-No.-1, as mine are.

Dr. B. F. BEARDSLEY, Binghamton, N. Y., has two large very fine Pekin Drakes, one Plymouth Rock cockerel, one Black Cochin pullet (fine, large, early hatch, weighs 8½ pounds)—to exchange for a first-class large Light Brahma cockerel, fit to exhibit; or Silver-spangled Hamburgs, first-class.

WM. H. GIBSON, Turbottville, Northumberland Co., Pa., has one trio of fine Light Brahma chicks to exchange for a good trio of American Dominiques, rose comb; also one pair of very fine Dark Brahmas for A. No.-1 White-crested Black Poland cockerel.

W. R. STEVENSON, Oil City, Pa., will exchange Silver-spangled Hamburg cockerels or White-crested White Poland cockerels, Buff Cochins cockerels, or Black Hamburg pullets—for White-crested Black Polands, Wright's Illustrated Book of Poultry, or Circular Saw to run with treadle.

G. HUNOLD, 46 Page St., Providence, R. I., will exchange two Hounds one Fox, ears 21½ inches long; and one Rabbit Hound; one Setter slut, 5 months old, of fine breed—for Ferrets and Singing Birds.

PETER LEPP, P. O. Box 833, East Saginaw, Mich., will give one pair Moorhens, one pair Red, one pair Black short-faced Tumblers, heavy booted, performers, and one solid Black Fantail cock, for one pair Red Barbs, and one White or Red Barb hen; must be strictly first-class. Write quick.

BOX 2946, New York, will exchange one pair Red Jacobins, one pair White, and one pair Yellow Fantails—for Common Pigeons, which must be mated.

A. C. VAN DOREN, Washington, N. J., has for exchange, one trio Black Sumatra Games, two trios Strychnine and Clipper cross, one Strychnine chick, one Clipper hen, all warranted "Dead Game?" would like two or more Black-Red Derby hens or pullets, white legs, red eyes. What offers?

W. M. WARD, Peabody, Mass., will exchange Light Brahma cockerels, weight, from 8 to 10 lbs.—for a good Buffalo Robe. Make me an offer.

G. W. FREDERICK, Chestnut Hill, Philadelphia, Pa., has for exchange, two pairs good Partridge Cochins fowls, for White Cochins pullets or hens.

D. SHIELD, Florence, Mass., will exchange fine pure bred Black Hamburg cockerels, for good Light Brahma hens, 1875 hatch, or for fine cockerels of same variety to change strains. Nothing but good stock taken or sent in this exchange.

S. G. WOOD, Nashville, Tenn., will exchange two Peacocks in full feather, two Peahens, and four young Peacocks—for Aylesbury or Rouen ducks, or Fancy pigeons, Leghorn or Asiatic fowls, or other offers.

R. KIRBY, 12 Courtland St., N. Y., will exchange one or more of Welch's Non-Freezing Fountains, for Partridge Cochins pullets, early hatch, or hatch of 1874. Must be good stock. Fountains warranted under directions.

DR. H. ENOS, Milwaukee, Wis., wants to exchange three pairs Japanese Silkies, two pairs Silver Duckwing Game Bantams, one pair White Guineas—for Brown Leghorn or Black Cochins pullets. What offers?

C. A. STEELE, P. O. Box 17, North Adams, Mass., will exchange one trio Black B. Red Games, bred from A. D. Warren's and Bicknell's stock, for one trio good Brown Leghorns. What offers?

WM. CRASTON, Meadville, Pa., will exchange Partridge and Buff Cochins, fine birds, Golden-Spangled Polish (3d prem. at Meadville), Golden-Pencilled Hamburgs (1st at Meadville, 1st at Erieville)—to exchange for first-class B. B. Red Stags, not later than June hatch, willow legs and bay eyes.

JNO. A. JONES, French Hay, Hanover Co., Va., will exchange a beautiful Gold Chain (gentlemen's), valued at \$20, for A-No.-1 trio Aylesbury ducks; good, large size, and all right in every respect.

JOHN TATE, Jr., Milton, Northumberland Co., Pa., will exchange one B. B. Red Game cock, two years old, for pit, and guaranteed No. 1 stand steel, one Red Barb, male, No. 1—for offers. Also, one Sharp's Revolver, 4 shooter, in good order, for trio Duckwing Game cock, to stand the test of steel. Cock or stag to weigh from 5 to 7 lbs.

L. S. HUDSON, Lansing, Mich.—Pure Suffolk sow, from blooded stock, pedigree furnished, 10 weeks old—for a Berkshire sow as good, no inferior blood wanted. Write; satisfaction warranted.

THOMAS P. MONTGOMERY, 7 and 9 South Third Street, Harrisburg, Pa., will exchange one pair Yellow Tumblers, one Goldfinch, one Writing Desk; one Smoothing, one Jack, and one Fore Plane; one Foot Ball, large—for Fancy Pigeons of any kind but Tumblers.

G. B. HAY, West Laurens, Otsego Co., N. Y., will exchange one Golden Sublight Bantam cock for Fanciers' Journal for 1876; a Rifle and Violin for Bronze Turkeys or a Honey Extractor.

J. T. BELL, Franklin, Pa., has a single-barrel, muzzle-loading Target Pistol, eight-inch rifled barrel, plain finish, valued at \$8; and a good Microscope, in a neat box, valued at \$10—to exchange for Black-breasted Red Game pullets of good stock.

J. W. WAMPLER, Enterprise, Preble Co., Ohio, has for exchange one very fine buck Lamb, Southdown and Cotswold crosses; Poland China Pigs; well-bred Black-and-Tan Terrier pups; Revolver, etc.—for Fancy Pigeons; Carriers, Inside Tumblers, and Light-colored Pouters preferred.

G. W. HUBLEY, York, Pa., will exchange first-class Black-breasted Red Game Bantam cockerels for Canaries or anything else valuable. Also for exchange, Silver Duckwing Bantams, Crevecoeur hens, Black Spanish and Golden Sebrights for what offers.

GEO. E. BRUXTON, 41 Court St., Boston, Mass., will exchange White Leghorns and Crevecoeurs for Partridge Cochins. Fine stock given and required.

D. S. WENRICH, Bernville, Berks Co., Pa., will exchange two trios of White Holland Turkeys for Dark Brahmas or other offers.

PROF. R. F. GEORGE, Secretary Wisconsin Central Poultry Association, Madison, Wis., will exchange one compound Microscope, mahogany box, 18 mounted objects, extra glasses, forceps, cost \$28—for good Lop-eared Rabbits, Plymouth Rock fowls, or Italian Greyhound slut. Do not write unless stock is first-class.

BOX 332, Vineland, N. J., will exchange a Gold Watch, a good Spencer Rifle, and a trio of pure-bred, good stock, Light Brahmas—for a Top Guy.

ISAAC S. SHADE, Tulpenhooken, Berks Co., Pa., will exchange Angora Rabbits, Guinea Pigs, White Mice, Red Squirrels, Light Brahmas, and Fancy Pigeons—for A-No.-1 Partridge Cochins pullets, Blue-pied or Blue Fouter hens, Black Magpies, Blushing Turbids, Yellow swallows. Make offers. Postal cards will answer.

J. T. BELL, Franklin, Pa., has four trios Golden-Spangled Hamburg chicks, choice birds, Ongley stock—to exchange for Black-breasted Red Game pullets. Must be good stock.

JOHN K. CAMP, Winsted, Conn., has for exchange one copy of Livingston's Travels in Africa, by Chambliss, issued this year, cost \$3; also, a few pairs of A-No.-1 Light Brahmas, young stock (Williams' and Dunbar's strains)—for Wright's or Tegetmeier's Poultry Books and a few nice standard Gray or Colored Dorking hens or pullets.

F. A. PENNINGTON, Delaware City, Del., will exchange one pair of White Fans, one pair of Magpies—for a Red or Dun Carrier hen; must be a good bird, as mine are.

F. A. PENNINGTON, Delaware City, Del., will exchange a walnut Mocking-Bird cage, new, three feet long, twenty inches wide, half-round top, morticed posts, thin glued, cost \$15—for pair Red or Yellow Fans. Must be good birds.

ROBT. GRAY, Turtle Creek, Allegheny Co., Pa., will exchange one trio of White Guinea fowls for two Partridge Cochins pullets; two Pekin drakes (Cliff's stock) for two Partridge Cochins pullets; one trio S. S. Hamburgs (Sheppard's), one trio White Leghorns (Smith's and Pitkin's)—for Rose-comb American Dominique pullets.

CHAS. SELSER, Doylestown, Pa., will exchange Dominique Leghorn, Black and Golden-spangled Hamburg cocks and cockerels—for pullets of the same varieties, or Silver-spangled Hamburg.

M. N. CHAPPELLE, Box 61, Peacedale, R. I., will exchange Black Breasted Red Game Bantams (cockerels), for Dark Brahmas or Plymouth Rocks (good birds, Spaulding stock), and nothing but good ones in exchange.

W. C. EATON, of Newark, N. J., has to exchange, a Graves' Incubator, also, White, Buff, and Partridge Cochins, Light Brahmas, Houdans, etc., for Singing Birds, Fancy Pigeons, etc.

JOSEPH L. VOSE, Kerserville, Pa., will exchange Black Cochins and White Leghorn cockerels for Light Brahma cockerels and Partridge Cochins pullets. My Black Cochins are June hatch, and weigh 8 pounds each.

H. C. GREEN, Indianapolis, Ind., will exchange one trio Partridge Cochins for Golden Sebright Bantams; one double-barrel Shot-gun (good shooter), one Pekin drake, one Wild Gander, one Black Muscovy duck, two Silver Cups (triple plated)—for Buff Cochins, Light Brahmas, or good Watch. Stock first-class; the same wanted or no trade.

G. J. BAKER, Oakville, Ont., Canada, will exchange Partridge and Black Cochins, S. S. Bantams, Pouters, and English Tumblers—for Rifle, double-barreled Gun, chest of Carpenters' Tools, or Black and Tan slut (must be small and well bred).

E. W. WATSON, Titusville, Pa., will exchange Target Rifle, with telescope and implements complete, cost \$200, all in good shape for shooting—for a good double or single Harness, Portland Cutt, Robes, or anything that is used in a lively stable, except horses.

G. J. BAKER, Oakville, Ontario, Canada, has a Setter dog, 15 months old, well broken, out of the best stock in Canada, to exchange for a Double-barreled Breech-loader, with everything complete.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column until thoroughly exposed.

S. D. R. SMITH, Williamsport, Pa., wants, in good condition Folding Exhibition Coops for his exchange offers in No. 42.

FANCIER, Lock Box 35, Natchez, Miss., wants Game fowls or eggs, from fowls that will fight. B. B. R. Games preferred.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

PHILADELPHIA, JANUARY 13, 1876.

No. 2.

"PRESS ON! you're rusting while you stand,
Inaction will not do.
Take life's small bundle in your hand,
And trudge it briskly through.

"Jump over all the 'ifs' and 'buts,'
There's always some kind hand
To lift life's wagon out the ruts,
And poke away the sand."

(From Journal of Horticulture.)

THE EXHIBITION DORKING.—No. 7.

BY. T. C. BURNELL.

No difficulty will be found in making a broody hen take to a strange nest, the only precautions necessary will be to move her when it is dark, to give her a china nest-egg or two, and to keep her shut in upon the new nest until she becomes accustomed to it. It will not be advisable to put the good eggs under her for a couple of days, until she has become thoroughly used to being taken off and put on the nest again by strangers. This should always be done every morning, and the hen put into a coop or other convenient place where she can be easily caught, with food and water for her to eat, and left there for about twenty minutes, and then replaced on the nest by hand and shut in. If a regular system be adopted, it is astonishing how many hens may be kept going in this way with very little trouble.

Two days before the eggs are due to hatch they should be well soused in tepid water when the hen is off the nest, and after being left in the water for two or three minutes they should be replaced, and the hen put on top of them. This will go a long way in preventing the chickens from becoming stuck to the membranous lining of the shell. If fresh, Dorking eggs will hatch on the twentieth day; but, if stale, they may be a day longer. For this reason the eggs in a sitting should, as nearly as possible, be of the same age, so as to hatch out altogether; but on no account should the hen be interfered with until the expiration of, at least, twenty-four hours from the appearance of the first chicken.

I consider it waste of time to help chickens out of the shell. I have often done so, but believe it to be far better to let them die at once, as if they are not strong enough to get out of the shell they are pretty sure to die afterwards, and, at all events, will never make prize chickens. If possible, it will be better to sit two hens on the same day, so that if the eggs hatch out badly we may be able to make up one good brood by putting all the chickens under one hen. A little sulphur should always be sprinkled in the nests of the sitting hens, or otherwise they are likely to become infested with vermin.

The hen-coop, as illustrated in the accompanying sketch, is well worthy of the attention of amateurs. It has been designed by Mr. Henry Lingwood, who for many years has been one of the most successful exhibitors in the poultry fancy. Last year he very kindly let me have one as a pattern, and I have found it answer so well that I have asked and received permission from him to have it drawn for general information. It combines every requisite for rearing chickens successfully, and with it no shed or coop-house is required. It also possesses the merit of being vermin-proof when shut up, and this, too, without the ventilation being at all impeded. Owing to an error in shading, the engraving is not so intelligible as I could wish; but I will endeavor to make it a little more simple by explanation. Most hen-coops are entirely inadmissible for outdoor chicken-rearing for two reasons: One, that the wet drives into the front of the coop; the other, that in heavy rain the wet runs in underneath the sides. In Mr. Lingwood's model coop both these disadvantages are avoided, as the roof projects over the open front, and effectually keeps out the rain; while a wooden tray is made to fit inside (which should be always kept filled with sand or dry earth), which entirely keeps the little chickens out of the wet. The flap-door, which in the woodcut is seen lying on the ground, hinges at bottom on hooks, and when turned up and secured with a button, fastens the coop up for the night, secure against fox or rat.

The top part of the open front is made of small-mesh wire, and should be placed perpendicularly, and not be made, as in the drawing, to lean forward. This, besides giving light and ventilation, will be found convenient for feeding the chickens through on a very inclement morning when it is not desirable to let them run out at once.

When twenty-four hours old the chickens may be safely put into such a coop as I have described, or into any other description of coop with waterproof roof. The hen should be fed and watered, and the chickens, too, should receive their first feed of bread crumbs softened with milk, canary seed, or some such little delicacy.

(For Fanciers' Journal.)

SITTING HENS.

EDITOR FANCIERS' JOURNAL.

Everyone who has kept the Asiatics has been troubled, no doubt, by their sitting propensities. Usually there is no convenient coop to confine them in, and after they have been on the nest a day or two, their owner, in sheer desperation, shuts them in the first barrel or box he comes across. The hen generally manages to get out in a couple of days, and the consequence is she is strengthened in her stubborn desire to sit. If her owner succeeds in breaking her up in two weeks, he congratulates himself upon his good luck. If the hen is taken off the nest immediately when she first commences to sit, there will be no trouble in breaking her up. Very soon we will begin to be troubled with sitting hens again, and the winter is the best time to fix a coop to shut the sitters in.

I have had in use for two years a coop for breaking up sitters, and I can consistently say, it is the best thing for the purpose I have ever seen. The coop is five feet long and two feet wide; height, two feet. The floor is made of inch square pieces, placed one and one-half inches apart. The front part of the coop is of lath. The hen cannot very well sit on the slatted floor, and she will generally give up in disgust, and in a day or two will be willing to go back to her old quarters and do her duty. They do not like the slatted floor—it does not agree with them, and herein lies its efficiency.

The above plan may be in common use for aught I know, but I have never seen one like it before, and thought it might be of use to some of your readers. D.

PASSAIC, N. J.

(For Fanciers' Journal.)

FACTS ARE STRONGER THAN FICTION.

MR. WADE:

I see by last *Journal* you are asked to "tell how much Mr. Van Derveer's big brag Bronze Turkey weighs." Now, as facts are wanting, may I not have the privilege of replying to your enthusiastic correspondent, "Pacific"—not for an hour, as I have accepted an invitation to travel through Turkey (thirty pounds, dressed with oysters), consequently, I must be brief. I would say that "his very biggest" weighed at death, when twenty-two months old, forty-two pounds. "His very biggest" hen (now alive), at thirty months old, weighs, this New Year's morning, thirty pounds; the latter, without a doubt, is the "very biggest" hen turkey on this continent to-day. She may truly be called the Giantess turkey.

Now, it seems that when people cannot find anything else to talk about, they give Van Derveer's turkeys a going over,

and some of 'em talk big, and here is where *fiction* comes in. It seems that when "Pacific" and her opponent get talking turkey, facts are of the things that were.

My turkeys are so large now that chicken thieves generally leave them roosting and take lighter weights. And it would take the combined skill of the Forty Thieves to carry off one of those of which our enthusiasts talk about. I always thought that twenty-six pounds was good for a six months turkey, but thirty-six pounds beats the Dutch all to smash.

In this world, at the present day, we are too apt to get things slightly mixed. At Buffalo, in 1874, I showed a pair of turkeys which weighed sixty-five pounds, and the papers in that city told the people to "go to the show and see the big turkey that weighed sixty-five pounds." At the same show a little girl was heard to inquire, when in front of the cage which contained this monstrosity, "Mamma, is it an elephant?" Again, my turkeys during the past summer were taken for berry-pickers, as they were roaming in the meadows after grasshoppers. Now, when turkeys are taken for elephants and berry-pickers, they are big enough for all work; but when "Pacific" gets them up to "either eighty-four or ninety-six pounds," they are too big by half.

Nothing but a "Ransom Range" can find accommodations for preparing a turkey of the period for the table New Year's now-a-days. What of the coming turkey, of which "Pacific" must be dreaming about. True, a story never loses by being told often. In telling stories (without they be fish stories), like everything else, we should all adopt Davy Crockett's motto, and then we would make no mistakes—"Be sure you are right, then go ahead."

PORT JACKSON, Jan. 1, 1876.

Bronze.

(For Fanciers' Journal.)

THE VIRDEN POULTRY ASSOCIATION,

Of Virden, Illinois, held its second annual exhibition on December 29 to 31, 1875. Their display of stock, and the management of the exhibition, was in every respect most creditable to the society.

The best of feeling prevailed among the competitors for the ribbons. The attendance was good, and the Virdenites seemed truly to enjoy and will doubtless be greatly benefited, poultrywise, by this second bringing together of fine poultry, for comparison, and study, as well as exchange or sale.

P. M. S.

(For Fanciers' Journal.)

ILLINOIS POULTRY ASSOCIATION.

EDITOR FANCIERS' JOURNAL.

The annual meeting of the Executive Committee of the Illinois Poultry Association took place at Springfield, Dec. 21, 1875. Present—B. L. T. Bourland, of Peoria; J. M. Wills, of Bloomington; Thos. Mason, of Jacksonville; I. J. Halsted, of Decatur; C. F. Mills and Phil. M. Springer, of Springfield.

The single bird premium list of last year was adopted, to which was added a classified list of pigeons. All first, second, and third premiums of the association, are to be paid in cash. Fourth premiums are "Highly Commended," and fifth premiums "Commended." A bench show for dogs in connection with the next poultry exhibition by the association was decided on, and a premium list ordered to be prepared.

The offices of assistant secretary and general superintendent were created. J. H. Leaton, of Bloomington, was chosen to the former, and H. C. Phelps, of Mansfield, to the latter.

Resolutions offered to hold the next exhibition in connection with the Illinois State Fair for 1876, failed of adoption, and a committee of three was appointed to decide on time and place for an exhibition during the winter of 1876-77.

The executive committee finding the association drifting from the original plan on which it was organized, appointed a committee to revise the constitution to suit the new policy which seems to be growing in favor.

The transactions of the association from its organization to the present time, are to be published without unnecessary delay. John T. Boyden, of Lincoln, was elected Treasurer of the association, *vice* Phil. M. Springer, resigned. Adjourned to meet at the call of the President.

Yours truly,

P. M. S.

(For Fanciers' Journal.)

PERHAPS.

WHILE hearing the conversation of various members of the fancy we are struck with the diversity of opinion regarding the best breeds for their several purposes; and it is generally worthy of remark, that whatever breed or breeds a man may have, *he* considers them better than all others for the particular purpose for which he keeps them. We should be "charitable" till we are thoroughly convinced that the breed we are about to denounce has been tried by us and given every advantage before we condemn it too severely. We are not all constituted alike, and select the breed of poultry (if we are over wanting *all* breeds) which is best adapted for the object we have in view.

Perhaps we should like the Partridge, Grouse, Wild Duck, Goose, or Turkey better if we knew they had been fed on corn and pure water alone; but that peculiar constitution of flesh of the wilder fowls or birds, and to which nature so mysteriously provides, is far more preferable to my palate than your "corn and water" fowls that can eat off the top of a flour barrel. When we cannot readily obtain the wild fowls, then I should come so near to nature as possible, and select the breeds that can take care of themselves, and subsist for the most part, especially during the summer, on the food provided by nature, and on which man cannot improve.

I most heartily concur with "Burleigh" in his remarks on Brahmas and Games. He has thoroughly tried the Brahmas and they failed his expectations; they did not "fill the bill;" he reverts to the ever alert, graceful, juicy-fleshed Games, a fowl that can be picked up almost any time, from a good walk, well prepared for the table, and has not been, necessarily, fed from the filthy pools of the barnyard. Mr. "Young Breeder" do you not know of any one who has or is keeping Brahmas that live in the barnyard a goodly portion of the time? Please discuss *both* sides of the question.

It is not necessary for every breeder of Games to be a cock-fighter; some breed them for pleasure, some for profit, some for the pit; neither is it necessary for a Brahma cock to whip a "so-called" (well put in) Game, to prove that Games are not true to their name. Now, Mr. Y. B., if you should assist your fighting Brahma over the fence into my yard, you would soon have occasion to repent, and be obliged to kindly take him back, right soon too, place him "in his

little bed," and for the next fortnight administer tonic paste to keep him alive, and bone meal to prevent bowleggedness.

You should be careful while endeavoring to step on other people's corns, for *you* may be blessed with the same protuberance, and bear in mind the Golden Rule, and remember that some breeds in summer will lay two eggs to one to your "gentle Brahmas;" so if eggs are twice as high in winter, others make up during the summer in *numbers*; what is the difference, "six of one and half a dozen of the other."

You, Mr. Y. B., should not try to fool those just catching the fever, for if your remarks should lead them to accept the Brahmas it might be the biggest "grind" they ever had played upon them. UNICORN.

(For Fanciers' Journal.)

CONNECTICUT NOTES.

SUBSCRIBING FOR THE FANCIERS' JOURNAL—THE NEW ENGLAND CONSOLIDATED EXHIBITION—A GRAND AFFAIR PROMISED—NEW FEATURES—PERSONAL NOTES—THE BRISTOL EXHIBITION—GETTING READY FOR THE EXHIBITION, ETC., ETC.

MY DEAR WADE:—Your question, "What are the Connecticut fanciers doing?" has remained unanswered too long, and I will try to give you just a faint hint of what they are about.

In the first place, from what I hear, they are subscribing in an exceedingly lively manner, for the *Fanciers' Journal*, and saying lots of good things about it. You know when the Connecticut men like anything they go in for it strong, and so every one of them who reads your *Journal* takes every possible opportunity to commend it, and that sort of thing tells, as you know probably better than any one else.

In the second place, they are getting ready for the grand consolidated New England Exhibition, which is to be held at Springfield, next February. There was considerable hesitation at first on the part of the Connecticut Society in coming to a decision to give up its regular exhibition, but the benefits to be derived from a consolidation with the New England Club of Worcester was so apparent that it was finally decided to "pass" this year and go in for the best thing ever seen east of Buffalo. The exhibition is to be given under the auspices of the two societies above mentioned and the Rod and Gun Club, of Springfield, which gave, last April, as you well remember, a remarkably fine bench show of dogs. The society is composed of many of the leading men of that enterprising city, and seem determined that its reputation for doing handsome things shall not suffer at their hands.

The Massachusetts Society, which always gives splendid exhibitions, will also pass this year, and its officers and members will contribute very largely to the success of the "Consolidated." I know your readers will be interested in a statement of the principal features of the exhibition, and so I give them. The birds are to be entered in pairs, but are to be separated in the coops. The birds must score at least 85, 80, and 75 points for a first, second, and third premium. The exhibitors' names are to be placed upon the coops as soon as they are put in position. The score cards, which originated with the Connecticut Society, last year, are to be put upon the coops by the judges, thus showing in detail, the points of all premium birds.

In the sale department, from which all inferior birds will be excluded, exhibitors will be allowed to sell at their own prices, and will *not* be required to attach "sale cards" to

their coops. Their honor will be trusted to report sales and pay commissions. The entry fees are to be one dollar per pair for competition, and fifty cents for exhibition and sale. Many of the leading breeders of New England will send fine birds to the sale department, and the management intend to make this a prominent feature. The premium list will be a very liberal one, and, in addition, there will be offered several "combination" premiums of \$100 and \$50 each. The rules, which I am told were compiled by President Sperry, of the Connecticut Society, are a new departure from the old stereotyped form, and present many attractive improvements which will, without doubt, commend them to other societies in the future.

A mention of the names of the Executive Committee will convince you, I think, that the affair will prove all that is promised. Mr. George W. Ray, the chairman, is a retired merchant, very wealthy, very genial, very liberal, good-looking, and just the man for the position. C. N. Nichols, the treasurer, is a well-known book publisher, a clear-headed, far-sighted man, who is always connected with successful undertakings, very gentlemanly, and exceedingly fond of good jokes and good fellowship. D. J. Marsh, the secretary, is the treasurer of one of Springfield's leading savings banks. He is not so good-looking as Ray or Nichols, but possesses an even temper, is full of grit and drive, well liked by all his friends, and often bet on by those who do not know his weight. The representatives of the Connecticut Society in the board are President H. T. Sperry, familiarly known among fanciers as the "White Poland Man," and S. J. Bestor, who stands at the head of White Calcutta Fan fanciers. The New England Club men are A. D. Warren, President, the Black-breasted Red Game man. He was never guilty of belonging to but one "ring," and that was a golden one, of course. President Sperry gave him the appellation of "Al Warren, My Boy," in a poem read last year at the Worcester supper, which you published, I believe, at the time, and it still sticks to him. The other is J. E. Pierce, the secretary, an elderly gentleman, well endowed with sterling good sense, which, with his dignified bearing and terse manner of putting things, always secures for him attentive listeners and willing followers. Altogether, as you can see, the management is in good hands.

The Advisory Board is made up of such men as President Williams, of the Massachusetts Society; Hon. Dr. George B. Loring, President of the Essex County Society; General Chas. A. Johnson, President of the Merrimack Valley Association; Hon. V. C. Gilman, President of the New Hampshire Society; Hon. Albert Noyes, President of the Maine Society, and the presidents of some ten or fifteen other New England poultry organizations, all of which shows that the very best talent has been enlisted, and nothing that will tend to make the Exhibition in all respects the best will be overlooked.

A reunion of officers of poultry associations and fanciers generally, will be held at the Massoit House, on some evening during the Exhibition. Of course, Friend Wade, you and the rest of our Quaker fanciers will come up and see what New England can do when she "consolidates."

In the third place: The Exhibition of the Central Connecticut Society at Bristol, held last week, was a fine affair. There were nearly seven hundred entries, and the proportion of meritorious birds was very large.

In the fourth place: Many of our fanciers are getting ready

for the Chicago and other exhibitions. Mr. Sperry, who has offered his flocks of White Polish for sale, showed eight coops at the Easton exhibition last week. And, by the way, while we all want him to succeed in his wishes, we hope he will not succeed in selling out. We want him to stay with us.

There, Friend Wade, I think I have answered your question in part. If this dose is not strong enough, let me know, and I will mix up another.

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

INFORMATION WANTED.

J. M. WADE, ESQ.

DEAR SIR: I have watched the Pigeon Department of the *Journal* for some time, in hopes to see some information in regard to breeding and rearing. I have lately obtained two pairs of Pouters, and I know nothing of their habits, necessary food, etc., and thinking that, perhaps there might be others as green as I am, I apply to you for information.

Please give us, as soon as convenient, an article, giving just the information needed by amateurs. Surely the columns of your paper cannot be better employed than in spreading knowledge among the young and inexperienced.

I am a regular subscriber to seven papers, and prize the *Fanciers' Journal* above all the rest. Success to the Exchange column.

Yours, etc.,

EATON, N. Y., December 14, 1875.

J. B. TUCKERMAN.

[We would be pleased to hear from any of our experienced pigeon fanciers on this subject, and would refer Mr. Tuckerman to page 504, Vol. II.—Ed.]

COLUMBIAN SHOW AT ALLENTOWN, PA.

ON Monday afternoon, last, I took my departure from Doylestown, at four o'clock, and at half past six my journey came to an end, having reached the thriving little city of Allentown. After a glorious night's rest, and partaking of a hearty breakfast at the American House, kept by that prince of landlords, Sheriff Newhard, who, by the way, is one of the few men who knows how to keep a hotel, I walked up Hamilton street to Centre square. In looking around I discovered the banner of the association floating out upon the cool morning air, and I then entered Kline's Hall. Chickens were crowing, pigeons cooing, and everything in grand confusion; however, all this was soon righted by the active, energetic committee, headed by that veteran fancier, Walter Miller. There was on exhibition about fifty coops containing pigeons. There was some very good birds on exhibition, and of course some very poor ones. The display was not equal to the last year's show, but the quality was far superior.

McKeen & Hulick, of Easton, Pa., had quite a fine display of pigeons, those of particular note were a pair of splendid Blue Antwerps; in using the word splendid, I wish it understood that they were not the dirty blue birds that we are accustomed to see, but in coloring almost up to the pictures in some of our pigeon books. Black Carriers, good; Blue Owls, Blue-wing Turbets, Black Magpies, and White Carriers, a pair of Silver Owls very fine, would have received a first premium, but were entered wrong.

Charles Trexler, of Allentown, showed a very large collection of fancy pigeons, some of them being Black Barbs, White Fans, Black Nuns, Magpies, and Trumpeters. Mr. Trexler received the special on pigeons, he having received the largest number of first premiums. There was several small exhibitors, but there was nothing worthy of mention concerning their birds. I might say, in regard to the poultry department of the show, that it was far ahead of Philadelphia, Tamaqua, and Doylestown. Miller's Light Brahmas, McKeen & Hulick's Buff and Partridge Cochins, were a grand sight to look upon. Mr. Keen had on exhibition an extraordinary fine Partridge Cocker hen. Mr. Otto, of Easton, showed some of the finest Polands I ever saw, perfect pictures some of them. The Lehigh Valley Poultry Association may congratulate themselves on this, their second poultry and pigeon show. Mr. Moore, the President of the association, has met with a sad bereavement, and was too unnerved to pay much attention to the poultry show. He has the sympathy of the whole community in this his sad hour of trial. Heartly thanks to Messrs. Shimer, Workman, Rhue, Miller, Trexler, and others, for kindness shown. The visit of the past week, will long remain as a green spot within my memory.

DOYLESTOWN, PA.

(For Fanciers' Journal.)

PIGEON RACE.

THE pigeon race from Spring Mill to Philadelphia came off on January 8th. Fifteen birds were entered and flown in this match. The following is the distance and the time made by the three winners: The pigeon owned by Mr. John Parker, of 502 North Eleventh St., Philadelphia, flew ten miles, bee line, in 16 minutes and 15 seconds, winning first prize, a very handsome urn. The second, which was a money prize, was won by John Parker, Jr.'s bird in 16 minutes and 30 seconds. The third money prize was won by Mr. Stephen Kershaw's bird, the distance being nine miles and three hundred and eighty-seven yards; time, 15 minutes and 57 seconds. Many of the other birds came in close to the winners.

This race was got up, and first prize so kindly given, by the well-known sportsman, Mr. Fred. Smith, of the Centennial Hotel, corner of Twelfth and Callowhill Streets, Philadelphia, who served up a good lunch after the race was over; also filled the urn with the very best of wine. Mr. Parker also filled it. Many of the Philadelphia fanciers were very sorry to see so few birds entered for this handsome prize. It is owing to the season of the year and the distance being so short. We finished up the evening on the English free and easy style. I hope all who get in the neighborhood of Twelfth and Callowhill Street will give Mr. Smith a call, as he is a jolly good fellow, and will make them welcome.

T. GRIST,

PHILADELPHIA, January 10, 1876.

Timekeeper.

SPORTSMAN'S DEPARTMENT.

(For Fanciers' Journal.)

SETTER AND POINTER CROSS, OR DROPPER.

In the last issue of the *Journal*, I find an article by "Vic" on this subject, in which he alludes to "Greenhorn's dog" (whose vagaries as a field dog created a sensation among your sporting readers some months since, several writers accounting for his worthlessness by reason of his being a dropper), and says, "Now, from actual experience with a 'dropper,' or cross between a setter dog and a pointer bitch, I can very positively assert that these parties were mistaken."

Now this is a pretty strong position to take, as "Vic's" experience, judging from his article, is altogether based on the performance of this particular dog.

Before going further, I will state that "Greenhorn's" dog was a *myth*, and his eccentricities were saddled on him for the purpose of eliciting a discussion in the Sportsman's Department of the *Journal*; all the replies were against the theory of cross-breeding field dogs, and I am glad that "Vic" has come to the front as his champion.

But, now to come to the pith of the subject. Granted, for the sake of argument, that "Vic's" dog is perfection, is this enough to warrant him to advise sportsmen to breed their dogs in this way, when arrayed against it is the experience of scores of practical sportsmen and breeders? Does he not know that for every prize drawn, twenty blanks will occur? No, we cannot afford to waste time and labor in attempting to improve our field dogs by hybridizing; and in the face of such an array of facts as come within every breeder's knowledge, what can be gained by it? This taking a step backwards. Surely the setter is good enough as we now find him. Where would the leading British breeds—the Gordon, the red Irish, and the Lavarack—be today if the mongrelizing system had obtained? Purity of breeding intensifies qualities, whilst hybridizing runs off on a tangent to—nowhere.

The setter and pointer are distinct breeds, and each has reached the acme of perfection; each has a specific place in field sports; under some conditions a setter is preferable, under others a pointer. To attempt to make a dog for all work by crossing is idle; for where you might by chance improve one quality, you would lose in another, and make the moral instincts of the brute a hopeless jumble, as in the instance of Greenhorn's dog.

And again, of what use is Vic's dog? Can he breed from him and feel sure of the quality of his produce? Every one knows that cross-bred stock of any kind is entirely unreliable to breed from, absolutely worthless, you never know what is going to turn up. Any well-bred setter or pointer will do all that Vic's dog will do, if, as he observes, "such a dog be trained as he should be," and with the advantage of being able to reproduce his quality in his progeny.

EDITORIAL DEPARTMENT.

STILL ANOTHER NEW SOCIETY.

REV. C. W. BOLTON, Armonk, Westchester Co., N. Y., informs us, that a society has been formed and christened "The Westchester County Poultry Association," with the following list of officers: President, James Wood; Secretary, Rev. C. W. Bolton. They are to have an exhibition at Mount Kisco, on the Harlem Railroad, on February 8, 9, 10, 11, 1876. A good hall has been secured. Any further information can be had by addressing the secretary as above.

TWO ADMIRABLE CORRECTIVES.

For use in poultry feeding, may be found in charcoal and Cayenne pepper, judiciously provided and not given too often, to both young and old fowls. The best way to administer these condiments efficaciously, is to pulverize the charcoal to a powder and mix it with soft food. In this shape the birds eat it freely, and it is a grand purifier of the system. The Cayenne should be procured of the best quality (always the cheapest in the end), and a tablespoonful should be thoroughly mixed through a pail of water and given them to drink. This last method is an admirable preventive of gapes in chickens, and for older fowls it is found an excellent thing in cold or chilly weather.

Neither of these aids should be used oftener than every other day in the week, and only for a week or two at a time, anyway, to be effective; but if managed with discretion they are more valuable, as a common preventive to disease, and a corrector to the internal composition of domestic poultry, than all the medicines that can be given fowls after they once get sick. Both charcoal and Cayenne can thus be very easily used, and after a little while, it will be found that the chickens become fond of this change for their benefit.

EXTENSION OF TIME.

TO THE EDITOR OF FANCIERS' JOURNAL.

At a meeting of the Executive Committee of the National Poultry Association, January 6th, the time for making the entries in the fowl and pigeon classes was extended to January 18th, at 12 o'clock, noon, to accommodate many fanciers who wish to exhibit, but did not get premium list and blanks in time to make necessary arrangements.

C. P. WILLARD, Secretary.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—"Philadelphia," if you will turn back to page 686, of the *Journal*, dated November 25th, you will find why "the squirrels were taken from the public squares."

—Col. Bee shot a hare (*Lepus sylvaticus*, Huon's name; *Jacksass rabbit*, the localism) and sent it over to my chickens. The boys skinned it to make bridles of the hide, but not before I had measured it, and found that it was 31 inches from tip of nose to end of tail, 38 inches from tip of fore-leg to tip of hind-leg, 15 inches from tip to tip of ears (they being set on the head one inch apart). The color is a yellowish-brown and black, eyes red.

I noticed several swellings, nearly two inches high, on the back and legs. Cutting into one, I found the contents to be numberless white eggs, resembling in shape and size a white mustard seed, inclosed in an opaque, white membrane; the whole floating in a fluid clear as crystal. I was told that a disease seizes many of them at this season of the year. Those that do not die, are called "grubby," some say "wormy." E. S. S.

—One of the Delaware County papers complains that hawks are particularly numerous and very destructive this season, in that and the neighboring county of Chester.

Of all the hawk family, the *Buteo borealis*, or red-tailed hawk, is the most to be dreaded for the havoc he commits on game. Bold, wary, and watchful, he haunts the neighborhood of the farmyard; always on the alert, and ready to seize any luckless fowl that strays outside the pale of the farmer's protecting gun; or, failing in that, he lurks near the feeding-ground of the partridge, and in a short space of time will annihilate an entire covey. In fact, nothing comes amiss to this rapacious and powerful bird; rabbits, pigeons, small bird, and even reptiles are equally acceptable as a repast. Every farmer, poultry breeder, and sportsman is interested in his destruction. But how is this to be accomplished? Ah! there is the rub. Perched on the top-most branch of some tall tree, his piercing eye roves incessantly in search of prey, and at the same time warns him of any threatened danger. He seems to have a correct idea of the range of a shot gun, and the shooter, be he ever so careful, is never allowed to get within the danger line. We must, therefore, have recourse to strategy. Of a team and driver he seems to have little fear; possibly, not possessing an analytical mind, he looks upon them as a harmless centaur, and the shooter may generally approach with oxen or horseback sufficiently near to riddle him with a charge of No. 5. But one of the best ways to destroy him, is to bait an ordinary steel trap, with the head or offal of a fowl, place it on a fence post near his lookout tree, securely tied with a strong cord to prevent his carrying it away if caught by the legs, scatter some feathers in the vicinity to attract his attention. This generally brings the answer.

"ZOO" NOTES.—No. 9.

VULTURES.

IN the southern end of the now completed Carnivora House, a rather remarkable bird has his winter quarters.

His name is "*Gyparchus papa*," though, should you prefer it, you may call him king vulture. He may have burst his egg-shell in Peru, Brazil, Guiana, Paraguay, or Mexico, for in all these places, do the king vultures reside, though they are only known there as "Condors."

I have no good word to say of vultures in general, or of king vultures in particular. They are all large birds, most of them gorgeously feathered, with a flight more graceful than that of the eagle, and equally as bold; but they are cowardly and filthy birds, feeding and gorging themselves on carrion, in good aldermanic fashion, to an aldermanic state of inactivity. Still, disgusting as are their habits they are invaluable in tropical regions, devouring animal substances whose speedy decomposition would otherwise, engender pestilential diseases. In this way the vultures fill the same place in the economy of nature, as the Jackal and Hyena.

Until Humboldt visited South America, the most extravagant ideas prevailed as to the size, and consequent strength of this bird, even to the belief that it could carry off a full grown man, while children of whatever age or size, were "nowhere." The great traveller exploded all that, as, after much time spent among them, and great research, he could not find any native who had known, personally, even the smallest babe to have been "appropriated;" but, on the contrary, the natives asserted that the birds were not at all dangerous to either man or beast, and even their young children were allowed to sleep in the open air without the least fear of danger from the vultures. Another instance that a nameless individual is never as black as he is painted.

The king vultures, like all of their kin, are disgusting to us in their choice of food, as well as in their gluttonous appetites. Preferring meat which has been dead some time, and consequently "high," they do not care to kill it for themselves, and have it fresh, only doing the battle when pressed by extreme hunger. On this "high" flesh will the king feed, tearing it with both beak and claws, overloading his crop to a fearful extent, until he becomes too stupid to move, when he is easily knocked over with a club and killed, or captured alive with the lasso.

The head and neck of the king vulture are of bright colors, the eyes are bold, beautiful and expressive, and the general color of the plumage is white, hence the Spaniards called it a "white crow." The name of king vulture was applied from the fact, that being of greater strength than other vultures, he forces them to stand aloof from a carcass, until his highness has finished his repast. Weakness must go to the wall, and ever bend to strength.

The king vulture clings to life with the tenacity of a cat, and, like the Irish gentleman in the song, "he's mighty hard to kill."

Happy king vulture now in the Zoo. You need never more indulge in "high" food, or disgustingly play the glutton; henceforth for fresh meat, and enough (which we are told is quite as good a feast) will be provided for you, and we hope you may pass down the rate of vulture years, living an ungorging peaceful life, and that your captivity may not prevent you from arriving at the appointed goal of vulture existence.

Yes, *Gyparchus*, may it be long, very long, before Dr. Chapman the accomplished prosecutor of the Zoo, places your bones to bleach on the roof of the Carnivora House, alongside of those of the dear departed Empress, giant elephant of India.

HUON.

(For Fanciers' Journal.)

PRAIRIE DOG VILLAGE.

From notes I made of "items of interest" for my little folks, modified from the guide book to suit little ears and understandings.

Four hundred and thirty-five miles west of Omaha is situated the great Prairie Dog City, one of the largest settlements on the line of the Union Pacific Railroad. Several hundred acres, each side of the track, have been taken up by the sagacious little prairie dogs, and there they have made their homes, and that without buying one lot from the company, or as much as saying, "By your leave." The dwellings consist of little mounds, from a foot to eighteen inches in height, raised by the dirt excavated by their burrows. On the approach of a train, the little inhabitants can be seen scampering for their homes. Arrived there, they squat upon their hams or stand upon their hind feet at the entrance—a hole in the top—barking at the train as it passes. Should anyone venture too near, down they go, and their city is as silent as the "city of the dead." It is said that the opening in the top leads to a subterranean chamber, connecting with the next dwelling, and so on through the settlement; but this is a mistake, as a few buckets of water will drown out any one of them.

The prairie dog is of a sandy-brown color, and about the size of a large gray squirrel. In their nest, living with them, are found the owl and rattlesnake, though whether welcome or not is uncertain. He lives upon grasses and roots, and is generally fat, and is by some, Mexicans especially, considered good eating, as his flesh is sweet and tender, though rather greasy. Wolves prey on the little fellows, and may be seen sneaking near the town, hoping, by chance, to pick up some straggler. But the dogs are not easily caught. Some one is always on the lookout for danger, and gives the alarm on the first intimation of trouble. Then away they all scamper to their holes.

There are settlements for miles up and down the road, but none that can compare in size with what is dignified on the map as Prairie Dog City.

C. S. S.

[A prairie dog village was one of the first things of interest started in the "Zoo" in this city, and, judging from the number of inhabitants and their activity, it would soon become a city were they not restrained by brick and iron. But probably "Huon" will tell us all about them ere long.—Ed.]

(For Fanciers' Journal.)

CAT SQUIRREL (*Sciurus Cinereus*).

BY O. D. FOULKE.

I NOTICE in your paper many references to the Fox and Gray squirrels, but nothing about the Cat squirrel, which, I believe, is peculiar to the middle states. Is it so rare that none of your many correspondents meet with it, or do they take it for merely a variety of the Fox squirrel? In my collection trips, in the mountains of Pennsylvania, I have shot numbers of Gray, Black, and Fox squirrels, but have only been able to procure four specimens of the Cat squirrel, and these in but one place: in the Cumberland valley, at the foot of the South mountains, in a tract of heavily wooded bottomland, known, I believe, as the Rich Lands.

Two of the specimens were of a beautiful light silvery-gray color, one a reddish orange slightly sprinkled with gray, while the other was nearly black. I showed the skins to Professor Baird, of the Smithsonian Institute, who was staying at Carlisle at that time, and he pronounced them to be fine specimens of the Cat squirrel (*S. Cinereus*).

They are much larger than the common Gray, and a little smaller than the Fox squirrel, being about twelve inches long in the body, with a broad flat tail about eleven inches, just an inch shorter than the body. In form, they are much stouter than either the above varieties, and I found them much less active in their movements and more covered with fat than any other variety of squirrel. The fur is a little inclined to be woolly, but, aside from this, they much resemble the Fox squirrel, and might easily be taken for it by persons unacquainted with that peculiar mark of the *S. Vulpines*—the white ears and nose.

A GALESBURG farmer, whose pew rent was raised to twenty-five dollars, exclaimed: "Great Caesar! here's a nice state of affairs—the gospel going up, and pork coming down. What's to become of us?"

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words, describing and offering for Exchange only, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

Advertisements "TO EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstance be admitted to the Exchange or Want column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

MILTON J. RUTH, Globe Hotel, Lancaster, Pa., will exchange a few numbers of "The Illustrated Book of Pigeons," by Robert Fulton for Fancy Pigeons; books in best of order.

FRANK R. HOWELL, Lancaster, Pa., will exchange Yellow Duckwing Game cockerel (took first prize at York last week), and one Guinea Pig heavy with young—for Red Pyle, White or Black African Game Bantams. None but good birds wanted.

I. P. LORD & BRO., Waupaca, Wis., will exchange one pair fine Tartar Games, young, for Dr. J. W. Cooper's work on "Game Fowls," or trio of same for "Tegetmeier's Poultry Book."

WINTER BROTHERS, Lock Box 5, Southbridge, Mass., has for exchange, first-class Dominique Leghorns (Lowe's strain), for Dark Brahmas and Black-breasted Red Game Bantams. What offers?

GEO. A. MEACHAM, North Cambridge, Mass., will exchange Black Spanish cockerels, White Cochins cockerels. Light Brahma cockerels, one Setter dog, almost nine month's old—for Plymouth Rocks and White-crested Black Polands.

FANCIER, Box 314, Worcester, Mass., will exchange choice Brown Leghorn hens (Wheeler's strain), also, White Fantail Pigeons—for a good Rifle, Revolver, Jewelry, or other articles. Write description.

W. W. ELLIOTT, McEwensville, Pa., has for exchange one trio Aylesbury Ducks (Todd's stock), Light Brahma cockerels (Williams' strain), and a fine collection of postage stamps—for Winged Turbids, Bald Tumblers, Moorcaps, Magpies, Archangels, and a White Fan hen. None but good birds wanted.

D. S. WENRICH, Bernville, Berks Co., Pa., will exchange two trios of White Holland Turkeys for Dark Brahmas. What other offers?

H. K. OSBORN, Cambridgeport, Mass., will exchange a fine muzzle-loading Rifle, with patent steel hardened breech, also bullet moulds, etc.—for Fancy Fowls or Pigeons. Rifle cost \$125, and is as good as new. Make me an offer.

GEO. SHIRAS & BRO., No. 3 Stockton Ave., Allegheny City, Pa., will exchange Blue Antwerp cocks (partly trained). A single cock for any of the following pairs: Red or Blue Swallows, Tumblers, or Moorcaps. Two cocks for Red or Mottled Jacobins or Baldheads. Must be first-class.

W. S. KEMP, Dayton, Ohio, will exchange one pair Buff Cochins, one pair W. F. B. Spanish, one pair G. L. S. Bantams, one trio Sultans, one pair Red Bars, one pair Archangels, one pair Black Magpies, one Black Swallow hen—for one Yellow Pouter hen, one Black Swallow cock, one Yellow-winged Turbit hen, or other offers in pigeons, books, etc.

JAS. W. McMAKIN, 25th Ward, Cincinnati, Ohio, will exchange Black Cochins fowls or chicks (P. Williams' strain), B. B. R. Game Bantam and Buff Cochins cockerels—for Buff Cochins pullets, White Cochins cockerels, or Bronze Turkeys. Must be good, as mine are.

D. F. PARKER, Station A, Cincinnati, Ohio, will exchange Black Carriers, Blue Pouters, Redwing Turbids, and Archangels—for Yellow Carriers, Yellow Pouters, or Houdan pullets.

H. T. BOLLES, Rockville, Conn., will exchange Stationary Steam Engine (six horse-power), Boiler, twenty feet of Shafting, Hangers, etc.—for offers.

J. F. FERRIS, Stamford, Conn., would like to exchange White Leghorns of his celebrated strain, for good light Harness, Carriage Hobs, etc. Also, Dark Brahmas, Plymouth Rocks, Aylesbury Ducks, and fine Bantams of all kinds—for Pekin Ducks.

J. F. FERRIS, Stamford, Conn., wants choice Light Brahmas in exchange for extra fine Red Pyle Game Bantams, Gold-laced Sebright Bantams, or White Leghorns of my well-known strain.

H. T. BOLLES, Rockville, Conn., will exchange a few thoroughbred Brown Leghorns, American Dominiques, Pea-comb P. Cochins, and Light Brahmas—for white Fantails or White Pouters.

HARRY K. WELSH, York, Pa., will exchange one pair White Fantails, one pair Mottled Tumblers, Brent's Book on Pigeons, 112 pages, and A No. 1 Allen (seven-shooter) Revolver—for A No. 1 nickel-plated Revolver (seven-shooter), Game Bantams, Red Pyle or B. B. Reds, or offers.

T. H. CARPENTER, Foxburg, Clarion Co., Pa., will exchange three first-premium Plymouth Rock cockerels for pullets or Dark Brahma hens or pullets; also, one trio P. Cochins and one pair Houdans (chicks) to exchange as above.

S. NEWTON, Oakdale Station, Allegheny Co., Pa., will exchange Dark Brahmas (A. A. Miller's strain), three White Leghorn hens—for Planet Jr., No. 2 Seed Drill, in good order. Also, Golden Polish cock, first-premium bird, for pair Guinea pigs.

BOX 474, Orange, N. J., has to exchange, fine Partridge Cochins, S. S. Hamburgs, or Dark Brahmas—for a good single light buggy harness.

W. W. MARTIN, York, Pa., will exchange two Black Cochins cockerels and two Black Cochins pullets (Todd)—for Fancy Pigeons or what offers. P. O. Box 246.

ERNEST W. WIDER, East St. Louis, Illinois, has to exchange two pairs Hants for two trios B. B. Red Game Bantams or Duckwing Game Bantams; two pairs Bars for one pair Black Baldheads; two pairs Pigmy Pouters for one pair Blue Baldheads; two pairs Carriers for one pair Black and one pair Blue Beard Tumblers.

IF YOU WISH TO MAKE A TRADE of any kind, write to J. F. FERRIS, Stamford, Conn. Will take anything of value that does not eat in trade for really choice fowls! Read this twice at home; profit by it; and say what we shall do for you.

W. ATLEE BURPEE, Philadelphia, Pa., will exchange Dark Brahma, Partridge Cochins, Brown and White Leghorn cockerels, Buff Cochins, Rouen and Aylesbury Ducks, Fancy Pigeons, etc.—for pullets, Bremen Geese, Pekin and Cayuga Ducks, Poultry, Pigeons, Ferrets, and Rabbits.

L. A. HAYS, Spring City, Chester Co., Pa., will exchange two Rouen drakes, White Fantails, Pearl Guineas, extra-large Black Gobbler, Pea cock, two pairs Sultans, pair Black Carriers—for Light Brahmas, three White-crested Black Polands, pair Maltese cats, or Blue, Black, or Yellow Fans. Good stock wanted.

CHARLES LIPPOLD, Lancaster, Pa., will exchange one pair of White Frizzles (took first at York), German Canaries, Goldfinches, Linnets, Guinea Figs, White Rabbits, one Red Squirrel, Red, Black, Yellow-mottled Tumblers; White, Blue, and Mottled Trumpeters—for White Owl cock, White Turbit hen, and Bantams of all kinds; none but good birds wanted.

J. T. BELL, Franklin, Pa., has a single-barrel, muzzle-loading Target Pistol, eight-inch rifled barrel, plain finish, valued at \$8; and a good Microscope, in a neat box, valued at \$10—to exchange for Black-breasted Red Game pullets of good stock.

JAMES L. VOSE, Kerserville, Pa., will exchange Buff Cochins and White Leghorn cockerels for Light Brahma cockerels and Partridge Cochins pullets. My Black Cochins are June hatch, and weigh 8 pounds each.

G. J. BAKER, Oakville, Ont., Canada, will exchange Partridge and Black Cochins, S. S. Bantams, Pouters, and English Tumblers—for Rifle, double-barreled Gun, chest of Carpenters' Tools, or Black and Tan sul (must be small and well bred).

E. W. WATSON, Titusville, Pa., will exchange Target Rifle, with telescope and implements complete, cost \$200, all in good shape for shooting—for a good double or single Harness, Portland Cutter, Robes, or anything that is used in a lively stable, except horses.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column until thoroughly exposed.

J. F. FERRIS, Stamford, Conn., wants at once a good Light Harness, new or nearly so, in exchange for choice thoroughbred fowls. Also, Pekin Ducks and Light Brahmas wanted in exchange for Bantams of superior merit.

H. B. GIBSON, Lock Box R, Cincinnati, Ohio, wants the name and P. O. address of all the Pigeon Breeders in the United States, with a view of purchasing enough to stock a large lot.

J. B. COLVILL, 411 Market Street, Philadelphia, Pa., wants six Silver-spangled hens; nothing but first-class stock wanted. Address above, with particulars.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

PHILADELPHIA, JANUARY 20, 1876.

No. 3.

POULTRY DEPARTMENT.

WISCONSIN STATE POULTRY ASSOCIATION.

We are indebted to G. H. Spear, Secretary, for the following list of awards:

CLASS I.—ASIATICS.

First premium, \$3; second premium, \$2.

Brahmas—Light—Cock, C. Robertson, Beloit, 1st. Hen, S. H. Seamans, Wauwatosa, 1st; C. Robertson, 2d. Cockerel, Ziegler & Williams, 1st; S. A. Philbrook, Brookfield, 2d; S. H. Seamans, 3d. Pullet, C. Robertson, 1st; Ziegler & Williams, 2d; S. A. Philbrook, 3d. Dark—Cock, S. H. Seamans, 1st; John Mueller, 2d; Peter Schoen, 3d. Hen, S. H. Seamans, 1st and 3d; J. Mueller, 2d. Cockerel, S. H. Seamans, 1st; Peter Schoen, 2d; C. A. Koeffler, 3d. Pullet, J. Mueller, 1st; C. A. Koeffler, 2d; S. H. Seamans, 3d.

Cochins—Partridge—Cock, H. D. Gardner, 1st; J. Miller, 2d; C. Robertson, 3d. Hen, C. Robertson, 1st; J. Miller, 2d and 3d. Cockerel, C. Robertson, 1st; S. A. Philbrook, 2d; S. H. Seamans, 3d. Pullet, H. D. Gardner, 1st; S. H. Seamans, 2d; J. B. Crosby, St. Joseph, Mich., 3d. White—Cock, J. B. Crosby, 3d. Hen, J. B. Crosby, 3d. Cockerel, S. H. Seamans, 1st and 2d; S. A. Philbrook, 3d. Pullet, S. H. Seamans, 1st and 2d; S. A. Philbrook, 3d. Black—Cockerel, Dr. H. Enos, 1st. Pullet, Dr. H. Enos, 1st and 2d.

CLASS II.—DORKINGS.

Silver-gray—Cock, S. H. Seamans, 1st. Hen, S. H. Seamans, 1st. Gray—Hen, S. H. Seamans, 1st.

Plymouth Rocks—Hen, S. H. Seamans, 1st. Cockerel, J. B. Judson, 1st; S. H. Seamans, 2d and 3d. Pullet, J. B. Judson, 1st; S. H. Seamans, 2d and 3d.

CLASS IV.—SPANISH.

Black—Cock, H. D. Gardner, 1st and 2d; J. W. Steffen, 3d. Hen, H. D. Gardner, 1st and 2d. Cockerel, H. D. Gardner, 1st; Ziegler & Williams, 2d; S. H. Seamans, 3d. Pullet, S. H. Seamans, 2d and 3d.

Leghorns—White—Cock, S. H. Seamans, 1st; J. B. Crosby, 3d. Hen, S. H. Seamans, 1st; Leon Howard, 3d. Cockerel, S. H. Seamans, 2d and 3d. Pullet, S. H. Seamans, 1st; G. A. Cunningham, 2d; Leon Howard, 3d. Brown—Hen, G. A. Cunningham, 1st. Cockerel, M. J. Lane, 1st. Pullet, M. J. Lane, 1st; G. A. Cunningham, 3d.

CLASS V.—POLISH.

Polands—White-crested Black—Cock, Dr. Horace Enos, 1st. Hen, Dr. Enos, 1st. Cockerel, S. H. Seamans, 1st. Pullet, S. H. Seamans, 1st; Dr. Enos, 2d; G. W. Lee, 3d.

CLASS VI.—FRENCH.

Houdans—Cock, S. H. Seamans, 1st; George Butters, Oak Park, Ill., 2d; S. H. Seamans, 3d. Hen, S. H. Seamans, 1st and 3d; George Butters, 3d. Cockerel, George Butters, 1st; S. H. Seamans, 2d. Pullet, George Butters, 1st; S. H. Seamans, 2d.

CLASS VII.—HAMBURGS.

Golden-spangled—Cock, S. H. Seamans, 2d. Hen, S. H. Seamans, 1st. Silver-spangled—Cock, S. A. Philbrook, 1st. Hen, Hermann Preusser, 1st. Cockerel, G. W. Lee, 1st. Pullet, S. A. Philbrook, 1st, 2d, and 3d.

CLASS VIII.—GAMES.

Black-breasted Red—Cock, J. W. Cross & Bro., Winneconne, 1st and 2d; G. A. Cunningham, 3d. Hen, J. W. Cross & Bro., 1st; S. H. Seamans, 2d; W. Lindman, Milwaukee, 3d. Cockerel, J. W. Cross & Bro., 1st, 2d, and 3d. Pullet, J. W. Cross & Bro., 1st, 2d, and 3d. Brown-breasted Red—Cock, G. A. Cunningham, 1st. Hen, G. A. Cunningham, 1st. Cockerel, S. H. Seamans, 1st. Pullet, S. H. Seamans, 1st. Silver Duckwing—Cockerel, H. D. Gardner, 1st. Pullet, H. D. Gardner, 2d. Spangled—Cock, F. J. Kline, 1st. Cockerel, F. J. Kline, 1st. Pullet, F. J. Kline, 1st. Pyle—Cockerel, S. H. Seamans, 1st and 2d.

CLASS IX.

Silbies—Cock, Dr. H. Enos, 1st. Hen, Dr. Enos, 1st. Cockerel, Dr. Enos, 1st and 2d. Pullet, Dr. Enos, 1st and 2d.

Friszles—Cock, Dr. Enos, 1st; H. D. Gardner, 2d. Hen, H. D. Gardner, 1st; Dr. Enos, 2d.

CLASS X.—TURKEYS.

Bronze—Gobbler, S. H. Seamans, 1st; M. Robinson, 2d. Hen, S. H. Seamans, 1st; M. Robinson, 2d. Cockerel and pullet, S. H. Seamans, 1st in each. Best fat turkey—J. Johnson.

Guineas—White—Fowls, pair, Dr. H. Enos, 1st and 2d.

CLASS XII.—GEESE.

Toulouse—C. Robertson, 1st; S. H. Seamans, 2d.

Bremen—S. H. Seamans, 1st; C. Robertson, 2d.

Wild—John Stuart, 1st.

African—J. Johnson, 1st; Mrs. Said, 2d.

Best fat goose, J. Johnson.

CLASS XIII.—DUCKS.

Rouen—S. H. Seamans, 1st and 2d.

Aylesbury—White—S. H. Seamans.

Pekin—Amos Sawyer.

Muscovy—White—S. H. Seamans.

CLASS XVI.—BIRDS.

German Canaries—Pair, Mrs. F. W. Spear, 1st and 2d. Cardinal Red-bird—Dr. H. Enos.

CLASS XVII.

Guinea Pigs—S. A. Philbrook, 1st and 2d; J. E. Bast, 3d.

MISCELLANEOUS.

Heaviest Turkey—S. H. Seamans. Heaviest Goose—C. Robertson. Heaviest Pair of Ducks—S. H. Seamans.

CLASS XV.—PIGEONS.

First premium, \$3; second premium, \$2.

English Carriers—Black, G. H. Spear, Milwaukee, 1st; Dun, G. H. Spear, 1st. Red, G. W. Lee, Milwaukee, 1st. Blue, G. H. Spear, 1st. White, G. H. Spear, 1st. Mottled, G. H. Spear, 1st. Barbs—White, G. H. Spear, 1st. Black, G. H. Spear, 1st. Red, G. H. Spear, 1st and 2d. Yellow, G. H. Spear, 1st and 2d. African Owls—Blue, G. H. Spear, 1st. Tumblers—Button-head, G. H. Spear, 1st and 2d. Almond, W. A. Collins, Milwaukee, 1st and 2d. Black Mottled Trumpeters, W. A. Collins, 1st and 2d. Splashed, W. A. Collins, 1st and 2d. Black, W. A. Collins, 1st. White, F. C. Germain, Milwaukee, 1st. Pouters—Yellow, J. Williams, Milwaukee, 2d. White, G. H. Spear, 1st; J. Williams, 2d. Blue, J. Williams, 1st and 2d. Red, J. Williams, 1st and 2d. Blue-checked, W. A. Collins, 1st. Fans—White-crested Calcutta, F. C. Germain, 1st; W. A. Collins, 2d. White Plain-head, F. C. Germain, 1st. Black, G. H. Spear, 1st. Blue, W. A. Collins.

SWALLOW PIGEONS.

First premium, \$2; second premium, \$1.

Blue, G. H. Spear, 1st. Black, J. Williams, 1st; F. C. Germain, 2d. Red, G. H. Spear, 1st; J. Williams, 2d. Yellow, J. Williams, 2d. Blue Swallows, white bars, W. A. Collins, 2d. Turbats—Silver-wing, F. C. Germain. Yellow-wing, W. A. Collins, 1st; F. C. Germain, 2d. Red-wing, F. C. Germain, 1st; J. Williams, 2d. Blue-check Wing, F. C. Germain, 1st. Black-wing, F. C. Germain, 1st; J. Williams, 2d. Tumblers—Yellow, F. C. Germain, 2d. Black Mottled, W. A. Collins, 1st and 2d. Black, G. H. Spear, 1st. Kite, G. H. Spear, 1st. Black Bald-head, G. H. Spear, 1st. Blue-beard, F. C. Germain, 1st. Red-beard, F. C. Germain, 1st. Red, W. A. Collins. Nuns—Black, W. A. Collins, 1st and 2d. Archangels—J. Williams, 1st. Priests—Black, G. H. Spear, 1st. Red, J. Williams, 2d. Spangled, J. Williams, 1st. Yellow, J. Williams, 1st. Jacobins—Red, Black, White, Red-mottled, and Yellow, J. Williams, 1st in each. Helmets—Yellow, G. W. Lee, 1st. Ice Pigeons—G. H. Spear, 1st; W. A. Collins, 2d. Moorheads—Blue, G. H. Spear, 1st. Black, J. W. Williams, 1st.

CLASS XVII.—BANTAMS.

Game—Black-breasted Red—Cock, S. H. Seamans, 1st; S. A. Philbrook, 2d; H. D. Gardner, 3d. Hen, G. A. Cunningham, 1st; S. H. Seamans, 2d and 3d. Cockerel, S. A. Philbrook, 1st; Miss Alice Wells, Milwaukee, 2d; S. H. Seamans, 3d. Pullet, S. H. Seamans, 1st; S. H. Philbrook, 2d; Miss Alice Wells, 3d. Silver Duckwing—Cock, S. A. Philbrook, 1st; S. H. Seamans, 2d and 3d. Hen, S. H. Seamans, 1st and 2d; F. Ricketson, Milwaukee, 2d. Pullet, S. H. Seamans, 1st and 2d; F. Ricketson, 3d. Yellow Duckwing—Cock, S. A. Philbrook, 3d. Hen, S. A. Philbrook, 1st and 2d. Pyle—Cock, S. H. Seamans, 1st. Hen, Houghton Bros., Milwaukee; S. H. Seamans, 2d. Cockerel, Houghton Bros., 1st; S. H. Seamans, 2d and 3d. Pullet, S. H. Seamans, 1st and 2d.

Gold-laced Sebright—Hen, S. A. Philbrook, 1st. Cockerel, S. H. Seamans, 1st and second. Pullet, S. H. Seamans; S. A. Philbrook, 2d. Silver-laced Sebright—Cockerel, H. I. Allen, Schoolcraft, Mich., 1st. Pullet, H. I. Allen, 1st. Black African—Cock, S. H. Seamans, 1st; Dr. H. Enos, 2d. Hen, S. H. Seamans, 1st; Dr. H. Enos, 2d. Cockerel, Dr. H. Enos, 1st; S. H. Seamans, 2d; S. A. Philbrook, 3d. Pullet, S. H. Seamans, 1st and 2d; S. A. Philbrook, 3d.

DOGS.

Pointer—F. A. Turner, Stoughton, Wis., 1st. Spaniel—Jacob Wisner, Milwaukee, 1st. Native English Setter—J. S. Ormsby, 1st. Black-and-tan Gordon Setter—J. S. Ormsby, 1st. Setter Pupps—Charles Goets, 1st and 2d. Bull Terrier—J. L. Griffen, 1st; Frank Whitney, 2d.

It was decided that a bird must figure eighty-five points for first premium; eighty points for second, and seventy-five points for third.

(For Fanciers' Journal.)

MARYLAND POULTRY ASSOCIATION.

BALTIMORE is ahead. The third annual exhibition of the above-named association took place in Baltimore, January 3d to 7th, and was decidedly a success. The interest manifested by the public in this show was of a character both gratifying and remarkable. The attendance of visitors, on the first and second days, was so great, that to judge many of the fowls properly was difficult and the judges were fain to request the officers to have a portion of the aisles closed until they had completed their labors. Taking the number of ladies and children that visited the show, as an index of the interest felt in fancy poultry, etc., Maryland must be singularly favored, for they surely composed a large proportion of the visitors. All things taken into consideration, we believe this to be the finest show of the season. Maryland Institute, where it was held, is well adapted for the purpose, as it is large, well-lighted and conveniently located. Outside the hall, near the entrance, were displayed beautiful paintings of fowls and pigeons, which presented an attractive appearance and caught the eye of the passing throng, giving a vivid and life-like picture of the living specimens to be seen within the hall, and we doubt not, lured many for the first time into a poultry show. In fowls, the interest apparently centred on the Asiatics. Of Light Brahmas, there were nineteen coops. The first prize pens were remarkably fine in color and of good size; this pair were awarded the silver cup for best pair of Asiatics; also, special for best cock. The second prize pair were also good, both in point of size and markings. There were several more coops shown in this class to which the judges would gladly have awarded premiums, but, as only first and second prizes were offered, they were compelled to pass them. Dark Brahmas, ten coops. Taken as a whole, this class was not very good, the prize birds being the only ones worthy of notice, the majority of the hens showing the white shaft plainly, while many of the cocks were brassy or brown on the back.

Buff Cochins were not a large class, nor were they particularly good, many of the hens being marbled or mottled in color; this, however, seems to be prevalent in Buffs this year, both here and in England. Partridge Cochins mustered ten coops; some of the hens were remarkably well penciled and of good size. The first and second prize hens were good birds, the cocks especially so. White Cochins were a very small class, only three coops, and of passable quality. Black Cochins, of this variety, we did not see a single coop; they ought to be more popular, but do not seem to meet with much favor. Dorkings were a small class, one pen of Silver-gray and two or three of colored Dominiques—Plymouth Rocks were also few in numbers and of fair quality. The Hamburg classes were not strong in numbers, but some excellent fowls were shown. Black Spanish were a good class, in fact the best display we have seen for some time, and contained some really good birds. Brown Leghorns were a poor class, two pens, and both were disqualified. White Leghorns were quite a good display, and some excellent birds were shown. The French classes were also small in numbers, but contained some good specimens. Polish were represented by White-crested, Black, and Silver-spangled. The first prize cock, of the Silver variety, was a grand bird. The White-crested Blacks were also fine, the first prize pen especially so, winning silver

cup for best pair of Polish. Games were well represented by Black-reds, Brown-red, Gray, Spangle, Duckwing, etc. The Black-reds were undoubtedly the best, and won the cup for best pair of Games. Bantams were small classes, but contained some good specimens. Black-reds were rather the best class, Sebrights, both Golden and Silver, were about the average. Turkeys were well represented by Bronze, and one or two pens of White. The display of water-fowls was not large, but some good Rouens and Aylesburys were shown.

The display of pigeons was simply grand. We doubt if such a magnificent show of really high-class birds was ever before seen in this country. There being over five hundred entries of pigeons, and all strictly first-class specimens, we confess our inability to do the pigeon department justice; hence, shall not attempt it, but leave it for a more able pen. The exhibition was to conclude the last two days with a display of pure-bred dogs. Judging from the numerous inquiries, of would-be exhibitors, this also promised to be a success. We regretted our inability to remain until the close of the show. The arrangements of the show and its management were a credit to the officers, who have good reason to congratulate themselves upon the success of their exhibition, which they well deserved, as the energy displayed by Mr. Slifer, the President, and Mr. G. O. Brown, the courteous and gentlemanly Secretary, would insure the success of anything, in the way of a poultry show, they might undertake. We are especially grateful to them and others for the pleasure we enjoyed while at the show, and when Baltimore has a hen show again, may we be there to see.

W. E. FLOWER.

(For *Fanciers' Journal*.)

THE DUCK QUESTION.—No. 1.

BY J. Y. BICKNELL.

IN presenting this subject to the readers of the *Fanciers' Journal*, I shall, for want of a larger store of language, be obliged to copy in part from my Catalogue of 1871; yet I hope to present some ideas that will be new and interesting to such as are seeking instruction. In treating of the comparative merits of the different varieties of ducks, I shall not aim to establish or overthrow any hobby, but present facts candidly and fearlessly, regardless of frown or favor. In view of the fact that Pekins have held so prominent a place, I shall digress from the natural order and discuss their comparative merits at the outset.

It is well known, that they have been recently introduced into this country, and that the entire stock, except a very few, have descended from Mr. Palmer's first importation. Notice of their arrival was duly chronicled, and their wonderful merits were conjectured. On account of their scarcity and supposed superiority, they have sold at extravagant prices, and purchasers have been found among those who never before supposed they had any affection for ducks.

Some purchasers fully believed in their represented superiority, while others supposed that high prices would be maintained, and great profits would accrue therefrom. With some, this last supposition has been realized while others have their Pekins on hand longing for customers.

I have found no other variety of ducks so plenty at our shows this season as Pekins, and I have been urged by several parties to purchase their entire stock. My first introduction to Pekins was at the Buffalo show, while judging ducks in 1874.

I was favorably impressed with them, and believed them to be a valuable addition to our stock of water fowls, but I did not believe they were much superior to our old varieties. My experience with them since verifies my first impression. In the early autumn of 1874, I procured, from headquarters, two pairs of early hatched birds. On their arrival, their size seemed immense, but on handling them they seemed light. I gave them a splendid chance; they shared the pond and stream with my Aylesburys for a few months, and, although they appeared so much larger, when tested by the scales the Aylesburys fell short of them in weight, just one pound to the pair.

During the winter I exhibited them successfully at two shows, then gave them as good a chance as my facilities, which are unexcelled, would admit of. The record that followed is so discouragingly bad that I omit it. In two instances I crossed a Pekin drake with an Aylesbury duck, as an experiment. The result was quite an improvement on the Pekins, both as to size and symmetry. The crosses bore no resemblance at all to the Pekins, but could easily have been mistaken for Aylesburys, with a slight tinge of yellow on the bills.

All the crosses have been slaughtered except four ducks, which I propose to experiment with the coming season. A neighbor of mine, last spring, crossed a Pekin drake with a Rouen duck, and the result was a splendid lot of black and white ducks that also outweighed the Pekins. Noticing a very nice lot of Pekins at a show last fall, I purchased the best pair, which were afterwards shipped to me. On their arrival I was again disappointed in their actual weight. A pair of late hatched Cayugas weighed in the same notch, although the Pekins looked to be one-third heavier. The scales informed me, also, that my young Aylesburys, Rouens, and Cayugas outweighed them by from one to three pounds per pair.

Pekins look much larger than either of the above-named varieties, but it is because their feathers are loose and fluffy. In view of these facts, have I not a right to claim that we have other varieties of ducks as valuable as Pekins? I discard the idea that they possess a *single point* of superiority over Rouens or Aylesburys. The compact, glossy plumage of the latter finds no comparison in the Pekin, and in symmetry and beauty the Aylesbury is ahead. It is of no account to us whether they come from the Imperial yards of the great heathen city or from the desert of Arabia—whether they are as plentiful as the sands of the seashore or as rare as pearls among pebbles. The point of interest with us is, Are they what they have been represented to be? I predict, and time will sanction my assertion, that to place Pekins on a par with our other valuable varieties is all that their merits will warrant. If they can rise higher, let them do so on their own merits, and not because others quack for them. I hope to hear from "Pekin" again; her articles are sensible and spicy.

"It makes good garden sass" to let your hens and chickens into your neighbor's grounds to take an Easter holiday.

"That bed is not long enough for me," said a tall, gruff Englishman, on being ushered into his bedroom by an Irish waiter at one of our hotels. "Faith, an' you'll find it's plenty long enough, sir, when you get into it," was the reply; "for then there'll be two more feet added to it."

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

SHOW OF PIGEONS AT BALTIMORE.

THE liberal schedule offered by the Maryland Poultry Association, together with the cups and other valuable prizes, brought out a large and beautiful collection of pigeons. The cream of the country were in the show. The high-class varieties contained some of the best birds ever shown on this side of the Atlantic; they were a great treat to behold and a surprise to all—not only to gentlemen of the fancy, but to the uninitiated in these feathered pets. We were pleased to see so many fanciers from neighboring cities, which happy meeting is the life of these interesting exhibitions, and many exchanges and purchases were made, to their mutual benefit, not forgetting the advantages in the comparing of good and bad studs of birds. Last year, the hall in which the show was held was found too small for the number of entries, which caused a fancier to wish that the largest hall in Baltimore would not be of sufficient size to hold the number of coops another season, which caused us to smile; but that enthusiastic fancier's wild expression (as we thought) has disappointed the hopes of the most sanguine and has been realized, as the hall was packed and no space for any more. The attendance of visitors was greater than at any exhibition of a similar character we have ever visited. The interest being taken in our pets we attribute partly to the large circulation of our poultry and pigeon periodicals, now to be seen in nearly every household. The grand display pleased all, which must have been very gratifying to the getters-up of so successful an exhibition. The birds had the best of attention given them, with good food and water. The well-sanded and new wire coops belonging to the association gave a neatness to the entire arrangement. In another season we hope to see printed labels of each variety posted on the coops, that strangers may recognize a Carrier from a flying Antwerp.

The society having offered a silver cup for the bird that would make the best time in a fly from Washington City to Baltimore, brought out several contestants. The race was won by Mr. Strine's Silver-dun Antwerp; time, one hour and forty-nine minutes; weather very cloudy. The time made did not satisfy the flying fanciers, as the same birds had flown the distance in much quicker time. The race created considerable excitement both in Washington and this city. Many persons witnessed the start from the dome of the capitol. The winning birds were again placed on exhibition, and attracted considerable attention and were much admired, as were also the beautiful Antwerps of Mr. Van Opstal, of New York, his birds having won prizes in races of several hundred miles in Europe. Many fanciers are now starting with this fashionable and intelligent variety

of pigeons. The crowded state of the aisles prevented us examining critically many of the birds; however, we managed to take a look at the winners and a few others. The judges were Mr. Long, of Philadelphia, and Mr. Stunyse, of this city, whose awards gave satisfaction in nearly all cases. We did not envy their work, as points in pigeons are so much finer now-a-days that it requires good and careful judgment to satisfy fanciers of the times.

There were ninety-one coops of Pouters, one fancier of this favorite variety (Mr. Becker) showing forty-two birds. First prize, Blue cock, very stylish and good in girth, rough limbed. Second prize (Caughey), a splendid bird, good in nearly all points, excellent in leg, crop, and moon, wanting only shoulder-marks. 705, very stylish and long in feather. 295, good color, large bird, but too thick. 475, highly commended, nice bird, fair marking, good legs. 476, rather small, good in girth and limb. First Blue hen, a very large bird and winner wherever shown; first two years in succession at New York; many supposed her to be a cock. Second prize hen, well placed, color and limb very good, no shoulder-mark. 480, nicely-marked hen. 481, highly commended, fair bird. First Black cock, a grand Pouter in all points and shown in splendid condi-

BLACK CARRIER COCK—SECOND PRIZE.

tion, the best for color and marking in the show. Second, fine bird, wanting in limb and color. 484, highly commended, excellent in limb and color, rather short in feather, good crop. First Black hen, not in good show condition, color and marking very good; we preferred second prize, with her good clean legs and feathered to our taste. 486, good in crop only. 487, fair bird, good crop. 708, unnoticed baby, we liked very much. The Black hen shown by Mr. Becker beat all the cocks in the show for crop. In Reds we find a great improvement in color of the cocks; some excellent birds in the class, and the winners hard to choose; nearly every bird deserving of a prize. First and second Reds very equal in points, the former the best in marking, the other best in leg and color; the prizes could have been reversed, second being such a stylish bird. 351, unnoticed, beat the pair in all points; a clean-marked bird, slightly ring-necked; he was sold, we believe, at what we thought a low price, to a New Yorker. Red hens not so good in color as is wanted. First Red hen, bad color, very long bird, good limbs, and a splendid stock bird; we preferred second prize hen. 493, a nice bird. Yellows were a good show, and well-known birds competed. First, a grand bird and no mistake, very long in feather, capital color, wanting only the rose to make him a bird hard to match. Second, a good Pouter. 358 seemed very young, only

wanting in leg-feathering; with a little more age he will be a good one; very long, thin girth, and quite stylish, with good marking. 228, worthy of a prize. First Yellow hen, a large bird. Second, we liked best; her being lame lost her the usual place; she is good enough to win anywhere. 677, a good hen. In young hens there were some good birds, 501 being the best in the lot, which won the special, 1875. First White cock will keep his place, and well deserves it, although some young ones coming on may take it from him. Second, also a good one. Several other White cocks deserved notice. Some very pretty young Whites shown. This class is always admired, especially by the ladies. The first White hen is always in her place; she changed hands, and now goes back to her old home; she recognized her old mate when she was put in an adjoining coop, and looked another bird just in time to catch the judges' eyes. Mealeys and Splashes contained some good birds and some inferior ones. One of the best in the lot was shown by Scheld, of Brooklyn.

BLACK CARRIER COCK—FIRST PRIZE.

Carriers, twenty-six entries. First prize Black cock (Yew-dall) was a grand bird, sound color, thick box beak, and the handsomest eye-wattle ever seen, and as near perfect as any Carrier ever shown; the condition of the bird attracted much attention; it will be difficult to find his equal. Second prize was a raven black, very long in face, beautiful in eye-wattle, and a very thin, long neck; a grand bird for the show-coop; head well up all the time, with that race-horse-like appearance so characteristic of these famous birds; he was a little faulty in beak; some fanciers regarded him as a dangerous competitor. The other Black cocks were good birds, but much behind the winners. First Black hen, good in head points. Second was a fair bird, her color very good; too young to compete with older birds. The first Dun cock was a magnificent bird, grand eye and beak-wattle, very strong in build, perhaps the best beak in the show; he was preferred by some to any bird shown; we thought he showed a little too much gullet, which gave him too thick an appearance about the head. Second prize Dun was a good bird in the show-coop, beautiful eye-wattle, rather too thick and short in neck, excellent beak. First prize Dun hen, a beautiful Carrier all over; very straight beak, excellent in color, and grand style, quite equal in size to most of the cocks. Second prize was not much behind, color not quite right. Pen 577, the best Dun Carrier hen we ever saw, good everywhere, and we think we are safe in calling her the best Carrier for a hen shown; we cannot see how she escaped the judge's notice; she deserved first prize, although her wattles were not quite as heavy as the win-

ner; one fancier of this noble bird tried hard for her, but she could not be left in Baltimore; she is a model of a Carrier, having all the points required in a first-class specimen. The other colors in Carriers need no special remarks.

Judging seventy-four short-faced Tumblers was no easy matter, the entire lot being so even throughout. First and second prize Almond cocks were two such birds as are not often seen, the latter only beaten in feather; he was a little gem, and had a wonderful head. Several others unnoticed were also good birds, especially the well-known Boston bird, who is now growing too dark. First prize Almond hen, excellent in step and carriage. Second, we preferred to the winner. Two others unnoticed were much better than the prize birds. The well-known little Scotch Lassie was again left out on account of a slight defect in beak. The highly commended hen was a grand bird in carriage and color, with the right Almond ground, beautifully spangled. The Reds were a grand class. First prize cock has won many prizes in Great Britain; he was the best Short-faced Tumbler in the show, so remarked a good Scotch judge of Short-faces. Second Red was a very fine style bird and excellent color. First Red hen (Wall), a neat little bird. Second, not so good in color. Agates were up in all points. Second Agate cock (Purvis), very good in head and beak. We preferred his hen to the first-prize hen, beating her in all points save feather. 746 contained a beautiful pair of Yellow Agates. Some good Mottles, Kites and Splashes were shown. The two latter colors we always like to see in the prize list; without them we could not well keep up our strain of Almonds.

A few very pretty Short-faced Balds were placed too high to be seen. They were very good in head, and some really clean cut, especially coops 452, 453, and 455. A nice pair of Yellows (long faces) were shown, also one pair of very small Blue Beards. Almonds always takes precedence in the Short-faced class. We preferred many of the other colors, especially the Red and Yellow Agate Mottles. The former, unless in their prime for feather, are not near so attractive. A special prize for the best pair of Short-faces (any color) might settle this question of feather.

RED BARB—FIRST PRIZE.

Sixty-two Barbs competed, and the winners well selected. Nothing wanting in the prize birds. The first Black cock (Slifer) was a Barb throughout, and we thought the best in the class. It was a grand show of Barbs, and many good birds changed hands. A few were not in prime show condition, and it would have been better had they been left at home; but a cup was at stake, and they all tried hard for it. We think the judges awarded the prizes to the right birds, without fear or favor.

The sixty-five Owls caused much talk in the judges' decision. The Blue Africans were very good in head points, and with their muffled frills were very pretty, yet we thought them very deficient in color. The latter we think a very important point in this favorite variety. We think the English and foreign should have separate classes. The several coops of White Africans were very clean and neat. In Blue and Powdered, as well as Yellows and Blacks, we saw some grand birds.

BLACK BARB COCK—FIRST PRIZE.

Thirty-six Swallows, nearly every coop good. The Blues, Reds, and Blacks with white bars, shown by Colell, of New York, were certainly deserving of the extra prizes. But the most perfect Swallow ever seen in Baltimore, the Blue Barless hen, coop 355, was as perfect as any of the Swallows in Fulton's new work, whether they are overdrawn or not. She is matchless. Her owner deserves much credit for showing such a faultless bird, which is as hard to breed true to feather as any of the Toy varieties. All of the known colors in Swallows in a row was quite a pretty sight.

Twenty-six Trumpeters, and four of them fine Russians, good Black and Mottles, the latter entirely too gay. Nice Yellows and Blues were shown. What has become of the pretty Reds we used to see so much?

Thirty-eight Turbits, all colors. A very pretty pair with white bars. Yellows few and good: points won over shells—why not? Reds were few, as were also Self-colors.

Twelve Jacobins. Not a first-class bird in the lot.

Eighteen Magpies, some very clean in marking. A very pretty pair of Reds won.

Twenty Fantails, some very fair birds. A beautiful pair of Whites, with shoulder-marks similar to Turbits.

Twenty Priests, consisting of Reds, Yellows, Starling, Spangled, and Ice—a very good collection. A famous pair of Yellows lost their place this time. The hooked-nose pair were given the preference. They were very pretty and won by having this extra point.

Eighteen Homing Antwerps. Their performance wins them the prize—not looks any more.

Archangels, Nuns, and other varieties contained nothing extra.

A good number of Short-faced Berlin (Maggie-marked) Tumblers were shown by Colell. They were new to the fancy here. Extra prizes were given to each color.

PRIZE LIST OF THE MARYLAND SHOW OF PIGEONS.

Pouters—Blue—Cock, 1st, J. Yewdall, Philadelphia, Pa.; 2d, N. W. Caughy, Baltimore; highly commended, A. Scheld, Brooklyn, N. Y. Hen, 1st, A. Scheld; 2d, N. W. Caughy; highly commended, C. Becker, Baltimore. Black—Cock, 1st, J. Yewdall; 2d, A. Scheld; highly commended,

C. Becker. Red—Cock, 1st, 2d, and highly commended, J. Yewdall. Hen, 1st, A. Scheld; 2d, J. Yewdall; highly commended, N. M. Pusey, Catonsville, Md. Yellow—Cock, 1st and highly commended, J. Yewdall; 2d, C. Becker; highly commended, A. Scheld. Hen, 1st and 2d, J. Yewdall. White—Cock, 1st and 2d, J. Yewdall; highly commended, C. Becker; highly commended, N. W. Caughy. Hen, 1st, John Yewdall; 2d and highly commended, C. Becker. Any other color—The following won prizes: A. Scheld, C. Becker, C. H. Clemm. Young Black cock, A. Scheld, \$5; Yellow, C. Becker, \$5; White, C. Becker, \$5; White hen, C. Becker, \$5. Best—Blue, C. Becker, \$5; Splash, A. Scheld; Mealy, A. Scheld, C. W. Clemm. N. W. Caughy's special for best Blue and White, J. Yewdall, \$10. Cup (value \$23), for best collection of Pouters, J. Yewdall; Carriers, J. Yewdall.

Carriers—Black—Cock, 1st and highly commended, J. Yewdall; 2d and highly commended, T. S. Gaddess, Baltimore. Hen, 1st and highly commended, J. Yewdall; 2d, T. S. Gaddess. Dun—Cock, 1st, J. Yewdall; 2d, T. S. Gaddess. Hen, 1st and highly commended, J. Yewdall; 2d and highly commended, T. S. Gaddess. Red—Cock, 1st, W. B. Cochran, Baltimore. Yellows—2d, F. Heine, Baltimore. Whites—1st and 2d, D. F. Wall, Baltimore.

Short-faced Tumblers—Almonds—Cock, 1st and highly commended, T. S. Gaddess; 2d, G. Purvis, New York; highly commended, S. H. Slifer, Baltimore. Hen, 1st and highly commended, T. S. Gaddess; 2d, G. Purvis. Red—Cock, 1st, T. S. Gaddess; 2d, D. F. Wall. Hen, 1st, D. F. Wall; 2d, T. S. Gaddess. Agate—Cock, 1st, T. S. Gaddess; 2d, Geo. Purvis. Hen, 1st and 2d, T. S. Gaddess. Black Mottled—Cock, 1st, T. S. Gaddess. Hen, 1st, T. S. Gaddess. Kite—Cock, 1st, S. H. Slifer; 2d, H. Colell; highly commended, T. S. Gaddess. Hen, 1st, H. Colell; 2d, S. H. Slifer; highly commended, T. S. Gaddess. Splashed—Cock, 1st, H. Colell; 2d, S. H. Slifer. Hen, 1st, H. Colell; 2d, S. H. Slifer. Silver pitcher and cup for best collection of Short-faced Tumblers, T. S. Gaddess. Short-faced Berlin Tumblers—Extra prizes were awarded to H. Colell for his collection of these varieties of Berlins. Extra prizes were also given for Yellow Short-faced Tumblers, 1st, D. F. Wall; 2d, C. Becker.

Balds and Beards—Cock, 1st and 2d, J. E. Koons. Hen, 1st and highly commended, J. E. Koons. **Beards**—1st in Yellow, 2d in Blue, 1st in Blacks, H. Colell; 2d, J. Oler, Baltimore.

Barbs—Black—Cock, 1st, S. H. Slifer; 2d, H. Colell; highly commended, D. Mordecai, Baltimore. Hen, 1st, D. Mordecai; 2d, H. Colell. White—Cock, 1st and 2d, S. H. Slifer. Hen, 1st, H. Colell; 2d, S. H. Slifer. Red—Cock, 1st, D. Mordecai; 2d, S. H. Slifer; highly commended, H. Colell. Hen, 1st, H. Colell; 2d, D. Mordecai. Yellow—Cock, 1st and highly commended, S. H. Slifer; 2d, D. Mordecai; Hen, 1st, S. H. Slifer; 2d, D. Mordecai. Dun—Cock, 1st, D. E. Newall, New York; 2d, S. H. Slifer. Cup (value \$23) and beautiful vase of wax flower offered by a lady friend of the society, won by S. H. Slifer.

Owls—White—Pairs, 1st, D. Mordecai; 2d, W. B. Cochran. Black—Pairs, 1st, H. Colell; 2d, D. Mordecai. Yellow—Pairs, 1st and 2d, D. Mordecai. Blue—Pairs, 1st, J. Schminck, Baltimore; 2d, W. B. Cochran. Blue-powdered—Pairs, 1st and 2d, D. Mordecai. Dun—Pairs, 1st, H. Colell. Cup, value \$23, for best collection of Owls, D. Mordecai.

Swallows—Black—Pairs, 1st, J. Schminck; 2d, T. Symington, Baltimore. Yellow—Pairs, 1st and 2d, T. S. Gaddess; highly commended, H. Colell and T. Symington. Red—Pairs, 1st, T. S. Gaddess; 2d, J. Oler. Blue—Pairs, 1st, J. Oler; 2d, T. Symington. Blue (barless), 1st, T. S. Gaddess. Extra prizes were awarded to H. Colell for Blue, Red, and Black Swallows with white bars.

Trumpeters—Black—Pairs, 1st, H. Colell; 2d, T. S. Gaddess; highly commended, D. Mordecai. Mottled—Pairs, 1st, H. Colell; 2d, T. S. Gaddess. Yellow—Pairs, 1st, F. Rommell, Baltimore; 2d, J. Schminck. White—Pairs, 1st, D. Mordecai; 2d, F. A. Rommell. Blue—Pairs, 1st and 2d, D. Mordecai.

Turbits—Black (self-color)—1st, W. B. Cochran; 2d, J. H. Lammers, Baltimore. Yellow (self-color)—1st and 2d,

A. N. RAUB, Associate Editor.

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES, IN THE UNITED STATES.

MICHIGAN STATE POULTRY ASSOCIATION.

JOS. M. WADE, ESQ.

DEAR SIR: Our arrangements for holding a union fair of poultry, dogs, cats, fish, fruits, flowers, vegetables, and babies, are progressing favorably, and our premium lists will be distributed this week. The fish commissioners are making an effort to hold a convention of all interested in pisciculture, and also of the state sportsmen's club, to secure some action for the preservation of game and fish. We hope to see here most of the eastern breeders who intend to visit Chicago, as our fair begins directly after the close of that of the National Association. Our most noticeable prizes will be \$25 for best five Light Brahma cocks or cockerels; \$50 for best Tortoise-shell Tom cat; golden double eagle for best baby under five years, and an excellent list on dogs of over \$300. Prize list and rules sent on application.

E. C. SKINNER, Secretary.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—The Skunk (*Mephitis*) is, we believe, the only undomesticated animal that always varies in color in the different individuals; no two are ever seen alike. Some are almost entirely black, others striped or spotted; some again nearly white. The skunk is found only in America, from the Strait of Magellan to Hudson's Bay. The colors are always white and black, none are ever seen entirely of either. They belong to the weasel family, but resemble the gluttons and badgers in habits and general appearance. They dwell, often, many families together, and are frequently found in the same hole with the woodchuck (*Arctomys monax*). They are active by day as well as by night, and when discovered, make no effort to escape, but are aggressive—acting always on the offensive. They are the most beautiful of American carnivora, and perhaps of any of our small quadrupeds.

J. M. McCAM.

—If "L" and "Aqua" could place the inside of the glass of their aquariums beneath the focus of a powerful microscope, they would behold a magnificent and boundless prairie, or pasture field, teeming with life of all imaginable shapes. They might behold terrific combats between monsters of the most grotesque and horrible forms. It is in the confervoid growth in the aquarium that the animalcula shelter, feed, and propagate; and it is in the pursuit of these, to us invisible forms of life, that the fish execute the double-quick movements up and down the glass. At night the fish will be found on the glass next to the light, where the animalcula are most easily seen.

C. VIULINUS.

—JET BLACK BUCK.—While hunting with a party of friends in the mountains, last fall, a jet black buck was seen, of unusual size and with noble antlers. White, or spotted deer are sometimes seen, but this is the only black one ever seen in these mountains. Any variation from the ordinary color is extremely rare. We also found and brought away, as a curiosity, a buck's horn of great size, and entirely free from "prongs" or "spikes," being as smooth as the horn of an ox.

J. M. McCAM.

—"Greeny" wants to know if the judge who made the following awards could be considered consistent, and whether the decisions were correct: 1, A. showed a pair of White Jacobins which were disqualified on account of not matching in eyes, being otherwise very fair birds; 2, B. showed a pair of Turbits, one a black wing, the other a red wing, which were awarded first premium over a pair of matched Reds that were very near, if not equal to, the odd pairs; 3, C. showed a pair of Colored Fantails, one having a slight crest, the other smooth head, one having darker eyes than the other, which were awarded third premium.

—A Californian is an authority upon any flea question: For that squirrel, Persian Insect Powder is good. For puppies, we wash in water with six drops of carbolic acid added to each pint; a salt-water bath is also good. A sure remedy is to catch the fleas, drown them in coal oil, then burn the oil. I wonder why their motive power couldn't be utilized. I think I saw once in some Turkish statistics, "If all the fleas a Turk carries in his clothes were to jump at once they'd carry him across the Bosphorus." E. S. S.

—"E's" ENGLISH SPARROWS (No. 48)—I am the friend of our native birds, so copy with pleasure this fling at the foreigners, by Wm. Flagg, in *Scribner's*, for December: "Since our people are resolutely bent on the destruction of our native birds, it may be fortunate that there exists a foreign species of such a character, that, like the white-weed and the witch-grass, after once being introduced, they cannot by any possible human means be extirpated. When all the native species are gone, we may be happy to hear the unmusical twitter of the house-sparrow, and gladly watch them and protect them, as we should if all the human race had perished but our single self, welcome the society of the orang-outang." E. S. S.

—A white snake was exhibited in this village by a traveller, some time since. It was about four feet in length, and had a horny protuberance on the point of its tail about half an inch long, and very sharp. He said he captured it in the mountains, and that it instantly killed one of his dogs by a blow of its tail. I am of the opinion that the horn was artificial; if so, it was so cleverly adjusted as to deceive the eye. That the snake was pure white there can be no doubt.

J. M. McCAM.

—The Council of the London Zoological Society have procured and deposited in their gardens a fine specimen of the Chimpanzee. It is a male and about five years old. It is playful and rather timid in disposition, and especially alarmed at the sight of a horse and cart. It was for some time in captivity in Africa before being shipped for England. It sits up and drinks out of a cup or from a spoon, and has learned to fold its hands and to box in a quiet way with its keeper, who can also make it laugh after a fashion of its own when pleased and caressed.

—SQUIRRELS.—In *Journal* for January 6th, J. M. McCam says, "that gray squirrels castrate each other." Is he sure of it? I have always supposed the operation was performed by the black squirrel (*Sciurus Caroliniensis*). I once shot a gray squirrel which was fighting with a black squirrel, and found him very severely wounded in the parts mentioned. I killed him with a bullet in the head, and the wound was fresh. So I am confident that he received it in the battle with his black cousin. Mr. McCam also says that the flying squirrel (*Pteromys Volucella*) "can fly from two to three hundred yards with ease." I have spent a great many years in the woods where these squirrels abounded, but sixty feet, with descent of at least twenty, is the longest flight I have ever witnessed.

J. M. TRACY.

—Snow-white hares are plentiful all through the mountains of this State. They are very much larger than the common gray variety, and are never found of any other color. They are very shy and as fleet as a greyhound, and are but seldom caught. Their habitats are the almost impenetrable Rhododendron thickets that fringe the mountain streams. J. M. McCAM.

—COMB PROTECTORS.—Have I, or have I not, improved on M. W. Miner's plan of comb protection? I found it very difficult to tie the flannel "caps" on my two favorite Leghorn cocks, and so I sewed them on with silk thread at front and rear of comb, by passing a needle once through the comb, and back, and tying the thread in a good knot. The chickens do not seem to mind it, and the cap stays on. Will it hurt them? J. W. GREENE.

CHILLICOTHE, Mo.

—SQUIRRELS.—The Santa Cruz *Scutinel* says, that in time, if no measures are used to check his ravages, the squirrel plague will soon be as fatal to California as the grasshopper has been to Kansas. Spasmodic and unsystematic efforts to abate him have been made, but without much success, except in a few localities. Occasionally, the inhabitants of a neighborhood turn out, and from time to time destroy thousands of the rodents, by poison and other destructive agents, and, in many instances, almost exterminate the pests; but, in a few weeks or months the number is as large as though none had been destroyed, for the simple reason that they emigrate in countless thousands from surrounding neighborhoods where they had not been poisoned. Hence, it is as useless as the endeavor to pump out the ocean, for any one community to exterminate them. All must join in the work at the same time, to make it effective. Therefore, we suggest that the law relating to the destruction of squirrels should be made applicable to all the counties of the state, and that every land owner should be compelled, at stated periods during each year, to devote a given number of days to the destruction of the pests; and for refusal or neglect to do so, be subjected to a penalty. We have the authority of farmers for saying that under some such system the state can be rid of a pest that now consumes not less than five per cent. of its products annually.

—RABBITS, HARES AND SQUIRRELS.—Your correspondent, J. M. McCam, seems to have fallen into the very error which note, page 710, December 9th, of *Fanciers' Journal*, has intended to correct. He has evidently taken, as usual, the rabbit for the hare. He says: "The nest of the hare is simply a hole in the ground, always lined with fur, and carefully covered with grass and leaves."

Dr. John D. Goodman says (*American Natural History*, Vol. 2, page 158): "The form (nest) of the hare is a mere space, of the size of the animal upon the surface of the ground, cleared of grass." And, on page 159, he says: "The American hare never burrows in the ground like the European rabbit."

S. G. Goodrich (*Animal Kingdom*, Vol. 1, page 341) says: "The breeding place of a hare is under a tuft of grass, a high brake, brushwood, or standing corn;" and on page 348, the same author says: "The rabbit digs a hole and pulls from her body a quantity of fur with which she makes a warm bed for her young." J. G. Wood (*Animal Kingdom*, page 582), says: "The hare does not live in burrows like the rabbit, but only makes a slight depression in the ground." On page 585 we read: "The female rabbit digs a burrow in which she places a quantity of dried herbage and down."

The *American Cyclopædia* (Art. hare), page 718, says: "The form (nest) is a mere depression of the ground." So much for the nests. Now for the young. J. M. McCam says: "The young of the hare are from three to eight in number, and are usually born in April." Now, all the authors above quoted, and others not quoted, as Buffon, Audubon, etc., state the young of the hare to be from two to five, and instead of being born in April exclusively, are littered, at least, in *five* months of the year. "The rabbit," says J. G. Wood, page 585, "gives birth to seven or eight." And Goodrich says, page 348: "A vigorous female will produce about eight young rabbits, not only in April, but seven times in the course of a year. I think, here are au-

thorities enough to show that J. M. McCam mistook the hare for the rabbit.

Now, a word about the flying squirrel. J. M. McCam says: "They can fly from two to three hundred yards with ease." I must confess that this takes me "on the fly." "And that naturalists say only about fifty feet." Now, I know not where J. M. McCam gets his authority for either of these statements. Goodrich (*Animal Kingdom*, page 355,) says forty or fifty yards (not feet), and the *American Cyclopædia*, page 583, says: "It sails a distance of forty or fifty yards." Buffon, Goodrich, and Wood, merely say it can leap or fly quite a distance; and, surely, if they could have even dreamed of a *volella* getting over ground, or air, to the extent of three hundred yards, nine hundred feet, between a fifth and a sixth of a mile, they would not have been content with such a simple statement, but would rather have given full value to the animal power and placed it among the wonders of nature.

If J. M. McCam, or any of our readers, will turn to page 583, *American Cyclopædia*, he, or they, will see how this mistake, if it is one, has been made. As to the habits of the gray squirrels castrating each other, I can find no authority for it, in a vast amount of reading; nor can I that of the flying squirrel to live in the same tree with the gray. Each of these habits are certainly too strange to have escaped the especial notice of such naturalists as Audubon, Charles Bonaparte, and others, who wandered for seasons through our American forests, making them and their inhabitants their study. HUON.

CORRESPONDENCE.

INDIANA POULTRY ASSOCIATION.

EDITOR FANCIERS' JOURNAL.

DEAR SIR: The Indiana Poultry Association held their annual meeting January 6th, and elected the following officers for the ensuing year:

President—A. C. Shortridge.

Vice-President—Robert Mitchell.

Secretary—Wm. H. Fry.

Treasurer—W. F. Christian.

Executive Committee—I. N. Barker, E. G. Bagley, O. W. Brownbeck, with the President and Secretary ex-officio.

The Association is in a prosperous condition, financially, and decided to hold an exhibition at Indianapolis, January 2, 3, 4, and 5, 1877.

Respectfully yours,

W. H. FRY,

Secretary.

INDIANAPOLIS, January 14, 1876.

ANOTHER FOLLY.

MR. WADE.

DEAR SIR: Last week, with the wisdom of an Owl, I visited your city in pursuit of a Pouter, whom I have spotted, and whom I shall prevent becoming a Nun, by calling in a Priest to assist me to Carry off, though she will surely Tern me from a Laughter into a Tumbler for Trumpetering like a Maggie, that my Helmet, Shield, and Breastplate, have not protected me from the Barbs of that Archangel, poetically known as Cupid. Of course, I had no time to visit No. 39 N. Ninth Street, but you know how a fellow feels under such circumstances [No, we don't.—Ed.], and I will try to do better next time. If you have not already enough on Hérédité, make use of the inclosed and possibly when I settle the present (it will not do to call it folly, she might broomstick me), I may return to "Youthful Follies." Do not forget to send me a few copies of No. 52, Vol. II. See postal card. The *Journal* is universally liked, and is certainly a successful fancier's paper.

Very respectfully,

WILL. BURLEIGH.

POULTRY AND PIGEON HOUSE WANTED.

JOS. M. WADE, Esq.

DEAR SIR: I would request (through the medium of your valuable paper) that some of the old "fanciers" furnish a plan of a poultry house, for four different varieties of fancy poultry; the second story of which is to be devoted to the breeding of four different varieties of fancy pigeons.

Hoping that some one will respond,

I remain, truly yours,

JANUARY 12, 1876.

J. E. M.

TEACHER—"What is the definition of flirtation?" Intelligent young pupil—"It is attention without intention."

"NEVER enumerate your juvenile poultry anterior to the period of incubation;" or, in other words, "Never count your chickens before they are hatched."

SMALL PET DEPARTMENT

AND YOUNG FOLKS' CORNER.

THE MOCKING-BIRD.

SUBDUED in plumage, sensitive of ear,
Gliding through the thickets when ther's danger near,
He does not prink—true poets never do—
He leaves such fopperies to the cockatoo,
The parrot tribe, whose ear-offending notes
Betray their breeding when they ope' their throats.
Graceful in motion, elegant, tho' shy,
His is the style we judge not by the eye.
Fine feathers mark the finch of gilded wing;
The bird of genius calmly waits to sing.
Ah, then! the magic of his art is shown
In twenty voices, none of them his own;
Now thrush, now robin—then to hear, you think,
The sweet bravura of the bobolink.
The black-bird's litting call, the blue-bird's sharp
Staccato, chiming with the March wind's harp.
The round he runs of each familiar strain,
We scarce catch one before he's off again.
With the hawk's scream, the frightened hen deceives;
Titters like sparrows underneath the eaves;
Trills till the vexed canary, in his cage,
Sulks on his perch in jealous, baffled rage;
Yelps like the puppy, like the kitten mew,
The lazy pigeon on the barn outcous,
And crowns the whole with one triumphant note
Of joyous laughter from the human throat.
But when in midnight's hush the full moon's beams
Flings the black shadows on Pilatka's stream,
Silvering the summit of the moss-hung pines,
And decks with diamond dew the tangled vines,
Then, when all else is hushed, hear him repeat
His native love-notes, witching, wild and sweet.

—WALTER MITCHELL, in *Scribner's*.

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS,

Philadelphia, for the week ending January 18, 1876.

- 1 Screech Owl (*Scops asio*). Presented by F. W. Sobyco, Philadelphia.
- 8 Musk-Rats (*Fiber zibetrecus*). Presented by C. B. Rossell, Trenton, N. J.
- 1 Raccoon (*Procyon lotor*). Presented by Master H. B. Miller, Philadelphia.
- 1 Banded Rattlesnake (*Crotalus durissus*). Presented by Dr. A. C. Beecher, Philadelphia.
- 1 Weasel (*Putorius fuscus*?). Presented by John Horan, Overbrook, Penna. R. R.

(For Fanciers' Journal.)

"ZOO" NOTES.—No. 10.

BY HUON.

OWLS.

"In the hollow tree, in the old gray tower,
The spectral owl doth dwell;
Dull, hated, despised in the sunshine hour,
But at dusk he's abroad and well!
Not a bird of the forest e'er mates with him,
All mock him outright by day;
But at night, when the woods grow still and dim,
The boldest will shrink away.
Oh! when the night falls and roosts the fowl,
Then, then is the reign of the Horned Owl."

THE Owl family in the Zoo, which comprises some of the most prominent members of the *Strigine*, has a quiet home in the southern end of the Eagle aviary, where, perched upon artificial trees, their cat-like eyes wink and blink at their visitors through all the long hours of the day. By name these feathered animals, which in their habits and facial appearance seem as much cat as bird, are known as the Great Horned Owl, the Java Owl, the Screech Owl, the Barn Owl, the Mottled Owl, the Barred Owl, the Burrowing Owl, the Snowy Owl, etc.

Of owls there are about one hundred and fifty species, more than forty of which are Americans. The whole race may at once be distinguished from all other birds by their short, bulky form, their disproportioned head, false horns, and cat face and eyes. But few of them are day birds, all are solitary, roosting and breeding in caves, hollow trees, or ruined and deserted buildings.

In the Bible, the owl is nearly always associated with gloom, ruin, and desolation. Painters have ever represented it as a bird of ill omen. The old Romans did something to redeem it by consecrating it to Minerva and nominating it the emblem of wisdom—an unfortunate selection. Wisdom requires brains; the owl has none to speak of.

One of the worst evils in life is to have to fight against a bad reputation, especially when one does not deserve the same; and no description of biped, be it a man without feathers or a bird with, has suffered more from this cause than the owl. Why, their very scientific titles, such as *Bubo*, *Strix*, and *Scops* are words conveying the idea of something noisy and unpleasant. Pliny—but that "old father" was always falling into some absurdity—says of the owl: "He betokeneth always some heave news, and he is most execrable and accursed in the presages of publick affaires." Another writer—Alexander Ross by name—says that an owl perched upon the roof-top of Valentinian (third Roman emperor of that name, and assassinated for his crimes, A. D. 455) and presaged that emperor's death! Obseques tells us of an owl roosting upon the top of the chamber of Commodus (that beastly, scoundrelly emperor, who should have been assassinated long before he was), and by its presence there predicted the tyrant's end. The Emperor Augustus also had his prophetic owl to sit in the pediment of the "curiæ" (court house) for several days consecutively, and there sing of that emperor's coming demise. Think of an owl singing! And yet, Shakespeare says he does sing:

"To whitt! To who! A merry note!
While greasy Joan doth keel the pot."

In 1542,—yes, quite a jump; some fifteen hundred and twenty-eight years from the time of Augustus,—the doleful

songs of the owls in northern France denoted something terrible, the people said, and, sure enough, soon there followed a great plague, a small war, and divers other calamities, though what the poor owls had to do with them I have been unable to discover.

Once having had a bad name established by the ancient writers, it was both natural and easy for the modern ones to follow in their wake, and even Shakspeare must have his ill word for the poor bird. When Lady Macbeth is waiting to hear of the murder of King Duncan, she cries:

"It was the owl that shrieked—the fatal bellman!"

meaning thereby that the owl's voice was the voice of fate, compelling her husband, in spite of himself, to commit the "murder most foul."

Buffon also abuses the owl. However, there is much chaff in his wheat, and we should know how to separate the one from the other. Of the *Bubo maximus* he says: "He is of that tribe of birds who fear the light of day, and only fly when it is gone;" that "his cry is fearful;" calls him a "groaning cat," and declares that "he spends the day in making ridiculous, buffoon-like gestures in the presence of men and other birds." For shame, Father Buffon! How could you?

In later days, when the credit of the owl was very low (from all these false reports), Audubon came to the rescue. Many a good word does he have for him, and much credit does he give him for intellect. He says: "Such persons as conclude, when looking upon owls in the glare of day, that they are, as they then appear, extremely dull, are greatly mistaken." Much does Audubon say in favor of the owl, very interesting, but quite too long for my limited space in the *Fancier*.

Let us say a word about the moral qualities of the owls, one of which is their extraordinary attachment for their young. Proof: Dr. Stanley, Bishop of Norwich, England, tells of a pair of old birds that carried dead game every night to feed an unfortunate little one who had been captured. And then, what a happy married life the owls lead! Observe the husband as he sits by the side of his mate, looking as wise as a stick of wood with a great coat on. Note Mrs. Owl's demeanor, too. No bickering or snubbing there! No; they nestle close together, enjoy each other's company, and sing owl duets, when the moon is brightly shining on the ivy-mantled tower. By the way, Gray, for all he could write such a beautiful elegy, knew nothing about these birds when he said,

"The moping owl does to the moon complain."

The owl does not mope. The genial Audubon calls him the "Sancho Panza" of the woods, and the readers of Don Quixote know how much wit, fun, and humor lies hidden under that name.

The owl, too, is a provident bird. He looks well to the larder; for food his young never wants. Can you have a better sign of a good housekeeper? Nor is he ever wasteful. He may not be, as King Arthur was with his pudding,—"What he does not eat one day, the next day he has fried,"—but what he has left to-day when his hunger is satisfied, *Bubo strix* or *scops* puts carefully by for to-morrow.

Very regular are the owls in their habits. The genus *Strix* *scops* keeps up its cry of "Kew, kew" all through the night, at intervals of two seconds, as regularly as the ticking of a Waltham watch!

Here, then, we have conclusive evidence of a number of

estimable qualities possessed by the owl. He is proved to be a good husband, an affectionate father, a frugal steward, an excellent chronometer, and a jolly fellow. There are great ones on this earth who have failed, with all their greatness, to merit such a eulogy.

"Mourn not for the owl nor his gloomy plight!

The owl hath his share of good.

If a prisoner he be in the broad daylight,

He is lord in the dark green wood!

Nor lonely the bird, nor his solemn mate;

They are each unto each a pride;

Thrice fonder, perhaps, since a strange dark fate

Hath rent them from all beside!

So, when the night falls and dogs do howl,

Sing ho! for the reign of the Horred Owl!

We know not away

Who are kings of the day,

But the king of the night is the Horred Owl!"

THE BIRDS OF BRAZIL.

Two remarkable ornithological specimens of birds from Brazil have recently been domesticated in the gardens of the Royal Zoological Society of London, in Regent's Park.

The first is the Bell-bird, the celebrated *Campanero* of the Spaniards, called *Dara* by the Indians. He is about the size of the Jay. His plumage is white as snow. On his forehead rises a spiral tube, nearly three inches long. It is jet black, dotted all over with small white feathers. It has a communication with the palate, and when filled with air looks like a spire; when empty, it becomes pendulous. His note is loud and clear, like the sound of a bell, and may be heard at the distance of three miles. In the midst of Brazil's extensive wilds, almost out of gun reach, you will see the Campanero. No sound or song from any of the winged inhabitants of the forest, not even the clearly pronounced "Whip-poor-Will" from the goatsucker, causes such astonishment as the toll of the Campanero.

With many of the feathered race, he pays the common tribute of a morning and evening song; and even when the meridian sun has shut in silence the mouths of almost the whole of animated nature, the Campanero still cheers the forest. You hear his toll, and then a pause for a minute, then another toll, and then a pause again, and then a toll, and again a pause. Then he is silent for six or eight minutes, and then another toll, and so on. "Actæon would stop in the mid-chase," says Waterton, "Maria would defer her evening song, and Orpheus himself would drop his lute to listen to him, so sweet, so novel, and so romantic is the toll of the pretty snow-white Campanero. He is never seen to feed with the other Cotingas, nor is it known in what part of Guiana he makes his nest."

The second specimen is a relative of the Bell-bird, and is known to ornithologists as the *Cotinga cincta*. Of these, in their natural state, even less is known than of the Bell-birds. The Cotingas are distinguished by the brilliancy of the coloration of the males. In the species at present under notice, the under parts are of a deep plum color, while the upper parts, with the band or cinctus across the breast, are of a magnificent ultramarine blue. In size this Cotinga equals a Blackbird. Their food consists of fruits, which their wide gape enables them to swallow with ease. Like their allies, the Bell-birds, they are solitary in their habits, keeping to the topmost branches of trees, and generally residing in the dense forest, though at times they approach the cultivated grounds in search of their food.—*Illustrated in Scientific American*.

"NOTED quacks—ducks."

A BUSINESS house in Columbus has conspicuously displayed in its show-window a man's skull, and printed in large letters across the forehead these words of warning to the daily swarm of traveling salesmen: "This was a drummer."

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words, describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

Advertisements "TO EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., cannot under any circumstance be admitted to the *Exchange* or *Want* column.

Advertisements for *Exchange* or *Want* will be inserted unless accompanied with 25 cents.

A. M. CAREY, Selingsgrove, Pa., will exchange superior P. Cochins, L. and D. Brahmas, Brown Leghorn cockerels, and Houdans. See *Want* Column.

CHARLES B. JAKES, Box 123, Metuchen, N. J., will exchange Partridge Cochins, Light Brahmas, a Walnut Tool Chest, 30 x 16, and 14 deep, with two drawers—for Printing Press, Type, and Cabinet, or for Merchandise. What offers? Don't all speak at once.

E. S. WHITING, Plainville, Mass., will exchange one good pair Black Jacobins, for a Yellow Jacobin hen, equally as good, or a good pair Short-faced Almond Tumblers, or pair Silver-gray Dorkings, or Brown Leghorns. Must be good ones.

W. McANALLY, Newark, Del., will exchange two hen-feathered Game stags, from an imported Irish cock, stags not trimmed—for either Scotch or Skye Blue Terriers (the Terriers to be young and small), or for anything else that will not fight with Leghorns. The stags must go.

G. H. WEISNER, Blandon, Berks County, Pa., has for exchange a fine pair of solid Black Carriers, for a pair of fine Ferrets, dark in color, between five and eight months old. Send Ferrets and prey expressage, and I will pay expressage on birds. Write quick. No Humbug.

W. B. SHERRY, Stony Brook, L. I., will exchange one pair of Black-Red Game Bantams, Poultry World of 1875, and one pair of White Fantails, good birds—for Dominiques. Speak quick, as my stock must be disposed of.

R. Y. FAIRSERVICE, East Newark, N. J., will exchange a fine Newfoundland dog, large and handsome, and an excellent watch dog, and a White Spitz bitch, very fine—for Pekin ducks, Partridge Cochins pullets, or offers.

W. H. PERKINS, Watertown, Mass., has to exchange one trio of Rozen ducks, for Fancy Pigeons of any variety; Yellow-pied or clear white Pouters preferred.

A. H. SHREINER, Maubien, Lancaster County, Pa., will exchange one Smith & Wesson Revolver, and one Smooth-bore Rifle, both in good order—for first-class fowls of Golden-spangled Hamburgs and Rose-comb American Dominiques; also, one trio Black Cochins (Hershtine strain), for same breed of some other strain. Must be good, as mine are.

G. A. WIDMER, Rochester, N. Y., will give one pair of White feather-legged Bantams, for Duckwings only. Also, Prairie Dogs, Angora Rabbits, White (clean-legged) and Spangled Bantams, for new Printing Press, new Squirrel Cage, Flour, or Butter. Send stamp for particulars.

M. VON CULIN, Delaware City, Del., has to exchange one pair B. B. G. Bantams, one pair Ginger-red Game Bantams, one trio G. S. Hamburgs, six G. S. Hamburg pullets (laying), one G. S. Hamburg cock, one pair Red Pied Pouters, one pair Black Bards, and one Black-mottled Trumpeter cock. See *Wants*. 3,4f

W. F. BACON, Lexington, Mass., will exchange a pair White Fantails, Black Carriers, or Mottled Tumblers, for Black Spots, Black Jacobins, Black Trumpeters, or other varieties.

R. Y. FAIRSERVICE, East Newark, N. J., will exchange a fine Partridge Cochins cockerel, eleven and a half pounds, and well marked, value \$20; a Light Brahma cockerel, eleven pounds; well marked, value \$15—for Partridge Cochins pullets, Pekin ducks, or offers.

M. VON CULIN, Delaware City, Del., has to exchange Pure-bred Setter dogs and bitches, broken and unbroken, and Setter and Pointer whelps, none superior in America; will send on approval, with pedigree; also, one well-broken Water spaniel, and Double Shot Gun. See *Wants*. 3,4f

ASH H. PENNINGTON, Middletown, Del., will exchange a full-blood Bull Bitch, for Black-breasted Red or Fyle Games. Must stand steel. What else offers?

F. PETRIE, Cooperstown, N. Y., has a fine Accordion, two pairs of Blue-Red Games, and one Fox Hound to exchange for B. B. Red Games. My fowls are first-class, and no others wanted. What other offers. No postal cards.

W. F. BACON, Lexington, Mass., will exchange Red Priest cock, for Blue Swallow hen.

D. A. CARTER, 37 Kimble St., Utica, N. Y., will exchange Silkies, Angora Rabbits, Scroll Saw (foot power), for Dutch and Himalayan Rabbits, right away. Who wants?

B. HULSE, Box 23, Allentown, N. J., will exchange Brown Leghorn cockerels, Light Brahma hens, White Fan hens, Black Barb cock, and White Jacobin hen—for G. L. Sebright hens, Black Fan cock, and White Carrier cock.

M. VON CULIN, Delaware City, Del., has to exchange the following books; Wells' Every Man His Own Lawyer, Scottish Sports and Pastimes, The Wood Turner's Companion, Davies' Practical Mathematics, Miniature Fruit Garden, Modern Practice of American Machinists and Engineers, The Tin, Sheet-Iron, and Copper-Plate Worker, The Marine Steam Engine, The Brass and Iron Founder's Guide, 507 Mechanical Movements, The Marble Worker's Companion, Bowman's Medical Chemistry, Channing's Medical Electricity, Hartsorn's Essentials of the Practice of Medicine, Longfellow's Poems, Grayjacket's Stories, etc., of the Rebellion, Youatt on the Dog, and Laverack on the Setter; also, one Drawing Board and Square, one 4 x 5 Printing Press, and Scientific American for the last six months. See *Wants*. 3,4f

SMITH & BRO., Stony Brook, Long Island, N. Y., will exchange Brahmas, Cochins, Crevecoeurs, Hamburgs, Leghorns, Bantams and Game Bantams, Ducks, Geese, and Fancy Pigeons—for anything of value, jewelry preferred.

M. VON CULIN, Delaware City, Del., has to exchange one Clark's Express tape line, one joint (brass) plumb bob, one 1½ inch Lathe Dog, one pair Flat Plyers, two pairs Dividers, three pairs Callipers, one steel Wire Gauge, one six-inch (Col's) Monkey Wrench, one Chuck Tool, Handle, and Tools, and one Spoke Shave. See *Wants*. 3,4f

JAS. C. ROBERTS, Box 113, Westchester, Chester County, Pa., has to exchange, for first-class Light Brahma pullets, one pair Hong Kong Geese, one trio Buff Cochins hens, and six Gray Dorking hens. Sent on approval to responsible persons.

J. H. HUNT, M.D., Valley Junction, Ohio, will exchange a pair of female Goshawks, suitable for a child to drive—for Pouter Pigeons. Who will make an offer?

OSGOOD PLUMMER, Worcester, Mass., will exchange one pair imported trained Antwerps (have flown from Paris to Antwerp, two hundred and sixteen miles), and in addition young birds from same stock, to make values equal—for one pair Black Bards. Only the best accepted.

B. R. HOUGHTON, 18 Batterymarch Street, Boston, Mass., has to exchange a Whitmore Muzzle-loading Rifle, hair trigger, about nine pounds, cost \$80, un injured, no outs—for a couple of Dachshunds, large English Beagles, or one or two Fox Hounds that can carry a fox trail on dry ground. ii

C. G. WILSON, Millbury, Mass., has to exchange, for Leghorns, Houdans, or Plymouth Rocks, six D of Y hens and cockerel, very large and good stock. ii

D. S. WENRICH, Bernville, Berks Co., Pa., will exchange one Silver-spangled Hamburg cock, or one fine Houdan hen—for a fine Golden-spangled Hamburg cock; also, White Holland Turkeys, for Dark Brahmas. What offers?

JAMES CAREY, Bath Road, Newport, R. I., will exchange two pairs Silver Dun show Antwerps for other Fancy Pigeons or Fowls.

W. G. BAKER, Norwalk, Huron Co., Ohio, will exchange one Green Talking Parrot and Cage, two Knitting Machines—for Scroll Saw, Power Straw Cutter, Type, or Target Rifle; also, some very fine pigeons for what offers.

I. W. HARTMAN, Westchester, Pa., will exchange two Duchess cocks, one Spotted Trumpeter cock, one young Red Barb cock, Tumblers in pairs, or odd birds, Carriers, etc., for Yellow Ears, Antwerps, etc. Write.

C. E. COOK, Union, McHenry Co., Illinois, will exchange one hundred Common Pigeons, all colors, Houdans, Black Hamburgs, Aylesbury White-crested Ducks, Buff Cochins, Japanese Frizzles (Black), White Holland Turkeys—for Wright's Poultry Book, Bantams, Pigeons, Rabbits, or Ferrets. Give full description and make offers soon.

H. A. NEITZ, Millersburg, Dauphin Co., Pa., will exchange all kinds of Fancy or Plain Job Printing, done to order—for pure-bred Poultry or Fancy Pigeons. Satisfaction Guaranteed. Write soon.

J. BERST, JR., Erie, Pa., will exchange one pair of B. B. Red Game Bantams, one pair Dominique Leghorns, one pair Brown Leghorns, one Golden-pencilled Hamburg cockerel—for Lop-eared and Angora rabbits, or Golden and Silver Sebright Bantams.

DR. J. W. GREENE, Chillicothe, Mo., will exchange four "Laughing-larks" for a pair English Rose-comb White Dorkings. Must be good chickens.

R. S. DAUDLEY, Newport, Sullivan Co., N. H., will exchange a few new and early bred Hatched Games—for Gun, Saddle, Books, Plymouth Rocks, American Dominiques, Houdans, Ducks, Turkeys, or most anything useful. Good stock, as mine is.

JOHN S. DUNKLE, Kutztown, Berks Co., Pa., will exchange one trio Buff Cochins fowls (1874 batch)—for one trio P. Cochins fowls or chicks. One trio Buff Cochins chicks, for three S. S. Hamburg chicks.

PETS AND THEIR INFLUENCE.—No. 2.

BY G. O. BROWN.

"There is that in every animal's eye, a dim image and gleam of humanity, a flash of strange light through which their life looks out and up to our great mystery of control over them, and claims the fellowship of the creature, if not the soul."

By the farmers' sons and daughters pets are just as much appreciated as by those who may possess them in cities and towns, although many farmers seem to think their children need no other recreation than that afforded by the monotonous every-day life incidental to farm labor. It is the nature of youth to desire to possess something they may designate as solely and truly their own; and by arbitrary restraint, and a total disregard of this natural "longing," parents have often made home-life uncongenial; that the "boys" were driven out to meet the many temptations of the world. If farmers would only indulge their children in this respect, they would find it one of the best paying investments they ever made, and would soon discover that home would afford an attractive pleasure, a congenial mingling of happy hearts drawn together by influences, that will ever cause a constantly growing love for the old homestead, which will become so impressed that even time and gray hairs will not efface the fond recollections. Not only is there in thus encouraging them the satisfaction of seeing instilled in their nature a sacred love for home, but it enables them, gradually, to realize the importance of self-dependence, and often inculcates a business principle which proves of much importance in after years. A few dollars invested in pure-bred fowls, fancy pigeons, or rabbits, will inaugurate a system of home contentment that will cause the farmer to wonder that the scales did not drop from his eyes sooner. I will close this already too long article by quoting the following, which I clipped from some of my papers a good while since, but it will, no doubt, be equally as appropriate as when first the author wrote it:

"It is surprising what a spring it gives to all the powers, to have the element of self-interest introduced into all the work. An invalid was directed to try gardening for a time every day as a medicine. He tried it one season, but derived no benefit from it. The next year he was told to try again for 'a share in the profits.' That year he gained rapidly and became in time a sound man—his mind was interested. Get your boy's mind wide awake on the subject of the growth of his melons and onions, and you will have no reason to complain that they are not well cultivated. If you have a narrow soul that grudges your boy his hard-earned dollars, then he does right to leave you when he becomes of age, if only in self-defense. If he stays he may grow like you, which would be a worse calamity than losing his right hand.

"A farmer near my former home encouraged all his boys and girls to have some little projected enterprise of their own on hand. Even the little ones had their hills of popcorn, which they learned to cultivate, and when the grain was dried it was shelled by their own hands and then popped and stored in bags, ready when the market wagon went to the city. Every week the farmer drove his market wagon into Philadelphia, and whatever the children had to sell was disposed of to the best advantage, and the money carefully counted out to them on his return. You will hardly find a thriftier, happier, more intelligent farmer's family. Each had an interest in his own, yet all worked together most harmoniously. With their combined savings, and a little help from mother, they bought a nice melodeon, on which the boys learned to play as well as the girls. The value of such a possession in refining and elevating a family of children cannot be estimated in dollars and cents. It was the aim of the whole household to make home pleasant, and farm life was to them the most delightful in the world. There is little probability of their sons going into other business as they grow up. They have found farming too pleasant, profitable, and healthful to take their chances at something else about which they know nothing.

"Make the farm-house pleasant; plant trees about in abundance, ornamental as well as fruit trees. Oh, these bleak, bad, red-painted houses, 'blistering in the sun,' which we see dotting so many wide farms, are a disgrace to the land. No wonder that we find within

"Shrill, querulous women, sour and sullen men,
Untidy and old before their time,
With scarce a human interest save their own
Monotonous round of small ceremonies,
Or the poor scandal of the neighborhood.

"Don't let the children's minds be narrowed down to the petty concerns of their small world, but give them books and good newspapers in abundance, which shall furnish a bright outlook to the great, beaming world which lies beyond and around them, so near and yet so far away, without this medium of communication with it. A home without newspapers is almost as cheerless as a home without windows.

"While you make it a rule that the boys shall not lounge around stores and saloons in the evening, be sure if a useful entertainment, like an elevating concert, instructive panorama or lecture comes to your village, to give all a chance to attend. Scrape up the money somehow, if you hurry off a pair of fat chickens to market to get it. Farmers' folks have the least excuse of any for denying their children these advantages, for they are great advantages in many respects, and not the least among them is the happiness they afford and the store of pleasant memories they lay up. Oh! what a 'penny wise' policy it is to grudge them the money for these simple enjoyments.

"It is an old Spanish proverb that 'there are no ungrateful children.' If we have given our children a childhood to be grateful for, they will not fail to keep our memory green and fragrant when our heads have long laid under the willows. If our training has developed only hard and selfish traits of character, we shall not fail to reap as we have sown."

THE BONNY GAME STAG.

BY WILLIAM M'FARLANE, MILWAUKEE.

I'm a bonny Black-red, a pure-blooded Game,
For years my old stock it has born a good name;
And now to the standard, for color and show,
Our owners will take us wherever they go.
Some shrewd, knotty points their standard requires,
While a judge he inspects and my carriage admires,
From the tip of my beak ev'ry point he'll disclose,
'Till he reaches the end of my sharp-scratching toes.
My beak must be strong, slightly curved, and well set,
Of a dark, horny color as near's you can get,
To match with my shanks, be they willow serene,
A yellow, a black, or a fine olive green.
He will symmetry scan, proportion, and build,
With condition of health, as in plumage he's skilled,
Denoting my station for carriage and style,
While these brilliant colors, well matched, draw a smile.
I've a fine snaky head, long, slender, and neat,
Comb single, upright, serrated, complete,
Two prominent eyes, both in color alike,
With a fearless expression all ready to strike.
My face must be smooth, have a deep, bright red skin;
On the ears not a speck of pure white must be seen.
These wings retain force on the shoulder butts strength,
And are not really long, tho' a medium length.
My neck rather long, with a slight curving arch,
And my hackle, tho' short, does not wave on the march,
But reaches, just scant, between shoulder and back,
While my gait, to be active, no motion must lack.
My back it is flat, at the shoulder full wide,
Has wings ever ready to spring from the side.
From the bow of the wing, you may all now discern
How I gradually taper right off to the stern.
There are men, to be sure, who delight in a crest,
While others admire my bonny black breast.
It is round, it is plump, and contains a stout heart,
And where's the usurper can make me depart?
See these thighs, round and stout, full of muscle they turn,
Carried close to the body—not lanky, but firm—
With a shank not too long, of a moderate size,
Scales running in harmony, never disguise;
My spurs set low down, do incline to the rear,
While my toes, rather long, spread out firmly and clear,
With scratchers, or nails, that are willing to toil,
For they are the members can turn up the soil.
Now, as to my tail, it must not be too long,
Nor spread o'er my back in a squirrely form;
Or, if drooping too much, 'twill my beauty obscure,
And leave me at discount the prize to secure.

I've an olio plumage of colors defined—
On my hackle, clear red, not a stripe can you find;
With brilliant maroon my back is now clad,
And the feathers fixed on it as close as a pad.
That bar on my wing has the color of steel;
These primaries uniform, hard, as you feel,
Like ebony, black, and as tough as whalebone,
From the breast to the hook not a fault, all alone.
These coverts are bronzed in the sun—see them shine.
Look! these sickles, arched over, in color combine,
With a carriage upright I step active and firm,
Fear no chanticleer, be he ever so stern.
But, when I am handled, my frame full of life,
In active commotion is ready for strife;
Tho' nothing delights me so much as to be
In the beautiful meadows where I can rove free.
Vast heaving young stag, I would like to inquire
What kind of a pullet your heart would desire
To strut through the fields, or wherever you roam,
Would accord with your wishes and make you love home?
You may call me a Mormon, a sinner, a saint,
For of prejudice I have not yet got a taint;
Dame Nature's my guide, and her laws I respect,
Hand me over five wives and you'll never regret
Let their carriage and symmetry be like my own,
A golden neck-hackle well striped to adorn;
Be their backs like a partridge, 'twill colors unfold
That you'll not regret when my stock's to be sold.
Now, from what I have said you can judge of the rest.
Select them from colors you know are the best;
With these wishes you mean to accede,
When the duty's performed, you'll have done a good deed.
Then you'll find that in courage I'm second to none,
That for pluck and endurance I rate number one,
And to whatever sphere I may chance to be led,
Remember me truly, your bonny Black-red.

(For Fanciers' Journal.)

MARYLAND POULTRY ASSOCIATION.

PREMIUM LIST.

POULTRY JUDGES—A. M. Halsted, W. E. Flower, and J. C. Long, Jr.

Asiaties—Brahmas—Light, best pair, 1st, C. B. Wise, Great Falls, Md.; 2d and best hen, J. E. Lloyd, Baltimore; very highly commended, Philip Royers, Baltimore. Dark, 1st and 2d and best cock and hen, George Colton, Baltimore. Cochins—Buff, 1st and best cock and hen, J. Chandler, Kennett Square, Pa.; 2d, George Colton. Partridge, 1st and best cock, George Colton; 2d and best hen, J. K. McKissick, Oxford, Pa. White, 1st and best cock, William Bowman, Baltimore; 2d, J. K. McKissick; best hen, J. Chandler.

Games—Black-breasted Red, 1st and best cock and hen, G. O. Brown, Brooklandville, Md.; 2d, John Oler, Baltimore. Brown-red, 1st and best cock and hen, T. A. Cochran, Baltimore. Silver Duckwing, 1st and best cock and hen, T. A. Cochran. White, 1st and 2d and best cock and hen, George Colton. Black, best hen, John Oler. Blue, best hen, John Merryman, Cockeysville, Md. Blue-reds, best cock and hen, William T. Long, Baltimore. Gray, best hen, John Oler. Spangled, 1st and best cock and hen, William T. Long. Dominique, 1st and best cock and hen, William T. Long.

Game Bantams—Black-breasted Red, 1st and best cock, J. Randolph Mordecai, Baltimore; 2d and best hen, F. A. Parker, Annapolis, Md.

Bantams—White, 1st, George Colton. Golden Sebright, 1st and best cock, George Colton; 2d and best hen, W. S. G. Baker, Baltimore. Black African, 1st and best hen, G. O. Brown; 2d and best cock, George Colton. Dominique, 2d, T. A. Symington, Baltimore.

Hamburgs—Golden-spangled, 1st and best cock and hen, G. O. Brown; 2d, Francis Taylor, Oakdale, Pa. Silver-spangled, 1st and best cock, G. O. Brown; 2d and best hen, F. Taylor. Golden-penciled, 1st and best cock and hen, G. O. Brown. Silver-penciled, 1st and best cock and hen, F. Taylor. Black, 1st and best cock and hen, G. O. Brown.

French—Houdans, 1st and best cock, George Colton; 2d, T. A. Symington; best hen, J. P. Sanderson, Arlington, Md. Crevecoeurs, 1st, J. Henry Symonds, Boston, Mass.

Polish—White-crested Black, 1st and best cock and hen, G. O. Brown. Golden-spangled, 1st and best cock, G. O. Brown; 2d and best hen, George Colton. Silver-spangled, 1st and best cock and hen, E. J. Chandler, Kennett Square, Pa.; 2d, John Oler. White-crested White, 2d and best cock and hen, George Colton.

Spanish—White-face Black, 1st and 2d and best cock, William Bowman; best hen, G. O. Brown. White Leghorns, 1st and best cock and hen, William McAnally, Newark, Del.; 2d, John P. Shriner, Baltimore.

American—Dominiques, 1st and best cock and hen, E. J. Chandler. Plymouth Rocks, 1st and best cock and hen, J. K. McKissick.

Dorkings—Colored, 1st and best cock, J. K. McKissick; best hen, G. O. Brown. Silver-gray, 1st and best cock and hen, G. B. Milligan, Baltimore.

Water Fowls—Ducks—Rouen, 1st and 2d, T. A. Cochran. Aylesbury, 2d, T. A. Cochran. Pekin, 1st and 2d, J. P. Sanderson. Geese—Chinese, 1st and 2d, Joseph Gorsuch, Towson, Md.

Turkeys—Bronze, 1st and best hen, John White, Adamstown, Md.; 2d, W. A. Myers, New Oxford, Pa.; best cock, J. E. Delaplane, Baltimore. White, 1st and best cock and hen, W. A. Myers; 2d, E. Whitman, Baltimore.

Call of Song and Ornamental Birds, 1st, H. Thomas, Baltimore; also diploma on Partridges and California Quail, Lewis Gilbert, 1st each on German Hares, English Hares, and Guinea Figs. G. O. Brown, 1st each on Madagascar and White Angora Rabbits. J. C. Gareis, diploma, Belgian Canaries. Best Cross or Grade, J. K. McKissick, Partridge Cochins and Brown Leghorns; 2d, G. O. Brown, Houdan and White-crested Black Polish. Best specimen of Taxidermy, David Mordecai. Best pair of Asiatics, any variety, silver cup, C. B. Wise, Light Brahmas. Best pair of Games, any variety, silver cup, G. O. Brown, Black-breasted Reds. Best pair of Bantams, any variety, silver cup, J. Randolph Mordecai, Black-breasted Red Game Bantams. Best pair of Polands, any variety, silver cup, G. O. Brown, White-crested Blacks. Best pair of French, any variety, silver cup, George Colton, Houdans. Largest and best variety of fowls taking most premiums, silver cup, G. O. Brown; also same for largest collection of different varieties, Wright's Poultry Book.

DOG PRIZES.

JUDGES—George S. Brown, Thomas W. Levering, J. Dickinson Logan, John F. Preston, and G. B. Milligan—made the following awards:

Red Irish Setters, 1st, J. H. Stromberg; 2d, E. Schenck. Black-and-tan Setters, 1st, Samuel Willie; 2d, J. H. Stromberg. Setters, 1st, J. Addison Smith; 2d, C. W. Warfield. Pointers, 1st, H. B. Welles; 2d, J. H. Stromberg. Beagles, 1st, J. Addison Smith; 2d, W. Ahrens. Skye Terrier, 1st, Charles Spence. Dandy Dimont, 1st, Charles Englehardt; 2d, W. F. Jones. Miscellaneous, 1st, Louis Roll. John Chrystal, E. P. Suter, H. Easter, Jr., H. B. Welles. Mrs. S. Smith, J. Randolph Mordecai, Charles Englehardt, and R. Stewart Latrobe; 2d, George W. Kemp and Jacob Albert.

The very large hall, known as the Maryland Institute, was completely filled, and in addition to the finest display of pigeons we have ever seen, there were numerous cages of song and ornamental birds, and the Armadillo, a South American animal, and the only living one that has ever been exhibited in this country. This peculiar little creature drew his share of admirers. Some very choice specimens of taxidermy were exhibited by Mr. David Mordecai, among which we noticed a splendid Austrian Bastard, nearly as large as the Emu or Ostrich. Each day, from the opening until the closing of the exhibition, the hall was crowded with visitors, and during the four days nearly ten thousand visitors were present. The dog show, although gotten up

at very short notice, was a genuine success, as there were sixty-five choice specimens entered. The Remington breech-loading shot-gun was awarded to J. Addison Smith, who donated it back again to the Association to be offered for the same premium at the next annual show. The Association are fitting up their headquarters in fine style, and will soon have an appropriate place to receive visiting fanciers from other States. The poultry which was awarded first premiums were in all cases meritorious birds. The Light Brahmas winning the cup were very excellent birds. Mr. Geo. Colton's Dark Brahmas were also very choice, as were his Partridge Cochins. The Black-breasted Red Games belonging to Mr. G. O. Brown, winning game cup, were magnificent birds, and were much admired. The cup Houdans of Mr. Colton, well merited their honors, as also did Mr. Brown's truly grand White-crested Black Polands, cup birds. The premium White Leghorns were unusually fine specimens. The Hamburgs exhibited by Mr. Brown, were all very fine in feather and condition. The Silver-spangled Polish premium birds were also good, the cock especially. Among the miscellaneous class we noticed an Eagle, two Hawks, a large Owl, and a little one, in a cage together. His owlishness, however, *canibaled* the little fellow the third day of the show, and on the morning after sat blinking as unconcerned as though nothing had happened. Several parties were heard to ask where the "show went next?" All in all, we think the Bantam show was a huge success, and well repaid the trip of a

HARRISBURGER.

BLOOMINGTON POULTRY ASSOCIATION.

FRIEND WADE:

I inclose herewith a list of awards at the first exhibition of the Bloomington Poultry Association, held in this city, December 14, 15, 16, 17, and 18, 1875.

Our Association made a bold strike at this their first exhibition, first, in adopting the *single judge* plan, and secondly, in making eighty-five points the minimum number which first premium birds should scale.

The Association was fortunate in securing the services of W. H. Todd, Esq., as judge; and on the perusal of the following awards by such a capable judge, none will fail to observe the excellence of our exhibition.

CLASS 1.—*Asiatics*.—Brahmas—Light, Fowls, 1st, Stone & Leaton, Bloomington, Ill.; 2d, James M. Wills, Bloomington, Ill.; 3d, J. S. Hilscher, Lincoln, Ill. Chicks, 1st and 3d, Stone & Leaton; 2d, J. S. Hilscher. Dark, Fowls, John T. Boyden, Lincoln, Ill. Chicks, 1st, J. C. Allabam, Polo, Ill.; 2d, F. W. Burns & Bro., New Rutland, Ill.; 3d, John T. Boyden. Cochins—Buff, Fowls, 1st and 3d, Stone & Leaton. Chicks, 1st and 3d, John T. Boyden; 2d, F. W. Burns & Bro. Partridge, Fowls, 1st, Bartholomew Brothers, Elmwood, Ill.; 2d, George Dunlap, Bloomington, Ill.; 3d, F. W. Burns & Bro. Chicks, 1st and 3d, F. W. Burns & Bro. Pea-comb Partridge, Fowls, 2d, John T. Boyden. Chicks, 2d, John T. Boyden. White, Fowls, 2d, Mrs. J. E. Gray, Bloomington, Ill. Chicks, 1st, Stone & Leaton; 2d, Mrs. J. E. Gray. Black, Fowls, 1st, Bartholomew Brothers. Chicks, 1st, Bartholomew Brothers.

CLASS 2.—*Dorkings*—Silver-gray, Fowls, 1st, Mrs. W. R. Duncan, Towanda, Ill. Chicks, 1st and 3d, Mrs. W. R. Duncan. Colored, Fowls, 1st, Mrs. W. R. Duncan. Chicks, 1st, A. S. Ross, Bloomington; 2d, Mrs. W. R. Duncan.

CLASS 3.—*Hamburgs*—Golden-spangled, Fowls, 1st, Stone & Leaton. Chicks, 3d, Stone & Leaton. Silver-spangled, Fowls, 3d, Stone & Leaton. Chicks, 1st and 2d, Stone & Leaton; 3d, J. M. Wills.

CLASS 4.—*Spanish*—Black, Fowls, 1st, Stone & Leaton. Chicks, 1st, W. R. Miller, Polo, Ill.; 2d, J. M. Wills; 3d, Stone & Leaton. *Leghorns*—White, Fowls, 3d, Stone & Leaton. Chicks, 1st and 2d, Stone & Leaton; 3d, Joseph H. Hamill, St. Louis. Brown, Chicks, 1st and 2d, Charles H. Carpenter, Danvers.

CLASS 5.—*French*—Houdans, Fowls, 1st and 2d, J. M. Wills. Chicks, 1st, J. W. Clinton, Polo, Ill.; 2d, J. M. Wills.

CLASS 6.—*Polish*—White-crested Black, Fowls, 1st, Stone & Leaton. Golden, Fowls, 3d, Louis Frey, Bloomington.

CLASS 8.—*Games*—Black-breasted Red, Fowls, 1st and 2d, Joseph H. Hamill; 3d, Alexander Frazer, Polo, Ill. Chicks, 1st, Joseph H. Hamill; 2d, Alexander Frazer.

CLASS 9.—*Game Bantams*—Black-breasted Red, Fowls, 1st, G. A. Butler, Lincoln, Ill.; 2d, J. M. Wills. Chicks, 1st, J. W. Clinton, Polo, Ill.; 2d, Joseph H. Hamill; 3d, J. M. Wills.

CLASS 10.—*Bantams*—Golden Sebright, Chicks, 1st, Stone & Leaton. White Rose-comb, Chicks, 2d, Alexander Stump, Bloomington.

CLASS 13.—*Ornamental, Gallinaceous*—White Guinea, 1st and 2d, J. M. Wills. English Pheasants, 1st, George O. Smith, Bloomington.

CLASS 14.—*Geese*—African, 1st, Ferdinand Basting, Bloomington; 2d, G. W. Smith, Elmwood, Ill. Embden, 1st and 2d, J. M. Wills. Toulouse, 1st, Bartholomew Brothers.

CLASS 15.—*Ducks*—Rouen, 1st, Charles V. Holder, Bloomington. Aylesbury, 1st and 2d, J. M. Wills. Crested White, 1st, George Dunlap. Pekin, 1st, G. W. Smith.

CLASS 12.—*Turkeys*—Bronze, Fowls, 1st, W. J. Holder, Hudson, Ill.; 2d, J. M. Wills; 3d, J. S. Hilscher. Chicks, 1st, O. Rugg. White, Fowls, 1st, J. M. Wills.

CLASS 17.—*Pigeons*—Tumblers, 1st, Charles V. Holder.

CLASS 18.—*Rabbits*—Madagascar, 1st and 2d, Charles V. Holder. Silver-gray, Angora, and Dutch, 1st each, Charles V. Holder.

The following is a list of special premiums awarded:

Best pair of Light Brahma fowls, Stone & Leaton; best pair of Light Brahma chicks, Stone & Leaton; best pair of Dark Brahma fowls, John T. Boyden; best display of Light Brahmas, Stone & Leaton; best Dark Brahma male, John T. Boyden; best Dark Brahma female, John T. Boyden; best male and five female Dark Brahma chicks, John T. Boyden; best pair of Partridge Cochins fowls, Bartholomew Bros.; best pair of Partridge Cochins chicks, F. W. Burns & Bro.; best Buff Cochins pullet, John T. Boyden; best male and five female Buff Cochins chicks, John T. Boyden; best Pea-comb Partridge Cochins fowls, John T. Boyden; best Buff Cochins fowls, Stone and Leaton; best pair of White Cochins chicks, Stone & Leaton; best White Cochins cockerel, Stone & Leaton; best pair of Buff Cochins chicks, John T. Boyden; best display of Asiatics, Stone & Leaton; best Golden-spangled Hamburg fowls, Stone & Leaton; best pair of Silver-spangled Hamburg chicks, J. M. Wills; best pair of Golden-spangled Hamburg chicks, Stone & Leaton; best pair Black Spanish fowls, Stone & Leaton; best pair White Leghorn chicks, Stone & Leaton; best Houdan cockerel, J. W. Clinton; best pair of Houdan fowls, J. M. Wills; best pair White-crested Black Poland fowls, Stone & Leaton; best Plymouth Rock cockerel, M. B. Gray; best pair Black-breasted Red Game fowls, Joseph H. Hamill; best pair Black-breasted Red Game chicks, Joseph H. Hamill; best pair Black-breasted Red Game Bantam fowls, J. M. Wills; best Bronze Turkey, male, O. Rugg; best pair Toulouse Geese, Bartholomew Bros.; best Tumbler Pigeons, Charles V. Holder; best pair Madagascar Rabbits, Charles V. Holder; best pair Silver-gray Rabbits, Charles V. Holder; best pair Canaries, Mrs. J. E. Gray; best pair Guinea Pigs, Jack Clark; best display of Cage and Song Birds by a lady exhibitor, Mrs. J. E. Gray.

BLOOMINGTON, ILL., January 6, 1876.

THERE'S lots of men in this world like roosters—Take the cockade and spurs off from them and you couldn't tell them from a hen.—*Billings*.

(For Fanciers' Journal.)

A NEW USE FOR CHICKEN FEATHERS.

"ACCORDING to statistics very carefully compiled," says a writer in *La Nature*, "we throw away yearly a quantity of chicken feathers, the intrinsic value of which is equal to the money we pay out for cotton." A startling statement, but the author considers it true; and he proceeds to explain how the feathers are prepared to make them valuable. The operation is to cut the plume portions of the feathers from the stem, by means of ordinary hand scissors. The former are placed in quantities in a coarse bag, which, when full, is closed and subjected to a thorough kneading with the hands. At the end of five minutes, the feathers, it is stated, become disaggregated and felted together, forming a down, perfectly homogeneous and of great lightness. It is even lighter than natural eider down, because the latter contains the ribs of the feathers which give extra weight. The material thus prepared is worth, and readily sells in Paris, for about two dollars a pound. About 1.6 troy ounces of this down can be obtained from the feathers of an ordinary sized pullet; and this, on the above valuation is worth about twenty cents. It is suggested that, through the winter, children might collect all the feathers about a farm, and cut the ribs out, as we have stated. By the spring time a large quantity of other down would be prepared, which could be disposed of to upholsters or employed for domestic use. Goose feathers may be treated in a similar manner, and thus two-thirds of the product of the bird utilized, instead of only about one-fifth, as is at present the case.

The chicken down is said to form a beautiful cloth when woven. For about a square yard of the material a pound and a half of down is required. The fabric is said to be almost indestructible, as, in place of fraying or wearing out at folds, it only seems to felt the tighter. It takes dye readily, and is thoroughly waterproof. There appears to be a good opportunity here for some ingenious person to invent machines to cut and treat the feathers.

(For Fanciers' Journal.)

THE SALE AT EASTON.

THE sale was a success, except in the case of some Light Brahma chicks, that were sent from Allentown. The cockerels were all light on the hackle, and the gentleman sent no pairs of pullets to make a better average. McKeen & Hulick sold all of their Bufts and Dark Brahmas, and a few Light Brahmas, Partridge Cochins, and White Cochins.

The first-premium pair of Buff fowls brought \$25, and they and some of the best hens and pullets will be kept and bred here. The Dark Brahma pullet that took first at Philadelphia, Doylestown, and Allentown, brought \$9, bid in for D. C. Waterhouse, of New Haven. The average on their fowls was \$3.45. The pigeons brought good prices, the average being \$3 per pair. The entries for fowls reached 124, and for pigeons, 13; the whole were sold in three hours.

H. HAMMOND, Secretary.

(For Fanciers' Journal.)

NORTHERN ILLINOIS POULTRY SOCIETY.

THE second annual meeting of this society was held in Rockford, Illinois, Tuesday, January 11th. The attendance was good and much interest was manifested. In view of the liberal accommodations and premiums offered in the poultry department of our Agricultural Society, the mem-

bers of this society have subscribed a liberal amount to be offered as special premiums at the next annual exhibition in September. The prospects are that the people of Rockford will then have an opportunity of viewing a large collection of the finest poultry in the West.

Now let all interested in poultry, whether for profit, pleasure, or its edible qualities, join the society at once, and so encourage the interest in improved poultry in Northern Illinois. Copies of constitution and by-laws can be had by applying to either of the following officers, which were elected for the ensuing year:

President—R. E. Mills, Rockford.

Vice-Presidents—L. J. Witbeck, Belvidere; J. Brown Taylor, Freeport; M. W. Elliott, Elgin; Evans Blake, Rockford; Rev. G. C. Partridge, Batavio; L. H. Fassett, Roscoe; Dr. F. W. Byers, Lena; E. Denney, Aurora; Henry Foulds, Lanark; I. B. Lippitt, Marengo.

Executive Committee—R. E. Mills, J. W. Hale, J. Coshun, I. B. Lippitt, W. J. Hamley, J. J. Lake, A. H. Currier, W. F. Seeley.

Secretary—A. H. Currier, Rockford.

Treasurer—J. J. Lake, Rockford.

Yours truly, A. H. CURRIER Secretary.

(For Fanciers' Journal.)

FIRST EXHIBITION OF THE COLORADO POULTRY AND PET STOCK ASSOCIATION.

THIS show, which occurred on the 28th, 29th, 30th and 31st of December, 1875, was in all respects a most creditable one.

The poultry interest in Colorado is comparatively new; although a few individuals have bred fancy fowls for several years, the attention of the general public has not been directed to this industry.

In March last, a Poultry Association was formed of which Mr. Robert James was elected President. Its work has been to awaken interest, spread information, and excite a spirit of confidence in the future of the poultry business. This preliminary effort laid broad and deep foundations, and will ever be regarded as the corner-stone of the future of this most necessary industry.

In September, at the annual election, Hon. Wm. D. Todd was elected President, Mr. James taking the place of Secretary. For these duties he is peculiarly fitted, and has discharged them thus far in a most acceptable manner. To him, above all others, the success of the annual show may be attributed. His portion of the work has been done thoroughly and carefully; although, owing to domestic afflictions and ill-health, the duties of his office, for three weeks, were performed by the President. Mr. Todd has devoted many weeks of valuable time from his business to forwarding the interests of the Association and may justly feel proud of the success of the enterprise.

Mr. Treasurer Clark, A. M. Wylan, Vice-President, Messrs. Talcott, Haff, Mattie Wilbur, Hiram Witter, E. T. Nichols, of Greely, G. K. Kimball, of Golden, and others, have devoted their whole time, for ten days, to the work, and have the satisfaction of knowing that their efforts are fully appreciated by those who have been fortunate enough to visit the exhibition.

The judges appointed by the Executive Committee on Asiatics, were John B. Platt and A. M. Wylan; on Games and Game Bantams, C. G. Chever, H. P. Bearce, and Cap-

tain Farrand; on Leghorns, Houdans, and Hamburgs, Messrs. Kimball, Witter, and Talcott; on ducks, turkeys, and miscellaneous, Messrs. D. Witter, Generals Pierce and Bearce. Their awards gave general satisfaction.

The Association feels much indebted to the business men, who have come forward with their usual liberality, in contributing specials, some seventy in number, varying in value from \$2 to \$15.

There were over two hundred entries, and nearly six hundred specimens, for which the following awards were made:

CLASS 1.—*Asiatics*—Brahmas—Light, 1st and 2d and four specials, J. W. Talcott, Denver. Dark—1st and five specials, Robert James, Denver; 2d, J. M. Clark, Denver. Cochins—Buff, 1st and special, William Burgess, Denver; 2d, L. H. Stryker, Golden. Black, 1st and special, Wm. D. Todd, Denver. Partridge, 1st and two specials, M. H. Wilbur, Denver; 2d, Henri R. Foster, Highlands. White, 1st, H. Witter, Denver.

CLASS 3.—*Hamburgs*—Silver-spangled, 1st and special, M. H. Wilbur. Silver-penciled, 1st and special, M. H. Wilbur.

CLASS 4.—*Spanish*—Leghorns—White, 1st and special, J. L. Hill, Golden; 2d, W. D. Todd; special, W. H. Green, Denver. Brown—1st and special, A. M. Wylan, Davidson; 2d, Robert James. Spanish—Black, 1st and two specials, William Seechrist, Denver.

CLASS 6.—*French*—Houdans, 1st and special, Henri R. Foster; 2d and special, A. M. Wylan; special, J. C. Shattuck, Greeley.

CLASS 7.—*Games*—Black-breasted Red, 1st and two specials, H. Chamberlain, Golden; 2d, George K. Kimball, Golden. Blue, 1st and special, F. L. Bird, Denver; 2d, D. E. Kurtz, Gilman, Colorado. Black, 1st and two specials, C. E. Anthony, Denver; 2d, F. L. Bird.

CLASS 8.—*Game Bantams*—File, 1st and special, W. H. Green. Black-breasted Red, 1st and special, W. D. Todd; 2d, W. H. Green.

CLASS 10.—*Miscellaneous*—Plymouth Rocks, 1st, W. D. Todd. Best Exhibition Coop, standard size, 1st, Robert James; also, 1st and special on best and largest display of poultry.

CLASS 12.—*Grades*—Best coop of grade hens or pullets, 1st and special, William Burgess; 2d, A. M. Wylan; two specials on grade pullets, J. M. Clark.

CLASS 13.—*Turkeys*—Bronze, 1st and two specials, H. R. Foster; 2d, William Seechrist.

CLASS 15.—*Ducks*—Pekin, 1st and special, Henri R. Foster. Aylesbury, 1st and special, Robert James; 2d, David Lees, Golden. Rouen, 1st, David Lees.

CLASS 16.—*Pigeons*—Fantails, 1st and two specials, M. H. Wilbur.

CLASS 17.—*Cage Birds*—Canaries, 1st and two specials, Mrs. M. J. Roberts, Denver; special for best display, M. H. Wilbur. Parrots, 1st and special, M. H. Wilbur.

Miscellaneous—Special for heaviest dozen eggs from one hen, William Seechrist, weight thirty-one ounces. Special for largest and best cock, Robert James, weight eleven pounds and four and a half ounces. Special for best display of chickens other than Asiatics, Robert James. Special for Dark Brahmas, David Lees.

CLASS 19.—*Dressed Poultry*—Special for best pair dressed chickens, Mary Seechrist, Denver.

CLASS 20.—*Cats*—Black, 1st and special, A. W. Barnes, Denver. Largest cat, 1st and special, M. F. Case, Denver.

CLASS 21.—*Dogs*—Rat Terrier, 1st and special, F. P. Cobham. Greyhound, 1st and special, J. B. Forrest, Denver. Bull, 1st and special, W. H. Green. Pet, 1st and special, H. Witter, Denver.

CLASS 22.—*Fish*—Best display of live Trout, 1st and two specials, N. A. Baker, Denver. Best display Gold-fish, N. A. Baker.

A PHILADELPHIA body-snatcher defends his business on the ground that the dead are clay, and so long as the spirit is in heaven it matters not what becomes of the mortal shell.

(For Fanciers' Journal.)

CAPITOL POULTRY AND PET STOCK ASSOCIATION.

LIST OF AWARDS, DECEMBER 27, 1875.

JOS. M. WADE.

DEAR SIR: The first annual exhibition of the Capitol Poultry and Pet Stock Association was a financial success. Although we did not have many fowls from abroad, the birds exhibited, with a few exceptions, were very fine and of extra quality, and showed good breeding. After paying premiums, the Association has a handsome sum left. I inclose you a slip cut from a paper containing the awards of premiums, which I have corrected.

Brahmas—Light—Fowls, 1st and 2d, P. M. Springer, Springfield. Chicks, 1st and 2d, J. S. Hilscher, Lincoln. Dark—Chicks, 1st, Frank Ridgely, Springfield.

Cochins—Buff—Fowls, 1st, W. H. Lightfoot, Springfield. Partridge—Chicks, 1st, C. T. Williamson, Springfield; 2d, I. J. Halsted, Decatur. Pea-comb Partridge—Chicks, 1st, P. M. Springer.

Dominiques—American—Fowls, 1st, W. H. Lightfoot. Spanish—Black—Fowls, 2d, A. Leggott. Chicks, 1st, W. H. Lightfoot.

Plymouth Rocks—2d, A. Leggott. *Leghorns*—White, 1st and 2d, C. Bressmer, Springfield.

Hamburgs—Silver-spangled—Chicks, 1st, W. J. Foote, Springfield; 2d, S. M. Clark, Springfield.

Polands—Golden-spangled—Fowls, 1st, C. T. Williamson; 2d, A. Leggott. Chicks, 1st, Henry Dose, Springfield. Silver-spangled—Fowls, 1st, C. Landgraaf, Springfield; 2d, C. T. Williamson. Chicks, 1st, C. Landgraaf.

Houdans—Fowls, 1st, C. Landgraaf; 2d, J. Q. A. Floyd, Springfield. Chicks, 1st, J. Q. A. Floyd.

Games—Black-breasted Red—Fowls, 1st, J. M. Smith, Springfield; 2d, James Sarver, Springfield. Chicks, 1st, John H. Nickerson, Springfield; 2d, J. Halfen, Springfield. Brown Red—Chicks, 1st, J. M. Smith.

Bantams—Sebright—Fowls, 1st, Frank Ridgely.

Game Bantams—Black-breasted Red—Fowls, 1st, W. H. Lightfoot. Chicks, 1st, W. H. Lightfoot. Duckwing—Fowls, J. Q. A. Floyd. Chicks, 1st, C. T. Williamson; 2d, Bertie Bates, Springfield.

Pigeons—Fantails, 1st, C. T. Williamson; 2d, A. Leggott. Pouters, 1st, A. Leggott. Trumpeters, 1st, A. Leggott. Carmelite, 1st, A. Leggott. Jacobins, 2d, A. Leggott.

Jack Rabbit—1st, Bertie Bates.

Fox Squirrel—1st, Bertie Bates.

Guinea Pigs—1st, John B. Conant, Springfield.

Ferrets—1st, James C. Conklin, Springfield.

Maltese Cats—1st, A. Q. Booth, Springfield.

Dogs—Spitz, 1st, Frank Ridgely. Poodle, 1st, W. B. Hatchett. King Charles, 1st, W. B. Hatchett. Pointer, 1st, Frank Ridgely. Black-and-tan Terrier, 1st, Frank Godley; 2d, E. Little. Scotch Terrier, 1st, Frank Godley. Coach, 1st, Eddie Green. Bull and Greyhound, cross, 2d, M. Palmer.

SPECIAL PREMIUMS.

Best collection of Light Brahmas, not less than ten birds, Frank Richardson, Springfield. Best three pairs Light Brahma chicks, Frank Richardson. Best two pairs White China Geese, W. H. Lightfoot. Best pair Pea-comb Partridge Cochins chicks, P. M. Springer. Best pair Guinea Pigs, John B. Conant. Best pair White Cochins chicks, C. T. Williamson. Best pair Trumpeter Pigeons, A. Leggott. Largest hen, of any breed or variety, W. H. Lightfoot, Buff Cochins, twelve and a half pounds.

W. H. LIGHTFOOT,

SPRINGFIELD, ILL.

Secretary.

(For Fanciers' Journal.)

FIRST EXHIBITION OF THE EASTON POULTRY AND SALE ASSOCIATION.

THE first exhibition that was held here I think we can call a success. Parties here, from the East and from neighboring towns, were delighted with the way the exhibition

was got up, and the manner in which it was managed. The room is the best suited to an exhibition of this kind of any I have ever seen. It is lighted by skylights, which throws the light in all directions, and the gas-lights are so arranged that every coop in the room is lighted up.

There were three hundred and twenty-three entries, about seventy-five being pigeons, and splendid birds they were, too. The principal exhibitors were Rev. T. A. Schwartz, with his Black, Blue, Yellow, and Red Pied Pouters; D. E. Newell, with Black and White Carriers, Black, Red, and White Barbs, some of which, I believe, he valued at \$200 per pair; C. G. Trexler, of Allentown, with sixteen entries of fine birds; Levi Bennet, with sixteen entries, among which was a magnificent pair of White Barbs, which carried off the first prize; McKeen & Hulick had twenty-four entries of pigeons, carrying off quite a number of premiums, the most noted of which were their Dun Carriers, which got 1st; Silver Turbitts, 1st and 2d; Blue Owls, 1st and 2d; Silver Owls, 1st; Yellow Barbs, 1st and 2d; Blue Antwerps, 1st and 2d.

The principal exhibitors of poultry were D. C. Waterhouse, of New Haven, who had Dark Brahmas, Partridge Cochins, and Plymouth Rocks, and took a premium on every coop; H. T. Sperry, of Hartford, with his beautiful little White Polish; John J. Berry, of Hackensack, had four coops of White Cochins and three of Plymouth Rocks that were somewhat out of condition on account of being shown so much, but, nevertheless, took five premiums on seven coops exhibited; Jacob L. Otto had a fine display of White, Silver, and Black Polish, taking quite a number of premiums. The largest exhibitors of Asiatics were McKeen & Hulick, who carried away enough prizes to win the special of \$50 for the largest and best display. Their Light Brahma chickens, of which they showed fifteen coops, were said by the judges to be a better lot than could be shown by any one party in the country, the three winning cockerels scoring ninety-one, ninety-two, and ninety-three; the bird that won the second prize at Brooklyn and 1st at Philadelphia being beaten two points by a later-hatched bird. Their late pullets, too, were much better than those shown early in the season, one of them figuring ninety-three. The cockerels that won 1st and 4th at Allentown were beaten by these birds kept at home. Their display of Buffs, too, was very fine, having won everything they showed for; they also showed a fine lot of Partridge and White Cochins, the Partridge Cochins cockerels being remarkably good.

There was a good display of ducks and turkeys, Mr. Christian Knecht, of Nazareth, showing some very fine White Holland and Bronze turkeys, and Mr. A. B. Holcombe, of Lambertville, N. J., showing the best Pekin and Rouen ducks. The ducks and turkeys were arranged in a very unique manner, being built up in a pyramid in the rear of the room, an immense Bronze gobbler topping out the pile.

The awards of the judges seemed to give general satisfaction, and they deserve a great deal of credit for the prompt manner in which they put it through. The room was all arranged Wednesday morning; a great many of the premium cards were on before one o'clock (when the hall was opened to the public), all of them being on by six o'clock. The judges were Messrs. Plaisted and Bradley, of Connecticut, on Asiatics; Major Cryer, of Philadelphia, on Games and Game Bantams; Dr. A. M. Dickie, of Doylestown, on the small breeds, and Mr. W. T. Rogers, of the same place, on pigeons.

I neglected to mention, in their proper order, the Games and Game Bantams, of which the display was good, there being twenty-five coops of Games and about the same of Bantams. The largest exhibitor of Games was Mr. F. Freeland, of Easton. The largest of Game Bantams was Charles E. Long, of Lancaster, who had some very fine ones, but the handsomest were a pair of Black Africans by the same exhibitor. We will be able to hold an exhibition here next year which cannot be surpassed in quality, and hope that Mr. Wade may have leisure enough to attend.

Yours, VICTOR.

N.B. I neglected to mention Mr. Rogers' display of Silver-penciled Hamburgs, which I do not think can be surpassed.

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

THE COLUMBIAN SHOW AT KUTZTOWN, PA.

I LEFT Doylestown on Tuesday morning, on the ten o'clock train, over the N. P. R. R. to Bethlehem, then, by the Reading road, to Kutztown. Meeting a small boy, he pointed out to me the residence of Dr. L. C. Berkemeyer, the President and the head of the Kutztown Poultry Association, and he at once conducted me to the Washington Hotel, presided over by that fine old German gentleman, Ulrich Miller. For mince pies, sausages, coffee, and good bread and butter, friend Ulrich is ahead, and old Berks County has reason to be justly proud of the Washington Hotel and mine host. Ulrich often spends a pleasant evening at the house of Dr. Berkemeyer. I retired to bed, and when the morning sun rose brightly over Kutztown, I was refreshed and ready for work at the show. The building in which the exhibition was held was well adapted for that purpose; the coops were nicely arranged and the stock showed off to a good advantage. There was, I think, about fifty coops containing fancy pigeons, many of them very fine birds.

Among the principal exhibitors were Mr. C. B. Bast, of Kutztown, Pa.; Mr. D. H. Hinterleiter, of Kutztown, Pa.; Oliver D. Shock, of Hamburg, Pa., and C. E. Long, of Lancaster, Pa. Some of the first premiums awarded to the gentlemen named above, were to birds of a high order of perfection, and the columbian part of the show will compare with that held in Philadelphia, Doylestown, Tamaqua, and Allentown. Dr. Berkemeyer, the President of the Association, worked hard to make the show a success, and when it is understood that the Kutztown fair was held after all the others in Eastern Pennsylvania, the Doctor may be proud of this his first effort. I had the pleasure of visiting the Doctor's poultry yards, and found that he had things nicely arranged. His stock consists of White Leghorns and Silver-spangled Hamburgs, and some of them were fine

birds. A new feature was introduced at this poultry show, namely, a lecture by that able writer and breeder of poultry, Dr. A. M. Dickie, of Doylestown, Pa. His remarks were listened to with marked respect by a large audience. At the conclusion of his address on the care and management of poultry, he was greeted with applause. I might mention here that Kutztown has a large normal school in successful operation. Take it all in all, Kutztown is a very beautiful place, and the residents are noted for their hospitality. It is mostly composed of Germans, and of all people with whom I have come in contact, for large and noble-heartedness, commend me to the honest Germans of old Berks County. Thanks to Prof. Mark, Bair, Berkemeyer, Schmehl, Gehring, and others, for their kindness and hospitality.

SPORTSMAN'S DEPARTMENT.

(For Fanciers' Journal.)

THE DROPPER.

I AM sorry to see anyone advocating, in your interesting paper, the use of that miserable nondescript, the dropper. Not only advising the use, but also the breeding of this mule among dogs, holding it up as the perfection of canine life, when, in reality, it is the worst of vermin. No one can say they resemble either of their parents, for to the most inexperienced eye they show the cross, imitation Pointers losing the close, fine coat peculiar to the race. They endeavor to represent, or burlesque, the Setter by having a feathered tail and outline of head, both imitations lacking the satin gloss, soft, silky hair, and length of feather. It is just this system of breeding cross breeds, anything, in fact, that will run about a field and stand a bird, that has so far depreciated our stock, that, with few exceptions, there is not a pure-blooded dog in America. One or two whelps from the first cross of a Setter and Pointer may turn out good dogs, but no better than either a pure Setter or Pointer; while, in the majority of cases, they will all be curs. If anyone doubts their capacity of breeding curs, let him cross two droppers, or a dropper and a full blood, and see what a kennel of big-tailed, thick-headed whelps he will have. It is a law of nature, that hybrids cannot propagate. It would be well if droppers could not, since their first get must disgrace their grandparents.

If a dog is wanted for open country, get a Pointer; he will work over prairie and meadow, and, if needs be, will work out a cripple, for I never saw a good-blooded Pointer refuse to enter a thicket. If a dog is wanted for low, unbroken, bushy country, a Setter will answer; but do not try to combine the two, when, by careful breaking, the full-blood may be made to do all the work that is required, and, at the same time, can be the means of adding value to your kennel by reproducing its own, or imparting better qualities to its offspring.

O. D. F.

THE CHICAGO SHOW.

As we go to press, Mr. Mack W. Miner writes us, "The big show is opened, and bids fair to be a grand success. There are two thousand entries of fowls and pigeons, of the very best quality."

IMPORTATION.

MR. J. O. THURSTON, 786 Broadway, N. Y., has recently added to his stock of Carriers by importation from England, three pairs of fine birds; one pair purchased at the Crystal Palace show by Mr. W. Masey, are particularly so. Mr. Thurston's imported Carriers have just taken two firsts, two seconds, and four specials.

AMUSEMENT AND KNOWLEDGE.

AN able scientist, versed in Ornithology and kindred subjects, writes that "the man is happy indeed who possesses an inborn taste for soft and quiet amusements, which he may resort to at any time of the day. He is still happier when he has good ground to expect from the said amusements, curious branches of knowledge that may become useful or valuable to mankind."

These may be very properly called philosophical amusements, he adds. The birds in a poultry-yard, for example, will afford diversions of this character to any one who may be fond enough of seeing, observing, and caring for them. If a man is obliged to pass a portion of his life in the country, he must be well pleased to experience within himself an inclination that will daily ensure a very laudable pastime to him.

In the rearing of poultry and other pet-stock, we may find them very fit to inspire us with this sort of taste. It is natural that we are thus tempted to try whether they will produce the effects we may aim at in various experiments made with them. And whoever undertakes to raise fowls or other small live-stock, cannot fail to grow fond of such reproductions, as they grow up under his supervision.

So long as they owe their lives and their progress to the care we bestow upon them, we behold their advancement and daily improvement with increasing pleasure. We follow their growth and development with satisfaction in every stage of their lives. We love to see them approach from infancy to maturity, and enjoy their comparison with those produced by our neighbors or competitors. We look to see if the originals bring forth their like—and thus we are tempted to observe them more critically, and are induced to make new trials, towards improving and increasing their

best qualities—through which pleasant operations we obtain fresh knowledge, and acquire an increasing spirit of laudable curiosity, leading us to inquiries not previously attempted.

All this is entertaining, healthy, and commendable. The man who indulges in this pastime lengthens his natural lease of life. He grows wiser, not only in this especial work itself, but he adds to his philosophical knowledge, upon general principles, by the indicated means. The suburban or country resident, who devotes a part of his time to this agreeable pursuit, may do this with pecuniary profit, too; and while he may thus contribute to the general knowledge of the community, through the promulgated results of his experience with these pets, he enhances his own personal wealth and attainments, and makes himself, his family, and his friends wiser and better as the years go by.

CONSOLIDATION.

A GRAND mass meeting of the poultry and pigeon fanciers of the eastern part of the State of Pennsylvania will be held at the American Hotel, Allentown, Pa., on Thursday, March 2d, at 11 o'clock A.M., to take into consideration the matter of forming all the poultry associations in the eastern part of the State into one grand consolidated body.

WE are in receipt of the *Fanciers' Journal and Poultry Exchange*, published weekly at Philadelphia, at \$2.50 per year. It is devoted to Poultry, Pigeons, Dogs, Rabbits, Pets, etc., treating on their breeding, care, successful management, etc., and each number is handsomely illustrated. We pronounce it one of the ablest journals of its class in this country, one which every breeder of poultry and pets should possess.—*The Lake County (Wis.) Patriot*.

A MISTAKEN POLICY.

A YEAR or more ago, some one who had never tried it, adopted the experiment proposed by a novice, of spreading pine saw-dust upon the hen-house floor, say six inches deep, into which was to be raked oats, barley, and broken corn daily, as dry food for the fowls confined in close winter quarters. It was claimed that they thus obtained exercise by scratching for their food, and were prevented, through thus being kept occupied, from eating the feathers off each other, etc.

Another use to which this same pine saw-dust has been largely put, is its adoption by managers of poultry shows for the bottoms of coops and cages sent to our fall and winter fairs. Either or both of these plans we look upon as objectionable, for the reason that, in the first instance, it has been found that in picking the oats and small grains out of the saw-dust in the hen-house, a great many particles of the powdered pine wood adheres to the broken kernels, and goes into the crops of the fowls, with the corn, oats, etc. And we have not found, and have never yet heard that this pine saw-dust is particularly digestible,

In the other case, the objection holds good for similar reasons. In the coops at our fairs, to be sure it is a pleasant sight to observe the cleanliness which this substance affords in the bottom of the cages. But the birds not only manage to get a great many particles of the wood-dust into their crops from picking food from amongst it, but in scratching, as they do frequently, they throw it into their drinking cups; and thus they swallow more of it, whenever they sip the water, and it will not digest well. This is a very sure thing, as anyone may imagine on a moment's reflection.

Now for the hen-house, dry leaves, or chopped straw and coarse hay, is infinitely better, for the floors; and for our coops at the shows, fine chopped straw (which can ordinarily be quite as easily obtained) is an improvement upon this pine saw-dust.

We throw out these hints for the benefit of all interested; merely adding that either of the ingredients we recommend are both as palatable and as digestible as are the grains; they fully answer the purpose for the "exercising" proposal, they are as cleanly and slightly, and that the saw-dust is not only indigestible, but it is very pungent, and more or less injurious to the birds as well.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—The Lake Merritt dam question, which has caused an agitation of the Oakland mind for several weeks, the topic under discussion referred to a special meeting of the Oak and City Council, which was in session last evening. The cause of this agitation lies in the fact that the Lake Merritt dam has given way, and does not hold water. Earnest speeches were made by the City Engineer, T. J. Arnold, Dr. Merritt and Geo. C. Potter, after which a resolution was unanimously adopted to the effect that the City Marshal, with the co-operation of the City Engineer, proceed at once with the work of reparation. The primary cause of the damage is attributed to the teredo, or some such species of worm, which has eaten the plank work of the dam, low down beneath the surface of the water. This ordinary dam was built about seven years ago, and an entirely new one is what is now needed. This idea was strongly intimated to the Council last evening, and the cost was roughly estimated at from \$12,000 to 15,000.—*Cal. Ex.*

—**MR. EDITOR:** Your correspondent, E. S. S., page 18, of the *Journal*, says, "Col. Bee shot a hare (*Lepus sylvaticus*, local name *Jackass rabbit*)." Now here is another confounding of animals. *Lepus sylvaticus*, improperly called rabbit, is common to the Middle, Northern, and many of the Southern States; while the *Jackass rabbit* (name given by our soldiers in the Mexican war) is only found in Texas, Mexico, and Oregon. This is the *Lepus callosus*, or *Lepus texianus*, of the naturalists. If the measurement, as given by E. S. S., be correct, he must have had a "giant in those days." *Lepus sylvaticus* has never been known to measure more than 17 inches from the tip of nose to root of tail, and 27 inches from tip of nose to the end of outstretched legs. E. S. S. gives him "38 inches from tip of forehead to tip of hind leg." Evidently this was not a *Jackass rabbit*, for its length from tip of nose to root of tail does not exceed 23 inches, while E. S. S. gives his animal 31 inches from tip of nose to end of tail. As to the "swellings" and "white eggs" found in the flesh, E. S. S. should know that nearly all the genus are infested, in the summer and autumn, with the larvae of the *Gad-fly* (*Estrus*), which penetrates the flesh, and the leanness of the animals at those seasons is caused by a constant irritation from the insect. Lovers of hare-meat will please make a note of it, if they are not aware of the fact already (it seems E. S. S. was not), and never use it as food out of season. **HUON.**

—**HEREDITÉ.**—Cresheim, I attribute the fine form of the Lancashire with Berkshire color and stamina coming through *heredité*, not *influence*. In case of the child it is a difficult question. **M. H. C.**

—**BULLFROGS.**—Seeing notice of shooting bullfrogs in No. 1, *Fanciers' Journal*, I thought it might interest some of your readers to know, that two old frog hunters came up the Indian River and its inlets (small lakes and ponds), and in two days, in July, caught eight hundred frogs, dressed and sent them to New York, where they got seven cents per saddle for them; thereby making forty dollars clear, after paying all expenses, and allowing them three dollars per day each for their work.

I was one of three who went to Bonaparte Lake about the same time, and in one hour and twenty minutes, we caught one hundred and sixty nice bullfrogs.

Later in the fall (15th October), the same party again went to Bonaparte, when the frogs had ceased their song of *go around*, and we caught one hundred and twenty-two pounds of trout. Twelve of which weighed seventy pounds, averaging nearly six pounds each. At the same time we got a nice venison. If Messrs. Dauth & McGovern, want sport catching bullfrogs, and if they have any doubts of what I write, let them come up in this Black-river-big-woods-country, and be convinced. **JEFFERSON COUNTY.**

CORRESPONDENCE.

IMPORTATION.

I RECEIVED, December 31st, a fine trio Brown-red chicks, from Henry Beldon, Bingley, Yorkshire, England. They came out in the "Germania," and arrived in very fine condition. Yours truly, **E. P. HOWLETT.**

IMPORTING.

MR. WADE:

Can any of your readers inform me what line I could import pigeons on from England. I have talked with the shipping agents here, and my brother has inquired in England, but we could not find any company that would import them. I have imported a number, but by private individuals. **T. STEVENSON.**

[Major Cryer, Southport, England, is the most reliable party we know to import either fancy stock or merchandise from. Inclose stamp to him for reply.—**ED.**]

NEW SOCIETY.

THE Poultry and Pet Stock Society of Hornellsville, N. Y., was organized here to-day, with W. W. Ford, of Canister, as President, and J. R. Sheldon, of Hornellsville, Secretary. Yours, **J. R. SHELDON.**

HORNELLVILLE, January 18, 1876.

A CURIOUS CASE.

MR. JOS. M. WADE.

DEAR SIR: The following circumstance occurred with a Light Brahma hen belonging to a friend of mine:

The first thing about the hen that attracted attention was the fullness of the crop when it came from the roost in the morning. The crop continued to fill out more and more for about a week. Her health seemed good until her crop was so full that she could not eat, when she was killed. In the crop was found a wad of grass, such as would be found this time of year, rolled up together, which completely filled it. She was very fat, her gizzard being covered with layers of it. Have any of the readers of this *Journal* ever heard of or seen a like instance, and what is the reason the grass would not pass from the crop; also, is there any remedy?

Yours respectfully,

F. A. M.

SUSQUEHANNA DEPOT, PA., January 12, 1876.

GOOD STOCK.

FRIEND WADE: I have purchased from P. Williams, the cock "Atlas," winner of first and specials at Boston and Buffalo shows last season. He is sire of the winner of the fifty dollar prize cockerel at Brooklyn show in December last. Atlas also won first at Dunkirk last week. I have also purchased a pen of C. A. Sweet's best Dark Brahmas.

Yours truly,

GEO. S. JOSSELYN.

FREDONIA, N. Y., January 17, 1876.

A SURE REMEDY.

FRIEND WADE:

I desire to communicate a fact for the benefit of my brother fanciers. In this changeable weather we all know how apt our fowls are to take cold, and if not cured a worse state follows. I have used a remedy for years that has never failed me, the first dose being generally sufficient, the second always successful. Take a common troche, crush it in the mouth, then hold the bird, opening the beak, and spit the whole well into the throat. I have told this to many, and they all testify that it works like a charm.

BIG FLATS, CHEMUNG CO., N. Y.

WM. ATWOOD.

ELECTION OF OFFICERS.

JOS. M. WADE, ESQ.

DEAR SIR: At a meeting of the Pennsylvania State Poultry Society, held this day, the following officers were elected to serve for the year 1876.

President—William Wister.

Vice Presidents—John E. Diehl, Samuel J. Sharpless, Samuel P. Courtney, John Clapp, Thos. B. Raynor.

Treasurer—G. W. Frederick.

Corresponding Secretary—A. P. Groves.

Recording Secretary—J. D. Nevius.

Executive Committee—Jos. M. Wade, W. F. Miskey, H. M. Phillips, Mark Schofield, John Stone, Jesse G. Darlington, Benjamin Mann, J. C. Long, Jr., Geo. C. Potts, Isaac F. Baker.

Yours truly,

A. P. GROVES,

PHILADELPHIA, January 18, 1876.

Corresponding Secretary.

IMPORTATION.

R. F. SHANNON received per steamship "Idaho," from Major Cryer, three Black and two Blue Bald-head pigeons. One of the Blacks a prize winner at Manchester, December, 1875. The Blues are also first-prize winners. Also, one trio of Red Pyle Game Bantams, first-prize winners. They all arrived in very good condition.

SMALL PET DEPARTMENT

AND YOUNG FOLKS' CORNER.

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS,

Philadelphia, for the week ending January 22, 1876.

- 2 Flying Squirrels (*Sciuropterus volucella*). Presented by Geo. Thayer, Delaware Co., Pa.
- 3 * Javanese Leopards (*Felis pardus*). Born in the Garden.
- 1 Golden Eagle (*Aquila chrysaetos*). Presented by Paul & Heichhold, Philadelphia.
- 2 Snowy Owl (*Nyctea nreia*). Presented by Geo. De Haven, Philadelphia.
- 1 Zebra (*Bos Indicus*, sacred to the Hindoos). Purchased.
- 1 Yak (*Bison grunniens*). Purchased.
- 1 Axis Deer (*Axis maculata*). Purchased.
- 3 White Deer.

* Short-lived were the young leopards, being born in the evening, and in the same night eaten by the parent. However unnatural this may seem, it is well known that the morbid habit or propensity is common to all the cat tribe—lions, tigers, leopards, panthers, etc.—and also to the hippopotamus, bear, hog, rabbit, and hare, as well as to fish in general. It is not long since a fine young hippopotamus, born in the London Zoo, and whose advent was most anxiously looked for, notwithstanding all the care of the keeper to prevent such a catastrophe, was taken as a breakfast by its mother.

THE DEATH OF BLUE BIRD.

"He is dead!" said the Wind,
 "Oh, who?" asked the Rose,
 "The prince of the wildwood—the Blue Bird."
 "And he died," said the Wind,
 "Oh, why?" asked the Rose,
 "Because she he loved was no true bird."
 "Alas!" sighed the Rose,
 "Ah, me!" said the Wind,
 "So handsome, so tuneful, so clever."
 "And she?" asked the Rose,
 "False one!" said the Wind,
 "In the maple chirps gaily as ever."
 "And he lies," said the Wind,
 "Oh, where?" asked the Rose,
 "At the foot of the oak, in the clover."
 "And the grass," said the Wind,
 "Droops low," wept the Rose,
 "O'er the form of the ill-fated lover."
 "Oh, list!" said the Wind,
 "I hear," sighed the Rose,
 "The grave-digging beetles are coming."
 "And that sound?" asked the Wind,
 "Is a hymn," wept the Rose,
 "That the Bee folks are solemnly humming."
 "They are there," said the Wind,
 "And at work?" asked the Rose,
 "Yes, the ground very softly they're breaking."
 "They are kind," said the Wind,
 "Most kind," wept the Rose,
 "Such a pretty wee grave to be making."
 "They are done," said the Wind,
 "And I'll fling," said the Wind,
 "A rose leaf or two where he's lying."
 "Take myself," sighed the Rose,
 "All myself," wept the Rose,
 "He is dead, and for him—I am dying!"

—MADGE ELLIOTT.

(For Fanciers' Journal.)

THE AQUARIUM.

THE aquarium, properly managed, is an absorbingly interesting and instructive ornament. That it is not more popular in this country is due to the fact that the business has not fallen into the hands of enthusiasts on the subject. Instead of endeavoring to cultivate a popular taste for the aquarium, dealers have been content to await its growth, believing that all that is required of them, as educators of the public taste in this direction, is to be able to furnish a receptacle which will hold water, without regard to its fitness. That most of the aquariums in use in this country since its introduction, in the condition in which they were sold, have been unfit for the purpose, the hundreds of unused aquariums throughout the country bear witness. That no vessel in which iron is exposed to the water can ever be made an aquarium is a scientific certainty. I will relate my first experience with an iron tank, stating first that I do not intend to condemn the tank itself, but simply to show the necessity for protecting every particle of iron inside the aquarium from contact with the water. I had endeavored for a long time, with the advantage of all the knowledge to be derived from dealers and from books on the aquarium, to accomplish the results they had promised, but in vain. In the morning I would approach my aquarium hopefully, but only to find the plants loosened and floating on the surface of the water. Why would they not root? They had the most favorable condition of light and temperature. I had introduced a few snails of the genus *Physa*. They had increased, in the course of a month, an hundred fold, in

spite of the depredations of sticklebacks and sunfish on the spawn. Here, I thought, is the trouble: this snail is a feeder on growing instead of decaying vegetation. They are nocturnal predators; and that the plants were eaten off at the bottom was further proof that it was the work of the snails, as to get on the plant they would commence at its base. Then commenced a work of extermination. Each evening I would retire from the field, thinking the foe vanquished; but, like Banquo's ghost, "they would not down," and each morning would disclose a new and formidable array arisen from their haunts among the rocks and pebbles.

But all things have an ending,
And this one was heartrending.
For the slaughtered snails were counted by the score;
Their character was damaged
By the plants I thought they cabbaged,
And I'd never have another—thus I swore.

I will digress here to say that this is an example of the way in which opinions are formed, and accounts for the many inaccuracies of and controversies among naturalists. This snail, which is harmless to living vegetation except of confervoid growth, was held responsible for the results of a destructive chemical action; and it is thus that many observations are made and many conclusions arrived at by naturalists, under conditions unfavorable to the animal. Everything is lost sight of but the object itself.

My aquarium did no better after the extermination of the snails, while their loss detracted from its interest and deprived the fish of a large amount of food in the spawn and young snails; the plants floated gracefully to the top as of yore, and I was in despair, believing the aquarium a delusion and a snare. At this juncture I saw in some newspaper a paragraph, of which I can give the purport, but of which I forget the exact phraseology. It said, "Muspratt (some European chemist, I suppose) calls iron nature's great scavenger," and said the oxidation of iron in connection with decaying animal and vegetable matter formed, among other combinations, nitric acid, which will destroy all organic matter. I exultingly exclaimed, Eureka! I had in my tank these very elements of destruction. Now all I had to do was to cover the iron with some pure and indestructible material. I tried in turn various paints, shellac, asphaltum, varnish, etc., but all were soon decomposed by the acids formed by the decaying animal and vegetable matter. I then tried Portland cement, and the result was a covering over the iron as hard, pure, and indestructible as granite. I now had a tank in which at the end of a year, without change of water, the sand was as sweet and pure as when introduced.

In other articles to follow, I will discuss the principles of the aquarium and the proper mode of stocking it.

(For FanCIers' Journal.)

CAT SQUIRRELS.

O. D. FOULKE (*Fanciers' Journal*, January 13, page 19) asks, "why he does not meet with more Cat Squirrels on his hunting trips, as he believes they are peculiar to the Middle States where he hunts." Goodrich says (*Animal Kingdom*, Vol. I, page 378), "The Cat Squirrel (*Sciurus Vulpinus*) is found sparsely in the Middle States;" and the *American Cyclopædia* says, "that in those states it is confounded with the Fox Squirrel;" which, doubtless, has led O. D. F. to suppose he should there find them.

I give here several important points of difference between the two, hoping they will be of benefit to future squirrel collectors as well as to O. D. F.

The Fox Squirrel is fourteen or fifteen inches in length, with tail, large and flattened, sixteen; hair coarse, and subject to great varieties of color, of which gray is the most common. Of the "mottled," the ears and nose are white. The Fox is a good fighter, stands in no fear of a small dog, and in a square fight will not come off second best.

The Cat Squirrel (*Sciurus Cinereus*) is thirteen inches long, with tail fourteen. It is heavy and slow in its movements, never will leap from tree to tree, or from branch to branch, like the Fox, unless when much alarmed or closely pursued by some enemy. Its size is the only thing which positively distinguishes it from the Fox Squirrel, while it shows so many varieties in color it is impossible to state them all. Three individuals, taken from one nest, were found so differently marked that they were supposed to be of separate species—one having all the marks of the Fox, and the others strongly resembling the common Black Squirrel.

HUON.

A WILD goose flew into Oregon, and its crop being opened revealed a new kind of grain. From the seed forty bushels have been raised, and the Oregon farmers are sitting on the fence, with their elbows on their knees, wondering what they shall call the new kind of whiskey they will make from it.

THE price of dogs has not fallen since a Lansing (Mich.) gentleman traded forty acres of land, worth \$100, for one. We hear of a recent transfer in which \$100 cash was the consideration in gold.—*Eco.*

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words, describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstance be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

C. J. ANDRUSS, Canandaigua, N. Y., has a copy of Burnham's "China Fowl," new and in perfect condition, to exchange for either Wright's Practical Poultry-Keeper, or Beument's Poultryers' Companion, in equally good order.

FANCIER, P. O. Box 1041, Williamsport, Pa., will exchange well improved property in the flourishing city of Williamsport, Pa.—for a small farm, well improved; land must be good, suitable for raising Fancy Fowls. Farm east or southeast of this place preferred. Information given.

PROF. R. F. GEORGE, Secretary Wisconsin Central Poultry Association, Madison, Wis., will exchange Appleton's Journal, No. 1 to 356, 9 vols., bound, or Fancy Pigeons—for Plymouth Rock fowls, Game Bantams, or what offers.

BOX 92, Basking Ridge, N. J., will exchange one patent Quilting Machine, one Rifle Cane, one two-wheeled Velocipede (cost new \$90), one Lt. Brahma cock from extra-good stock—for Brown Leghorn hens or pullets, Lt. Brahma pullets, or offers.

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

PHILADELPHIA, FEBRUARY 3, 1876.

No. 5.

TO SLANDERERS.

A SATIRE.

BY C. D. FRENCH.

AY, scoff at others, call them silly fools,
Pile up their errors—mark the trait that rules;
Avoid their merits, seek alone to find
Their faults and failings—leave all else behind.

Of character leave not a single trace,
Heap on the scandal, bring them to disgrace,
Show them no mercy, *one* will deem you just,
If 'neath your heel you grind them to the dust.

Strew rankling thorns along their future course,
Blight all their prospects; never fear remorse—
Yourself perfection, in your faultless mind,
One spark of evil none could hope to find.

Erect an altar, offer sacrifice,
The God of Evil, give him something nice;
Still ply the lash, censure the good and great,
Denounce all virtue, nourish vice and hate.

Thus through your life aim only to destroy
The peace of others; deem it sweetest joy
To wreck their happiness, their life, their all,
And fill their cup of misery with gall.

And when Death comes to claim you for his own,
Review the crimes, the evil you have done.
Throw off your armor, sheathe your reeking sword,
And of the devil claim your just reward.

THE MAGIC SPITTOON.

The Virginia City *Enterprise* tells the following good story of a magic spittoon: A night or too since, at an up-town saloon, hostilities suddenly opened between two men who were standing at the bar, when one of them caught up a large spittoon and let his antagonist have it square on the top of the head. The man hit was not knocked down, whereat he seemed a little astonished. The man who struck the blow was also astonished. He dropped his weapon and the pair stood looking inquiringly at one another. All trace of anger had disappeared from their countenances—they merely looked bewildered. The fellow who received the blow put his hand to his head and prospected, as it appeared to him that he had felt it crush in like the shell of a rotten pumpkin, while on the other hand, the one who did the striking was sure he had felt the spittoon sink half way through his enemy's head. At last the latter said: "Well, I swear, either that thing or your head is made of leather, and d—n me if I know which it is!" The spittoon used happened to be an India rubber one painted in the imitation of earthenware. The discovery of this fact so amused the pair that they at once shook hands and settled their difficulty by getting outside of a couple of cock-tails in company.

POULTRY DEPARTMENT.

SILVER-PENCILED HAMBURGS.

THE above cut is a representation of a pair of Silver-penciled Hamburgs—"Tammany" and "Sophie"—drawn from life, and engraved by our artist, Mr. Erdmann. They are the property of W. T. Rogers, of Doylestown, Pa. They were exhibited at the various local shows in Eastern Pennsylvania the present season, and were much admired. The hen—Sophie—is very nearly a perfect bird. She was "figured" on two occasions, by different judges. In each case her score was the same—ninety-eight points. Tammany's score was ninety-three, scored by the same judges. This score is somewhat remarkable, as neither of the judges knew what the other's score was, the times of judging being two weeks apart and done at different shows. That it was done by competent parties is proved by the fact that they both hold commissions from the A. P. A. Mr. Rogers has reason to be proud of such birds. We have seen the originals and know that the cut does not

flatter them. He has four yards of Silver-penciled birds, all very fine, and perhaps stands now at the head of the list of breeders of this variety. He devotes his yards to this variety exclusively, and takes great pleasure in showing his pets to fanciers who may visit him. D.

(For Fanciers' Journal.)

SUPREME SELFISHNESS.

THE reply of Q., in Vol. 3, No. 3, while extremely courteous, does not seem to us to dispose of the question. In the beginning, allow us to say that we meant no personal allusion to any of the members of the Elmira Society. In fact, from what we learn, we have a high regard for each and every one who has come to our notice. Q. says, the publishing of the names of the breeders "will be better for the mass of breeders." If this is "a step in the right direction," why not take, for the sake of simple justice, one more "step" and give to the public the strain, or combination of strains, from which the birds originated. Would this not be, at least, more tangible? Where is the successful fancier who does not reinforce his yards with something new every year. Young breeders should generally be credited with what points they win on condition. Even the breeder can have his birds mated when he buys them; then, thanks to well-filled grain bins and a faithful hired man, win all the honors, according to Q.'s theory. As to worthless stock, Q., if he breeds fowls, knows that the whole country is full of it. Even the most upright and honest work off (for small prices it is true) specimens which they are aware will produce nothing fit to be seen, so that the progeny of such a trio after having been well-fed, and well-used, are only fit for the pot.

We fully believe that ninety-nine out of one hundred cases of failure are produced, not by ignorance or carelessness on the part of the breeder, but by the worthlessness of the breeding-stock. Old breeders! Stand up and declare you will not let a fowl leave your yards which you would hesitate to breed from yourselves, then, this will be another step in the right direction. As to friend Wade, we will vouch that he would say, that there is nothing new in the fact that often specimens which appear small and almost worthless in the fall come out wonderfully nice in the spring.

I. K. Felch says, his preference is for June pullets, as they are apt to be finer than the early ones. How do these June birds appear in the fall? The plain, simple reason why we object to the putting on the breeder's name on the coop, is, because it is of no benefit whatever to the public, or to anyone, except the breeder. For reasons above given, it means nothing, and, finally, it has no right to be there. When old breeders see that this course ceases to bring the "almighty dollar," they will not clamor for it, and we predict for the society which enforces this rule thin shows. It is very well to depreciate on "bought reputation" when not a dozen breeders on this continent possess any other. The man who buys, and brings into his town, a better domestic fowl than was there before, is as much entitled to credit as he who, in the same way, improves his own and his neighbor's cattle; as he who makes grow two blades of grass where one grew before; or, as he who plants a tree by the wayside.

YOUNG BREEDER.

(For Fanciers' Journal.)

ANNUAL MEETING OF THE AMERICAN POULTRY ASSOCIATION.

GRAND PACIFIC HOTEL, CHICAGO, ILL., JANUARY 22, 1876, 10 A.M.
THE American Poultry Association met pursuant to the following call:

OFFICE OF THE AMERICAN POULTRY ASSOCIATION,
Buffalo, N. Y., November 15, 1875.

DEAR SIR: At a meeting of the Executive Committee of American Poultry Association, held in New York, August 11th, in anticipation of the National Poultry Association holding their exhibition February next, it was resolved that the annual meeting of the American Poultry Association should be held at Chicago, February 11, 1876.

In consequence of the National Association having concluded to hold their exhibition from January 20th to 28th (the original date), it becomes necessary to change the date of the meeting of the American Poultry Association to correspond with the Chicago exhibition.

Therefore, please take notice that the annual meeting of the American Poultry Association will be held at Chicago, Ill., January 22, 1876, at 10 o'clock A.M., at the Grand Pacific Hotel.

CHARLES A. SWEET, *President*.
E. S. RALPH, *Secretary*.

The President, Charles A. Sweet, of Buffalo, N. Y., in the chair. Members present—P. Williams, Taunton; H. A. Mansfield, Waltham; I. K. Felch, Natick, Mass. H. T. Sperry, Hartford, Conn. E. L. Lamb, C. P. Willard, C. J. Ward, Chicago, Ill. A. McLaren, Meadville; Jas. M. Lambing, Parker's Landing, Pa. E. R. Spaulding, Jaffrey, N. H. David R. Jones, Tecumseh; A. Ferguson, East Saginaw, Mich. W. H. Todd, Vermillion, Ohio. Z. C. Luce, Cedar Rapids, Iowa. C. A. Sweet, E. B. Smith, F. Masten, S. Curtis, J. Beier, Jr., E. S. Ralph, Buffalo; J. Y. Bicknell, Westmoreland; W. A. Worden, E. S. Ongley, Auburn; H. E. Wolcott, Fairport, N. Y. Daniel Allen, R. McMillan, Galt; S. Butterfield, Sandwich, Ont. S. H. Seamans, Wauwatosa, Wis.

The business to come before the Association was briefly stated by the President. On motion it was resolved to adjourn to convene again at 7 o'clock P.M., at same place, in order to give the time of several members of the A. P. A. to the National Association, thus enabling them to complete their awards at an early hour. Adjourned.

January 22, 1876, 7 P.M.

The Association met, pursuant to adjournment, President Sweet in the chair, and the regular order of business resumed. Reading minutes of last meeting being first in order, on motion of H. T. Sperry, it was resolved that whereas the minutes of last annual meeting had been issued in pamphlet form, and also that of the August meeting of the Executive Committee at New York City having been generally published by the poultry press, the reading of the minutes be dispensed with. Carried.

The reports of the Secretary and Treasurer being next in order, were read, and, on motion, referred to the Finance Committee, to report on Monday next.

Reports of committees being next business in order—

Dr. A. M. Dickie, chairman of Committee on Centennial Matters, not being able to be present, submitted through the President a lengthy report, showing the difficulties the committee had to obtain a hearing or recognition from the officers of the Centennial Commission at Philadelphia, and also the total lack of moral support or adequate preparations offered—and the advice and suggestions from parties familiar with the details of poultry exhibitions being entirely ignored—that the committee were constrained, from feelings of self-respect in themselves and for the Association they

"THE rich," said a Dutchman, "eat venison because it ish dere. I eat mutton because it ish sheep."

represented, to recommend that the American Poultry Association, as an organization, have nothing more to do in the matter. On motion, the report of the committee was accepted, ordered on file, and the suggestions therein adopted as the sense of the Association. Carried unanimously, and Committee discharged.

The committee on the case of E. T. M. Simmons also submitted their report. On motion, received, ordered on file, and action deferred until next meeting.

W. H. Todd, from committee to whom was referred Mr. Hayden's offer to dispose of certain secrets in poultry matters to the A. P. A., reported that as they were so secret that the committee could have no opportunity to consider them, they asked to be discharged. Their report was, on motion, accepted, ordered on file, and committee discharged.

The chairman from committee on the case of F. J. Kinney made verbal report. On motion, the regular order of business was suspended, and resignation of F. J. Kinney accepted. On motion, the committee on his case were discharged.

A. M. Halsted, of Rye, N. Y. (editor of *Poultry Bulletin*), offered his resignation, which was, on motion, accepted.

Regular order of business resumed.

Election of officers being next in order, a motion by F. Masten prevailed, asking the Chair to appoint a committee of five to nominate officers for ensuing year, to report on Monday next. The following were named as such committee: F. Masten, New York; Z. C. Luce, Iowa; H. T. Sperry, Conn.; E. L. Lamb, Ill.; and P. Williams, Mass.

Unfinished business being next in order, the subject of changing Article III., Section 1, of the Constitution, action on which had been postponed to this meeting,—proposed amendment being to raise the initiation fee to five dollars, annual dues to three dollars, and life membership to twenty dollars,—on motion of I. K. Felch, action was deferred until next annual meeting,—leaving the initiation fee at three dollars, annual dues at two dollars, and life membership at ten dollars.

A goodly number of applications for membership were presented and read by the Secretary. That of H. E. Blaisdell was, on motion, laid on the table, and the balance referred for action to the Executive Committee.

The matter of time and place for next annual meeting provoked considerable discussion, the utmost good fellowship prevailing. Invitations were extended by P. Williams on behalf of the Massachusetts Society; by Dr. Dickie, through the President, from the Eastern Pennsylvania Society; by G. O. Brown, through the President, from the Maryland Association; by J. C. Long, Jr., through the President, from the Pennsylvania State Society; and by W. Wright, from the Michigan Society, for 1877. A very lively debate followed, the friends of each section urging their claims. Remarks were made by H. T. Sperry, Judge Luce, P. Williams, W. Wright, C. A. Sweet, and others. On motion of H. T. Sperry, Byston, Mass., was named as the place for holding our next annual meeting.

Mr. Williams thanked the Association for their partiality in accepting their invitation among such strong competition, promising the whole fraternity a hearty reception, and with a further invitation to all fanciers throughout the continent to meet with them.

A motion prevailed that when we adjourn, it be to re-

assemble at same rooms, at 2 o'clock P.M., on Monday next Jan. 24.

The subject of size and weight, as now adopted, came up for discussion. On motion, all fanciers present not members of the Association, were invited to make remarks upon the subject before the meeting. Several availed themselves of the privilege extended. Considerable debate followed—the speakers on either side of the question vying with each other in trying to bring the matter to a liberal and true basis; remarks were made by Jas. M. Wills, Ills.; Henry S. Magrane, N. J.; W. H. Todd, Ohio; Judge Luce, Iowa; I. K. Felch, and P. Williams, Mass., and others. Judge Luce being called to the chair. C. A. Sweet, of N.Y., made some very pertinent and extended remarks, which were received with great favor.

E. R. Spaulding, asked for the application of some principle as to Game and other Bantams. All Bantam breeders were requested to mature a plan for presentation on Monday. On motion further consideration of the subject before the Association was deferred until Monday next.

On motion adjourn until Monday next, 2 P.M.

MEETING OF THE EXECUTIVE COMMITTEE.

GRAND PACIFIC HOTEL, CHICAGO, ILL., January 22, 1876, 10 P.M.

The Executive Committee of the American Poultry Association held their usual session during the annual meeting. The following members being present: C. A. Sweet, P. Williams, I. K. Felch, D. Allen, W. Wright, H. T. Sperry, H. A. Mansfield, James M. Lambing, E. R. Spaulding, E. S. Ongley, Z. C. Luce, E. L. Lamb, and J. Y. Bicknell. President Sweet in the chair.

The following fanciers, applying for membership, were duly accepted and elected members of the American Poultry Association: Samuel O. Upham and E. W. Lane, Waltham; A. E. Abbott, East Hampton, Mass. C. S. Burt, Seneca Falls; Newton Adams, Utica; E. T. Baily, Mount Kisco; Rev. C. W. Bolton, Armonk, N. Y. Henry S. Magrane, Woodside, Newark, N. J. A. Merrill, Meadville; W. T. Bell, Franklin, Venango County; W. Craston, Meadville; Francis Taylor, Oakdale, Delaware County; S. H. Cook, McDonald's; W. E. Flower, Shoemakertown; Louis Senderk, Parker's Landing, Pa. Dr. Horace Enos, Milwaukee, Wis. T. A. Winfield, Hubbard; C. C. Williams, Elyria; R. H. Peck, Earlville, Ohio. James M. Wills, Bloomington; M. W. Elliott, Elgin; J. A. P. Hovey and G. Charles Smith, Chicago, Ill. W. K. Barber, Hastings; E. D. Voorhees, Ionia, Mich. C. Robertson, Beloit, Wis. Thomas F. Barnes, Blairstown, Iowa.

The following applicants for judgship were duly appointed to act on the varieties named:

Henry S. Ball, Shrewsbury, Mass., Asiatics, Games, Game Bantams, Bantams other than Games, and Spanish classes; Henry Bisco, Leicester, Mass., Polish class; A. P. Coddington, Trumansburg, N. Y., Plymouth Rocks; Rev. C. W. Bolton, Armonk, N. Y., Polish and Hamburgs; Henry E. Wolcott, Fairport, N. Y., Polish; Wm. Austin, Niagara Falls, N. Y., Game and Polish; Henry S. Magrane, Woodside, Newark, N. J., Light Brahmas and Bantams other than Games; S. H. Cook, McDonalds, Pa., Blk. Br. Red Game Bantams and Turkeys; Clement B. Elben, Pittsburg, Pa., Light Brahmas, Black Rose Comb Bantams and Aylesbury Ducks; F. R. Wotring, Mansfield Valley, Pa., Light and Dark Brahmas; James M. Lambing, Parker's Landing, Pa., Light Brahmas and Black

Hamburgs; A. McLaren, Meadville, Pa., Games and Game Bantams; J. C. Long, Jr., Asiatics and French and White and Brown Leghorns; Sam'l P. Courtney, Philadelphia, Pa., Buff Cochins; Francis Taylor, Oakdale, Del. Co., Pa., Hamburgs; Jos. M. Wade, Philadelphia, Pa., Light and Dark Brahmas; W. T. Bell, Franklin, Pa., Hamburgs; G. O. Brown, Brooklandville, Md., Asiatics and Polish, Silver Spangled Hamburgs, Houdans, Crevecoeurs, Spanish, White and Brown Leghorns and Plymouth Rocks; T. A. Winfield, Hubbard, Ohio, Games and Game Bantams; M. Eyre, Jr., Napa, Cal., Light and Dark Brahmas, White and Brown Leghorns, Houdans and Bronze Turkeys; S. Butterfield, Sandwich, Ont., Asiatics, Polish Hamburgs, Games, Game Bantams and Bantams other than Games.

On motion adjourned to Monday next, at 1½ o'clock, P.M.

ADJOURNED MEETING OF EXECUTIVE COMMITTEE.

Monday, January 25, 1876, 2 P.M.

The Executive Committee of the A. P. A. met pursuant to adjournment, President Sweet in the chair.

On motion the applications for judgeships were considered; those laid on table at last session were first disposed of, one only being rejected. The following judges were appointed to act on the varieties named:

L. D. Ely, Jr., Rochester, N. Y., Hamburgs, White and Brown Leghorns, Rose-comb White Bantams, Bronze Turkeys, and Rouen Ducks; Newton Adams, Utica, N. Y., Hamburgs and White Leghorns; J. Y. Bicknell, Westmoreland, N. Y., Games; C. P. Howlett, Syracuse, N. Y., Light and Dark Brahmas; David Jones, Tecumseh, Mich., Buff Cochins.

The following fanciers made application for membership and were duly elected: D. L. Miller, Polo, Ill.; Peter Lepp, East Saginaw, Mich.; H. C. Darrah, Dubuque, Iowa; T. S. Gaddess, Baltimore Md.; John E. Diehl, Philadelphia, Pa. No other business coming before the Executive Committee, on motion they adjourned subject to call.

EDMUND S. RALPH,
Sec. and Treas. A. P. A.

ADJOURNED MEETING.

CHICAGO, January 25, 1876, 3 P.M.

The A. P. A. met, pursuant to adjournment, President Sweet in the chair. Reports of committees being first in order, H. T. Sperry, Chairman of Finance Committee, to whom was referred the Treasurer's report, on Saturday last, reported the accounts correct, and that, although the association was at present in debt, they had assets that would reduce the amount to a very small sum, but that the association needed, for immediate use, about \$600 (offers were immediately made by fanciers present to loan that amount). The association may be said to be in a flourishing condition. Regular order of business suspended, the following resolutions, by Judge Luce, were presented and considered:

Resolved, That, on and after March 1st, no standard of the last (1875) edition will be exchanged for the edition of 1874, except upon the receipt by the Secretary of the old standard, and sixty cents to cover difference in exchange and postage. Carried unanimously.

Resolved, That all judges before receiving a diploma from the A. P. A. shall pay the Treasurer one dollar, to pay the expense of printing, preparing, and postage on the same. Carried.

By W. Wright:

Resolved, That the rule requiring judges sealing specimens for registry to send a duplicate certificate to the owner of the specimen, shall and is hereby amended, so that the judge

shall send both the original and duplicate to the Secretary of the A. P. A., and that the Secretary shall affix the seal of the society upon the same before sending it to the owner of the specimen, and that no certificate shall be deemed official or acknowledged by the association without said seal. Carried.

W. H. Todd presented a resolution altering the disqualification of Partridge Cochins. After considerable discussion (eliciting a strong feeling that the standard should not be altered), which was participated in by H. T. Sperry, J. Y. Bicknell, I. K. Felch, W. H. Todd, Judge Luce, H. S. Magrane, E. R. Spaulding, P. Williams, and others, Mr. Todd withdrew his resolution, thus leaving the standard as issued.

I. K. Felch, from Committee on Fixing a Standard Weight to govern Judges, offered the following standard weights, viz.: Light Brahmas, cock, twelve pounds; cockerel, ten pounds; hen, ten pounds; pullet, eight pounds; allowing one point per pound for any excess, and deducting two points for any deficit from above weight. Dark Brahmas, standard weights, cock, eleven pounds; cockerel, nine pounds; hen, nine pounds; pullet, seven and a half pounds. Allowance same as for Light Brahmas. Partridge Cochins, standard weights, cock, eleven pounds; cockerel, nine pounds; hen, nine pounds; pullet, seven and a half pounds. Allowance same as for Light Brahmas. Buff Cochins, standard weights, cock, eleven pounds; cockerel, nine pounds; hen, nine pounds; pullet, seven and a half pounds. Black Cochins, standard weights, cock, ten and a half pounds; cockerel, eight and a half pounds; hen, eight and a half pounds; pullet, seven pounds. Plymouth Rocks, standard weights, cock, ten and a half pounds; cockerel, nine pounds; hen, eight and a half pounds; pullet, seven pounds.

H. S. Magrane offered the following as an amendment on Light Brahmas, standard weight: Cocks, sixteen pounds; cockerels, fourteen pounds; hens, fourteen pounds; pullets, twelve pounds. One point per pound to be deducted for birds falling short of those weights. Amendment put to vote and lost. Judge Luce being called to the chair, C. A. Sweet made remarks, when a vote being taken on the original report it was adopted.

W. H. Todd, Daniel Allen, and E. S. Ongley, gave notice that, at the next meeting, they should bring forward and urge the passage of the following resolution.

Resolved, That the disqualification weights of Black and White Rose-comb Bantams be raised, namely: On cocks weighing more than twenty-six ounces; hens more than twenty-two ounces.

On motion of C. A. Sweet, the salary of Secretary and Treasurer was fixed at \$250 for the year 1876. E. R. Spaulding offered the following resolution:

Resolved, That the following instructions be given to guide judges in applying the scale with reference to weight in Game Bantams. The standard weight to be, for cock, twenty-two ounces; cockerel, twenty ounces; hen, twenty ounces; pullet, eighteen ounces. For every ounce a bird weighs over the standard weight cut a half point. For every ounce a bird runs under the standard weight add a half point. Carried.

F. Masten, Chairman of Committee appointed to nominate officers for the year 1876, reported the following:

President—Chas. A. Sweet, Buffalo, N. Y.

Vice-Presidents—A. D. Warren, Worcester, Mass.; P. Williams, Taunton, Mass.; E. C. Skinner, Detroit, Mich.; Rev. William Atwood, Big Flats, N. Y.; Albert Noyes, Bangor, Me.; Z. C. Luce, Iowa City, Iowa; H. T. Sperry, Hartford, Conn.; Dr. A. M. Dickie, Doylestown, Pa.; D. Allen, Galt, Ont.; Edward L. Lamb, Chicago, Ill.

Secretary and Treasurer—Edmund S. Ralph, Buffalo, New York.

Executive Committee—All the above, and P. W. Hudson, N. Manchester, Conn.; I. K. Felch, Natick, Mass.; S. J. Bestor, Hartford, Conn.; S. H. Seamans, Wauwatosa, Wis.; E. S. Ongley, Auburn, N. Y.; J. Y. Bicknell, Westmoreland, N. Y.; George S. Josselyn, Fredonia, N. Y.; C. A. Johnson, Newburyport, Mass.; Jas. M. Lambing, Parker's Landing, Pa.; G. O. Brown, Brooklandville, Md.; C. B. Elben, Pittsburg, Pa.; A. J. Tuck, Nashua, N. H.; Wm. Wright, Detroit, Mich.; C. H. Turner, St. Louis, Mo.; E. P. Howlett, Syracuse, N. Y.; J. P. Buzzle, Clinton, Mass.; H. A. Mansfield, Waltham, Mass.; C. H. Crosby, Danbury, Conn.; E. R. Spaulding, Jaffrey, N. H.; C. C. Williams, Elyria, Ohio.

Finance and Auditing Committee—H. T. Sperry, E. C. Skinner, and C. A. Sweet.

On motion, the Secretary was directed to cast the ballot for the association, and the above were declared elected as the officers of the American Poultry Association for the year 1876. The following resolution was offered by W. H. Todd:

Resolved, That the following suggestions to judges, in reference to Bantams other than Game, be adopted as the standard weights—For cock, 26 ounces; cockerel, 24; hen, 24; pullet, 22. For every ounce a specimen weighs above the standard weight discount a half point, and for every ounce below standard weight credit a half point. Carried.

John E. Diehl offered the following:

Resolved, That a vote of thanks be tendered to Mr. C. A. Sweet and the other officers of the A. P. A. for the able manner they have discharged the duties of their respective offices during the past year. Carried.

John E. Diehl, from the Committee on Centennial Matters, made a supplementary report stating that the Centennial Commission at Philadelphia had finally located a plot of ground containing about six acres, and a plan for pens 4 x 10 feet, one-half to be under cover. The exhibition to be held before June 15th, or after October 20th. Mr. Diehl also stated that the Pennsylvania State Poultry Association would hold their ninth annual exhibition about November 1st, and in behalf of that association invited the A. P. A. and all fanciers to meet with them.

President Sweet resumed the chair. On motion of J. Y. Bicknell a committee of three was appointed by the chair, the chairman of such committee being authorized to name two additional members (this making the committee five) to whom the whole matter of a Centennial show should be referred with power; also, with authority to nominate to the Centennial Commission a Superintendent of Poultry. John E. Diehl, of Philadelphia, Pa.; P. Williams, of Taunton, Mass.; and E. L. Lamb, of Chicago, Ill., were named by the chair as said committee. Judge Luce offered the following resolution:

Resolved, That the Secretary cause the instruction to judges (that had been passed at this meeting) printed on a sheet uniform with the standard, and that the poultry press be requested to give notice that any one inclosing a stamp to the Secretary will receive a copy of the same. Carried.

On motion, the excuse of the Rev. Wm. Atwood for non-attendance at this meeting was accepted with fraternal regards. On motion, the Secretary was directed to furnish all the poultry papers with a copy of the minutes of this meeting, with request to publish. The Committee on Sumatras and Wild Indian Game made a report which was accepted, and action deferred until a future meeting. Mr. Diehl offered the following resolution:

Resolved, That the A. P. A. request as many of the members and their friends as possible to meet at Philadelphia during the Centennial show of poultry. Due notice to be given. Carried.

On motion, adjourned.

EDMUND S. RALPH.

Sec. and Treas.

(For Fanciers' Journal.)

THE NATIONAL EXHIBITION.

In the show-room, among the crowing, cackling, quacking, and hissing, a detailed report would hardly be expected, so we will do the best we can under the circumstances. The show is a grand success. We have 2064 entries, and very few poor birds on exhibition. The Light Brahma class is well filled with good birds, in fact the Asiatics are, as usual, well up in numbers and quality, and of themselves would make a large show at any ordinary exhibition. We have had little time to investigate and criticise the awards, but generally believe they were in accordance with justice. Mr. Lamb, the President, showed nearly forty Dark Brahmas, old and young, for exhibition only. These were taken from the yard just as they had been bred, not selected, and when we compared them in our imagination with such as were shown four or five years ago, we were astonished at the improvement. In the competition class, too, we were surprised at the same marked improvement. One hen from Canada in this class was almost perfection in markings, but the confinement had reduced her two and one-half ounces below the lowest standard weight. She seemed to be in fine condition, yet her appetite had forsaken her and she refused to eat. A little change of diet, however, seemed to agree with her, and she just balanced the required weight and came in for a well-deserved prize.

The French class occupied but little space, but the few specimens were good. The Leghorn class contained one pair of Dominiques, three pairs of Brown that had no business in any show on account of their inferiority, and a very fine lot of Whites.

Some specimens of Spanish were unusually fine. The first prize pullet being as good as we ever saw.

Four pairs of colored Dorkings, all grand birds. Only two pairs of White and two pairs of Silver Gray, one of which was disqualified.

Hamburgs, all varieties, except the insignificant White, were in full force, and competition is great. All varieties of Polands were also well represented and creditable. Now we come to the Games and Game Bantams. Here the Asiatics get a close rub. Two men entered Asiatics for the \$100 prize and two entered Games. The competition was so great that, by mutual consent, the competitors divided the amount. African Bantams, Golden and Silver Sebrights were creditable. The latter the genuine *Silver*, not the faded Golden as shown a few years since.

There were only five turkeys in the room, but they were good. Geese very good, but few in numbers. Aylesbury, Rouen, and Pekin ducks were fairly represented, but only

three pairs of Cayugas and one of Muscovy. Here, again the "Imperial Pekins" fell below Rouen and Aylesbury in weight from two pounds to four pounds per pair. They must pick up lively in future to keep pace with their comrades. The pigeon show was not equal to Buffalo, but many were fine. One cage contained a cat and a canary quietly reposing side by side. Ten incubators were shown, one of which was shelling out chicks splendidly; the others was transported too far to be in operation and did not compete.

We forgot to mention that the Plymouth Rocks were very good; but Dominiques, except a very few, were quite inferior, and if we do not get in some of the clarion notes of the cocks, and quacking of the ducks, we shall do well.

The Dog show was held in a separate room, and such a show. Over 340 entries. We will not attempt to report this part of the exhibition, but keep within our own sphere. The show is largely attended. People rush in at such a rate that policemen are obliged to be on hand to keep order. No doubt the show will be a success in every respect.

CHICAGO, January 27, 1876.

J. Y. BICKNELL.

NATIONAL ASSOCIATION OF FANCIERS.

The regular annual meeting of the National Poultry Association was held in the committee-rooms at the Exposition Building. There was a large attendance of members. The following list of officers was elected for the ensuing year:

President—Edward M. Teall, Chicago.

Vice-Presidents—John P. Reynolds, Chicago; A. D. Warren, Worcester, Mass.; Charles H. Turner, St. Louis; Charles A. Sweet, Buffalo; Dr. F. W. Byers, Lena, Ill.; H. A. Mansfield, Waltham, Mass.; Joseph M. Wade, Philadelphia; E. R. Spaulding, Jaffrey, N. H.; Dr. J. H. Bryant, St. Paul, Minn.; Albert Noyes, Portland, Me.; Dr. N. Rowe, New York; Charles H. Raymond, Morris Plains, N. J.; L. H. Smith, Strathroy, Ont.; Luther Adams, Boston; Horace Smith, New York; George H. Warner, New York Mills, N. Y.; J. M. Ferris, Stamford, Conn.; I. N. Barker, Thornton, Ind.; C. B. Elben, Pittsburg, Pa.; E. S. Ongley, Auburn, N. Y.

Secretary and Treasurer—Charles P. Willard, Chicago.

Executive Committee—W. W. Corbett, Chicago; S. H. Seamans, Wauwatosa, Wis.; Dr. Horace Enos, Milwaukee, Wis.; John H. Whitman, Chicago; Philander Williams, Taunton, Mass.; Z. C. Luce, Iowa City, Ia.; E. L. Lamb, Chicago; Alonzo Snider, Chicago; William H. Woodward, Chicago; J. Y. Bicknell, Westmoreland, N. Y.; C. J. Ward, Chicago; D. L. Miller, Polo, Ill.; David Jones, Tecumseh, Mich.; James M. Lambing, Parker's Landing, Pa.; John D. Olcott, Milwaukee, Wis.; W. F. Milligan, Chicago; Thomas F. Barnes, Blairstown, Ia.; John F. Boyden, Lincoln, Ill.; I. K. Felch, Natick, Mass.; W. H. Todd, Vermillion, O.; H. T. Sperry, Hartford, Conn.

Mr. E. L. Lamb, the retiring President, was unanimously nominated for re-election, but positively declined to serve, owing to the pressure of other business.

An universal desire was expressed by the members present that the name of the association should be changed from "The National Poultry Association" to "The National Association of Fanciers," with a sub-title of "Poultry, Pigeons and Dogs." This change awaits only the action of the association, at its April meeting, to become final.

The time for holding the next exhibition was fixed at February 3 to 12, 1877, at Chicago, which all agreed to be the best point, both on account of its location and facilities, for such an exhibition.—*Chicago Tribune*.

(For Fanciers' Journal.)

BUCKEYE UNION POULTRY ASSOCIATION.

JOS. M. WADE:

Nothing can afford the amount of pleasure to a "real" fancier like the feast to the eyes which a "first-class" exhibition affords. Such were our thoughts and feelings as we marched and countermarched up and down the long line of coops while visiting the exhibition of fine poultry held at Springfield, Ohio, under the auspices of the Buckeye Union Poultry Association, commencing December 15 and closing December 22, 1875. This was the second annual exhibition of the society, and was a grand success, and much superior to the one held last year, not only in the number of entries made, but in the quality of the birds shown. The Light Brahmas were out in full force, and were good birds, with a few exceptions. The Dark Brahmas were not as well represented. The first premium pair of Partridge Cochins chicks were well worthy of the prize they won; the pullet was beautifully penciled, the feathers being free from the white shaft, as was the first prize Dark Brahma pullet. This white shaft, so frequently seen in the two above varieties, is an eyesore to all "first-class" breeders, and should be bred out. The White and Black Cochins were as fine specimens as I ever saw; the Buff were not as good. Friend Nichols was there with his favorite Houdans. He is certainly the champion breeder of this variety. The White and Brown Leghorns were splendid birds, with immense combs towering high above their heads. Games and Game Bantams were largely represented and were a credit to those who bred them. There was also a good display of Pigeons and Songsters, but not being an expert as to this class, could not say as to their real merits. In fact, there was everything there from a Humming-bird to an Owl, and from the diminutive Bantam to the mammoth Bronze.

The birds were shown in pairs (with the exception of the Owl), and the one-judge system adopted; coops large and conveniently arranged, and the whole under the management of a corps of gentlemanly officers. May success ever attend the Buckeye Union.

H. P.

LIMA, O., January 1, 1876.

SPORTSMAN'S DEPARTMENT.

(For Fanciers' Journal.)

DOG BREAKING.

LESSONS IN THE FIELD.

BEFORE proceeding to the business in hand a few words as to what is the best game to work young dogs on. Most sportsmen will say quail, but as far as my experience goes I am inclined to give preference to the woodcock, for the reason it is seldom that more than one gets up at a time,

and that they are quickly out of sight, so the dog is not so strongly tempted to chase.

The quail is a nice bird to work, but as they go in bevy and lie so close it is not best to hunt them with a young dog until he has gained some experience. It is not to be expected that an inexperienced dog with the whole bevy buzzing about his ears will not get excited and rush after them in spite of your orders. Another reason is that after hunting a pup to them a few days he loses caution, and will not be satisfied to point at a distance, but must draw close on before standing. This is a common fault of many that are otherwise good dogs. Hutchinson says, in his most excellent work on breaking, that "a dog should look out for the faintest indication of a scent, and to point the instant he winds it, instead of heedlessly hunting on until he meets a more exciting effluvia."

But, to return to our pupil and his lessons in the field. The first day out will show whether you are qualified for the business or not. You must expect to have your patience sorely tried, and to give up all idea of killing much game. Bear in mind you are not out for sport, but give your attention entirely to the work in hand, for much of the future value and usefulness of a dog depends on his first day out. Mind, I do not say you need go home with quite an empty bag if your pup has been properly house-broken, and obeys the orders "to ho" and "charge" promptly—and he should never be taken into the field until he does.

Before going out it will be well to know where the birds are, as you will not care to tire yourself or the dog looking them up. Do not be in a hurry to get off early, wait until the dew is off the grass. Aside from its being wet and disagreeable walking, there is always a scent of rabbits and other vermin lingering among the bushes to confuse the dog and take his attention from the birds. Keep him close to your heels when going to the field. This may be taught by leading him with the cord, and checking him when he attempts to push ahead. When you get where the birds are cast him off with a wave of your hand in the direction you wish him to go. If he starts wrong call him back and walk that way yourself; after going some few yards give a whistle and turn and walk the other way. Beat the ground in a zigzag direction, giving a whistle and a wave of your hand as you turn. In this way you will soon get him in the habit of looking to you for signals and to quarter the ground thoroughly.

Most writers on training say that it is very difficult to teach a dog to quarter the ground properly, but by following the above plan I have not found it so. To be sure, it will make what will seem to be a great deal of unnecessary travel, but you will be well repaid in the end. Do not let the dog hunt more than twenty-five or thirty yards from you at first, so that you can control him the easier when he first winds the game. When you see him feathering, and he shows by his actions that he is near a bird, get up as close as possible. If he seems too eager and pushes on too fast check him by the command, "careful." If he is of the right sort he will soon come down to a point most beautifully "to ho." Should he in his excitement and heedlessness disregard the command and flush without pointing, get hold of him as soon as possible and drag him back to where he should have stood; give one or two light strokes of the whip, at the same time repeating the command, "to ho." Do not be too severe, but endeavor to make him understand that he has committed a fault and is punished for it. Should

he obey orders promptly and point steady, get up to him as quietly as possible, and if the bird lies well stand by his side several minutes. Now let him draw on "careful" to a flush; keep close to him, and the instant the bird rises give the order "charge" in a strong, emphatic tone, at the same time give him a smart blow with the whip. Shoot and kill your bird, and if he breaks and rushes after it drag him back, give him the whip, and make him keep his position until you reload. You may now call him to you and wave your hand toward where the bird has fallen, and when near it say "fetch." Make him bring it quickly by calling and walking away from him. Praise and caress him, and let him see that you place great value on the bird, but never let him mouth or play with it. Proceed in this manner with every bird you find; punish him when he disobeys; and never let a fault pass unnoticed; fail not to praise him when he performs well, and in a very few days you will be surprised at the progress he has made in his education. Of course, it is not expected that you will follow these instructions to the very letter, but use your judgment at all times, and do as circumstances and the nature of the ground shall determine.

Some dogs show great perverseness in breaking shot and chasing, regardless of repeated floggings, and there is no quicker or more certain way of stopping it than to let them have the contents of the gun a few times. Many will condemn this and say it is liable to injure the dog and make him gun shy. No. 10 shot, at forty or fifty yards, from an ordinary gun will only just warm up his jacket nicely, and the dog that has not courage to bear it is not worth the trouble of training. Let no one misunderstand me, and think that I recommend harshness or cruelty, for it is only in extreme cases, when other means fail, that I would venture to do it. The check cord will, if persistently used, generally accomplish your object. Some dogs will bear a greater degree of severity than others, and it requires a thorough knowledge of the animal's disposition to know to what extent to use it.

While not advocating an injudicious use of the whip, I do not think that any dog was ever broken to prompt and unhesitating obedience without it; but, there is no need of harshness. Because you are advised to punish a dog it is not necessary to hold him up by the collar and kick his ribs in, or to bend your gun barrel over his back; such treatment is worse than useless, and many a good dog has been spoiled by it. The whip should never be used in anger, nor when the dog is not fully aware of his fault.

There are many things about dog breaking that can only be learned from experience. The directions given will enable any one to train a dog well; and, if what has been written in these articles will be of any use to young sportsmen, I shall feel that the time has been well spent.

B. F. WHITE.

MAN—"Do you think it would be safe for me to cross this pasture?" Maid—"Well, the old bull don't like red very much, but if you will chalk your nose I guess he won't attack you."

A YOUNG woman in Chicago put her false teeth in a glass of water at night, and in the morning found them imbedded in a chunk of solid ice. She was late at breakfast, the process of thawing out the teeth with a bonfire of matches having been slow.

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES, IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

PHOTOGRAPHS RECEIVED.

SINCE our last notices of Photographs Received, we have been favored with a good many long-desired photographs of our leading fanciers and writers. Among them are:

H. Woodward, of Worcester, Mass., one of our ablest writers on poultry matters; but, as many of the productions of his pen have appeared over different *nom de plumes*, he is not as well known to the fraternity as he is to the editors of poultry journals.

Andrew Sugden, Hartford, Conn., well known as the breeder of White-crested Black Polands and the author of the articles which appeared in our columns on the Silk Worm and Silk Industries. Mr. Sugden's name was unintentionally omitted from our list of contributors. He will occasionally be heard from in our Small Pet Department.

William E. Flower, Shoemakertown, Pa., one of our contributors from the first, and a devoted friend to the *Journal*.

W. M. Ward, Postmaster, Peabody, Mass., well known as a devoted admirer of Light Brahmas.

C. J. Ward, Cedar Rapids, Iowa, now of Chicago, founder of the *Swine and Poultry Journal*, and too well known to need any comments from us. May he and his paper always prosper.

Ezra B. Dibble, New Haven, Conn., one of the oldest and most reliable breeders of our favorites, the Light Brahmas. Our readers have been occasionally favored with articles from his pen, but not as often as we would wish.

George Van Derveer, Port Jackson, N. Y., the great Bronze Turkey breeder, or rather breeder of great Bronze Turkeys.

Mack W. Miner, Wyoming, Ill., two views—one with his setter "Floss" by his side; the other with his setter "Major" on his lap. Mr. Miner is quite a young man, but an enthusiastic fancier of both fowls and dogs. He was the first to be heard from at Chicago, as will be seen by referring to the editorial department in No. 4.

J. Y. Bicknell, Westmoreland, N. Y., one of our best-known and oldest general breeders of fowls and ducks. Mr. B. is one of our most practical writers. His catalogues usually contain matter of much interest. He is a Judge of several varieties of fowl, both land and water, and is appointed by the A. P. A.

Frank J. Kinney, Worcester, Mass., the noted Brown Leghorn breeder. Mr. K. is also a very extensive grower of small fruits.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Mr. McCam says gray squirrels castrate each other. I think he will find it is done by the small red squirrel. I have been told by hunters that they had seen it done. The red is so quick that he will master the gray squirrel, and he fights by attacking in the rear. L. W. ALLEN.

—Hogs.—I have a fine stock of hogs, and they have been sick about a week. I have given them everything that is in my knowledge with the intention of curing them, but it is all in vain, and they are not cured yet. I should like to know what is good for them. They will lay for twenty-four hours without moving, as if they were sleepy, and their skin is getting tight, or dried up. If you, or some of your friends that holds correspondence with your *Journal*, know what is good, I would be very much obliged for the prescription. WM. B. DAVIS.

—FRESH-WATER SHELLS.—Fresh-water shells, such as muscle, snail, etc., may be bleached to a snowy whiteness by placing them for a few hours in a solution of chloride of lime, first washing them perfectly clean. Place the vessel containing them in the sunshine, and when sufficiently bleached, remove and wash in clear water. Then taking a soft woolen cloth, moisten it with a little oil and dip in powdered pumice-stone, and polish the entire surface, finishing afterward with a soft chamois skin or woolen cloth and brisk rubbing. This will produce a snow-white shell with highly enameled surface.—*Germantown Telegraph*.

—A few days ago, at the country residence of J. Addison Smith, Esq., near this city (Baltimore), one of his men cut down in the woods a large tree, and on splitting it discovered three pure white squirrels; two of them had been killed by the concussion of the falling tree, but the live one was captured, and is now in Mr. Smith's possession, in this city, and is a very fine specimen. "Hoon," your very excellent contributor, has his hands full in keeping the amateur, and other animated nature admirers, from getting the hares and rabbits, etc. too greatly, as "Hans Schneider" would say, "confoosed;" but, "if any man kin, he kin," as Captain Cattle says. G. O. B.

—CRYSTALLIZED FLOWERS AND FOLIAGE.—Take flowers and leaves of various kinds, such as violets, pansies, geraniums, ivy, etc., and fasten them to stems of wire, or, if desired, sew them carefully to the bottom of a shallow basket, made of wire or wicker work; sink them into a saturated solution of alum, after it has become perfectly cold. When a clear, sparkling coat has formed upon the surface of each leaf and flower, sufficient to form bright dew-like drops, remove them with great care, and allow them to drip until perfectly dry, when the flowers will present the most charming appearance, looking as if covered with a clear coating of ice, or as if dripping with dew-drops, according to strength of the alum solution, or the manner of drying. These crystallized flowers are a beautiful ornament for any room, and will retain their lovely appearance for a long time.—*Germantown Telegraph*.

—FOWLS, DUCKS, AND PIGEONS.—Are there any data to show that the domestic fowl was known to ancient Egypt? On the great pyramid is represented a chick, but it certainly is that of the quail, which bird is still common in that country. Ducks, among the hieroglyphics, certainly have not the show of a representation; but pigeons, both wild and tamed, have been plentiful in Egypt from the earliest times. The common rock pigeon (*C. livia*) is generally distributed. On the temple of Medinet Haboo there is found hieroglyphics which date back 1300 years before Christ, among which are priests in their state robes letting off carrier pigeons with messages to some distant points. Indeed, there are records of Egyptian history which show that pigeons were domesticated and reared as food no less than three thousand years before the Saviour was born. Hoon.

—I notice your editorial in last *Fanciers' Journal* about sawdust, its bad influence, etc., and must say that your paper is brimful of good, sound advice, which, if fanciers only heed, will save their stock and trouble. I had the pleasure of attending the late Baltimore show the last two days, and noticed that they there used clean white sand, very dry and fresh, and was put in the cages every morning. I consider this a good idea. The fowls the last day all appeared fresh and in thriving condition. Although the straw idea is good, yet I think fowls penned up several days in an exhibition room need gravel or sand to be kept in a healthy condition. I also noticed, at the same exhibition, that the premium award cards that were tacked upon the coops were printed in the form of a diploma and filled in with exhibitor's name, variety, etc., and signed by the Secretary. This makes a good record that winners can preserve, and, being official—as is often not the case with the card simply printed first premium—they are only good for those that they are intended.

NOD PATTERSON.

—INSTINCT OR REASON?—I do not suppose the above question will ever be settled to the general satisfaction of all, but I would like some of my "instinct" friends to tell me what this was on the part of a gray squirrel. These animals dearly love corn, and will carry off large ears from the fields. I once saw one sitting on the top rail of a fence, with an ear, and when he saw me he dropped it, but remained on the rail, flattening out his body as much as possible, so that I could hardly distinguish him from the rail, he being so nearly the same color, which fact, I think, he well knew. Upon my too near approach he made for a tree, where he would all the time keep on the opposite side of the trunk, hanging there until I would rout him. Here too, I think, the cunning fellow knew that his fur was just the color of the bark, else why hang there so flat and so still? I struck the tree with my stick; he did not seek another tree—he had too much—reason may I say?—but he would go higher up, until among the leaves I lost sight of him entirely. Query.—Does not man, in his boundless self-conceit, name the intelligence and industry of animals "instinct," and overlook their wisdom and fitness of behavior?

HUON.

—J. M. McCAM is right in what he says in regard to rabbits or hares making nests and lining them with fur. Now, I do not know whether the common gray rabbit is a hare or rabbit, but I know for a certainty that they do dig a hole from ten to fifteen inches deep, make a nest of grass and moss, and line it with their own fur, "Huon" and all the authorities he quotes to the contrary notwithstanding. I do not mean to say that they always do it, for I have often found the young huddled together on the form, but as a general thing the old one makes a nest.

In regard to the distance that a flying squirrel can jump, I once saw one go from the top of a pine to an old chestnut, a distance of forty-four paces (nearly nine rods) from tree to tree. There could be no mistake, as the pine stands in an open lot, with no trees between it and the edge of the woods.

Now, about gray squirrels. Nearly every farmer's boy who is big enough to carry a gun knows that gray squirrels castrate each other; but it is done in their battles, not, as McCam says, "in the nest." Neither is it done by the black squirrels, at least not in this vicinity, for we have no black ones here. The common woodchucks do the same thing, but not as often.

B. F. WHITE.

—A few days since I was asked to explain why the hoof of the mule (hybrid) was in all respects so much better than that of the horse; and especially so, since the hoof of the ass is well known to be bad? Several gentlemen present, well known here as extensive breeders and fanciers of horses and cattle, avowed that they had never known an ass to have a perfect hoof. Not being able to give an explanation, I, on their behalf, agreed to refer the matter to Dr. Baily, who has recently been working up the subject of *hérédité*.

MEDICUS.

In reply to "Medicus," we can say that the ways of nature are mysterious, but certain in their results. The student of nature is often puzzled to explain their laws, also the unerring laws of *hérédité* which govern the production of hybrids.

It is a principle well established in *hérédité* that defects in constitution are more often transmitted by and from the mother—that is, should tuberculosis or insanity exist in a family on the mother's side, the disease is more apt to be transmitted than if it existed on the father's side. Writers on mental diseases are aware of this fact and frequently make use of the statement.

The mule is more frequently a cross between an ass and a mare, and through the dam this important point (the hoof) is transmitted. While the characteristic forms of the sire are preserved in the offspring, the usefulness of the foal depends much on the transmitted qualities of the dam.

JAMES S. BAILY, M.D.

—In your issue of January 20th, "Huon" seems to doubt that gray squirrels are castrated. I know they are, better than I know that oxen are; but, whether the grays perform the operation, or the reds, as I have often heard alleged, I know not. I have seen the time, when I lived in old Vermont, that I would make a wager with any man, that of a dozen male squirrels he might kill, not more than one in the dozen would be whole. I have often discussed the matter with persons in "Huon's" state, holding the animal in my hand, and once not healed. I have had squirrels kill each other when caged together.

I incline to believe that the castrating is done before they leave the nest, and by the mother. My observations lead me to conclude that the female always seeks seclusion in breeding. The young can be easily raised on a cat that has young kittens. Slip them in among the kittens while they are sucking and you need take no further trouble with them. In puss extremes meet at this time. I have thus raised them, and have known others to do the same. It is necessary to find the squirrels. To do this, have leisure and patience, a locality where the squirrels resort, and a pleasant day in March or April. To raise on a cat they should be secured before their eyes open.

P. WELSH.

CORRESPONDENCE.

MR. JOS. M. WADE.

DEAR SIR: I killed a hen last night to all appearances perfectly healthy, and on drawing her I found six soft shell-less eggs, full formed, and the contents of all added. Can you or some of your readers tell me the cause and antidote?

Yours respectfully,

T. F. SMITH.

BOSTON, January 28, 1876.

[Several years ago we killed a hen that was very large behind, and on opening her we found several eggs with perfect shells and others in course of forming, but all were good in this case.—ED.]

EDITOR FANCIERS' JOURNAL.

DEAR SIR: Inclosed find premium awards of Game Bantams which I understand were omitted. With many regrets that such a thing should have happened, I remain

Yours respectfully,

EDWARD T. ROWELL.

LOWELL, January 27, 1876.

Secretary.

Game Bantams—Fowls, 1st, W. F. Bacon, Lexington, Mass.; 2d, Damon & Marshall, Cohituate, Mass. Chicks, 1st, W. H. Goodale, Woonsocket, R. I.; 2d, W. F. Bacon.

JOS. M. WADE, ESQ.

DEAR SIR: Will you allow me to correct a slight mistake you made in your *Journal* No. 3, viz.: In your list of premiums awarded for pigeons by the Maryland Poultry Association, you give E. Whitman second premium for Blue Antwerps, but he was awarded first premium for Red Antwerps.

I am very much pleased with the *Journal*—in fact I do not know how I did without it so long. Wishing you great success, I am,

Yours truly, H. F. WHITMAN.

BLACK LIST.

MESSRS. F. P. SCOTT & BRO., Wrightstown, Pa., complain of the dealings of Ambrose Witzel, No. 16 Kuhn Block, Rochester, N. Y. We wrote him for an explanation, but were not favored with a reply.

ARRIVALS AT THE ZOOLOGICAL GARDENS,

Philadelphia, for the week ending January 29, 1876.

- 1 *Jumping Mouse (*Gerbillus Canadensis*). Presented by O. D. Foulk, Town Point, Md.
- 1 Pair Peafowls (*Pavo Cristalis*). Presented by James T. Robbins, Morrisville, Pa.
- 1 Guinea Pig (*Cavia aperea*). Presented by W. G. Hann, Philadelphia.
- 1 Gray Squirrel (*Sciurus cinereus*). Presented by W. Erskine.
- 1 Rufous Rat Kangaroo (*Hypsiprymnus minor*). Born in the Garden.
- 1 Raccoon (*Procyon lotor*). Presented by C. B. Rossell, Trenton, N. J. HUON.

(For Fanciers' Journal.)

"ZOO" NOTES.—No. 11.

BY HUON.

CAMELS.

STANDING before the family of camels now in the Zoo, the mind of the most unobservant observer cannot but be carried back to the earliest period of the world as recorded in Bible history. In the book of Genesis (three generations before we read of horses), we are told that Abram (not yet Abraham) acquired, among other wealth, quite a number of camels, evidently even at that time in a complete state of domestication. When the brethren of Joseph had cast him into the pit, and were sitting down to eat bread, they lifted their eyes and beheld the loaded camels of the Ishmaelites. When Gideon slew Zebah and his companion he captured the ornaments which were on the camels' necks. Jacob sent thirty milch camels and their colts among the presents made to propitiate his ill-used brother Esau; and we are told that the Chaldeans stole from that patient man Job, no less than three thousand of the patient beasts—the camels. Mention of the animal will be, in numerous other places, found in the Bible; the above, however, are enough to show how far back it dates.

It is somewhat remarkable, that though the presence of the camel in Egypt during the sojourn there of Abram is a matter of history, yet, while is found a great variety of animals, represented in the writings, paintings, statues and

hieroglyphics of that people, the camel has never been met with. In more modern history, we read that when Xerxes invaded Greece, camels were part of his fighting stock, and the great Assyrian Queen, Semiramis, is said to have had an immense number of them in her Mesopotamian expedition. The beautiful but unfortunate Zenobia also had her camels, but neither their fighting powers nor their swiftness could save her from falling into the hands of Aurelian, her Roman conqueror.

Zoology divides the camel into two species; the Bactrian, and the Arabian. The former has two humps, the latter but one (which latter is improperly called the dromedary, as that name is properly applied to merely one particular variety of the Arabian, and means an animal of extraordinary fineness), and the whole family presents to us one of the most complete instances of design by the Almighty in relation to human wants. Look at, what at first sight you would call deformities, the hump and the callosities! "Are the latter not due," asks some one, "to the weight of the body and the heavy loads which have been placed upon the animal from generation to generation?" No, Sir, or Madam. They appear upon the young camel at birth, and, it has been happily asked in answer, "Did you ever know a babe to be born with corns or bunions?" Truly was the camel created for the desert, where the arid, burning sands would, without the callosities, crack the skin at the points where the weight of the beast must rest in lying down to receive its burden. The hump is indeed a very peculiar feature in the structure of the camel, and which is not generally understood, perhaps, and, "when it is," says a writer on the camel, "it exhibits one of those wonderful adaptations by the Almighty of animals to the country they must inhabit, as to excite both our admiration and reverence."

The hump is composed of gelatinous fat, which is absorbed by the animal when the nature of the country, through which it must pass (or any other contingency), deprives it of sufficient food, and it is not uncommon to see camels, after a long and painful journey, with backs nearly devoid of the hump, it having been absorbed on the journey. In due time, the animal being properly fed, the hump again appears, to be again absorbed should occasion require. The hump does not appear to be intimately connected with the animals' vitality, as when it gets so large that the saddle will not fit, its owner, with a sharp knife, will open it and remove large slices of the fat without injury to the general health of the camel. "Ugly feet?" Not a bit of it, madam. In their adaptation quite as perfect as your own. Observe the pad-like cushions, and how they can spread and adapt themselves to the sand hills and even the paved stones over which they are forced to travel. Nothing so perfectly adapted can ever be ugly.

We are told the camel has no less than five stomachs, and in one of these it can, and does, carry a supply of water sufficient for several days support, and that from this source water can be drawn after the animal has ceased to live. This carrying power, as well as the wonderful reservoir, has been denied and denounced as a falsehood, but investigation has proved the statement true, and though the said water is not very palatable, yet it can be drank, and, though it will sustain life, it is not quite as fresh and sparkling as water from the running brook. To the great majority of your readers, it is known that the camel is a native of the warmer parts of Asia, but so thoroughly has

* This little animal is remarkable for the great length of its hind legs and its mode of progression, in both of which it resembles the kangaroo. In jumping it can clear a space of from five to six feet at every spring. It is found from Pennsylvania to Canada, though not in very great numbers in the former, and for this the Pennsylvania farmers should give thanks, for the jumping rascal are great robbers of the grass and grain fields. In the winter season it lies trodden, buried some foot or two below the surface of the earth, from which depth it has been dug up, rolled in a ball of clay about an inch thick (much like an apple in a dumpling), and so completely curled up, dumpling fashion, as to conceal the figure of the animal entirely.

man appropriated it and made it his slave, that not even in its own country can it be found in its wild state; hence, in such a condition there is no authentic account of the animal. It certainly appears to have been very nearly, if not absolutely, the first animal that was reduced to serve man in the capacity of a beast of burden, and, from his subjugation, for hundreds and hundreds of years has his race been common carriers, and, doubtless, so will it continue to be, until steam and rail have done their work by traversing all lands, bringing animal transportation into disuse.

It is not merely as a beast of burden that the camel is useful to man. Its flesh is good food, the hump especially; its milk is most excellent, and its hair is woven into cloth; John, the Baptist, had a coat of it, and, you know, my dear madam, how you have yearned, time and time again, for a "dear love of a camel's hair shawl." Artists look to the camel for fine brushes and pencils; its droppings are used for fuel, and the soot of this fuel forms the hydrochlorate of ammonia, formerly imported from Egypt into Europe. Indeed, so important, and so many, are the uses of the camel, that whole tribes of the wild Arabs of the desert subsist almost wholly by its aid. Why Moses outlawed the camel, placing him in the forbidden list, "because he cheweth the cud, but divideth not the hoof; he is unclean unto you,"* is something which no writer, zoological, physiological, or otherwise, has, as yet, been able to divine.

The attention of visitors to the Zoo is called to the magnificent specimens, eight in number, now in the garden. The mother and her colt have been separated from the herd, and will be found in the deer inclosure, opposite the bison pens.

(For Fanciers' Journal.)

THE GUINEA PIG.

THE domestic Guinea pig originally came from Guiana, which has been corrupted into *Guinea*; hence its name, Guinea pig. It belongs to the *Rodentia*, or gnawing animal; but from its fancied resemblance to the pig, the name of pig has been given it.

The body of the Guinea pig is short and thick; the legs short; the head and nose somewhat resemble those of the rabbit; the ears are transparent; the eyes are large and bright. It has four teeth—two in the upper and two in the lower jaw. The color of the Guinea pig is varied—black, white, and yellow, irregularly arranged, being the prevalent colors. Entirely white specimens are rare, and bring high prices.

The breeding of white Guinea pigs is a most interesting fancy, and we have known many to embark in it, but they have usually quit it just about the time success seemed attained. Mr. W. H. Brackett, of Boston, seems to have been quite successful with them. In a recent letter he states that one of his sows had just given him three young, two of which were white and the other nearly white. This is unusual, and is evidently a streak of good luck, as there is no certainty of white producing white. Mr. B. is also trying to produce solid black and solid yellow which we have not yet seen.

Guinea pigs are among the most fertile of animals. They breed at the age of six weeks, though their full growth is not reached till seven or eight months. The female goes sixty-three days with young. Two is generally the number

of the first litter; the number increasing until, when in her prime, twelve is sometimes born to a litter.

Though the female has only two mammae, she supplies all her young with an abundance of milk. She gives such about twelve days. The old ones seldom make a nest, and the young are born with their eyes open, and are able to frisk about and run after the old ones a short time after they are born.

The Guinea pig lacks attachment for her progeny, and will permit them to be abused or even killed without acting at all in their defence.

The males often have fierce conflicts among themselves, though they will not defend themselves against the attacks of other animals. A few years ago it was asserted that Guinea pigs would drive away rats, and every rabbit fancier had a pair of Guinea pigs attached to his rabbitry; but the theory has since exploded, and it has been proved that the Guinea pig, instead of keeping away rats, are themselves killed and eaten by the vermin.

They are very susceptible to cold and damp, and should be kept in a warm and dry place. They keep themselves very clean, and the better part of their existence is spent in cleaning and smoothing one another's coat.

They drink but little, and when green food is supplied them, none at all. When food is given them at regular intervals, they will utter strange squeaks on the approach of the keeper.

Hutches similar to those used for rabbits, only smaller, are the best in which to keep Guinea pigs. The male can be kept with the female without fear of his devouring the young if properly fed.

The same food with which rabbits are fed will answer for Guinea pigs. Bread soaked in milk is beneficial if given occasionally. They are less liable to disease than most any other animal, if kept in a warm, dry place. P. L.

PROFESSIONAL RAT CATCHING.—The *Troy (N. Y.) Times* says: We met in this city last evening Dick Toner, the famous New York professional rat catcher, formerly proprietor of a rat pit on Water street, known as "The Band-box," which was long since closed by Bergh. Toner is accompanied by John Cassidy, his assistant. They are at present at the Delevan House, Albany, and proceed to work something in this manner. With noiseless shoes upon their feet, at about eleven o'clock at night they enter the kitchen or bakery; Toner with a long pair of pincers and a dark lantern in his hands, and Cassidy with a wire cage. Advancing to the centre of the room noiselessly, the door is shut and both stand for a moment while the rats scamper about.

Dick chirrups in imitation of a rat, and the rats gather about him. Suddenly he jerks the slide from in front of the lantern's bull's-eye, and its glare falls in a circle upon the room. The rats which may be within the circumference stand astonished at the blaze, then with a rush run about within the light, apparently fearing to cross into the darkness, acting as if it were a solid wall against which they dare not venture.

Dick then skillfully begins the work. Grasping his pincers he makes a dip, grabs a rat by the back, the head, the tail, the leg—anywhere—lifts it and drops it quickly into the cage, conveniently held open by Cassidy. One after another is seized until all are disposed of. Quickly retiring, the two men then close the door and pass into some other

* Leviticus 11: 4.

apartment, repeating their work, and making a second round if they have time. This is the method in hotels, slaughter houses and other places where rats are plenty.

In private houses it is the custom for Dick to sprinkle about the kitchen floor a liquid to attract the rats. Then late at night he enters and begins the onslaught. The largest catch ever made in one night was three hundred and fifty, which he captured eight years ago in the Astor House, New York. This is the largest outside of the countless numbers always picked up in slaughter houses.

When Dick entered the business he caught the animals with his hand, and was quite often bitten, once so severely that he feared he would lose his arm. Afterward the pincers suggested themselves, and he has since used them without danger. He says that rats living in granaries are not poisonous, but those that feed on refuse inflict painful and serious wounds.

Dick charges \$5 each per night for himself and assistant, with their board, at hotels, or \$15 per hundred rats in private residences and other places. The rats, when Bergh's agents can be avoided, sell for \$20 per hundred for rat baits—that is, for use in pits, where dogs are matched to kill a certain number within a certain time.

The new aquarium at Westminster, England, will be 600 feet long by 240 feet wide. The building will be two stories in height, and a basement tank will contain 600,000 gallons of water.

He sat in a railway car. His head was thickly covered with a mass of red hair. Behind him in a seat sat a man with hardly any hair on his head. He said to him, "I guess you wasn't around when they dealt out hair." "Oh, yes, I was," replied bald head, "but they offered me a lot of red hair, and I told them to throw it into the ash bin."

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words, describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

42- "To EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER" or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

42- No Exchange or Want will be inserted unless accompanied with 25 cents.

BOX 2946, New York City, will exchange one pair Buff Cochins and one pair Black-breasted Game Bantams—for common mated Pigeons. Say how many pairs you will give.

F. L. EVANS, 1252 North Seventh Street, Washington City, D. C., will exchange one of the handsomest trios of Silver Pouldins in this country (three premiums—Boston, Pennsylvania, and Maryland)—for Black, Red, or Yellow Pouters.

JAMES L. VOSE, Russell Hill, Wyoming County, Pa., will exchange Buff Cochins and White Leghorn cockerels—for Light Brahma cockerels and Partridge Cochins pullets. My Black Cochins are June hatch, and weigh eight pounds each.

BOX 14, Bayshore, Long Island, N. Y., will exchange a trio of White-face Black Spanish—for White Leghorns. Nothing inferior wanted. Send offers and get particulars.

CHARLES F. HAWKINS, Goshen, N. Y., will exchange, for first-class B. B. R. Game Bantam pullets or hens, one Golden Sebright cockerel, one trio of Black African Bantam chicks, Tumbler Pigeons, and Partridge Cochins.

D. SHIELDS, Florence, Mass., will exchange fine Black Hamburg cockerel—for fine early hatched Light Brahma cockerel or pullet, large and well marked and good strain.

W. H. JEFFRIES, Irwin Station, Pa., has for exchange one pair Maltese Cats (male and female), one year old—for one trio Plymouth Rocks, good breeding birds, or three first-class Houdan pullets.

W. M. GILLI, Brockton, Mass., will exchange Buff Cochins, Brown Leghorns, Houdans, or Light Brahmas—for Fancy Pigeons, Pouters, Colored Fans, Owls, or Jacobins. Nothing but good stock taken or sent in this exchange.

W. H. LIGHTFOOT & CONANT, Springfield, Ill., will exchange one Alto Horn (brass), in good order, valued at \$15, for Lop Rabbits, Parrot, or Monkey; B. B. Game Bantam cockerel, Dominique pullets, White China Geese, for Game Bantam pullets or Pigeons—Runts preferred; or make offers.

WILLIAM F. KERR, Wilmington, Ind., will exchange four California Bronze gobblers, June hatch, weight from 18 to 20 pounds—for Bronze Turkey hens or Light Brahma chicks or fowls. Must be good, as mine are.

STEPHEN BOALT, Norwalk, Ohio, will exchange one trio B. B. R. Game Bantams (express charges paid)—for one trio of Black African Bantams, Silver Sebrights, White Leghorns, Silver-spangled Hamburgs, or Black or Buff Cochins (charges paid). Must be good stock, as mine are. What offers?

H. F. WHITMAN, P. O. Box 154, Baltimore, Md., will exchange a Red Homing Antwerp cock, one of a pair which took the first premium at the Maryland Poultry Show, January, 1876—for a Red, Blue, or Blue-checked Antwerp hen. Write quick.

H. F. WHITMAN, P. O. Box 154, Baltimore, Md., will exchange a pair of Blue Priests that took first premium at Maryland Poultry Show, January, 1876—for a pair of Short-faced Tumblers.

CHARLES LIPOLD, Lancaster, Pa., will exchange one pair of solid Black Turbits, good lot of Outside Tumblers, all colors, one pair of Blue and one pair of Black-mottled Trumpeters, one fine Blue Carrier cock, German Canaries, males and females, Goldfinches, Linnets, small pet African birds, lot of Ring Doves, Guinea Figs, one fine Lop-ear buck, gray common Rabbits—for White Owl cock, pair White Turbits, large Pouters, all kinds, S. S. Sebright Bantams, and one male Ferret.

JACOB FOUST & BRO., Milton, Northumberland County, Pa., will exchange one muzzle-loading, six barrel Shot-gun, in good order, three sows and one boar Guinea Pigs, one sow with young and cage, one White Pantal cock, one Mottled Fan cock, one nickel-plated, seven-shot Revolver, new, one pair S. S. Hamburgs—for Fancy Pigeons or Fancy Poultry.

R. W. COMLY, 31 Elizabeth Street, West, Detroit, Mich., wishes to exchange White, Buff, or Partridge Cochins; Fancy Pigeons; "Illustrated Book of Poultry" by Wright; "Pigeons" by W. B. Tegetmeier, illustrated by Harrison Wier; or "Poultry Book" by W. B. Tegetmeier—for a Novity or some other good Printing Press, with Type, etc., complete.

C. KING, JR., Plainville, Mass., has nice Crested White Fans, Red Barbs, Black-mottled Tumblers, in pairs; odd males, Black-pied Pouter, Blue-beard Tumbler, and Red Jacobin—for Yellow Jacobins in pairs or odd hens, or Brown Leghorns.

M. VON CULIN, Delaware City, Del., has to exchange one pair Blue-pied Pouters, one pair Yellow Barbs, one pair Highfliers, two pairs White Duches, one pair B. Mottled Duches, four pairs Outside Tumblers, and many odd birds. See Wants.

A. HOSMER, Lawrence, Mass., wishes to exchange one pair Rouen Ducks for Plymouth Rock or Partridge Cochins chicks, for breeding purposes. None but first-class birds are wanted, as ducks are warranted so. What offers?

J. H. MARX, Kutztown, Pa., will exchange a trio of Dark Brahma pullets for a trio of Silver Pouldins, either all pullets or two pullets and cockerel.

J. T. BELL, Franklin, Pa., has Wright's Illustrated Book of Poultry, bound, to exchange for a pair of good Light Brahmas (1873 or 1874), large birds, with small straight combs, clear plumage, heavy leg-feathers. The long tail feathers of cock to be black and broad.

ALFRED, 17 Clinton Place, New York, exchanges imported or domestic Segars, any quality or price required, wholesale rates, samples by mail—for all kinds Pouldins, Light and Dark Brahmas, Cochins, Houdans, Hamburghs, Spanish Leghorns, small Bantams, Gold and Silver Pheasants, Toulouse Geese, Crested Ducks, Angora and Himalayan Rabbits. Send descriptions and prices.

CHAS. E. LONG, Lancaster, Pa., will exchange one pair B. B. Red Game chicks (Stone's stock), in full plumage—for two Silver Duck-wing Game Bantam pullets, good color, not over 18 ounces; one pair fine Buff Cochins—for a pair Black-capped and one Red-capped Magpie cock.

T. C. STANTON, 36 Adams Street, Rochester, N. Y., will exchange fine pure-bred Irish Red Setter, five months old—for Rifle or Shot-gun, Tegetmeier's Poultry Book, B. B. Red Games, Game Bantams, Houdans, Partridge and White Cochins—for Mocking-bird, Mule-bird, Carrier Pigeons, Duckwing Gooks, or Black Hamburgs.

C. R. CHACE, Plainville, Mass., will exchange eleven pairs of Wright's Illustrated Book of Poultry—for a pair of Plymouth Rock fowls. Must be good birds to insure trade. Write. No other offers wanted.

TOWNSEND W. COX, of Westchester, Pa., will exchange one pair of solid Black Barbs, good birds, for two bushels of Canary Seed, or one bushel of Canary Seed and one good Talking Parrot; also, one pair of Splashed Barbs and one pair of Red Tumblers, for a Smith & Wesson Revolver, nickel-plated; Dutch Rabbits for one pair of short-faced Yellow Tumblers (must be good, as the rabbits are). Also, female Ferret for a male. None but responsible parties need correspond.

J. H. FASSITT, 1639 Locust Street, Philadelphia, Pa., will exchange a large number of Mayne Reid's and Oliver Optic's books for Black or White Trumpeters.

SQUIRRELS.

BY PAUL LOGIC.

CHAPTER I.—INTRODUCTION.

Dear is my little native tale—
The Ring-dove builds and warbles there;
Close by my cot she tells her tale
To every passing villager.
The Squirrel leaps from tree to tree,
And shells his nuts at liberty.—ROGERS.

THE introductions of chaptered articles are like the introductions of individuals—particularly dry; and the reader has my sympathy if he skips this chapter entirely. As people have to be introduced, so articles are governed by the same polite formality, and articles without introductions are like "scraped acquaintances," not long continued. To continue with my smile, I will say, "Mr. Reader allow me to make you acquainted with my dearest friend, Mr. Squirrel," and proceed.

When I set about the task of "writing up" the Squirrel, I supposed a few weeks' careful reading and observation would suffice to fit me for proclaiming to the world "What I know about Squirrels." Imagine my surprise when the first day's reading multiplied the dozen species known to me to fifty, and a week's reading increased the number to a hundred, and half of that number were found in my own continent. The weeks grew into years before I felt at all competent to do the subject anything like justice, and a hundred years, were I positive of living to complete the task, could be advantageously spent in ferreting out and observing the ways of this little creature which inhabits nearly every region from the Arctic to the Antarctic Circle.

Whenever I saw anything which I thought would interest my readers, whether it was in the Natural Histories of Linnæus, Buffon, Cuvier, or merely a paragraph in a country newspaper, I immediately pounced upon it and wove it into my chapters; in some places giving the necessary credit, and in some places not. To Mr. Bassett, of Berlin, Wis., I am greatly indebted for information concerning the White (or Albino) Squirrel of Wisconsin, and I take this opportunity of publicly thanking him for the kindness with which he has always answered my inquiries and volunteered information. At the beginning of each chapter is placed a fragment of poetry or prose in which mention is made of the Squirrel. The descriptions of Squirrels are nearly all taken from actual specimens, and many of them from living animals; so the reader can rely on their correctness.

After nearly two years poring over musty books, examining stuffed specimens, and observing the little creature in his own native woods, the writer submits the result of his labor to the reader, and hopes the latter may be as much benefited in reading them as the writer was in getting together matter for their construction.

Of all the four-footed inhabitants of our woods, from the fleet deer down to the winter-sleeping wood-mouse, perhaps none of them is so much admired on account of the gracefulness of its shape and movements, or the beauty and softness of its fur, as the Squirrel. All varieties of the species come in for a share of this dangerous popularity, fatal alike to their liberty and to their happiness.

Even the old Romans were fond of the Squirrel; but they liked them best served up as a side-dish at their gorgeous feasts. The plume curled gracefully over the smoking bodies cooked in the perfection of Roman culinary art, presented such a pleasing contrast to the rainbow-hued plumage of the pea-fowl, served up feathers and all, and which generally occupied a prominent place at these religious feasts. The Squirrels intended for food were kept and fattened in places constructed especially for this purpose, and distinguished by the name of *gliraria*.

The Indian, too, was a lover of this beautiful little rodent, but he admired him for his beauty and agility, and called him Adjidamuo (Tail-in-air). Longfellow, in his story of "Hiawatha's Wooing," says:

"From his ambush in the oak-tree
Peeped the squirrel, Adjidamuo,
Watched with eager eyes the lovers."

The little creature's feathery tail often occupied a prominent place in the red man's head-dress, side by side with the feathers of the eagle and the hawk; and Indian lads were fond of pet Squirrels and tame crows. But, sad to say, when other food became scarce, the noble red man killed his little friend, and roasted him on a stick.

In the fifteenth century, when poodles and cats were scarcer than they are now, ladies made pets of Squirrels, and the little animals became so tame that collars and chains were attached to their necks, and they were led about by the ladies as a dainty black-and-tan or a fat little lap-dog is at the present day. The engraving accompanying this chapter was originally taken from a piece of tapestry woven in the fifteenth century, and represents a lady in the dress of that period, with a tame Squirrel, to whose neck is fastened a collar and chain. Judging from the engraving of the piece of tapestry, then, as now, maiden ladies of an uncertain age were, the most addicted to keeping pets.

There is, I believe, no mention made of the Squirrel in the Bible. Whether there are or are not Squirrels in Pales-

tine and Egypt, I am unable to say. Squirrels are found in Africa, and are plentiful in Greece and Italy, and certainly must abound in the groves about Jerusalem.

The Squirrel is frequently named in the writings of the Greeks, who considered it a great delicacy (for table use), and by whom it was called *Sciurus* (Shadow-tail), which name was adopted by the Latins, and is now used by naturalists as a name for the Squirrel family.

JUDGING BY THE STANDARD.

BY ISAAC VAN WINKLE.

THE Standard says that a perfect fowl should be characterized by such and such qualities; that those various qualities which belong to any particular breed or variety of fowls, which in the aggregate show the greatest perfection and the least number of imperfections, may be called perfect or standard birds. So far and no farther can your Standard mark out or designate the perfectibility of a fowl. But, when it is attempted to measure the perfectibility of a bird by a set of arbitrary signs or a "scale of points," it must necessarily fail of its purpose, as no two judges look for or value all or any one of these qualities alike, since the tastes and degrees of culture in different individuals will differ.

All architects may agree in the one opinion that St. Peters is a *chef d'œuvre*, or masterpiece of art, and yet they may differ as to its details or in choice of design. Some have a preference for the Doric, some the Ionic, the Corinthian, the Gothic, Basilican, or the Composite order. One person may admire the Gardens of the Palace of Luxembourg, some those of the Tuileries, St. Clome, or Bois de Boulogne, others the Parks of Compiegne or Versailles. Tastes will vary. Some editors will head an article that abounds with stupid wit, pointless satire, and billingsgate classics, with a scripture quotation.

This idea of measuring the beautiful by a scale of numbers is about as rational as to measure it by a tape string. For an artist to be a judge of a picture he should be familiar with the peculiarities of that school of art. For a person to act as a competent judge of a fowl, or any other animal, together with his knowledge of the fundamental principles of art, he should have considerable experience in the mating and breeding of the animals, and a thorough acquaintance with their habits. How can any one figure up by numbers the sum total of his judgment of the perfectibility of a piece of architecture or a landscape painting? The Standard, so far as it gives us the various characteristics by which we distinguish the different varieties of fowls and what qualities constitute a perfect cock or hen, is a very useful thing,

but its appendage, the "scale of points," is a useless incumbrance, unreliable, and means nothing.

I know the stand I am taking is not popular, nor did I gain much *applause* by attacking the errors and absurdities of our former Standard, but it helped to improve it some, and in that improvement was my reward. Are we not adding too many disqualifications to the Standard and carrying our fancy notions to the *ultima thule* of absurdity? Are we not murdering utility with the brilliant points of fancy? Are we not making bones when we should have flesh? Is it not time that we should learn that the productive qualities of a fowl are equally as important as its beautiful qualities? That its gastronomic qualities are not all in your eye?

Would it not be well for our "fancy servants" to hold their meetings in some place where the savory fumes of a young gobbler, Houdan, Pekin, or Aylesbury could reach their olfactories and titillate their palates? There seems to be a great diversity of opinion as to how many points a fowl should count to class it as first premium. Mr. Lambing says 90 for first premium, 85 for second, 80 for third, and so on; highly commended, 75; commended, 70. Mr. Wright says that, "A fowl which retains, after all deductions, a value of 86 points, has a good chance of first premium, while 90 will make it almost certain." I should say 100, that is perfection. A fowl to win first premium should not fall more than five points below; but, the great difficulty is that judges so differ in estimating the value of its several qualities or how much it should lose by its several defects. And just here is the great uncertainty of the scaling system. No two persons will differ as to a first-class fowl, but to express its value in numbers by the scale is impossible. Mr. Wright evidently has no confidence in such a system; he thinks, and truly so, that the eye and judgment of the best judges will and must continue to be the final authority at all our poultry shows, using standards, as the name implies, chiefly as permanent canons, to which, if correct, it may be expected that awards will in the main conform; and especially not expecting that a book, however perfect, can enable anybody to judge fowls, as seems by some in both hemispheres to have expected.

Again, he says, that "When it is coolly asked that judges should add up the points of the various pens, we cannot help reflecting how many weeks it would take to judge a large show honestly on this system; for, we have repeatedly noticed that birds which would have cleared first according to the Standard, were by no means the best of their class." I shall not quote any more on this point, since all the good judges of England are of the same opinion. To illustrate my method of judging by the rules I have laid down, the first thing we look at is the form or shape of the bird, how near in this quality it approaches the ideal of perfection, the eye of its head, the color of its eyes and deaf-ear, and length and beauty of its wattles fill in the details.

Color.—Purity of color, its proper distribution, determinateness of hue, harmony and false colors.

Proportion. The relation of parts to each other; that is, the legs should be proportioned to its body, even in length, and of proper thickness, so with length and size of wings, head, etc.

Congruity is the adaptation of parts.—That all its parts have an office, and that in size and position they be adapted to that office. For instance, the fifth toe in a Houdan is an incongruity, and if we persist in sticking to the fifth toe in a Houdan, we may as well give this class another name—

"Oldipus" or "Swollen-foot Species." Another incongruity is knock-knees, which are now so common among the Brahmas, more especially the Light variety. A knock-kneed bird is far more hideous than the vulture hock, which is frequently useful for breeding purposes. If we are going to breed out the prominent characteristics of some fowls, and breed others into the same species, as a pea-comb on the Cochins variety, and a rose-comb on the Brahmas, we might as well abolish the different varieties and blend them into one whole, called the "Fantastic Breed." Some people's tastes partake of the monstrous and the unnatural. They admire such monstrous deformation as the Sphynx, Chimæras, Centaurs, and Gryphons. No wonder the Arimaspians, among whom the Griffins flourished, were a one-eyed people.

Symmetry.—Measurement in totality. It relates to the graduation in measurement of all the parts, connected in a whole to the dimensions of one taken as a standard. It takes in rotundity, thickness, plumpness of muscle, length of body, framework, etc.

Carriage.—How the bird stands on its feet—firmly, solidly, erect, full of fire and activity.

Condition.—Whether it is too fat or too poor, condition of health or weight should be graduated by the size, and every bird should carry as much weight as its age and health will permit. The weight should consist in flesh, and not fat alone. The larger the size you can breed a fowl of any description (excepting toy birds) the greater the success; and, if some of its fancy points should have to yield to weight and size, the latter should predominate over the former.

(For Fanciers' Journal.)

JUDGING AT BAGTOWN.

BLESS my heart, friend Wade, have you ever acted as judge at a poultry show? Well, it is wonderful how many friends a man has before he commences to perform the duties of his office, and how few he has after those duties have been performed. I have often wished that the executive committee would say to me, "Award all the birds in the hall a first premium, also a special premium." But would exhibitors then be happy? Well, I am strongly inclined to doubt it. Here I stand in conversation with an executive committee man; he informs me that Mr. So and So is one of the leading members of the association; his birds are not very good, but you must give him a first premium on them. If you do not, he will no longer aid us; and, remember, he is a man of influence and high standing in Bagtown, and we must humor him.

Well, here comes the Honorable President of the Bagtown Poultry Association. "Good morning, Judge; I wish to say a few words to you in private." When I say to him, "How do you desire to have these birds judged?" he answers me by saying, "Give nothing a premium unless it is deserving of it. The Bagtown Association will never have it said that a premium was awarded a member in an exhibition unless the birds were really worthy of it." Well now, being the Judge, what am I to do about it?

Well, ah, here comes Mr. Trick. I made his acquaintance last week at another poultry show. I remember he informed us that he was the number one man on the executive committee of this Association. What he says I must do—shall be done. "Good morning, Judge. Look here! I have some fine birds on exhibition; you must not go back on me. There is one pair of Jacobins that have a black

eye; but, you must know that the people of Bagtown do not understand the fine points in fancy pigeons; so, my dear Judge, put first on them. Now, I have a pair of White Fans here; one is all right, the other has some bad feathers, but now help me through; if you do not, it will be impossible for me to dispose of my surplus stock."

Well now, this is freedom in judging with a vengeance, but the stock must be judged, the reputation of Bagtown is at stake. Time is up, work finished, book handed in. Friend after friend departs who has not lost a friend; but I will stake my last dollar that no one ever lost friends as fast as I did. When the committee had finished tacking the cards on the coops, here comes a German exhibitor—he was one of our dear personal friends,—but, oh dear! what makes him look so awful in the face? "Mr. Shudge, vot in tunder is der mistake mid my Trumpeters? Dare is no card on der cage. Ruselem mighty! Vot for you pe a Shudge? You vos one old woman—you know noting." Well, I endeavored to explain to my German friend, what was wrong in his Trumpeters; but there was no use. He remains firm in the thought that "der Pigeon Shudge at Bagtown Show was von d— big fool."

But this is not the end; here comes the leading member of the executive committee. "How is this? I have only received three premiums on twelve coops of Pigeons. I am ashamed to hold my head up. Why, I am the laughing-stock of all Bagtown. Do you remember the conversation I had with you before you commenced to judge? Well, you have gone back on me, and you may rest assured that your services will not again be wanted in our town."

Well, I console myself by thinking perhaps it is all for the best. Here comes number three. Ah! what a learned look he has. Behold that head of Webster! "Can you inform me, sir, why this pair of Red Carriers have received the first premium over that pair? I am somewhat of a fancier myself, and I am indeed at a loss to understand why this is thus." "Well my dear friend," said I, "if you will read carefully the cards on the cages, perhaps you will understand." He did so, and found that in one coop was a pair of Dun Carriers. He did not linger long with me after this wonderful discovery, but soon passed out of sight.

Well, here comes a man who made the assertion that he only placed his birds on exhibition to help the Association along; did not care if he received no premiums. "Vat is der matter vid my Black Shackerbines? Vot for you pass em by. Heyvell, I am subrised mit you. Now, come make an explain mid yourself." I took out of the cage the pair of Black Jacobins, and showed him the black spots on the top of the head, but

A man convinced against his will,
Is of the same opinion still.

So it was with grumbler number four, and I might go on and take up all the journal with cases of the same kind. I am well aware of the fact that some judges as soon as the book is handed in, depart, and that very quickly, for the railroad station. Still, I always like to remain, and hear all that may be said.

In conclusion, I may say the people of Bagtown will hold an exhibition next year, and, my word for it, you will find a better class of birds on exhibition, as friend Duterhimer said when I took my departure, and clasped his good honest hand in mine, "Dis show was better as good; der next show will be as good as never was."

TENNET.

DOYLESTOWN, PA.

(For Fanciers' Journal.)

THE PEDIGREE BUSINESS

FOR poultry seems to have experienced a lull. In a late number of the *Poultry World*, where this arrangement originated a year or more ago, we notice the announcement that "no more pedigrees of fowls will be published in that paper, hereafter," and only in the Pedigree Book, whatever that work may be.

Why is this thus? What has happened? Does the pedigree pump suck? Are all the good birds pedigreed; or, have the fanciers who jumped at this bait found a hook in their gills? We did not suppose it would last so long as it did; but we opine that the last year's experience with this dodge and its necessary cost, has convinced the pedigreering breeders and amateurs who accepted this mode to sell their stock to better advantage, by this time, that what was asserted in these columns upon this subject was about the "square thing" in the shape of good advice.

However, bought experience is well enough when it does not cost too dearly. We are inclined to think that even the projectors of this pedigree notion have sickened of it for the *World* quietly says its columns can be filled with more acceptable matter hereafter; and we think this a very correct decision.

The whole thing will probably be forgotten in a twelve-month. It never paid anybody, probably, although so many of the fanciers indulged in this luxury for a single season. Our opinion is unchanged regarding this "nonsense," and we are glad to note that most of those who started off so glibly in their chicken pedigreering are coming round to agree with us that it did not amount to much after all. N. E.

(For Fanciers' Journal.)

GAME FOWLS.

BREEDING, ETC.

MR. EDITOR.

DEAR SIR: As I see so little in the poultry journals of this country on the Game fowl, I take the liberty of writing a few lines of my experience with the breeding and management of Game fowls for the last twenty years. What little I have seen and read in the poultry papers has been of very little benefit to the amateur breeder of Game fowls. They begin, or start, at the wrong end of the Game cock, namely, the feathers and points. They will count in a show, neglecting the first point, and the only one that makes a Game cock and Game hen. It is not the points they will sum up in a show, nor any one fixed shape of body, or the one certain way they must carry their tail and head. It is all nonsense for a breeder to have his fowls bred to a feather, and carry their tails close, neck long, legs long, spurs low down, feathers close, toes long and strong, broad across the shoulder and narrow behind, neck hackle free from black, wings free from white, breast black, free from red or white spots, and win a first prize in a show, as Game fowls, on the above points only. You may trim and dub, breed, feed and show, and win fifty premiums, and have all your points as required in the standard, and then that does not make your fowls Game; and I can say that fifty per cent. of the fowls that are entered and win prizes at shows as Game cannot properly claim the name of Game.

I have counted up the points to my standard, and a great many of the prize winners in shows count from one point up to about ten points of my standard. My standard

is a Game cock and a pair of inch and a quarter steel spurs. If a cock will stand unflinchingly up to this standard he is a Game fowl, and if he has the feather let him win at the show as a Game cock.

In selecting Games for breeding stock, from my experience in the show-room and pit, and breeding Game fowls, in color I claim Black-reds first, with either white, yellow, or willow legs. Blue, second; Gray, third; Brown-red, fourth; Black, fifth; and White, sixth. Of the crosses I would give Blue-red, first place; Black-red, second; Blue-gray, third; Spangles, fourth; Black-gray, fifth; Ginger, sixth; Brass-back, seventh; and Dominiques, eighth. Muffs, Tassels, Rose-combs, Pea-combs, (or Round-heads), hen feathers and Malays in the same order as the first colors. All breeding stock should be sound, and free as possible from all blemishes; for numbers of chickens get one year olds, but they are not so hardy as two year olds. Two year old stock I count the best for all purposes, as the chickens are more solid and close, and harder than when raised from one year old stock. Three year old breeding stock are good breeders. Put a few hens with one cock, of four year old breeding stock; with the cock put two year old hens, and with the four year old hens put a two year old cock. After they have turned four year old kill them off, if you have enough younger birds of the same stock. Do not cross colors, nor do not cross your stock too often, as crossing confounds the most of the breeders of Game fowls. Ten years is often enough to cross any Game stock, if rightly managed.

Mark your eggs when laid, and when wanted to set, also mark the date when set and date when to come off at same time, and let the hen alone to do her own sitting at least twenty days. Set them on the ground, and not on a nest made up on a wall. Feed the chickens at first with coarse dry corn meal, next with wheat, when old enough; afterwards good smooth corn (not the horse-tooth corn), with a change once in a while; give meat once a week, with plenty grass—dry grass for winter or fine hay; give sand and lime and pounded charcoal, no pepper nor anything to force.

The best roosting perches are cedar poles or sticks, just large enough for the feet of the fowls to go half way round. Leave the peeling on the cedar perches and put them just high enough to let a man walk under. A grass sod floor is the best. Do not have any nail sticking inside the coop or roosting house to tear the birds, nor do not make them wild or have them chased by anything. Any one who has no shade trees or bushes for their poultry to go under in hot weather, or in cold winds and rain, can make a cheap shade with sunflowers. I have no shade trees, but plant rows and beds of sunflowers, with pole beans in among them, and a few dry sticks to help to hold the beans, and my birds make a regular resting and dusting place of it as well as a shade from sun or storm, and from hawks. The seeds of the sunflowers are also a good pastime for the fowls to pick, and a few of them are very good for feed. They have very large heads, as large as a man's hat. If any of your subscribers want any of the sunflower seeds, if they send the postage, I will send them seed by mail at any time, as I have several bushels of it put away for winter amusement for my hens.

LANCASTER, ONTARIO, CAN.

RICHARD BRANSON DEAN.

It makes a man feel bad after he has partaken of mince pie to have a cat stand before him and endeavor to engineer a scotch duet with the remains of the pie, which he can feel scratching around within him at the same time.

A CANADIAN POULTRY YARD.

THE editor of the *Galt Reformer* recently visited the poultry yard of Mr. McMillan, and this is what he has to say about it: "Through the kindness of Mr. R. H. T. McMillan, the proprietor, we enjoyed a walk through the institution, and were surprised to find such a variety of fowl. The poultry yard is situated on South Water street, at the rear of Mr. McMillan's residence. When Mr. McMillan started the fowl business, in May, 1874, he built what he now terms 'the old house.' This contains six pens, the inside measurement of each being 6 x 8 feet, and the runs 8 x 12 feet. He now uses it exclusively for keeping the young birds in. The floors are of plaster, the walls double-boarded, with windows to give sufficient light. Lattices enclose the runs, and an ingenious contrivance is that the door of each pen when opened allows the fowl egress to the runs, at the same time separating one variety from the other. The new house may be entered directly from Mr. McMillan's residence. It is 60 feet long by 14 feet wide. A hall of five feet, taken off from the south side, allows nine feet clear as the width of the apartments. In this house there are ten pens, so that by calculation, it is ascertained that the pens are 6 x 9 feet each. On the right hand side of the hall are five windows, which are amply sufficient for all purposes of light; there are also four feed boxes on the south side which open with a slide at the lower end, and are very convenient. In the centre of the hall is a coal stove, and on either side of it are two small pens used for housing early chickens. We understand the proprietor intends to have hatched a number of these in January, and as the thermometer registered 58° while we were inspecting the premises, we see nothing to prevent this being done. It is the intention of Mr. McMillan to allow one cock and six hens to each pen as far as practicable. Each apartment is supplied with water from the front, and this is contrived so that while having access to water at all times the poultry cannot bathe in it. An aperture for the fowls to pass out into the yards, or runs, is made by a slide door drawn up by a rope and pulley from the hall. The fronts of the apartments are of wire, and at the bottom are egg boxes, which may be opened very conveniently from the hall. The floors are a solid mixture of Paris plaster and sand, and are kept very clean and neat, this being greatly facilitated by the roosts being movable. The runs are each 6 x 15 feet, covered on top, latticed in front, and with a dust box in each. Ventilation is secured by four ventilators at the top of the building situated at equal distances apart. The entire cost of the new building was about \$300, and certainly shows that Mr. McMillan is thoroughly interested in the poultry trade. He appears to be well posted on the chicken and hen question, and has accordingly made rapid strides as an exhibitor since he began in May, 1874.

"As the door to the new house is opened it may be seen at a glance that the stock may be easily and satisfactorily inspected. The pens are all on the left hand side, and we will now give an idea of their occupants. In No. 1 may be seen a trio of Light Brahmas, imported from the stock of W. H. Todd, Esq., Vermillion, Ohio. In Nos. 2 and 3 are respectively Black Hamburgs and Black Spanish. No. 4 is a grand pen of Golden Penciled Hamburgs, from Mr. H. Pickles, Earby, England. In this apartment is the hen that won the first prize at the last show of the Western New York Poultry Association, held at Buffalo. The cost of the trio was \$42. The 5th and 6th pens contain Silver Duckwing

Game Bantams, amongst which are the 1st and 2d prize cocks, of the Detroit show of January last. Mr. McMillan entered four of his birds of the Silver Duckwing breed at the last Buffalo show, winning three 1sts and 3d. No. 7 contains Black Spanish, the cock of which won the 2d prize at the last Buffalo exhibition. In No. 8 are Golden Penciled Hamburgs, bred from the stock of Mr. Beldon, Yorkshire, England. No. 9 contains a trio of White Leghorns. These birds were bred from J. B. Smith's stock, hatched on the 24th of May, and began laying on Thursday last. Mr. Smith is probably the greatest breeder of this variety in America, having taken over 100 prizes in this class. In the 10th and last pen are Light Brahmas, bred from Todd's trio.

"Mr. McMillan has also several of other varieties, but we believe he purposes giving his attention to the breeds enumerated. He exhibited a large number of these birds at the National Poultry Association show, which was held in Chicago on the 20th to the 28th of January, 1876. The proprietor of this yard is the possessor of a great number of fancy pigeons, including Tumblers, Fantails, Turbits, etc. Altogether we were pleased and surprised at the exhibit made by our enterprising friend, and did not regret visiting his poultry establishment."

(For Fanciers' Journal.)

THE LICE QUESTION.

FRIEND WADE.

DEAR SIR: I do not make any pretension towards writing for poultry papers, yet for all it is my impression that too much is said respecting the pedigree, and blood of fowls, and not enough about raising them. A friend of mine remarks in this wise, "I believe Mr. H., of C—, is a cheat." "Why?" says I. "I'll tell you why: Last spring I bought two sittings of eggs from him, which he said were to be from his best stock—the same yard that the first premium hen at Buffalo, 1875, and fourth premium cock were bred. Now they are not so large, not as well feathered, and I do not believe are from his best stock." He says "Come over and see them." I went, and, upon being informed that they had the best of care, told my friend to catch one and I would show him his trouble. Catching one of the cockerels, I discovered that he was literally alive with lice, my friend declaring that he had looked, and they were free from all lice.

Now to the point in question. I really believe that no man can, however well he may feed his chicks, bring them out in feather and size with a thousand or more lice on them, and, also, I know that all the dust baths and sulphur in America, will not disturb these lice in question. If any fancier, either old or young in the business, will take the trouble to catch his chicks or fowls, turn them head down, open the fluff just under the vent, or at the base of the tail, he will discover what he has been feeding in company with his chicks. This lice question is of great importance, and a great drawback to the breeding of fine stock. It matters not where the eggs come from, the owner or the sender of the eggs must be blamed for sending out poor stock. I do not write this for an advertisement, but with several years experience with a certain powder, would cheerfully advise any person taking the trouble to write to me with stamp, all I know respecting this remedy for lice. I write this from experience, and should you choose to print it do so.

Respectfully,

F. P. BUTT.

HAVANA, January 1, 1875.

L. S. HUDSON, of Lansing, Michigan, has a handsome wild turkey gobbler which weighs twenty-six pounds. The egg from which this turkey was hatched was found in the woods, by A. Dixon, in 1873.

SPORTSMAN'S DEPARTMENT.

(For FanCIers' Journal.)

THE AMERICAN QUAIL.

(*Ortyx Virginianus*.)

THIS well known little game bird inhabits, generally, all the Northern and Western, as well as most of the Southern States. In Pennsylvania and southward it is improperly designated as "partridge," a name to which it has no possible claim, as the ornithological name of partridge is "perdix," not "ortyx." Leaving the nomenclature, however, I shall only speak of its habits and instincts as exhibited in the Northern States, which, by the way, differ in some important respects from those of the species inhabiting the warmer latitudes.

With us, then, not being migratory, in addition to their danger of destruction from beasts of prey, and from man, they also suffer greatly from the long continuance of the deep snows of our severe winters, by which their resources of food are not only cut off, but they are often buried and frozen under the heavy drifts, and perish miserably in an icy prison. It is their habit, on the approach of such a storm, to gather into concentric circles, their tails all pointing inward, and to permit themselves to be buried. The storm over, they make a simultaneous start, and by their united strength generally succeed in forcing their way through the superincumbent snow, and are free. It sometimes happens, however, by the formation of a crust overhead, that the attempt fails, and they perish from starvation. It frequently happens that birds are very scarce on grounds where they have usually been plenty, and this is attributable to the before-mentioned causes; in fact, they have been at times so near extermination from a combination of causes, that clubs, and even individuals, have purchased them alive, fed and cared for them through the winter, and then released them in the spring to breed and increase.

Their enemies and dangers are legions, and with their disappearance we lose the finest game bird of our country, and the cheery whistle of the male bird, so familiar to the farmer, will be heard no more. Although the laws of most States forbids the killing of this noble game out of the proper season, yet is the crime still committed; and, with the exception of a few localities, in which the determined efforts of some club succeed in partially enforcing it, the law is a dead letter. While I would advocate and uphold the propriety of such law, I still believe that if the facts were placed before the farmer, over whose broad acres, covered with crops, the pot-hunting loafer, with his half-bred cur must tramp in finding the birds, *he* would more speedily end it than any number of pages of laws and penalties. Let the land-owners know that the proper season for killing this

game is from the middle of October to March, months in which he has no outstanding crops that may be injured by the roving feet of the sportsman or his canine companion, months too, by which time the birds have acquired their full weight and size, and from being swift and strong on the wing, cannot so easily fall victims or suffer extermination, and interest will make a stronger bar to their improper slaughter than all the law-making powers can effect. Farmers are, and should be, the truest friends of this gallant little bird, for he is an old and familiar acquaintance, whistling his cheery cry from every fence and corner of his farm; or, driven by hunger, in winter, fearlessly and trustfully gathering round his barns and stacks. Forbid then, ye owners of the soil, that strolling loafers from neighboring town or city shall out of season trespass upon your domain and murder this beautiful little denizen of the tangled copse or field that nods in autumn with golden harvest.

The quail commences to build her nest early in May—the pairing and courtship having been accomplished between the first of March and this period. The nest is placed on the ground, concealed in some thick tuft of grass, and in it the eggs, from twelve to twenty-five in number, are deposited. The period of incubation agrees with that of the common hen, viz., three weeks, and the young leave the nest as soon as they are out of the shell; or rather, as soon as their legs are free, for I have seen them run briskly with portions of the shell still attached to their little bodies.

Frequent attempts to domesticate them have been made by putting the eggs under the common hen, but I believe never with permanent success. They are easily hatched in this way, and for a time will follow the supposed mother in search of food; but, no sooner do they acquire the ability to serve themselves than they seek out their natural haunts in the field and copse.

Generally, by the first of October the young have acquired full weight and size—certainly, by the middle of that month, all—even the late broods have done so, and are then fair game. Fattened by the gleanings of the golden stubble fields they are plump and juicy, unequalled in the sport they afford in their pursuit, and in the delight they give the *bon vivant*—indeed, *me judice*, I believe no feathered game in our country approaches in excellence this noble bird, in season, and properly cooked and served up.

To the sportsman many difficulties in finding this game present themselves. Many writers upon this subject have spoken of the unexplained fact, that it is impossible to find a bevy of quail if followed up immediately after flushing them, each attributing it to different causes.

After long experience, and carefully examining the apparent and available reasons, I have been led to favor the theory that the bird possesses the power of closing the pores of the skin, thereby retaining the scent. In my experience I have owned and shot over as fine and true-nosed dogs as ever “brushed the dew from cover,” and yet failed to find them, after marking them plainly go down in an open field, unbroken save by tussocks of grass and rank weeds, although every rod of ground in the vicinity was thoroughly quartered by my dogs. In this case time enough to escape by running had not been allowed, and therefore they must have been there, and if so, could not possibly have escaped being found, except by lying close and giving out no scent. Wait a half hour and then follow to where you marked them go down, and you will have no trouble in putting them up at once, and strange to say, they will not thereafter repeat the

trick, but may be promptly followed and readily found. I attribute this habit to fright, by being suddenly forced to take wing, and by the firing, and they involuntarily close the pores of the skin, and skulk as they alight.

The quail favors the neighborhood of streams—especially if along the banks grow the tangled copse and brushwood, with contiguous stubble-fields for feeding grounds. Their transit from one feeding-place to another is generally made on foot, even though the distance amount to miles, preferring this method to taking wing, which they rarely do except when frightened. They breakfast early—as must the sportsman who is ambitious of a full bag—and then retire to some quiet nook or cover and lazily digest their food through the middle of the pleasant, dreamy days of fall.

Follow them on some bright October day, and enjoy rare sport, and gain renewed health by exercise developing both physical and mental strength by the communion with nature's fairest works. May we meet then, gentle reader, when the fierce heat of summer has been deliciously banished by the cooler breezes of autumn; when the fields lately waving with the farmer's stores of grass and grain are shorn of their nodding glory; when our favorite, plump with the gleanings of the stubble-fields, lies before the noses of our well-trained dogs, or rises with the nerve-thrilling whirr before our eager eyes; when the many tinted leaves of gorgeous autumn have lent new glory to the landscape, and when we may take arms and go forth like true knights and do our *devoir sans peur, et sans reproche*.

(For Fanciers' Journal.)

SETTER AND POINTER CROSS.

GREENHORN, in reviewing my article on the above subject, certainly assumes more than he will find ground for in the language used in my communication. He tries to make the impression on the reader of the *Journal*, that I advised the breeding of the crossed dog or dropper. He will find, by carefully reading the aforesaid article, that no such advice is given or doctrine preached. My purpose was simply to encourage the owner of the dog referred to, to try and train him properly, and make of him a valuable dog, which I certainly think could be done with a *bona fide* dropper. I am glad that my advice was not required, because Greenhorn's dog “was a myth!” Greenhorn says much more than he supposes; he practically acknowledges that he could not find a genuine dropper to suit his purpose—probably all were too good—but he had to imagine a mythical dog, and he described him just as *he thought* a dropper should be to contrast unfavorably with his pure-bred pointers and setters. Let him describe a real dropper next time, and his statements and inferences will be worth something.

We never thought of breeding from a dropper; but this does not decrease his value as a good dog in the field. If he will show how the first cross in a pointer and setter can be otherwise than pure-blooded—sire and dam being pure-blooded themselves,—and give good reasons for a dropper not being fit to train, and why, twenty to one, such dog must prove a failure, he will be talking to the point, and enlightening those for whom he writes; but to this end he must *prove* as well as make his statements. Perhaps Captain Bogardus could help him in some way, as he appears to have a peculiar preference for droppers. No mythical dogs or things this time, if you please, Mr. Greenhorn; we want facts. VIC.

EDITORIAL DEPARTMENT.

OUR CONTEMPLATED CHANGE.

As some of our readers seem to misunderstand our announcement, we will state that the *Journal* will not take one step backward, but the prospect is very bright at this writing for an enlarged journal, under a management that will greatly enlarge its sphere of usefulness. It will remain "*The Fanciers' Journal*," and under its present editorial management. Its friends should not relax their exertions in its behalf, but send in their advertisements and subscriptions as rapidly as possible. At this time we are hardly prepared to make large promises, but the prospects are that *very large* editions of the *Journal* will be sent over the entire country. We hope ere long to see the *Journal* come up to the standard laid down by its founder.

THE NEW DEPARTURE IN EASTERN PENNSYLVANIA.

THE contemplated action in the matter of organizing a large poultry society, in the eastern part of the State, meets with the approval of a large majority of the fanciers and breeders embraced in the State east of the meridian of Harrisburg, or properly, east of the mountains.

The committee appointed to conduct the correspondence, and make the necessary arrangements for a mass meeting of fanciers and breeders, at Allentown, have received assurances of the presence of delegates from all the local societies, and from many prominent individual fanciers.

It is not the intention of this movement to interfere, in any way, with the existing local organizations. But the time has come when we need a larger society, one that can incur the responsibility and expense of large shows.

However excellent the shows of our local societies may be, they do not give us the prestige and standing that will be conferred by a large show, in which competition will come from abroad. Our local shows have done a good and useful work, but we expect better results from a single show which shall rank with the best in the country.

An organization such as is contemplated will be able to offer liberal prizes, and draw out breeders from a distance. Competition will, of course, be closer, and awards, when won, will be worth having. These shows will afford better opportunities for a more extensive acquaintance among the fraternity, and, better than all, they will be self-supporting, pecuniarily.

We would recommend to all interested to be in attendance at the meeting at Allentown, on March 2d, at 11 A. M. The meeting will be held at the American House, on Hamilton Street.

DICKIE.

TO ADVERTISERS.

An article went the rounds (from *Wilson's Hand-book for Advertisers*), the subject of which was, "The Cost of Advertising," which ran on in this way: "It is cheaper to pay five shillings for inserting your advertisement in a journal having a circulation of five thousand, than to pay two shillings for one having a circulation of one thousand." That is two-fifths as much for a circulation of only one-fifth. But, it is not this evident discrepancy in the relative proportion of cost and circulation to which we would call your particular attention; the important fact of the relative class of journals and advertisers is overlooked, which is a very poor policy for any, excepting the high-priced journals and their well-paid agents, to advocate without distinction. The journals having the largest circulation and highest advertising rates may be such as would never reach a desired class of dealers or consumers at all; or, they may not be published so frequently as desired by the advertiser who is in haste to dispose of his stock.

The representative journal to patronize in such instances is the one without regard to cost or extensive circulation, provided it reaches the largest number of the *desired class*. Suppose, for instance, that one wished to dispose of his fancy stock of fowls or pigeons as quickly as possible, we claim that he had better patronize the journal which is chiefly read by the fanciers and dealers who know just where to apply for such information (to advertise in any other class of journals or miscellanies would be suicidal), especially if the poultry department is published *weekly*, like that of the *Fanciers' Journal*.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—A big white cat and a canary were exhibited in the same cage at the show of the National Poultry Association, Chicago.

—A seal weighing eighty-four pounds was recently caught in Chaumont Bay, Lake Ontario. The fisherman who captured it had never seen such an animal before, and had no idea at the time what it was. The question is, How did it come there? This is the third seal caught in Chaumont Bay—one about five years ago, and another ten years ago.—*Ex.*

—In Flat Fishes or *Pleuronectidae*, the eyes are on opposite sides of the head in the young, and on the same side afterwards. M. Mirart thinks the change is accomplished suddenly. M. Malm declares that it is slow.—*Ex.*

Do Flounders belong to this class, they are flat, and fill the conditions about the eyes? E. S. S.

—GRAY SQUIRRELS.—Yes, the old male does castrate the young squirrel. I have shot several that were castrated—in fact, about fifty—and I find that only one in six is perfect. Last spring I found two nests of young ones, and all the males but one in each were castrated; and, last spring, a friend of mine, while out hunting, heard some squirrels chattering, and going to see the cause, saw two full-grown ones on a nest. He shot them, and they proved to be a male and female, and on climbing the tree he found five young squirrels in the nest (two females and three males), of which two had just been castrated by the old male, as one of the testicles still laid in the nest. I believe both the gray and red fox squirrels have this habit, as I see many of each that have been castrated. M. W. MINER.

—FLYING SQUIRRELS.—I notice considerable in the last *Journal* about flying squirrels, and will tell you what I saw. My brother and I were going through the woods, and, being tired, stopped to rest. While we were seated, we noticed a snag that was full of holes, about ten feet high. It being too early in the season for birds to have their nests, we came to the conclusion that we would push it down, and did so, when out popped a flying squirrel. On looking in the hole that she came out of, we found four young ones. We took possession of the nest, the young being very small. The old squirrel would sail from one tree to another and squeak, being very anxious to obtain her young; so we came to the conclusion to let her take one and see what she would do with it. Going away from the snag, she came and took one, went to a tree, went up about thirty feet, sailed off to another tree, and from that tree to another, with one of her young in her mouth. She left it in the last tree and returned for another. Taking it, she went the same way as before. The two first trees were about forty feet apart. As she came back, I threw a piece of bark in front of her when she was about twenty feet from the tree that she had left, and instead of flying against the bark, she turned an upward somersault and lit on the same tree, about six feet from the place she sailed from. We let her take the rest of her young without annoying her further. J. W. WAMPLER.

—I wish that Huon, the very interesting historian of the "Zoo," could spend a few days in the mountains. I would "see him again at Philippi." The pheasant shooting is excellent, the hares and castrated squirrels innumerable, and a *Volucella* occasionally spreads his sails and soars away into the "ethereal blue." Reading many books, has not Huon neglected the great volume of Nature? Like Goldsmith, quoting Buffon, but, unlike White, of Shelbourne, observing nothing for himself. The language used by me—"The nest of the hare is simply a hole in the ground, always lined with fur, and carefully covered with grass and leaves"—either means that if this covering were removed the young would be exposed to the full light of the sun, or it means nothing. If there is a true rabbit—a burrowing animal—in North America, I would like to see by what authority it is here. Huon is prattling of the English, an entirely different animal to any that we have, coming originally from the North of Africa. On page 743 of the *Fanciers' Journal* we read: "The gray or cotton-tail rabbit is usually called a rabbit, whereas we have no species which should bear the name." If not a hare, then what is it? Remember, Huon says it burrows! Huon insinuates that I said, "The young of the hare are born exclusively in April." I used no such language, but only said that this was the usual time, meaning that more were produced then than at any other season of the year. Huon says there is no authority for a hare to produce more than five young at a birth. Now, a woman might be able to show but poor authority to justify her in giving birth to four or even six children, but, notwithstanding all this, she sometimes, like "Old Hickory," "assumes the responsibility." "Rev. J. G. Wood says the rabbit gives birth to seven or eight young,"—I am quoting Huon. Now, Wood is good authority, even if he does send all eight of them to heaven with the best of us; but Chambers' Encyclopedia—article "The Rabbit"—says that they sometimes give birth to twelve; so these things are not immutable, like the laws of the Medes and Persians. Now, remember that it is the rabbit described by Wood that Huon has made burrow in the United States, and considers it the same animal as *S. lybaticus*.

Now for our little friend *Volucella*. Chambers says, "Its flight is fifty feet." It is nocturnal in habit, and rarely seen by day unless it has been disturbed. If the tree in which it lives is cut down, it will fly to the nearest one it sees—this may be only "forty yards" distant. Now, does Huon consider that there might be a difference between the distance it actually flew at any given time and the distance it is capable of flying? A frigate-bird might alight after a flight of only half a league: would he conclude, therefore, that it could fly no farther? Does Mr. V. ever launch himself into the air from the earth? He does nothing of the kind in the mountains. His flight is from one tree to

another. Suppose two flying squirrels start from the same tree to reach a given point—one starts from the distance of twenty feet from the ground, and the other is eighty feet above it—would their flight extend to the same distance? Suppose one is strong and active, the other a female with young, would their flight be equal? Suppose one flew up a hill and the other and stronger one flew down, each using all its strength, would the distance passed over be the same? Huon says that the gray squirrel can show no authority for living in the same tree with *Volucella*; but I do declare that I have found them so situated. I never said, nor do I mean, that they were in the same cavity. I further assert that I have seen *Volucella* fly more than two hundred yards. I cut the tree in which a colony of them lived; it was, I suppose, eighty feet high, and contained seven or eight flying squirrels and one gray squirrel. When the tree commenced falling, some of the flying squirrels were near the top, others at various heights; some flew up the hill—the tree was near the summit—and others down; some came to the ground at a distance of only a few yards, and one succeeded in reaching an oak that stood at a distance of two hundred and fifty steps below. He started from the top of the falling tree and struck the other at the ground. The ground was descending, but not steep. Now, suppose that this tree had been a Wellingtonia three hundred feet high, and the little elevation on which it stood Pike's Peak, would not *Volucella* have taken a flight that would have astonished a swallow? Remember hereafter, dear Huon, to say, when speaking of the flying capacity of little *Volucella*, that it depends upon its altitude when starting and the nature of the ground over which it is to glide.

Huon says—for he contradicts all I say—that gray squirrels cannot show the slightest authority for castrating each other. Now, whether they have any other than "the good old rule, that they may keep who have the power, and they may take who can," I do not know. Mr. Tracy says that the operation is performed by the black squirrel. I have only to say in reply, that not a black squirrel has been seen here for years, and still the work is done. But I do not doubt that where they abound they do castrate the gray, and vice versa. Now, according to Huon, what is not to be found in "authorities" cannot be true. Here, then, is an end to all investigation; the great book, the Zoological Garden of Nature (something larger than the one in the "City of Brotherly Love") is completed—and sealed with seven seals. Contributors to Weekly Gossip must hereafter tell us that the elephant is a large quadruped, the mouse is not so large, etc. The cockatrice, produced by a cross between an African bantam (?) cock and a toad, was once down in the authorities, and the hippogriff also, with a power of flight greater than *Volucella*. People do not believe much in them now.

Speaking of *Lepus Americanus*, page 29, *Fanciers' Journal*, I say, They are never found of any other color (than white). I mean in winter; in summer they are gray.

J. M. McCANN.

CORRESPONDENCE.

BERKS COUNTY AGRICULTURAL AND HORTICULTURAL SOCIETY.

At the annual meeting of the Berks County Agricultural and Horticultural Society, held in the city of Reading, Saturday, June 15, 1876, the following officers were elected:

President—A. F. Boas.

Vice-Presidents—Jacob G. Zerr, William Yocum, John A. Scheetz, and Thomas Penrose.

Secretary—Cyrus T. Fox.

Corresponding Secretary—Stephen M. Meredith.

Treasurer—William S. Ritter.

Auditors—Hon. S. E. Ancona and Frederick Lauer.

CYRUS T. FOX,

Secretary.

READING, PA., February 1, 1876.

CORRECTION.

MR. JOS. M. WADE.

DEAR SIR: The second premium Blue-pied Pouter cock, so well described by Marble, in premium list of Maryland show, in No. 3 of the *Journal*, is not the property of Mr. Caughy, as stated there. The bird, as Marble well knows, belongs to my loft since three years, and I am in possession of the second premium card, signed by Mr. Brown, the secretary. Please correct this error and oblige.

Yours very truly, A. SCHELD.

BROOKLYN, E. D., January 31, 1876.

SALE OF FINE STOCK.

J. M. WADE, Esq.

DEAR SIR: I have bought the entire stock of Golden-penciled Hamburgs of A. J. Tuck, of Nashua, N. H., including the cock "John Bull" that won first last winter at Connecticut, Boston, and Buffalo; also a very fine cock Mr. Tuck imported from Beldon, costing him (with two hens) seventy-five dollars, of which Mr. Beldon says he is the finest bird of his kind in America.

Yours truly,
WM. E. SHEDD,

BOSTON, February 2, 1876.

Waltham, Mass.

SOUTHERN TIER POULTRY AND PET STOCK SOCIETY.

FRIEND WADE:

At the meeting of the Southern Tier Poultry and Pet Stock Society, held in this city, January 6th, the following were elected officers for the year 1876:

President—William Atwood, Big Flats, N. Y.

Vice-Presidents—John H. Hall, Catharine; William Fitzhugh Miller, Geneva; George L. Whiton, Elmira.

Secretary—C. S. White, Elmira.

Treasurer—H. C. Howland, Elmira.

Executive Committee—George W. Chidsey and E. R. Bloomer, Elmira; H. L. Petton, Penn Yan; H. B. Batterson and W. W. Albro, Elmira; F. F. Preston, Candor; C. J. Andruss, Canandaigua; D. G. Eacker, Havana; S. H. Lany and Benjamin Blampied, Elmira. C. S. WHITE, ELMIRA, N. Y., January, 1876. Secretary.

DAVENPORT POULTRY CLUB.

AT the annual meeting for the election of officers for the above association, the following were chosen:

President—H. H. Smith.

Vice-President—J. J. Guill.

Secretary—J. L. Daymade.

Treasurer—E. S. Ballard.

Executive Committee—J. J. Guill, H. N. Norton, A. Stuhr.

Our club is in a more prosperous condition than it ever was, probably owing to our recent public exhibition. I think the fever is spreading among our farmers, who hitherto never took any interest in fine poultry.

Yours truly,
H. H. SMITH.

MISTAKEN.

J. M. WADE, Esq.

"VICTOR" made a mistake in writing about the Easton Poultry Show. He says, "Mr. A. B. Holcombe, of Lambertville, N. J., showing the best Pekin and Rouen Ducks." I won first premium on old Rouens and first on young. A. B. Holcombe had no Rouens on exhibition.

REAVILLE, N. J., January 31, 1876.

P. Q. HOLCOMBE.

FOXBURG POULTRY ASSOCIATION.

JOS. M. WADE, Esq.

DEAR SIR: At our meeting last night I was instructed to inform you that the first exhibition of the Foxburg Poultry Association will be held in Smith's Hall, Palmer Street, Foxburg, February 22, 23, and 24, 1876. The following are the names of the officers for 1876:

President—W. S. Gregory.

Vice-President—H. McCray.

Secretary—J. C. Patterson.

Assistant Secretary—R. M. Belknap.

Treasurer—W. H. Currie.

Executive Committee—W. H. Carpenter, T. Tregoning, J. F. Duncan, R. M. Belknap, M. M. Mandivall, J. P. Simmons, M. Haffé, J. T. Fowler. J. C. PATTERSON, FOXBURG, PA. Secretary.

SMALL PET DEPARTMENT

AND YOUNG FOLKS' CORNER.

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS,

Philadelphia, for the week ending February 2, 1876.

- 1 * Cat (*Felis domestica*). Presented by Geo. J. Schmidt, Philadelphia.
- 1 Snowy Owl (*Nyctea Nivea*). Purchased.
- 1 Red-Tailed Hawk (*Buteo borealis*). Presented by John Krider, Philadelphia.
- 3 Musk-Rats (*Fiber zibethicus*). Presented by C. B. Rossell, Trenton, N. J.
- 2 Goldfinch mules (*Eringilla carduelis*). Presented by J. R. Hays, Philadelphia.
- 1 Gray Fox (*Vulpus Virginianus*). Presented by S. D. Burroughs, Williamsport, Pa. HUON.

(For Fanciers' Journal.)

A BLACK SQUIRREL.

HE was black all over, and his thick, bushy tail was as long as he, even though the tip had been pulled off. That is as nearly as I can tell of his looks, for it is seven months since I saw him last; and then he kept me so busy trying to keep mischief out of his way and wondering what he'd do next, I had'n't time to measure him, even if I'd thought of it.

The brother of my neighbor, Ida, caught him in the woods when he was a wee little baby Frisk, hardly fit to be out of the nest, and when he was two years old sent him in a splendid two-story cage, with a wheel for a play-ground, to her for her Christmas. He had been handled and petted so much he wasn't a bit afraid. If you went into the room where he was, as likely as not he'd jump on your shoulder and search your pockets.

Ida used to say, "The peace is gone from my life! Why, he's worse than half-a-dozen children. After his nap in the morning, if I don't let him out he acts so I'm almost crazy. He'll drag down the wool and hair of his bed, stuff it, and all the litter and bits of nut-shells, through the bars of his wheel on to the floor; tip over the water, and scold so I'm

* This animal will be found in company with two other cats among the monkeys. At first sight it might be supposed to be a Manx cat, but it is not, but merely by a freak of nature it was born without a tail, and thus making its hinder parts to much resemble those of a rabbit or hare.

glad to let him out for sake of quiet. Then I have to watch him every minute. If the pantry-door is open, ever so small a crack, he steals my sugar and every goody that isn't under lock and key, and he won't leave a scrap of paper on the shelves. If he gets into my bedroom he makes more havoc in five minutes than I can tidy in an hour. You should see him train before the glass on my dressing-table! One day I missed him, finally finding him curled up in a nest he'd made in my trunk of my very newest, of course, Butterick pattern."

One day Ida came to me in a great hurry to borrow a few raisins. She "had promised" Charley mince-pie for dinner, had got the meat ready, the raisins stoned, and was getting ready to make the paste, when a neighbor called her to the door. She "wasn't gone but a minute," but when she came back the raisins had disappeared. What Tommy hadn't put away in his pantry (*i. e.* his bed), he was munching in his parlor.

His greatest fun was to seat himself on an open book, tear a little place, then turn around and tear it a little more; keep on tearing and turning until only the covers were left. Then he'd hide himself in the litter. But the bits he'd make of a newspaper! I never gave him but one for me to pick the pieces off a carpet, you may believe.

One day Ida's thimble, a stocking, and something else, were missing,—that was before they'd learned his tricks. They hunted and hunted, and finally concluded the broken-pieces girl's basket had carried them off. But one day, when Ida was ransacking Tom's pantry, there she found them, with an almost endless variety of odds and ends—bits of cake, sugar, candy, and nuts.

When Ida died, her husband brought him to us. "But, I'm afraid he'll be lost," I said; "the doors and windows all open—it was in May—and there are so many little fingers to open the cage, and I haven't time to watch them." "I was going to let him go anyway," Mr. P. answered; "but thought I'd wait until I could go to the woods; but you've so many trees, if he gets away let him go. I thought he might amuse Mr. S. by his antics."

And he did. When some duty would call me from my invalid, I would give him some nuts, let Tommy out, and call in the cat; and the frolic they would indulge in would bring light to the eyes that had almost forgotten to smile. Mr. S. would hold a nut in his fingers, and call "Tommy." Tom would jump on the bed, take the nut in his teeth, and scamper with it to the footboard. Then he'd hold it in his fore paws, gnaw at a minute, turn it over and around, gnaw another minute; then, with it between his teeth, start for some higher perch—the top of the rocking-chair, or maybe the top of the secretary. Then he'd go through the same performance, then maybe start with it for his cage, and be back in a second for another. Sometimes he'd drop his nut, and "Friday," the cat, would give it a push with her paw, then both would start for it. Then Tommy would go after Friday. Friday would get her back up and spit at him. Frightened Tom would start for his cage, Friday after him, pell-mell, helter-skelter; no matter what was in the way.

How he *did* enjoy being out of doors. For three days he was free. He would come to his cage on the porch to sleep, or to us if we called him with nuts or apple in our hands; but otherwise he was "in his element." He'd run to the top of the very tallest elm; there where the twigs would bend with his weight, he'd cling and swing. One day a

strange dog got into the yard. We saw Tommy sitting on the carriage-way looking fearlessly at him. We called; but before we could get to him he was dead.

Poor Tommy!

E. S. S.

CAT RACES.

CONTESTS of speed between carrier pigeons are by no means the only ones with which the Belgians occupy themselves. A Liegeois society has also organized cat races. In the "event" which has already come off the contestants, to the number of thirty-seven, were taken to a cabbage field on the road to Beyne, beyond the old barrier, and there let loose at 2 o'clock in the morning. The distance run is not stated, but the race proved to be a complete success. At the same moment the thirty-seven cats were let loose, and scurried off in every direction, bounding over the heads of the cabbage with swollen tails and shining eyes. Blondinette, aged two years and a half, was the first to arrive, at 6.48 in the morning, and gained the prize, consisting of a magnificent tray, a pair of vases and thirty francs in money. The second cat came in at 6.24 the next morning, and Finette, the third, arrived at 6.42. The second and third prizes consisted of hams and smoked tongues.

CANARY BIRDS.

THE season for obtaining canary birds has come again. Almost every steamer that arrives from Europe has a lot on board, consigned to the dealers in these wonderful little songsters. It is wonderful that so little a throat is capable of such a volume of sweet sound. There are two or three simple suggestions that may not be out of place in this paper, concerning the cost and care of a bird. First, a plain brass wire cage is preferable to another, because it is easier to keep clean, vermin will not infest it, and it is more beautiful than painted or wooden cages are, and not much more costly. Second, a bird will cost from three to five dollars. It is difficult to select a good bird from a lot, because you cannot distinguish the quality of his notes among so many; you must rely on the judgment and honesty of the dealer. You do not want a loud singer with a piercing note. The birds that are offered for sale at this season are mostly young birds, therefore select one with a soft sweet voice; he will increase in power and volume of song as he grows older. Do not hang him in a draft of air. He will bear the out-door air, but not where a current of air flows upon him. His food should be plain canary and rape seed, with fresh water and a bath daily, or at your convenience. We have a bird that we purchased in Providence last autumn, that has not missed a day of song during the year. He is now moulting; his coat is as ragged as that of a tramp. All his tail feathers, save one or two, are gone, but he sings as sweetly and cheerfully as ever. We feed him on absolutely nothing but the seed we have spoken of. There are four things, yea five, that a bird will do in a family. He will give the little girl, eight or nine years old, a few minutes lesson in tender, loving care each day. He will settle a dispute or a quarrel by drowning the voice of contention in the voice of song. He will drive away the blues, thereby saving a doctor's bill and helping digestion. He will awaken the household with a concert at sunrise, and fill the house with his happy spirit all day long. There will be at least one cheerful fellow in-doors when all the rest are sad.—*Spirit of the Times.*

A TENDER-HEARTED BROTHER.

A COUPLE of enterprising men doing the clothing business at Atlanta, are interviewed by a customer in search of a coat. The senior of the firm handles the new comer, and soon finds a "first-class fit." In answer as to the price the response is, "Eighteen dollars."

"Well, sir, I like the coat very much, but don't like the price."

"Well, mine friend, ze price is noting so you like ze coat We let you take 'em at fifteen dollars."

The customer still complains of the price, saying that fifteen dollars was too much. This was too heavy for the dealer, so, taking his customer to the extreme end of the store, and drawing him into a dark corner, he whispers in his ear:

"Mine friend, I let you have zat coat for twelve dollars and a half."

"Well, sir," said the customer, "I like your coat very much, and am satisfied with the price, yet I would like to know why this mysterious performance."

"Well, mine friend, you see dot leetle man there? He was mine broder. He got ze heart disease, and so help me gracious, if he was to hear me tell you I take twelve dollars and a half for zat coat he drop dead mit his track."

HARDSHIPS OF WESTERN HUNTERS.

THE rough experiences of the hunters and trappers upon our western borders are wonderful, and it hardly seems, to civilized home-bred people, that the perils of these daring and reckless men can be enjoyable. And yet, only through the continual excitements and adventures they encounter in their precarious calling, are such men content to live, year after year, in the wilds of the forests, the mountains and the plains, barely subsisting, for the most part, and very rarely if ever realizing any pecuniary gain in their weary course of life.

A recent account is given of two hunters who were on an expedition among the mountains of Nevada, early last spring, when one of them accidentally shot himself in the foot, lacerating the flesh and breaking the bones in such a manner that amputation of the limb seemed the only means of saving his life. Too weak from pain and loss of blood to attempt the journey of forty miles to the nearest settlement, the wounded man was conveyed to the rude cabin which they had made their headquarters, by his companion, who, after dressing the wound as well as he could, and cooking a plentiful supply of provisions for the three or four days he expected to be gone, started for the settlement to procure medical aid. He secured the services of a physician, and they started for the mountains, but a blinding snow storm coming on they became lost, barely escaping with their lives. So deep and so badly drifted was the snow that they were obliged to give up all thought of reaching the wounded man, no further attempt being made for about two months, when a party of friends thought it their duty to seek out the lonely cabin and bury the remains of the unfortunate hunter. What was their surprise, on nearing the place, to see him hobbling along on crutches to meet them, well and hearty with the exception of his lameness. He told them that after he was left alone his wound grew better; that when his provisions failed he crawled to the huge carcass of a bear they had killed a few days before the accident, and, unable to procure wood for cooking, devoured the meat raw. On this, and this alone, had he subsisted during the two months he had been imprisoned.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., cannot under any circumstance be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

B. HULSE, Box 23, Allentown, N. J., will exchange two Shepherd Suits, Partridge Cochins, one pair of White Leghorns, one pair of White and one pair of Red-mottled Fans, and Ring Doves—for Sebright Bantams, one S. W. Turbit hen, and B. Moorcock hen.

S. P. WHARTON, Spruce Hill, Juniata Co., Pa., will exchange a fine Sporting Rifle, eighty bore, twenty pieces nice mounting, no out—for a twenty-two Cal. Target Rifle (breach-loading), or offers. Rifle is somewhat skuffed, but warranted a good shooter. Cost \$35.

F. M. HERBON, Indianapolis, Ind., will exchange one pair each Black, Red, Yellow, and Blue-Bearded Tumblers; two Black Tumblers; one White Trumpeter and one Blue Pouter Cock; one pair each White Trumpeters; Black Barbs, and White Pouters. Also, G. P. Hamburg chicks—for Red Jacobin hen, Black Hamburg Cockerel, Brown Leghorns, &c. What offers?

JNO. F. HOUSER, Tamaqua, Pa., has for exchange Pea fowls (three males and one female), hatched 1875. Also, one pair pure White Angora Rabbits, two trico Golden and one trico Silver Sebright Bantams (first-premium stock), Exhibition Coops, Rabbit Hutches, Squirrel Cages, Parrot Cages, White Mice, White Mice Cage, and Fancy Pigeons. What offers?

E. G. BAGLEY, Indianapolis, Ind., will exchange three White Angora Rabbits, ten weeks old—for three Dark Brahma pullets. Must be good, as my rabbits are. Also, three volumes War with the South, handsomely bound and engraved, published at four sovereigns gold—for Dark Brahma pullets.

CHAS. L. COBB, Lock Box 1299, Brockton, Mass., will exchange one trio of Light Brahmas, one trio of Houdans, and one trio of Black African Bantams—for Pouters, Barbs, two Female Carriers (Dun or Black), Black Fantails, White Owls.

DR. H. A. RECORD, Mayville, N. Y., will exchange B. Red Game pullets (Warren's strain)—for Game Bantams, Mocking-bird, or Parrot. My birds are fine and large.

DR. H. A. RECORD, Mayville, N. Y., will exchange B. Red Game hens (Warren's strain)—for Black-and-Tan pup, or Pekin Ducks. What offers?

JOHN E. SCHUM, 150 South Water St., Lancaster City, Pa., will exchange one trio Aylesbury Ducks, one Feeding Hopper for pigeons, one Red-breasted Game cock, is a beauty, trimmed for the pit, won three fights lately. Also, one Black and Red-breasted Game stag, weight five pounds. Make offers.

JACOB E. TODD, JR., Basking Ridge, N. J., will exchange six Silver-spangled Polands—for Light or Dark Brahmas, or White Cochins.

G. R. HAY, West Lawrens, Otsego County, N. Y., will exchange thirty yards of Brannen carpet, cost \$1.50 per yard; a light, good Shooting Rifle, worth \$15; a good Violin, Bow, and Box, worth \$12—for good Light Brahmas, Brown Leghorns, Plymouth Rocks, Bronze Turkeys, or offers.

T. F. SMITH, 140 South Market St., Boston, Mass., will exchange his Red Setter dog, eighteen months old, broken to house and field, shot over one season—for a Laverack Red, or Orange-and-White Tucked dog, well broken and kind to children.

G. W. CLEVELAND, Millington, Mass., will exchange Dark Brahmas or P. Cochins—for American Dominique pullets or yearling hens, and one Silver-penciled Hamburg cockerel or cock.

T. A. WINFIELD, Hubbard, Ohio, has for exchange one White Fan cock, one Blue Pouter cock, two Dun-pied Pouter hens, two White Pouter hens, two Black Swallow hens, one Almond Tumbler cock, one Yellow Tumbler hen—for Common Pigeons, or Fancy Pigeons to mate up a part of above.

T. A. WINFIELD, Hubbard Ohio, has for exchange a fine-bred Irish Red Setter dog pup, ten months old, shot over some this season—for Guns, Fancy Pigeons, etc. What offers?

T. A. WINFIELD, Hubbard, Ohio, has for exchange Dark Brahmas, G. P. Hamburgs, Black-red Games, from my imported stock—for Cooper's Game Fowl, Tegetmeier's or Wright's Poultry Books, or Fancy Pigeons.

B. A. WHITNEY, Meadville, Pa., will exchange Fancy Pigeons, for good Canary Bird, Pouters, Red and Black Jacobins, White Turbit (black tail), one Red Trumpeter cock, one pair White and Black Fans.

PHILADELPHIA, FEBRUARY 17, 1876.

No. 7.

(For Fanciers' Journal.)

WELCOME TO ALL.

A CENTENNIAL BALLAD.

From the East and the West, from the North and the South,
Come join in the grand enterprise,
A glorious reunion of brothers once more,
And let birth-day anthems arise,
Beneath the old flag our forefathers loved,
Untarnished by rent or by stain,
In council as firm and as brave as of yore,
In friendship united again.

CHORUS—Come join us in friendship, the old and the young;
Come join us the great and the small;
Our greeting is welcome to rich and to poor—
Come on, there is room for us all.

In this age of progress, communion of thought
Is traversing every land.

Let feuds be forgotten, prejudice cease,
And reason assume the command.

We make no distinction of country or creed;
Let all for the banquet prepare.

A tribute to labour and learning we pay,
And all in the honor may share.

CHORUS.

From Iceland, the cold, rugged land of the Dane,
To India, the land of the sun;

From Peking to Athens, from Sydney to Rome,
In the cause of progression—come on.

Instruction and civilization our aim,
Our contest a trial of skill;

And though all are rivals in Science and Art,
Our motto is "peace and good will."

CHORUS.

Above us the Goddess of Peace spreads her wings,
And smiling upon us looks down;

And Fame, with a wreath of fresh laurel, awaits
Already the victor to crown.

Come join us and celebrate our natal day,
And partake of our homes and our fame;

All nations are welcome, as equals we meet,
There is room for us all and to spare.

CHORUS.

PETER PEPPERCORN.

SQUIRRELS.

BY PAUL LOGIC.

CHAPTER II.—INTRODUCTION.—Continued.

"As nimble as a squirrel."—*Old Saw.*

SQUIRRELS are found in nearly all parts of the world. No animal is more extensively located. As far north as the fir tree extends, under the burning sun of the tropics, among the stunted trees of the dreary far south, some species of this immense family has its home. In fact, the family is so generously distributed, we may say, without much exaggeration, that wherever trees grow squirrels are found. Of course the squirrel of the north and south differ greatly from its relative of the tropics; the former can scarcely endure the climate of our own latitude because of its heat, and the latter because of its cold; and if the one were to change

places with the other, both would die. But, nevertheless, the entire squirrel family have the same general characteristics in a striking degree: all live in trees or burrow in the ground; all eat fruit, buds, and nuts; all have the bushy tail; and in all the *squirrel* character is plainly visible. Goldsmith* goes so far as to give as his opinion that the entire *Sciurina* originally sprung from one parent, rather than each species had, at the beginning, a representative, and the progeny of this first pair, aided by climate and circumstances, spread into the number of species we now have.

In Australia—that country of curious plants and strange animals—the squirrel, so far as investigated, is not found, though it unites with the opossum and the rat to form the kangaroo. In Ireland squirrels are extinct, though in former times they were plentiful, but that was when Ireland was covered with great forests, and the cutting down of these, of course, was the cause of the extinction of the squirrel. Occasional specimens were seen as late as fifty years ago.

Animals extensively located, like the squirrel, are likely to deviate into varieties. Because of this, naturalists had great difficulty in classifying the species. In 1857, Professor Baird reduced the number of species found in the United States from twenty-four to ten, with two doubtful ones. Mr. Allen reduced them in 1875 to five, with seven geographical varieties in addition. The number of North American species of *Sciurina* in all is twenty-five. Sometimes a variety becomes in time settled into a permanent species; thus, if the white squirrel found in various parts of the United States, particularly in Wisconsin, were to breed among themselves for a length of time, a species of perfectly white squirrels would be established. White mice, white Guinea pigs, white rabbits, etc., thus originated; but in nature nothing but chance brings two "sports" of like appearance and different set together, therefore the formation of new species is the occurrence of a century.

Animals under the influences of a domestication deviate greatly from the original or any particular color; but in nature such deviations, except in the cases of a few animals, are rare. The skunk and the squirrel are the only animals known to us that in a state of nature differ in color. Squirrels differ only slightly in color,—not enough to be noticed by a casual observer,—but they do differ, and enough, too, to give naturalists considerable trouble in classifying them. The color of the gray squirrel runs from an ashy beach to a pure white, and all other species deviate in color in the same manner, though not in such a degree.

* We cite the opinion of Goldsmith, not because it of itself is of any particular value (his work on natural history being nothing but a cunning compilation), but because it represents the conclusions reached by the French and the German naturalists, from whom Goldsmith gathered most of the material for his "Animated Nature."

POULTRY DEPARTMENT.

(For FanCIers' Journal.)

INCUBATION.

SPEAKING of early chicks, and the difficulty of obtaining hens wishing to sit early, reminds me of an experiment I tried two years ago. I looked in vain for a sitting hen, and finally gave two shillings for a common hen, determined to make her sit. I took a barrel and made a nest in it, and put in a few eggs and put my hen on at night, and fastened her in. I left her for a day and took her off to feed for fifteen minutes, and then put her on again; repeating this for three days, I found she took to the nest quite willingly. So I gave her a sitting of eggs, taking her off daily to feed as before. In due time the chicks came out, which I took away and gave my hen a clean nest and a fresh lot of eggs, which in due time were also hatched out. I removed these and gave her the third lot of eggs, and she brought these out in good style. I left the chicks with her, and took off my hen every day during all this time, and gave fresh water and food, at the same time providing a good dust bath, etc., and when my hen finally left the nest with her brood, she weighed six ounces more than when I commenced my experiment. I do not say this will always succeed, but in two cases at least besides mine it has succeeded finely. EDWARD.

WESTERN NEW HAMPSHIRE POULTRY AND PET STOCK ASSOCIATION.

The following premiums were awarded at the First Annual Exhibition of the above Association, held at City Hall, Keene, January 18 and 19, 1876:

CLASS 1.—*Asiaties*—Brahmas—Light, Fowls, 1st, P. Frank Amidon, Hinsdale; 2d, J. W. Sturtevant, Keene; 3d, Milton Blake, Keene. Chicks, 1st and special, P. Frank Amidon, Hinsdale; 2d, H. B. May, Natick, Mass.; 3d, James L. Davenport, Keene. Dark, Fowls, 2d and special, P. Frank Amidon, Hinsdale. Chicks, 1st and special, P. Frank Amidon, Hinsdale. Cochins—Partridge, Fowls, 1st, T. H. Leverett, Keene; 3d, Herbert W. Wood, Ashuelot. Chicks, 1st and special, M. L. Davis, South Keene. Buff, Fowls, 2d, estate of Mrs. L. M. Henderson, Keene; 3d, C. C. Holton, Hinsdale. White, 1st and special, P. Frank Amidon, Hinsdale. Black, 3d and special, O. G. Dort, Keene. Special for best display of Asiatics, P. Frank Amidon, Hinsdale.

CLASS 2.—*American*—Plymouth Rocks, Fowls, 2d, Curtis G. Britton, Keene; 3d, M. J. Russell, Harrisville. Chicks, 1st and three specials, Curtis G. Britton, Keene; 2d and special, James H. Morrison, Marlow; 3d, Curtis G. Britton, Keene. Special for heaviest Plymouth Rock, A. H. Latham, Hinsdale.

CLASS 3.—*Dorkings*—Silver Gray, Fowls, 1st and special, Noah W. Hardy, Nelson. Chicks, 1st and 3d, Noah W. Hardy, Nelson; 2d, Charles E. Joslin, Keene.

CLASS 4.—*Hamburges*—Silver Spangled, Fowls, 1st and special, H. E. Honey, Marlow. Chicks, 1st, H. E. Honey, Marlow. Golden Spangled, Fowls, 1st and special, Luther P. Eaton, Harrisville. Chicks, 1st and 2d, Luther P. Eaton, Harrisville.

CLASS 5.—*Spanish*—White-faced Black, 3d and special, D. H. Dickinson, Keene. White Leghorn, Fowls, 1st, W. G. Scribner, Fitchburg, Mass.; 2d, Curtis G. Britton, Keene; 3d, M. J. Russell, Harrisville. Chicks, 1st and special, W. G. Scribner, Fitchburg; 2d and 3d, H. B. May, Natick, Mass. Special for largest and best display of White Leghorns, W. G. Scribner, Fitchburg, Mass. Brown, Chicks, 1st, 2d, and two specials, W. G. Scribner, Fitchburg, Mass.; 3d, Arthur Edgerly, Keene. Special for most meritorious display of Leghorns, W. G. Scribner, Fitchburg, Mass.

CLASS 6.—*French*—Crevecoeurs, 1st and special, Charles Fletcher, Harrisville; 2d, Obed M. Holton, Keene. Houdans, Fowls, 2d, Arthur Edgerly, Keene. Chicks, 1st and special, George D. Wheelock, Keene; 2d, estate of Mrs. L. M. Henderson, Keene.

CLASS 7.—*Polish*—White-crested White, Fowls, 1st and special, E. A. Pickering, Ashuelot. Chicks, 1st, 2d, and 3d, E. A. Pickering, Ashuelot.

CLASS 8.—*Game*—Black-breasted Red, Fowls, 1st, Fred. K. Pratt, Keene; 2d, Scott W. Bullard, Keene; 3d, Geo. A. Leonard, Keene. Chicks, 1st and three specials, C. C. Holton, Hinsdale; 2d, Fred K. Pratt, Keene; 3d, Geo. A. Leonard, Keene. Yellow Duckwing, Fowls, 1st, Fred. K. Pratt, Keene; 2d, M. J. Russell, Harrisville. Chicks, 2d, S. D. Stanley, Keene; 3d, Chas. O. Coburn, Keene.

CLASS 9.—*Game Bantams*—Fowls, 1st, Asa Fairbanks, South Keene; 2d, C. C. Holton, Hinsdale; 3d, Geo. Greenwood, South Keene. Chicks, 1st and special, Fred. K. Pratt, Keene; 2d, Frank Duffy, Keene; 3d, C. C. Holton, Hinsdale.

CLASS 10.—*Bantams*—Golden Sebright, Fowls, 1st and special, P. Frank Amidon, Hinsdale.

CLASS 12.—*Turkeys*—Bronze, Fowls, 1st and special, J. E. Fuller, Westmoreland. Chicks, 1st and special, Norman Howe, Hinsdale; 2d, J. E. Fuller, Westmoreland.

CLASS 13.—*Ornamental*—Peacock and Hen, 1st, Luther P. Eaton, Harrisville. Guinea Fowls, 1st, Martin Tracey, Keene.

CLASS 15.—*Ducks*—3d and special, T. H. Leverett, Keene.

CLASS 16.—*Pigeons*—Tumbler, 1st, E. K. Seabury, Walpole. Trumpeter, 2d, E. K. Seabury, Walpole. Ruff-neck, 2d, E. K. Seabury, Walpole. Blackwing Turbitts, 2d, E. K. Seabury, Walpole. Ring Doves, 1st and 2d, Asa Fairbanks, Keene. White Fantails, 1st, P. F. Amidon, Hinsdale; 2d, E. K. Seabury, Walpole; 3d, W. H. H. Beal, Keene. Black and White Jacobin, P. F. Amidon, Hinsdale. Special for largest and best display of Pigeons, E. K. Seabury, Walpole.

CLASS 17.—*Birds*—Java Sparrows, 1st, Mrs. J. H. Wellington, Keene. German Song Canary, 1st and special, Mrs. D. D. Griffith, Keene; 2d, Ira D. Gates, Keene. West India Parrot, S. F. Merrill, Keene.

CLASS 18.—*Rabbits*—Angora, 1st, M. J. Russell, Harrisville. English, 1st, G. G. Bidwell, Swansey Factory.

CLASS 19.—*Minor Pets*—Angora Cat, 2d, George F. Sanborn, Keene. Gray Squirrels, 1st, John Malony, Keene.

CLASS 20.—*Sundries*—Artificial Mother, 1st, A. J. Fisher, Walpole. Exhibition Coop, George W. Cleveland, Millington, Mass. Display of Flowers, 1st, Ellis Brothers, Keene; 2d, Hutchinson Brothers, Keene.

SPECIALS.—Heaviest bird in any class, J. W. Sturtevant Keene. Heaviest chick in any class, P. Frank Amidon Hinsdale. Largest and best exhibition by one person, P. Frank Amidon, Hinsdale.

J. W. STURTEVANT, Secretary.

(For FanCIers' Journal.)

EGGS FOR HATCHING.

THE shipping of eggs, so that they will arrive safely, is a matter of no small importance to the purchaser. It is admitted by many, if not most fanciers, that eggs will bear a great amount of rough handling and not impair their

vitality. The question then is, how shall we pack our choice eggs so they will not break? The systems of transporting articles are so fully established in their ways that it would seem useless to quarrel with them, especially when they are so willing to give us a guarantee that they are not responsible for eggs. In business, we demand full weights and measures, and that our goods are properly packed, and if they are not, we have our redress.

I do not think I over-estimate when I say our eggs for hatching cost the purchaser about one dollar apiece; I mean, of course, the purchase price, express charges, breakage, etc., added. Now, if by any superior method of packing we can but save one egg out of each lot shipped, it is safe to credit its value to the superiority of the process; is it not? Now, if two or three eggs are usually broken out of a sitting, and said eggs are worth from fifty cents to one dollar each, here certainly is a field for experiment, if not of actual improvement. I am not a fault-finder, nor have I been idle on this point, but, after experimenting and testing said point, will tell what I know about packing eggs for shipping:

First, make a box large enough to hold say fifteen eggs, divided into compartments for each egg, and opening in the middle, provided with a hook to fasten it. Take thin cloth and form sacks one-half the size of your egg and insert in the boxes, tacking the top to the edges of the box; now, put in your eggs, first wrapping them in thin paper, or cotton wad, if you choose; close your box and hook it, and, if it has been properly made, you will find your egg fully supported without any possibility of coming in contact with hard substances. Now, make another box, one and one-half inches larger all around inside than your egg box; make sixteen tapering spiral springs, say two inches in diameter at the large end; put four of these on the bottom of the larger box, two on each side and end, and four on your cover, securing them all to their proper places by a bit of leather and a tack; place your egg box in place and screw down your cover; put on a handle, and mark, eggs for hatching, and your directions. The estimated cost of this box is sixty to sixty-five cents in lots of fifty or more; but, please bear in mind, this is for eggs worth from eight to twelve dollars per dozen.

EDWARD.

(For Fanciers' Journal.)

SOUTHERN PENNSYLVANIA POULTRY ASSOCIATION.

THE following premiums were awarded at the second annual exhibition of the Southern Pennsylvania Poultry Association, held at York, Pa., December 28, 29, 30, and 31, 1875. There were three hundred and nine entries.

Brahmas—Light—Wm. A. Myers, New Oxford, 1st on hen; George J. Chalfant, York, Pa., 1st on cockerel and 2d on pullet; George E. Heiges, York, Pa., 1st on pullet and 2d on cockerel; Wm. Gilberthorp, York, Pa., 2d on hen; Dark—Wm. A. Myers, 1st on cock, 2d on hen, and 1st on pullet; Geo. J. Chalfant, 1st on cockerel.

Cochins—Partridge—W. H. Hibner, York, Pa., 1st on cock; Wm. A. Myers, 1st on hen; M. J. Seitz, York, Pa., 2d on cock; Edmund Deitz, York, Pa., 2d on hen; John Holder, York, Pa., 2d on cockerel. **Pea-comb Partridge**—Geo. R. Heiges, 1st on cockerel and 1st on pullet. **Buff**—Isaac E. Wise, Hanover, 1st on cock; Wm. A. Myers, 1st on hen, 2d on cock, and 2d on cockerel; A. M. Carey, Selinsgrove, 2d on hen. **White**—Dr. J. D. Heiges, York, Pa., 1st on cock, 1st on hen, and 1st on cockerel; Isaac E.

Wise, 2d on cock and 2d on hen; Wm. A. Myers, 1st on pullet, 2d on cockerel, and 2d on pullet. **Black**—C. H. Fry, York, Pa., 1st on cockerel and 1st on pullet.

Dorkings—Edmund Dietz, 1st on cockerel and 1st on pullet; John Miller, York, Pa., 2d on cockerel and 2d on pullet.

Dominiques—John N. Wellenseik, York, Pa., 1st on hen and 2d on cockerel; Edmund Dietz, 1st on cockerel and 1st on pullet.

Plymouth Rocks—Ulrich Strickler, Goldsborough, 1st on cockerel and 1st on pullet; J. L. Sheffer, York, Pa., 2d on cockerel.

Leghorns—Brown—J. E. Wise, 1st on cock; Edmund Dietz, 1st on pullet; Wm. H. Epply, York, 2d on cockerel; A. M. Carey, 2d on pullet. **White**—C. H. Fry, York, 1st on cockerel and 1st on pullet. A. M. Carey, 2d on cockerel and 2d on pullet. **Black**—Jacob Igenfritz, York, 1st on cockerel and 1st on pullet. **Dominique**—A. M. Carey, 1st on cockerel and 1st on pullet.

Spanish—White-faced **Black**—Alexander Kidd, York, 1st on cock; Jacob F. Hantz, 1st on pullet.

Hamburgs—Golden-spangled—W. H. Epply, 1st on cockerel and 1st on pullet. **Silver-spangled**—Eli Spangler, York, 2d on cock; George Strubinger, York, 2d on pullet; J. E. Wise, 2d on hen. **Black**—C. H. Fry, 2d on cock, 2d on hen, and 2d on pullet; Jacob Bullinger, York, 1st on cockerel and 1st on pullet; M. J. Seitz, York, 2d on cockerel.

Polands—Golden—W. H. Epply, 1st on cockerel and 1st on pullet. **White-crested Black**—William Epply, York, 1st on cockerel and 1st on pullet. **E. C. Beck**, 1st on Golden **Poland** hen. **Silver**—Jacob Igenfritz, 1st on cockerel and 1st on pullet.

Games—L. H. Greenawalt, York, 1st on **Yellow Duckwing Game** cock, 1st on **Red Pyle Game** cock, 1st on **Blue B. Red Game** cock, 1st on **Sumatra Game** cock, and 2d on **Black B. Red Game** cock. **William Epply**, 1st on **Black B. Red Game** pullet, 1st on **Red Pyle Game** hen, 2d on **Red Pyle Game** cock. **John Miller**, 1st on **Red Pyle Game** cockerel, and 1st on pullet. **Jacob Dick**, York, 1st on **Sumatra Game** cock and 1st on hen. **Edward Blauser**, 2d on **Sumatra Game** hen. **E. C. Beck**, 1st on **Black B. Red Game** cockerel. **J. E. Wise**, 2d on **Black B. Red Game** pullet. **Z. W. Smyser**, York, 1st on **English Game** cock. **F. R. Howell**, Lancaster City, 1st on **Silver Duckwing Game** cockerel.

Bantams—E. C. Beck, 1st on **Silver Duckwing Game** cock and 1st on hen. **Charles E. Long**, Lancaster City, 1st on **Black-breasted Red Game** cock and 2d on hen; 1st on **Black-breasted Red Game** cockerel and 1st on pullet; 1st on **Golden Duckwing Game** cock and 1st on hen; 1st on **Golden Duckwing Game** cockerel and 1st on pullet; 1st on **Red Pyle Game** cockerel and 1st on pullet; 1st on **Black African** cockerel and 1st on pullet. **A. M. Carey**, 1st on **Golden Sebright** cock and 1st on hen; 1st on **Black-breasted Red Game** hen and 2d on cock; 1st on **Silver Duckwing Game** cockerel and 1st on pullet; 2d on **Black-breasted Red Game** cockerel and 2d on pullet. **Isaac E. Wise**, 2d on **Gold-laced Sebright** pullet. **Charles Lippold**, Lancaster City, 1st on **Gold-laced Sebright** cockerel and 1st on pullet.

Miscellaneous—William Epply, 1st on **Sultan** cock and 2d on hen. **C. H. Fry**, 1st on **White Guinea**. **York County Almshouse**, 1st on **Pea fowls**. **Ulrich Strickler**, 1st on **Frizzles**. **William Gilberthorp**, 1st on **German Hares** and 1st on **White Rabbits**. **Lewis Strayer**, 1st on **Guinea Pigs**. **Edward Stuck**, York, Pa., 1st on best collection of **American birds**, stuffed.

Pigeons—William Gilberthorp, 1st on **Moorheads**. **William Epply**, 1st on **Archangels**. **E. C. Beck**, 1st on **Snells**, 1st on **Black Priests**, 1st on **Carriers**, 1st on **Yellow Tumblers**, and 1st on **Red Barbs**. **Charles E. Long**, 1st on **Black-pied Pouters**, 1st on **Blue Magpies**, 1st on **Yellow-winged Turbids**, 1st on **Blue Swallows**, and 2d on **White Trumpeters**. **Charles Lippold**, Lancaster City, 1st on **White Trumpeters**, 1st on **Yellow Trumpeters**, 1st on **Black Turbids**, 1st on **Red Jacobins**. **F. R. Howell**, 1st on **Silver Antwerps**. **William Epply**, 1st on best collection of **Singing Birds**. **Charles Lippold**, 2d for best collection of **Singing Birds**. **William Epply**, 1st on **Paroquets** and 1st on **Parrots**. **Charles Lippold**, 1st on pair of **South American Parrots**.

Ducks—William A. Myers, 1st on Pekin. York County Almshouse, 1st on White-crested.

Turkeys—Edward Stuck, 1st on Bronze gobbler and 1st on young Bronze. Dr. J. D. Heiges, 2d on Bronze gobbler. William A. Myers, 1st on White Holland.

Dogs—Jacob Koons, York, Pa., 1st on full Buck Hound. A. F. Coble, York, Pa., 1st on Fox Hound. Edward Stuck, 1st on Irish Setter. Jacob Brillinger, 1st on English Bull Terrier. E. P. Welsh, 1st on Gordon bitch, 1st on Gordon dog, and 1st on Orange and White Setter. Frederick Slesder, 1st on Prince of Wales Pointer.

A. M. Carey, Selingsgrove, took the society's special of \$10 for the largest, most varied, and most valuable collection of poultry, and Charles E. Long, Lancaster City, took the society's special of \$5 on a pair of Black African Bantams and \$5 on a pair of Golden Duckwing Game Bantams, both figuring over ninety points.

The exhibition was a perfect success as far as the stock was concerned, but a failure on account of patronage, which was caused by being a rainy week. C. H. FRY,
Corresponding Secretary.

(For Fanciers' Journal.)

HERÉDITÉ.

BY JAMES S. BAILEY, M.D.

RECENTLY in the *Fanciers' Journal* it was stated that a professor in one of the Philadelphia medical colleges stated before the class that cases occurred where Jewish children were born circumcised. In another issue this statement was questioned. I at once determined to consult my friend, Dr. Joseph Lewi, of Albany, who himself is an Israelite, and his practice during the last twenty-eight years has largely been among his own people. He affirms that such is really the case, which leaves no further doubt in my mind upon this subject.

An Irish gentleman recently stated to me that he owned a mare which was spavined, and each of her foal—fourteen in number—became spavined between four and five years of age.

Curious facts on hereditary transmission are to be found in Walker's work on intermarriage (London, 1838). We are informed that "if a stallion be prevented, even by accidental lameness, from obtaining exercise, he is sure to be deficient in muscular power, and to convey that deficiency to his offspring. I knew a horse who broke his leg when running a race, when three years old, and who has since been kept for covering mares, not being capable of anything else or even of traveling for that; but his stock are not promising, though he is exceedingly well bred."

I really did not intend to refer to this subject again in the *Fanciers' Journal*, but facts are stubborn things, and truth will assert itself. Why then not convince the skeptic? Although it has been well said:

"To convince a man without his will,
He will be of the old opinion still."

(For Fanciers' Journal.)

REPLY TO F. A. M.

LAST season I reported through the *Journal* a case precisely similar to that mentioned by F. A. M. The treatment adopted was simple and efficient. With sharp scissors a hole was cut into the crop, of sufficient size to enable me to remove the mass of tangled grass and soft food. I then closed the aperture with a stitch, taking care not to catch the skin and crop together, which, in most cases, will prove fatal. I then confined the hen in a coop for a few

days and gave moderate quantities of soft food. In a short time the wound had entirely healed.

The long, dry grass, eaten in considerable quantities, become so matted together that it cannot pass into the gizzard. If the hen is not relieved, the mass will sour in the crop and eventually produce death.

The operation is easily performed, and, with proper care, rarely fails of success.

MANSFIELD VALLEY, PA.

F. R. W.

(For Fanciers' Journal.)

THE WESTERN PENNSYLVANIA EXHIBITION.

AND now Pittsburg takes the lead. The extremely liberal premium list, together with the guarantee to pay all premiums in full, made and offered by the Western Pennsylvania Poultry Society, was undoubtedly a great inducement to breeders and fanciers to send their stock to the above-named Society's annual exhibition, which took place in Pittsburg, January 12th to 18th, inclusive, and proved a decided success; in fact, it reminded us of the big shows held in Horticultural Hall and Concert Hall, under the auspices of the Pennsylvania State Society, and when Wade, Herstine, H. H. G. Sharpless, John Clapp, Churchman, and the rest of the big boys were in full blast.

As it will be of little interest to your readers to know how we made the journey, we will simply say, that on leaving the cars of the Pennsylvania Railroad, at Pittsburg, we proceeded directly to Blair's and took breakfast (Blair's is a good place for a hungry man to get his breakfast), from thence we made our way directly to the old City Hall, where the exhibition was held, and which, by the way, is undoubtedly one of the best, if not the best, hall for exhibition purposes in the United States, it being commodious and well lighted from both sides.

As the Executive Committee of this society are old hands at the show business, the arrangements were complete, and the accommodations afforded the visitors to view the fowls, etc., all that could be desired. It might truly be said that the Brahmas were a show of themselves, as the Light Brahmas were represented by fifty-four coops, and contained many really meritorious birds. Where such strong classes are shown, we think a fourth, fifth, and even a sixth premium would be advisable; otherwise many good birds remain unnoticed in the awards. Dark Brahmas mustered twenty-seven coops. The first premium pair of fowls were very fine, the cock especially so; the second was also good. The third prize hen was a grand bird, winning special, and, had she been well mated, would undoubtedly taken first. The first prize pair of Dark Brahma chicks were also very superior birds, the pullet being one of the best we ever saw. Second and third were also fine. Of Buff Cochins, there were fourteen coops shown, but scarcely a good bird in the lot, many of the hens being mealy or marbled, and not of that pure, even color so desirable in Buffs. Partridge Cochins, fifteen coops; many of them were really first-class specimens. Black Cochins, six coops; a majority of the birds in this class were out of condition and hardly up to the average. White Cochins, eight coops; some very fine birds shown. Pea-comb Partridge Cochins, one coop. Games were well represented by Black-reds, Brown-reds, etc., being thirty-two coops in all. Hamburgs were all good classes, and were said to contain some of the best specimens ever seen in this country, all varieties being shown, to the number of thirty-six coops. Leghorns, mostly White and

Brown, seventeen coops, about the average in quality. The display of Spanish was small, four coops only.

The display of water fowl was very good, comprising fifteen coops of Geese, containing fine specimens of Hong Kong, Toulouse, and Bremen. Of Ducks, there were eighteen coops of Rouen, Aylesbury, etc. Turkeys were few, five coops only. Bantams, forty coops, comprising Black, Brown-red, and Pyle Game, also Black African, etc. Twelve coops of Polish fowls were also shown in their respective classes, which we omitted to mention in the proper place. The Pigeon department was small, compared with Baltimore, but the one hundred and thirty-nine entries shown would have been greatly missed by their numerous admirers. Upon the stage we noticed a beautiful pair of Fawns, several pairs of Rabbits, and Ferrets.

One of the chief attractions of the exhibition was the display of pure-bred Dogs, which was quite a creditable one, and comprised some forty-three entries of Setters, Pointers, Terriers, etc.

To Messrs. Shannon, Elben, Wotring, Miller, Cooke, and others, who did much to make our visit a pleasant one, we are especially grateful.

W. E. FLOWER.

(For Fanciers' Journal.)

SOUTHERN TIER POULTRY ASSOCIATION.

FRIEND WADE:

The Southern Tier Poultry Association have just closed their second annual exhibition. The visitors to our hall, when they looked over the five hundred entries, exclaimed, "This surely is a success." Evidently we occupy a central point, and if we proceed to incorporate, as we propose to do, there are few places that can hold the stock that will be entered.

As I was not an exhibitor I made it in my way to be with the judges quite often, of whom too much cannot be said in their praise. I believe Charles H. Crosby and J. Y. Bicknell have acted impartially, and judged the specimens upon their merits alone. Their task was no easy one—awarding a prize to a pair after figuring the single birds was unpleasant for them in some cases, viz.: a Dark Brahma cockerel was in a coop with a pullet of so much poorer grade that they took third premium, whereas, if the pullet had been better, or equally as good as the cockerel, they would easily have taken first. Here we have an argument in favor of single-bird premium and awards, and I hope all societies will come to the rule, and subsequent premium lists will be issued accordingly. I take the liberty of appending the judges' report, to show how competent gentlemen look upon our efforts. Such approbation in a great measure compensates for the anxiety and labor it has cost to reach our present standing.

*To the President and Associate Officers of the
Southern Tier Poultry Association.*

GENTLEMEN: In submitting our report, we have the satisfaction to state that we were happily disappointed in finding many more birds than we had anticipated, the quality of which would do credit to any locality. In view of this fact, our labors have been much more irksome; yet, if we have done justice to the exhibition, we feel fully compensated for our services. If errors in judgment have been made, we are confident that they will be attributed to the difficulties attending us, rather than any intent on our part.

The courtesy we have received from officers and members of the society is appreciated, and you have our best wishes for your future success. Very respectfully,

J. Y. BICKNELL,

BIG FLATS, CHEMUNG CO., Jan. 11, 1876.

C. H. CROSBY.

(For Fanciers' Journal.)

TO ALL WHOM IT MAY CONCERN.

FRIEND WADE:

I crave your indulgence for this time only, while I state a few facts "to all whom it may concern," leaving the bandying of epithets to Superintendent Snow, and others of that ilk. I know whereof I speak, and my statements can be substantiated by hundreds of visitors, as well as exhibitors, at the fair in Brockton, Mass. No one disputes that the show of poultry and pigeons was a fine one; due credit having been given the committee for their untiring efforts in calling out so fine a display. The premium lists were scattered far and wide, every inducement being offered to fanciers to bring their stock to the exhibition. True, they did not say, as far as possible the premiums should be awarded to Brockton people, "without fear or favor" (which proved to be the case, thus substantiating, in one respect, the "tickle me and I'll tickle you" statement), and in consequence, fanciers from all the region around gathered their choice birds and took them to the fair, expecting justice would be done. The "limited amount of money" must have been very unequally distributed, with a good deal of favor, if without the fear, since I heard one exhibitor of pigeons (a Brockton gentleman, and I think, one of the committee) say he had been awarded forty dollars in premiums. Mr. Snow is right regarding the arduous labors of the judges, for they were all of two days in getting the premium cards tacked to the winning coops; but I beg to reiterate my statement, concerning the judging having been accomplished in five hours, as I have the authority of a gentleman who was with them from the time they commenced till they had finished. Again, Mr. Snow says: "I heard no complaint from any exhibitor." Had all the exhibitors been aware he was so sorely stricken (with deafness as well as blindness), there would, in all probability, have been more charity manifested; but as there are none so blind as those who will not see, or so deaf as those who will not hear, he must have been classed with these unfortunates. Complaints were rife on every hand, in other departments as well as that of poultry and pigeons, and I will state here (to show the favor), though irrelevant to the subject in hand, that a lady counted the premiums awarded to specimens of breed, and found that out of fourteen awards twelve went to Brockton ladies. Whatever the Brockton Agricultural Fair is to Brockton people, it appears to have been a very evident "fraud" to parties outside. I refer Mr. Snow, and "to all whom it may concern," to the sharp criticisms in the Boston papers.

Phillander Williams was heard to remark: "This is the best show I ever saw at a county fair." This is the first intimation Plymouth County people have had, that their fair, which is always held on their grounds at Bridgewater, and which had been held two weeks previously, had been transferred to Brockton. Mr. Williams usually attends the county fair, and knows where it is held, and though he expressed his opinion freely to me, he did not intimate that he was attending a county fair.

Could Mr. Snow have refuted the statements made in my communication of November 4th, it is natural to suppose he would have done so in his "maiden effort," but he has not even attempted an explanation. His object appears to be to shield the judges and committee (which he may have done), by hiding them under the mantle of "Esquire," but it is not every good Esquire that is a competent judge of poultry and pigeons. I heard a gentleman, a noted breeder and a large exhibitor, say: "I would not like to employ those judges to buy fowls for me." This does not look as though the judging was impartial, or the judges competent. So far from being one of "those dissatisfied, growling exhibitors," I was awarded a number of premiums that I little expected, after learning the direction in which the tide was turning. Being one of those old fogies who believe in awarding premiums to the "best specimens, without fear or favor," I took up the cudgel in their defence, and exposed the frauds I saw practiced.

HOPEFUL.

PLYMOUTH CO., MASS., January 12, 1876.

SPORTSMAN'S DEPARTMENT.

(For Fanciers' Journal.)

THE DROPPER AGAIN.

I HAVE just read "Greenhorn's" last communication to the department, and would like to say a few words in corroboration of "Vic's" statement. Two years ago I bought a pup out of one of the best known Irish Setter sluts in this vicinity by a Spanish Pointer. I broke him to the house or rather "house broke" him, and from his actions concluded that I had better get rid of him. While I was looking for a purchaser I took him into the field for the first time, with a thorough-bred Pointer slut that I had. His work in the field did not suit me, and I was still more determined to get rid of him. When he was a year old I found a man willing to exchange a Red Irish three months old dog for him, and he went. From his hands he went into those of a professional hunter, and the discussion between the merits of the "dropper" and thorough-bred for sporting purposes having arisen, I determined to keep sight of him and two others of the litter, in order to see how they turned out. Last spring I went to see him work on snipe, he was working considerably better than when I had last seen him, giving evidence of a remarkable nose, but still a little unsteady. The party that owns him wanted me to come up in the fall and bring my setter (at that time in the hands of a well-known trainer), and he thought he would be able to work against and beat him. I took my dog into the woods for two weeks' steady work and then went to try the dogs. To say that I was overmatched is a mild way of putting it; the dropper has come to be the best dog I ever shot over; in his quar-

tering and point he is simply perfect. He made one point on a woodcock that we paced off from his stand to the "white-wash," and made it forty-eight feet. He says he is the best dog he ever saw. I offered him my setter (which I had refused \$100 for repeatedly) and \$50 besides, but he says "no, I thank you." Two others of the litter have turned out well, a little heady, but no more so than scores of thorough-breds I have seen. No one will dispute "Greenhorn's" declaration as to the value of the produce of the dropper. But let me ask him how much the average sportsman cares for breed, provided he is a good worker in the bush? Of course if a man owns a good bitch he would not like to have her served by any but a good dog (by good I mean thorough-bred), and the progeny of the pair would bring better prices than if otherwise, even if they turned out good for nothing; but the average man that owns a good worker in the bush, don't care if he be dropper or thorough-bred.

AH SIN

BOSTON, January 15, 1876.

(For Fanciers' Journal.)

THE ADVENTURES OF A POT-HUNTER.

(Continued from page 7.)

"Paul," he whispered, so faintly that I had to place my ear to his mouth in order to catch the words, "Paul, I'm more resigned, I feel I'm going," and he was gone for a third time. More mud and water until he came to.

"Good bye, Paul," he continued, when he became once more conscious, "I know you didn't mean to shoot me; I'll forgive you. Take good care of Ketchem, and don't let Billy McGruel take Maria Dumpling to the circus. Good bye," and he was unconscious again. I left him lying unconscious on the ground, and hastily returned to the village to spread the story.

About dusk, Eureka came sneaking through the village (he could not get home without coming through it), an object pitiful to behold. He, as I afterwards learned, had remained in the woods all day, still believing himself to be mortally wounded, alternately swooning and reviving. He accounted for my absence by believing I had gone to the village for aid. So, hour after hour went by, I returned not, and he died not, when he began to suspect a joke, and, in feeling for the supposed wound, found himself to be uninjured.

Of course, for weeks "I-have-found-it" was the butt of the village. Every night, after the sun had sunk in the west, I would see Mr. Clam dodging about the banks of wood which stood in front of my father's house, watching for me. One night he caught me and administered such a thrashing as cased his mind; afterwards we were as good friends as ever. The diabolical plot against Ketchem was never hatched.

During all the time I was perfecting myself in shooting cats on the wing, Eureka Clam was my brother-in-arms. Together we practiced, and after practicing, together we stole the bottle of whisky—imported from Smith's Island—secreted in the wood-banks by Than Estmony, the drunken village cobbler. Why we did this I cannot say, for neither of us liked the taste of the fluid; but then it was sportsmanlike, I suppose. Eureka had a gun now, which he said he traded with an old Jew peddler, giving Ketchem, the part-Chinee, for the gun, though the peddler declared he (Eureka) gave him fifteen dollars for the gun and two

dollars beside to take the dog away. The last I saw of the part-Chinee were the Jew and he going up the dusty road. He had a cord around his neck, at the end of which the Jew, perspiring and swearing horribly, was tugging, while Ketchem tugged at the other, enlivening the scene with heart-rending howls. The two slowly vanished out of sight and were lost forever.

CHAPTER IV.—In which the Pot-hunter goes gunning on the salt-marshes.

By constant practice I so perfected myself in the art of shooting that there was scarcely a cat upon my father's premises which did not bear marks of my skill—broken legs, eyes knocked out, flesh torn off. In fact, matters came to such a pass that the cats holding their nightly revels on the roof of our barn, "making night hideous," adjourned to the barns of Deacon Lang, because of the fearful ravages made in the ranks of the serenaders.

The night after the mutilated cats migrated to the barns of Deacon Lang, he came down to the store and, lighting his corn-cob pipe, turned to Doctor Hoop, the village physician, and said:

"Well, I vum, Doctor, I've heerd of its raining frogs and fishes and sich-like, but I'm tetotally struck dumb if it haint rained cats down around my barn! Jist before dark I went out to water the old mare, and, so goodness help me! if the roof of the barn wasn't covered with cats; and sich lookin' critters! .You ought to seed 'em. 'Pears as if they were strick by lightnin' when they was all together in a heap. Can you account for it, Doctor?"

The doctor leaned his chin on the head of his cane for a few minutes, and then began a learned explanation of the phenomenon: how these cats had been encircled by a whirlwind, perhaps many hundred miles distant, and brought here and deposited on the deacon's barn by this same whirlwind.

At the close of this scientific explanation, the doctor glared around at the crowd of open-mouthed rustics, ready to annihilate by logical arguments the reckless person who would dare to break a lance with him. I laughed in my sleeve at the lengthy explanation of such a simple thing.

(To be continued.)

ITEMS.

A HEN at New City has been sitting for three weeks on a porcelain nest-egg. Her owner lets her have her own way and is anxiously awaiting the result. He wants to ascertain whether her persistency will come to naught, or whether she will hatch a set of crockery.

"If God," said Lessing, "held all truth shut in His right hand, and in His left nothing but the restless instinct for truth, though with the condition of forever and ever erring, and should say to me—Choose! I would bow reverently to His left hand, and say, Father, give! Pure truth is for Thee alone!"

It might be well to remind our readers that the *Scientific American* will contain illustrations and descriptions of all new inventions in machinery, engraving, chemistry, etc., exhibited at the Centennial, besides containing nearly everything new in animal and plant life. \$3.20 will be well invested in the *Scientific American* for 1876.

A BOSTON firm having recently written to a debtor two or three times, without eliciting any response, sent a letter asking if there was not a little lack of "commercial courtesy" in his neglect to reply. Promptly, by the return mail, came a check for the account and the terse and comprehensive reply: "No lack of commercial courtesy, but a lack of circulating medium here."

A GENTLEMAN in Chicago noticed a pigeon entangled in some string on a tree so that it could not extricate itself. A number of boys were throwing stones at it, but the kind man rebuked them for their cruelty and drove them away. Then he got a ladder and tenderly took the frightened, fluttering little creature in his hand, and the next day he observed that it made one of the best pies he had ever eaten.

"You see, grandma, we perforate an aperture in the apex, and a corresponding aperture in the base; and by applying the egg to the lips and forcibly inhaling the breath, the egg is entirely discharged of its contents." "Bless my soul," cried the old lady, "what improvements they do make. Now, in my young days, we just made a hole in both ends and sucked."

A WESTERN editor, on entering his office and seeing his apprentice boy cutting up some queer caper, called to him:

"Jim, what are you doing on the floor?"

"Why, sir, I have had a shock."

"A shock?"

"Yes, sir."

"What kind of a shock?"

"Why, sir," said the lad, gasping, "one of your subscribers came in during your absence, said he owed for two years' subscription, paid it, and also paid another year in advance."

SCHNEIDER TOMATOES.—Schneider is very fond of tomatoes. Schneider has a friend in the country who raises "garden sass, and sich." Schneider had an invitation to visit his friend last week, and regale himself on his favorite vegetable. His friend Pfeiffer being busy negotiating with a city produce dealer on his arrival, Schneider thought he would take a stroll in the garden, and see some of his favorites in their pristine beauty. We will let him tell the rest of his story in his own language.

"Vell, I valks shust a liddle vwhile roundt, when I sees some of dose dermarters, vot vas so red und nice as I nefer dit see any more, und I dinks I vill put mine self outside about a gouble a tozen, shust to geef me a liddle abberdite vor dinner. So I bulls off von ov der reddest und pest look-in' of dose dermarters und takes pooty good pite ov dot, und vas chewing it oop pooty guick, vhen—by shimony!—I dord I hat a peece of red-hot goals in mine mout, or vas chewing oop dwo or dree bapers of needles; und I velt so pad, already, dot mine eyes vas vool of tears; und I mate vor an 'olt oken bucket,' vot I see hangin' in der vell, as I vas goomin' along.

"Shust den mine vriend Pfeiffer game up und ask me vot mate me veel so pad, und if any of mine vamily vas dead. I dold him dot I vas der only von ov der vamily dot vas pooty sick; und den I ask him vot kind of dermarters dose vas vot I hat shust peen bickin'; und, mine cracious! how dot landsman laughit, und said dot dose vas red beppers dot he vas rasing for bepper-sauce. You pet my life I vas mat. I radder you geef me feefy tollars as to eat some more ov dose bepper-sauce dermarters.—Chas. F. Adams.

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES, IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

The next number of the *Journal* will be issued from Hartford, Conn., and some delay will no doubt occur both in the issue of the *Journal* and in correspondence, for which we crave the indulgence of our patrons.

PLEASE NOTICE CHANGE OF ADDRESS.

ALL editorial and personal correspondence must be sent to
JOS. M. WADE,
Rockville, Conn.

All business correspondence, orders for books, electro-types, etc., must be addressed FANCIERS' JOURNAL,
Hartford, Conn.

THE POULTRY ORGAN

Has ceased its monthly visits for the present; cause, insufficient support. We regret this, although the field is well supplied with poultry journals. Had the times been better, Mr. Day would no doubt have received the support he justly deserved. We feel guilty of neglect in not noticing the *Organ* more, but overwork is our only excuse for this as well as other shortcomings in our editorial department.

A NEAT LITTLE CIRCULAR.

ROBERT J. HOLMES, of Watertown, N. Y., sends us a neat little four-page circular devoted to pure-bred Game fowls and Long-faced or Homing Antwerps, also wooden nest bowls. It is very evident that Mr. Holmes appreciates the value of the weekly *Fanciers' Journal*, as one-fourth of his circular is devoted to it, and for which he has our sincere thanks. All fanciers who desire to make customers for their surplus stock will do well to follow his example.

ILLUSTRATED BOOK OF PIGEONS.

PART 21, just received, containing, as usual, two large colored plates of Trumpeters and Flying Tumblers, as follows: Black, Black-mottled, and White Trumpeters. The Tumblers are Rose-wing or Black-mottled, Red-mottled, and Yellow-mottled. The letter-press describes the Damascenes and Capuchins, English compared with the Scotch Fantail, and concludes with the Trumpeter, giving "Points in Judging" for the same.

MR. JOHN SCHOFIELD, of this city, whose advertisement will be found in our columns, has been a breeder of Hamburgs at least sixty years. Over sixty years ago he was a breeder of Aylesbury ducks. He certainly cannot be classed as a fickle man. One year ago we published his obituary notice, but the old gentleman thought we had better postpone that matter until some indefinite time after the Centennial.

GOOD BREEDS OF POULTRY

ARE now so common around us, and the varieties in this country are to be had so readily, in all the Eastern, Northern, and Western States, in such abundance (as may be discovered by consulting the advertising columns of the *Fanciers' Journal* weekly), that it seems hardly worth while to discuss the question of crossing for the improvement of fowls in the hands of most fanciers at the present day; and yet, scarcely a day passes that we are not appealed to verbally, or by letter, to give our ideas as to "what are the best varieties of chickens to cross for general usefulness and profit?" To the farmers or poulterers who need to make a good market, and raise birds simply for eggs and for fattening, a first cross is just as well with any kind of full-blooded fowl, no doubt, for a term, provided care is taken in the subsequent annual selections of the stock they make for future operations from among that crossing. But we do not favor this practice, as a general rule anyway. If we try any of the popular breeds of the day, now current among us, whether we choose the Asiatics or the lesser-sized birds, we shall find that all well-bred varieties have their peculiar advantages, which, in one way or another, commend them each to the notice of the breeder. Some have great size to recommend them, others will give you more eggs in a season, a third species will mature earlier for roasters or boilers, and others will prove non-sitters, or good mothers for hatching purposes. These for the fancier.

When the farmer or poulterer comes to inquire about what may answer his purpose best, we say again that certain crosses (for eggs and marketing only) may be indulged in, and the greater expense of stocking one's yards with scores or hundreds of purely-bred chickens, of any kind, is avoided by accepting the crosses, or, with a few pure birds at the outset, making the cross to suit his own taste or wishes in this direction.

We believe that purely-bred fowls are the best in any case, but the price of prime stock is still kept so high that farmers and small chicken-raisers cannot supply themselves with the popular leading kinds, in any quantity, without becoming subjected to a heavy tax when they wish to change their stock, and for this reason they content themselves, as yet, with putting in a fresh male bird or two, annually, or adding a trio or half a dozen of the better classes to their flocks, and crossing the latter upon their common or previously half-bred birds. If this plan is found necessary to be adopted for economy's sake, then we can say that in our judgment the best crosses to try are the medium-sized male birds of any variety upon the Brahmas or Asiatic hens. For a cross with half-breeds, or common fowls, the pure Brahma or Cochin cock, of either color, upon the ordinary hen is the best. For a choice of breeds to cross upon Asiatics, or full half-breeds of the larger class of hens, the Dominique, Leghorn, or Spanish cock is valuable. But the first cross produced through any of these experiments will

give you the best specimens. Select these of both sexes and breed them back the second year to the pure-blooded fowls. Then, alternate from year to year, always choosing the best young stock you raise in size, form, and color, and you may keep up very fair lots of poultry for marketing purposes, strictly, at moderate cost for your stock.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—ALBINO SQUIRREL.—Mr. J. C. Long, Jr., of this city, has just received from Mississippi an albino squirrel of the red species, which is remarkably tame. It is the first one of the kind we ever saw. Some two years ago we bought a piebald squirrel of this variety from Mr. Colburn, of Boston. This was very nicely marked, the red color predominating over the white.

—A SPARROW INCIDENT.—A sparrow became ice-bound in a water-spout, in this city, on the 5th of February, and its struggles and scratching attracted the lady of the house and several neighbors, who set to work with a broomstick and beat the spout until its load of ice was all extracted, when the liberated bird flew off as unconcerned as if it had not met with an unusual experience.

—FLOUNDERERS.—Your genial correspondent, E. S. S., asks if the flounder belongs to the *Pleuronectidae*. It does; genus *Platessa*. The common flounder (*Platessa plana*) is the finest of all our flat-fish for the table. The English flounder is the *Pleuronectes flesus*. Both of the above have the eyes on the right side, but the *Platessa oblonga* and the *Platessa stellata* have the eyes on the left. There have been one or two instances where the eyes have been placed one on each side of the head, but they have been considered as merely simple variations from the ordinary law. Is this what E. S. S. means by the eyes of the flounder changing places? If not, will that writer please "rise to explain?"
—HUCON.

—HUCON sincerely thanks his friend, J. M. McCann, for his invitation to spend a few days with him where the pheasants, hares, and squirrels, are plenty—because he has spent much time in, and has ever found

"A pleasure in the pathless woods"
"And a rapture on the lonely shore—"

Though his friend McC. seems to think he has spent too many hours over books. Hucon does not wish to take up our mutual friend the *Fanciers'* pages with a wordy controversy about hares, rabbits, and squirrels. He was merely endeavoring, respectfully, to correct a popular error, and for that purpose quoted what he supposed to be good authority. Since J. M. McCann has given the invitation to pheasant shooting, will he please state where the pheasant is to be found, seeing that all the *Phasianidae* belong to the old world? I presume it is the ruffed Grouse (*Bonasa umbellus*), called "partridge" in New England, and pheasant in the Middle States, that you mention in your kind invitation, friend McCann.

CORRESPONDENCE.

EXECUTIVE COMMITTEE MEETING, A. P. A.

At a meeting of the Executive Committee of the American Poultry Association, convened at Chicago this day, the following members being present: C. A. Sweet, President, J. M. Lambing, Daniel Allen, I. K. Felch, E. L. Lamb, P. Williams, A. C. Williams, J. Y. Bicknell.

The Secretary being absent, on motion, J. Y. Bicknell was appointed Secretary *pro tem*. The following named fanciers made application for membership in the A. P. A., and were duly elected: N. W. Barnes, H. H. Rosa, A. Lowe, E. M. Teal, W. W. Corbett, Chicago, Ill.; W. H. Wood-

ward, Hyde Park, Ill.; Fred. W. Byers, Lena, Ill.; J. T. Comings, Tuscola, Ill.; J. Brown Taylor, Freeport, Ill.; J. W. Clinton, Geo. Butters, Polo, Ill.; F. Richardson, Springfield, Ill.; Thos. Mason, Jacksonville, Ill.; John T. Boyden, J. S. Hilscher, Lincoln, Ill.; B. N. Pierce, Corning, Iowa; Peter Schoen, John Miller, Milwaukee, Wis.

On motion, adjourned.

J. Y. BICKNELL,

CHICAGO, ILL., January 25, 1876.

Secretary *pro tem*.

MR. WADE.

DEAR SIR: Can any of your many readers inform me through your paper if that Silver-penciled cock that was disqualified at the fair held at Doylestown was the same that took the first and special premium at the fair held at Assembly Buildings, in Philadelphia, in December last, and oblige

Yours respectfully,

JAMES TAYLOR.

OAKDALE, February 5, 1876.

THE EXCHANGE COLUMN.

MR. EDITOR:

Your exchange column is the first that I look at in the *Journal*. Some seem to find fault with you if all their exchanges are not satisfactory. No doubt there is much reason for fault finding, but when they find fault with you I think they are barking up the wrong tree. I have made an exchange with a man that is editor or publisher of a poultry paper in New York. The Angora rabbits he sent me were the meanest things I ever saw in the shape of rabbits. One of them died soon after getting here. I have written him, but got no answer, and suppose all I have to do is to grin and bear it.

I think it would be a good plan to have, in connection with your exchange column, a column where any one, by paying twenty-five cents, could give the name of any one they are displeased or pleased with in exchanging.

M. S. CHAPMAN.

CORRECTION.

MR. JOS. M. WADE.

In my report of the National Exhibition, page 50, No. 5, "ten incubators" should read "two artificial incubators."

FEBRUARY 7, 1876.

J. Y. BICKNELL.

SMALL PET DEPARTMENT

AND YOUNG FOLKS' CORNER.

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS,

Philadelphia, for the week ending February 12, 1876.

- 1 Mink (*Putorius vison*). Presented by E. Mason & Son, Philadelphia.
- 1 Great Kangaroo (*Macropus major*). Born in the Garden.
- 1 Crow (*Corvus Americanus*). Presented by Master A. Mallock, Philadelphia.
- 1 Opossum (*Didelphys Virginianus*). Presented by Robert Ferguson, Jr., Merion Square, Pa.
- 1 *Lioness and 2 Whelps (*Felis Leo*). Purchased.
- 1 Rocky Mountain Rat (*Neotoma cinerea*). Presented by Capt. John Evans, bark "Sam Sheppard," Philadelphia.

HUCON.

*This is an extra fine specimen of the lion tribe, and is the mother of the two cubs which have grown up in the Garden, known as Daniel Boone and Simon Kenton—so named on account of their having been born while their mother was on a traveling tour through Kentucky.

(For Fanciers' Journal.)

"ZOO" NOTES.—No. 12.

BY HUON.

ZEBUS AND YAKS.

AMONG the latest arrivals at the Zoo, is a specimen of each of the above bovines, and as they have been seldom seen here, a word or two about them we hope will be acceptable to the readers of *Fanciers'*.

THE ZEBU (*Bos Indicus*).—In the East Indies there exist many singular and distinct species of horned animals, the most remarkable of which is, perhaps, the celebrated Brahminic bull of the family Zebu, sacred to the Hindoos, under their holy protection, and to swear by the "horns" of which is the most binding oath a Brahmin can take. This bull is a heavy, indolent, phlegmatic animal, with pendulous ears, a hump on the shoulders, and a dewlap of solid fat, which never, even under the terrible heat of an Indian sun, is known to melt or perspire. Of this family the beautiful little hump-backed cow, now in the Zoo Carnivora house, is a member.

The home of the Zebu may be in China, Persia, Arabia, India, or along the east coast of Africa, for in all those places it is found. It is only by the Hindoos, however, that it is held sacred, who consider it a sin to kill one, though it does not degrade them to make them work. In the streets of Calcutta, Zebus may be seen at all times, wandering with the greatest liberty, eating the rice, grain, and flour of the storekeeper, without "let or hindrance," as it would be contrary to Hindoo religion, as well as statute law, to prevent the sacred animals from taking food and pleasure wherever they can be found.

The Zebu is a quiet and intelligent animal, and, in its thoroughly domesticated state, does good service to the people of India in various ways. It does not possess much speed, but in harness it draws the plow, or a heavily-laden wagon, with steadiness a great distance; while it will carry a rider Zebu-back fifteen hours in a day at the rate of six miles per hour. At jumping, the Zebu is good. It has been known to clear a five-rail fence to obtain water, and, having satisfied its thirst, to leap back again into its pasture. It is only known in a domesticated state, and happy is it for the animal that it bears a charmed life among the weak and superstitious people, the Hindoos; especially for the bull, as it is forbidden by law to take one of them out of the country. A bull, however, did arrive here in 1861, in spite of the law. Its mother gave birth to it on the passage across the Atlantic, and both were exhibited in Boston in 1861 and 1862, though what became of them eventually, I am unable to say.

THE YAK (*Bison grunniens*).—In Central Asia, and among the mountains of Thibet, the Yak has a home. He is a near relation of the Zebu, and though not held sacred, or in any manner venerated, is capable of quite as high a state of domestication. As the Yak is found only near the line of perpetual snows, nature has provided it with a covering of hair, long, soft, and thick. Strong and sure-footed, the Yak is very valuable to the wandering Tartars, who have domesticated it into a beast of burden, and who pasture it from place to place, according to the pitching of their tents.

Of its hair ropes and tents are made; excellent butter from the milk, which butter is kept good in skins and bladders for a whole year,—(certainly Yak butter would have

pleased Dr. Johnson, who is said to have despised that article unless it was rancid),—and jackets of the skin. The tail, set in a costly handle, is prized throughout India, where it is called a "chowrie,"—as a fly brush,—while the Chinese dye it red and wear it for a hat ornament. In some parts of India these red-tails are carried before certain officers of state, the number of tails indicating the rank of the individual.

The Yak is a good carrier, but he does not like too heavy a load, and when such is the case, he vents his displeasure at it by a most melancholy grunt,—(hence his scientific title, *grunniens*),—which has been known to affect the nerves of unpracticed riders to such an extent that they have dismounted, preferring to perform their journey on foot rather than listen to the doleful and lugubrious chant of the grunting Yak.

(For Fanciers' Journal.)

LONGEVITY IN ANIMALS.

BY JAMES S. BAILEY, M.D.

IN reading the article by Huon (Zoo Notes, No. 8) upon the subject of longevity, I was much interested, as really I am in perusing all the papers from the pen of this talented author. But allow me to add a few well-authenticated facts in reference to the longevity of some of the brute family. The horse, for instance, lives to a much greater age, occasionally, than is supposed. The writer has seen several horses whose ages were over thirty years, which were as active and sprightly as colts. Two of them belonged to a practicing physician, and had been used by him under the saddle for upwards of twenty-five years.

A writer from "the Hub" remarks, "Twenty-nine years ago last spring a horse was brought from Vermont to Boston for sale, being then eleven or twelve years old. Strange as it may appear, that horse is still living, now forty or forty-one years of age. He was purchased at that time by the late Cyrus Reed, of Lexington, and is now owned by his son, John Reed, one mile from the Lexington depot. Notwithstanding his great age, he has been most wonderfully preserved and is able to perform light work, and is often seen on the road working as faithfully as he did a quarter of a century ago."

A correspondent of the New York *Post* writes, that "Mr. Richard Jeffers, the proprietor of a horse-shoeing establishment in West Thirteenth Street, near Fifth Avenue, in this city, owns a farm near Annadale, Staten Island, where he has in his stables a bay gelding which he says he has owned for twenty-five years, and that he bought him from a Staten Island farmer who had owned him twenty years and who says the horse was ten years old when he bought him. Here is a record of fifty-five years, and the horse now, as you stand in front of him, has the appearance of a hale and vigorous animal, with bright, intelligent eyes and a prospect of many years of life and usefulness. Mr. Jeffers drives him before an ordinary road-wagon to and from the Annadale Station of the Staten Island Railroad, at a good trot, and the writer has seen the horse and ridden behind him within the last two months. If the account be correct, this horse was venerable in years before the Lexington 'oldest horse in the world' was foaled."

A valued friend—the Rev. Father Noethen—has in his possession a ring-neck dove, which he has owned for nineteen years, and which up to this writing is wonderfully

prolific and as sprightly as when young. He also states that he has known one specimen live to the age of thirty years.

The domestic goose sometimes attains very great age. Some time ago a statement was made in a paper that geese frequently live to be very old, and at the same time a record was given of one who had attained the age of one hundred and twenty-eight years.

Mrs. Colrose now owns a canary which she has had in her possession thirteen years. It was an old bird when it flew from some cage in the vicinity in her window. She has another, which she reared, which has passed its twenty-first year, and from appearances may live much longer.

(For Fanciers' Journal.)

PHEASANTS.

THERE are two families of birds in the Zoological Garden, Philadelphia, which, for their graceful forms and gorgeous plumage, receive special attention and consequent admiration, namely: The Golden Pheasant (*Thaumalia picta*) and the Silver Pheasant (*Gallopholis nyctemerus*). The brilliancy and variety of the plumage of the golden pheasant is beyond description. The silver pheasant, while not so graceful in shape, or so brilliant in color, is still a very beautiful bird and a very powerful one, being quite a match for the best game chicken that ever wore a spur or fought a battle without one. Both these birds are natives of China, where they form a common article of food.

Of pheasants proper, there is quite a large family, the origin of which was somewhere in Asia Minor. It has been introduced in most European countries, where it has been thoroughly acclimatized. Its beautiful plumage, graceful shape, and delicate flesh has, in all places, made it a great favorite. Strange to say that America does not produce a single one, though we often hear of "pheasant shooting" in the Middle and Northern States; it is a kind of partridge, however, that is hunted.

The common pheasant of Europe (*Phasianus colchicus*), introduced there from the east coast of the Black Sea, is thought to be the only pheasant which could be turned to good account in America, and that would thrive only in the temperate regions. The ring-necked pheasant (*Phasianus torquatus*) is subject to worms in the neck, throat, and windpipe, which chokes it to death if not properly attended to.

The most magnificent, in strange, varied, and brilliant colors, of all the pheasants, is the Argus (*Argus giganteus*), so called on account of the eye-like spots on the secondary wing feathers, and which reminds one of the ill-fated Argus of heathen mythology, who had eyes all over his body, only two of which ever slept at one time. Ere long the Zoo Society intend to place specimens of the most interesting of these birds among the other rare collections in the garden, when we shall have a good chance to study them.

HUON.

(For Fanciers' Journal.)

A FROG STORY.

"A FISH story never loses anything by being told often," but that is not the case with a frog story. Brother Wade, I am something upon a "fish," even if I must be almost drowned sometimes, or get an arm broken. I love it, and who shall dare to chide me for going a fishing?

Judge W. and your humble servant a few years ago

armed themselves with a long bamboo rod and a short line, to one end of which were attached four pike hooks tied by their shafts, the barbs extending out as the four points of the compass, a sinker tied about a foot above the hooks, hidden by a red flannel butterfly.

We marched forth where frogs most do congregate, and in a few hours we marched home with one hundred and forty-three frogs that would have made any epicure leap for joy. There is true joy in throwing the speckled trout from the brook; in trolling the pike across a creek; in lifting the yellow bass from the river; but no sport with rod and line equals that of watching for frogs to bite.

Of course, you must first see your frog, then quietly "drop him a line" with hooks and bait arranged as I have described. Allow it to come within a foot or two of his august presence, and slowly oscillate it in front of his optics. He will swell up to the full extent of his ability, his eyes will sparkle like diamonds (not the gem in the head of the toad), he will give a sharp—what shall I call it?—bark, I suppose, jump at the flannel butterfly, and fall upon the hooks. This is genuine sport, and your game is not riddled with shot and most frequently lost. The advantage of this system is, that those who cannot draw a bead along a shooting iron may have their share of this most delicious flesh. I would like to show you how nice it is to bag a few score of them when they are ripe again. SAM.

MRS. MAXWELL'S MUSEUM.

MRS. MAXWELL'S museum, formerly of Boulder, has become one of the institutions of Denver, and is now open to the public, with its choice collection of birds, rare geological specimens and Rocky Mountain animals, arranged with an eye to the artistic effect, and so true to nature. At the farther end of the room are caves in miniature, a good representation of the Rocky Mountains, with deer and antelope on the run, bears in ambush, and smaller animals *ad infinitum*. No one could show more taste and skill in arranging an institution of this kind than Mrs. Maxwell, who should have the patronage and support of the public.—*Colorado Farmer*.

WOULDN'T BE EATEN.

It is a common, and, apparently, a plausible opinion, that many small animals when brought face to face with a snake, are so overcome with terror, or dazed by its cold, glittering eye, as to lose all power of resistance, and fall an easy prey to the destroyer. There are exceptions to this general rule, as the following incident indicates:

A rat was destined, the other day, as breakfast for a serpent, in the Jardin des Plantes, at Paris, and was with this purpose introduced into the cage of the reptile. It was unquestionably the rat's duty, on being brought face to face with the serpent, to have become fascinated, and to have obeyed the instinct which is supposed to deliver "such small deer" an unresisting prey to the destroyer. Far from fulfilling the duty traditionally incumbent upon him, this daring innovator flew at the throat of the snake and bit it so severely as to produce instant death, and a loss to the gardeners of about two thousand francs' worth of serpent. This unexpected result has, however, had the good effect of determining the managers of the Jardin des Plantes to feed their reptiles on dead animals only, the "fascination theory" having proved an utter failure.

A LITTLE girl, having heard her father call her younger brother "a little shaver," and desiring to use the expression, could come no nearer to it than "O, you little barber shop!"

A LITTLE boy once brought me a wild bird for a present. I took the little brown beauty in my hand and asked, "What kind of a bird is this?" "A black bird," said he. I said, "I thought the black birds were black, but this is brown." "That's because this one is a girl," said the boy.

I USED to have two little chickens, or, indeed a whole brood of them; but the others were claimed by my brothers and sisters, so that only "Silver" and "Goosy" were considered really mine. Their mother died when they were young, and we children took them under our care and made pets of them; and famous pets they were. They followed us about, hopped up on our knees, and climbed on our shoulders and heads. When they grew to be hens, they liked still to be pets. Old "Goosy" undertook once to have some chicks of her own, and, before we knew it, had a great store of eggs in her nest—as many as thirty or forty. She used to let all the other hens come to her nest, and the more they laid the more she tried to spread.

The funniest part of our experience with the pets was, that one or two of them did not like nests like common hens, but would steal into the house; and, hopping up into the girls' laps, would make nests of their aprons, and leave a warm, white egg in them, talking to themselves, and making low noises at first, till their feat had been accomplished, when they would go off with a loud cackle. This went on till one day an aspiring hen undertook to use the baby's head, as it lay in the cradle, for a nest-egg, whereupon this episode in a hen's life was closed.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"TO EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstance be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

ELIJAH LOY, Box 33, East Meriden, Conn., will exchange one good Rifle—for a pair of Ferrets or others. Also, twenty-five pairs of White Mice, and two splendid Nickel-plated Revolvers—for Pouters or White Fantails, Lop Rabbits, or others.

FANCIER, French Hay, Hanover Co., Va., will exchange first-class Light Brahmas, White Leghorns, or B. B. Red Games—for No. 1 Dark Brahma hens or pullets.

FANCIER, French Hay, Virginia, will exchange a beautiful Colt's Pistol (seven shooter, new)—for a No. 1 trio Rouen Ducks. Must be large and fine birds.

LESTER G. BIRDSEY, Meriden, Conn., will exchange a pair of very fine B. B. Red Game Bantams—for a pair of Lop-eared Rabbits, or a pair of Fantails, any color, and one Smooth-head White Fan hen.

A. D. BINKER, M.D., Miller's Eddy, Pa., will exchange some superior W. F. B. Spanish cockerels—for pullets, Light or Dark Brahmas, Black or White Leghorns, or any good layers.

W. J. S., Clingerland, N. Y., will exchange his whole flock of White Leghorns and Houdans (fifteen pullets and four cockerels)—for Silver-spangled Hamburg, Plymouth Rock, or Dark Brahma pullets. Must be choice birds, as I keep none other.

W. H. JEFFRIES, Irwin Station, Pa., has two Ferrets (male and female), five months old, to exchange for a good trio of Plymouth Rocks, or three Gold-laced Bantam hens or pullets, to weigh not over twenty ounces.

FRANKLIN KELLER & BRO., Box 532, Newark, O., will exchange one White Cochon and one Light Brahma cockerel (A-No.-1 birds)—for one pair young Rouen Ducks. Ducks must be good.

W. H. JEFFRIES, Irwin Station, Pa., will exchange one Blue Antwerp cock (imported) and a pair of Tumblers—for a first-class Black Jacobin cock.

GEO. W. SCHEFFER, No. 21 South Second St., Harrisburg, Pa., will exchange Golden Sebright hens, one Houdan cock, one Golden-spangled Pheasant hen, and Tumbler Pigeons—for Angora Rabbits or Fancy Pigeons. What offers? Speak quick.

BOX 474, Orange, N. J., has to exchange Partridge Cochins, White Leghorns, Houdans, or Dark Brahmas—for a good, light single harness.

J. G. MCKEEN, South Acworth, N. H., will exchange a good E. flat Cornet, for a B. flat. Eggs from five varieties of fowls, and Seed Potatoes—for Fancy Pigeons. Houdans—for Wright's new Poultry Book. Stock good.

T. H. SPANN, Indianapolis, Ind., has to exchange one trio Silver-spangled Hamburgs, choice birds—for a trio of White Leghorns. Must be No. 1.

WILL. HAWLY, P. O. Box 5, Hornellsville, N. Y., will exchange one Nickel-plated Pistol, cost \$4; one pair of Games (the cock is Earl Derby and the hen Black-red)—for L. B. hens or pullets.

J. A. LAUDENSLAGER, Pillow, Dauphin Co., Pa., will exchange one Plymouth Rock cock (will be two years old next May)—for Black Cochon cockerel, or White Cochon hen or pullet (each party to prepare express charges), or others.

P. JASON KELLER, Box 545, Newark, O., will exchange four Rabbit Hutches; each hutch contains four separate boxes, each box and bed-room is 20 x 28 x 48 inches, all wire fronts. The four hutches will hold sixteen rabbits, separately, cost \$32—for anything that will not eat. Make offers.

JAMES Y. BORDEN, Box 306 Bridgeton, N. J., has for exchange Silver Gray (Dutch) and Angora Rabbits—for pure White or Black Guinea Pigs. Also, will exchange Rabbits for Golden-Laced Sebright Bantams. Write soon and make offers.

W. C. EATON, Newark, N. J., will exchange Partridge Cochins and Light Brahmas ('74 and '75 birds), and a Graves' Incubator—for Plymouth Rock eggs. Will also make Photographs for P. R. eggs.

CHAS. E. LONG, Lancaster, Pa., will exchange Fancy Pigeons, or one pair Buff Cochon Fowls (Herstine stock)—for one good Pekin Duck ('74 or '75 hatch). Give age and weight of the duck.

WM. BELLMAN, Harrisburg, Pa., has Black Breasted Red Game stag, A-No.-1 (Spring '75)—to exchange for Light Brahma cockerel or hen, or Brown Leghorn cockerel, same age. Good stock wanted.

OLD BREDER, Box 44, New Haven, Conn., will exchange one pair of Light Brahmas ('75 hatch), fine birds—for a good copy of Webster's Illustrated Unabridged Dictionary, well bound.

E. J. FRY, Tamqua, Pa., will exchange Jersey Bull Calf, solid lemon color (calved February 8, 1876, from stock imported from "Island of Jersey") via Liverpool and Philadelphia, in ship Tonawanda, September, 1871—for Chester White or Berkshire Pigs, or Plymouth Rock chickens. Best stock offered, same wanted.

THOS. PEAX, 91 Jacob Street, Louisville, Ky., will exchange 32 volumes Scientific American, Matthew Henry's Commentaries, five vols., edition of 1818, German Art Treasures, Turkey morocco, very fine—for fine poultry, poultry or agricultural books, and good Microscope. Write.

OLIVER D. SCHOCK, Hamburg, Berks County, Pa., will exchange Almond Tumbler cocks, one Blue Swallow cock, two Black Swallow hens, one pair Dun Carriers, one Black Turbit cock—for one Black Turbit hen, Black, Blue and White Jacobins (pearl eyes), or others.

OLIVER D. SCHOCK, Hamburg, Berks County, Pa., will exchange one trio Black Red Game chicks, one trio S. S. Hamburg chicks, one trio Partridge Cochins chicks, one trio Muscovy Ducks—for White, Blue or Black Jacobins (pearl eyes), Black, White or Yellow Owls, Golden Laced Sebrights, or what offers in Pigeons.

FANCIER, Box 314, Worcester, Mass., will exchange three Light Brahmas (Felsch strain), two pair Brown Leghorn hens (Wheeler's strain), also, fine White Fantail Pigeons—for good lined Robe or other horse furnishing goods, Cutlery, jewelry, or other articles.

F. M. HERRON, Indianapolis, Ind., will exchange one pair each Black, Red, Yellow, and Blue-headed Tumblers; two Black Tumblers; one White Trumpeter and one Blue Pouter Cock; one pair each White Trumpeters, Black Barbs, and White Pouters; also, G. P. Hamburg chicks—for Red Jacobin hen, Black Hamburg cockerel, Brown Leghorns, &c. What offers? ii

JNO. F. HOUSER, Tamqua, Pa., has for exchange Pea fowls (three males and one female), hatched 1875. Also, one pair pure White Angora Rabbits, two trio Golden and one trio Silver Sebright Bantams (first-premium stock), Exhibition Coops, Rabbit Hutches, Squirrel Cages, Parrot Cages, White Mice, White Mice Cage, and Fancy Pigeons. What offers? ii

T. A. WINFIELD, Hubbard, Ohio, has for exchange Dark Brahmas, G. P. Hamburgs, Black-red Games, from my imported stock—for Cooper's Game Fowl, Tegetmeier's or Wright's Poultry Books, or Fancy Pigeons.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

HARTFORD, FEBRUARY 24, 1876.

No. 8.

TAKE THE PAPERS.

BY N. P. WILLIS.

Why don't you take the papers?
They're the light of my delight;
Except about election time,
And then I read for spite.

Subscribe! you cannot lose a cent;
Why should you be afraid?
For cash thus paid is money lent
At interest four-fold paid.

Go, then, and take the papers,
And pay to-day, nor pay delay,
And my word for it is inferred,
You'll live until you're gray.

An old neighbor of mine,
While dying of a cough,
Desired to hear the latest news
While he was going off.

I took the paper and I read
Of some new pills in force;
He bought a box—and is he dead?
No—hearty as a horse.

I know two men, as much alike
As e'er you saw two stumps;
And no phrenologist could find
A difference in their bumps.

One takes the papers, and his life
Is happier than a king's;
His children all can read and write,
And talk of men and things.

The other took no paper, and,
While strolling through the wood,
A tree fell down and broke his crown
And killed him—very good."

Had he been reading of the news,
At home like neighbor Jim,
I'll bet a cent that accident
Would not have happened him.

Why don't you take the papers?
Not from the printer's sneak,
Because you borrow from his boy
A paper every week.

For he who takes the paper,
And pays his bills when due,
Can live in peace with God and man,
And with the printer too.

(For Fanciers' Journal.)

THE AQUARIUM.—NO. 2.

The principal of the Aquarium is so to adjust the relations between the animal and vegetable life that the one will sustain the other. A knowledge of these relations is necessary to prevent a violation of the laws governing them. Confine human beings in an air-tight apartment, and when they have breathed the air sufficiently to have exhausted the oxygen from it they will suffocate. The result will be the same to the inhabitants of the water under the same circumstances, when the oxygen is exhausted from the water in the tank, the fish sustain life only by keeping their noses at the surface and obtaining a fresh supply from the atmosphere, but would soon die if not relieved. Now vegetation is introduced into the tank for the purpose of renewing the oxygen absorbed by the fish and of absorbing that which is exhaled by the fish—Car-

bonic acid gas. Fish absorb oxygen and exhale carbonic acid gas—plants in growing absorb carbonic acid gas and exhale or liberate oxygen—each furnishing the element vital to the existence of the other. To have an aquarium then we must have growing vegetation. To simply take a vessel and place in it sand and pebbles, aquatic plants and fish, at one and the same time and leave the rest to chance, is the way not to have an aquarium, and to become finally disgusted with it and to pronounce it an impossibility. But to go about it with a proper appreciation of the principles of the aquarium and to adhere to them strictly, it is simple and easy. The great requisite is patience. An aquarium cannot be made in a day. If both fish and plants are introduced into the tank at one time, the attempt will fail disastrously, for the reason that before the plants are rooted and growing and giving off oxygen, that with which the water was charged on its introduction into the tank will have been exhausted, and the condition of the water will destroy both plants and fish. Although the plants absorb and live on carbonic acid gas, they will die unless the water is in fit condition for the fish—that is with a proper proportion of oxygen. To stock an aquarium properly then we must begin with vegetation alone. As to the time required to prepare the aquarium for the introduction of the fish, there can be no rule, as it depends altogether on the growth of the plants, which again is determined by surrounding conditions—such as light and temperature. I should say however not less than a week or ten days under the most favorable circumstances, but this must be determined by the person in charge of the aquarium.

The aquarium should be placed at a window—an eastern or southern exposure—is preferable. In the winter they need all the sunshine they can get, in the summer they are easily protected from the extreme heat of the mid-day sun by a screen of blue paper or other material, but it is absolutely necessary that they have plenty of light, otherwise the plants will die or their growth will be of an unhealthy, consumptive sort accompanied by sufficient decay to neutralize all beneficial effects. As to temperature the lower the better. When water is cold it will hold more oxygen than when warm, and the respiration of fish is not so rapid, consequently there is a gain both in holding a greater supply and in reducing exhaustion. Aquatic plants which are perennial, of which the *Msriophyllums* are an example, grow as rapidly in winter as in summer. Many plants, such as the *Callitriche Verna*, will only grow in very cold water and are most beautiful at this time of the year.

The greatest enemy of the aquarium is the hot dry atmosphere of the modern dwelling heated as it is by hot, or more properly burnt air. Water is a great absorbent of impurities, and in such an atmosphere the management of the aquarium becomes exceedingly difficult, except with a very limited number of fish. I advocate under such circumstances, where possible, a tight-fitting cover of glass, as it will prevent the absorption of impurities from the atmosphere and retains between it and the water what oxygen is given off by the plants in excess of what the water will hold so that there is always immediately above the water a per-

fectly pure atmosphere. I have tried this plan with perfect success with the beautiful Bell Glass Aquarium now growing so popular—with the tank it is more difficult to have a tight-fitting cover as they are generally constructed.

(For *Fanciers' Journal*.)

HERÉDITÉ.

The question of *hérédité* is becoming a very absorbing one. Just now in its history we seem to be passing through the period of twilight, towards the splendor of the sunrise. Masses of information are being accumulated around the hypothesis thrown into form by Darwin, and in the future much that to us is obscure will be as plain as daylight to the coming generations. Then some great mind will arise and analyzing the information that the workers of this era will heap together, will abstract the true and give the world a formula by which a producer will be able to supply any development of nature that may, within the pale of reason, be desired.

That mind will belong to an American. It may be a century before it appears, but the wave of knowledge and power starting from the comprehensive pen of Comte, refined upon and simplified by Darwin and Spencer, and gathering force from the researches of Huxley, Tyndall, and hosts of others, will roll onward and upward until at the height of our national and intellectual prosperity, the questions that now are received by many with doubt will be solved and used as foundation stones, to build upon for future generations. That this great work will be accomplished by Americans is very evident to any accustomed to study the evidences and necessities of progress. The older nations are conservative, anything that is new or radical is to them mischievous, and as such must be opposed. The temper of their minds is towards inertia—that of the mind of America is observant, competitive, and aggressive. An American lives longer in the first thirty years of his life, than does any individual of any other nationality in a lifetime. He will see more in ten minutes than a foreigner in a day, and why? Because in this country of competition, when the struggle for existence is active, unpitiful, and eliminative, the wits of the individual are sharpened to the acutest degree, there is no time lost over the luxuries and accomplishments of life, naught is of use that cannot be handled at once and to the purpose. The youth no sooner enters the arena of life than he rids himself of his collegiate lumber, steps backward a few years, and begins by the side of the newsboy in competition for knowledge and power, and the probabilities are that the newsboy, from the rude experimental training of his mind, (excluding everything not useful and available,) will win in the race.

The labors of those grand minds, Darwin, Spencer, Huxley, etc., are better known to our ordinary mass of intellect than they are to the selected few of their own country. Throughout the breadth of our land, questions are discussed as common topics of conversa-

tion and experimental experience, that are dimly looked at or put aside by most English writers, with the remark that American writers are unreliable, etc., etc.—and then they proceed to furnish up labored editorials upon subjects utterly useless to their readers, when by reaching out their hands they could gather at their doors the thoughts and facts that have been sent to America for publishers and admirers. Into our literature a vast deal that is uncertain has crept, but it has not been without its uses. It has made us skeptical, which is the necessary starting point of knowledge. A true American accepts no man's diction. He must see and prove the facts, and when he does that and satisfies himself that what he has done is a link of a chain, each link of which is but a repetition in a higher or lower degree of what he has done to accept the chain or hypothesis, and passes on without add to something else. I have so satisfied myself with regard to the doctrine of evolution, but shall not attempt to satisfy anyone else, as that is a subject which each mind must investigate for itself, there is one thing however upon which I wish to give in my experience, hoping it may act as a suggestion to start others whose opportunities are greater than mine to experiment. *Are accidents hereditary?* I include in this, artificial as well as unavoidable accidents. The experience I have had (which is but of one individual) compels me to answer yes. Then immediately arises the opposite, why is not an amputated limb or cock's comb impressed upon the offspring? To which I answer, I believe they are. Not of course to the degree that ignorance of physiology would demand, but to that degree which would satisfy any student of natural science, that by experiment extended over a period of time a race of limbless or combless individuals would be produced. In this as in all things else, the poet's remark is true "The mills of God grind slowly."

Upon the removal of a limb, the system proceeds to accommodate itself to its circumstances, and the longer the individual exists, the more certainly do the minor (nervous, muscular, etc.,) systems become impressed with the new conditions of the general system. If it is a leg amputated at the thigh, and the person uses one crutch, the muscles of the shoulder of that side increase in volume, the spine becomes curved, while the leg upon the opposite side also increases in size but joins the pelvis at a different angle from what it would did the other leg remain to support the body. It takes this acquired condition a long time to impress itself upon the secretion of the reproduction organs, but that it does so, is just as certain to my mind as is the parallel illustration of near sighted people reproducing that misfortune, until at last the progeny is blind. In the first case, 'tis difficult to marry two or more persons with amputated limbs so that the impress of the accident is held almost in obedience by the perfect form of the person wedded, but in the latter case, there is hardly an individual among us but can point to some hereditarily short sighted person. This I know from observation, that in a case where amputation of the right limb was the father's accident, that his child showed a smaller right leg than the left, a thing contrary to the common rule that the right side is the most strongly developed. The mother was a strong, well developed woman. My grandparents, as was my mother, were far sighted persons, from close application my father acquired the accident of near sightedness, it impressed itself upon two children, and in myself has steadily increased since my boyhood. In chicken's combs I noticed particularly the rose combed counterfeit games. Bred in and in, the combs of the stags were cut, and notwithstanding that the hens were full combed, thereby counteracting in part the trimming influence, the combs became smaller each year. In the winter of 1863, I exposed to the cold a pair of young pigeons, producing in them the accident of small size, it was reproduced in their young, continuing that, after several years I obtained birds so small and delicate that I wearied of trying to raise their young. A young speckled flying tumbler

was exposed to the cold and thereby stunted in its growth, though afterwards matched with a large coarse bird its young were very small.

One of my healthy rabbits was stunned by a blow on the head. It was afterward subject to convulsions as were its future progeny. One rabbit inoculated with tuberculous matter recovered but produced a family of consumptives. A black and tan bitch lined accidentally by a yellow cur, invariably afterwards produced a yellow pup in her litters, very much to my disgust. Such accidents were evidently known to the ancients or why should it be set down in the bible:

"And it came to pass whensoever the stronger cattle did conceive, that Jacob laid the rods before the eyes of the cattle in the gutters that they might conceive among the rods." "But when the cattle were feeble, he put them not in, so that the feeble were Laban's and the stronger Jacob's." I take it Jacob was a skilful breeder as well as a sharp practitioner.

Of the deformities before birth I shall say but little, as each person knows of some such unfortunate cases. Six fingers have often been reproduced, humped back chickens appear from healthy parents but impress their deformity upon their own young, so also of crossed beaks and other malformations. Any one who wishes to try a simple yet convincing experiment can choose from their yard, a sport, that is an individual with a deformity of some kind, either in form or feature, and by breeding it with another, afterwards matching it to its young, he can fix the deformity and satisfy himself of the possibility of producing almost anything that may be demanded. Any change of form or feather that appears accidentally in a sport, is much easier fixed and held than where one has to experiment until he produces a sport, for instead if there were no such things as white pigeons with black tails and they were desired, the way to get them would be by judicious matching of white and black birds until some one or more white birds with black on or near the tails should appear as stock to commence, if, however, a sport could be found, white with black on or near the tail the labor would be less, because in an accident of nature's the tendency for like to produce like is stronger than where a sport is produced through artifice. Of course the variations are at first scarcely noticeable. No man of sense would expect an adherent of the evolution theory, to breed a chicken from a pigeon by one experiment or a hundred experiments, nor would he expect you to produce a barb from a pair of commons in a day as some seem to think should be done to prove the position. No, if he hath eyes to see, and mind to understand, let him take the first sport he can find (as did the producer of the otter breed of sheep,) and experiment until he fixes the peculiarity of his sport in a strain, and then he will understand and believe the hypothesis of variation and selection with a surety that nothing short of an earthquake can shake, and until he does so the writings of an archangel will not give him satisfaction unless indeed he can look about him and see the variations that appear among different strains of the varieties of chickens, dogs, pigeons, cattle, horses, etc., and allow his observation alone to satisfy him.

BALTIMORE, MD.

(For Fanciers' Journal.)

THE BULLETIN AND OUR STANDARD.

From articles in Jan. number of the *Bulletin*, we trust that we may be allowed to surmise that there is a slight unpleasantness between the editor, thereof, and some person or persons connected with the *Standard*. Once we consulted a learned lawyer as to whether we were legally correct on a position we had taken. After stating the case fairly, he asked, "What is your idea of the way the law should read on this matter?" We replied that "common sense ought to conclude that the law should be so and so,

but we knew nothing about law." He replied, "the law is common sense, and nothing else, in most cases, and if this latter ingredient is more commonly used in business affairs, such matters as these, in nine cases out of ten, need not be referred to an attorney." Now the *Standard* is *Our Law*. Let he who will, "kick against the pricks," and the question is, shall common sense be used in applying it. The judge at the Brooklyn show says, "No!" and on his argument, a Brahma with five toes, three legs, or two heads, would not be disqualified, because the *Standard* does not refer to every possible feature in connection with Brahmans. The editor of the *Bulletin* says "No!" and stating substantially that "the outer toes being well feathered to the ends thereof" ("language so plain that any wayfaring man, tho' a fool, need not err therein,") means, or may mean, feathers originating on the outer toe-nail. Mr. Judge and Mr. Editor! The *Standard* was not made principally for the uses of judges or newspaper men. The judges generally appear at the show with a "bran new" *Standard*, and thus equipped, are ready to judge "anything, gentlemen, of the Ex. Com.," then out comes the *Standard*, from their coat-tail pocket, which they proceed to study, seemingly as closely, as they would a wealthy relations last will and testament. The inevitable sorehead is sometimes appeased with the remark, "*Standard* is not clear, or should be so and so," then down goes the *Standard* into the coat-tail pocket, not to be resurrected until the invaluable services are called into requisition at some other show. The *Breeders'* and *Fanciers'* are the persons substantially who buy, pay for, and use the *Standard*. Go to their homes and you shall find thousands upon thousands of these men, who keep a copy of this book where they can readily lay hands on it. Ask them not which are their favorites. *Examine their Standard*, and you shall find a few well-worn, and much thumbed pages, which not only tell the tale of their specialties, but how they are breeding them. Is it not enough for their purposes, for the *Standard* to say what a fowl "shall be," and give them a volume for a dollar, which they can afford to buy, and explicit enough for all practical purposes? or should a *Standard* state in every particular, what a fowl should not be, making a cumbersome volume, so expensive that not one fancier in fifty could afford the cost?

YOUNG BREEDER.

(For Fanciers' Journal.)

NATIONAL POULTRY ASSOCIATION.

FRIEND WADE:

I have been to Chicago, and Chicago is ahead—think of it, 2064 entries of fowls, dogs, and pigeons, and grand specimen, too, the flower of the country. But I do not intend in this article, to mention any particular birds nor fanciers, neither do I mean to give a description of the various classes, as they were represented, but simply glance at the whole as a whole, and leave detail to some future time, or an abler pen. First, then, let me say, I think our Western brethren "*done themselves proud*," in this, their first grand show of the National Association, or rather, I should say, Continental, as our brethren from her Majesty's dominion were there in force, and carried off a goodly number of the premiums, too, so National, I think, scarcely covers the ground. But no matter, what's in a name. Any way it was a grand turn-out of grand fowls and dogs, and Brother Lamb, and Willard, who are a host in themselves, left nothing undone that could make it pleasant and agreeable to exhibitors and guests. There are many things to contend with, in the arrangement and management of an exhibition of such magnitude, and even if some of our fanciers, with more experience in the Poultry-Show business, could have suggested some improvements, I still think there was but little chance to complain on the part of any one, and exhibitors went away well pleased with the treatment they

received at the hands of the National and its officers. The Judges, too, of all departments, were selected for their known ability and familiarity with the species they were called upon to judge, and used their best efforts to do equal justice to all, and with a very few exceptions indeed, I think the best birds won. But it was no easy matter to decide which were the best, in some of the classes. Nearly three hundred entries of Light Brahmas, and almost as many B. B. R. Games. In fact, competition was very strong in all classes, and those who carried off the prizes have reason to congratulate themselves on their success, and can feel that their birds deserved all they got, and got all they deserved.

In the dog department was to be found almost anything in the dog kind, from the St. Bernard, Newfoundland, and Russian Blood Hound, as large as a two-year old cow, to the miniature toy terrier of a few ounces, making a contrast that was simply ludicrous, in a sense. But what a feast for the eye of the lover of field sport, to see the host of imported and native bred, English, Irish, and Gordon setters, and a host of pointers, "too numerous to mention," all looking as though they had rather be charging on Prairie hen, or quail, than lying in the show box for the curious public to stare at. When I say the dog show was a *grand success*, I am saying all I need say for it, and only repeat what the thousands who daily and nightly came and went, said, feeling that they had seen but a part, and came again, bringing their friends with them. Chicago, and the west know how to patronize such entertainments—think of *eight thousand* people attending a poultry and dog show, in a single day. I am sure the officers of the National feel that their efforts have been appreciated, and will be encouraged to hold a second exhibition next winter, which I understand they have decided to do in February, 1877, though I am not officially informed of the time. At another time I may tell you of the fanciers I saw, and the fowls they exhibited, if some one else, better able to do it, does not relieve me of the task.

JAMES M. LAMBING.

Parkes, Jan. 31, 1876.

(For Fanciers' Journal.)

TO ALL INTERESTED.

FRIEND WADE:

As your correspondent in No. 6, "hit the nail on the head," as to the Lice question, I should like to assist him in "driving it home." After an experience of twenty years with poultry and pigeons, I have found their *greatest enemy to be lice*, not excepting roup, cholera, gaps, or any other kindred disease. In the majority of cases the latter evils are brought on by the fowl or bird being reduced by the former. We all know that the best safeguard against disease in our poultry is to keep them always in *proper condition*, vigorous and full blooded. All the medicines, and tonics in the world will not do this when there is a constant drain on their life blood. How will we rid the coop and fowls of these pests, you ask. Ah, here is the rub! Notwithstanding the assertions of many fanciers, I know all the whitewash, lime, and sulphur you can put in your coop *will not kill* them, unless you set fire to the sulphur. Lime is good enough in its place, and should be in every coop; but if you think, by whitewashing and dusting with lime, you rid your coop and fowls of vermin, you are very much mistaken. By so doing, it is impossible to reach the places where they hide. Do your best, then knock off a board and examine for yourself. Whitewash by all means, but don't do it and then rest in the idea that you have killed all the lice. They will breed under it when it begins to dry and scale off like the bugs under the bark of a tree. *Fact*. Coal oil is another remedy. It will kill them if you can put in on them, but you will find yourself like the Irishman and the flea—you must find them first! all of them. Sulphur is another

remedy, and how are you going to get that into all the cracks, crevices, sides and roof of your house? Put it into biddy's dust bath and you will never get her to take the second one in that place. Then, again, if your coop is infested your *fowls must be*. On them you *should never use* lime, coal oil, sulphur, or tobacco, any sooner than you would whitewash them. In fact, the latter would do the least harm. They may be persons who use these ingredients on their fowls, but they are not the quality we buy in this part of the country. My experience is that I killed the fowls and the lice lived to starve to death. Try a bath of either, yourself, if you think you are *prepared to go*. Put into a nest enough to keep off or kill the lice of either the lime or sulphur, and you will injure your chicks, if the poor hen is fortunate to hatch any. She will certainly *not turn her eggs* if she is obliged to take a whiff of it into her nostrils every time she attempts it. A little watching will soon convince you of this. Not only this, it has killed many a chick, and you have wondered what did it. To be born in a lime or sulphur bath is no joke, not even to a chicken. I have had a whole brood (and it has been the experience of others) totally blinded by it, and others put back weeks in their growth. How many have poured *coal oil* on a valuable hen to kill the lice, and by so doing *anoint her for her burial*? How many for the same reason have given their fowls a *lime dusting*, and in a few days lined the floor of their coop with a coat of feathers? *Tobacco dust*, sure thing on lice, but a surer thing to drive your fowls frantic; and if they cannot find a cool dust bath immediately they suffer. If they do they only rid themselves to return to the infested coop to get another cargo. Again fowls *will not, cannot plume themselves* when their feathers are full of lime, sulphur, or tobacco. And the effect is soon apparent. You may do *all this*, and if your fowls live through it, you may pride yourself that they are at least free from vermin. Look and see! Take your best cockerel, handle and pot him, then be obliged to *rub the back of your neck*, and *ponder over the matter*. Yes, and remember above all, that until your fowls are *entirely free* from lice, they are in no condition for breeding. It is *simply impossible* to get healthy chicks for such fowls. Remember, also, that all the lime, sulphur, and tobacco you can use unless you injure your fowls, will not accomplish the purpose, viz: *ridding your coop of vermin and keeping it so*. In my experience, I have found but one way. There may be others and no doubt there are. But this I know will "*clean them out*," and if followed up now and then will keep them out.

First take your fowls, and if covered with the varmints, you must *wash them*. Do it in tepid water and a little soap. Wipe dry and then take *lard or lard oil* and oil them thoroughly under the wings, on the head, and at the root of the tail. This will keep them from taking cold, also kill any lice that may be left. The fowls had better be put in a warm place and thoroughly dry before this oiling is done. If you do not wash them, do the oiling. Now go for your Coop. Loosen all boards that you can, inside. Take out and burn the old nests. Then close all doors and crevices, on the outside. Take a hot pan or iron pot, place it in the center of the coop and pour into it at least a pound of sulphur. Be careful not to inhale the fumes. Make yourself scarce, closing all doors after you closely. Let the lice enjoy the atmosphere for at least two hours; they all will be past troubling your fowls by that time. Then air your coop, put in fresh nesting, and your chicks will rest in peace. In a day or two you will have a fresh invoice from the nits left by the lice. Give them a dose—after which you will have no trouble. Watch your fowls closely and on the first "appearance of evil" give them the sulphur fume.

You will soon see that you have accomplished wonders. Your pets will show it, and in looks and condition be far ahead of what they have been. Use your tonics now, it will assist in "building up." When in proper condition what a change you will see in

the chick from their eggs. Try it. Give me a coop free from vermin and I will show you *choice stock*, in *splendid condition*, and *far above the average in weight*.

In regard to nesting, sitting, &c., I shall write again. There is something far superior to the above ingredients you can use,—something that will not interfere with the *natural condition* of things, at the same time be effective; not making a little *Infernal Regions* of the birth-place of your chicks.

Yours, very truly,

W. G. NICHOLS.

(For Fanciers' Journal.)

THE SPIRIT OF DISQUALIFYING.

I find among some of our Poultry Fanciers a spirit that I will call the spirit of disqualifying. I have heard it manifested in such language as the following: "They ought to have been disqualified. If I had judged them I would have disqualified them." I know of several exhibitions at which were birds, and disqualification it was said ought to be their fate. And the birds against which I have heard such expressions were not disqualified by the standard by which they were to be judged or by any other standard of which I know.

I will illustrate by giving an instance. The birds were Creves; the fatal defect, white ear lobes; the standard by which they were to be judged was that of the A. P. A. It decrees red ear lobes but does not make white a disqualification. This spirit would carry the decree farther and disqualify. The A. P. A. can of course adopt as its standard what it chooses. But I challenge these disqualifiers, or the standard maker of the A. P. A., or any one else to prove to me from Wright, Tegetmeier, Piper, Bailey or any other Poultry book that the ear lobe of Creves should be red. I have not only heard this spirit manifested but have seen it carried out in the show room by judges. In one instance a judge was asked why certain birds seemed to have been passed over. The answer was, they were disqualified. He was asked what the disqualification was. He mentioned what he considered the disqualification. He was told that the standard by which he judged did not make it a disqualification. His reply was, that there were disqualifications which the standard did not mention but which were taken for granted. I for one am opposed to this spirit and the taking of such matters for granted and especially of Fanciers, acting as judges, carrying it out in the exhibition room, societies ought not to tolerate it. And they ought to see to it that their judges make up their judgment in accordance with the standard by which they are to judge, instead of their whims, caprices, and prejudices. And unless this spirit is curbed I fear bad results to our societies, I fear there will be failure of exhibitions for want of exhibitors.

CRESHEIM.

(For Fanciers' Journal.)

HOUDANS vs. PLYMOUTH ROCKS.

FRIEND WADE:

After reading some of the back numbers of the JOURNAL, I notice Dr. Dickie's elaborate account of the Plymouth Rocks, which interested me very much, telling us all about their good qualities. In fact, we have been treated with accounts of a great number of breeds, about their egg and meat producing qualities, which is all very good. Thanks to the JOURNAL. The more the better. But it seems to me the best wine has been left to the last of the feast. In my opinion, the Houdan is the best of all for actual profit; now for the proof: as soon as they are out of the egg, and dry, they are ready to run with the hen, and almost any kind of soft food will do for them. They do not want to be fed with a silver spoon, or nursed like a baby and be fed on pap. I repeat, almost

any kind of soft food will do for them, and they will thrive well, being very hardy. They feather and mature quickly, for I have had them to lay at five and a half months old, with ordinary care, while a mongrel hatched at the same time, with the same feed and care, did not lay some six weeks later, and such eggs! why, the great big Brahma's eggs don't begin with them. I think they (the Houdan) can beat anything in the poultry line for weight of eggs. They are good winter layers with ordinary care, and to keep any hens laying in winter they must have care. Most of us can recollect what a bad winter we had last year, ice and snow on the ground for about two months. I recollect my pets were not out of their coop for weeks at a time, but they layed faithfully right along, and I had chicks hatched on the 23d of January, and about 30 more of the same kind on the 20th of February. I know some breeders will differ with me about their being good winter layers, but I have tried them, now, this is the third year.

Now about the meat part, which I consider cannot be beat for flavor, except in the Dorking. Neither can they be beaten much in making flesh. I exhibited a cockerel seven months old that weighed seven pounds, and I have had them to weigh 12 lbs. to the pair at six months old. I recollect a Brahma fancier coming to look at them; he would not believe me about their weight until they were put on the scales.

And I think there is more actual meat on a Houdan than almost any other kind of fowl of same weight. Well do I recollect the first one I killed. After I plucked it, I handed it over to my wife to draw. She called my attention to it as she thought something ailed it, as she remarked, "it has not got much more than half the insides of other fowls."

I have been in the poultry business from boyhood up to the present time, am now an old man of 36 years, have had experience in most all kinds, but have settled down on the Houdans as being the most profitable of them all.

HOUDAN.

(For Fanciers' Journal.)

CONCERNING LICE.

F. P. Butt, in No. 6 of JOURNAL, says, "I know that all the dust baths and sulphur in America will not disturb these lice in question." It might interest the fancy to know what sort of lice Mr. B. breeds. We have none of that variety in this section. Sulphur not only disturbs, but is certain death to them. A little lard rubbed upon the feathers underneath the vent will effectually destroy the eggs of the lice, and if the fowl is held downward, and sulphur sprinkled liberally through the feathers, few, if any, living lice will be found on the following day. This treatment is simple and effective.

Q.

(For Fanciers' Journal.)

BE MORE EXPLICIT, PLEASE.

MR. EDITOR:

As a reader of some of the many different publications devoted to the poultry interests, I am sometimes amused and sometimes aggravated, according to the lightness or gravity of the consequences, by the indefinite terms used by fanciers in their recipes and directions. For instance, where one is about to give us a valuable tonic for fowls, it is worded somewhat thus: "Give a little Tincture of Iron in their drinking water." Or, "Put some Sulphate of Iron and some Sulphuric Acid in their water." As a fine stimulant, "A pinch of Cayenne pepper." For severe cases of roup, "A few drops of Tincture of Aconite," or "Use Turpentine and Goose Grease."

Now any one who is at all familiar with the above remedies, knows well that all but one of them are dangerous articles to give valuable fowls, and yet, poulterers will recommend the use of

them in just as careless quantities as though they were corn or wheat screenings.

On taking up the last number of the JOURNAL, my eye rested upon an article in which your correspondent recommends the use of a common troche for the colds which fowls are liable to during cold wet spells. Now the common troche which he means is the puzzler to me as well as to others, I suppose. There are so many common troches, and some of them so very common that I would hesitate some time before I would use them upon my fowls. If your correspondent wishes that recipe to be of any use to us—and I have no cause to believe but that he really does—won't he please name the particular troches which he uses or give us the exact formula for making them, and then we will feel more safe in following his instructions.

Yours Truly,
CHAS. BROCKWAY.

HAVERSTRAW, N. Y.

(For Fanciers' Journal.)

SULLIVAN CO. [N. H.] POULTRY ASSOCIATION.

The Sullivan County Poultry Association has come to the front and made its first bow before the public, and has been well received, hereafter it is numbered with the things that are and are to be. Its officers have worked hard to bring its first exhibition up to a high standard and have well earned all the praise the public has bestowed upon it during its two days continuance at Westport, Feb. 9th and 10th. This is a thriving town, being the county seat, with two large hotels, and is awakening to the startling knowledge that it is not more hens but better hens than the country just now needs, as the western Congressman remarked in substance about whiskey.

This revival has been brought about mainly by the FANCIERS' JOURNAL for which E. A. Pollard, the secretary of the Association, is obtaining additions to his already considerable list. Having about twenty numbers of the JOURNAL with me, I took them to the hall, and was surprised to see how eagerly they were received. Many promises of subscription were made and the parties were commended to Mr. Pollard. But to return to the show. The total number of birds and animals on exhibition was somewhat over two hundred and fifty, and were mostly fowls. Pigeon fancy has not yet taken a great hold on the "Granite" hearts. A good show of rabbits, &c., was made. The Cochins and Leghorns are the most sought after hereabouts, though the Plymouth Rocks are coming into notice lately and are winning many friends. Curtis G. Britton of Keen was present and made a good show in the American and Spanish classes, taking first money on Plymouth Rocks and White Leghorn fowls. E. A. Pollard, of Newport, makes a specialty of White Leghorns, and took first on chickens. J. G. McKeen had nearly every class represented, and took several first premiums. Farther than this I cannot speak in detail. It has been withal a good and profitable show, and the Association is reported in a sound financial condition, and is evidently full of life, and I hope to be able to visit their pleasant town again and report another year's progress.

ALTA.

(For Fancier's Journal.)

PETE SMILEY AT BALTIMORE.

MISTER WAID:

I hev jest retuend from ther Balttmer show, I tell yew it was a big thing, me an the Parson, Capt. T. the Deacon, Squire B., an the Kernel, all went on tewgether, I was verry much disapointed in not seeing yew ther. Wen we got inter ther deapo at Balttmer we was met bi a hull croud ov hack drivers, an tha kep a yellin cab sir! cab sir! ride up! have a kerrage, and so 4th. Pete, sez Cap. T., daz Burnam drive a cab heer in Balttmer? Not much sez I. Well arter we got cleer ov ther cab drivers we footed it daown Broadway, keepin a sharp look-out fur sines ov the hen

show, purty sunc we seed a hull croud ov people stanin in frunt of a big bielden, Pete, I reckon ther must bee ther plais, sez ther Parson, so we krost over tew sea wat tha was gazin at, wall we found ther tha was lookin at a lot ov pieters of pigens, chickens and sich. Wall we bot our tickets an went in an sich a squalin, krowin, an kacklin yew never heerd, "I snum ter guinea," sez Cap T., "this beats all natur." Wall arter dew got a little used ter ther noise, we begun ter look aroun a bit, I kum akross Mister Braown, ther Sekretary, he hed hes kote arf an hes sleeves roled up an was es bizzzy es a bumble bee, I axed him if "Hans Schnieder" was in ther show, an he sed he was, so I went tew look fur him, I hed never seen Hans, but was shure I shud no hem by his kountenance es shown in the "Jernel" I sune faoun him a lookin at ther chickens and eatin a peace ov bolona sasseneger, Mister Schneider haow dew yer dew sez I, holdin aout mi han, "I dont no who you vas I vas I nefer see you pefore," sez he, why im Pete Smiley sez I, "Ish dot so, vy Pete how you vas I was know you yust so soon I see you," sez he, Pete I was got some pully howdings here, yust come and look of dem, "did yew git yer aiges from ther trio that wun ther pairs meddle?" axed ther Parson, no I dont vas got any from dot New York partenders stock, sez Hans, now Pete dem vas pully howdings sez he, hoodaus yew mean sez I, no dey vas howdings sez he, and we argered about it, an we axed 2 er 3 wat was ther korect name ov ther burds, won man from Pittsburg sed tha was hoodens, another frum England sed tha was "oodans mi lads," an a Frenchman frum Limerick, sed tha was "howdams be jabers." Pete sez Hans "I toll yew I vas preed dem schickens longers as any man in America, an I no dey vas howdings." "Haow es et tha dident t-ake a preemum?" axed ther Parson, "vell you see sez Hans de shuges drow em out pekase vone hen dont vas got fife toes, but dey can scratch like ter tieufie mit four. Dem shuges dont vas gife me no preemiums on my Game Shickens, I vas got to see about dot." Jist then Mister Flour kum along an Hans sez "You vas vone of te shuges aint it?"

"Yes sir," sez Mister F.

"Vill you dell me vats te matter of my Schickens of you blease?"

"Wall which air yewer chickuns," sez Mr. F.

"My schickens vas te Game schickens," sez Hans.

"Well but ther air a gret meny Games hear," sez Mr. F., "I dont no which air yewers."

"Come mit me an I show you," sez Hans, and we all follered him till he kum tew his burds, and then he sez "dot vas him, now dell me vats te matter of dem schickens of you blease."

"Wall," sez Mister F., "tha haint matched in ther pen, yew hev won Duckwing hen an the other is a Brown red an ther cock is a Black Red."

"Dot makes no difference dey vas game. I didnt vas know dot dey most pe all von kind of games—I haf mouch droubls do got my schickens by express from New York, von hens cot out afor ve cot do Fillydelfy, and I dont got him no more."

"Wery true," sez Mister F., "but we coodent give em a preemium, bekase acordin tew ther standard ther air disqualified, its not the fault ov ther chickens but in ther matching."

"Dots it, der vas noding de matter mit de schickens, its de shuges dont vas understand ter pizzness," sez Hans, an he sed sum cuss words ther woodent dew ter print. I felt kinder sorter sorry fur ther jedges bekase I think tha tride ter dew wat was rite, an if Ilaus made a mistake in matin his burds he oughtenter git mad ef he didnt win. Pete come an look ov my "Plymouth Rocks," sez Hans, an he pointed em aout tew us. "Why they hev got fetthers an ther legs," sez ther Parson, "Vell you know Dick de doctor, he vas say dey come dat way somedimes, but dey vas goot pure pred Plymouth Rocks for all dot," sez Hans, "yes I no but wun ov ther hens is neerly black," sez tha parson.

"Oh vell, I vas preed dem mit a plack java hen mated mit a Daminker cock, Dick ter doctor, he vos say ve git a plack von vonce in a vile, but dey vos goot pure pred of Plymouth Rocks for all dat," sez Hians.

Wall arter we'd seen all ther fowls, we went ter look at ther Pigeons, an sich a sight I never seed afore, we stood on ther stage an lookt over ther hall, an wun big fat feller sez, "dunder an blixen ynst look of ter Pichens," we seed Mister Long a jeidgen em an I reckon he hed a long job. We seed Mister Halstead ther Bulletin man, and a hull craud ov "Fanciers," we had a good time. "Pete," sez ther Parson, "lets go ter Pittsburg," "agreed" sez I, an we bid Hians an ther rest "good-bie" et ther door and left fur him.

Yours feelingly,

PETE SMILEY.

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

THE COLUMBIAN SHOW AT EASTON.

The first annual exhibition of the Easton Poultry Association, and Columbian show, was held last week, at the above named place. I arrived there at six o'clock on Monday evening, and was at once made comfortable, at the United States Hotel. The show was not opened until Wednesday noon, and at that time all the stock was nicely arranged in comfortable coops, ready for the inspection of the judges. The pigeon display was grand, one hundred pair were entered for competition. It was indeed far ahead of all the Columbian shows held during the present year, in Eastern Pennsylvania, and I was highly pleased to find some of the stock very choice. The principal exhibitors were McKeen and HULICK, of Easton, Pa.; Rev. Swartz, of Bernville, Pa.; C. G. Trexler, of Allentown, Pa.; Mr. BENNET, of Easton; D. E. Newell, N. Y.; and Mr. Long, of Lancaster, Pa. McKeen and HULICK showed some fine Yellow Barbs, Checkered Carriers, Blue Antwerps, Silver Owls, Blue Owls, Dun Carriers and Silver Turbits, some of them as fine birds as can be found in America. Rev. Swartz was on hand with fine display of Black pied Pouters, Blue pied Pouters, and Yellow pied Pouters. The first premiums were awarded in these birds without difficulty. C. G. Trexler, the leading pigeon fancier of Allentown, had a fine display of white, smooth-head Fans, Red Magpies, Black Trumpeters, Black Capped Barbs, Yellow Magpies, Mottled Trumpeters, and Black head nuns. D. E. NEWELL, of New York, exhibited fine pairs of Black Carriers, Red Barbs and Black Barbs. He had awarded him a special for best pairs of Black BARBS. His pair of Black Carriers were of a very high order, and well deserved the first premiums. L. BENNET, of Easton, Pa., had on exhibition, high class White BARBS, White TURBITS, Dun BARBS, Black Tamblers, Antwerps, White Trumpeters, and Starlings. Mr. B. is very proud of his stock of the above named birds. During my stay in Easton, I visited his lofts, and I would advise the young pigeon fanciers of Penn-

sylvania, who desire to see perfection in pigeon keeping, and breeding, to go and do likewise. When I say that a lady, having on her Sunday suit, might go through all of them, and after the visit, would have her dress as clean as when she entered them, I do not exaggerate at all. Long life to Levi, may he be spared many years to ENJOY his pets. Mr. Long, of Lancaster, Pa., had on exhibition, fine White crested Fan Tails, Black Magpies, BLUE SWALLOWS, Yellow capped Magpies, and Black capped Magpies. The White crested Fans were the best that I have been called to act as Judge on, this year—one of the birds had thirty feathers in the tail. The Carrier was splendid, and all together they were of a high order.

There were only 29 coops of birds that received first premiums, out of one hundred, having instructions from the executive committee to award nothing as a first premium, unless really meritorious; the cutting down was fearful. In one hour after the cards had been placed on the coops, I was glad to receive information from one of the high officers of the society, that although some of the exhibitors, though the judgment severe, yet all seemed satisfied. The Columbian show was a success, and was in every way the equal of any I have visited for years. On Friday morning, Mr. McKeen drove up to the front door of the Hall, holding in hand the lines that governed a pair of thoroughbred horses, and tendered a kind invitation to Mr. Plaisted, Mr. Bradley, Mr. Waterhouse, and Tennet, to take a morning ride with him, out to his poultry farm. The invitation was gladly consented to, and away we went, through the streets of Easton, out and away, over hill and dale, and finally drew up at our destination. I do not intend to speak concerning the horse or cow department of the farm, but of the poultry and pigeon houses, and yards. The location of the poultry houses and yards are very good, having the warm morning sun in winter, and in hot weather the houses can all be closed up, there will be no danger of any one receiving from Messrs. M. and H. mixed eggs, as the yard fences are made very strong, and the doors of the chicken houses are all worked by a patent spring, and it would be impossible for one of them to be left open. In all the houses, two feet from the ground, is an old boot leg, this is intended for the Light Brahma stock, to eat their feed from. The idea, I believe, originated with Mr. Plaisted, of whom Messrs. M. and H. received it. Hens I believe, can not eat food from it. They have quite a large number of hatching, and small cluck houses, and a splendid hot-house for young chicks. His yards are large and roomy. Mr. Plaisted found a new point in Light Brahma hens, during his visit, that he perhaps had never observed before—namely, aspect. I have very serious doubts, however, whether he will ever have it recognized in the Standard. The pigeon lofts are in complete order, and the arrangement is very good. Into the carriage again, and, after a short ride, back in Easton. The visit ended, our duty at the fair performed, we were wheeled away by the engine, Packer, to our home in D. Thanks to Mr. McKeen, Hulick, Bennet, Otto, Hulsheiser, Reudenberger, and others, for kindness shown.

DOYLESTOWN, PA.

TENNET.

THREE CLASSES.—Mary Mardock Mason divides her sex into three classes—the giddy butterflies, the busy bees, and the woman's righters. The first are pretty and silly, the second, plain and useful, the third, mannish and odious. The first wear long trailing dresses, and smile at you while waltzing; the second wear aprons, and give you apple dumplings, and the third wants your manly prerogatives, your dress coat, your money and your vote.

A man whom Dr. Johnson reproved for following a useless and demoralizing business, said: "You know, doctor, that I must live." The brave old hater of everything mean and hateful, coolly replied that he did not "see the least necessity for it."

IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

The case of E. T. M. Simmons, charged with embezzling funds from the Oil City Building & Loan Association, was concluded in Franklin, on Tuesday last. The accused was found guilty and sentenced to one year and nine months in the Western Penitentiary. His embezzlement from the above institution and the Oil City Savings Bank, amounted to about \$10,000.

The inclination to reply to the many congratulatory letters containing expressions of good-will, and hearty welcomes to New England is very strong, but our space is too limited. To those who have taken so much pains to express their kindly wishes, we can only say that we shall endeavor to show our appreciation of their encouraging words, by a continued effort to make the Journal in every essential particular the best Poultry and Fanciers' publication in the United States.

Mr. Bicknell in his notes on the Chicago exhibition, was led into an unintentional error in saying that President Lamb's \$100 premium for the finest display of any one variety, was divided between two exhibitors of Games. The judges who were selected to place this premium, found the competition so close and the competing entries so meritorious, that they recommended that it should be divided among the competitors, Mr. Philander Williams of Taunton, Mass., who entered 30 coops Light Brahmas; H. T. Sperry, of Hartford, Conn., 40 coops White Polands; Mr. Allen, of Galt, Ontario, 20 coops Black B. Games; and another gentleman whose address is so blurred in the item sent us, that we can't make it out, 18 coops Brown B. Games. The executive committee accepted the report of the judges, and the award was announced to have been made accordingly.

Our friends of the Chicago Poultry Journal are getting unduly round shouldered over the statement in some eastern magazine, that eastern exhibitors could not send their birds to Chicago, on account of the distance. We happen to know that there isn't the slightest truth in the statement. Mr. Philander Williams, of Taunton, who sent some 200 coops of Asiatics to Chicago, Mr. H. T. Sperry, of Hartford, who sent 40 coops of White Polands, and Mr. E. S. Brewer, of Hartford, who sent several coops of Erminettes, all inform us that their birds arrived in fine condition at the exhibition, and that those that were not sold at Chicago, came home in splendid condition. In fact all three gentlemen sent many of the same birds to the Springfield show, and lost no points there, on account of their condition. We have no idea why such a statement should be made, and we trust the officers

of western societies will not allow it to annoy them, as we can assure them there is the best of feeling among the breeders of the east toward the western exhibitions. We believe the number of entries from the east at the next Chicago exhibition will be four times larger than at the last.

We are unable to reply officially to the many queries received in regard to the paying of the premiums, offered at the late Chicago show, but as we understand the matter, it stands about in this way. Mr. Willard, the Secretary, was taken sick at the close of the exhibition, and was unable to make up his accounts for some weeks. This is now being done, and as soon as completed, the premiums will be paid. We think some of our correspondents are unnecessarily disturbed. Knowing the officers of that society as well as we do, we feel safe in predicting that every promise made, and every obligation entered into by them will be fulfilled to the letter. The question as to whether the exhibition was profitable or not, will not, in our opinion, be considered for a moment in connection with the payment of premiums, any more than it would be by the officers of any other society in the United States.

THE EXHIBITION SEASON.

The exhibitions are over and the birds have gone back to the breeding yards. Looking over the season, it is safe to say that the three most notable shows were those of Portland, Chicago, and Springfield, the first on account of the immense attendance of visitors, the second on account of its national character, and the meeting of the A. P. A., and the last for the quality of the specimens shown. At Portland 35,000 tickets were sold, at Chicago were gathered hundreds of the most prominent fanciers from all parts of the country, and the A. P. A. accomplished some very important work which we have already noted, and at Springfield the two thousand birds on the benches, in point of quality, were far in advance of any collection ever placed on exhibition in this country. All the classes were full, and of superior excellence with possibly the exception of the Games and Leghorns, although they were up to the standard of other shows. We speak particularly of this exhibition, because we believe in quality rather than quantity, and are desirous of encouraging the breeding and showing of fine birds instead of favoring the mistaken notion that an exhibition is only successful when its excellence is measured by numbers. Various things contributed to the achievement at Springfield. In the first place there was involved the reputation and experience of those two veteran societies, the New England Club, and the Connecticut Association, ably backed and supported by the wealthy Rod and Gun Club of Springfield. Then there was a breaking away from the old stereotyped notions and forms, in its general conduct and management, as evidenced in the new rules and regulations, which will undoubtedly be widely copied by other societies. The combination premiums through which exhibitors themselves had an opportunity of expressing in a tangible manner, their faith in their own breeding. The omission of the usual fine shows at Boston, Hartford, and Worcester, the prompt payment of premiums before the close of the exhibition, and various other things which it is not necessary to enumerate, but which were in perfect keeping with the progressive ideas of the most intelligent fanciers of New England. The extraordinary large premium list, aggregating about six thousand dollars, was of itself a loud call for the best birds, and the high marking required, with the excellent rule that inferior birds would be excluded, was sufficient notice that poor ones would not be looked at by the judges, so out of it all, came as we say, probably the best exhibition we have ever had. There were very few large exhibitors but the number of leading fanciers who made a few entries each was unusually large. All the New England States were repre-

sented and splendid specimens were present from New York, New Jersey and Pennsylvania, and from Ohio, Illinois and other states. The judges of course had a difficult task to perform, but as a general rule, we believe their decisions were satisfactory. Some severe criticisms, however, were made in regard to the placing of a few of the premiums in two of the larger classes, but as the aggrieved exhibitors happen to be fanciers of large experience, who long since learned to take an occasional defeat in the same urbane manner with which they receive their numerous victories, we shall probably have no "growling", unless it be from those of their friends who can't endure an adverse or mistaken judgment on their favorite strains. The gathering of fanciers from all parts of the country, was very large, there being at one time no less than eighty-six well known breeders from various States present at the Haynes House, where they were well entertained. The reunion of Officers and Fanciers was held at the Massasoit House, and was one of those genial occasions for which the societies of New England are so noted. The plan of allowing each participant to pay for his own ticket was very highly commended, and secured a large attendance. We are very strongly of the opinion that this plan should be universally adopted. Then every one will feel free to attend, without carrying with him the unpleasant impression that however welcome he may be, he is nevertheless a source of expense to the society he may be visiting. If it should be understood that this plan obtains everywhere, these reunions, which are the source of so much profit to those present, would be the rule instead of the exception. The annual suppers of the Boston, Worcester and Hartford societies have cost them from two to four hundred dollars each. This is a heavy burden—however willingly they bear it—and as visitors derive much pleasure and valuable information from these gatherings, they are willing, and should be allowed to bear their proportion of the expense, which at the best is small. Another pleasing feature of this exhibition was the separating of the birds in the coops. We have no doubt that this plan will soon become general,—even, if the birds, as at Springfield are entered in pairs. The arguments in favor of this, are so many and well known, that it is unnecessary to state them here; still another step in advance, which will soon be taken by the more wealthy societies, will be the showing of birds in uniform coops owned by the societies, as at Chicago and Buffalo. The Chicago coops are the best we have ever seen, and very low in price, on account of the cheapness of lumber in that market. We make the suggestion that several eastern societies might unite in a contract with the maker, in that city, and have the coops (in shocks) transported by the car-load, thus getting a fine coop, made entirely of lumber, at an exceedingly low rate. Another meritorious departure at the "consolidated" was the placing of exhibitors names on the coops, upon their arrival in the hall. At Chicago, and we have seen the same thing at other shows, the judging was not finished until after the exhibition had been open some days, all this of course is a great loss to those who are breeding for profit, and are desirous of securing the full benefit of being known as the breeders of the fine birds on exhibition. They are certainly entitled to this, and while it is not always possible, however desirable it may be, to have the birds judged before the exhibition opens to the public, it is always easy to put the exhibitors names on the coops, and then Messrs. officers, how ridiculous it is to be sure for you to invite gentlemen to judge your birds—by that act showing that you have implicit confidence in their ability and integrity—and then by *leaving off* the names of exhibitors, announce to the world that you doubt the honesty of your judges, and decline to let them know whose birds they are judging for fear they will show partiality. If officers will give this subject a little thought, we have no doubt all this nonsense will be speedily done away with. At Chicago no names were placed upon the coops by the society, either before or after the judging, and so exhibitors who were not present to put

cards upon their coops, were wholly deprived of the advertising, which is the greatest inducement offered breeders to show their fine birds.

Well, as we said at the start, "The exhibitions are over, and the bird's have gone back to the breeding yards." The breeders are mating up their stock and getting ready for another season. The notes of preparation, which reach us from all over the country, indicate that the present year will be one of unusual prosperity and activity among fanciers. Thousands of fine birds have changed hands, at high prices, during the exhibition season, just closed, and there will be more careful and intelligent breeding than in the past. Fanciers who have kept at the head in their particular specialty, will be close pressed by new comers, and many who have bred a number of varieties, are finding what we have often predicted, that they are scattering too much, and will confine their efforts to a single variety in the expectation of excelling in that. Much fine breeding will be done for the great exhibitions of next season. Those already announced, are the Boston, which will put on a little extra gilt edge, for the next annual of the A. P. A., which is to be held there, Chicago, which made such a complete success of its first, Portland, "where they close the stores during hen show, and every man, woman and child is a judge of fine birds, and Hartford, which has never been beaten, except by Springfield, and there she won one-third of the glory, and where—the *well* the JOURNAL has taken up its permanent residence in Hartford, and so it will hardly do for us to say just what we were going to.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—ANTS of the species *Aphenogastrea*, in storing seeds for food, bite off the radicle to prevent the germination of the seed.—J. T. MOORIDGE.

—The rattle of the rattlesnake is for the purpose of imitating the sound of the Cicada or other insects that form the food of birds and so attract the latter within reach of the serpent.—PROF. SHALER.

—Sunflowers are said to exhale an ozonized oxygen, and are therefore recommended for cultivation in malarial districts to destroy the malarial poison. They are besides very useful plants, yielding about 40 per cent of oil from their seeds, their leaves serve as fodder, and their stalks as fuel. A diet of sunflower leaves is said to increase the laying power of hens.

—RUFFLED GROUSE.—Would Hoon permit his friend McCann to remind him of the fact that the Ruffed Grouse (*Bonasa Umbellus*), is only a connecting link between the families *Tetraonidae* and *Phasianidae*, and properly belongs to neither the one or the other? The legs of the true grouse are always feathered to the feet. Pheasant is just as correct as grouse, when applied to (*B. Umbellus*) *Satis Superque*.

—"NO SQUIRRELS IN AUSTRALIA."—Your correspondent, "Logic" in his second paper of what promises to be an able and exhaustive article on Squirrels, says:—"In Australia, so far as is investigated, the squirrel is not found!" Now I hope "Logic" will not ignore the TAGUAN (*Petaurus taguanoides*), the LUGUAR SQUIRREL (*Petaurus sciuroides*), the HIPOONA ROO (*Petaurus australis*), nor the dear little beauty ARIEL (*Petaurus ariel*) so named for its graceful and easy flight, equal to our own flying squirrel. All these are natives of Australia, and two of them are now on exhibition in the Zoological Garden, Philadelphia. "Logic" may say the PETAURISTS do not belong to the true squirrels. Neither does our flying squirrel (*Volucella*), but so closely do the Petaurists resemble them, that upon their discovery Naturalists placed them at once in the family *Sciuridae*. The Petaurists, or Australian squirrels seem to be but a repetition of the ideas which formed the creation of the older world carried out in a new, or different manner, doubtless for the purpose of fitting them to a different place, and I sincerely hope "Logic" will include them in his sub-families. HOON.

LAKE AND BROOK TROUT—ARE THEY THE SAME?—I have often heard this question discussed, and always answered in the negative by those who had eaten of both. That they are identical, the following facts are conclusive: In the settlement of

Vermont, two brothers took up grants in the town of Chittenden; after some years, the neighbors noticed on several occasions the dressings of very large trout on their premises; and on one occasion a neighbor came upon one of the brothers dressing an enormous trout in the rear of his house. A regular watch was organized and set upon them; and the watchers were finally rewarded by discovering the brothers' preserve, about three miles in the forest, and on the very top of the mountains, consisting of a pond of about two acres in extent, and of great depth. Vast quantities of fish were taken out as soon as the secret became known, one specimen, Hon. Daniel P. Thompson states, weighing 12 pounds! There are now in the pond splendid trout, and lots of them; but the men living are rare who have been favored with a bite. Some Rutland boys used a net several years since, but the mountaineers spoil that sport by felling the spruce trees that grew upon its borders. A friend of mine tried his luck there once, and took out 23 fair ones in about as many minutes; but not another bite, although he camped by them for two days, and tried them a number of times for years after, I accompanying him in one of his visits. At certain hours in the day the surface of the pond was in continual agitation with their risings; but I never learned of one being taken with a fly.

The brothers stated that several years before the discovery of their secret they put some small brook trout into the pond.

P. WELCH.

LINDEN, N. J.

—I'm sorry, Huon, but the facts of the case won't permit me to take an iota from the length of my animal.

There was an error, however, further on. I should have said from tip of right leg to tip of left leg, whether it was fore or hind leg I am not certain, it was so long ago, and I think the measurement was 28 inches. They are very large. I've thought sometimes when I've seen them on the hill top "outlined against the sky," that they were more like fawn than hare. I shall have a chance to describe one more fully if this storm ever abates, as our hoodlum hunters having no Chinamen to pester, have turned their strength against these timid hare, and are slaughtering them without mercy. Then, if you please, I would like its name.

We are not "lovers of hare meat" tho' many call it good. My poultry however fancy it. In describing the nest of the hare, you gave a good description of the nest of my animal, only this of mine seems to be made with care, the ground is slightly hollowed and made as smooth as glass. As the nest is made when vegetation has attained its growth, in April or thereabouts, these hard, smooth places remain bare until the rains of autumn. They are oftentimes found in the grain fields, and the so called "sport" of hunting the hare, crowns the harvest as a sort of festival. As the reapers—more than one are necessary in these large grain tracts—go the rounds, (young hare are often to be found in their track with their legs cut off by the machine), the animals are driven towards the center of the field, then at the last, the mighty braves rush in, armed with guns and dogs, to the death of those that have that have neither way of escape nor means for self defence.

E. S. S.

CORRESPONDENCE.

THE EXCHANGE COLUMN.

FRIEND WADE:

Like Mr. Chapman, I do not see how any one can reflect on you, if they have been unfairly dealt with. I have been intending for a long time to relate my own experience. Last fall I sent an advertisement of Bronze Turkeys, for sale. In a few days there came an offer from an attaché of a New York Daily to trade two pairs of Dorking chickens for a trio of turkeys. Dorkings were said to be good, bred from imported birds. As the Poultry Show at the Pittsburgh Exposition was to open in a few days, I wrote, saying if the Dorkings were shipped to me at Pittsburg in time for the show there, I would make the exchange. The offer was accepted by the other party, and Turkeys and Dorkings were, I believe, shipped the same day, or very nearly so. Dorkings were received on opening day of Poultry Department or Exposition. One Silver Grey Dorking pullet was passable, the balance were utterly disqualified birds. The New Yorker acknowledged the reception of the turkeys and said they were satisfactory, and hoped the Dorkings would be equally satisfactory. He must

have been utterly ignorant as to what Dorkings should be, to have asked such a question, and I am charitable enough in his case to think it was ignorance rather than intentional wrong. He is not, so far as I know, a breeder of fowls for sale.

About the same time, I saw an advertisement in the Exchange column, offering to exchange Dark B. Partridge Cochins, etc., for Toulouse Geese, Ducks, etc. etc. I wrote to Mr. ———, offering to exchange a number of Ducks, Geese, etc., placing a low price on them. Mr. ——— wrote saying that his Dark B's were worth from \$5 to \$10 each. Would send 10 Dark B's for \$75 worth of water fowls. At the price I had placed on my birds, it would take, as I wrote the party, about a car-load of Ducks, to get his Dark B's. I then wrote, saying I would give him a trio of Toulouse Geese, for some of his chickens, as I wished to dispose of all my Geese. He wrote to send the Geese, and he would send Dark B's. His letter being mislaid, I am not sure how many he offered, but think it was four birds. Geese were shipped, and after some three weeks, I received two little stunted chicks (Dark B's). Believing any one with cheek enough to send such birds would be equal to anything, I wrote nothing to him about them. They remain in my yards to be shown to visitors as specimens of the stock of that extensive breeder and advertiser, ———, Philadelphia. They don't cause a great many orders to be sent to him. Our mutual friend, F. R. Woting, has seen them and can tell precisely what they are.

Yours,

A. A. MILLER.

ED. FANCIERS JOURNAL.

Dear Sir: Owing to the fact that many are uninformed, or under wrong impressions in relation to color of earlobes on White Leghorns, and think they should have yellow, or cream colored instead of pure white. I would say they should be white, and only white, and in proof would add, I have bred them thus for many years, and have imported from Leghorn, Italy, five trios, and none of them had any approach to yellow on earlobe. When the white is imperfect, or injured, it invariably shows red, and it should be either white or red under all circumstances, and under none, yellow or cream color; neither do I know of any pure variety of fowl with yellow or cream colored earlobes. The Asiatic, Game, French, American, Dominique, and Dorking, some 32 kinds have red ear lobes. The Spanish, Hamburg, Polish, and Seabright, some 23 kinds, have white earlobes, and I know of no kind with yellow or cream colored. I think it probable if any one should introduce Light Brahma blood into White Leghorn stock, it would increase their size, and perhaps a pure white earlobe on one and a pure red earlobe on the other might produce a yellow or cream colored earlobe, but I do not believe a yellow or cream colored earlobe is natural to any pure blooded and distinct variety of fowls. If any importer of Leghorns has ever imported any with yellow or cream colored earlobes I should be pleased to hear from him through your columns.

An article in the *Rural Journal*, of February, 1876, signed H. says, "the White Leghorn fowl, from its name, is presumed to have been introduced from Leghorn, Italy, although there is no doubt but that it is of American origin, being classified with the Dominique and Plymouth Rocks as American breeds, by all of our best poultry societies. Of late years a few fowls have been imported from Italy, and are inferior to our own, and evidently spring from birds that found their way there from this country. The varieties are White, Brown, Black, and Dominique, size being in the order in which we have enumerated them. Cocks weighing from 5 to 7 pounds, and hens from 4 to 6 pounds. Any admixture of the blood shows itself very plainly in the color of the egg shell." Such information as this ought to immediately educate all, as regards this variety. 1st, that they are of Ameri-

can origin, and only imported recently, when it is a well known fact, that nearly one-fourth of a century has passed since their importation direct from Leghorn, Italy, to Connecticut, and I think those that went from this country to Italy, were, as he says, "birds that found their way there," as I hardly think any one carried them, as it would be like taking coals to New Castle. 2d, In size, I see little or no difference, except the Blacks are a little the smallest, but none should weigh as heavy as he says, $3\frac{1}{2}$ to 5 pounds for cocks, and 3 to 4 pounds for hens, is near their natural weight. 3d, any admixture of blood does not show in color of egg shell, it only shows when mixed with such variety as lay colored eggs, or eggs that are not white, but how will it show if the admixture is with a variety that also lays white eggs?

C. A. PITKIN.

HARTFORD, CONN.

DEAR JOURNAL:

A German gentleman called on me the other day, and wished to see my pigeons. Of course I was only too glad to show my pets, and we were soon in the house I call my loft. It is a two-room house, formerly occupied as a dwelling, and is very convenient, as at this season of the year I keep the cocks in one room, and the hens in the other, not allowing them to breed in winter. Somehow, I felt that I could learn lots about pigeons from my visitor, and I listened eagerly to everything he said. He talked considerable, and, among other things, told me his way of teaching pigeons to come back to the cote, when flown for the first time, and, as I have seen several inquiries on this subject, in the *Journal*, and other papers, I give it just as it was given me—except the German accent. It is new to me, but others may have heard of it before. He said:

"You must take your pigeons into the cote on *Friday*, and let them stay there till the next *Friday*, feeding them in the cote. On the *Friday* after you have put them in, catch each pigeon, and, holding the head from you, pluck two short feathers from the right wing. These feathers you must break, or bend double, and nail up in the cote. As soon as you have done so to all the pigeons, open the trap and let them fly. They will never fly away while the feathers are nailed up; but be sure you do it on *Friday*, and get the right wings of the pigeons."

My face must have expressed my doubts about the efficacy of this plan, for the old gentleman appeared hurt, while he re-assured me with the remark that he had "tried it so much as one hundred times." I have not tried the experiment yet, and do not think I shall; but it does not look any more unreasonable than some of the stories Moore tells, about the medical properties possessed by the pigeon.

LON. HARDMAN.

ST. JOE, MO., FEB. 1.

FRIEND WADE:

Our fair has come and gone and we find ourselves a thousand dollars ahead in cash and material, besides the enjoyment attending a most delightful exhibition. Our only defect was in the fact that the building was not properly constructed for that purpose, which necessitated the separation of the departments. The fish display was magnificent, filling 15 large aquariums, some over five feet in length with plate glass sides, besides a large number of small hanging aquariums and the hatching troughs.

We are being urged by the citizens to erect an exposition building and are thinking seriously of making the attempt. We had fifteen thousand visitors, who all expressed themselves delighted with the fair. Felch did most of the judging, and there was not a protest.

I learn that the Utica fair has been seriously interfered with by bad weather.

Yours, &c.,

E. C. SKINNER.

DETROIT, FEB. 18, 1876.

PEDIGREES.

MR. EDITOR:

In Vol. 3 No. 6, p. 60, top of 1st column of your paper "N. E." makes the *World* say that "no more pedigrees of fowls will be published [in the *World*] hereafter."—What the *World* did say was that "pedigrees of birds hatched in 1874 or earlier years" would be published in the magazine, but "entries of poultry hatched in 1875 or later years will appear in regular book form but not in the magazine."

The difference is the same as between half a loaf and no bread. Please make the correction in justice to the *Journal* as well as to the *World*.

Yours with respect,

H. H. STODDARD.

HARTFORD, CONN., FEB. 14, 1876.

DROPPING EGGS.

EDITOR FANCIERS' JOURNAL.

SIR: I have some fine light Brahma Hens, and some of them have a notion of dropping their eggs without shells or with shells partly formed. I have had to relieve one of her egg which had smashed and one of them died on her nest I think from the egg breaking inside. Perhaps some of your readers will give a remedy.

Respectfully,

SHERWOOD CHASE.

JEFFERSON, WIS., FEB. 14, 1876.

SMALL PET DEPARTMENT

(Reported for Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDEN,

Philadelphia, for the week ending Feb. 18th, 1876.

- 1 Alligator (*Alligator Mississippiensis*). Presented by S. I. Lerick, Jr., Philadelphia.
- 1 Opossum (*Didelphys Virginianus*). Presented by Hon. Alexander Henry, Philadelphia.
- 1 Flying Squirrel (*Sciurus Volucella*). Presented by J. McCabe, Philadelphia.
- 1 Sparrow Hawk (*Accipiter nisus*). Presented by John Krider, Philadelphia.
- 1 Berlanders Tortoise. ——— Presented by Dr. H. C. Yarrow, Washington, D. C.
- 19 Chequered Tortoises (*Cistudo Virginia*) } Presented by John
- 1 Red-bellied Terrapin (*Clemmys rufiventris*) } Fletcher, Philadelphia. HUON.

For the week ending February 26, 1876.

- 1 Fulmar Petrel (*Procellaria glacialis*). Presented by W. H. Zern, Atlantic City, N. J.
- 1 Opossum (*Didelphys Virginianus*). Presented by William Golding, Philadelphia.
- 1 Wild Turkey (*Meleagris gallopavo*). Presented by Mr ——— Wistar, Germantown, Pa.
- 8 Dingoes (*Canis dingo*). Born in the Garden.
- 1 Snowy Owl (*Nyctea nivea*). Presented by William Eachus, Wagontown, Chester County, Pa. HUON.

(For Fanciers' Journal.)

ZOO NOTES, NO. 13.

PRAIRIE-DOGS.

The Prairie-dog (*Cynomys*) a genus of American rodent, belonging both to the squirrel and wood-chuck families, is found very abundantly on the plains west of the Missouri River. Your correspondent E. S. S., has given a very interesting sketch of

these little rodents in FANCIER—Jan. 13, p. 19, to which I can add nothing save a remark or two about the Owl and Rattlesnake residing with them.

It is true the Prairie dog has not the pleasure of having a house to himself, and the Burrowing Owl (*Athene cunicularia*) and the terrible Rattlesnake (*Crotalus tergeminus*) do take forcible possession of his domicile! It has been taught by some who had too much charity to think evil of even snakes and owls, that because bird and reptile were found in the home of a quadruped that it was a happy family, but alas for the romance! it proves to be the old story. The lion does lie down with lamb, but the lamb happens to be inside of the lion; and the knife of the naturalist has found the prairie-dog inside the snake, and proved thereby that the snake was by no means a welcome guest, but an intruder on the premises, self-billeted, soldier like in time of war, procuring lodging without cost, and eating up the inhabitants by way of thankfulness!

The reason for the owl being one of the residents is not so clear, but as those birds love flesh, probably they snap up an occasional young and tender prairie-dog. Perhaps Cynomys would not allow either of these intruders in his home if he could help it, but like a member of more elevated society, he must put up with a nuisance because he cannot get rid of it.

Does not E. S. S. mean "prairie-squirrel," (*Spermophilus*) when she says a few buckets of water will drown one of them (*prairie-dogs*) out? Five barrels of water have been poured into the burrow of the letter without filling it!

Twenty-eight of these interesting little fellows were presented to the Zoo by a gentleman of the West, before the Garden was formally opened, since then they have been increasing to considerable extent; some have been given away, some have been fed away, and some died away by reason of the long severe cold snap of weather last winter. It was a wonder that all were not frozen to death! How the figures would show at this time were the census of Dog-Town taken it would be hard to say, but doubtless there would be found, at least, the original number of the colony when founded. As the Cynomys is in no way related to the dog, nor in the least resembles one, how it came to be so called is, as Dunderary says, "what no killah can find out." It may have been called a dog from the sharp tone of its yelp or chatter, or it may have been on the principle of "*lucius a non lucendo*," because it was no dog at all.

HUON.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"TO EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

☞ No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

We have several complaints against Wm. S. Knox, of Allegheny City. Will Mr. Knox please explain.

R. G. FAIRSERVICE, E. Newark, N. J., wants 1 White Leghorn Cockerel, 1 Silver Penciled Hamburg Pullet, 1 White Cockerel, 1 Partridge Cockerel, 2 Aylesbury Ducks, in exchange for Aylesbury Drakes out of Imported Eggs, or Light Brahmas Pullets.

J. L. CONNELLY, Harris-town, Ill., will exchange 1 trio of Bronze Turkeys, last June hatch, Gobblers weighs 25, hens 13 and 14 lbs. each, 1 trio of Light and Dark Brahmas, '75 hatch, **TODD & WILLIAMS**, Strains, good Birds, for two Pekin Ducks, two drakes, a pure bred Newfoundland dog pup, must be beautifully marked. *Wright's Illustrated Book of Poultry* bound, send age and weight of Ducks, all must be 1st class as mine are.

W. I. ROW, Greensburg, Pa., has a Gales' Feed Cutter to exchange for first-class breeding Light Brahmas or Buff Cochins, heavy birds: how many will you give, charges paid. Cutter good as new, cost \$10.

T. MILLER, Lock Box, No. 4, Harrisburg, Pa., will exchange 75 large Chaucer Little-eggs of half-cent sub-jects, 1 Breech-Loading Gun, single barrel, 1 Letter Press, 1 Pouter cock, 2 large Family Bibles, new, for 1 Red Pouter Hen 1 Antwerp Hen, 1 Antwerp Cocker, or offers.

JAMES THORNTON, 525 Race St., Harrisburg, Pa., will exchange an Irish Bull Terrier Bitch, weight 45 lbs, color light brindle, an elegant watch dog, for Singing Birds, Fancy Chickens, or offers

WARREN REED, York, Pa., will exchange one pair of very fine Black Carriers, one pair of Ring Doves, one very B. K. R. Game Stag, one Black Game Hen, one Yellow Cap Magpie Cock, Tumblers in variety, one Black Quaker Cock and eggs from 1st prize B. B. Red Games and Golden Pouters, (Dickensell's strain) for Silver Duck wing Game, or Nos. 12 to 25 of Wright's Illustrated Book of Poultry.

GEORGE GREINER, 318 South Queen Street, Lancaster City, Pa., will exchange 1 good Male Canary, 1 good Large Malay Game, Game Cocks or Stags and Hens for good White Leghorns. Must be pure stock as mine are. Also have 2 Setter Bitches, one is perfectly trained; one is *pladed*, full blooded. Make offers.

CHAS. SELSER, Doyleston, Pa., will exchange one trio of G. S. Hamburgs for trio S. S. Hamburgs or Houdans, four good B. Hamburg Cockerel for good Hamburg Pullets of any kind.

F. H. SCHWARTZ, Bernville, Berks Co., Pa., will exchange a Cape May Phoebe Box ready for the painter, which for style and finish cannot be surpassed. Also Yellow Pouter Cocks, for Red or Yellow Hens, or offers.

JOHN HENDRICKS, Tamaqua, Pa., will exchange two trios first-class Houdans, large size, one color, crest and beard for Owls, Swallows or genuine Antwerps. None but mated, good birds wanted.

ELIJAH LOV, Box 83, East Meriden, Conn., will exchange one good Rifle—for a pair of Ferrets or offers. Also, twenty-five pairs of White Mice, and two splendid Nickel-plated Revolvers—for Pouters or White Fantails, Lop Rabbits, or offers.

W. C. EATON, Newark, N. J., will exchange Partridge Cochins and Light Brahmas (74 and 75 birds), and a Graves' Incubator—for Plymouth Rock eggs. Will also make Photographs for P. R. eggs.

THOS. PEAY, 91 Jacob Street, Louisville, Ky., will exchange 32 volumes Scientific American, Matthew Henry's Commentaries, five vols., edition of 1813, German Art Treasures, Turkey monoco, very fine—for fine poultry, poultry or agricultural books, and good Microscope. Write.

JNO. F. HOUSER, Tamaqua, Pa., has for exchange Pea fowls (three males and one female), hatched 1875. Also one pair pure White Angora Rabbits, two trios Golden and one trio Silver Sebright Bantams (first-prize stock), Exhibition Coops, Rabbit Hutches, Squirrel Cages, Parrot Cages, White Mice, White Mice Cage, and fancy Pigeons. What offers?

T. A. WINFIELD, Hubbard, Ohio, has for exchange Dark Brahmas, G. P. Hamburgs, Black-red Games, from my imported stock—for Cooper's Game Fowl, Tegeimer's or Wright's Poultry Books, or Fancy Pigeons.

JOHN S. HURDIS, 93 State St., Albany, will exchange two pairs Red Dragons, one pair Black Carriers first-class birds, for six White Face Bk. Spanish Pullets.

E. J. CHANDLER, Konest Square, Chester Co., Pa., will exchange one White Polish Cockerel and one American Dominique Cockerel, good stock, both are fine and stylish birds—for one White Polish Hen, and one White Leghorn Cockerel, both must have pure white ear-lobes, and good birds.

C. L. GATCH, New Richmond, Ohio, will exchange for trio Plymouth Rocks (Upman's Strain with Pedigree), or trio White Cochins (with Pedigree), not over a year old—a fine Combination Telegraph Instrument, with Battery and Instruction Book to learn the business. What offers. The above new.

W. H. BOSTWICK, 914 South Sixth St., Minneapolis, Minn., will exchange two Vols. of Zell's Encyclopedia for Brown Leghorns with solid white ear-lobes and good combs. What offers.

I. F. FULLER, Normal, Ill., has for exchange one pair of S. S. Hamburgs, one pair of Silver Polish, a Golden Hamburg hen, (W's stock) a Light Brahma cockerel, and a Black Polish cock, for Houdans, Brown and White Leghorns, or Light or Black Brahmas. All good stock; same wanted.

G. C. LEONARD, 115 Baldwin St., Elmira, N. Y., will exchange one new Musard Nickel Case Watch, Duplex movement; one new Rosewood Music Box, brass cylinder, plays two tunes; valuation, each fifty dollars, for Song Birds, or what other offers.

OLIVER D. SCHOCK, Hamburg, Berks Co., Pa., will exchange 1 trio White Rose combed Bantams, (clean legged), for White African Owls, Bred or White Jacobins, must have pearl eyes. Be quick!

BOX 28, WILLIAMSPORT, PA., will exchange L. Brahms, B. Cochins, G. Pheasant cockers, C. Muscovy Duck hen, Setter Dog, G. Pheasants, by order, for W. C. B. Polish, B. Cockerel, W. Leghorn trio, Houdans, or offers.

STEVEN BOALT, Norwalk, Ohio, will exchange four pair Silver Dun Antwerps, one pair Red Jacobins, one pair Red and White Fms, old pig-ons; 4 Cuck and 3 Hen Bronze Turkeys; 1 trio Black Spanish, for flour, wheat, corn, merchandise, or offers.

G. C. LEONARD, 115 Baldwin St., Elmira, N. Y., wants to exchange 100 boxes Benham's polish for all kinds of metal, without soap or water, put in new tin boxes, with full directions, medals for 25 cents; one Mexican Double Yellow Head Talking Parrot, 10 months old, value \$30. What offers?

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

HARTFORD, MARCH 2, 1876.

No. 9.

AGASSIZ.

I stand again on the familiar shore,
And hear the waves of the distracted sea,
Piteously calling and lamenting thee.
And waiting restless at thy cottage door.
The rocks, the seaweed on the ocean floor,
The willows in the meadow, and the free
Wild winds of the Atlantic welcome me;
Then why shouldst thou be dead and come no more?
Ah, why shouldst thou be dead, when common men
Are busy with their trivial affairs,
Having and holding? Why, when thou hadst read
Nature's mysterious manuscript, and then
Wast ready to reveal the truth it bears,
Why art thou silent? Why shouldst thou be dead?
LONGFELLOW.

HANDLING COBRAS.

In no one account is obedience to David Crockett's maxim, "First be sure you are right, then go ahead," more important than in handling poisonous snakes. To know just how to do a thing is the secret of doing it well, but in handling cobras, it is the preventative of death. At the Zoological Gardens, London, a box of cobras was recently received from India. A correspondent thus describes the keeper's method of handling them:

With his long-handled wire hook, he, from a respectful distance, managed to draw a snake tail first, and catching it by the tip, let it gently down head foremost into its new cage, the lid of which, a glass slide, was open just wide enough to receive it. One after another, eight cobras were thus removed and safely housed, some dilating their "hood" and angrily hissing as they tried to strike whatever object they could reach. Snake charmers and Indian jugglers thus handle the cobras with impunity.

Suspended by the tail, they are powerless to raise themselves and wound the hand that holds them; but care must be taken lest the creatures strike at the limbs. The specimens just arrived are *Naja tripudians*, the cobra of India. One other of the same species, but a sickly snake, is already in the gardens; another died lately. In their narrow prison-house the new family present a miserable appearance. Ample space to bathe and to move freely would be their almost only chance of health, and it is to be hoped that when the lions' new and commodious quarters are ready to receive them, a more suitable home will be built for the Ophidians. Several of these new cobras were found to be already dead.

CAPART'S SERVANT.

Jules Verne is a wild inventor, and famous for his improbabilities; but his orang, "Jupe," in the story of "The Mysterious Island," that acts as waiter, &c., like an intelligent negro servant, is no improbable creation. The wonderful African chimpanzee, "Tombouctou," now in Paris, is a fact, and would make an excellent mate for Verne's fiction.

He is perfectly tame and gentle. While his master, M. Capart,

lived at Sierra Leone, he filled in his house the office of domestic, saluting visitors, opening doors, &c. When they embarked for France, Tombouctou suffered some days from sea-sickness, but after his recovery he jumped about on deck, on yard arms and masts, and became a great favorite with the sailors. When the ship was entering the Gulf of Gascony, Mme. Capart was startled at missing her baby, a child eight months old. Looking about her, and then up towards the sky, she saw the monkey, with the baby in his arms, on the top of the mainmast, gravely seated on a yard arm, rocking the child to and fro, as he had seen the mother often do, while now and then he would give it a pat on the cheek with his paw.

This lasted for perhaps half a minute; then, while every eye was upon him, he executed a prodigious cabriole, descended in an instant the backstay, and, hooking himself by his tail to the yard-beam, balanced himself with his burden. The mother screamed, but the captain put his hand over her mouth, commanding silence, as the monkey might be frightened and let go his hold of the baby. Finally came a dash of sea against and over the ship, when Tombouctou let go the mast and fell, but with such address as to catch himself with one hand to a rope, jump upon a ladder, and with one bound was upon the bridge, with the baby safe and sound in his arms.

MARVELOUS SNAKE-FIGHT.

The Santa Rosa (California) *Democrat* of Feb. 20th tells this story:

Last August, as Mr. Woodbridge, who lives just above Cloverdale, formerly of Petaluma, was going to his work in the early morning, he saw a strange sight, something which he could not at first define—whirling, writhing, and turning on the ground.

On a nearer approach, what was his astonishment to discover two immense rattlesnakes engaged in a deadly strife. They were wrapped around each other from the tail to within six or eight inches of the head, and never for a moment did they take their eyes off each other. Now and then they would slowly unwind to within one or two coils of the tail, when, with an instantaneous movement, they would again become involved to the neck, and with jaws distended and fangs exposed, one would strike at the other, his antagonist invariably dodging the blow, when in turn he would be foiled.

After repeating their manoeuvres for a time, they would lie panting in each other's coils, and then slowly and cautiously unwind, only to repeat the involvement and striking again. So fiercely did they embrace each other that one would think surely the life would be crushed out. Strike after strike was made on both sides, but never once was an adversary so far caught off his guard as to receive a blow.

They had been fighting over a space of fifteen or twenty feet, as evinced by their tracks in the dust. To all appearances they had been fighting all night, every inch of ground bearing marks

of the conflict. After looking at them for some time, Mr. Woodbridge cut a pole some eight or ten feet long, and just then a Mr. Murphy came up.

He took the pole, and, approaching the snakes, they simultaneously discovered him, when, loosening their hold of each other with marvellous rapidity, the larger one rushed at him, perfectly furious. It required the second blow to stop him. In a moment after, the other started after Mr. Murphy, as his now dead antagonist had done, when he, too, was slain by a well-directed blow. One had sixteen and the other fifteen rattles.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

JUDGING BY THE STANDARD.

ED. FANCIERS' JOURNAL:

In number six of your JOURNAL I notice an article on "Judging by the Standard," from the pen of Isaac Van Winkle, Esq., in which my name appears, and this you know is sufficient cause for me to say a few words in defense of my former article on the same subject, although I *rule* the subject out of order at this time, when all the poultry shows are over, and the judging of the season done. And I must say also that I approach the subject with "fear and trembling," in the face of the classic lore exhibited in the learned gentleman's article, a part of which is about as relevant and lends as much weight to the subject under consideration as the reading of a page of Homer's Iliad would to the illustration of a question in theology. For instance, in comparing the judging of a chicken to the different orders of architecture, the gentleman makes a mistake. In judging by the standard, a specimen is all Doric, all Ionic, or all Gothic, and not a part of them all, as he puts it. As the gentleman truly says, the standard of excellence points out the various qualities that go to make up a perfect specimen, and also shows where the imperfections are to be found. Now, if it does this, why cannot we place a numerical value on the perfection and deduct a part, or the whole, of such value when the specimen under consideration falls below this standard perfection. If a perfect fowl, is made up of certain enumerated parts, and must have these parts as described by the standard, in order to be perfect, why cannot a relative value be placed upon each part, and that value be represented by a number corresponding to the value of that particular part in comparison to the others? If a fancier has a just appreciation of a fowl, he can soon determine what fraction of a perfect fowl the head, hackle, or tail, represents, but if he is narrow-minded and prejudiced in his ideas of what constitutes a perfect bird, he can see only the tail, hackle, or leg-feathering, to the disadvantage of all other parts, and to such a man the standard is of no use. Again, when the gentleman takes exception to the values I placed on a first, second, and third premium he misunderstands my proposition of the case. I do not say that a bird scoring 90 points *should* have a first premium. I only said a specimen scoring less than 90 *should not* have one. I should much rather place my scale

5 points higher, all around, but I take it if a judge takes the standard of excellence for his guide and scores a bird according to its teachings, he will find but few that will scale 90 points, and fewer still that will score 95, and I venture the assertion that there never was and never will be one that will score 100 points. Think of it! a chicken entirely perfect in symmetry, head, comb, hackle, &c., one to which nothing could be added or taken from. Perfection in that sense is something at which we may all aim, with the certain knowledge that we can never attain. Again, *good judges* see nearer alike than some people would have us suppose.

I have an instance now in my mind where four *good* judges scored the same bird with a difference of but ($\frac{1}{2}$) one half a point, and six scored the same bird with but one and one-half ($1\frac{1}{2}$) points difference, all marking by the Standard of Excellence and each ignorant of the others' score. And while I have no doubt some improvement could be made in the description of some of the varieties of domestic poultry, as they appear in the Standard of Excellence, I am satisfied that the A. P. A. did a grand work when they placed it as it now stands before the fanciers of America, and I am satisfied also that it needs only to be understood to be appreciated, and to enable good judges to render similar decisions. I have no doubt also that discussion and an honest interchange of sentiments will bring about at the next meeting of the A. P. A., all the alterations or amendments that are necessary to make it what it certainly will some day be—a complete and perfect guide to poultry breeders.

In conclusion, I will only say, I have written this article not for the sake of discussion or to see my name in print, but to remove any erroneous impression my former article may have caused, and in defense of one of the links that binds together in unity the fanciers of America—THE AMERICAN STANDARD OF EXCELLENCE.

Respectfully,

JAMES M. LAMBING.

PARKER'S LANDING, PA., Feb. 16th, 1886.

INSTINCT.

ITS "PLASTICITY" IN FOWLS.

A writer in the London *Nature* says:—Three years ago I gave a pea-fowl's egg to a Brahma hen to hatch. The hen was an old one, and had previously reared many broods of ordinary chickens with unusual success even for one of her breed. In order to hatch the pea-chick she had to sit one week longer than is requisite to hatch an ordinary chick, but in this there is nothing very unusual, for, as Mr. Spalding observes, the same thing happens with every hen that hatches out a brood of ducklings. The object with which I made this experiment, however, was that of ascertaining whether the period of maternal care subsequent to incubation admits, under peculiar conditions, of being prolonged; for a pea-chick requires such care for a very much longer time than does an ordinary chick. As the separation between a hen and her chickens always appears to be due to the former driving away the latter when they are old enough to shift for themselves, I scarcely expected the hen in this case to prolong her period of maternal care, and, indeed, only tried the experiment because I thought that if she did so the fact would be the best one imaginable to show in what a high degree hereditary instinct may be modified by peculiar individual experiences. The result was very surprising. For the enormous period of eighteen months this old Brahma hen remained with her evergrowing chicken, and throughout the whole of that time she continued to pay it unremitting attention. She never laid any eggs during this lengthened period of maternal supervision, and if at any time she became accidentally separated from her charge, the distress of both mother and chicken was very great. Eventually the separation seemed to take place on the side of the peacock, but it is

remarkable that although the mother and chicken eventually separated, they never afterwards forgot each other, as usually appears to be the case with hens and their chickens. So long as they remained together the abnormal degree of pride which the mother showed in her wonderful chicken was most ludicrous; but I have no space to enter into details. It may be stated, however, that both before and after the separation the mother was in the habit of frequently combing out the top-knot of her son—she standing on a seat, or other eminence, of suitable height, and he bending his head forward with evident satisfaction. This fact is particularly noteworthy, because the practice of combing out the top-knot of their chickens is customary among pea-hens. In conclusion, I may observe that the peacock reared by this Brahma hen turned out a finer bird in every way than did any of his brothers of the same brood which were reared by their own mother, but that on repeating the experiment next year with another Brahma hen and several pea-chickens, the result was different, for the hen deserted her family at the same time when it is natural for ordinary hens to do so, and in consequence all the pea-chickens miserably perished.

I have just concluded another experiment which is well worth recording. A bitch ferret strangled herself by trying to squeeze through too narrow an opening. She left a very young family of three orphans. These I gave, in the middle of the day, to a Brahma hen which had been sitting on dummies for about a month. She took to them almost immediately, and remained with them for rather more than a fortnight, at the end of which time I had to cause a separation, in consequence of the hen having suffocated one of the ferrets by standing upon its neck. During the whole of the time that the ferrets were left with the hen the latter had to sit upon the nest; for the young ferrets, of course, were not able to follow the hen about as chickens would have done. The hen, as might be expected, was very much puzzled at the lethargy of her offspring. Two or three times a day she used to fly off the nest, calling upon her brood to follow; but upon hearing their cries of distress from cold, she always returned immediately and sat with patience for six or seven hours more. I should have said that it only took the hen one day to learn the meaning of these cries of distress; for after the first day she would always run in an agitated manner to any place where I concealed the ferrets, provided that this place was not too far away from the nest to prevent her from hearing the cries of distress. Yet I do not think it would be possible to conceive of a greater contrast than that between the shrill piping notes of a young chicken and the hoarse growling noise of a young ferret. On the other hand, I cannot say that the young ferrets ever seemed to learn the meanings of the hen's clucking. During the whole of the time that the hen was allowed to sit upon the ferrets she used to comb out their hair with her bill, in the same way as hens in general comb out the feathers of their chickens. While engaged in this process, however, she used frequently to stop and look with one eye at the wriggling nest-full with an inquiring gaze expressive of astonishment. At other times, also, her family gave her good reason to be surprised; for she used often to fly off the nest suddenly with a loud scream—an action which was doubtless due to the unaccustomed sensation of being nipped by the young ferrets in their search for the teats. It is further worth while to remark that the hen showed so much uneasiness of mind when the ferrets were taken from her to be fed, that at one time I thought she was going to desert them altogether. After this, therefore, the ferrets were always fed in the nest, and with this arrangement the hen was perfectly satisfied—apparently because she thought that she then had some share in the feeding process. At any rate she used to cluck when she saw the milk coming, and surveyed the feeding with evident satisfaction.

Altogether, I consider this a very remarkable instance of the plasticity of instinct. The hen, it should be said, was a young one, and had never reared a brood of chickens. A few months before she reared the young ferrets, she had been attacked and nearly killed by an old ferret which had escaped from his hutch. The young ferrets were taken from her several days before their eyes were open.

In conclusion, I may add, that a few weeks before trying this experiment with the hen I tried a similar one with a rabbit. In this case the ferret was newly born, and I gave it to a white doe rabbit which had littered six days before. Unlike the hen, however, she perceived the imposture at once, and attacked the young ferret so savagely that she broke two of its legs before I could remove it. To have made this experiment parallel with the other, however, the two mothers ought to have littered on the same day. In this case the result would probably have been different; for I have heard that under such circumstances even such an intelligent animal as a bitch may be deceived into rearing a cat, and *vice versa*.

(For Fanciers' Journal.)

NATIONAL POULTRY ASSOCIATION.

JOS. M. WADE:

DEAR SIR,—Our great National show is just over. It was a grand success, there being three thousand fowls and pigeons, and three hundred dogs.

When I entered the poultry department, I thought what a splendid chance for a fowl report. Well the Light Brahmas were a large class, and were fine, two of the hens weighing respectively 13½ and 14 lbs. There were some very choice cocks, and the cockerels were nearly perfect, as were a great many of the hens and pullets.

The Ducks were not so large a class, but were very good, and were headed by a magnificent pair of birds, entered by the President, Mr. E. L. Lamb; they were almost perfect, and to describe them more fully, I would say that they were the noted birds Waltham and Dee. There was also a young cockerel that belonged to Mr. Lamb, that promises to excel his father Waltham, when developed.

There were many other good birds exhibited by different parties. The judging by Mr. Mansfield gave good satisfaction, and the prizes were well placed.

The Buff Cochins came next, and were a splendid class. There were some very choice birds owned by Mr. Barnes, and by Mr. Jones. But as a class, we think they would average 80 points. I did not admire the first premium cock as much as I did the third prize one, which I think was much better in color, shape, and size. But the Buffs did not near equal the Partridge Cochins. There were a great many of them, 60 birds. They were grand, and were the richest looking lot of birds on exhibition. The prizes were well placed, and gave good satisfaction to all, excepting two or three constitutional grumblers.

Whites were a poor class, with the exception of two birds, that was the 1st prize cock, and a hen or pullet, I know not which. The Blacks were a small class but good, and prizes well placed. Next came the B. B. Red-Games. They were a big class, numbering 89 birds, they were beauties. There were a great many fashionable birds, with long legs and snake like necks and heads, and of course they took the prizes. But I admired the birds that had been bred more especially for the pit, with shorter legs and more plump, symmetrical bodies; and they were by far the brighter colored, and beautiful. But still fashion must have its sway, and take the lead, but long live the clippers. There were some Black Red Derbys, that were nice birds.

Next came the Duckwings, they were not a large class, yet

very good in both classes, Silvers and Yellows. They were all in good condition, and were well judged.

Then came the Piles; they were, with two exceptions, very stylish birds, and with different coloring, would fill A. D. Warren's model to a T. They were well judged. The two excepted, were birds bred for the pit, good in color, but set lower and with smooth, plump bodies, and shorter necks and heads, yet they were very good.

Black Games were a small class and good, were mostly pit birds, and well judged. Grays, Dominiques, Sumatras, and one or two more classes, were small but good, and judged well. The Poles were large classes, and very beautiful, especially the Whites owned by Mr. Sperry of Hartford, Conn.; they were gems.

The Hamburgs were out in full force, and were nice, especially the blacks.

Spanish were a medium sized class, and very fine. Leghorns ditto. Houdans, small class and an indifferent. Crevecoeurs, good. La Flech were also good. Dorkings, a small class, but the best I have ever met. Plymouth Rocks were a medium class, and very good in quality, as were the Dominiques. Bantams were a very large class, and I will not attempt to describe them, as I could not do them justice, and will only say they should have been seen to be appreciated; they were well judged by Mr. Spaulding, and the other judges.

There were on exhibition also some Pea Fowls, Pheasants, and Ferrets.

There were some Lop-eared Rabbits, they were not very beautiful, but were, I suppose, fine specimens. Also a pair of Himalayans, they were beauties and were much admired by the ladies and children. There were several cats, one was a beautiful Tortoise-shell cat, owned by Mr. Lamb; it sold for \$25; there was also a large white Thomas called Tommie Graves, he was in a cage with a canary, which she did not appear to notice. The Maltese kittens were good.

I will not attempt to describe the pigeons any more than to say that they were beauties. The dogs were all very fine, and may be described at a future day.

The show was no doubt a grand success, which was owing entirely to the efforts of Secretary Willard and his assistants; and I left with the impression on my mind, that Willard is just the man, and could not be done without. Long may he wave.

And having noticed all and compared we will say.

Stemmata quid faciunt,

RENIM.

(For Fanciers' Journal.)

PEKIN DUCKS.

Is the Editor of the Bulletin an "inflationist?" I judge so by the space he gives gratis, in the Poultry Bulletin, for November, to that *Mystic* (Bridge), Rev. Mr. Clift to advertise Pekin Ducks. It may be, that it doesn't amount to much, but it is too gshy, and the advertising dodge, thus *mystic*(ally) wormed in the reading department of the "Bulletin" is simply done to assist in selling more ducks this fall, and to increase the demand for eggs the coming spring. Some time since, Mr. Editor, you informed me that you had several enquiries from would-be-purchasers of the Pekin ducks, and before you answer them, I would like to have Mr. Clift substantiate the following statement. "They proved to be very prolific and hardy, and much larger than the Rouens and Aylesburys." The italics are mine, and on that point I want emphatic, special information—free from *guess-work*. He also remarks: "A few extra weights have sold as high as \$30, consequently, at this late day he will experience no difficulty in giving me the weight of specimens, "*much larger* than Rouens or Aylesburys?" "They are the perfection of all the duck tribe, for eating." What

a shame to "sacrifice for the table" "odd drakes," when the "poultry" of a cross with "Aylesburys and Rouens is an *improvement* upon these fine breeds" and doubly so, while, "the original prices are still maintained." But perhaps the extraordinary prolific nature of this "great acquisition to the water fowl of the country," explains why the palate is tickled with such Tycoon luxuries. But wont these *puffs* become stale some of these days? Old breeders already read them knowingly, with *one eye closed*. But I must exit, as I know the JOURNAL is down on advertising in its reading columns, and might think I am also interested in Pekins.

Yours truly, WESTERN NEW YORK.

[The above article unfortunately got mislaid, but it has some points that will not spoil very soon, and are as much in order now as when written.—Ed.]

THE WORCESTER AND FRANKLIN CO. POULTRY AND PET STOCK ASSOCIATION.

The following premiums were awarded at the annual exhibition of the Worcester and Franklin Co. Poultry and Pet Stock Association, at Starr Hall, Athol, Mass., Tuesday, Wednesday, and Thursday, January 4, 5, and 6, 1876.

LIST OF PREMIUMS.

Brahmas—Light, Fowls, 1st, P. F. Amidon, Hinsdale, N. H.; chicks, 1st and 2d, P. F. Amidon. Dark—Fowls, 1st, J. S. Goodnow, Millington; 2d, C. W. Chamberlin, Arlington; 3d, P. F. Amidon; chicks, 1st, P. F. Amidon; 2d, C. W. Chamberlin; 3d, G. W. Cleveland, Millington.

Cochin—Buff, Fowls, 2d, C. C. Holton, Hinsdale, N. H.; 3d J. S. Goodnow; chicks, no award. Black—Fowls, 2d R. Wm. Waterman, Athol. Partridge—no award. White—Chicks, 3d, Asa Hosmer, Baldwinville.

Plymouth Rock—Fowls, 1st, W. A. Carleton, Fitchburg; 2d, R. W. Waterman; 3d, F. Brooks; chicks, 1st, Henry Latham, Hinsdale, N. H.; 2d and 3d, A. French, Orange.

Black Spanish—Fowls, 1st, S. S. Tower; 2d, C. F. Flint; chicks, no award.

White Dorking—Fowls, 1st, J. R. Maxham, Fitchburg; chicks, no award.

Hamburg—Silver Spangled, Fowls, 1st, G. J. Pratt; 2d, R. W. Waterman; chicks, no award. Golden Spangled—Fowls, 2d, J. S. Goodnow, Millington; 3d, G. W. Woodward. Black—Chicks, 1st, W. A. Carleton.

Leghorn—White, Fowls, 1st, W. G. Scribner, Fitchburg; 3d, E. A. Pickering, Ashuelot, N. H.; chicks, 1st and 2d, J. H. Osterhout, Greenhout, Greenfield; 3d, E. A. Pickering. Brown—Fowls, 1st and 2d, W. G. Scribner; chicks, 2d, C. C. Haskell, Greenfield. Spangled—Chicks, 1st and 2d, A. J. Hamilton.

Crevecoeur—Fowls, 1st, Chas. Fletcher, Hinsdale; 2d, S. J. Pratt; chicks, no award.

Polish—White-crested White, Fowls, 1st E. A. Pickering; chicks, 1st, 2d and 3d, E. A. Pickering. White-crested Black—Fowls, 2d, T. L. Weber, Orange; chicks, 2d and 3d, T. L. Weber. Silver Spangled—Fowls, 1st, T. W. Fleming, Orange; 2d, D. C. Martin, Orange; 3d, F. W. Fleming. Muffed and Bearded—Fowls, 1st, G. W. Cleveland.

Game—Black-breasted Red, Chicks, 1st, E. L. Elliott, Orange; 2d, C. C. Holton, Hinsdale. Earl of Derby—Fowls, 3d, E. S. Bigelow. Yellow Duckwing—Fowls, 2d, Geo. E. Morse, Hubbardston. Ginger-red—Chicks, 2d, James Kelly. White—Fowls, 1st, R. Wm. Waterman; chicks, 1st, R. Wm. Waterman. Silver Duckwing—Fowls, 2d, G. W. Cleveland. Gray—Chicks, 2d, D. C. Martin, Orange. Black—Chicks, 1st, E. L. Elliott. Blue Pile—Fowls, 1st, H. H. Adams, Orange.

Bantam—Black-breasted Red Game, Fowls, 1st, W. F. Bacon, Lexington; 2d, C. C. Bolton, Hinsdale; 2d, W. F. Bacon; Chicks, 1st, C. C. Holton, Hinsdale; 2d, G. W. Cleveland. Brown-breasted Red—Fowls, 1st, 2d and 3d, Rogers & Heywood, Worcester. Chicks, 1st and 2d, Rogers & Heywood. Red Pile—Fowls, 1st and 2d, Rogers & Heywood; Chicks, 1st and 2d, Rogers & Heywood. Spangled—Fowls, 1st, Rogers & Heywood. Ginger-red—Fowls, 1st, Rogers & Heywood; Chicks, 1st, and 2d, Rogers & Heywood; 2d, F. M. Jennison. Silver Duckwing—Fowls, 1st, Rogers & Heywood; Chicks, 1st and 2d, Rogers & Heywood. Golden Duckwing—Fowls, 1st, Rogers & Heywood; Chicks, Rogers & Heywood. White Game—Fowls, 1st, Rogers & Heywood; Chicks, 1st, Rogers & Heywood. Golden

Seabright—Fowls, 1st, A. F. Stevens, Natick; 2d, P. F. Amidon, Hinsdale; Chicks, 2d, S. B. Pitts. White Rose Comb—Fowls, 1st, A. F. Stevens; Chicks, 1st, A. F. Stevens; 2d, T. M. Shepard, Northampton. Black Rose Comb—Fowls, 1st, A. F. Stevens; 2d, Rogers & Heywood.

Japanese Silkies, 1st, G. W. Cleveland.

Bucks County—Fowls, 1st, O. Mixer, Worcester; Chicks, 1st, O. Mixer; 2d, E. J. Miller, Philadelphia.

Turkeys—Fowls, 1st, J. R. Maxham, Fitchburg.

Burgles—Bronze, 1st, Norman Howe, Hinsdale; 2d, W. H. Newton, Royalston; 3d, Henry Kendall. Wild, 1st, Mrs. C. W. Moore.

Guinea—Pearl, Fowls, 1st, Abel F. Stevens. White—Fowls, 1st, W. F. Bacon, Lexington.

Geese—Toulouse, 2d, W. H. Newton.

Ducks—Mallard, 2d, H. A. Haven. Rouen—1st and 2d, Mrs. C. W. Moore.

Pigeons—Carrier, 2d, G. W. Cleveland. High Flying Tumblers—1st, G. W. Cleveland. White Fantails—1st, W. F. Bacon. Black Magpies—1st, W. F. Bacon. White Trumpeters—2d, W. F. Bacon. Black Mottled Tumbler—1st, W. F. Bacon; 2d, G. W. Cleveland. Ring Doves, 1st and 2d, Mrs. O. Mixer. Black Priest—G. W. Cleveland. White Crested White, 1st, G. W. Cleveland.

Pouters—2d, E. D. Andrews.

Parrots—Grey, 1st, Ira L. Davis. Green—1st, Mrs. G. W. Woodward.

Canaries—Male, 1st, Mrs. John Swan, Jr.; 2d, Miss Swan. Female—1st, Mrs. R. Wm. Waterman; 2d not awarded. Song—1st, Mrs. R. Wm. Waterman, 1st and two specials.

Paroquet—Miss Brooks, 1st and special.

Rabbits—Angora, 1st, G. W. Cleveland. Black—G. W. Cleveland. Fawn—1st, G. W. Cleveland. White—1st, Rogers & Heywood; 2d, O. Washburn, 3d, Rogers & Heywood.

Guinea Pig—1st, A. F. Stevens.

Stuffed Birds—1st, Ira L. Davis; 2d, J. H. Talbot. Dogs—Newfoundland, 1st, Chester Canham. Irish Spaniel—1st, R. Wm. Waterman.

Coons—1st, E. L. Richards, North Dana.

Best Drawing of Animals, by boy under fifteen years of age, 1st, Charlie Waterman.

Best Drawing, by girl, Clara Wheeler, Northfield.

Best Drawing of Birds, by boy, 1st, Charlie Waterman; 2d, Asa Haven.

Best Drawing of Birds, by girl, 1st, Clara Wheeler.

MIDDLESEX POULTRY ASSOCIATION.

The following is the "Official Report" of the Exhibition of the Middlesex Poultry Association, held at Huntington Hall, Lowell, Mass., Dec. 21st, 22d, 23d, and 24.

E. T. POWELL,

Secretary, M. P. A.

LIST OF PREMIUMS.

CLASS 1. *Asiatics*—Brahmas—Light—Fowls, 1st, 2d, and 3d, Damon & Marshall, Cohasset; 4th, Geo. V. Fletcher, Belmont. Points—1st, male 88, female 93; 2d, male 89, female 91; 3d, male 86, female 91½. Light—Chicks, 1st and 3d, G. V. Fletcher, Belmont; 2d, Damon & Marshall; 4th, J. E. Wilmarth, Taunton. Points to 9th premium—1st, male 93, female 92; 2d, male 94, female 93½; 3d, male 91, female 92; 4th, male 87, female 96; 5th, male 92, female 91, Damon & Marshall; 7th, male 90½, female 88, Damon & Marshall; 8th, male 88½, female 89½, J. E. Wilmarth; 9th, male 86, female 89, J. E. Wilmarth.

Cochins. Pea Comb Partridge—Fowls, 1st, C. H. Edwards, Melrose, Mass.; Chicks, 2d, 3d, and 4th, C. H. Edwards, Melrose, Mass. Partridge—Fowls, 1st, Geo. W. Brunton, Boston, Mass.; 2d, W. G. Garmon, Manchester. Buff—Fowls, 1st, Geo. V. Fletcher; Chicks, 1st, J. L. Noyes, Lowell; 2d and 3d, Geo. V. Fletcher. Black—Fowls, 1st, C. L. Parker, Winchester; Chicks, 1st, C. L. Parker, Winchester; 3d, Starks & Whiton, Hingham.

CLASS 2. *Darlings*—White, 1st, W. H. Allen, Manchester, Mass. Gray—Fowls, 1st, W. F. Daniels, Franklin, N. H.; Chicks, 1st, W. F. Daniels, Franklin, N. H.

CLASS 3. *Hamburgs*—Golden Penciled—Fowls, 1st and 2d, A. J. Tuck, Nashua; Chicks, 1st, and 2d, A. J. Tuck, Nashua. Silver Penciled—1st, A. J. Tuck. Silver Spangled—Fowls, 1st, Geo. F. Seavey, Cambridgeport; Chicks, 1st, Geo. F. Seavey, Cambridgeport; 2d, W. H. Cope, Lowell. Golden Spangled—Fowls, 1st, Geo. F. Seavey; 2d, Frank Ellis, Cambridge; Chicks, Geo. F. Seavey; 2d, Frank Ellis.

CLASS 4. *Lep horns*—White—Chicks, 1st, Laurin Martin, Lowell; 2d, James H. Nichols, Lowell; 3d, N. G. Robinson, Taunton; 4th, Laurin Martin. Points—1st, male 86, female 86½; 2d, male 87, female 83; 3d, male 83, female 84; 4th, male 84, female 84. Brown—Chicks, 1st, Laurin Martin; 2d, Geo. A. Parker, Reading; 3d, Gray & Sherman, Foxboro; 4th, Albert Beard, Nashua. Points—1st, male 91, female 94; 4th, male 87, female 82.

CLASS 5. *French*—Houdans—Fowls, 1st, 2d, and 3d, E. C. Aldrich, Hyde Park; Chicks, 1st and 2d, E. C. Aldrich, Hyde Park; 3d, Wm. J. Merrill, Lowell. Crevecoeurs—Fowls, 1st and 2d, J. Henry Symonds, Boston, Mass.; Chicks, 1st, 2d, and 3d, J. Henry Symonds, Boston, Mass.

CLASS 6. *Polish*—Fowls, White Crested Black, 1st, E. Hartshorn & Son, Boston; Chicks, 1st and 2d, E. Hartshorn & Son, Boston, Mass. Golden Spangled—Fowls, 1st, H. L. Clapp, Boston, Mass.; 2d, John H. Nichols; Chicks, 1st, J. Henry Symonds. Silver Spangled—Fowls, 1st, Starks & Whiton, Lowell; 3d, Asa Vinal, Lowell; Chicks, 1st, Starks & Whiton.

CLASS 7. *Game*—Black Breasted Red—Fowls, 1st, D. B. Wallace, Lynnfield; 2d, J. H. Fisher, Weston; Chicks, 1st, D. B. Wallace; 2d, A. H. Trowbridge, Winchester; 3d, E. H. Fisher. Brown Breasted Red—Fowls, 1st, D. B. Wallace. Claiborne—Fowls, 1st, D. B. Wallace; 2d, M. Schwartz, Boston; Chicks, 1st, D. B. Wallace; 2d and 3d, J. H. Fisher. Ginger Red—Fowls, 1st, D. B. Wallace. Earl of Derby—Fowls, 1st, D. B. Wallace; 2d, M. Schwartz; Chicks, 2d, M. Schwartz. English White—Fowls, 1st, D. B. Wallace. Georgian White—Fowls, 1st, D. B. Wallace. White Pile—Fowls, 1st, D. B. Wallace; Chicks, do. Red Pile—Chicks, 1st, D. B. Wallace; 2d, J. H. Murphy, Lowell. Spangled Pile—Chicks, 1st, D. B. Wallace. Blue Spangled—Fowls, 1st, D. B. Wallace. Yellow Duckwing—Chicks, 1st, D. B. Wallace. Red Dun—Chicks, 1st, D. B. Wallace. Tartar—Fowls, 1st, M. Schwartz. Wild Indian—Chicks, 1st, M. Schwartz. Clipper—Chicks, 1st, M. Schwartz. Heathwood—Chicks, 1st, J. H. Murphy; 2d, Laurin Martin. Fowls, 1st, J. H. Murphy. Golden Duckwing—Fowls, 2d, A. J. Tuck, Nashua.

CLASS 8. *Game Bantams*—Red Pile—Chicks, 1st, Rogers & Heywood, Worcester; Fowls, do. White—Chicks, 1st, Rogers & Heywood. Spangled—Chicks, 1st, Rogers & Heywood. Brown Red—1st, Rogers & Heywood. Golden Duckwing—Fowls, 1st, Rogers & Heywood; Chicks, do. Black Breasted Red—Fowls, 1st, W. F. Bacon, Lexington; 2d, Damon & Marshall; Chicks, W. H. Goodall, Woonsocket; 2d, W. F. Bacon.

CLASS 9. *Bantam*—Golden Sebright—Fowls, 1st, Geo. F. Seavey; Chicks, do. Silver Sebright—Chicks, 1st, Geo. F. Seavey. White Rose Comb—Chicks, 1st and 2d, W. G. Garmon, Manchester, N. H.

CLASS 10. *Plymouth Rock*—Fowls, 1st, Hiram Randall, Stoughton; 2d and 3d, V. C. Gilman, Nashua; 4th, James Hutton, Billerica; Chicks, 1st, 2d, and 4th, V. C. Gilman, Nashua; 3d, Hiram Randall. Frizzles—Chicks, 1st, Chas. W. Hoitt, Nashua.

CLASS 11. *Turkeys*—Bronze—Chicks, 1st, Levi L. Hall. Gray—Fowls, 1st, Geo. W. Varnum, Dracut.

CLASS 12. *Ornamental*—Pearl Guinea—Fowls, 1st, W. B. Feich, Lowell. White—Fowls, 1st, W. F. Bacon.

AQUATIC DIVISION.

CLASS 13. *Geese*—Bremen—1st, C. L. Parker, Winchester. Gray China—1st, C. L. Parker. Wild—1st, C. L. Parker. White China—C. L. Parker.

CLASS 14. *Ducks*—Rouen—1st and 2d, C. L. Parker; 3d and 4th, Albert Beard, Nashua. Pekin—1st, Laurin Martin, Lowell. Cayuga—1st, C. L. Parker.

COLUMBARIUM DIVISION.

CLASS 16. *Pigeons*—Carriers—Black, 1st, G. F. Seavey; 2d, Dun, G. F. Seavey; 3d, Yellow, G. F. Seavey. Tumblers—1st, Almond Shortface, Geo. F. Seavey; 2d, Ermine Shortface, G. F. Seavey; 3d, Almond, G. F. Seavey. Ring Doves—1st, L. Kirk Sprague, Lowell. Pouters—Black Pied, 1st, R. H. Justice, Lawrence; 2d, Black Isabella, R. H. Justice; 3d, Black Pied, L. Kirk Sprague. Barbs, 1st, Black, R. H. Justice; 2d, Yellow, John H. Nichols; 3d, Red, R. H. Justice. Fantails—1st, White Crested, Geo. F. Seavey; 2d, Black Smoothhead, Geo. F. Seavey; 3d, Yellow Smoothhead, G. F. Seavey. Spots—1st, Red, R. H. Justice; 2d, Brown, Kirk Sprague; 3d, Black Capped, C. C. Chase, Manchester. Trumpeters—1st, 2d and 3d, C. W. Chamberlain, Arlington. Swallow, 1st, Black, C. W. Chamberlain; 2d, Red, C. W. Chamberlain. Turbats—1st, White, Geo. F. Seavey; 2d, Yellow Wing, Geo. F. Seavey. Jacobins—1st, White, G. F. Seavey; 2d, Yellow; G. F. Seavey; 3d, Black, G. F.

Seavey. Archangels—1st, Blue, C. C. Chase. Magpies—Black Capped, 1st, R. H. Justice; 2d, W. F. Bacon; 3d, C. C. Chase, Manchester, N. H. Helmitis—1st, Black, R. H. Justice. Owls—1st, White African, D. Frank Ellis; 2d, Blue African, D. F. Ellis; 3d, Black African, D. Frank Ellis. English White Eyes—1st, R. H. Justice. Drums—1st, John H. Nichols. Blue Brunswick—1st, C. C. Chase, Manchester, N. H. Imported Turtle Doves, 1st, John H. Nichols.

CLASS 19. *Minor Pets—Guinea Pigs*—1st, A. F. Stevens, Natick.

Squirrels—1st, W. A. Safford.

Thomas L. Hallworth, of Chelsea, made a creditable display of Spangled Leghorn Chicks. Although they have not been recognized by the "American Standard of Excellence," will undoubtedly take a conspicuous place in the Leghorn class. Mr. Hallworth has a standard for his birds, and can show, by comparing the young birds with the old, that his efforts to breed to that standard have been a success.

SPECIAL PREMIUMS.

CLASS 1. Best collection Buff Cochins, George V. Fletcher, Belmont. Best pair Buff Cochins, J. L. Noyes, Lowell. Best pair Light Brahma Chicks, George V. Fletcher, Belmont. Best collection Pea Comb Partridge Cochins, C. N. Edwards, Melrose, Mass. Best pair Dark Brahma Chicks, C. W. Chamberlain, Arlington. Best pair Sebright Cochins, V. C. Gilman, Nashua. Best Light Brahma Cockerel, George V. Fletcher. Best Dark Brahma Cockerel, C. W. Chamberlain, Arlington.

CLASS 4. Best five pair White Leghorn Chicks raised by exhibitor, J. W. Vanson, Boston. Best White Leghorn Cockerel, John N. Nichols, Lowell. Best Brown Leghorn Cockerel, Laurin Martin, Lowell.

CLASS 5. Best collection Houdan Chicks, E. C. Aldrich, Hyde Park. Best collection Crevecoeurs, J. Henry Symonds, Woburn. Best pair Crevecoeur Chicks, J. Henry Symonds. Best pair Houdan Chicks, E. C. Aldrich. Best Houdan Cockerel, E. C. Aldrich.

CLASS 7. Best collection Game, D. B. Wallace, Lynnfield. Best pair Heathwood Ducks, J. N. Murphy, Lowell.

CLASS 8. Best collection Game Bantams, Rogers & Haywood, Worcester. Best pair Black Breasted Red, W. N. Goodall, Woonsocket, R. I.

CLASS 10. Best collection Plymouth Rocks, V. C. Gilman, Nashua.

CLASS 11. Best collection Turkeys, Levi L. Hall, Dracut.

CLASS 13. Best collection of Geese, C. L. Parker, Winchester.

CLASS 14. Best Collection of Ducks, C. D. Parker. Best Pekin, Laurin Martin, Lowell.

CLASS 16. *Pigeons*—Best collection pigeons various varieties, R. N. Justice, Lawrence. Best general collection, Geo. F. Seavey, Cambridgeport. Best and largest collection Silver and Blue Owls, Michael Stanton, Lowell.

CLASS 17. Best Canary Singing Birds, W. A. Safford, Lowell.

CLASS 19. Best collection Guinea Pigs, A. F. Stevens, Natick.

CLASS 20. Best Exhibition Coop, Geo. H. Burrows, Somerville. Best Hatching Coop, Laurin Martin, Lowell.

The exhibitor paying the largest entry fee for fowls and chicks, D. B. Wallace, Lynnfield. The exhibitor paying the largest entry fee for Pigeons, Geo. F. Seavey.

NEW HAMPSHIRE POULTRY SOCIETY.

Premium awards of the Ninth Annual Exhibition of the New Hampshire Poultry Society, held in Concord, February 1, 2, and 3, 1876.

Judges—H. S. BALL, A. F. STEVENS.

Brahmas—Light—Fowls, 1st, 2d and 3d, C. C. Russell, Nashua; chicks, 1st and 2d, C. C. Russell, Nashua; 3d, Nathan Mansur, Concord; specials for best collection and best trio, C. C. Russell. Dark—Fowls, 1st and 2d, W. E. Hood, Concord; chicks, 1st and special to J. Dutton, Hillsborough Bridge; 2d, J. R. Willman, Fisherville; J. W. Bond, Concord.

Cochins—Buff—Fowls, 1st, H. L. Wilkinson, Laconia; chicks, 1st, 2d, 3d, and special, H. L. Wilkinson. Partridge—Fowls, 1st, 2d, 3d, and special, W. G. Garmon, Manchester; chicks, 1st and special, F. P. Kemp, West Concord. White—Fowls, 1st, C. M. Boynton, Concord; chicks, 1st, 2d, and special, C. M. Boynton, Concord. Black—Fowls, 2d and special, W. G. Everett, Manchester; chicks, 1st, C. H. Colburn; 2d, W. G. Everett, Manchester.

ter; 3d, E. A. Drew, Concord. Pea Comb Partridge—chicks, 1st and special, V. C. Gilman, Nashua. Seabright—1st, V. C. Gilman.

Plymouth Rocks—Fowls, 1st and 2d, V. C. Gilman; chicks, 1st and 3d, V. C. Gilman; 2d, L. B. Hoitt, Concord; specials, for the best collection and the best trio, V. C. Gilman.

Dominiques—American—Fowls, 1st, W. F. Daniell, Franklin; chicks, 1st, 2d and 3d, W. F. Daniell.

Dorkings—Silver Gray—Fowls, W. F. Daniell. Colored—1st, W. F. Daniell.

Natives—1st, L. R. Goodrich, Hopkinton.

Crevecoeurs—2d, W. A. Sewall, Concord.

Houdans—1st and special, G. Blanchard, Wilton.

Polish—White Crested White—Fowls—1st, C. H. Colburn, Manchester; 2d, W. G. Everett; 3d, G. H. Woodbury, Newport; chicks, 1st, C. H. Colburn; 2d, W. G. Everett. White Crested Black—Chicks, 1st, C. W. Drake, Concord. Silver Spangled—Fowls, 2d, J. F. Jones, Contoocook; chicks, 1st, H. L. Clapp, So. Boston, Mass. Golden Spangled—Fowls, 1st, H. L. Clapp.

Game—Earl Derby—Fowls, 1st, H. C. Richards, Manchester. Red File Muff—Fowls, 1st, John Leary, Concord; chicks, 1st, John Leary. Black Red—Fowls, 1st and 2d, E. W. Thomas, Jr., Franklin; chicks, 2d, W. T. Putnam, Concord; special for the best collection of game, W. T. Putnam. Golden Duckwing—Fowls, 1st, A. J. Tuck, Nashua. White Georgian—Fowls, 1st and 2d, W. A. Sewall, Concord; chicks, 1st and 2d, W. A. Sewall; 3d, J. W. Gordon, Concord. Ginger Red—Fowls, 2d, W. T. Putnam. Gray—1st, J. L. Champigny; 2d, W. T. Putnam. Red File—Chicks, 2d, John Leary.

Game Bantams—Red File—Fowls, 1st, C. W. Hoitt, Nashua. Silver Duckwing—Fowls, I. Dean, Taunton, Mass.; chicks, 1st, Brad J. Cilley, Manchester, 2d, I. Dean. Golden Duckwing—Fowls, 1st, Brad J. Cilley; chicks, 1st, Brad J. Cilley. Black Red—Fowls, 1st, I. Dean; 2d, Brad J. Cilley; chicks, 1st, I. Dean; 2d and 3d, Brad J. Cilley; special for best collection, Brad J. Cilley.

Leghorns—White—Fowls, 1st, G. Blanchard, Wilton; 2d, C. M. Boynton, Concord; chicks, 1st, E. Dart, Franklin Falls; 2d, Laurin Martin, Lowell; 3d, J. H. Morrison, Marlow; special, E. Dart. Brown—Chicks, 1st, 2d, 3d and special, E. G. Rannels, Hopkinton. Dominique—Chicks, 1st, 2d, 3d and special, O. A. Hamblett, Milford.

Spanish—Black—Fowls, 1st, W. T. Evans, Manchester, 2d, H. J. Eaton, Concord.

Hamburgs—Golden Spangled—Fowls, 1st, L. P. Eaton, Hancock; chicks, 1st and 2d, L. P. Eaton. Silver Spangled—Fowls, 1st and special, E. E. Lane; chicks, 1st and 2d, J. Dustin, Henniker. Golden Penciled—Fowls, 1st, A. J. Tuck. Silver Penciled—Fowls, 1st and special, A. J. Tuck.

Bantams—Golden Seabright—Fowls, 1st and special, Isaac Dean; 2d, Mrs. C. C. Chase, Manchester. Silver Seabright—Chicks, 1st, I. Dean. White Rose Comb—Fowls, 1st, W. G. Garmon, Manchester; chicks, 1st and 2d, W. G. Garmon.

Silkie—Chicks, 1st, A. O. Hamblett, Milford.

Ducks—Pekin—1st and special, Laurin Martin, Lowell, Mass.; 2d and 3d, C. B. & G. H. Flanders, Concord. Rouen—3d, E. P. Kemp, West Concord. Aylesbury—2d, John B. Sanborn, E. Concord.

Pigeons—J. P. Ankarloo, Manchester, 7 first, 2 second premiums. N. A. Sleeper, Manchester, 1 first, 3 second. C. C. Chase, Manchester, 13 first, 10 second. D. W. Littlehale, Sutton, 1 second.

Cage of Song Birds—C. H. Barrett, Concord, 1st.

Turkeys—Bronze—1st and special, John B. Sanborn, East Concord. Wild—1st, B. W. Morgan, Franklin.

Mocking Bird—H. O. Mathews, Concord, 1st.

Collection of Stuffed Birds—F. B. Kemp, W. Concord, 1st.

Exhibition Coop—M. V. B. Kinne, Manchester, 1st.

Heaviest Cock—A. T. Sanger, Concord.

WM. G. GARMON, Sec'y.

ATHOL POULTRY ASSOCIATION.

The above association was formed last July, by a majority of the officers of the association holding its exhibition in Music Hall, Athol, in 1875, and now has nearly 300 members, among whom are many of the principal poultry breeders in this part of the State, and several belonging in New Hampshire. Its first exhibition was a success financially and otherwise. Some 400 coops of first-class fowls being entered for competition.

Leghorns—Dominique, Chicks, O. J. Stockwell, Athol. Spangled

—A. J. Hamilton, Athol. White—Fowls, W. G. Scribner, Fitchburg. Chicks—J. H. Oterhout, Greenfield. Brown—Fowls, W. G. Scribner. Chicks—C. C. Haskell, Greenfield.

Lucks County—Fowls, O. Mixer, Worcester. Collection do. *White Dorkins*—J. R. Maxham, Fitchburg. Chicks, do.: best pair fowls or chicks, do.

Polish—Chicks, E. A. Pickering, Ashuelot, N. H.

Runpess—G. R. Maxham.

Silkes—J. W. Cleveland.

Plymouth Rocks—Fowls, W. A. Carlton, Fitchburg, Mass.

Chicks—Henry Latham, Hinsdale.

Black Spanish—Fowls, S. S. Tower, Athol.

Hamburgs—Silver, Spangled, G. R. Pratt. Spangled—J. S. Goodnow, Millington.

Crevcaours—G. R. Pratt, Athol.

Bantams—Black African, A. F. Stevens, Natick, Mass. Chicks, do. *Smallest pair* of any variety, Marshal B. Waterman, Athol. Best cross, do. Best collection, A. F. Stevens. The largest number of bantams raised by the youngest exhibitor, Marshal B. Waterman.

Guinea Fowls—A. F. Stevens.

Best Crowing Bird—E. S. Bigelow.

Best Crossed—Thoroughbred fowls, H. H. Adams, Orange. 2d best, E. S. Elliott.

Turkeys—best, N. Howe, Hinsdale, N. H. 2d best, W. H. Newton, Royalston.

Ducks—Mrs. C. W. Moore, Athol.

Geese—W. N. Newton, Royalston.

Rabbits—Rogers & Haywood.

Ararots—Gray, Ira L. Davis. Green, Mrs. Geo. W. Woodward.

To the woman raising, caring for, and exhibiting the largest collection of fowls, Mrs. Geo. W. Woodward.

To the woman raising and exhibiting best pair of fowls, Mrs. G. W. Woodward.

Largest brood of youngest chickens, O. J. Stockwell, Athol.

Canaries—Best pair, Mrs. R. Wm. Waterman. Best singers, do.

Paroquet—Mrs. Mattie Broom, Athol.

Doves—Ring, Mrs. O. Mixer.

Peacock—Ira L. Davis.

Dressed Poultry—Mrs. C. W. Moore.

Largest Eggs—Summer Sibley. Smallest, Mrs. O. Mixer.

Hicciest Hens—C. C. Holton, Hinsdale.

Squirrels—B. King.

Wild Game—(alive,) D. L. Richards. Same for three live coons.

Cat—Best specimen, Marshal B. Waterman.

Dogs—Largest and handsomest, to Chester Conham, Athol. For Newfoundland dog, hunting dog, to R. Wm. Waterman.

Pencil Drawings—One each for animals and birds, to Clara Wheeler, Northfield. Best specimens of the same by a boy, to C. A. J. Waterman.

Stuffed Birds—J. H. Talbott, Athol.

SPECIALS.

For the largest number of entries, Rogers & Haywood, Worcester, Mass.

Brahmas—Light, P. F. Amidon, Hinsdale, N. H. Chicks, do. Best collection, do. Dark—best pair of fowls, P. F. Amidon. Chicks, do. Best pair of hens, R. Wm. Waterman, Athol, Mass.

Cochins—Black, R. Wm. Waterman. Buff—E. C. Holton, Hinsdale, N. H. Chicks—A. French, Orange, Mass. Collection, do. Partridge—J. W. Cleveland, Millington, Mass. White—Asa, Hosmer, Baldwinville, Mass., F. C. Furbush, Westboro, Mass.

Game—White, Fowls, R. Wm. Waterman. Chicks, do. Best pair from Curtis & Merritt's stock, Hartford, Conn., do. Chicks from any strain, do.—B. B. Read. Chicks—E. L. Elliott, Orange. Game. Earl of Derby—E. S. Bigelow, Athol. Duckwing—G. W. Cleveland.

Bantams, Game—Best pair of any variety, Rogers & Haywood. Chicks, do. Duckwings, do.

SWEETSTAKES.

A \$42 sewing machine, contributed by the manufacturers for the person receiving the largest number of premiums was awarded to Rogers & Haywood, of Worcester, Mass.

The premium offered to the bird of any variety, scaling the most points, was awarded to R. Wm. Waterman of Athol, on his white game, figuring 96 points.

A. F. Stevens of Natick, Mass., received on his Rose Combed Bantams, figuring 94 points, the premium offered to the birds of any variety, excepting game, figuring the most points.

SPORTSMAN'S DEPARTMENT.

(For Fancier's Journal.)

THE DROPPER. FINAL ANSWER TO "VIC."

In the Journal of February 10, "Vic" disavows advising the breeding of droppers as field dogs. I somehow imbibed the idea that he had advocated it, but now that I am set straight in the matter, I have strong hopes of him, and congratulate him on his probable conversion to the "blue blood dog."

Let me assure him that I have described the real dropper. I know him in all his purity (?). There are some genuine specimens in my vicinity, with all the enviable traits of "Greenhorn's dog."

Captain Bogardus knows more about some other things than he does about the science of breeding.

He is just the man to describe the *modus operandi* of a pigeon match, and is a safe man to bet on, but when he leaves his legitimate theme and attempts to tell us how to breed our field dogs, he is getting beyond his depth. He recommends the dropper, and further in his system of breaking recommends riddling his hide occasionally with a dose of shot, to check his dropper proclivities. We don't have need to descend to brutality to educate (not break) the thorough bred.

I will now quote a paragraph in "Vic's" last. "If he (Greenhorn), will show how the first cross in a pointer and setter can be otherwise than pure blooded—sire and dam being pure blooded themselves." Good gracious! Will he tell me if the following described creatures are pure blooded, and by what scientific deductions he arrives at his results? viz., the produce of the pure pointer and the pure spaniel; the pure greyhound and the pure foxhound; or coming a little nearer home, suppose we take in the genus Homo; that voluntary cross between the pure Caucasian and the pure Congo negro; the mulatto. Pure blooded! yes, just as pure as Vic's dog.

With this I drop the dropper, leaving it for his admirers to sing his praises to their heart's content. GREENHORN.

OUT OF LUCK.

Two Sacramento men, "T. M." and "C. E. M.," had a little shooting at Beach's Lake a day or two ago. They at first took possession of a stand and waited long and patiently, but the ducks not appearing to be on the wing, they determined, as it was necessary to do something to warm up, to walk around the lake and see if they could not find birds sitting. Presently a flock of canvass-backs were discovered near a patch of tule, and the hunters "turtled" up to good shooting distance and fired. Some of the ducks tumbled over, but none flew away, and they loaded and fired again, about which time a professional hunter rose out of the tule and intimated his intention to inaugurate a season of hostilities, because of their having filled his decoys full of shot and about ruined some of them! A compromise was effected, and the amateurs were allowed to take a duck boat and try their luck on the lake. It was not a good day for hunting in duck boats. They only got one shot, but that sufficed, owing to the gun's pushing back (unphatically and upset the little craft in which they were seated, and they reached the shore wet to the skin. Of course it was nonsense to think of remaining longer at the lake.—From the Sacramento Record-Union.

A. N. RAUB, Associate Editor.

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES, IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

MARRIED.

Our well known and highly esteemed correspondent, Dr. Wilbur P. Morgan, of Baltimore, was married on the 26th of February, in Philadelphia, by the Rev. L. F. Morgan, D. D., to Miss Lalage, the youngest daughter of the late Professor S. H. Dickson, of the Jefferson Medical College, Philadelphia. The Dr. has been associated with *THE JOURNAL* from its first issue, having sent the first MSS. for its columns, and probably no series of articles have been read with greater interest than those from his pen. We know that our readers will join us in wishing the doctor and his much happiness.

The Rhode Island Exhibition was a very fine affair and fanciers generally will be pleased to learn that it was, financially, all that the managers expected. The next exhibition promises to be one of the best "Little Rhody" has ever known.

The premium list at the Springfield exhibition amounted to \$5,898. Every exhibitor who was present received the amount awarded him before he left the city, and all the premiums were paid within five days after the closing of the exhibition.

Breeders and fanciers who think the standard should be changed in any particular, must remember that they are required to send a definite proposition of such changes as they desire, to Mr. Ralph, Sec., A. P. A., at Buffalo, and must appear at the next annual meeting, at Boston, to advocate the change and show why it should be made.

In view of some of the ridiculous reports concerning the Exhibition at Springfield, it seems necessary to state that the credit for that splendid success, is almost entirely due to the well directed efforts of Messrs. Marsh, Nichols, Ray, Morris, and Birnie, of Springfield; Messrs. Sperry, Bestor, and Brewer, of Hartford; and Messrs. Pierce, Warren, Knox, Aldrich, and Mason, of the New England Club of Worcester.

In last week's issue we said, exhibitors from the east would not be prevented from making entries at the next Chicago exhibition, on account of the distance; we were correct. But when it comes to be known that the policy of the "National Society," is to pay

all its home bills promptly, and oblige exhibitors to assume the loss if there is any; we don't think they will go in swarms from the east, or the west either, for that matter.

Just at this season we are in the receipt of many inquiries from beginners asking advice as to where they shall get the best stock. We reply—consult our advertising columns carefully, then if possible ascertain the standing of the party of whom you wish to order. We will willingly give our opinion concerning any one whose reputation we may know. Get the best stock and pay what it is worth, the best is always the cheapest.

SLIGHTLY PERSONAL.

To the patrons and well wishers of the *JOURNAL*—just one word. We are getting settled in our new home, and so far we must say we like it. The Breeders of New England are a warm hearted, genial set, and the way they have of swarming around a Fancier, and doing and saying kind things, makes one feel as though he had taken all the prizes at a consolidated exhibition. We are indulging in this sort of feeling just now, and rather like the sensation. The *JOURNAL* has been much more warmly greeted and welcomed than we had anticipated, which of course leads us to believe that it is appreciated. Well, as we say, we are getting rapidly settled, and shall soon be in complete working order again. The delay in issuing the *JOURNAL* which is attendant upon our removal, will be only temporary, and very soon our subscribers will receive it regularly upon publication day. We have various changes and improvements in contemplation, which will be announced by their appearance, and not by any previous heralding; in the mean time we intend to keep it up to its present high standard. Letting the past and present stand as the promise for the future, we call upon those who like the *JOURNAL* and believe in it, to bring it to the notice of their friends. Our subscription lists are rapidly augmenting, and that without any special effort on our part. We get many letters which open by saying that the writers have "accidentally seen a copy," and want it sent to their address. So many letters of this nature have been received that we feel like urging our friends to take a little pains to bring the attention of non subscribers to the merits of the *JOURNAL*, a little effort of this kind on the part of each subscriber would result in adding thousands of names to our lists in a very short time. Every reader of the *JOURNAL* is directly benefited by every additional subscription he obtains for it. The larger our receipts, the better able we are to improve it. So we say to our many friends, make an effort to increase our lists by speaking good words for the *JOURNAL*, but don't do it unless you can do it with the honest conviction that you are recommending a good thing.

A SINGULAR PROCEEDING.

"Knowing the officers of the Chicago society as well as we do, we feel safe in predicting that every promise made, and every obligation entered into by them, will be fulfilled to the letter. The question as to whether the exhibition was profitable or not, will not, in our opinion, be considered for a moment in connection with the payment of premiums, any more than it would be by the officers of any other honestly conducted society in the United States."

These were about the words we used last week in alluding to the delay in paying the premiums awarded at the "National Exhibition" at Chicago. We had barely passed them over to our readers when we received notice that in consequence of extravagant management the exhibition was not a financial success—though we are left in the dark as to the deficiency—and that the exhibitors who had relied upon the promises made, and had incurred heavy expenses to make the show a fine one, and many of whom had contributed large sums for the premium list, would receive only a part of the premiums awarded them.

For the first time in the history of Poultry Exhibitions in this

country, a first-class society repudiates its promises made to exhibitors. This is something so entirely new and unexpected, that it is hardly safe just now to predict its effect upon the fraternity. It is possible that fanciers will take it all in good part, and continue to incur a large expense in making fine displays at the various exhibitions without looking very closely into their previous management. And then again, they may take up their minds that it isn't safe to rely upon any society in the future, which in the past has coolly laid aside and ignored its obligations and promises.

We have not time this week to go into this matter very closely, and must reserve extended comments until we can get the bottom facts. There are a few points, however, which we will simply allude to. The Chicago Society is supposed to be national in its scope. The officers are gentlemen selected from various parts of the country, and so far as we know them, are men of high standing and influence. We do not know of one on the lists who would countenance a discreditable, or even questionable act so that it is quite possible, as they are scattered all over the country, that this matter was never submitted to them, and may have been arranged by a few who gave it little or no thought. As their names stand among the officers, however, they will of course be considered as having advocated or acquiesced in the proceeding, though we think they should not be held responsible until it is known that they advised the non-payment of the premiums.

While it is usual for societies to promptly pay all the premiums, leaving their local bills to the last, the Chicago society has promptly paid all its miscellaneous home bills, and inflicts what loss there is upon exhibitors, the most of whom live out of the city, and who were at much trouble and expense to make the exhibition an attractive one.

Many hundreds of dollars were contributed by poultry fanciers and breeders, in all parts of the country, for premiums. This money it put in among the general receipts of the society, and then among the expenditures appears an item of \$1,272, for prize cups, so that the Poultry fanciers, without so intending, helped pay for the prizes which went to the Dog fanciers.

The winners of the unpaid premiums are informed by the circular, that they are to hold them as a debt against the society which is to be paid out of future profits. But why the exhibitors are to carry this debt we are unable to tell. It seems to us that if the gentlemen in Chicago had any faith in "the future receipts" that it would have been an easy thing to have made an arrangement with the gentlemen who furnished the "stoves and pipe \$486" (He certainly ought to have confidence in the society,) with the owners of the exposition building \$1,011, and other debtors in that city by which their claims could have been deferred at a fair rate of interest until the future receipts come in. Instead of adopting this course, which is the usual one with societies when the receipts do not cover the expenditures, and the members do not assume the obligation themselves, the Chicago society sends word to exhibitors who made the show what it was, that they must carry the debt for it. The fact that Chicago was so prompt in collecting her bills against the society and was unwilling to wait for "future receipts" is not a very encouraging one for the holders of unpaid premiums in distant parts of the country to contemplate.

These are only a few of the unpleasant features of this unfortunate proceeding. We use the word "unfortunate" in its largest sense, for it not only destroys confidence in this society, but to a greater or less degree weakens the faith of fanciers in every society in the country which has not been thoroughly tested. If this course can be generally adopted and not reduce the number of entries at future exhibitions, what is to prevent any society—however weak it may be—from offering twenty or thirty thousand dollars in premiums, and then politely ask the successful exhibitors

to consider the premiums awarded them as a debt against the society.

Just at the present writing the action of the Chicago society is a problem; that its solution in the near future will prove an unpleasant revelation there isn't the shadow of a doubt.

FANCIERS' JOURNAL.

We desire to call the attention of our readers to the above Poultry journal, the only weekly published in the United States. It is published by Joseph M. Wade, Hartford, Conn.

It is devoted to the interests of Poultry and small pet fanciers, and has no odor of a "ring."

We wish we could say as much of all other Poultry papers. To a fancier who enjoys fresh, spicy news, the *Fanciers' Journal* must prove an acceptable weekly visitor.—*Rural Journal*.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—An owl was brought to me to-day that measured 43 inches, (and there were giants in those days, Huon!) from tip to tip of wings. E. S. S.

—Over 38,000 squirrel tails were received at the office of the County Clerk, of Lake Co., Cal., in 1875, to claim the bounty offered, for the extermination of the pests.—*Petaluma Argus*.

—BIRDS OF NORTH AMERICA.—Nos. 15, 16, and 17 of this valuable work has just come to hand. Our readers who are studying Natural History, should not fail to examine this work. Jacob Studor & Co., Ohio, are the Publishers.

—HARE'S NEST.—Mr. Varnum does not agree with Mr. McCann, but states that after spending 43 years, almost daily in the woods, never saw a nest dug in the ground, nor lined with fur. He says they usually have 2 and 3 young at a birth, and once he saw four.

—Mr. Nelson Varnum, of Atco, N. J., assures us that the red squirrel is castrated by a worm, about $\frac{3}{4}$ of an inch in length, similar to those produced by the gad fly, in the backs of cattle. When Mr. V., was a resident of the State of Maine, he often shot the red squirrel in harvest time and extracted the worm.

—FLYING-SQUIRRELS.—While in the woods, in Maine, Mr. Nelson Varnum once saw a tree chopped down on an island. The tree had been killed by the rise of the water. In this tree a lot of flying squirrels had built their quarters. When the tree fell on the ice, from 3 to 5 were killed. This tree was 100 feet from any other which were on the bank of the pond. To reach this tree the squirrels must have ascended some high pines on the bank, from which elevation they were enabled to reach the dead tree on the island.

—Is it known to naturalists that the Black Bear (*Ursus Americanus*), feeds on still living animals? They are omnivorous, but prefer vegetable food to flesh. Unlike the Felidae, the Ursidae family never play with their victims. But I am assured by reliable gentlemen living in the Alleghanies, that the Black Bear will carry off a hog to a place that suits his ideas of "the eternal fitness of things," and there make a supper off the flesh of the living animal; not deeming it necessary to first take its life. Travelers tell us that the Abyssinians cut pieces of flesh from living animals, and eat them, being careful not to injure a vital part until much of the carcass has been consumed—are the bears no better?

J. M. McCANN.

—"INSTINCT OR REASON?"—I am glad my friend Huon accepts the latter. There is nothing remarkable about the actions of the squirrel spoken of; all squirrels do just the same thing every day—so do birds and insects—they know when the color of grass or leaves is the color as that of their feathers—and insects know when the objects on which they are is the color of their own bodies. But an observer of animals will see them do things that can only be accounted for on the supposition that they are in possession of reasoning faculties. This is especially true of dogs and horses. I have a horse now that opens gates and doors. To those who deny to animals reason faculties, I beg to recommend the following books; to wit: Buckland's *Curiosities of Natural History*, Jesse's *Anecdotes of Dogs*, The *Birdyie Michelet*, The *Intelligence of Animals*, (Ernest Menault), The *Universe*,

(Pouchet) Jesse's Gleaning in N. History, Wood's Man and Beast, Watson's Reasoning Power of Animals.

J. M. McCANN.

—A STRANGE ANIMAL.—A correspondent at Gaffney writes to the *Helenia Independent* that while out hunting recently, he came across an animal in the mountains, which he describes as a bald faced bear. It is the first time anything of the kind has ever been seen in Montana. Some months ago some hunters in Idaho killed a bear resembling it in some respects, but different from it in essential features. This bear appears to be allied to the grizzly species and was of remarkable size. From the crown of the head to the tip of the nose was a blazed spot not unlike the blaze on a horse's face. Although several shots were fired at the animal, severely wounding him; he nevertheless succeeded in escaping. From tracks seen in the snow, the correspondent is of the impression that there are a number of these animals in the mountains.

—SQUIRRELS.—I have in my rambles succeeded in obtaining a very good knowledge of the habits of the most common species of squirrels. That the gray, fox and black squirrels all castrate their own species, to a small extent, is certain, but the most inveterate enemy of them all is the little Red squirrel, some times called the Alleghany squirrel, *Sciurus hudsonius*. This pugnacious little fellow will castrate every squirrel, large and small, that he can get at, attacking with equal bravery the big fox squirrel, as well as his own species. I do not make this statement on my own observation alone, although the number of cases that have come under my observation would warrant it. I have been able to glean from old mountaineers, men whose lives have been spent in the woods, on intimate terms with all its denizens, sufficient information to corroborate my own experience. Such men are the ones to go to for information, as they are not likely to be led away by scientific facts, for they know only the facts as they observe them with their own eyes. O. D. F.

—Will Huon please tell me if bovines ever perspire. This is a matter that but few naturalists have thought of, but is one well worthy of consideration. I have yet myself to know of a single instance. On the frontier of Texas, where transportation is conducted by ox wagons, during the entire warm months, after drives of extreme length, and through the deep mud of alluvial soil, I have often searched in vain for moisture on the steers. I have seen wild and fractious cattle chased, in endeavoring to pen them for five miles in the broiling sun, and while the mustangs would be reeking with perspiration, not a drop of moisture would be found on the cows, except on the end of the nose. This idea was suggested by reading "Zoo notes, No. 12." Would like also for Huon to write on the subject of *Hares*, to give distinguishing difference between them and Rabbits. Also to give the number of varieties of American Hares, with the common and scientific name of each, and if it would not be taxing his ready pen too much, would like to see a short description of each variety's characteristics, in the *FANCIERS JOURNAL*, for future reference. "SIOUX."

—SQUIRRELS.—THE FINAL SUMMING UP.—The question asked by me in "Weekly Gossip," "Is it known to naturalists that squirrels castrate each other?" has brought out the following evidence:—

1st, This most interesting fact has been fully established, by witnesses, from Vermont to Maryland.

2d, That while this habit of the gray squirrel (*Sciurus migratorius*) was known to "every farmer's boy, big enough to carry a gun;" it had escaped the notice of the great poet-naturalist Audubon and all other writers on animal nature.

3d, That the gray is sometimes castrated by the black or red.

4th, That they are sometimes thus mutilated in battle with each other.

5th, That the operation is often performed by one, or the other of the parents, upon the young while they are in the nest. Proof: In the Spring of 1874, I took a nest of young gray squirrels, and kept two of them until fully grown. One was a female—the other a castrated male. They were quite small when taken, so that the operation in this instance must have been performed while they were in the nest. In reply to the suggestion that the work is always done by the red squirrel—I have only to say—that this is an animal never seen here.

RESULT.—A most curious and interesting habit of the *Sciurus* family, for the first time given to the scientific world.

J. M. McCANN.

—HOW TO KEEP GOLD FISH IN HEALTH.—1. Cover the bottom of the aquarium with clean coarse sand (obtainable at the aquarium dealers) to the depth of about one inch and a half. Avoid fine sand and soil. 2. Insert the weeds with a stone over each

bunch, to prevent their disturbance by the fish. 3. In a few days, when the plants show that they are thriving, by the production of oxygen bubbles, put in the fish—not before. 4. Beware of the common fault of putting in too many fish, and be careful as to the admission of sticklebacks, injurious insects, &c. Some sorts of beetles are very destructive to fish. 5. Never give the fish bread. In good condition they require no feeding; but a pinch of dry vermicelli, broken into minute pieces with the finger and thumb, is good for them. They are very fond of it, and will soon take it from the fingers when called. If forgotten, no harm will follow. 6. Do not let the aquarium remain in a strong sunshine or glare of light; a position between two windows is the best. If in a window, the light should be regulated with the blind or frosted glass. 7. In addition to the rooted plants, it is well to have a few of the round leaved water-plants floating upon the top. The water in my aquarium has not been changed for twelve months; I simply add a little from time to time to make up for diminution by evaporation. If the fish remain near the surface, gasping for air, it is a proof either that the aquarium is overstocked with fish, or that the weeds are not growing healthily, through some of the foregoing rules being broken. It is well to have a few water snails in the aquarium. A sponge fastened to a stick will suffice to cleanse the interior sides, leaving the side next the light uncleaned, whereby the light is qualified. Once fairly started, there is no further trouble whatever.—*Ex.*

SMALL PET DEPARTMENT

STRENGTH OF INSECTS.

We call a man, a horse, an elephant, strong; but it is very easy to see that, proportionally, insects are the strongest animals that live. They manifest their strength in running, leaping, flying, and sometimes in other ways. Some insects have been known to run so rapidly that, if a man of ordinary size should make as good time, proportionally, he would run more than twenty miles per minute, or sixty times the ordinary rate of a railroad train. A locust, with the aid of its wings, will leap two hundred times its own length; to equal which, a man would need to leap nearly a quarter of a mile. A flea, without wings, will leap the same relative distance; and it has been estimated that, if a horse should jump as far in proportion to its weight, it would scale the rocky mountains in a single leap. A humble bee has been known to follow a rail car, going twenty miles an hour, against a strong wind, for a long distance. Some beetles have a flight swifter, considering their size, than any bird; and butterflies sometimes travel more than a hundred miles on the wing at one flight; an elephant having the force of a horn beetle would be able to move a mountain. All have doubtless seen a beetle move a candlestick or lamp in his efforts to escape from underneath it; and he has been compared to a prisoner in Newgate shaking the building with his back. Some insects can easily raise forty times their own weight, and the smaller insects in the same groups invariably raise the greater weight in proportion to their size.—*Ex.*

PETS.

"Love me, love my dog."

It is curious to observe how, in the stoniest heart of man, there is always a certain small store of affection still left, which seeks an outlet. The philanthropist extends it over the whole race; the miser bestows it upon the bag that holds his precious hoard, and the poor captive lavishes it all on a tame rat or sociable spider. Old maids and authors, it seems, are famous all over the world for similar predilections; the former to spite an ungrateful sex that would not see their charms, the latter to console themselves for bitter critiques and an unappreciative public. Occasionally only do we meet with a man whom Providence has enriched with legitimate objects of his love, and who still finds a surplus of affection to bestow upon pets. Such an overflowing heart is owned by one

of the cleverest and brightest of French writers. Théophile Gautier, who has lately presented his favorites, under the title of his *Domestic Menagerie*, to the reading public.

The tendency must have been deeply rooted in his heart, for his very first sorrow was caused by the absence of a favorite pet. He had been carried from his home in the provinces to the capital, and sadly missed, amid the splendor of Paris, the familiar faces, the *patois* of his friends, and, above all, the companion of his gambols, a pet dog, who had been left behind. Though only three years old, he became so homesick that, one fine day, he threw his leaden soldiers, his wooden village, and his bright-red violin, out of the window, and merrily trotted down the street, on his way home. Fortunately, he was overtaken in time, and to comfort him in his deep felt exile, the nurse purchased a dog for him, that looked enough like his old favorite to dry his tears. The animal soon became gentle, and warmly attached to the boy, especially at meal-time; but after a while he seemed to pine; he looked sad, moved with difficulty, and refused to play and to run. One fine day, when the future author was pulling him rather roughly, he felt something strange in his hair, and the nurse was called in to examine the matter. She took a pair of scissors, cut a thread which she had discovered underneath, and relieved the poor dog of a warm overcoat of sheep's-wool, which he had been compelled to wear for beauty's sake. It had fitted him well enough when he was thin and lean, but, as he fattened under generous treatment, the coat became too tight, and threatened to smother him. Now, relieved of his strait-jacket, he shook his ears, stretched his limbs, and gambolled joyously around the chamber, quite content to be ugly, if he could only be easy.

With growing years, the boy's affections were transferred to cats, as more quiet and dignified, and dynasty succeeded dynasty, till Hildebrand ruled supreme in the house. Hildebrand was a superb creature, with tawny fur, striped with black; large green eyes, and majestic deportment, so as to look for all the world like a miniature tiger, and quite as blood-thirsty. But as his owner began to write poems, which gave his name no small prestige, the pet also began to give way to ambitious designs. One fine day a friend brought to Gautier a parrot, which he wished to be taken care of during a short absence. The bird, slightly frightened, climbed to the top of his pole and examined every thing in the room with his bright big eyes. The cat had never seen a parrot before, and returned the compliment by fixing his green eyes steadfastly upon the strange bird, lying all the while, as motionless as a mummied cat of Egypt, on his soft cushion. All his recollections of life in the garden, the court-yard, and on the roofs, failed to throw any light on the subject. At last he came to the conclusion: "It must be a green chicken!"

Thereupon he coiled himself up in a ball, ready to spring upon his victim. The parrot followed all his movements with feverish anxiety; he shook his feathers out, he rattled his chain, he raised his claw, snapped his fingers, and sharpened his beak on the edge of his cup. The eyes of the cat became only more eloquent; they said clearly that "green chicken must be good to eat!"

Suddenly the arched back unfolded itself, and, with one magnificent bound, the cat was on the perch. The parrot, seeing his danger, in a solemn, deep-bass voice, suddenly cried out: "Had your breakfast, Jack?"

These words frightened the cat beyond any thing he had ever heard. A trumpet-blast, a pile of plates falling with a crash, a pistol fired at his ear, could not have startled him half as much. He bounded back and looked all consternation. "What did you have—roast meat?" continued the parrot, enjoying his adversary's discomfiture. The cat's eyes said clearly: "It cannot be a chicken, after all; it is a gentleman!" The poor creature crept under the sofa, and did not venture out all day long.

From cats to rats the transition was sudden and violent. A

couple of self-styled sailors offered the author some handkerchiefs of pine-apple fibre and a pair of diminutive white rats, with the prettiest pink eyes in the world. He bought them, as he happened just then to have a fancy for white pets, and, from the horses in his carriage to the chickens in his poultry yard, all was white. A huge cage, with stair-cases leading from story to story, was built for the tiny animals, and soon they became marvelously tame. They not only suffered themselves to be caressed, but would seize their master's finger with their tiny pink hands, and lick it most affectionately. After dinner they were let out of their cage, and immediately they began to race, with amazing swiftness and graceful agility, over the arms, the shoulders, and the head of the author, passing under the waistcoat, and reappearing through the sleeve, out at the wrist. Then they were put on the table, and, in a few moments, the merry couple had disposed of nuts, filberts, raisins, and even the lumps of sugar left from the coffee. The author had a narrow plank laid from the edge of the table to their cage, and on this they carried, with an air of amusing stealthiness, all their treasures to their store-room. Soon they multiplied, and some thirty snow-white rats ran up and down in the strange Ratanopolis, as their owner called their cage. At times he would go to the uppermost story of his house and whistle softly; instantly the whole little people left the open cage, and, as they could not well ascend the steps, they would climb up one of the balusters, and, in single file, creep up on the railing, till they reached their master, uttering low cries of delight. Their end was tragic. During an oppressively hot summer day their cage had been carried into the garden, under a vine-clad bower. A thunder-storm broke out, and, just as the author was leaving the house with an umbrella, to look after his pets, a tremendous flash of lightning nearly blinded and deafened him; when he recovered from the shock he went to the bower, and there found his thirty-two rats lying on their backs, struck by lightning. The iron wire of their cage had probably attracted the electric fluid.

The strangest among his numerous canine pets was a spaniel, called Zamore, unpretending in figure and color, but remarkable for his extraordinary eccentricities. He hated the fair sex; he accepted all their favors and caresses, but he ignored their wishes haughtily, never obeying nor following them. He attached himself exclusively to the author's father, whom he worshiped silently, soberly, never taking his eyes from him for a moment, and following him, step by step, without looking right or left. He never indulged in the slightest gambol, but appeared, at all times and in all places, calm, philosophic, and almost ridiculously solemn. And yet he concealed under this austere demeanor a most extraordinary passion. An accident revealed it to himself and to the world.

Lying at his master's feet, he was one morning startled by the sudden explosion of a tambourine and a life before the window; he jumped upon the window-sill, and remained there as if petrified. In the street was a number of trained dogs, dressed up as noblemen, troubadours, or Turks, as Swiss shepherdesses and old marchionesses, according to sex. They walked on their hind-legs, they bowed and courted, they danced and pirouetted. Zamore stared, and at that moment probably said to himself: "I also am an artist." He rushed out; he tried to raise himself on his hind-legs, and attempted to join the company of learned brethren, but the owner cut him with his whip, and drove him ignominiously away. From that hour, Zamore's peace of mind was gone; he became more morose than ever, and refused even to eat. Soon a strange noise was heard at night, in a vacant room where Zamore used to sleep in an old easy-chair. After many guesses, one of the author's sisters at last ventured to investigate the matter, and, when she opened the door cautiously, she beheld, in the pale moonlight, a most extraordinary sight. There was Zamore on his hind-legs, beating the air with his fore-legs, and practising the

steps he had admired in the street! And this was not a passing fancy. He learned to dance, but only by dint of much hard labor and severe study. No sooner were the tambourine and the fife heard below, than he rushed down into the street, and, with a watchful eye, observed the graceful steps of his fellow-artists; when night came, he retired to his quiet room, and there practised what he had seen. The author and his friends went again and again to the half-opened door, and witnessed the strange performance. But a stranger scene was still to come. One fine morning the servants of the house saw, to their utter amazement, that some fifteen or twenty dogs of the neighborhood had squeezed through the iron railing, which separated the ample courtyard from the street, and formed a kind of circle around a smooth place, on which Zamore was gravely performing his best steps. Soon the outside public became more numerous, and, when the eccentric animal sank down exhausted, after having shown off all his acquirements, he was warmly applauded by an enthusiastic audience of men and dogs. His accomplishments did not change his nature, however; he remained as solemn and atrabilious as he had been before, and died soon after of brain fever, probably the effect of an attempt to learn the Schottische, which was just then becoming the fashion. The author proposed to erect over his grave a monument with the inscription, copied from the tomb of a famous danseuse: "O Earth, rest lightly on me, as I have ever rested lightly on thee!"—*Appleton's Journal*.

CORRESPONDENCE.

A GERMAN LETTER

FRI TZLAR KURIEZZEN, GERMANY,
February 4th, 1876.

DEAR MR. WADE:

If you have not received from me the subscription fee for 1876, it is because I have been here in Germany since last August, and having no greenbacks here, I could not send any. I therefore hope you will excuse me until I return to Indianapolis, next May, and wish you would continue to send your valuable Journal to my address there, as it will be read by some friends, and an occasional one sent to me by my friends. I am glad to see the Journal continue to improve, a sure sign that it takes, and will eventually pay. Since my stay here in Germany, I have taken considerable interest in the German Poultry and Pigeon fancy, and find the Germans wide awake in their organizations. Their Journals, too, are interesting, and since the existence of newspapers and poultry shows, the price of Poultry and Pigeons has doubled and trebled; the same is true with canaries, and birds of all kinds. Men that formerly raised birds only for pleasure, and would have to give away their surplus in order to get rid of them, can now, through a little advertisement, sell them at good prices, and thus make Pigeon-raising not only a source of pleasure, but of great profit too. The time that you could purchase a fine pair of German Toys for a dollar has long gone by; good birds of any variety cost as much here as they do with us, and the demand is quite as lively, and such birds as good English Pouters, and Short-faced Almonds, bring even better prices here than in America. You know I am a Pouter and Almond Tumbler fancier, and now I have found a variety in Germany, that I shall add to my lofts, and that is the little Pigma Pouter. I think they are bred from the Austrian Pouter. They are found here in all colors, with white bars on the wings. They are exquisite in shape and carriage, and seem to me the real aristocracy of Pigeons. They are very rare, and found only in the hands of the few. I shall also bring a few pairs of Caryl Poultry, a pair of Red Pieds, from Dundee, Scotland, and a pair of Whites, from Birmingham; also a pair of Yellows. Think after I get home, (and can gather courage enough to part with them,) shall

dispose of all my Almonds, and keep only large and small Pouters. But here I am rattling away about my fancy without taking your valuable time into consideration, and will therefore speedily draw to a close, with the hope to pay you and Philadelphia a visit on my way home.

Very truly your friend,
F. P. BECKER.

IOWA STATE POULTRY AND BENCH ASSOCIATION.

OFFICERS ELECTED FOR THE ENSUING YEAR.

At a meeting of the above Association, Wednesday Evening, February 9th, 1876, in I. N. Whittam's office, the following officers were elected for the ensuing year:

President—Z. Z. Luce, Iowa, Iowa.
Vice-President—J. O. Ferree, DeWitt; H. W. Boynton, LaPort; Alex. Charles, Cedar Rapids; G. B. Smealie, Independence; A. A. Cope, West Branch; Daniel H. Richards, Cedar Rapids; J. M. Gilchrist, Marshalltown; G. H. Goodrich, Toledo, J. J. Snouffer, Cedar Rapids; J. G. Pearce, DeWitt.
Secretary—Daniel H. Richards, Cedar Rapids.
Executive Committee—J. J. Snouffer, Hiel Hale, Geo. H. Greene, Cedar Rapids; Thomas Barnes, Blairstown; A. Littlejohn, Independence.

It was decided to hold a Bench show of Dogs in connection with the fourth annual exhibition.

Committee on Bench Show of Dogs.—A. C. Taylor, Cedar Rapids, Chairman; G. H. Goodrich, Toledo; these two will fill the committee to five.

Twenty new members joined the Association. Cedar Rapids is again fortunate in securing the location of this show, in January, 1877, or about that time.

THE LICE QUESTION.

Mr. Editor:

DEAR SIR:—On page 61 of your JOURNAL, is an article headed as above, signed F. P. Betts. The writer of that article evidently is too penurious to pay you ten cents a line for advertising his lice powder. After telling all he knows about the Lice Question, he says if any person will take the trouble to write to him, with stamp, he will cheerfully advise them all he knows respecting this remedy for lice. I took the trouble of sending him a stamped envelope, and I enclose his reply, which is his card, telling when he was born, that he has Brahma eggs for \$3.00, and if I will send him ten to twenty-five cents, he will send me a package of powder, with full directions. I think this is an imposition to the readers of your valuable JOURNAL. He does not do what he promises. If he wants the people to know when he was born, or if he has eggs and powder for sale, why don't he advertise as other men do who have goods for sale, and not say he will tell all he knows, and then ask for 10 to 25 cents for a package, without imparting the knowledge which he promises to give.

Respectfully,

W. J. BREWSTER.

Hannibal, N. Y., March 1, 1876.

WHITE FANTAILS.

ED. JOURNAL:

Can pure White Fantails, hatched from eggs from colored birds be said to be pure White Fans and first-class birds? By answering the above you will greatly oblige, Yours,

W. W. ELLIOTT.

[They would certainly be pure white, but not pure bred White Fantails, and yet they might have white offspring. They would not be the kind of stock we should select to breed from by any means.—ED.]

REDUCTION IN THE PRICE OF ADVERTISING.

In consequence of the hard times and scarcity of money, we have determined to put the price of advertising within the reach of all; also to make the width of column uniform with other poultry journals. After this date, only **TEN CENTS** per line of about eight words will be charged for each and every insertion.

200 BROWN LEGHORN FOWLS AND PULLETS for sale, suitable for breeding; also eggs from hens two years old mated with premium cockerels at \$2.00 per setting, two settings for \$5.00.

PART-BAILED COCHINS. I claim for my strain, large size and great layers.
Eggs \$2.00 per dozen.

M. A. FRY,
Vineland, N. J.

OUR ANIMAL FRIENDS.

A journal published under the auspices of the American Society for the Prevention of Cruelty to Animals. Henry Bergh, President. \$1 per annum.

GEO. WILL JOHNSTON,
Editor and Publisher,
No. 34 Elizabeth Street, New York.

FOREIGN COINS IN 1876.

During the Centennial, large quantities of foreign coins will be circulated by visitors to the International Exhibition. To prevent annoyance, delay, and loss, everybody should at once secure a copy of the New Edition of PETERSON'S COIN BOOK, containing perfect fac-simile impressions of the various gold, silver, and other metallic coins throughout the World; with the United States Mint value of each. The whole being placed in pre-order as regards the various currencies to which they belong, arranged according to their different denominations and value. Together with a complete index, alphabetically arranged, of the coins of each nation and fac-similes of the State Arms of each of the United States. Published in one folio volume, bound in paper, price \$1, and will be sent by mail, postage paid, on receipt of the price by the Publishers, T. B. Peterson & Bro., 395 Chestnut Street, Philadelphia, Pa. Do not wait until the foreigners arrive to purchase the needed Coin Book, but secure it at once.

A. N. RAUB, Lock Haven, Pa., has left with him for sale a first class double-barreled Rifle—stubb and twist barrels, silver-mounted, cost \$60, made to order. Write also if you have a first-rate Setter to exchange.

THREE SILVER CUPS AT BALTIMORE SHOW! Eggs from my cup B. B. Red Games, and W. C. B. Poland; also from my choice Houdans, L. and D. Brahmas, W. Leghorns, Game and G. Sebright Bantams. Address

MONTVUE POULTRY YARDS,
Brooklandville, Md.

NOW READY TO SHIP—pure and fresh eggs, 13 for \$2, 39 for \$5, of choice D. Brahmas, P. Breds, and Brown Leghorns. Visitor get tickets for Burt Station via Pottstown, Pa.

Address J. K. SCHULTZ,
Colebrookdale P. O., Berks Co., Pa.

DOMINIQUE'S, FANCY PIGEONS, AND WARREN GAMES.

Also, Black-breasted Red Games. Eggs for hatching in season, \$3 per setting of thirteen. Address

W. H. HELLENGER, Edgewood, Bucks Co., Pa.

W. H. BRACKETT Boston, Mass.,
Offers for sale at prices varying with quality of specimens, Partridge Corbials of his well known prize-winning strain; top-eared, Angora, Himalayan, and Dutch Rabbit; Guinea Pigs, some of which are white; and Pigeons of many varieties. Write for what is wanted, and address

Care of Washington National Bank,
Boston, Mass.

FOR SALE.—A few Games, (pit fowls) consisting of Black Reds, Duckwings and Heathwoods; prices low. Steel Spurs, Boston drop sockets, \$3.60 per pair.
Address
H. M. POOLE, Rockland, Mass.

INTENDING to close out my Partridge Cochins. I offer one cock, three fine cockerels, twelve hens and pullets. Choice stock; very low.

H. A. GRANT, Jr.,
Tarrytown, N. Y.

EGGS.

From thirty varieties, at \$2.00 per setting, sent to hatch. Send for descriptive catalogues, free.

SMITH & BROS.,
Stouy Brook, N. Y.

VOL. III.

HARTFORD, MARCH 9, 1876.

No. 10.

ONE TOUCH OF NATURE.

My sketch was finished, and I turned to go,
Yet lingered for a minute to compare
The painted cottage in my folio
With that which stood within the landscape there.
How feeble was my picture, despite all my care!

The cotter's wife was standing at her door,
And saw her husband coming down the lane,
And, catching up her baby from the floor,
She hurried out to meet him once again,
Lavish of treasured smiles that were not spent in vain.

Their meeting all his weariness relieved;
His drudgery to merriment gave place;
Exchanging burdens, she his tools received.
And he, the baby, nestling to his face.
So went they back contented to their dwelling-place.

Weak was my sketch, and weak the matchless hue
Which nature shed around on land and sea,
Beside the beauty of affection true
That simple meeting there revealed to me.
Nothing on earth with human love compared can be!

LAWNS.

Those who are about to make new lawns for another year should now commence the labor of trenching or plowing or subsoil plowing very deep. The lawn should be made and allowed to settle a week or two or during two or three good rains before sowing the seed and leveling up, and the seed should be sown as early as the season of cool nights and frequent rains comes on. Some writers advise the use of grains, as rye, oats, etc., to be sown with the grass seed; but, as according to the general law, the stronger overpowers and gradually destroys the weaker, we have found the use of any coarse grain injurious rather than beneficial. In the making of lawns we have at times had the handling of some very light sandy soil, and when compelled to do the best we could, without aid from top dressing, etc., we have used oats in the Fall, for the purpose of holding it from blowing, and have made our second sowing of seed after the oats had grown an inch or so.—*Practical Farmer.*

THE FAMILY.

The family is the educator of the race. Here men and women are made. What they are in the world, that they were in the family as children. The family is the place where the first lessons of law are received, and where the whole character in view of law has a direction given it. The citizen is made in the family long before the time of voting or activity has come. When Napoleon said, in answer to Madame de Staël's question about France's greatest need, "Mothers," he asserted the all-potent influence of a true family life. The family is the greatest means for the development of character. What a world does it present for the affections to abide in! Where on all the earth besides are sympathies so warm, love so pure and fervent as here? All that gives value or beauty to human character finds in the family at once an atmos-

phere in which to expand and develop the elements which shall bring it to the highest perfection. The family creates a perpetual power which holds and moves evermore each individual of the circle. The parental love evoked every hour in providing, watching, guiding, throws back its influence over the heart and life of father and mother, and makes them what they never could be without it; it is a power which tends all the time to lift them to a higher and better place.

SCRAPS.

The chilling winds of winter have made their appearance; the ponds and rivers are frozen over, and the happy, joyous skaters are gliding hither and thither upon their icy surface, whilst others are climbing the snowy hill and rapidly glide down upon the "ripper," "runner," or old-fashioned sled.

The "tinkling of the bells" greet us pleasantly as they ring out upon "the icy air of night," while the grand old-fashioned sleigh-rides loom up before us, as we recall those times when we went for our "gal," and joined with others in a ride to a neighboring town, there to skip the "light fantastic toe," (when we weren't blessed with "cowhides,") to the rustic music of the village "fiddler" and "prompter."

The saying, "the times have changed and we have changed with them," cannot, perhaps, be more perceptible, than when we contrast the Present with the Past, and cannot cease to wonder what the Future will be.

We hear the buzz of machinery throughout the land, and note the various productions of "Yankee" ingenuity with amazement; and now at the Centennial rapidly approaching, I suppose we are making arrangements to outdo all creation.

I suppose, "last but not least," the Centennial will have a "Poultry Show."

How our forefathers would have scouted the idea of a "POULTRY Show," drawing the words with a turn of the nose, indicative of disgust. But we hear of these shows occurring throughout the land, and new Societies are rapidly springing up here and there, for a claim upon our attention, and never was the demand for fancy poultry more great than to-day; the immense shows which are annually being holden, and in the midst of which we are, prove the assertion.

The cash prizes, medals, diplomas, honorable mentions, and specials, have an attraction, and are frequently making poultrymen—some start out with great ideas, but soon comes down to common sense; that he doesn't know it all;—and moreover, you take these men who go into the business for love, and you will find the most jolly, good natured, story-loving crowd you often meet.

UNICORN.

AN AMERICANIZED citizen was called on as a witness in a case before one of the justices lately, and when the oath was administered he raised both hands and said: "I shall spoke nod-dings what ain't drew, if ever I hope to die so quick as a minute."

POULTRY DEPARTMENT.

THE TRUE MODE OF FEEDING POULTRY

Is not universally understood, notwithstanding the mass of suggestions and directions that have been afforded through the poultry and agricultural press of this country in the past twenty years.

If we observe the habits of fowls and chickens, daily, we shall notice, that from the day these domesticated birds emerge from the shell, to the hour of their death, they seem to exist to eat. When at liberty, they range from dawn to sunset, in search of food—no matter how well they may be fed around the farm-house door, or in their regular feeding pens. Offer them a variety of feed different from the ordinary allowance, and they devour it. And during the warm months, when insect life is busy, they know no cessation, by daylight, in pursuing the flies, gnats, grubs, moths, worms, etc., that come and go in their way.

They eat little at a time, but do this often—upon opportunity. In a state of nature, the jungle fowl picks up his provender at large, and finds it slowly, as do the partridge and quail or grouse. Conditions are changed, of course, when we come to domestication; but the closer we can follow nature, in conducting to the comfort and care of our chickens, the better they will flourish, in the main.

Therefore, it may be set down as a good rule, that the general feeding of our poultry should be done upon a system that at least partakes, in a measure, of the natural course through which chickens will obtain their subsistence, if they find themselves at large, and are required to forage for their living, chiefly, and this mode is a very simple one.

All dry food, in the shape of whole or broken grains, is best fed to poultry by being scattered broadcast, as far and as widely as it can be readily dispersed over a clear space, from the hand. If whole corn and grain is fed, occasionally, it may thus be strewn over the grass-plot about your place, not a kernel will be lost, unless you thus distribute it wastefully, or overmuch, in proportion to the size of your flocks. The fowls and chicks will find it all, and they will thus fill their crops slowly and obtain a goodly degree of exercise during the operation, in preference to gobbling it by the handful, and thus gorging themselves, as is too often the result in ordinary feeding.

Food thus given digests better, the birds are obliged to "work for their living," by the means, and they swallow their food with a much keener relish in their slow way, than if they cram themselves hastily, by having it thrown to them or fed in lumps, or in large quantities. Scatter your dry poultry feed, then, among the gravel, upon the grass, and around the door-yard, at large, whenever this can be done conveniently.

Do this at morning and afternoon feedings, and allow them good range "between meals," with plenty of fresh water always close at hand; and you may be put to very little daily trouble on this score, during seven or eight of the twelve months in the year,

while your fowls, both old and young, will thus be kept busy, and do fifty per cent. better in the long run than you can make them do, through the crowding and cramming process in vogue among poultry-raisers in many places that might be pointed out.

DUCKS REQUIRE WATER

For their best thrift, it is usually claimed, and they will wander away from their home premises, a long distance daily, to gratify this indulgence of their natural inclination in this respect. But this is not absolutely essential to the well-being of the duck-race, in all cases, it appears.

A correspondent writes us that he "raises two or three broods of ducks annually, for his own family use in the fall, and he has no stream, pond, or river upon his place." The undertaking, he adds, "was experimental, three years ago, with me. I procured part ducks' eggs in the market, set them under hens, hatched my ducklings, kept them amongst my common poultry, and have never had any difficulty with them, more than with the chickens about the place, of same age.

They will eat as much as the largest chicks or fowls, but I feed all alike. They have never troubled me with any wandering propensity, and I have not found it necessary to provide any water for their convenience, other than that which the fowls generally are allowed for drinking purposes. I keep the wooden vessels that hold this water slotted over the tops, so that the ducks shall not get into and pollute it. But if they are not accustomed to swimming from their birth, they quickly come to "accept the situation" like the rest. And I have never observed that there was any difference in the habits of this class of domestic fowl, from those of the hens and chickens."

"I raise a couple of dozen, annually," says our correspondent, "which I fatten and kill off in the fall and early winter, for my own table use, and I find them very palatable, inexpensive, and thrifty, from the start; quite as much so as the same number of Cochins chickens would be. But they never see any water, save that which they drink. I keep no ducks over the winter, Christmas and New Year's sees the last of the annual broods. In the spring, I purchase eggs again, set them under hens, feed them as I do the rest of my fowls, and mature them as before, without extra cost or trouble."

Those who are fond of duck-meat upon their tables, may imitate our friend's practice with ease and profit. If two or three dozen can thus be raised, without the requirement of a stream or pond on the premises, in one case, it is certainly a feasible plan; and there appears no good reason why it should not always be similarly successful.

(For Fanciers' Journal.)

NEST BOXES AND NESTING.

As the time is now at hand when the arrangement of Nests and Setting Hens require special attention, I write this article sandwiching new and old ideas together hoping some one reader will at least be benefited by one or the other.

First, the arrangement of Nest Boxes. There is a "bit of advice" that has been published time and time again, that from my experience I cannot give as such. It is this—"let your hens follow their own inclinations"—"Let their nature do the work." "Let your hen and her eggs alone, if you want any chickens," &c. Don't be foolish enough to try this experiment. If you do the majority of our best birds, especially the Asiatics, will teach you a lesson in nature, that you was not looking for. I have a Partridge Cochins hen that laid her eggs in a pile of old iron scraps, and out of goodness of their nature, she set on the shells! and it was not until the most careful searching did I discover the iron manufacturing in full blast. Some say a hen hiding her nest, is always a forerunner

a nice clutch of chicks. How many can truly say this is so? With our common and Game fowls, this may be so, but with no other breed. I have yet to see one of the Asiatics do it successfully, and if left alone, as to nest, etc., they make a sad mess out of it. Give your hen and her nest careful attention, and if you do not get stronger and more chicks from the same number of eggs, your experience is quite different from mine.

FIRST.—Have a coop or coops so that you can set your hens apart from the laying stock. For the following reasons: The hens will not be annoyed by others when on or off the nest. You can arrange the food, water, etc., so that she can always have access to it. Also, get a full supply. By being so confined she will not spend more time than necessary away from her eggs. Last and not least; you can see to matters without the annoyance to, or from your other fowls.

SECOND.—Take a box, the proper size, with *bottom and one side out*. This when on the ground, will give a *ground floor, ends, top and back covered*. If more than one in a coop I place them with the end against the side of the coop. By so doing, the hen is out of sight of the others. She must in all cases *go in on to her eggs*. She cannot *go down on to* and break them, as she would be obliged to do if in an open box or barrel. With such a box she is more secluded, and less liable to be annoyed. Nail the box to the side of the coop. Take an old knife and lower the earth in the box, and mix with it equal parts of wood ashes (free from charcoal) and sawdust, the latter dampened with a weak solution of carbolic acid and water. Now pack around the edge of the box, leaving a basin (not funnel) shaped nest. Line this with fine hay, not more than enough to simply cover the earth. Pack thoroughly, and with the warmth of the hen for one day before you give her the eggs, it will be a nest vermin proof, and much better than a mass of straw in an old box or barrel. Put into it two or three nest-eggs. Have plenty of food, water, gravel, etc., so that the hen can have access to it. Take the hen, gently drop her on the floor, after eating she will find the nest before night. If not, at night put her on it; put the eggs under her the next night. Examine the eggs every few days, by careful passing your hand over them. If they move easily they are all right. If not, some of them have been broken. Wash the eggs in warm water; put in a little fresh hay and replace them. Remove the chicks and shells as the eggs are hatched. Do not neglect a box of slacked ashes, or dust in the coop; but most important of all, is careful attention to minor matters, and a few things you *should not do*.

First, and with a heavy hen, absolutely necessary to success is, not to make the nest, be it made of what you will, *funnel shape*. If it is so made, the hen cannot turn the eggs. The upper or outside ones will crowd against, and crush the lower ones—very little weight is required to do this. Any one by examining into this matter, can see this, and instead of laying the blame of broken eggs to biddy, will put it where it belongs. Her *perverted nature or your own*. Have the nest *full bowl shape*, if it don't hold quite so many eggs. The hen can then move them about freely, and you can set a twelve pound Cochon without any risk. Have the nest free from small pebbles and bits of charcoal.

Never grease the hen before or while setting, to kill vermin. Greased eggs will not hatch. Never set a hen if you can discover a single louse on her. That louse will soon have a family.

Never put a nest full of eggs in a strange place and expect any hen to brood them immediately. Let her have a day or so acquaintance with the nest and its surroundings.

Never crowd a nest with coarse straw, put in any shape, and expect a favorable result.

Never give a hen more than she can cover. The entire lot will in time be *chilled*, as the hen in turning them brings them to the outside.

Never hurry matters, and attempt to set a hen until she is brooding, and fully ready for the business.

Never *pull* a hen off her nest. Lift her carefully by passing your hand under her—eggs are eggs, and the rough handling of the setting hen has brought on untimely death to many a chick.

Last but not least: Don't count your chickens before they are hatched, "accidents will happen in the best regulated families."

W. G. NICHOLS.

Springfield, O., Feb. 29th, 1876.

(For Fanciers' Journal.)

THE POULTRY SHOW AT UTICA.

Having secured an invitation from the Central New York Poultry Association, to act as Judge, at their show in Utica, I departed from home on Tuesday morning, February the 8th. The journey through New Jersey, and up the Hudson River was a very pleasant one, but very lonely. On my arrival in Utica, I heard the familiar name, Bagg's Hotel, and one of the porters conducted me within, and I was at once made to feel that I was at home, by the landlord, Mr. Proctor, who is a thorough bred fancier. The exhibition was held in the City Hall, a fine large building, and the stock showed to a good advantage. All was confusion when I entered the room, and who is there who will not understand the meaning of that word who has ever had anything to do with the management of a Poultry Show. There were 850 entries, consisting of Poultry, Pigeons, and small pets. There was a very good display of Fancy Pigeons, some fine Carriers, Jacobins, but the main display was poultry. I never witnessed a finer display of Houdan fowls and chicks. It was indeed grand, also the display of Buff Cochins. I was not favorably impressed with the exhibition of Partridge Cochins. The White Leghorns were admired by all. The display in Hamburgs was very good. The Duckwing class was poor, with the exception of two or three pairs. The Plymouth Rocks want a little more Plymouth in them, and they might have been better. I now ask the question, I may be very ignorant: What is a Plymouth Rock? I have an idea, but no, I will not state it: only this and nothing more. That I do not believe that there is a man in the United States who knows what they are. Now for the Lord's sake Dickie, Drake, Corbett, Gilman, Upham, Felch, and Stoddard, do not take up the columns of the JOURNAL in answering me, do not write me letters. I indeed thought, when I visited the Springfield show, that I would find out; but after hearing the views that were advanced by some fifteen persons, I became more bewildered than ever, and gave up in disgust, but I will drop the curtain. Some of the Black Spanish were very good, also the Game class. The display of Games was highly admired by those who fancy that class of poultry. J. Y. Bicknell had a splendid collection of Ducks. Mr. B. is one ahead in ducks in the United States. Mr. Green had on exhibition fish, but my idea of fish is, that I prefer them on the dinner table, and not in glass jars. The display was very creditable to Mr. G.

There was nothing in the hall that attracted more attention than the display of bugs and butterflies, exhibited by Dr. Cook. It was valued at \$3,000, for some of them the Dr. paid as high as \$30.00. Well we all have to ride some hobby. And now one word on Pekin Ducks on exhibition; well indeed they was. All our shows have had them like the small-pox. Oh, poor little despised Rouen, were you there? In this article, Rouen, I will do you justice; it must come out—you stand high, over the Pekins. outweigh them? yes indeed. I would not give one pair of Rouen Ducks, for three pairs of Pekins. I have been there—I speak by the books—my dutch is up. I do not believe that you can ever make a Pekin duck outweigh a Rouen, no sir, it cannot be done—this is a positive fact: at our exhibition, the Rouens outweighed them, and it is the case every where. The stock of Light Brahmas was very good at this exhibition. I visited the country residence

of J. Y. Bicknell, and found all in perfect order. He has a fine farm, and stands at the head of the poultry fraternity, in the State of New York. I also visited the home of Newton Adams. His stock of Houdans and White Leghorns are about as near perfect as can be found anywhere. This is the third exhibition held by the association, and the managers have reason to be proud of it. The President, Mr. Preston, and in fact all the officers, are live, energetic men, and they deserve success.

I was highly pleased with Utica, it is a grand little city, and its people are very hospitable. Thanks to Messrs. Bicknell, Adams, Proctor, Root, Warr, and the hen judge, Willard, for kindnesses received.

During my visit to Utica, I accepted the kind invitation of the venerable Dr. Cusson, of Clinton, to visit the State Lunatic Asylum. I found it perfect in cleanliness and order, and was glad to find there were no Poultry Fanciers confined within it, and was informed that the insanity of poultry men was of so mild a type, that they were perfectly harmless. I left Utica on Monday morning, changed cars at Albany, and visited the grand consolidated show at Springfield, Mass., and to be candid, I must say that I was not very favorably impressed with consolidation. But some other pen will tell the story. I had the pleasure of meeting some of the prominent men of New England, who are engaged in breeding poultry. I might mention the names of Gen. C. A. Johnson, Sperry, Lockwood, Smith, Bestor, Stoddard, Hudson, Williams, Hudson, Brewer, Plaisted, and others. I found them all gentlemen—whole souled and generous, and was pleased to meet them.

Kindly Yours, TENNET.

Doyleston, Pa.

(For Fanciers' Journal.)

HOW TO AVOID VERMIN.

EDITOR FANCIERS' JOURNAL:

DEAR SIR.—The first number of our favorite *weekly* poultry paper, in its very neat style and form, dated "Hartford, Conn.," reached us to-day after a hiatus of two weeks in its regular issue—and we were very glad to welcome the bright clean pages and well filled columns of the FANCIERS' JOURNAL once more, after its change of locality in publication. There is no indication of retrograding, and No. 8, for 1876, is quite up to its predecessors in general value, good appearance, and interest, in all respects.

On page 84 of this number, I notice that your correspondent, Mr. Nichols, takes ground against the efficacy of sulphur, tobacco-dust, and coal oil, in their application for the destruction of vermin upon fowls, and in the poultry house. I am an "old stager" in this business of practical chicken raising (as you know) and I am very certain that Mr. N. is mistaken in his notions—for, during years and years of experience, I have made use of these preventives, and I have no lice among my fowls, to trouble them or me.

Mr. Nichols premises in his article headed "TO ALL INTERESTED," that after a long experience with poultry he "has found their greatest enemy to be lice," &c. This is correct. No malady known among fowls is so annoying, so vicious, so destructive, and so insidious, as is this—and in almost all cases of sickness among domestic birds, to this nuisance may be traced the grand cause, near or remote, of most so denominated fowl "diseases."

But there is no need to have lice about, either upon your fowls or in their nests, coops, or houses, if reasonable means are adopted, and care is properly taken in continuing such means for the prevention of the breeding of this pest upon one's premises.

Mr. Nichols says "if your coops are infested with lice," and "if your fowls only rid themselves to return to the infested coops, and "if covered with the varminits," etc., etc., why, of course "sulphur and lime and coal oil is of no use." And in this your writer may be correct, in part. But this is not my style of ap-

plying the mentioned remedies—though I use them each and all, and have done this successfully, for many years.

If I am asked "how shall we get rid of the lice, if we are so unfortunate as to be annoyed with them?" I answer that I have never been thus troubled to any extent, and so can hardly advise—otherwise than I have done, herein. But I am quite confident that if those who are plagued with this inconvenience will follow up my suggestions, *thoroughly*, they will be benefited; and by continuing the practice faithfully, when once relieved, neither the owners or the fowls will thereafter be similarly affected.

PREVENTION is my plan.

I do not allow the lice to get a foothold, in the first place. And this is not a difficult thing to manage, at all. If it is not permitted among your layers and setting hens, the chicks will be free from the pest. If vermin is not suffered to breed in your nest-boxes, upon the roosts, or in the breeding (brooding) coops, there will be no "nits," and the fowls, young and old, will be free from that annoyance.

To do this effectually then, I have found the application of powdered sulphur in the dust boxes, underneath and on the sides of the sitting and laying nests, and dusted through the feathers of the birds, (male and female) *thoroughly*, a great aid towards the destruction of lice. The burned sulphur (in spring and fall) in the tightly closed house, is another most excellent plan. But the washing of the roosts with coal oil (or turpentine spirits) twice a month in early and late summer, is very beneficial. And the scattering of tobacco leaves or dust beneath and through the hay of the nests is also very effective.

This should be followed up attentively. Once in a year isn't enough! But if it be attended to properly, no lice can begin to grow on your premises; and thus, you will not be called upon to devise ways and means to get rid of the curse. The rubbing of a little lard (saturated or mixed with crude oil of petroleum) beneath the wings and around the outside of the vent of adult fowls thus infested, will drive vermin away. But the *nits* on birds so affected must be destroyed, also—or they quickly get lousy again.

In conclusion, I repeat that you must *prevent* lice from getting a hold on the premises or the birds. If the old fowls are thus kept free from the nuisance, the chicks will not be troubled; and I have found that the rightful use of sulphur, tobacco, and kerosene has always done the business for my poultry.

Yours, &c.,

VETERAN.

THE ASSOCIATED FANCIERS OF EAST PENNSYLVANIA.

Pursuant to the call for a convention of fanciers and breeders, to meet at Allentown, March 2d, 1876, the following Poultry Societies were represented. The delegates from the Pennsylvania State Poultry Society, were, Messrs. G. W. Frederick and A. P. Groves, Chestnut Hill, Pa.; J. D. Nevions and J. G. Darlington, Philadelphia, Pa. The Eastern Pennsylvania Poultry Society sent as delegates: Messrs. A. M. Dickie, T. P. Harvey and W. T. Rogers, Doylestown, Pa.; W. E. Flower, Shoemakertown, Pa. The Central Pennsylvania Poultry Society was represented by Mr. W. A. Shoemaker, of Tamaqua, Pa.; the Berks County Poultry Society, by Dr. Berkemeyer of Kutztown, Pa.; the Easton Poultry Society, by Messrs. T. L. McKeen, W. H. Hulick and Jos. Rodenbaugh, Easton, Pa.; the Lehigh Valley Poultry Society, by T. James Ruher, W. C. Miller, and H. T. Warman, Allentown, Pa.; and several other individual members of the association.

Dr. A. M. Dickie called the meeting to order at 11 o'clock A. M., and on motion, J. G. Darlington, of Philadelphia, was chosen President, and W. E. Flower, Shoemakertown, Pa., Secretary. Dr. Dickie then in a few brief and pertinent remarks, stated the

object of the meeting, viz: "to combine or consolidate, for the purpose of holding one large exhibition of poultry, pigeons, dogs, etc., at some designated place in Eastern Pennsylvania." A general discussion then ensued by Messrs. Dickie, Nevius, Frederick, McKen, and others. On motion of T. P. Harvey, a vote was taken to see what societies were in favor of consolidation or combination, which stood two for, and three against. Allentown declining to vote either way.

On motion of T. L. McKen, a vote was taken to hold a combined show. The vote stood as follows: Philadelphia, Doylestown, Easton, and Tamaqua, in favor of a combined show. Allentown declining to vote at all. Adjourned until 1.30 P. M.

Meeting called to order at 1.30 P. M., President Darlington in the chair, J. D. Nevius made a motion that a permanent organization be formed, to consist of a President, two Vice-Presidents, a Corresponding and Recording Secretary, and an Executive Committee to consist of one member from each society in the combination; carried.

T. L. McKen made motion, that a committee be appointed to select a list of officers; carried.

The following committee was appointed by the President: T. L. McKen, Easton, Pa., A. P. Groves, Chestnut Hill, Pa., W. T. Rogers, Doylestown, Pa., W. C. Miller, Allentown, Pa., W. A. Shoemaker, Tamaqua, Pa.

The following list of officers were selected by the committee: President, T. L. McKen, Easton, Pa.; Vice-Presidents, A. P. Groves, Chestnut Hill, Pa., and E. J. Fry, Tamaqua, Pa., Corresponding Secretary, Jos. Rodenbaugh, Easton, Pa., Recording Secretary, — Hammond, Easton, Pa., Treasurer, W. H. Hulick, Easton, Pa.

On motion, the above named officers were elected by acclamation.

On motion of Dr. A. M. Dickie, it was decided to hold the first annual exhibition at Easton, Pa., the first week in January, 1877, and that T. L. McKen be authorized to procure a suitable hall for the purpose. No other business being before the meeting, it was adjourned.

W. E. FLOWER, Secretary, pro tem.

A CURIOUS OLD WORK ON POULTRY RAISING.

ARTICLE I.

We chanced upon a quaint volume, recently, entitled "The Art of Hatching and Bringing up Domestic Fowls, of all kinds, and at any time of the year," by Mons. de Reaumur, of the Royal Academy of Sciences, at Paris. This elaborately prepared, and finely illustrated volume, of about 500 pp., was written over one hundred and twenty five years ago, and bears the London imprint: "Printed for C. Davis, over-against Gray's Inn Gate, Holbourn, in the Strand, 1750."

M. Reaumur's work is devoted principally, to the hatching of domestic poultry, by means of artificial heat—"either in hot-beds, or by that of common fire," and is a studied dissertation upon the mode for hundreds of years in vogue among the *Bermeans*, in Egypt; where millions of chickens are annually, and successfully raised without mother-hens.

The *modus operandi*, through which this colossal result is attained in Egypt, has ever been—and still is—virtually a secret. M. Reaumur says in this volume, although through the researches of Messieurs Monconys and Thevenot, and Father Sicard, we have had much light thrown upon the subject, yet "their accounts have not been sufficiently particular in detail," and there are many minor discrepancies even among the records given by these travelers and savans.

Father Sicard tells us that "we ought not to wonder that this peculiar method of hatching chickens, should not be known in

Europe; since it is unknown even in a great part of Egypt. It is a secret, limited there to a single village, called *Berne*, located in the Delta, sixty miles from Cairo—and a few adjoining places, "The inhabitants of *Berne* teach this secret to their children—but successfully keep it from all strangers." In the proper season, the *Bermeans* disperse themselves around, each man who understands the process, takes charge of one "oven," for about six months, successively, and through their skilful management from 45,000 to 70,000 eggs are set at a time, in each oven—to be hatched out by means of properly applied, and carefully conducted artificial (fire) heat.

The Egyptian secret consists of two parts: namely, that of building these hatching-ovens properly, and that of causing the immense number of eggs set in them to be regularly and appropriately heated, night and day, as they would be if set on by the hens. The results attained are similar to those reached by the use of modern incubators, on a far lessor scale. The knowledge which the *Bermeans* possess (and which they keep so cautiously to themselves,) is that of so warming the eggs continuously, for twenty-one days, as to gradually unfold the chicks within, and finally to hatch them; the important point towards success, consisting simply (or in the cases of the American artificial incubator of Graves, or Halsted,) in keeping up a constant and regular needful degree of heat, and knowing exactly how to manage the ovens properly to effect this object.

A veritable account is given of the enormous number of chickens thus hatched in Egypt, as well as the exact number of ovens in use at that period, by the *Bermeans*. There were then 386 licensed ovens. "This number," says Father Sicard, "can never be increased, or diminished without the fact being known, since the Aga of *Berne*—a governing official—is the recipient of a regular tax of eight or ten crowns each for the privilege allowed to run an oven; and this being his rent-roll, all operators are duly licensed and registered. Thus it is known that there are (or were) 386 ovens annually at work in Egypt—say in 1740 to '45

In each oven they contrive to turn out, in six months' time, an average of eight broods, or hatchings, one after another. This gives three thousand and eighty-eight broods. The number of eggs set in each oven, at one time, is from 45,000 to 60,000. If three-fourths of the eggs hatch, (and this is said to be about the average product) we find that in each yard there are produced in Egypt, by this secret artificial process, 3,088 broods of say 30,000 live chicks, each; or the amazing number in the aggregate of *ninety-two millions, six hundred and forty thousand, annually!* At all events, this was the official record, more than one hundred and twenty-five years ago, from indubitable authority.

Americans naturally exclaim "where do all these eggs come from, just at the right time for setting, thus?" And "what do they do with these millions of chicks, as to raising, and disposing of them, after hatching?" We will answer these natural questions in next number, and give our readers some farther information upon this curious, but interesting subject—which has wondrously increased in proportions, as a business in Egypt, since the middle of the last century—but to which we cannot conveniently devote farther space this week.

PREMIUM LIST OF EASTON POULTRY EXHIBITION.

Brahmas—Light—Fowls, 1st, Paul Balleit, Balliettsville, Pa.; 2d, W. C. Miller, Allentown; 3d, McKen & Hulick, Easton, Pa. Chicks, 1st, 2d and 3d, McKen & Hulick. Dark—Fowls, 1st and 2d, D. C. Waterhouse, New Haven, Conn. Chicks, 1st and 2d, D. C. Waterhouse; 3d, McKen & Hulick. *Cochins*—Buff—Fowls, 1st, McKen & Hulick; 2d, U. N. Homer; 3d, James Cattell, Easton. Chicks, 1st, 2d and 3d, McKen & Hulick. White—Fowls, 1st and 3d, J. J. Berry, Hackensack, N. J.; 2d, McKen & Hulick. Chicks, 1st, J. J. Berry; 2d and 3d, McKen & Hulick. Partridge—Fowls, 1st,

2d and 3d, D. C. Waterhouse. Chicks, 1st and 2d, D. C. Waterhouse; 3d, McKeen & Hulick.

Dorkings—Silver Gray—Fowls, 2d, Richard Lee, New York. Chicks, 2d and 3d, Henry Hales, Ridgewood, N. J.

Leghorns—White—Fowls; 2d, Jos. S. Rodenbourg, Easton. Chicks, 1st and special, P. S. Hulsiger, Easton; 2d and 3d, Jos. S. Rodenbourg.

Houdans—Fowls, 1st, Thos. L. McKeen, Easton; Chicks, 3d, John Bacon, Easton.

Polish—Silver Spangled (bearded)—Fowls, 1st and special, Jacob Otto, Easton. Chicks, 1st, 2d and 3d, Jacob Otto. Silver Spangled—Chicks, 1st, P. S. Hulsiger; 2d and 3d, Jacob Otto. Golden Spangled—Chicks, 1st, Jacob Otto; 2d, H. S. Hickman & Co., Allentown, Pa. White-crested, muffed and bearded—Fowls, 3d, H. T. Sperry, Hartford, Conn. Chicks, 1st, H. T. Sperry. White-crested (American)—Fowls, 1st and 2d, H. T. Sperry; 3d, Amos Stone, Doylestown, Pa. Chicks, 1st and 3d, H. T. Sperry; 2d, J. H. Bardell, Nazareth, Pa. White-crested (bearded)—Fowls, 1st, Jacob Otto. White-crested Black—Chicks, 1st, Geo. Hickman, Nazareth, Pa.; 2d and 3d, Jacob Otto.

Hamburgs—Silver Spangled—Chicks, 1st, C. S. Siexler, Allentown; 2d, Herbert Hammond, Easton. Golden Spangled—Chicks, 1st, Chas. Selser, Doylestown. Silver Penciled—Fowls, 1st and 3d, W. S. Rogers, Doylestown, Pa. Chicks, 1st and special, W. S. Rogers. Golden penciled Hamburgs—Chicks, 1st and 3d, Howard Swinning, Doylestown; 2d, A. B. Holcomb, Lambertville, N. J.

Games—Earl of Derby—Fowls, 1st, A. B. Holcomb. Chicks, 1st, A. B. Holcomb. Black-breasted Red—Fowls, 1st, W. S. Eisenhart, Doylestown, Pa. Chicks, 1st, F. Darlington, Doylestown, Pa.; 2d, John Lair, Lambertville, N. J.; 3d, James R. Williams, Port Oran, N. J. Brown-breasted Red—Chicks, 2d, S. Vreeland, Easton. Ginger-Red—Chicks, 1st, Frank Vreeland. Pyle—White—Fowls, 1st, Channey Hilliard, So. Easton. Red—Fowls, 1st, Stewart & Raphael, So. Easton; 3d, Frank Vreeland; Grey—Chicks, 3d, H. Vogel, Easton. Black-Grey—Chicks, 1st, Frank Vreeland. Brass Backs—Chicks, 2d, Frank Vreeland.

Game Bantams—Black-breasted Red—Fowls, 1st, C. E. Long, Lancaster, Pa.; 2d, Berton Darlington, Doylestown, Pennsylvania. Chicks, 1st and 2d, Chas. E. Long; 3d, Fennicle & Hulick, Easton, Pa. Yellow Duckwing—Fowls, 2d, Chas. E. Long; 3d, Fennicle & Hulick. Chicks, 1st, Chas. E. Long. Silver Duckwings—Fowls, 2d, A. B. Holcomb. Red Pyle—Chicks, 1st, Chas. E. Long.

H. HAMMOND, Sec.

Easton Poultry Association.

RHODE ISLAND POULTRY AND COLUMBARIAN SOCIETY.

OFFICE OF THE CORRESPONDING SECRETARY.

PROVIDENCE, MARCH 3, 1876.

DEAR SIR:

With this I hand you the list of awards made at our 3d annual Exhibition holden in this city Feb. 7th to 12th. The Exhibition was a perfect success financially, our entries numbered about 475, a little more than half the number of last year, but as a whole were a much better class of fowls. We added a bench show of Pointer and Setter Dogs, owned in the state, to our exhibition, which form d a very attractive feature, our entries, though not numerous, (35) embraced many of the best dogs about here, and we trust another year we shall be able to throw our Premium List on Dogs as on Poultry, open to all comers.

The following gentlemen officiated as Judges on poultry: H. S. Ball, E. V. Lilly, A. F. Stevens, A. E. Abbott, T. A. Todd; on Pigeons, H. S. Ball, Aquatics, W. Clift; Dogs, Dr. N. Rowe, "Mohawk."

Yours truly,

JAS. L. BULLOCK,

Cor. Secretary.

CLASS 1. *Asiatic*—Brahmas—Light—Fowls, 1st, G. B. Fitz, Attleboro', Mass.; 2d, H. A. Rhodes, East Greenwich; 3d, C. & J. H. Cushing, Anthony, R. I. Chicks, 1st, 2d, and 3d, to J. E. Wilmarth, Taunton, Mass. Dark—Fowls, 1st, to C. W. Chamberlain, Arlington, Mass.; 2d, C. G. Sanford, Providence; 3d, H. A. Rhodes, East Greenwich. Chicks, 1st, C. G. Sanford; 2d and 3d, H. A. Rhodes.

Cochin—Black—Chicks, 1st, to W. B. and F. B. Hazard, Providence. White—Fowls, 1st, Thornton H. Adams, Pawtucket; 2d, W. B. & F. B. Hazard; 3d, L. B. Whitmarsh, Providence. Chicks, 1st, W. B. & F. B. Hazard; 2d and 3d, Thornton H. Adams. Buff—Fowls, 1st, 2d and 3d, to W. B. & F. B. Hazard, Providence. Chicks, 1st, and 2d to same; 3d, Joshua Vose, Mantion. Partridge—Fowls, 1st, to W. F. & F. B. Hazard; 2d, H. A. Rhodes, East Greenwich; 3d, W. L. Dennis, Providence. Chicks, 1st, to Joshua Vose, Mantion, R. I.

CLASS 2. *Dorkings*—Silver Gray—Fowls, 2d, to A. L. Dennis, Providence. Chicks, 2d, to J. S. Moorhouse, North Dighton, Mass.

CLASS 3. *Hamburgs*—Golden Spangled—Fowls, 1st and 2d, to L. L. Tingley, Pawtucket. Chicks, 1st and 2d, to same. Silver Spangled—Fowls, 3d, to C. B. Carpenter, Providence. Chicks, 2d, H. E. Tiepke, Pawtucket. Golden Penciled—Fowls, 1st, John Becker, Pawtucket. Chicks, 1st and 2d, L. L. Tingley; 3d, John Becker. Silver Penciled—Fowls, 3d, John Becker. Chicks, 3d, G. Dillenberger, Providence. Black—Fowls, 1st, J. S. Moorhouse, North Dighton, Mass. Chicks, 1st and 2d, L. L. Tingley.

CLASS 4. *Spanish*—Leghorns—Brown—Fowls, 2d, to Gray & Sherman, Foxboro', Mass. Chicks, 1st, J. H. Congdon, Providence; 2d, Gray & Sherman; 3d, Oliver Kendall. White—Chicks, 1st and 2d, J. E. Wilmarth, Taunton; 3d, E. B. Pendleton, Westerly.

Black Spanish—Fowls, 1st, J. L. Moorhouse; 2d, Chas. W. Grant, Attleboro'; 3d, J. E. Wilmarth, Taunton. Chicks, 1st and 2d, Chas. W. Grant, Attleboro'.

CLASS 5. *French*—Houdans—Fowls, 2d, to Joshua Vose, Mantion.

Creve Coeurs—Fowls, 1st, R. G. Buffington, Somerset, Mass.; 2d, Joshua Vose, Mantion. Chicks, 1st, to R. G. Buffington.

CLASS 6. *Polish*—Black—Fowls, 1st, S. P. Bullas, Providence. Silver Bearded—Fowls, 1st and 2d, Oliver Kendall, Providence. Silver Spangled—Fowls, 1st, to Oliver Kendall.

CLASS 7. *Game*—Black Breasted Red—Fowls, 1st, to J. J. DeFray, Newport. Chicks, 1st, J. H. Hammett, Newport; 2d, J. H. Congdon, Providence. Brown Red—Chicks, 1st, J. H. Hammett. Yellow Duckwing—Fowls, 1st, J. H. Hammett. Chicks, 1st, to same. Spangled—Fowls, 1st and 2d, to Frank Brown, Greenville. Chicks, 1st, 2d, and 3d, to same.

CLASS 8. *Game Bantams*—Black Breasted Red—Fowls, 1st, J. T. Peckham, Providence; 2d, Lincoln Curtis, Watchemoket; 3d, Clifton P. Brown, Providence. Chicks, 1st, Thornton Adams, Pawtucket; 2d and 3d, J. T. Peckham, Providence. Yellow Duckwings—Chicks, 1st, G. Dillenberger, Providence; 2d, W. B. & F. B. Hazard, Providence. Silver Duckwing—Chicks, 1st, S. P. Bullas, Providence.

CLASS 9. Bantams—African—Black—Fowls, 1st, E. S. Whit-
ing, Plainville, Mass.; also 1st on Chicks.
There were some fine specimens of Scabright Bantams entered,
that were disqualified from premiums by over weight.

MISCELLANEOUS.

CLASS 10. Dominique—Chicks, 1st, Albert F. Babbitt, Paw-
tucket; 2d, Jos. B. Hayward, Pawtucket.

Plymouth Rock—Fowls, 1st and 2d A. L. Dennis, Providence.
Chicks, 1st and 2d, P. A. Ballou, North Attleboro'; 3d, C. L.
Reed, Providence.

Sultans—Fowls, 1st, to Benjamin White, Pawtucket; Chicks,
1st, to same.

Turkeys—Bronze—1st premium, J. B. Heywood, Pawtucket;
2d, J. T. Wilcox, Warwick Neck; 3d, Harris Ralph, Pawtucket.
White—3d, Wm. Peirce, Jr., Hope, (the 1st and 2d premiums
were not awarded). Special premium for the best pair, J. B.
Heywood, Pawtucket.

Guinea Fowls—Pearl—1st premium, R. S. Buffington, Somers-
et; 2d, Chas. A. Russell, Providence. White—1st, R. S. Buf-
fington, Somerset.

Pea Fowls—1st, J. Lippitt Snow, Providence, R. I.

AQUATICS.

Ducks—White Breasted Poland—3d, J. Lippitt Snow, Provi-
dence. Rouen—1st, John S. Moorhead, North Digh-on; 2d, Jere-
miah Briggs, Providence; 3d, Harris Ralph, Pawtucket. Pekin—
1st, Samuel P. Bullas, Providence; 2d, Avery Forbes, Attleboro'.
White Muscovy—1st, Wm. Peirce, Jr., Hope. Colored Mus-
covy—1st, Wm. Peirce, Jr., Hope; 2d, G. Dillenberger, Provi-
dence; special premium for best pair, S. P. Bullas, Providence.

Geese—Toulouse—1st and 2d, Harris Ralph, of Pawtucket.
Emden—1st, J. W. Miller, Rehoboth; 2d, Wm. Peirce, Jr.,
Hope. Brown China—1st, J. Lippitt Snow, Providence; 2d,
Wm. Peirce, Jr., Hope. White China—1st, W. D. & F. B. Haz-
ard, Providence; 2d, Wm. Peirce, Jr., Hope; 3d, Harris Ralph,
Pawtucket; special premium for best pair of any variety, J. W.
Miller, Rehoboth, Mass.

COLUMBIAN DIVISION.

The first premiums in this Division are \$2, the second \$1, and
the Society special \$5.

CLASS 15—Pigeons—Pouters—Blue Pied, 1st, Benj. White,
Pawtucket; 2d, Adam Horst, Providence. Black Pied—1st, 2d
and special, Benjamin White. Red—1st, Benj. White. White
1st, Benj. White. Carriers—White—1st, and spec. 1, Sam. P.
Bullas, Providence. Barbs—Black—1st, and special, Sam. P.
Bullas, Providence; 2d, Benj. White. Red—1st, Benj. White,
White—1st, John Bray, Olneyville. English Owls—Blue—1st,
Blue—1st, Benj. White. Black—1st, and 2d, to same. White—
1st, 2d, and special to same. Blue Tail—1st, N. P. Brown.
Black Tail—2d, to same. Fan Tails—White Crested—1st and
special, Benj. White; 2d, W. B. and F. B. Hazard, Providence.
Smooth Head—1st, Walter Richmond, Providence; 2d, W. B.
and F. B. Hazard. Black—1st, C. R. and A. H. Nicholas,
Greene, R. I. Blue—1st, to same. Yellow—2d, R. G. Buffin-
gton, Somerset, Mass. Turbits—Black—1st, Oliver Kendal-
l, Providence. Blue Wing—1st, and 2d, C. R. and A. H. Nicholas.
Red Wing—1st, Oliver Kendall. Jacobins—Black—1st, C. R.
and A. H. Nicholas; 2d, Oliver Kendall. Magpies—Black—1st,
Oliver Kendall; 2d, Robert J. Haig, Providence. Black Cap—
1st, C. R. and A. H. Nicholas. Red—1st, to same. Tumblers—
Yellow—1st and 2d, Oliver Kendall. Black—1st, to same;
2d, Robert J. Haig. Red—1st, to same. Blue Beard—1st, Oliver
Kendall. Black Bald Head—1st, to R. J. Haig. Short-faced
Almond—1st and special, Benjamin White; 2d, Oliver Kendall.
Swallows—Black—1st, Adam Horst. Nuns—Black—1st, Oliver
Kendall; 2d, C. R. and A. H. Nicholas. Moreheads—Black—
1st, Adam Horst; 2d, C. R. and A. H. Nicholas. Spots—Black
1st, C. R. and A. H. Nicholas. Starlings—1st, S. P. Bullas,
Piscataway—Black—1st, O. Kendall. Red—1st, to same. Archang-
els—1st, S. P. Bullas. Antwerps—Blue long-faced—1st, S. P.
Bullas; 2d, Oliver Kendall. Blue short-faced—1st, G. Dillen-
berger, Providence; 2d, S. P. Bullas. Silver Dun—1st and 2d,
S. P. Bullas. Mahomets—1st, Benj. White. Dutchess—White.
1st, Oliver Kendall; 2d, R. J. Haig. Yellow Magpies—1st, N.
P. Brown, Taunton, Mass. Yellow Swallows—2d, T. Dillenber-
ger, Providence, R. I. Dun Dragon—1st, S. P. Bullas, Provi-
dence.

CLASS 16. Rabbits—Angora, 1st and special, G. Dillenberger,
Providence; 2d, James Laycock, Providence. Blue—1st, G.
Dillenberger. Native—1st, Henry B. Tallman, providence.

CLASS 17. Squirrels—Gray—1st, Henry T. Root.

MISCELLANEOUS.

Stuffed Birds and Animals—\$5, Thomas Alcock, Providence.
Canary Birds in Attractive Cages—\$5, Greenleaf, Anthony &
Co., Providence.

Best Singing Canary—Fine brass cage, and fine German Canary,
(two premiums) Greenleaf, Anthony & Co.

Exhibition Cops—\$3, C. A. Branford, Manchester, N. H.

Guinea Pigeons—Gratuity, Winthrop W. Brownell, Prov., R. I.

White Rats—Gratuity, Joshua Hoyle, Prov., R. I.

Ant Enter—Gratuity, Joshua Hoyle, Prov., R. I.

Display of Sky Larks—Gratuity, Joshua Hoyle, Prov., R. I.

Diploma awarded Steamer No. 10, for fine cage of monkeys on
exhibition.

SPECIAL PREMIUMS

Brahmas—Light, for the best cockerel in Asiatic class, Jas. L.
Bullock, Prov., R. I. (94 pts.) Heaviest Pair Fowls, H. A.
Rhodes, East Greenwich. For best pair, J. E. Wilmarth, Taun-
ton, Mass. For best hen, a L. B. hen, G. B. Fitz, Attleboro,
Mass. For best pair Fowls, a L. B. Pullet, G. B. Fitz, Attleboro,
Mass. Dark—For three best pairs Fowls, one L. B. hen, value
\$5, H. A. Rhodes, East Greenwich. For best hen, one Partridge
Cochin hen, value \$5, H. A. Rhodes, East Greenwich. For the
largest and best collection of D. B. not less than ten coops, H. A.
Rhodes, East Greenwich. For three best pairs Chicks, one Par-
tridge Cochin hen, value \$5, C. G. Sanford, Providence. For best
Cock bred by exhibitor, a D. B. hen, C. G. Sanford, Providence.
For best pair, C. G. Sanford, Providence. For best collection of
Cockerels, \$3, S. G. Sanford.

Partridge Cochins—For the five best, in one coop, H. A. Rhodes,
East Greenwich: also for best collection. For best pair, \$5,
Joshua Vose, Manton. White—For largest and best collection,
\$5, Thornton H. Adams, Pawtucket. For best Cock, figuring the
highest number of points, \$5, Thornton H. Adams. For best
pair, a White Leghorn Cockerel, W. B. & F. B. Hazard, Provi-
dence. For best pair Cochins, other than Partridge, \$5, W. B. &
F. B. Hazard, Providence.

CLASS 2. Dorkings—For best pair Dorkings of any color, one
Light Brahma pullet, A. L. Dennis, Providence. For best Dork-
ing cockerel, one year's subscription to *Poultry Argus*, R. G. Buf-
fington, Somerset, Mass.

CLASS 3. Hamburgs—For best pair of Black Hamburgs, a Black
Hamburg cock; for best pair Hamburgs, \$5; and for best Ham-
burg cockerel, one year's subscription to *Poultry Argus*, all to L.
L. Tingley, Pawtucket. For best silver spangled cockerel, one
pair pigeons, to H. E. Tlepiek, Pawtucket.

CLASS 4. Spanish—For best pair brown Leghorns, \$5, to J. H.
Congdon, Providence. For best pair black Spanish, one white
Cochin cockerel, to Charles W. Grant, Attleboro'. For best white
Leghorn cockerel, silver cup, to J. E. Wilmarth, Taunton. For
best pair White Leghorns, \$5, to same. For best cockerel in class,
one year's subscription to *Poultry Argus*, to J. H. Congdon, Provi-
dence.

CLASS 5. French—For best pair, \$5, R. G. Buffington, Somers-
et, Mass.; for best cockerel, one year's subscription to *Poultry
Argus*, same.

CLASS 6. Polish—For best pair, \$5, Oliver Kendall, Providence.
CLASS 7. Game—For best pair, \$5, J. H. Hammett, Newport;
for best cockerel, year's subscription to *Poultry Argus*, same.

CLASS 8. Game Bantams—For best pair Game Bantams, S.
P. Bullas, Providence, \$5, also for best cockerel, same class, one
year's subscription to *Poultry Argus*.

CLASS 9. Bantams, other than Game—For best pair and best
Cockerel in same class, E. S. Whitney, Plainville, Mass.

CLASS 10. Miscellaneous—For best pr. Plymouth Rock chicks,
\$5, P. A. Ballou, North Attleboro'; for best cockerel, year's sub-
scription to *Poultry Argus*, same.

DOG PREMIUMS.

Premiums were awarded in the "Bench Show" as follows:

THE CENTENNIAL POULTRY SHOW.

We are pleased to learn that Dr. A. M. Dickie, of Doylestown, Pa., has accepted the position of Supervisor of Poultry &c., at the Centennial Exhibition, tendered him by the authorities. We congratulate the Commissioners upon their success in securing the services of such an efficient and capable man as the Dr., whose experience will enable him to discharge the duties appertaining to the office, in a satisfactory manner to all. The Dr. is a thorough "Fancier," highly esteemed by all who know him, and his acceptance of the position cannot fail to give universal satisfaction to the Poultry and Pigeon Fanciers, both at home and abroad.

CAN EGG-LAYING BE FORCED.

We are frequently asked by novices how the laying of eggs may be increased? or how this desirable object may be promoted beyond the ordinary yield afforded by certain kinds of fowls? In a single sentence we reply that there is no known process that will inspire hens to lay, inordinately, or that will cause them to give us more eggs than about so many at the proper time, in a year.

Fowls bred and fed and cared for under different circumstances, or the widely different breeds of domestic birds we have in this country, may yield a greater or less quantity of eggs in the course of a season. It is quite possible to indifferently hasten in point of time the depositing of eggs, by using certain stimulating food, in given cases, when the chosen hens are about to begin naturally to lay. But this latter attempt will prove but slightly effective at the best, although we frequently read accounts in the papers of the rare success certain individuals meet with, through feeding with an excess of raw meat, plenty of scraps, quantities of ground bone and like substances. It is quite unlikely that any kind of food whatever will materially accelerate this work.

In such instances of noted success, the fowls have reached the point before this extra feeding commences, when they are about to lay. The stimulants may promote the discharge of the eggs somewhat, but to no considerable degree. If the hens are not nearly ready to lay, this change of food will do very little good, as a rule, and it is mostly imaginary—the results thus claimed.

Nevertheless, a regular and generous system of this sort of feed-

ing, from the time the pullets are fairly grown, and during the weeks or months they are coming up to the proper time for beginning to lay, will be found beneficial, and good warm quarters in severe cold weather will assist towards inducing them to lay at quite as early (or earlier) an age as a habit of negligence in their diet and care will tend to bring about these first results. But you can't have eggs from your fowls until nature has perfected the processes of their formation. And no amount of stuffing or forcing will expedite the discharge of their eggs, healthily, in the natural way.

It is very true that experiments have been tried repeatedly with this and that kind of food, or advertised "preparation, to make hens lay constantly," which have been pronounced by the experimenters successful. We are constantly reading such accounts in the papers. But it will be found in all such instances that the conditions were right with the fowls thus treated, for them to have performed their work naturally, had they been left without the forcing stimulants. And where this attempt has failed to produce the desired effect, that it was not the fault of the extra food administered. We know of no method to "force hens to lay." When they are ready, they will drop their eggs. Until they are thus ready, they naturally decline to oblige us.

THE CHICAGO EXHIBITION—MORE LIGHT.

The editorial in last week's issue, under the caption of "A Singular Proceeding," is attracting much attention from Fanciers, Officers, and Breeders, in all parts of the country, as is evidenced by the many letters we are receiving on the subject. We called for a suspension of judgment upon the officers living out of Chicago, as it was probable the matter of withholding the premiums had not been referred to them. In this supposition, we find we were correct. It is safe to say that the questionable proceeding was entered into, and consummated by a few managers, who not only seemed willing to tarnish their own reputations, but by their acts showed that they had no regard for the reputations of the gentlemen whose names had been placed upon the list of officers. It seems to us, that the ordinary courtesy of every-day life would have led them to have at least informed the gentlemen whose reputations were at stake, of the proposed action, and given them an opportunity of making good, in some way, the promises of their Society, or of resigning, if the determination to ignore its solemn obligations was too strong to be overcome.

As it stands, these gentlemen, who were selected for officers, on account of their sterling integrity, their prominence as fanciers, and their influence, without a moment's notice, or a chance to prevent the disgrace, are placed in a false position before the country. We venture the assertion, that there isn't one of them, but who, if the opportunity had been given, would have become personally obligated, if the matter could not have been arranged in any other way, rather than have it said that they were connected with an association which has no respect for its written pledge.

Why, look at the action of the A. P. A. At Chicago, the Society was found to be in debt; immediately the members came forward, took the Society's notes, and furnished the money to pay its bills. It will be said in answer to this, that they had faith in the association. Very well; then the deduction in view of the action of the Chicago Society is, that its managers had no faith in its future, and so obliged the exhibitors to carry the debt though they had never received an intimation that this would be required of them. On the other hand they were told that the premium list amounted to over six thousand dollars, and that exhibitors would be treated "with the utmost liberality." The "liberality" with which the exhibitors were treated is shown in the result. All the local bills, even to the "miscellaneous disbursements in small sums since organization of Society, \$471.26," and which had nothing to do with the exhibition, were promptly paid, and the exhibitors who

made the show what it was, were coolly told to "go whistle down the wind" for the premiums promised and awarded them!

Another point which we touched upon last week: The premium lists were opened at Buffalo, at the exhibition a year ago, and at the time of the annual of the A. P. A., when several gentlemen offered large sums, with the distinct understanding that they were to be given as single premiums. Then circulars were sent all over the country, soliciting donations of PREMIUMS. All this resulted, as appears by the published premium list, in contributions amounting to \$3,277. That this amount was contributed for premiums, there is not the shadow of a question. In fact, the managers so considered it, for we find them saying in the lists which were sent out to induce breeders to send their birds to the exhibition, that this amount "has been divided by the officers of the association, and distributed through the premium lists." Instead of holding these subscriptions sacred, for the purpose for which they were given, we find them treating the premium gifts as "donations" for general expenses. As appears by the statement given herewith, the amount of offerings for premiums, \$3,277, has, however, dwindled to \$2,039.73 in "donations," and no explanation is given concerning the balance of over \$1,200. If this amount was collected, what has become of it? If it was not all collected, why is it that the fact, with the attendant reasons, is not stated? Can it be true as alleged, that fictitious subscriptions were put in for the purpose of alluring exhibitors? From the best information we have, however, we should say the subscriptions were honest ones; that very nearly the full amount was collected, and through some mistake is not given in the statement.

Of this amount (\$3,277) \$2,415 is entered in the premium list, as having been given to the poultry department, and undoubtedly in strict accordance with the wishes of the donors, but we find even this amount has been entered among the "receipts," and as stated last week, to offset it is an item of \$1,282.49, in the "expenditures" paid for prize-cups, so that the money donated by fanciers and others, for the poultry department, was used in part to pay the premiums for the dog fanciers. In addition to this we get well authenticated reports that judges who were invited from a distance to judge in the various classes, and were promised their expenses, have never received a single dollar to reimburse them for their large outlay. Many exhibitors report that they do not receive even the proportion allowed on a number of the premiums which were awarded them. Others write us that while they were required to pay their entry in P. O. orders, or drafts on Chicago, they receive the proportion of premiums allowed them in checks, upon which they are obliged to pay collection fees. Another writes us that a valuable pair of pigeons was sold at the exhibition, without orders, and that although he has repeatedly written concerning the matter, can get no satisfactory explanation. And so we might go on for columns, with the complaints that reach us from all over the country, concerning the mismanagement, to use a mild term, of the national exhibition at Chicago.

Two letters received, deprecate our course in exposing this matter, and say "it would be better to let the matter drop quietly;" that "if it wasn't taken up by the poultry papers, nothing would be heard of it as the injured parties are so widely scattered, no one would be likely to complain, on account of a want of concentration against the probably unintentional wrong." To all such we have but one word. The FANCIERS' JOURNAL proposes to live strictly by its adopted motto, "*not for itself but for all.*" It is published for the benefit of fanciers and breeders, in all parts of the country, and whenever it finds wrong-doing in any society, or among those whose names should be on the black list, it will be found denouncing it, without fear or favor, and we are glad to say the JOURNAL is not alone in this position. When the voice of the poultry journals come to be heard on this matter, it will be found that the fanciers of the country are to be well sustained.

We alluded last week to the proceedings of the Chicago society, as being "unfortunate." Look at it in any light we may, let us interpret it as charitably as we can, and it still presents itself in an uncomfortable aspect. This society started out under the most favorable auspices. It was given a splendid send off by prominent fanciers in all parts of the country, who showed their good will by tangible acts of liberality. It was backed up by the A. P. A. in a splendid manner; had the best wishes of the entire East, which sent handsome donations for premiums, and birds for exhibition. The best men in the various States were selected for its officers; in fact, it had everything in its favor, and every advantage that would enable it, under honest and careful management, to take a very high position among the best societies in the country. But by an ill-considered act, it has lowered itself to the level of a few local societies, which think nothing of breaking their pledges. If this so-called national society, with its attractive surroundings, can peaceably repudiate its promises, how much labor will it require to convince breeders that they will not receive the same treatment from associations which make no pretensions of superiority?

A feature of this matter is—and we wish to emphasize it—that a vast majority of the criticisms, complaints and censures we have received, come from the West, which goes to show that the western breeders are thoroughly alive to the necessity of having their exhibitions conducted in the same honest and fair manner that the eastern societies conduct theirs.

We trust the Chicago Society may find some way to place itself right before the country. As it is to-day, there is a wide spread feeling of distrust and discontent, among those who had dealings with it, possibly excepting those whose bills were so promptly paid in that city.

We should be pleased to hear from any one who can give us any further light, or has any comments to make on this matter, not for publication, but as additional guides for further remarks.

Below we give the statement of the society, which, as the reader will see, is only partial. It shows over \$3,000 on hand, and yet does not state what was done with this amount.

We don't care to dissect these figures this week, but can't help briefly alluding to some of the striking absurdities which reveal themselves at a glance. For instance take the expenditure for "labor, \$1,914.80." Well, this amount, allowing \$3 per day, which is liberal, would pay for the services of fifty-two men for twelve days. Those who were present at the exhibition know very well that the sum paid is out of all proportion to the service rendered. This labor item as it stands unexplained, gives considerable color to the intimation made by two of our correspondents that some of the managers received handsome sums for services and expenses.

Then again take the item "coal, \$129.50." At Chicago quotations this would give over three tons for each stove in operation during the exhibition. There are other items, such as "telegraphing,"—which has a funny history connected with it—"Stoves and pipe," &c., which may be alluded to in the future.

NATIONAL POULTRY ASSOCIATION.

STATEMENT.

As there is a very general desire on the part of Exhibitors and Fanciers to know how the large amount of money received by this Society during its recent Exhibition, has been expended, I present below a Statement of the Receipts and disbursements of Money since the organization of the Association. Many of these items seem extravagant, and the amount can undoubtedly be materially lessened at another exhibition. The Labor Account is nearly double what it would have been had the show been a consolidated one instead of two separate and distinct exhibitions, and had the Association not been compelled to hire men to do work which at all smaller exhibitions is performed by members of the Society free of charge. The large item for Printing and Bill-posting includes the cost of Premium Lists, about \$400; Entry Lists \$120, and the cost of billing the city during the show, about \$300. The balance is made up of cost of Handbills and Circulars for distribution, and miscellaneous printing before and during the show.

This item of \$1011.62 for use of the Exposition Building, appears rather liberal, but it seemed an equitable arrangement to the officers of the Association at the time the bargain was made, for if the receipts were small, the compensation would be small, and if the receipts were large it was thought we could well afford to pay 15 per cent. for the use of the building.

RECEIPTS.

Received for Initiation Fees and Dues.....	\$566.00
" Entries.....	2,607.75
" Sale of Tickets.....	6,744.17
" In Donations.....	2,039.73
" for Commission on Sales.....	146.77
" Sale of Standards, and Commissions from "Automatic Wonder," Peanut Stands, &c.....	149.13
	\$11,953.55

EXPENDITURES.

Paid for use of Exposition Building, (15 per cent. of door receipts)	1,011.62
" Prize Cups.....	1,272.40
" Steam Incubator.....	100.00
" Building Partition.....	125.00
" Printing and Bill-posting.....	1,182.12
" Advertising.....	590.13
" Labor.....	1,914.80
" Coops (still on hand).....	576.60
" Feed and Water Cups (still on hand).....	132.87
" Placards (still on hand).....	76.20
" Stoves and Pipe, (still on hand).....	486.10
" Lumber.....	174.84
" Coal.....	129.50
" Feed for Dogs and Poultry.....	161.91
" Postage.....	111.99
" Stationery.....	102.80
" Telegraphing.....	30.01
" Gas Bill.....	295.37
" Miscellaneous Disbursements in small sums since organization of Society.....	471.26
Cash on hand.....	3,008.03
	\$11,953.55

That the affairs of the Association could have been more economically administered is quite probable, but the size of the exhibition rendered impossible that personal attention to details by Officers which is practiced at smaller shows, and important duties were necessarily left to disinterested employees. Trusting that the experience gained at the past exhibition will be profitably employed in the future.

CIRCULAR SENT TO EXHIBITORS.

OFFICE OF NATIONAL POULTRY ASSOCIATION,
CHICAGO, Feb. 29, 1876.

DEAR SIR:

Enclosed find check for \$73.00, which is sixty-five per cent. of \$120.00, the amount of your premiums. The Association is unable to pay the full amount of the awards at present, although it has on hand 1,894 exhibition pens, 4,037 feed and water cups, 13 large stoves and pipe, and other fixtures used during the recent exhibition, the cost of which was over \$1,300. These would be sold by the Association if it could realize over thirty per cent. of their cost, but as this cannot be done, it has been decided not to sacrifice them, as they are worth their full cost for use at future exhibitions. This residue of thirty-five per cent. the Association regards as a debt to be paid out of the proceeds of future exhibitions.

Below we present statement.

Sixty-five per cent. of premiums.....	\$73.00
Amount due on Entry Fees.....	
Amount due for expressage.....	5.00
Amount due for stock sold.....	
Commission on sales.....	
	\$73.00

We give below the list of officers of the "National Poultry Association," elected at the last annual meeting held in Chicago. The list as it now stands is not correct, as we are notified that several of the gentlemen named have resigned since the statement of the society has been published.

We are informed, on the very best authority, that very few of the officers residing out of Chicago were notified of the contemplated repudiation of the society pledges. If this is so, they certainly should not be denounced and criticised as they are until they have had an opportunity to place themselves right before the public.

The gentlemen named as officers who were not consulted in regard to the management at Chicago, therefore not responsible for the unfortunate *denouement*, and who do not wish to stand in a false position before their brother Fanciers of the country, will undoubtedly correct all wrong impressions concerning themselves.

PRESIDENT.

Edward M. Teall, Chicago.

VICE-PRESIDENTS.

John P. Reynolds, Chicago.
A. D. Warren, Worcester, Mass.,
Charles H. Turner, St. Louis.
Charles A. Sweet, Buffalo.
Dr. F. W. Byer, Lena, Ill.
H. A. Mansfield, Waltham, Mass.
Jos. M. Wade, Philadelphia.
E. R. Spaulding, Jaffrey, N. H.
Dr. J. H. Bryant, St. Paul, Minn.
Albert Noyes, Bangor, Me.
Dr. N. Bove, N. Y.
Chas. H. Raymond, Morris Plains, N. J.
L. H. Smith, Strathroy, Ont.
Luther Adams, Boston.
Horace Smith, N. Y.
Geo. H. Warner, New York Mills, N. Y.
J. M. Ferris, Stamford, Conn.
I. N. Barker, Thornton, Ind.
C. B. Elden, Pittsburg, Pa.
E. S. Ougley, Auburn, N. Y.

SECRETARY AND TREASURER:

Charles P. Willard, Chicago.

EXECUTIVE COMMITTEE:

W. W. Corbett, Chicago.
John H. Whitman, Chicago.
E. L. Lamb, Chicago.
Alonso Snider, Chicago.
William H. Woodward, Chicago.
C. J. Ward, Chicago.
W. F. Milligan, Chicago.
H. S. Seaman, Warwicks, Wis.
Dr. Horace Enos, Milwaukee, Wis.
Philander Williams, Taunton, Mass.
Z. C. Luce, Iowa City, Ia.
J. Y. Bicknell, Westmoreland, N. Y.
D. L. Miller, Polo, Ill.
David Jones, Tecumseh, Mich.
Jas. M. Lombing, Parker's Land'g Pa.
John D. Olcott, Milwaukee.
Thomas E. Barnes, Blairstown, Ia.
John F. Boyden, Lincoln, Ill.
I. K. Feleh, Natick, Mass.
W. H. Todd, Vermillion, O.
H. T. Sperry, Hartford, Conn.

Mr. E. L. Lamb the retiring president, was unanimously nominated for reelection, but positively declined to serve.

The Secretary, Mr. Chas. E. Willard, who labored so assiduously to have things go right, has sent in his resignation. He will receive the hearty commendation of the fanciers of the country if he adheres to his expressed determination to insist upon its acceptance.

The poultry breeders of America are under lasting obligations to Mr. H. T. Sperry, of Hartford, for his timely and earnest defence of the New Standard and earnest entreaty that it should not be tampered with or changed, except by consent and full knowledge of all the fanciers in the country. At the last meeting of the A. P. A., several resolutions changing the standard, disqualifies, etc., were introduced, and the Association seemed inclined to make some radical changes until Mr. Sperry, by his sensible and timely remarks, showed conclusively that it would be the ruin of the Standard to make any change unless due notice was given before such changes were made. It is often the case that one clear head will prevent much future trouble, and in this case, Mr. Sperry's head was most decidedly "level."—*Chicago Poultry Journal and Record*.

WHITE-CRESTED BLACK POLANDS.

Newton Adams, Secretary of Central N. Y. Poultry Association, has sold all his White-crested Black Polands, to Mr. Asa P. Moorhead Cold Water, Michigan.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—A story is told of a class of ragged boys who had learned to answer the questions in the catechism by rote. One day a stranger entered to examine them, but unfortunately the boy who was always at the head of the class was absent. The stranger asked: "Who made you?" And the boy answered: "The dust of the earth." "Oh, no!" was the remonstrance, "God made you." "No," was the response, "the boy that God made isn't here."

—SQUIRRELS.—Long years have passed since I have had an opportunity to observe the squirrel in its native haunts, but when a boy in the good old Buckeye state, I have passed many happy hours in observing their peculiarities. One of these I have never seen in print, although I confess to not being well read on the subject. I have never observed it in any but the red and the gray squirrel. It is a fondness for swinging violently back and forth suspended from a limb by the hind feet, always as far as pointed out to me and as far as my own observation extends early in the morning and on *fallen* trees. I have myself taken advantage of this knowledge to shoot them. Hiding myself near

north than the great mass of other birds. What we know, all we know, in fact, of the birds away up in this inhospitable region is gathered from the fragmentary narration of Arctic explorers, and from the birds themselves. That they do go North of 70°, or even 82° north latitude, and go in large flocks, we will further on undertake to prove. We do not assume that all the brant go north of 82°, but that nearly all that intend to reproduce their young, do. Some from weakness or weariness, caused by the long journey, or possibly from the pressure of the egg for extrusion, or other causes, may drop out of the flock and hence be seen in Summer south of 70° north latitude. Again, some may linger with no intention of breeding, as do the other geese. Sir John Richardson says of geese (vol. 1, p. 251): "There are a considerable number who do not breed, but keep in small bands and are called barren geese. Of these we saw several flocks." Among the earlier Arctic explorers the opinion evidently prevailed that brant did not go so far North to breed. So late as 1848, Sir John Richardson writes: "In Coronation Gulf are many islands. Swan, snow geese, brant geese, eiders * * * breed in immense numbers on these islands." Further on he says that they (brant) breed on Wollston Land. They were going north, and he presumed they would stop there, but now recent explorers have demonstrated his error. Hall, on his first expedition, saw brant at the mouth of the Jordan River, and others may have been seen in out-of-the-way places. The surgeon of the "Hecla" and "Griper," Alex. Fisher, on the 16th of July, remarks: "A party of six went out for a ten day's hunt. They saw a great many brant, but only succeeded in killing a dozen." And further on Latitude 70° 30'—longitude 71° 15', on the third of September, 1820: "Saw two flocks of brant geese." June 12, while at Hooper's Island, (near Melville) he observes: "We saw several ptarmigan and a great many of the geese so often mentioned in the course of our journey * * * of these birds we managed to shoot four during our stay, and found them to be brant geese. They weighed about four pounds each." Parry, on his first voyage to Melville Island, June 12, 1820, says: "The birds seen by our people were many brant geese and ptarmigan, several golden plover, one or two boatswains, and abundance of snow buntings." They were hurrying along north, just as they do at Cape Cod; in fact, they are always in a hurry; always on the alert. We have never seen them sit down like other fowl, head under wing and sleep.

McClure, while at Prince of Wales Straits, wrote the following: "The king and common eider, the pin-tail ducks, and the brant geese form their simple nests in spite of the prowling fox." As he does not speak of seeing a brant's nest, we are rather inclined to believe it was not there. We doubt, with a single exception, if any one has ever discovered or seen a brant's nest. McClintock, at Cape Bird, remarks (p. 290): "I saw and shot a brant goose, seated upon an accessible ledge, and made a prize of four eggs." But apparently fearing his reader might be led to believe it a common occurrence, appended the following: "It seemed strange that the bird should have selected so unusual a breeding place." Further on, at Boothia Felix, latitude 69° 50', longitude 96° 10', (p. 280) he says: "On the 8th of June the first ducks and brant geese were seen flying Northward." At Bellot Straits (1858) he writes: "We cannot discover the nests of either ducks or geese."

Dr. Kane, on his first voyage, (1850) saw no brant till he arrived in the vicinity of Wellington Channel. So early as the 26th of August, the brant began to be seen on the return voyage. He says (p. 160): "If we add to these (the other birds) the crowding tenants of the air, the brant geese which now came in great cunoid flocks from the north by east." And again, (p. 174): "Our solitary goose, (one shot by Murdaugh with a rifle on the wing) was the *Anser bernicla*, crowds of which now began to fly

over the land, and in a cunoid stream to the east of south." This "cunoid stream" rather puzzles us. If they fly in that shape in the Arctic region, it is different from what they move in New England. They generally fly irregularly in a line. That line is sometimes bent forward in the centre so as nearly to represent a V, but never continues so for any length of time. We should be inclined to believe the birds described were Canada geese, were they not named specifically. And, besides, we presume *Anser canadensis* does not reach so high a latitude. Sir John Richardson says (vol. 1, p. 320): "The Canada geese breed throughout the woody districts, (of North America) but do not reach the vicinity of the Arctic Sea." Again, writing from Fort Confidence (vol. 2, p. 105): "The Canada geese come in the van (May 19) and remain breeding in the woody country."

In this northern journey, from the vicinity of Wellington Channel, the brant take a northeast course which brings them to the north part of Smith's Sound, where they were seen by Kane, Morton and others. We quote from Morton's statement (Kane's expedition): "June 21, 1854, a flock of brant geese were coming down the valley of the lowland, and ducks were seen in crowds upon the open water. When we saw the geese first they were apparently coming from the eastward; they made a curve out to seaward, then turning, flew far ahead over the plain until they were lost to view, showing that their destination was inland. The general line of flight of the flock was to the northeast." This was near Cape "Constitution," and about latitude 80° North. At Rensselaer, Kane says (p. 302-3): "The brant geese had not been seen before, since entering Smith Straits. It is well known to the Polar traveler as a migratory bird of the American Continent. Like the others of the same family it feeds upon vegetable matter, generally marine plants with the adherent molluscous life. It is rarely or never seen in the interior, and from its habits may be regarded as singularly indicative of open water. The flocks of these birds, easily distinguished by their wedge-shaped line of flight, now crossed the water obliquely and disappeared over the land to the north and east. I have often shot these birds in Wellington Channel in latitude 74° 50' nearly six degrees to the South. They were then flying in the same direction."

(To be Continued.)

CORRESPONDENCE.

LIVE FEED FOR CHICKS.

DEAR SIR: Make a pit, by digging out the ground about four feet square, six inches deep, and make it smooth; then take two bushels of bran, and put in the pit; then wet the bran with water, and put in the bran a pig's or sheep's pluck, and in a short time there will be plenty of live feed for the chicks. Take a shovel and throw out a few shovels full a day. I think this is better than tying meat up to a tree, and hitting it with a stick, to shake out the maggots.

R. B. D.

SAGINAW VALLEY POULTRY AND PET STOCK ASSOCIATION.

East Saginaw, March 5th, 1876.

JOS. M. WADE, ESQ.,

DEAR SIR: A large and enthusiastic meeting of the fanciers of this part of the State, assembled last evening, and perfected the organization of the Saginaw Valley Poultry and Pet Stock Association. It was decided, and included in the association, the counties forming what is known, as the Saginaw Valley, Saginaw Bay, Tuscola, Midland, Gratiot, Isabella, Clan, &c. From the great general interest taken in their new association, we look forward to a successful show for another winter. A great deal of fine

stock is owned in this vicinity, which will be still further improved and augmented through the stimulus given by an association.

I enclose a list of officers:

President—A. Ferguson, East Saginaw.
Vice-Presidents—A. Purchase, Jay; C. Beierle, Bay City; J. K. Rose, Saginaw City; P. C. Heald, Midland City.
Secretary—J. H. Cowell, M. D., East Saginaw.
Treasurer—C. W. Wells, Saginaw City.
Executive Committee—Peter Lepp, Stephen H. Haskell, J. A. Ashley, East Saginaw; D. W. Green, Fred Lewis, Saginaw City; J. Spordeder, of Tilwaukee; E. Stimson, of St. Charles, and W. R. Munroe, Bay City.

J. H. COWELL, M. D., Secretary.

LOSS OF SIGHT IN A GAME STAG.

February 26th, 1876.

J. M. WADE, ESQ.:

DEAR SIR:—Will some of the readers of the JOURNAL tell me what to do for my Game Stag? He is blind in one eye—done by stone, stick, or snow ball, (not fighting). The eye seems all right, only a film over it. I would like to know what will take it off.

"Whisper to Will Burleigh," that several of the fanciers around here, do not feel very well towards that "nun" he rescued, down at Philadelphia. Is not he going to give us any more of the youthful follies.

Yours Truly, BLACK RED.

HOW MANY EGGS TO A POUND?

MR. WADE,

DEAR SIR: What is a fair number, per lb., for pure White Leghorn eggs. Please answer through FANCIER'S JOURNAL. An argument arose with parties here the other day, they saying it would take 10; and to convince them, I weighed, from my stock, eggs weighing 1 lb. and $\frac{1}{2}$ oz., not picking the eggs out, taking them just as they came out of the box. If you answer such questions through your columns, please do so and oblige,

D. GILPIN.

P. S.:—State my number and weight—may hear from other fanciers.

D. G.

SCOTCH COLLIE.

Feb. 29th, 1876.

To the Editor of the Fancier's Journal:

DEAR SIR: Would you be kind enough to ask through the columns of your JOURNAL for a description of the Scotch Collie or Shepherd Dog. The markings and points that indicate a pure blooded, thorough bred animal, and oblige,

INQUIRER.

LeRoy, Mower Co., Minnesota, Feb. 16, 1876.

FRIEND WADE:

There is a "Gun Club" in our village, and some of the members tell me that they have hard work to find birds when they want them. They are anxious that I should raise pigeons, and offer ten cents each for them, allowing me all that escapes, and return home (which, judging from their last "shoot," would be a good many).

Now I would like to know if it would be profitable to raise pigeons at that figure? or will it pay to raise them for market? I will have five hen houses 8x16x7 front x4 back. Now, could I not at a little more expense put a pigeon-roost the whole length of each house? (on top of course).

Which kind are the strongest flyers? and which make the best Squabs,—please answer through your columns. I would like to give the JOURNAL a puff but everything in that line is stereotyped. So you will have to wait until I can conjure up something original in that line. However, it won't be a puff, will it? to say that

it comes regularly, and that I read it from "kiver to kiver" every time.

By the way; now I think of it, can't you prevail on your "Ink-slingers" to "let up" on Brother Pyle a little? first thing you know he will get so mixed that he can't tell a Brahma's egg, from any other man. Now I have 75 of the very "mongreleest" kind of "Dum-hills," and I got some of the "yallerest" eggs you ever saw, yet I would not say anything about it, for fear of adding myself to the list of "P(y)ilers."

But don't forget to answer the above questions, and oblige,

Yours, &c., "JONATHAN SQUABE."

[The common pigeon is the best for this purpose; but why raise them at 10 cents each when the lowest price is 15?—ED.]

VILLYTELEY, MARSCH TE ADE.

MEISTER VADE:

Efer sens I peen reating so mooch apoud dot "Zoo Nodes," in te Schourral, I hafe peen a regeler gusdomer mit der Zoologialler Garten. I vood like do no somedings apoud dot Hyener animals. SCHONNY SPROAGLE.

THE CHICAGO EXHIBITION.

FRIEND WADE:

Please look again at my notes on the Chicago Exhibition, and you will see that I am correct, and that my statement agrees with your correction. On p. 49, No. 5, I say "Two men entered Asiatics, for the \$100 prize, and two entered Games. The competition was so great that, by mutual consent, the competitors divided the amount," meaning, of course, that the four competitors divided the amount.

Yours, truly, J. Y. BICKNELL.

Westmoreland, N. Y., March 6, 1876.

F. P. BUTTS AND THE LICE QUESTION.

OKADALE, FEB. 21st, 1876.

FRIEND WADE:

In journal No. 6 appeared a communication signed F. P. Butts, offering to any one sending a stamp, information in regard to a powder to destroy lice. I enclosed a stamped envelope to Mr. Butts. I send the reply to you. If Mr. Butts as a "true Fancier" will tell all he knows, why don't he make known the ingredients of which his powder is composed, instead of keeping them secret and making a charge for the powder. Small as price asked is, the inference is, there is some money in it. I do not know Mr. Butts. You perhaps do and know that all is fair and right. The

relations I sustain to you are such that I feel in duty bound to lay all such documents before you, and if you feel that you have been imposed on, you possibly have some redress. Without any further information I at least will have no more correspondence with Mr. Butts.

Your friend, A. A. MILLER.

HAVANA, Feb. 16th, 1876.

MR. A. A. MILLER:

Dear Sir:—Your's received, and in reply will say that I did not write as fully to the Journal as I intended, hence I must ask you to remit me either 10, 15, 20, or 25 cents just as you choose, and I will mail you a package of this powder and write you how to use it. This is no humbug, and I believe one can save at least 25 per cent. in feed by its use. If I could see you and tell you all I know about it, you would, I know, in the future never go without it. I never expect to make a cent out of it, but as I claim to be a true Fancier of good poultry I am perfectly willing to tell all I know.

Hoping to further our acquaintance, I am respectfully,

F. P. BUTTS.

IMPORTATION.

Baltimore, Md

I received per. Steamship California, from Glasgow, Scotland, on the 8th inst., two pairs Pouters; one pair blue, and a red cock, yellow hen.

If you have any space in your Journal, please make a note of it. Yours, CHAS. BECKER.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

For "TO EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

We have several complaints against Wm. S. Knox, of Allegheny City. Will Mr. Knox please explain.

H. T. BOLLES, Rockville, Conn., will exchange one Pea Comb P. C. Cock and four hens, for Light or Dark Brahma pullets, or hens hatched in 1874.

F. G. FLANDERS & CO., Manchester, N. H., have to exchange 1 pair of Black Magpies, one six-barreled revolver, for a pair of Red or Yellow Bails, and a trio of White and Brown Leghorns. Must be No. 1.

J. W. KILGORE, 559 North Queen St., Lancaster, Pa., will exchange a good single gun, has not been used much, for a male Canary, good whistler, or fancy Pigeons. Write quick.

M. VON CULIN, Delaware City, Del., has for exchange, 1 pair B. B. R. G. Bantams, 5 pullets and 1 cockerel G. S. Hamburgs, 1 trio S. S. Hamburgs, for Brown or White Leghorn pullets, and one Brown Leghorn cockerel.

F. G. PATERSON, Portland, Me., will exchange three Blue Carrier cocks from imported stock, and common Pigeons for breeding, for Light Brahma (Duke of York stock) eggs for hatching, or Guinea Pig, or offers.

OLIVER D. SCHOCK, Hamburg, Berks Co., Pa., will exchange 1 extra fine Black and Tan Bitch, weight 45 lbs., 20 months old, value \$25; had one litter of pups; warranted extra stock, for two pairs mated Blue Jacobins; must have good hood, chain and pearl eyes, and no foul feathers. What other propositions?

JACOB L. OTTO, No 1031 Lehigh St., Easton, Pa., offers in exchange, 4 Houdans, cost \$20, bred by Bicknell, from an imported cock, cost \$40; 1 pair Light Brahmas, (Tods); 1 Golden Polish cockerel; 1 Silver Bearded cockerel; Cooper's small work on the Game Fowl; and Mechanical Toy, runs for nearly one half hour, cost \$5, for Bearded White Polish hens or pullets, Wright's, Tegetmeier's, Cooper's, or Doyle's Poultry Book, Talking Parrot and cage, or Black Cochins.

CHAS. W. DEBRANT, Findlay, Ohio, wants to exchange one pair of Silver Duckwings, and a Black Breasted Game Bantam cockerel, for three good, early hatched Black Breasted Red Game hens or pullets. Will send first to any advertiser in Fanciers' Journal. Speak quick! No postal cards.

JAMES B. FIRSH, Harrisburg, Pa., has to exchange White and Mottled Pouters, for other fancy pigeons, Tumblers excepted.

M. L. & M. W. GRAVES, Northampton, Mass., offers eggs for setting from high-class Light Brahmas, Brown Leghorns, and American Boudinques, in exchange for Fancy Pigeons. What offers?

DR. G. L. REAGAN, Shenandoah, Pa., will exchange Jersey bull Nicholas, age 14 months, No. 1874, A. T. C. C., for Ayrshire bull, same age and registered, or Berkshire Pig. Will give, and want good stock.

S. CHASE, Jefferson, Jefferson Co., Wis., has for exchange one B. Rat Corner, German silver, warranted correct and good as new, cost \$42.00, for Wright's Illustrated Book of Poultry, bound, and first-class fowls. What offers?

J. S. EDMONDS, Schenectady, N. Y., will exchange copy of Stanley's How I Found Livingston, 3 vols. Harpers' Weekly, 9 vols. Scientific American, Founders of the World, 2 vols. American Builder, for revolver, canaries, books, or offers. Write if you have anything to exchange.

GEO. W. SCHEFFER, No. 21 South 2d Street, Harrisburg, Pa., has for exchange one young Kid Goat, 3 months old, for Fancy Pigeons of the following kind: Owls, Turbids, Nuns, or Yellow Pouters, or Carriers or Angora Rabbits; also Stereoscopic Views of Black Creek, for Fancy Pigeons of any kind. What offers?

GEO. W. SCHEFFER, P. O. Box 163, Harrisburg, Pa., will exchange a young Fawn-colored Kid Goat for Fancy Pigeons, either Pouters, Owls, Nuns, or Angora Rabbits; also have a fine Black Hamburg cock, 2 Game cocks, and Seabright hens, for Pigeons; also have Tumblers and Silver Saborn hen, and other odd birds to exchange for Lop-Eared Rabbits.

JAMES Y. BORDEN, Box 206, Bridgeton, N. J., has his stock of fine Lops, Angora, Silver Gray, and Dutch Rabbits, to exchange for pedigree White or Brown Leghorn chickens. Has two of choice Black and Tan Doves, weight when full grown, three pounds, pretty as pictures; will exchange them also for the above fowls. Write quick.

I. B. TUCKERMAN, Eaton, N. Y., will exchange a gold watch, open face, detached lever, 18k cases; one gold album watch chain; one navy White Crested ducks, one pair Golden Poland chicks, two Colored Dorkin cockerels, for what offers. Write. See wants.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

I. B. TUCKERMAN, Eaton, N. Y., wants a pair of Silkies, and a pair of Guinea Pig. See exchanges.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line or about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

BUFF COCHINS.—My entire breeding stock of this variety are for sale, one cock and five hens, (the pair that took first at Philadelphia, January 1875 as chicks, included.) Price \$40. JOHN CHANDLER, Box 12, Kennett Square, Philadelphia.

FOR SALE OR EXCHANGE.—A pen of Black Red Games, consisting of cock and six hens, standard birds, bred from imported stock; will exchange for a good grade Alderney cow. Address C. H. MALLESON, Hudson, Col. Co., N. Y.

THREE AYLESBURY DRAKES, \$5 each; 2 pairs Cayuga Ducks, \$10 per pair; 3 pairs Rouen Ducks, \$10 per pair; Pekin Ducks, \$15 per pair; one White Muscovy Drake and 3 ducks for \$10. All first-class stock. Rouens and Aylesburies are far superior to Pekins in size and other desirable points. I have facts to prove my assertion. Remember my warning. Send for price list of eggs and fowls. J. Y. BICKNELL, Westmoreland, Oneida Co., N. Y.

WHITE LEGHORN EGGS for sale at \$2.50 per 13, from my stock that took 1st premium at Pennsylvania State Poultry Show in 1870-'74 and '75; also 1st and special for best cock, and special for best hen at Maryland State Show at Baltimore '76. Birds I raised have taken more first premiums at the Pennsylvania State Show at Philadelphia than all other Leghorns combined! Deny it who can; it can't be hid. Address WM. MCANALLY, Newark, Del.

G. S. HALL, Gustavus, Trumbull Co., Ohio, can spare Dark Brahmas, Buff Cochins, Partridge Cochins, Brown Leghorns, Plymouth Rocks, and B. B. Game Bantams. Write for circular giving full descriptions of breeding stock, price list of eggs, etc.

E. S. Having bought of G. W. Dickinson, of Warren, Ohio, his entire stock of Buff and Partridge Cochins, and B. B. Red Game Bantams, including some grand imported fowls and a number of prize winners, I am better prepared than ever to fill orders for first-class stock.

REDUCTION IN THE PRICE OF ADVERTISING.

In consequence of the hard times and scarcity of money, we have determined to put the price of advertising within the reach of all; also to make the width of column uniform with other poultry journals. After this date, only TEN CENTS per line of about eight words will be charged for each and every insertion.

HAMBURGERS, AND AYLESBURY DUCKS.—JAS. SCOFIELD, Glen Riddle, Clark's Run, Del. Co., Pa., breeder of all varieties of Hamburgs and Aylesbury Ducks. Eggs in Spring, \$3 per 13.

G. O. BROWN. Brooklandville, Md., has one pair each of S. S. G. P., and Black Hamburgs each won first premium at last Baltimore show, and one pair Golden Poland (first at same show)—to exchange or for sale. What offers? Immediate

HAMBURGERS. JNO. & THOMAS SCOFIELD, 71st and Darby Road, Phila., are making a specialty of, and have for sale all varieties of Hamburgs, from imported fowls. Eggs in Spring, \$3 per 13, carefully packed.

OUR ANIMAL FRIENDS.

A journal published under the auspices of the American Society for the Prevention of Cruelty to Animals. Henry Bergh, President. \$1 per annum. GEO. WILL JOINTON, Editor and Publisher, No. 34 Elizabeth Street, New York.

FOREIGN COINS IN 1876.

During the Centennial, large quantities of foreign coins will be circulated by visitors to the International Exhibition. To prevent annoyance, delay, and loss, everybody should at once secure a copy of the New Edition of PETERSON'S COIN BOOK, containing perfect fac-simile impressions of the various Gold, Silver, and other metallic coins throughout the World; with the United States Mint value of each. The whole being placed in pre-order as regards the various governments to which they belong, arranged according to their different denominations and value. Top-ther with a complete index, alphabetically arranged, of the coins of each nation, and fac-similes of the State Arms of each of the United States. Published in one folio volume, bound in paper, price \$1, and will be sent by mail, postage paid, on receipt of the price by the Publishers, T. B. Peterson & Bro., 296 Chestnut Street, Philadelphia, Pa. Do not wait until the foreigners arrive to purchase the needed Coin Book, but secure it at once.

A. N. RAUB. Lock Haven, Pa., has left with him for sale a first class double-barreled Rifle—stubb and twist barrels, silver-mounted, cost \$80, made to order. Write also if you have a first-rate Setter to exchange.

THREE SILVER CUPS AT BALTIMORE SHOW! Eggs from my cup B. B. Red Games, and W. C. B. Poland; also from my choice Houdans, L. and D. Brahmas, W. Leghorns, Game and G. Sebring Bantams. Address

MONTVUE POULTRY YARDS, Brooklandville, Md.

DOMINIQUE'S, FANCY PIGEONS, AND WARREN GAMES.

Also, Black-breasted Red Games. Eggs for hatching in season, \$3 per sitting of thirteen. Address W. H. HELLENGER, Edgewood, Bucks Co., Pa.

W. H. BRACKETT Boston, Mass., Offers for sale at prices varying with quality of specimens, Partridge Cochins of his well-known prize-winning strain; Lop-eared, Angora, Himalayan, and Dutch Rabbits; Guinea Pig, some of which are white; and Pigeons of many varieties. Write for what is wanted, and address

Care of Washington National Bank, Boston, Mass.

INTENDING to close out my Partridge Cochins, I offer one cock, three fine cockerels, twelve hens and pullets. Choice stock; very low.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

HARTFORD, MARCH 16, 1876.

No. 11.

FIRST PREMIUM BLACK CARRIER COCK AT BALTIMORE, OWNED BY MR. JOHN YEWDALE, PHILADELPHIA.

(For Fanciers' Journal.)

THE WIND FLOWER.

Come with me to the woods when the March wind blows,
And I'll show you a flower in bloom;
Its delicate petals out rival the rose,
Though it hath not the faintest perfume.

In the depth of the wood, at the foot of a tree,
I found it in beauty, alone,
A waif in the forest, a stranger to me,
But I loved it and called it my own.

And every spring to the woods I repair,
When the blue bird is singing with glee,
Though years have flown past since I first found it there,
It still seems as lovely to me.

You may ask why I fancy the frail little thing?
And perhaps at my favorite sneer;
But I love it because it heralds the spring,
Ere a swallow has dared to appear.

PETER PEPPERCORN.

**POULTRY DEPARTMENT.**

(For Fanciers' Journal.)

WHICH BREED FOR PROFIT?

What breeder of thoroughbred fowls in the country, does not have the question asked a dozen, and perhaps a hundred times in the course of a year—"which breed shall I keep for profit?" In many instances this is a difficult question to give a proper and sensible reply to—but under consideration of certain circumstances and facts, which we shall name, we will give one solution of the question asked. Taking it for granted, that before making your choice, you have posted yourself on the different varieties, their excellences, as well as their drawbacks, you will arrive at the conclusion, that for profit, you wish *egg-producers* more than you do fowls suited for market purposes, and that it is universally admitted, that the small breeds far excel the larger varieties in this essential point. Of the small breeds,—after years of experience—I place the *Leghorns* at the head of the list, and the *White*, No. 1. I have bred them in all ways, and under all circumstances; in close confinement; in moderate sized yards, and at liberty, on the farm, and with proper care I find them to do equally well. By actual experiment, I find them fully fifty per cent. more profitable, that is, on twenty per cent. less feed, they produced *in value*, thirty per cent. more eggs; and this trial was at a time when I had not less than twenty varieties in my yards (that covered many acres), and was made from an entirely unbiased standpoint, and taking several years in succession, the result was the same. From one yard, of sixteen *White Leghorns*, pullets and hens in their first year, from March 1, to September 1, I received 1,696 eggs, an average of 106 eggs to each hen, for six months.

The eggs were sold at prices ranging from 25 cents to 75 cents per dozen, and realized over \$75, at an expense of less than \$10 for feed. They were confined in a barn-cellar 15x20 feet, and their only "run" was a small area of 20x3 feet between the barn

and the yard fence. The feed consisted of scraps and refuse from the table, plenty of green food from the garden, and fresh water, with whole wheat as a substantial. No chicks were raised, and besides eggs sold as above, there were used the quantity usually needed in a small family of which no account was taken. Actual experiments under other circumstances show the same favorable results—trials having been made with both larger and smaller flocks. Were I not trespassing on your space I might give a dozen experiments of a similar kind, with items of debit and credit in full.

Another material point to the Fancier in favor of *White Leghorns* is, that if proper care is exercised in mating for breeding, no one variety will produce so large a percentage of saleable birds, and at such highly remunerative prices.

F. F. J.

(For Fancier's Journal.)

THE LICE QUESTION.

To permanently get rid of these pests is one of the question while you keep fowl; but to render them comparatively harmless only requires a few hours labor two or three times a year. Will W. J. Brewster execute the following directions, in the louisiest resort he knows of, and report progress; put a quantity of any kind of fat scraps into an iron kettle, heat to melting, best in the hen-house on a portable furnace and kept hot; make a tight pliable swab at the end of a pole, and with this apply the grease to every inch of the interior of the henery, especially along the perches, top and bottom, and "sizzle" it in'o every crack and cranny. At the end of another pole rig a ves-el in which put any inflammable rubbish and sulphur, set fire to it and let the flame come in contact with every portion of the interior; no danger from fire with a little care. Have no stationary nests, you can then carry them out into the yard and fire their contents. Do thus, and with a place to take a dust bath, my word for it you will experience but little trouble from the arch enemy of your fowl. Sifted coal-ashes is very permeating, and not at all offensive to the fowl.

PATRICK WELCH.

LINDEN, N. J.

No. 2.

THE SUBJECT OF ARTIFICIAL EGG-HATCHING

was referred to in our last number, and the Egyptian method of producing millions of chickens annually there, without the use of the hen-mothers, was briefly mentioned. In the further perusal of Mons. de Reaumur's entertaining work, from which we gather our data on this curious subject, we find that we have entered upon a more prolific theme than we at first deemed it to be—though none the less instructive and edifying. We shall be obliged to devote one more article (after this) to the matter we have undertaken to discuss, to give even an inkling of the method, and its apparent advantages.

It is very doubtful if we in America can successfully follow the Egyptian, or Bermean lead, in this business of raising poultry in such enormous quantities, according to their concealed method. The "ovens" we alluded to last week are called *mamals*, in Egypt. Each mamal has its Bermean, and one only is entrusted with its management. He is educated from childhood to the work, but the French authors for whom we quote, advances the proposition (very cautiously) that "the huge quantity of chickens, which will be looked upon as really prodigious, might be annually produced in France, or other populous countries" through means approximatory in character to those employed by the Egyptians.

Then Mons. Reaumur goes on to tell how common bakers' and pastry-cooks' ovens may be utilized, to produce similar results. Indeed he details numerous experiments he tried, and

succeded with excellently well, with such ovens—or rather the waste heat of them—in the space over the hot bread and pie ovens of Paris. At the convent of the Society of L'enfant Jesus, with the nuns at the Convent St. Sulpice, and also under the superintendence of the Abbe Menon—in France, the experiments with their baking ovens were practiced upon de Reaumur's suggestion with a few hundreds of eggs at a hatching, with remarkable success and satisfaction.

Prior to the issuing of this book by de Reaumur—away back a hundred and forty years ago—the Duke of Tuscany (so Thevenot asserts) in order to indulge a laudable curiosity, “for which the ancient house of *Medicis* was eminent, had sent to him from Egypt one of these educated Bermeans, skilled in the art of hatching chickens,” who hatched some at Florence with as good success as they were got out in Egypt. This experiment was subsequently similarly tried with like success in Poland. A French prince attempted it at Chantilly, subsequently, without the Bermean—but failed, comparatively. And it was concluded that to do this work as *they* did it—producing such vast quantities of chickens at a time—the Egyptian operator must be imported, who knew how to build the “oven” first, and how to manage it and the eggs deposited therein, rightfully—afterwards.

We have only approached to this “art” in hatching chickens through similar modes, by using the incubator, which is heated artificially, and from which only a few score, or hundreds at most, can be hatched at a time. And even this system is but indifferently understood in this country as yet, though we are gaining upon it, constantly. “Where do the eggs come from, in Egypt, to supply these enormous hatching-ovens at the right time, of such freshness as to be rendered at once available?” is a question we proposed last week to answer in this issue.

Through this method of successfully hatching such large quantities of chickens every year by the Bermeans, under a system that has been in vogue there for centuries, it is at once apparent that “hens have been rendered infinitely more common in Egypt than in any other country known. This is of course owing to the facility with which Egyptians are able to multiply them,” says Reaumur. And Father Sicard adds that a thousand eggs are sold there for not above thirty to forty *medins*—which is equal to but 36 to 40 cents in silver. There is therefore no difficulty in procuring any quantity of eggs, when they are wanted—since every peasant or poultry owner knows when they are needed for the hatching-ovens, and provides his share from day to day through the season on the spot, at Berme, where they are used and promptly paid for, on delivery.

Next week we will conclude this subject with an article explaining how the Egyptians rear their chickens, from the shell—when they find them coming forth to the light at the rate of a quarter of a million to each of the 386 ovens, in a season.

THE POULTRY SHOW AT UTICA.

LIST OF AWARDS:

CLASS 1.—Brahms—Light, second premium cock, G. T. Holingworth, Utica; third, Chas. A. Sweet, Buffalo; first premium hen, Seward Merry, Iion; second, Chas. A. Sweet, Buffalo; third, Seward Merry; first premium cockerel, Seward Merry; second and third, do.; first, second and third premium pullet, Seward Merry. Dark—cock, first, Seward Merry; second, Chas. A. Sweet; third, W. A. Fuller; hen, first and second, Chas. A. Sweet; third, E. A. Down, Utica; cockerel, first and third, Chas. A. Sweet; second, J. M. Seymour, Clark's Mills; pullet, first and third, Seward Merry; second, Chas. A. Sweet.

Cochens—White—first premium cock, Geo. Chapman & Co., Rochester; second, W. A. Fuller, Glen, N. Y.; third, W. S. Bills, Auburn; hen, first, W. S. Bills, Auburn; second, George Chapman & Co.; third, W. A. Fuller, Glen; first premium cockerel and pullet, W. S. Bills, Auburn; pullet, second, George Chapman & Co. Buff—cock, first, second and third, Seward Merry; hen, first,

second and third, Seward Merry; pullet, first, S. S. Morley, Clyde; second and third, Seward Merry. Partridge—cock, first, C. H. Crosby, Danbury, Ct.; second, James H. Nelson, Iion; third, G. G. Wickson, Jr., Lyons; hen, first, C. H. Crosby; second, George Chapman & Co.; third, James H. Nelson; cockerel, first, G. G. Wickson, Jr. Black—cock, first, L. B. Root, Utica; hen, first and second, cockerel, first and second, pullet, first and second; L. B. Root, Utica.

CLASS 2.—Howlands, cock, first, Warner & Root; second, Edward Warr, Utica; third, Michael Ryan, Utica; hen, first and second, Warren & Root; third, Michael Ryan; cockerel, first, Michael Ryan; second, Daniel Pinckney, South Onondaga; third, Edward Warr; pullet, first, Warren & Root; second, Daniel Pinckney; third, Edward Warr. Crevecoeurs, cock, first, Kent Jarvis, Cooperstown; second, E. Warr; hen, first, E. Warr; second, Kent Jarvis; pullet, first and third, J. Y. Bicknell, Westmoreland. LaFleche, cock, first, and third, C. N. Brown, Naudilla Forks; second, J. N. Seymour; hen, first, J. N. Seymour; second, C. N. Brown; third, J. Y. Bicknell; cockerel, first, J. Y. Bicknell; second, C. N. Brown; pullet, first, J. Y. Bicknell; second, C. N. Brown.

CLASS 3.—Leghorn—White—cock, first, Newton Adams, Utica; second, O. Howland, Auburn; third, John D. Ernst, Franklin Iron Works; hen, first, L. D. Ely, Jr., Rochester; second, George K. Hawley, Glens Falls, N. Y.; third, O. Howland; cockerel, first and second, Newton Adams; third, John D. Ernst; pullet, first, L. D. Ely, Jr.; second, C. W. Weaver, Deerfield; third, J. A. Hall, Utica. Brown—hen, first, F. H. Loucks, Salisbury Center; second, A. Leach, Utica; cockerel, first, John D. Ernst; second, C. W. Weaver; third, F. H. Loucks; pullet, first, J. C. Walter, Leonardsville; second, John D. Ernst; third, C. W. Weaver. Black—cockerel, first, and pullet, first, A. Leach, Utica. Spanish—Black—cock, first, George E. Barber, Auburn; second, Cole & Son, Richfield Springs; Thomas Stafford, Sr., Utica; hen, first, George K. Hawley, Glens Falls; second, S. P. Halleck, Oriskany; third, Thomas Stafford, Sr.; cockerel, first, George E. Barber; second, Cole & Son; third, Thomas Stafford; pullet, first, O. Howland, Auburn; second, George E. Barber; third, J. Y. Bicknell, Westmoreland.

CLASS 4.—Jorkings—White—cock, first, C. N. Brown; hen, first, C. N. Brown; second, J. Y. Bicknell; cockerel, first, G. H. Warner; second, C. N. Brown; pullet, first and second, G. H. Warner; third, C. N. Brown. Silver Grey—cock, first, G. H. Warner; hen, first, C. H. Warren; cockerel, first and second, G. H. Warner; pullet, first, second and third, G. H. Warner. Colored—cock, first, R. P. Wolcott, Holland Patent; hen, first and second, R. P. Wolcott; cockerel, first, G. H. Warner; second, R. P. Wolcott; pullet, first and second, G. H. Warner; third, R. P. Wolcott.

Dominiques—hen, first, J. Y. Bicknell; second, O. Howland; cockerel, first, J. Y. Bicknell; second, O. Howland; pullet, first, J. Y. Bicknell; second, O. Howland.

Plymouth Rock—cock, first, S. S. Morely; second, A. Leach; hen, first, A. Leach; second, Newton Adams; third, L. D. Ely, Jr.; cockerel, first, Newton Adams; second, A. Leach; third, J. C. Walter, Leonardsville; pullet, first, A. Leach; second, Newton Adams; third, C. W. Weaver.

CLASS 5.—Hamburghs—Golden-spangled cock, first, E. S. Ongley, Auburn; second, L. D. Ely, Jr.; third, Newton Adams; hen, first, E. S. Ongley; second, J. N. Jacobs, Holland Patent; third, L. D. Ely, Jr.; cockerel, first, E. Ongley; second, Newton Adams; third, L. D. Ely, Jr.; pullet, first, E. T. Ongley; third, L. D. Ely, Jr. Silver-spangled—cock, first and second, Warren A. Worden, Auburn; third, Newton Adams; cockerel, first and second, Warren A. Worden; third, Newton Adams; pullet, first and second, Warren A. Worden; third, Newton Adams. Golden penciled, cock, third, C. H. Warren; cockerel, second, L. D. Ely, Jr. Silver penciled, cock, first, hen, first, cockerel first and second, pullet first and second, Warren A. Worden; pullet, third, J. Y. Bicknell. Black Hamburghs—cock, first and second, hen first and second, cockerel first and third, George W. Wood, Ithaca; cockerel, third, T. R. Proctor; pullet, first, Newton Adams; second, George W. Wood.

CLASS 6.—Polish—White crested black, cock, first, hen, first, J. Y. Bicknell; cockerel, first and second, and pullet second, Newton Adams. White—cock, first, F. H. Loucks; second, O. Howland; cockerel, second, O. Howland; third, G. N. Chidsey, Elmira; pullet, first, O. Howland; second, G. W. Chidsey. Golden—cock, second, C. D. Cartwright, Frankfort; third, C. H. Warren; hen, first and third, C. D. Cartwright; second, C. H. Warren, cockerel, first, second and third, pullet, first and second, C. D. Cartwright; pullet, third, C. H. Warren. Silver—cock, first and second, E. A. Putnam, Syracuse; third,

William Morris, New York Mills; hen, first and second, E. Aug. Putnam; third, William Morris; cockerel, first, C. H. Francisco, Stillwater; second and third, E. Aug. Putnam; pullet, first, C. H. Warren; second, E. Aug. Putnam; third, C. H. Francisco. Golden bearded—cock, first, Alfred Fosgate, Auburn; second, C. D. Cartwright; hen, first, Alfred Fosgate; second, C. D. Cartwright; cockerel, first and second, pullet, first and third, C. D. Cartwright. Silver bearded—cock, first, George H. Gillus, Auburn; second, C. D. Cartwright; hen, first, George H. Gillus; second and third, C. D. Cartwright; cockerel, first and third, pullet, first and second, George H. Gillus; cockerel second, and pullet third, C. D. Cartwright.

CLASS 7.—*Game*—Black-breasted Red—cock, first, J. A. Davis, Auburn; second, J. Y. Bicknell; third, A. B. Smith, Whitesboro; hen, first, J. A. Davis, Auburn; second, J. Y. Bicknell; third, J. A. Davis; cockerel, first, C. H. Warren; second and third, A. B. Smith; pullet, first, C. H. Warren; second and third, A. B. Smith. Brown-breasted red—cock, first, E. P. Howlett, Syracuse; hen, first, E. P. Howlett; second, C. H. Warren; cockerel, first and second, E. P. Howlett; third, C. H. Warren; pullet, first and third, E. P. Howlett, second, C. H. Warren. Golden Duckwing—cock, first, C. H. Warren; second, James F. Fulton, Johnstown; third, J. M. Seymour; hen, first, J. M. Seymour; second, John Fulton, Gloversville; third, C. H. Warren; cockerel, first, James Y. Fulton, second, J. Y. Bicknell; third, John Fulton. Silver Duckwing—cock first, John Fulton; second, C. H. Warren; hen, first, C. H. Warren; second, E. C. Dietrich, Buffalo; cockerel, first, Kent Jarvis; second and third, John Fulton; pullet, first, Kent Jarvis; second, A. B. Smith; third, J. Y. Bicknell. Pile—cock, first, John D. Leland, West Schuyler; second, J. Y. Bicknell; third, C. J. Bulkley, Utica; hen, first, Robert Burch, West Schuyler; second, J. Y. Bicknell; third, E. C. Dietrich; cockerel, first, John D. Leland; second, J. Y. Bicknell; pullet, first, Robert Burch; second, J. Y. Bicknell; third, John D. Leland. Blue—cockerel, first, J. Y. Bicknell; second, C. H. Warren; pullet, first, J. Y. Bicknell. Irish gray—cock, first, hen, first, E. C. Dietrich; second, John Fulton; cockerel, first, E. C. Dietrich. Black—cock, first and hen second, J. Y. Bicknell. White—cock, first, John Fulton; second, George Chapman & Co.; third, J. Y. Bicknell; hen, third, J. Y. Bicknell; cockerel, second, John Fulton; pullet, first, John Fulton; second, George Chapman & Co. Spangled—cock, first, John Fulton; second, and hen first, C. H. Warren.

CLASS 8.—*Game Bantams*—Black-breasted Red—cock, 1st, E. B. Smith; 2d, J. C. Everett, Utica; 3d, G. H. Warner; hen, 1st, Robert Burch; 2d, E. B. Smith; 3d, Rev. W. N. Irish, Holland Patent; cockerel, 1st, E. B. Smith; 2d, H. S. Quinn, Utica; 3d, Rev. W. N. Irish; pullet, 1st and 3d, E. B. Smith; 2d, H. S. Quinn. Brown-breasted Red—cock, 1st, hen, 1st, Rogers & Heywood, Worcester, Mass.; 2d, Charles J. Hodge, Buffalo; cockerel, 1st, Kent Jarvis; pullet, 1st, Charles J. Hodge. Silver Duckwing—cock, 1st and 2d, E. B. Smith; hen, 1st and 2d, E. B. Smith; 3d, S. P. Hallock; cockerel, 1st, G. H. Warner; 2d, E. B. Smith; 3d, S. P. Hallock; pullet, 1st, E. B. Smith; 3d, G. H. Warner. Golden Duckwing—cock, 1st, E. B. Smith; 3d, George Chapman & Co.; hen, 1st and 3d, E. B. Smith; 2d, J. Y. Bicknell; pullet, 1st and 3d, E. B. Smith; 2d, J. Y. Bicknell. Pile—cock, 1st, C. H. Crosby; 2d, J. Y. Bicknell; 3d, Rogers & Heywood; hen, 1st, C. H. Crosby; 2d, L. B. Root; 3d, J. Y. Bicknell; cockerel, 1st and 2d, E. B. Smith; 3d, L. B. Root; pullet, 1st and 3d, E. B. Smith; 3d, J. Y. Bicknell. White—cock, 1st, Doll & Volger, Buffalo; hen, 1st, Rogers & Heywood; hen, 2d, cockerel, 1st, pullet, 1st and 2d, E. A. Tallman, Utica. Black—hen, 1st, Chas. J. Hodge; 2d, E. A. Tallman; pullet, 1st, E. A. Tallman; 2d, Chas. J. Hodge.

CLASS 9.—*Bantams*—Golden Sebright—cock, 1st and 2d, G. H. Warner; 3d, G. W. Chidsey; hen, 1st and 2d, G. H. Warner; 3d, G. W. Chidsey; cockerel, 1st, G. H. Warner; 2d, J. M. Seymour; pullet, 1st and 2d, G. H. Warner; 3d, J. M. Seymour. Silver Sebright—cock, 1st, hen, 1st, cockerel, 1st, Alfred Fosgate. Black African—cock, 1st, hen, 1st, Geo. W. Wood; cockerel, 1st, G. H. Warner; 2d, J. Y. Bicknell; pullet, 1st, G. H. Warner; 2d, J. Y. Bicknell. White Rose Combed—1st on cock, hen, cockerel, and pullet, E. A. Tallman.

CLASS 10.—*Miscellaneous*—Sultans—1st on cock, hen, cockerel, 1st and 2d, pullet, 1st and 2d, Edward Warr. Silkies—pair fowls, 1st, D. A. Carter; pair frizzled fowls, 2d, O. Howland; pair black Russians, 2d, A. Leach.

CLASS 11.—*Turkeys Old*—Bronze—cock, 1st, Chester Wolcott, Trenton; 2d, J. Y. Bicknell; 3d, J. W. Jenkins, Verona; cock, young, 1st, Chester Wolcott; 2d, hen, young, third, J. Y. Bicknell. White—pair 1st, O. Howland; 2d, T. R. Proctor, Utica. Black 1st, R. H. Wolcott, Holland Patent; 2d, O. Howland; pair black young, 1st, R. A. Jones, Whitesboro; 2d, R. P. Wolcott.

CLASS 12.—*Ducks*—Rouen, pair old, 1st, Chester Wolcott; 2d, J. Y. Bicknell; 3d, G. H. Warner; young, 1st, G. H. Warner; 2d, J. Y. Bicknell; 3d, C. H. Warren, Verona; Pekin, pair old, 1st, G. T. Hollingworth; 2d, J. W. Jenkins; 3d, Chester Wolcott; Pekin, pair young, 1st, G. T. Hollingworth; 2d, Chester Wolcott; 3d, J. W. Jenkins; Aylesbury, pair old, 1st, J. Y. Bicknell; 1st and 2d, do., young, J. Y. Bicknell; Cayuga, pair old, 1st, Chester Wolcott; 1st do., young, O. Howland. Muscovy, pair old, 1st, R. A. Jones, Whitesboro; 2d, S. F. Sherman, New Hartford; 3d, J. Y. Bicknell, Westmoreland; pair young, 1st, R. A. Jones.

CLASS 13.—*Geese*—Bremen, pair, 1st, George Chapman; 2d, O. Howland; pair wild, 1st, Chester Wolcott; 2d, O. Howland; African, 1st, Nathaniel Barnes, New Hartford; China, 1st, O. Howland.

CLASS 14.—*Ornamental, Pea Fowls*, 1st, C. N. Brown; 2d, T. R. Proctor; White Guinea, J. Y. Bicknell; pearl do., 1st, O. Howland; 2d, T. R. Proctor.

CLASS 15.—*Cage Birds*—1st premium mocking bird, goldfinch, bullfinch, song thrush, German canary, cardinal, green parrot, George Weber, Utica; 2d premium German canary, same; 1st premium Belgian canary, Jacob Meyers, Utica.

CLASS 17.—*Pigeons*—Pair pied Fouters, 2d, S. Y. Lane, Utica; 3d, J. Y. Bicknell; pair fantails, 1st, J. Y. Bicknell; 2d, S. Y. Lane; pair Tumblers, 1st, J. Y. Bicknell; 2d, S. Y. Lane; 3d, D. M. Cook, Utica; pair Jacobins, 1st, J. Y. Bicknell; pair Nuns, 2d, S. Y. Lane; pair Barbs, 2d, S. Y. Lane; 3d, J. Y. Bicknell; pair Starlings, 1st, S. Y. Lane; pair Trumpeters, 1st, J. Y. Bicknell; 2d, Dr. M. Cook; pair Owls, 1st, J. Y. Bicknell; pair Antwerps, 1st, S. L. Willard, Utica; 2d, J. Y. Bicknell; pair Blue Rocks, 1st, J. Y. Bicknell; pair Archangels, 1st, Dr. M. Cook.

CLASS 18.—*Rabbits*—pair lop-eared, 1st, G. H. Warner; Angora, 1st, D. A. Carter, Utica; Himalayan, 1st and 2d, J. Y. Bicknell; Dutch, 1st and 2d, J. Y. Bicknell.

CLASS 20.—*Red Squirrel*—1st, B. Willard, Utica.

GUINEA PIGS—best pair, 1st, and 2d, R. Roemer, Utica.

CLASS 21.—*Miscellaneous*—1st premium incubator, C. C. Weston, Washington, D. C.; 1st premium for best coop for rearing and protection of chicks, Potter Brothers, Onondaga.

Special, Dr. M. Cook, large entomological collection, also coop for pigeons. NEWTON ADAMS, Sec'y.

THE POULTRY SHOW AT ELMIRA.

OFFICIAL REPORT.

Asiatics—Light Brahmas, Fowls, 1st and Spec., John H. Hall, Catharine, N. Y.; 2d, W. W. Albrow, Elmira, N. Y.; 3d, F. F. Preston, Candor, N. Y. Chicks—1st, 2d and specials, F. F. Preston; 3d, G. W. Chidsey, Elmira, N. Y. Dark Brahmas—Fowls, 1st and special, John H. Hall; 2d, Laing & Taynton, Elmira; Chicks, 1st, John H. Hall; 2d, W. H. S. Scott, Elmira; 3d, W. W. Albrow, Elmira. Partridge Cochins—Fowls, 1st, Geo. W. Chidsey, Elmira; 2d, H. B. Batterson, Elmira; 3d, W. L. Moody, Elmira. Chicks, 1st, Laing & Taynton, 2d and special, D. G. Eacker, Havana, N. Y.; 3d, LeRoy Emhoff, Elmira. Pea-combed P. Cochins, Chicks, 2d, Laing & Taynton; Buff Cochins—Fowls, 1st and special, F. F. Preston; 2d, D. G. Eacker; 3d, Geo. Chapman & Co., Rochester, N. Y.; Chicks, 1st and 2d, F. F. Preston; 3d, Laing & Taynton. White Cochins—Fowls, 1st and special, Geo. Chapman & Co., Chicks, 1st, LeRoy Emhoff; 2d, D. G. Eacker; 3d, Geo. Chapman & Co.

Houdan—French—Fowls, 1st and special, Ed. Ware, Utica, N. Y.; 2d, Jesse Lyon, Catharine, N. Y.; 3d, Wm. F. Miller, Geneva, N. Y. Chicks 1st, Jesse Lyon, 2d and 3d, Wm. F. Miller.

Crevecoeurs—Fowls, 1st and special, Kent Jarvis, Cooperstown, N. Y. Chicks, 1st, Wm. F. Miller.

LaFleche—Fowls, 1st and special, Wm. F. Miller; 2d and 3d, Wm. F. Miller.

Leghorn—White—Fowls, 1st and special, Newton Adams, Utica, N. Y.; 2d, Geo. W. Chidsey; 3d, S. H. Laney, Elmira. Chicks, 1st and 3d, Newton Adams; 2d, Geo. W. Chidsey. Dominique—Chicks, 2d, H. L. Pelton, Penn Yan, N. Y. Brown—Fowls, 2d, Kent Jarvis. Chicks, 1st, 2d and special, W. T. Bowlby, North Hector, N. Y. Black—Chicks, 1st and special, W. P. Bowlby; 2d, M. H. Thurston, Elmira.

Spanish—Black—Fowls, 1st and special, H. L. Pelton; 2d, Kent Jarvis. Chicks, 1st special, and 3d, H. B. Batterson; 2d, M. King, Elmira.

Dorking—Colored—Fowls, 2d, H. L. Pelton. Silver Gray—Chicks, 1st, H. L. Pelton. White—1st and special, P. C. Shepard, Ithaca, N. Y.; 2d, H. L. Pelton.

Plymouth Rock—Fowls, 1st and specials, A. P. Coddington. Trumansburg, N. Y. Special Cock or Cockerel scoring most points, A. P. Coddington, on P. R. Cock; Wm. F. Miller; 3d, Newton Adams. Chicks, 1st, Newton Adams; 2d, A. P. Coddington; 3d, G. W. Chidsey.

Hamburg—Golden Spangled—Fowls, 1st, L. D. Ely, Jr., Rochester, N. Y.; 2d, Newton Adams; 3d, Geo. W. Wood, Ithaca, N. Y. Chicks, 1st and 2d, Newton Adams; 3d, Geo. W. Wood. Golden Penciled—Chicks, 1st, Newton Adams; 2d, A. McLaren, Meadville, Pa. Silver Spangled—Fowls, 1st and special, Newton Adams; 2d, Orlando Seely, Ithaca, N. Y.; 3d, F. C. Shepard, Ithaca, N. Y. Chicks, 1st, 2d and special, Newton Adams; 3d, F. C. Shepard. Black—Fowls, 1st and special, Geo. W. Wood, Ithaca, N. Y.

Polish—Black White-crested—Fowls, 1st and special, Newton Adams; 2d, Chas. G. Day, Ithaca, N. Y. Chicks, 1st, Newton Adams; 2d, Chas. G. Day. Silver—1st and special, H. L. Pelton; 2d, Chas. D. Brooks, Addison, N. Y.; 3d, Wm. Ward, Elmira, N. Y. Chicks, 1st, H. L. Pelton; 2d, Wm. Ward. Golden—1st and special, A. McLaren; 2d, L. D. Ely, Jr.; 3d, Jesse Lyon. Chicks, 1st, Chas. G. Day; 2d and special, Jesse Lyon. Bearded Golden—1st, LeRoy Emhoff. Chicks, 1st and 2d, Leroy Emhoff. White White-crested—Fowls, 1st and special, Geo. W. Chidsey. Chicks, 1st and 2d, G. W. Chidsey.

Game—Black-breasted Red—Fowls, 1st, special and 3d, Curtis & Whiton, Elmira; 2d, A. McLaren. Chicks, 1st and 2d, Curtis & Whiton; 3d, C. S. White, Elmira. Brown-Red—Fowls, 1st and special, E. P. Howlett, Syracuse, N. Y.; 2d, Curtis & Whiton; 3d, E. P. Howlett. Chicks, 1st, E. P. Howlett; 2d and 3d, S. H. Laney, Elmira. Silver Duckwing—Fowls, 1st and special, Curtis & Whiton; 2d, A. McLaren. Chicks, 1st, Kent Jarvis; 2d, Curtis & Whiton. Yellow Duckwing—Fowls, 1st and special, Curtis & Whiton. Chicks, 1st, Curtis & Whiton; 2d, C. S. White; 3d, A. McLaren. Red Pile—Fowls, 1st and special, Wm. F. Miller, Geneva, N. Y.; 2d, A. McLaren; 3d, Curtis & Whiton. Chicks, 1st, Curtis & Whiton; 2d and special, C. S. White. White Pile—Chicks, 1st and 3d, C. Havens, Elmira; 2d, Dwight Palmer, Elmira. Blue-Red—Fowls, 1st, S. H. Laney. Chicks, 2d, Baker & Reynolds, Elmira. Irish-Gray—Fowls, 1st, A. McLaren. White—Fowls, 1st and special, C. S. White. Chicks, 1st, A. McLaren; 2d, Geo. Chapman & Co. Black—Chicks, 1st, A. McLaren; 2d, C. S. White; 3d, Ginger-Red—Fowls, 1st and special, Curtis & Whiton; 2d, S. H. Laney; 3d, L. B. Clark, Elmira. Chicks, 1st, S. H. Laney; 2d, Curtis & Whiton. Spangled—Fowls, 1st, A. McLaren.

Bantam—Black-B Red—Fowls, 1st and special, E. B. Smith, Buffalo; 2d, A. McLaren; 3d, Kent Jarvis. Chicks, 1st, A. McLaren; 2d, Geo. W. Chidsey. Brown-Red—Fowls, 1st and special, C. S. White. Chicks, 1st, Kent Jarvis. Silver Duckwing—Fowls, 1st and special, E. B. Smith; 2d, C. S. White; 3d, Geo. W. Chidsey. Chicks, 1st and special, A. McLaren; 2d, Geo. W. Chidsey; 3d, C. S. White. Golden Duckwing—1st and special, Geo. Chapman & Co. Chicks, 1st and special, E. B. Smith; 2d, C. S. White; 3d, Geo. W. Chidsey. Red Pile—Fowls, 1st, A. McLaren; 3d, G. W. Chidsey. Chicks, 1st and special, E. B. Smith; 2d, G. W. Chidsey; 3d, W. H. Peters, Elmira. White Pile—Fowls, 1st, E. B. Smith. White Game—1st, S. H. Laney. Golden Sebright—Fowls, 1st and special, Geo. W. Chidsey. Chicks, W. H. Peters. Silver Sebrights—Chicks, 1st, special and 3d, F. C. Shepard. African—1st and special, Geo. Wood.

Frizzle—Chicks, 1st, H. B. Batterson. *Turkeys*—Bronze—1st and special, Geo. W. Chidsey. Slate—1st and 2d, D. P. Billings, Elmira.

Ducks—Rouen—1st and special, S. H. Laney; 2d and 3d, H. L. Pelton. Aylesbury—2d, Geo. Chapman & Co. Cayuga Black—2d, Geo. Chapman & Co. Pekin—1st and special, R. Merrill, Elmira; 2d, H. B. Batterson. Colored Muscovy—1st and special, S. H. Laney; 2d, John H. Hall.

Geese—Bremen—1st and special, Geo. Chapman & Co.

Fowl Poles—1st, John Friend, Elmira.

Guineas—White—1st and special, H. L. Pelton. Pearl—1st and special, John H. Hall.

Silver Pheasants—1st, W. F. Albrow, Elmira.

Pigeons—Black Bald-head—F. F. Preston. White Fans—1st and special, F. F. Preston; 2d, J. Desmond, Elmira. Black Fans 1st, C. S. White. Red Jacobins—1st, E. R. Bloomer, Elmira; 2d, A. P. Hall, Elmira. Yellow Jacobins—1st, J. Desmond. Red-wing Tumblers—1st, F. F. Preston; 2d, Geo. W. Chidsey. Yellow-wing Tumblers—1st and special, Geo. W. Chidsey. Black and Red Carriers—1st, J. Desmond. Black Barbs—1st and special, C. S. White. Nuns—1st and 2d, J. Desmond. Red Tumblers—1st and 2d, J. Desmond. Archangels—1st, J. Desmond. Black Priests—1st, Chas. G. Day.

POULTRY SHOW AT MT. KISCO.

Owing to the unavoidable absence of the Secretary, the following list of Premiums have been delayed from publication.

DEAR SIR:

I send you a copy of the Premium List, of the West Chester County Poultry Association Exhibition, held at Mt. Kisco, Feb. 8th, 1876. It was a very great success. The display of Games was fine, also Polish and Hamburgs. There were no poor birds exhibited. The Pigeon display was very good. Mr. D. E. Newell had a splendid collection. The whole affair passed off well. It was the first and we have everything to encourage us.

C. W. BOLTON, Sec.

OFFICIAL REPORT OF PREMIUMS.

CLASS 1. Cochins—Partridge—Fowls, 1st, R. Y. Fairservice, East Newark, N. J. Chicks, 1st, R. Y. Fairservice; 2d, H. A. Grant, East Newark, N. J. Buff—Fowls, 1st, W. H. Hammond, Tarrytown, N. Y. Chicks, 1st, W. H. Hammond. Black—Chicks, 2d, H. A. Grant, Jr., Tarrytown, N. J.

Brahmas—Light—Fowls, 1st and 2d, R. Y. Fairservice; Chicks, 1st and 2d, R. Y. Fairservice. Dark—Fowls, 1st, R. Y. Fairservice. Chicks, 1st and 2d, R. Y. Fairservice. Chicks, 1st, W. H. Hammond.

CLASS 2. Plymouth Rocks—Chicks, 1st, Rev. D. D. Bishop, Ridgefield, Conn; 2d, H. L. Underhill, Croton Landing.

Dominique—Fowls, 2d, E. H. Smith, Wolcottville, Conn. Chicks, 1st, Henry Wood, Bedford, N. Y.; 2d, E. H. Smith.

CLASS 3. Hamburg—Golden Spangled—Fowls, 1st and 2d, C. W. Bolton, Armonk. Chicks, 1st, C. W. Bolton. Silver Spangled—Chicks, 1st and 2d, C. W. Bolton. Golden Penciled—Fowls, 1st, W. H. Hammond; 2d, C. W. Bolton. Chicks, 1st, C. W. Bolton; 2d, W. H. Hammond. Silver Penciled—Fowls, 1st, C. W. Bolton. Black—Chicks, 1st and 2d, Jarius Gilbert, Mount Kisco.

CLASS 4. Spanish—White-faced Black—Chicks, 2d, J. A. Hayt, Patterson, Put. Co.

Leghorns—White—Chicks 1st and 2d, Underhill Bros., Croton Landing. Brown—Fowls, 1st, A. L. Banks, Mount Kisco. Chicks, 1st, A. L. Banks; 2d, Henry Wood, Bedford. Dominique—Chicks, 1st, A. L. Banks; 2d, E. H. Smith. Spangled—Chicks, 1st and 2d, A. L. Banks.

CLASS 5. Houdan—Fowls, 1st, D. F. Gorham, Mount Kisco. Chicks, 1st and 2d, H. A. Grant, Jr. Crevecoeurs—Chicks, 1st, Elliot Smith, White Plains.

CLASS 6. Polish—Golden—Fowls, 1st, C. W. Bolton; 2d, W. H. Hammond. Chicks, 1st and 2d, C. W. Bolton. Silver Penciled—Fowls, 1st, C. W. Bolton. Chicks, 1st, W. H. Hammond. White Penciled—Chicks, 1st and 2d, C. Bolton, Armonk. White-crested Black—Fowls, 1st, C. Bolton. Chicks, 1st, C. Bolton. Golden Bearded—Fowls 1st, I. M. de Verona, 18 Wall street, New York. Chicks, 1st, I. M. de Verona. Silver Bearded—Chicks, I. M. de Verona; 2d, C. W. Bolton.

CLASS 7. Games—Black Breasted Red—Fowls, 1st, C. S. Betts, Mt. Kisco; 2d, E. T. Bailey, Mt. Kisco. Chicks, 1st, C. S. Betts, 2d, W. Hammond. Ginger Red—Chicks, 1st, E. T. Bailey. Brown Red—Chicks, 1st and 2d, C. S. Betts. Yellow Duckwing—Fowls, 1st and 2d, C. S. Betts. Chicks, 1st, E. T. Bailey; 2d, C. S. Betts. Grey Strychnine—Chicks, 1st, C. S. Betts. Clippers—Fowls, 1st, C. S. Betts. Derby—Fowls, 1st, C. S. Betts. Chicks, 1st, E. T. Bailey. White Muff—Fowls, 1st, C. S. Betts. Sefton—Fowls, 1st, C. S. Betts. Henny—Chicks, 1st, C. S. Betts. Tartars—Chicks, 1st, E. T. Bailey. Blue—Fowls, 1st and 2d, Geo. Laidlow. Blue Breasted Red—Chicks, 2d, E. Bailey. Red Pile—Fowls, 1st, E. T. Bailey. Chicks, 1st and 2d, E. T. Bailey.

CLASS 8. Bantams—Black B. R. Game—Fowls, 1st, W. H. Hammond. Chicks, 1st, Underhill & Bros; 2d, Rev. D. D. Bishop. Silver Duckwing—Chicks, 1st and 2d, W. H. Hammond. Yellow Duckwing—Fowls, 1st, W. H. Hammond. Chicks, E. T. Bailey. Ginger Reds—Chicks, 1st, W. H. Hammond. Golden Sebright—Chicks, 1st, Joseph Schirmer, Mt. Kisco.

CLASS 10. Turkeys—Bronze—1st, W. H. Hammond; 2d, Geo. Laidlow, Mt. Kisco.

CLASS 12. Gese—African—1st, Peter Archer, Mt. Kisco; Embden, 2d, Geo. Laidlow. Brown Chinese—1st, W. H. Hammond.

CLASS 13. Ducks—Aylesbury—1st, W. H. Hammond. Rouen—1st, S. H. Weeks, Jr. Pekin—1st, Odell Stevens; 2d, Geo. Laidlow.

CLASS 14. Pigeons—White Jacobin—1st, Tho. H. Hammond, Tarrytown. Red Jacobins—1st, Tho. H. Hammond; 2d, Elliott

Smith. Black Ba'd-headed Tumblers—1st, W. H. Pullis, L. I. Black Tumblers—1st, D. E. Newell, Yonkers, N. Y.; 2d, Tho. H. Hammond. Red Tumblers—1st, Tho. H. Hammond. Mottled Turbitts—1st, Joseph Schirmer. Blue-wing Turbitts—2d, T. H. Hammond. White Turbitts—1st, Wm. H. Pullis. Red Tumblers—1st, Wm. H. Pullis. Blue Antwerps—1st, D. E. Newell. Black Magpies—2d, T. H. Hammond. Splashed Trumpeters—1st, T. H. Hammond. White Trumpeters—1st and 2d, D. E. Newell. Priest Bronze-wing—1st, D. E. Newell. Black Carriers—1st and 2d, D. E. Newell. White Carriers—1st, D. E. Newell; 2d, J. Schirmer. Blue Carriers—2d, D. E. Newell. Black Barbs—1st, Henry Johnson, Mount Kisco; 2d, D. E. Newell. White Barbs—1st and 2d, D. E. Newell. Red Barbs—1st and 2d, D. E. Newell. Dunn Barbs—1st and 2d, D. E. Newell. Yellow Barbs—1st, J. S. Schirmer. Red Pouters—1st and 2d, D. E. Newell. White Pouters—1st, D. F. Gorham; 2d, D. E. Newell. Blue Pouters—2d, D. F. Gorham. Red Mahometts—1st, D. E. Newell; 2d, E. T. Bailey. White Crested Fantails—2d, Elliott Smith. Helms—2d, D. F. Gorham. Black Swallows—1st, J. C. Schirmer. Silver Swallows—2d, J. Schirmer.

CLASS 15.—German Canary—1st, A. C. Banks. Black Bird—1st, S. Potter. Magpie—1st, S. Potter.

CLASS 16. *Rabbits*—Lop-eared—1st, I. M. deVarona. Himalayan—1st, T. H. Hammond.

CLASS 17.—Guinea Pigs—1st, Elliott Smith. Grey Squirrels—1st, Ed. Quett.

CLASS 18.—Best collection of Dressed Poultry, Geo. Carpenter, Mount Kisco.

CLASS 19.—Feeding Troughs, C. W. Bolton. Aquarium of Gold Fish, A. B. Banks.

(For Fanciers' Journal.)

"PERHAPS."

"Perhaps" we are a little late in attending to your case Mr. Unicorn, but "Perhaps" if you will look over the pages of the JOURNAL it may occur to your befogged vision that it was a Game and not a Brahma man who first inaugurated the stepping on of corns. One of these days it may also seem to you that Burleigh is a capable, energetic writer, fully able to take care of himself. It may require two Games to get away with one Brahma in these days of the degenerated Game whose fighting qualities are supplanted by a uniform, reminding us of the Home Guards during our "late unpleasantness," and rendering him as harmless as a Quaker cannon, and as liable to "bust" when touched off. Pray do not mention the "average" Game as a fighter, because if a small, dirty-faced boy should make his appearance at your yards with a "pit" Game under his arm spoiling to fight your best for fun, love, or his entire capital of a dollar, you would throw yourself on your good behavior, and declare that your birds should be subjected to nothing of the kind, whereupon the boy might appropriately remark, if he kept a bull dog with cropped ears he would have one which would "tend to biz." But, Mr. Unicorn, would you keenly enjoy seeing a valuable, peaceful, unoffending bird cruelly thrust into the camp of his enemy, then taken to his own home, wounded, bleeding, and mangled, and then retire to your "little bed" and thank God for the pleasures of the day? If so all we can say is, the Almighty in His infinite wisdom has seen fit to construct some men with a few more brains it is true, but with fewer good qualities and of less value to the community than an average Brahma. We do not intend to keep fowls which will be a nuisance to our neighbors, nor shall their longer annoy us. Should any more of these practical highflyers visit us during the present season, thus kicking up a row and destroying, for the time being our breeding pens, we shall use, without any hesitation, the powder and shot which we recommended to our young friends as exceedingly effective and to be applied daily (Sundays excepted) until we are rid of the loafers. This is also excellent practice just before snipe shooting, and as we carefully wipe out our pet breechloader we shall sigh for one more shot at a rooster scaling the fence. Beautiful sight, the gracefulness of the act is only surpassed by a dog running down street with a tin kettle tied to his tail. Your bird! gets off the ground (some-

how) with sundry flops, kicks, and unearthly yells, and as much fuss as if he was just being burnt out at home, arrives at his destination with a sheepish air and don't know as he really is a rooster until he can believe his ears and has heard himself crow.

"Tread on your corns"—oh! no! Please try and rinse some of the chicks and see if you can conquer your depraved taste for fowls fed on the delicious tit-bits, and flavored with the delightful extracts of the "barnyard." We do know of people who "keep Brahmas in the barnyard," but thank Heaven we are not obliged to eat at their table—we do not intend to "discuss both sides of this question," any more than that our Brahmas shall fight both sides of the fence. As to the Golden Rule we do not see where that appears in the case of the hen which lays two eggs in summer at ten cents per doz., &c., &c. "Alert, graceful, juicy-fleshed game." A fowl which can be "picked up &c., from a walk" (why don't you call it a fly)? You could not catch one in a week in a ten acre lot unless, like a darkey you take advantage of the night. If you expect one for dinner, try our receipt, no "axe," no patent about it, nearly all use it who keep your kind.

YOUNG BREEDER.

ELECTION OF OFFICERS.

At the annual meeting of the Western Pennsylvania Poultry Society, held on the 7th inst., the following officers were elected for the ensuing year:—President, Edward Gregg; Vice Presidents, C. B. Elben, Theodore Grey, Kinder Blair, R. Henderson, Alexander King, P. J. Rodgers; Treasurer, C. A. Stevens; Secretary, A. H. Lane; Executive Committee, John Morrow, Henry Phillips, A. C. Hays, W. H. Jeffries, S. H. Cook, John Dyer Samuel Cameron, J. W. Knox, J. Carpenter, C. H. Siddle.

(For Fanciers' Journal.)

AFFLICTIONS POULTRY.

We are afflicted, not like Job,
He hadn't progressed to the white ear-lobe,
Though "setters" might have licked his sores,
And watted carriers "flew on chores."

But Job knew nothing of Canker or Roup,
And doubtless he never white-washed a coop.
And though he was scourged to the very brim,
His scourge wa'n't caused by "breeding in."

But now days we have both lice and mites;
Hen hawks by day, and "owls o' nights,"
Minks, and Skunks, and Thomas cats,
That fraternize and "compound" with rats;
And every thing that can do evil,
From rodents to the very Devil.

11 P. M.—three traps set, therefore Ed. Journal excuse—will do better next time.

T. J. M. D.

HOLLIS CENTRE, ME.

THE SMALL BOY has long been recognized as one of the most formidable of wild beasts, but no handsomer compliment has ever been paid to his capacity for making life a burden to his fellow-creatures than this, which we find in our latest files from Mexico: A father in Guadalajara, during the earthquake season, sent his two boys to a distant friend's until the peril was supposed to be over. A few weeks after, the father received this letter from his friend: "Please take your boys home and send down the earthquake."

A FAMOUS auctioneer, after exhausting the language of praise in extolling a certain gentleman's park which had to fall under his hammer, said he was bound, as an honest man, not to conceal the only drawbacks to the property, which were the litter made by the rose leaves and the perpetual din kept up by the nightingales.

SPORTSMAN'S DEPARTMENT.

DOGS IN SHAKESPEARE.—At a dinner, now long ago, Lord Nugent (the greatest Shakespearean scholar of his day,) affirmed that there was not in the whole series of the plays a single passage commending, directly or indirectly, the moral qualities of the dog. Thinking this to be impossible, I accepted the wager which Lord Nugent offered me on the subject, with the concession of a year to make my research. Even with the aid of several friends, I failed to find any such passage; and at the end of the year I paid the guinea I had lost. At a dinner at the Bishop of Exeter's, some time afterward, when I related the anecdote, Mr. Croker, with his wonted ingenuity, struck upon a passage which came nearest to the point; but it was an ingenious inference only, and would not have won me my wager.—*Sir Henry Holland's Recollections.*

THE CONSCIOUSNESS OF DOGS.—A dog feels anger precisely as we do, and after provocation is sometimes vindictive and sometimes placable, according to his individual character. He is susceptible of hatred of the bitterest kind. He is so excruciatingly jealous that his life becomes a burden in the presence of a favored rival. His envy continually leads him to eat what he does not want, lest another animal should take it, and illustrate the fable of the dog in the manger. Gluttony holds out to him temptations under which even his honesty sometimes succumbs; but, on the other hand, from drunkenness he is nobly emancipated. A dog mentioned by Rev. Thomas Jackson, ("Our Dumb Companions,") having been once made so drunk with malt liquor that he was unable to walk up stairs, ever after declined to taste the pernicious beverage, and growled and snarled at the sight of a pewter pot.

ANIMAL AFFECTION.—"I have reared a fine mastiff. He is now three and a half years old. While he was a puppy, he and a kitten evinced a strong liking for each other. The kitten, when able to leave her mother, fixed her residence in the dog's kennel, and never seemed happy when away from her large friend. She ate her breakfast out of the dog's bowl, and slept in his kennel with his paws around her. She used to catch mice and young rats and carry them to him, and seemed pleased when he accepted friendship's offering. One morning I observed the cat preparing a bed with straw in the corner of the kennel—an ordinary wooden one, 4 by 2½ feet. As she was going to have kittens, I thought she intended making the kennel her nursery, and Cato (the dog) her head nurse. Such proved to be the case. She brought forth five kittens, and there they lay for some time. The mother frequently went away for hours, leaving the dog to look after her family. I many times stooped down to examine them, and Cato stood by my side very proud of his charge. The poor cat came to an untimely end eighteen months ago, but the only surviving kitten of the five named above is as fond of the dog as her mother was. She brings mice, young rats, and rabbits, and lays them down before Cato, and looks beseechingly till he takes them. She constantly plays

with him and gets on her hind legs to look fondly into his face, while he puts his paws around her as he used to do to her mother. She must have inherited this affection from her mother, as she was too young to have imitated her mother's actions at the time of her death."—*Nature.*

A DOG'S REMORSE.—Being accustomed to walk out before breakfast with two sky terriers, it was my custom to wash their feet in a tub kept for the purpose in the garden, whenever the weather was wet. One morning when I took up the dog to carry him to the tub, he bit me so severely that I was obliged to let him go. No sooner was the dog at liberty than he ran down to the kitchen and hid himself. For three days he refused food, declined to go out with any of the family, and appeared very dejected, with a distressed and unusual expression of countenance. On the third morning, however, upon returning with the other dog, I found him sitting by the tub, and upon coming toward him he immediately jumped into it and sat down in the water. After pretending to wash his legs, he jumped out as happy as possible, and from that moment recovered his usual spirits. There appears in this instance to have been a clear process of reasoning, accompanied by acute feeling, going on in the dog's mind from the moment he bit me until he hit upon a plan of showing his regret and making reparation for his fault. It evidently occurred to him that I attached great importance to the foot-bath, and if he could convince me that his contrition was sincere, and that he was willing to submit to the process without a murmur, I should be satisfied. The dog in this case reasoned with perfect accuracy, and from his premises deduced a legitimate conclusion which the result justified.—*Spec-tator.*

A DOG'S CONFIDENCE.—Robert Hey, Prebendary of Litchfield, Vicar of Belper, Derbyshire, sends the following description of the conduct of a bull-terrier at Clay Cross to the *Animal World*: "She was rejoicing over a litter of pups, attending to them with a motherly care, caressing them, and showing for them much anxiety. The owner of this interesting family, accompanied by a few friends, came to look at them. The fierceness of the mother was at once developed, and manifested by impetuous growlings, snarls, and barkings. She would evidently die in defence of her offspring. But the master said, 'I can take every one of those pups away from the mother, and she will not hurt me. He drew near and approached his hand towards one of the pups. The mother flew at it and seized it in her mouth. He did not attempt to withdraw it until she released it. He proceeded to lay hold of one of the pups. She seized his hand again and held it fast, but without biting it. By degrees he withdrew one of the little creatures. The same process was repeated until every pup was removed and the mother was bereft of all her offspring. She was the picture of misery. She looked up piteously in her master's face and howled with an exceeding bitter cry. The appeal could not be resisted. He replaced the little ones in their nest, and rejoiced to witness the caresses and gratification of the mother. But his surprise and that of his friends was great when he saw her take them up one by one in her mouth and bring and lay them down at his feet. He waited to see what she meant, and was soon convinced that she wished to express her entire confidence in her master. She laid her dear ones at his feet, one by one, with the assurance that he would take care of them with affection equal to, if not greater, than her own. She then returned to her nest, now empty, lifted up her head into the air and gave vent to several piteous cries until her little ones were once more restored to her. It is impossible to misunderstand her impulse. She had at first misjudged her master, but now she trusted him. She brought them of her own accord and placed them at his disposal, with full confidence in his love.

CRUELTY TO ANIMALS.

There is a bill now before the Legislature of Pennsylvania in which the penalties for cock and dog fighting are very severe. The abettors of dog and cock fighting, the individuals who train the creatures for the fight, and the persons who pay or take pay for witnessing the fight, are punishable the same as the principal—by a fine of \$10 to \$20 for the first offenses, and \$20 to \$50 for subsequent offenses. Where the fine exceeds \$20, an appeal may be taken, upon the usual security, to the Court of Quarterly Sessions, and upon conviction there the fine may be \$200, or imprisonment for one year, or both. In the lower courts, the punishment may be imprisonment in the Work House for sixty days to six months, in lieu of fine.

THE CHICAGO MATTER—WORSE AND WORSE.

We stated last week that the premiums donated to the Chicago Society amounted to \$3,277. We find an error in this which we hasten to correct. On a more careful examination of the Premium List we discover several premiums given the society which are not entered upon the list of "donations." Among others we note Tremont House, \$50.00, Western Sportsman, \$125.00, Southern Sportsman, \$25.00, and E. F. Stoddard, \$25.00. Adding these and others which should be included, but which for some unexplained reason are left out of the regular list of donors, and we find the premiums given the society amount to over \$3,500, instead of the sum stated. Deducting the amount credited in receipts as coming from donations we have the neat little sum of very nearly \$1,500 unaccounted for. We are informed that only two or three of the donors of small premiums have not as yet responded, so that there is a clear discrepancy of about \$1,400, which would go some ways in making up the 35 per cent. unpaid premiums. We understand that the society will claim that the donations made by the various publications were given in advertisements, but if we allow that every cent so donated was in advertisements, there still remains a handsome amount to be accounted for. We are informed, however, that the bills for these advertisements are charged in the disbursements, so that the whole amount should be entered in the receipts. A prominent dog fancier calls our attention to another very discreditable operation. In the Premium Lists sent out to the country we find this solemn announcement made in red ink to emphasize and give it prominence:

"It was the original intention of the Association to offer only CASH PREMIUMS, but many of the prominent dog fanciers expressed a preference for a handsome piece of plate as a trophy of their victory, and for that reason the Society have substituted cups for cash in the first prizes.

These are offered with the assurance that the valuation placed upon them is

the regular price, and not an inflated one for the purpose of swelling the Premium List.

This proves to be a falsehood and seems to have been uttered with a deliberate intention to deceive. For as concise and unmistakable as the assertion is made, the very book in which it is printed furnishes proof that it is untrue, for we find that while S. H. Smith donates for a premium \$25, the cup which it buys is put in at \$35.

Arnold Burgess donates \$25 and his cup is put in at \$35.

The Commercial Hotel donates \$50 and the two cups are put in at \$70.

The Matteson House donates \$25 and it is swelled to \$35.

E. C. Weller donates \$25, and it grows to \$35.

The Sherman House donates \$50, and its two premiums enlarge to \$70.

The Chicago Field donates \$100, and the three cups which this amount procures are put in at \$120.

John D. Alcott donates \$10 and is represented as giving a \$25 cup.

We needn't go through the entire list, the same thing is done with nearly every item, so that the premiums offered for dogs is swollen nearly five hundred dollars over amount credited in list of "donations" as given for that purpose.

It may be claimed that the society was not satisfied with the amounts given by the dog fanciers, and so added to their donations from the amounts given by the poultry fanciers. We hardly anticipate that this claim will be put in, however. It is more than possible that the gentleman who wrote the paragraph alluded to, didn't know that the Premium Committee were "padding" the lists.

Notice has been sent us, giving the names of ten or fifteen officers who have resigned, but as it is not official, we withhold the names for the present. All the gentlemen who have withdrawn, disclaim any knowledge of the doings of the society; say they were never consulted in regard to the withholding of the premiums, or any other matter relating to the society. Three write that they were never notified of their election as officers, and didn't know that their names were being used, until they saw them in the list, given in last week's JOURNAL.

Well, what have the other gentlemen to say in regard to this matter?

SOME ECHOES.

The following are extracts from a few of the many letters we have on this subject:

FROM MILWAUKEE.

* * * * Yes, sir, you are correct, "the western breeders are thoroughly alive to the necessity of having their exhibitions" conducted in an honest manner. Perhaps we care quite as much about the decency and honor of the thing as we do the "necity." * * * * "I have talked with some of the prominent managers and I find that some of them were paid all their expenses, am rather inclined to think that some of them got more than that." * * * * "What a sweet thing it is, to be sure, invite guests like Felch and Ongley and Mansfield and Spaulding and others from the East to our entertainment, tell them we will give them a good square meal, and take fine care of them if they will work for us, and then sit down to a well-laid table, held ourselves first, clean it all off, and then tell those gentlemen to go and buy some food for themselves or go hungry; well, it isn't a very pretty picture, but that is just what was done at Chicago." * * * * "Am glad there is one Journal which has courage enough to say what it thinks of mean things and small things, and disreputable things, whenever it finds them among poultry men." * * * * "Let us go with clean hands, and honest efforts, even in the chicken business, if we can't, then let us stop."

Yours encouragingly,

FROM A MEMBER OF THE EX-COMMITTEE.

* * * * "I was present at a meeting of the Executive Committee where a resolution was introduced and carried, to the effect,—I forget just the wording—that if the Society could afford it, after paying all its honest debts, that

\$500.00 be paid the Secretary, for his labors. I am not posted, but I give it as a guess, that it looked at one time as though there would be money enough, and so the amount was paid before all the accounts were in—mind now, I don't say that this was done, but that it might have been done—very easily if one may judge from the statement just out, \$1,900 for labor, \$600.00 for stoves, good gracious! \$1,300 contributed for premiums net accounted for. *

* * * Well, friend Wade, you are doing a good thing. If you make them explain and show after that they didn't do anything but make a mistake in "taking care of our folks," and letting the strangers suffer, you have done a good thing, and will get lots of thanks too.

FROM ERIE, N. Y.

* * * * They induced the Buffalo society to give up their show this season under the promise that they would omit and unite with them at Buffalo next year. The fact that they have voted to hold an exhibition in spite of this promise, shows how the duck swims. * * * *

FROM ST. PAUL, MINN.

* * * My Dear Wade, do you expect to live, and yet go for a great national association as you do? Now why can't you rest easy and shut your eyes to the blemishes. Don't you know we shall get right up and howl "Eastern Jealousy," "Fighting Fanciers' Figuring Furiously," "Journal Jokers Jawing Jealously," "Chicken Chokers Causing Curious Comments," "Enraged Exhibitors Execrating Extravagant Expenses," and all that sort of thing, why my dear fellow you want to be able to stand the pressure. Just wait till our western papers get at you—wait till you get an explanation of the crooked things at that exhibition. Just because crooked whiskey had to be straightened out in Chicago, you don't suppose the chicken business has got to follow suit—not a bit of it—some fellow out here will stop the Journal, then see how you'll apologize; then see how all the Vice-Presidents and Executive Committees will go for your hair * * * * But if you do shake a bit send to me and I'll give you some delightful facts you haven't got hold of yet, though I must say you're likely to find them without my help if you keep on mousing.

FROM AN EXHIBITOR.

Now I rather enjoy the fun; I thought I wouldn't say anything, but let the procession move on without me, but I see you say there was something funny about the telegraph bill, well I should say there was. I was there, I got a dispatch after the lists were closed, to increase my entries to a certain number, and by so doing would "be sure to take the President's \$100.00 premium for best display of one variety." Now I wasn't the only one who got that sort of thing wired to him—and what did I do? why I saved the dispatch, and it is at your disposal.

FROM OUR DUTCH FRIEND.

"I vos at does show, und I vas doud like zum tings mit him. I vas geet zum breumens vot vos gif mine ens ash vos petter ash zum udder ens vash dare, und now vot vash dere told me zum tings, veel dat ish dish, dare show is bankrutt und don't pay mit der breumens all to vout, zum dime von you know zum udder show you ish hav von bill mit der rest—Dat ish not like der man vot ish keeper der store und zo I ish zeek und zell der ens, vich is bad."

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—CRUELTY TO ANIMALS.—Brute beasts are defenseless, and to torture them is despicable; the assassin at least risks his life, but the torturer of animals risks nothing; and I do not hesitate to place him lower still in the scale of humanity. There are men who have committed great crimes, and yet in whom the spark of humanity is certainly not extinct; but he who takes pleasure in the sufferings of a dumb animal, and prolongs them regardless of its groans and of its supplicating looks, I pronounce—without a heart; and when the heart is dead all is dead.—*Comte de Gasparin.*

—RETRIEVING EXTRAORDINARY.—An Aylesbury drake was added to my stock a few evenings ago, but the morning after he was not to be found, high or low. "Strayed away, or stolen," was the unanimous conclusion come to. During the day, Rose, my setter, was observed sniffing about the place, apparently very uneasy in her mind, and the same evening towards dark, to the great surprise of the cook, the drake, without a feather being turned on him, was brought into the kitchen and laid at her feet by Rose, who seemed quite delighted with the exploit. Now, it is

very extraordinary that the setter should know the strange bird from the others, exactly the same in color; and she evidently feels that he requires looking after, for she always keeps an eye on him, when she gets a chance, and has taken him more than once in to cook—a very significant reminder, I should say. She never takes in any of the other fowls.

—The foreign papers state that at the recent meeting of horticulturists in Melbourne, Australia, the sparrow difficulty was the principal subject of discussion. To such dimensions have the losses of stone and small fruits attained that the growers feel themselves face to face with the most serious obstacle they have to encounter. By the introduction of the English sparrow the balance of Nature has been completely upset; the native birds which used to visit the gardens at certain seasons—many of them insect destroyers—have been driven away by the pugnacious strangers, to whose capacity fruits, grain, and seeds are alike sacrificed.

—G. W. CAMPBELL, a well known horticulturist of Delaware, Ohio, described a method by which he claims to be able to ascertain in advance the qualities of seedling grapes. He says that in the taste and flavor of the green tendrils of the vine may be found a true index of the character of its prospective fruit. He further declares that the tendrils of each variety possess a distinguished flavor, by which it may always be detected from any other, and a seedling with this peculiarity of character may be at once set down as good, even in advance of its crop. His predictions have been verified in every instance, and frequently, too, when the appearance of the foliage would lead him to the opposite conclusion.—*Ex.*

—LONGEVITY OF TREES.—From an article by Elias Lewis, on the longevity of trees, published in the *Popular Science Monthly*, for July, 1873, we learn the following facts of the greatest age of trees:

	YEARS.
Palms	500
White Pine.....	430
Wadsworth Oak, Genesee, N. Y.....	500
Cowthorpe Oak, England.....	1,800
Oak at Saintes, France.....	2,000
Chestnut, Tretworth, England.....	1,000
Wurtemburg, Germany.....	1,000
Evergreen Cypress, Spain.....	800
Cedar of Lebanon.....	1,200
Cypress of Montezuma, Mexico.....	2,000
Cypress of Santa Maria del Tule.....	4,024
Ankerwyke House Yew, England.....	1,100
Brabene Churchyard Yew.....	2,500
Sequoias, California.....	2,000
Baobab, Africa.....	3,000

According to this, 500 years may be reckoned the longest life of a tree in the United States east of the Rocky mountains.

—CRUMBS OF KNOWLEDGE.—No. 1. Fish.—Fish do not possess much sense of taste, as the solitary glands are inconspicuous, nor have they an external ear. Their organs of touch lie mostly in lips. In some fish, teeth are not found in the mouth, but in the gills.

Every scale of a fish has a hole through it, which admits the water, and this balances the outside pressure from the same element.

Organs of voice are entirely wanting in fish, though many make a sound; for instance, the Weak-fish (*Otolithus regalis*) make quite a noise, when caught. Black drum and cat-fish do the same, but the sounds are abdominal, not vocal.

Some species of fish habitually leave the water in search of food. In Siam is found a fish which is there called amphibious, as it has been found on the land a full mile from the water.

Fish are never poisonous in themselves; whenever they have been, they have been made so by feeding on some poisonous plant or animal. Several fish, however, have a poisonous sting. The bones of certain fish are used for fish hooks in some parts of the world, to catch other fish of the same species! ADAM.

—MR. WADE.—I found the enclosed item in the Pacific Rural Press, the best paper of its class on this coast. Mr. M. Eyre, Jr., is the poultry editor. "Mr. Eyre—Sir: Received your circular. You wanted to know the exact age of my bronze gobbler. The eggs were set the 2d day of May. When last weighed he weighed over 40 pounds. He will not weigh that now because he runs with a flock of 24 turkey hens, and I don't feed him, in order to lessen his weight. His color is a very dark brownish grey, very rich plumage and heavy low build. Of my half bred turkeys of

last year, the gobblers weighed 20 pounds; the hens, 10, 12 and 14 pounds. I sold them for \$4.50 to \$6. I have not thought yet of selling my gobbler. I can get \$25 at the door."

Mrs. J. E. GAFFEY.

Galt, Sacramento Co., Feb. 4th, 1876.
Mrs. Gaffney doesn't say when "he was last weighed," but it is safe to presume that it was about Thanksgiving, as people are "hefting" their poultry about that time. He would be then about six months old. Now, Sir Vanderveer, let's count up a little, on our fingers. You called 26 lbs. at six months very large. Well, 26 : 40 :: 42 : 64.61 +.

I pacifically await further developments.

—EXCITEMENT AT WEST POINT.—A RABID DOG BITES THE POST SURGEON.—On Saturday, March 12th, as Dr. Erwin was emerging from his quarters, an immense dog sprang upon him. The Doctor to protect himself, threw out his arm, which was covered with the cloak he wore. The teeth of the rabid animal tore through it, and grazed the wrist, not however abrading the surface, but leaving spots of ecchymosis. After which, the dog turned into the dog yard, when a sentinel sent a bullet coursing through his carcass which put an end to his depredations. Before attacking the Surgeon, he had jumped upon the back of the Bugler, and attempted to seize him by the neck, but the dog's weight pushed the man prostrate upon the sidewalk, and he passed on. The dog entered West Point by the road leading by the government graveyard, when he attacked the keeper's dog, and lacerated him fearfully about the neck. In the fight, a splendid grey-hound was also bitten. To-day, (Sunday) the police are patrolling the grounds, shooting such luckless curs as present themselves within range. The torn cloak was smeared with the frothy saliva from the rabid dog's mouth.

The Surgeon and scar-worn veteran of a quarter of a century's service, was so nervous over the event that he took the next train to New York, for the purpose of consulting Dr. Hammond, who has gained notoriety by writing on the subject.

Impending danger from virus lurking in the system, will cause the stoutest heart to quail, and it is not surprising to find a nervous man succumbing to the impression. Although, in this instance, inoculation could not have taken place, as there was no broken skin for absorption.

In the bite from the mad-dog the teeth in penetrating garments, are cleansed from the poisonous mucus, and therefore the danger to the individual is not so great.

"STOUC."

—PARASITIC GROWTHS IN WINE.—When wine becomes acid, it has been invaded by the flower of vinegar, *Mycoderma aceti*, the function of which seems to be to transform alcohol into acetic acid by a sort of incomplete combustion. This has been seen into by most housekeepers, when they give the name of *mother* to the membranes found in jars which have contained vinegar; and a rapid way of making vinegar has been based on this observation. Another analogous mycoderm, the flower of wine, does not occasion any hurtful formations, but seems rather to favor the reaction due to what is called the "bouquet." A worse malady has for its cause a growth which presents itself under the appearance of filaments of extremely slender aspect, and forms those slight waves which may be remarked when wine is shaken. This mycoderm has a strong affinity with that which produces lactic acid. Wines that are described by the growers as fat and oily, are charged by a fermentation which takes the form of globules joined together in a kind of entangled chaplets. What they call an old or bitter taste is a malady which chiefly attacks the finest wines, and also has its origin in a special fermentation, which reminds the palate of wine turned acid; under the microscope the floating particles are larger, and resemble the dranches of dead trees. If the germs of these different mycodermes are killed by heat, the wine is safe from all change so long as it is kept in a closed vessel, but it is evident that these precautions are useless if new germs are brought with the air, or in unprepared wines which may be mixed with that which has been heated. After many experiments which have been made by the wine-growers of Burgundy, it is decided that it is well to heat the vintages to the amount of from sixty to eighty degrees, if for only a minute, and that instead of losing their aroma and flavor, they are in fact rather improved. For the same reason, a voyage to a hot climate has been recommended.—*Ex.*

—Oh, Huon, do you know what they're trying to do. Why! to have one seals the prey of everybody. 'What seals?' Why, the sea lions on seal rock. Have you never heard of that pleasant drive through the sand hills over that marvellously fine road to the Cliff House; that place of resort built upon a cliff one hundred and thirty feet almost perpendicular, of frowning basalt, where you can sit upon the porch and watch at your leisure the gambols

of the sea-lions on the group of rocky islands but a short distance from the beach? They are very numerous, and show by their seeming freedom from fear their appreciation of the 'sanctity of the law' that protects them. So nearly human are they, that, (it is said) the more audacious they have, the louder and oftener do they roar. This roar is stunning to stranger's ears, but the San Franciscan finds it sweet music. When a blast longer and louder than those gone before startles us, you'll be sure to hear him say, "That's Gen. Grant, you bet your pile he's a top of the highest rock." And so we find him the largest, most active of the colony whom we do not have to watch long to see that his supremacy is acknowledged among them. None attempts to climb to his place and when he descends all make way for him to flapper his way to the water. But now just think of it, Huon, a curious set of zealots styled "Fish Commissioners" are praying legislature "that nine-tenths of these intelligent animals may be killed. They eat from 10,000 to 20,000 lbs. of fish a day" and where, oh where, is the supply for San Francisco's market in 1886 to come from?—entirely ignoring the millenium that is on the books for next year, when we shall need no fish,—and deeming as naught the warning of that most approved prophet who has San Francisco swallowed whole by an earthquake in just half of ten years time.

Various and many are the arguments put forward by the friends of the seals. For one, that fish from but one of four articles of seal food. They live chiefly upon the sea gull, the worst enemy the fish have. Also, upon mollusks, crustaceans and smooth round stones, some of them a pound in weight. It is curious to watch the seal catch a gull. He dives deeply under water, then swims some distance from where he disappeared, then, rising cautiously exposes the tip of his nose above the surface, at the same time giving it a rotary motion like a water-bag at play. The unwary bird on the wing seeing the object near by, alights to catch it, while the sea-lion at the same moment, settles beneath the waves and at one bound, with extended jaws, seizes his screaming prey and instantly devours it.

A voice has come to us from the East. Seth Green says, "Don't. If you do you'll regret it but once and that will be forever afterwards. They don't destroy as many fish as a Chinaman." Now, Huon, "rise up next," as Domine Dictum says, tell us about these beautiful eyed creatures. As some one said to me, "It seems almost like sanctioning murder." Just look in their eyes and see if there isn't most soul enough there for them to be

HUMAN.

SMALL PET DEPARTMENT

(For Fanciers' Journal.)

ZOO NOTES, NO. 14.

THE MARSUPIALS IN THE GARDEN—THE KANGAROO.

"Gord gracious! how you hop,
Over the fields and waters too—
As if you never would stop!
I wish I could hop like you—
Said the Duck to the Kangaroo.

True, Ducky, Kangaroo can hop—that is,—when he has a chance—fifteen feet on the clear can he hop, and then not hop his level best.

The Kangaroo, while it is of much interest and curiosity in our Zoo, is quite the reverse to the settler in Australia, that strange, fifth-quarter of the globe, when most things are reversed apparently; where cherry-stones grow outside of the pulp, where the big end of the pear is attached to the branch, where nettles, ferns, and grasses grow into trees, and lilies, tulips, and honeysuckles assume almost the substantial form of the American Oak, and where are found more than fifty species of quadrupeds,—frugivorous, carnivorous, and omnivorous, formed on the opossum plan, with a *marsupium* or a pouch which serves as bed, cradlehouse and home for the little family.

When first born, the young Kangaroo is a strange looking object. It is but little over an inch in length, much resembling a transparent mouse, or an earth worm, only it has not as much shape or form. The most prominent thing about this *lump* is four knobs, which full develop in time, two of them into those long and powerful hind legs, and two into the short fore-arms. Strange

to think that these hind legs at maturity so much the longest, are at birth one-third shorter than the fore! What strange work nature performs! In an embryotic, unfinished state, is the Kangaroo born, but the mother finishes the process by dropping her "Joey" into her pouch, pocket or cradle, at the proper time, where the young "sucker" finds something to attach himself and to which he will cling until his "knobs" turns to legs and his mother licks him into shape. Soon he will be able to hop out of the pouch, to return again however, at the first sign of danger, and very interesting does he appear with his head protruding from his pouch door, his soft round eyes taking in the entire situation.

When mother Kang has deposited "Joey" safely in her pouch she has no further trouble, and for eight months she allows him to make that his home. At the end of that period he must "git up and git," but even after he is driven from home he is quite a "mammy calf," and will rush back to the maternal cradle at the slightest approach, or sign of danger—perhaps to find a brother or sister (never but one) in occupation.

"How large is he when he leaves home?"

Well my boy, he is about the size of a cat, weighs about ten pounds, and will grow to weigh one hundred and sixty if you will give him a chance.

The Kangaroo is not a sociable animal, though he is seldom seen entirely alone, and while other quadrupeds move in large groups, the Kangaroo groups never exceed in number six or eight. Macropus Major, Head Kang, of the Zoo would be called a "boomer," perhaps "old man," in his native land and there he would eat as much grass as three sheep, and trample and destroy quite as much as he would eat; hence the stock breeders in Australia have no particular cause to love him. And what nice work does he make of the settler's garden! Think of some half dozen of them, each measuring ten feet from head to tip of tail, and weighing one hundred and fifty pounds, every mother's Kangaroo of them, settling down, just as soon as the—

"Little stars, one by one mount their golden throne."

—for your Kangaroo is a night robber, and there by the light of the moon cut and slash among your headed cabbage, your crisp lettuce leaves and other "garden sass." Therefore, is Kangaroo hunted down, his hind quarters given to the roast, his tail to the soup kettle, and his hide to the shoe-maker, for your Australian Lady and Gent *par excellence* do greatly delight in a shoe or boot made from the skin of the Brush Kangaroo, and for a long time they would were no other.

A "boomer" is rather an ugly customer when he gets his blood up. Drive him in a corner and he will suddenly place his fore legs round the neck of his pursuer and with his powerful hind legs, armed with a terrible weapon in the shape of a nail, he will, in a moment, rip his enemy open. Dogs who know their "biz" don't tackle a "boomer" until a musket has begun the work, or one is handy to begin it. A "boomer" was once known to seize a dog which was pressing him too sharp, and holding him in his fore paws, he plunged with him into a stream and there held the dog's head well under until he had drowned him! And yet some naturalists have said the Kangaroo is of a low order of intellect!

"Will he live here anytime?"

Yes, madame, he seems quite hardy and does not mind heat or cold, so that the extremes be not too great. Like a good honest politician he changes his coat at the proper time. In Summer his fur is light and scanty, but when Winter comes he dons a thick woolly overjacket well adapted to keep out both cold and wet, and there is no trouble to furnish him with food.

Seeing the wonderful hops of the Kangaroo one cannot wonder that the Duck who wanted to see the world should have selected him as a steed! And how coaxingly Ducky puts her request! We do not know, but we hope she was not refused.

"Please give me a ride on your back!
I would sit quite still and say nothing but "quack"
The whole day through!
And we'd go to the Dec and the Jelly-Bolee—
Over the land and over the sea—
Please take me a ride, Oh, do!
And away we'll go with a hop and a bound;
And we'll hop the world three times around!
And who so happy, Oh! who!
As the Duck and her Kangaroo?"

HUON.

BRANT GEESSE.

[Continued from No. 10.]

Dr. Hayes' sledge expedition reached Cape Lieber, latitude 81° 35', April, 1861, and found the nests and breeding places of many birds, but no brant. If further testimony were needed that these birds breed north of and beyond any human footprints, we would give the following from the last named author: Long lines of cackling geese were sailing far overhead winging their way to some more remote point of Northness." (p. 382). Again, July 7, he says: "I found a flock of brant geese, but could not discover their nests." (p. 411.) If they do breed along the shores of Baffin's Bay and the Arctic Archipelago, it is very singular that none of these voyagers have spoken of finding their nests or eggs, as they do of the eiders and other birds.

Capt. Hall's first expedition reached Frobisher's Bay June 24, 1861, and a party went ashore for eider ducks eggs with the following result: "In ten minutes four of us gathered six dozen, and at another island, in twenty minutes, sixteen dozen and five." He makes no mention of brant in this vicinity. Again, July 23, he observes: "Duck were to be seen in every direction. * * * They were in such numbers that when above us they almost darkened the air." His second voyage was through Hudson's Bay, to King William's Land, but he does not speak of seeing brant. The third expedition—the unfortunate "Polaris"—reached 82° 29' north latitude, where he pens this sentence: "Seals, game, geese, ducks, musk cattle, wolves, fowls, bears, partridges, and lemmings are plenty." Our quotations from the brave men who have suffered untold hardships to discover a "Northwest passage," or "open Polar Sea," are, we submit, sufficient to establish the hypothesis that brant go north of 82° to breed, and that they go in large flocks. Any observer of the habits of birds knows very well that while they are in "large flocks," they are in no condition for breeding. Before nidification takes place, they "woo and wed," i. e., they "pair" and retire to solitary nooks for the seclusion of the little family, and although hugely gregarious at other times, during the breeding season we believe all the *anserinae* are strictly monogamous. Nor do we suppose all the birds go to one island, or arrive or depart at the same time. It takes from four to six weeks for all of them to pass a given point at Cape Cod or Prince Edward's Island, so that the last of the flight does not reach the Arctic Archipelago till late in June. Then see how brief a period they have to build their nests, incubate and carry their young through the various stages of growth, from the tender days of infancy, to the self-sustaining maturity. It seems almost incredible that all this is accomplished in less than three months! It so happens that some years there are no young brant. The cause of this we presume to be the shortness of the season, i. e., when the Spring is backward and Winter sets in early. When the young ice forms rapidly by the 3d of September the parent birds must abandon their progeny or perish with them. The law of self preservation is stronger than the love of offspring, and with sorrowing hearts they bid adieu to the callow brood and wing their way to more genial climes. On the following Spring the epicure will in vain call at the Parker House for the coveted morsel.

We have spoken of the Arctic Archipelago as the place of

nativity of these birds. It is possible that Greenland continues to and beyond the pole. Certain it is that these birds do not go into the middle of the ocean or "open Polar Sea" to lay their eggs and rear their young. They are not divers, and must feed on shore or in shoal water. It is probable that the region north of Greenland and around the pole is dotted all over with islands. The Austrian "Tegethoff" expedition of 1872, which discovered Francis Joseph's Land, and other islands has proved this theory further east, and we think the brant themselves have westward. The climate must be so warm as to produce marine vegetables for food, and also to exempt the eggs from the possibility of destruction by frost. There is something inexplicable in the temperature of these unexplored latitudes. The sun's rays fall more obliquely as we approach the pole, and yet it must be warmer than at 70° of north latitude. Is it not possible—nay, probable—that in the wisdom of the Creator, some law exists whereby the sun's rays, on reaching a certain degree of obliquity, renew their heating power, which being intensified as it approaches the pole, makes a comparatively warm climate there! We know that a similar law exists in regard to water. Water diminishes in bulk, as it cools down to 39:80°, at which point it expands down to the freezing point. Let us suppose the law of solar heat to be cooling as the rays incline to an angle of 45°, (or any other) and warming beyond that degree, and we are at once relieved from our brant dilemma. Another feature of the climate disturbs us. Dr. Kane discovered ice in Smith's Sound forty feet thick, and Koldewey, on east coast of Greenland, sixty feet! The old navigator, Scoresby, in 1820, undertook to prove that this ice formed in mid ocean, but this hypothesis is contrary to our observation. The first young ice is formed along the shore line, in shoal water, then pushes itself out into the bay or ocean. We presume in the Arctic region the ice forms around the islands, then extends to meet that formed around other islands until it encases everything in its crystal folds. Then as Summer approaches it is disengaged from the land or broken up by heavy gales and drifts with the current down through Baffin's Bay, or between Spitzbergen and coast of Greenland, where it melts and disappears. Of course the ice first melts in Spring, where it first froze in Autumn, along the shore line, and is there first disengaged. Were it not so the brant would not be able to get on to their feeding ground so early as the end of June, and consequently would not be able to reproduce at all. Then there would seem to be scarcely time for the growth of marine plants for food. It may be fore-ordained by Divine Wisdom that the tender herb may be dispensed with. We have observed, more especially in Spring time, the decoys constantly pecking at the boards and decayed posts of their pen. They seem to hanker after decayed wood, and we have been led to suspect that this article forms no inconsiderable portion of their food in their boreal abode. Why should they eat up their pen? It is a curious way of obtaining their liberty, and yet we are well assured they devoutly desire this boon. They often try to fly or jump out of their pens, and when a flock is flying overhead in sight, they instantly and vociferously utter the call note "r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r!" There is plenty of drift wood in the Arctic region which in time must decay. Capt. John Franklin (afterwards Sir John) found, in 1821, at mouth of Banks' River a fine log of drift wood sufficient to cook a bear. McClure, at Banks' Land, 1851, discovered wood to the depth of forty feet. McClintock and the other navigators in that quarter, speak of great quantities of drift wood along the Coast of Greenland, and Parry finds the same thing at Spitzbergen. All the rivers of Northern Asia, Europe and America, as well as the swift currents of Behring's Straits are constantly discharging their rich freight of drift wood into the Polar Sea, and if the brant do not feed upon it there they act very differently from what they do in bondage. Here, then, we may, in our mind's eye, see the different families

isolated and scattered all over these islands, at the end of August, or first of September, gathering and running into large flocks ready for the long voyage South. Doubtless many of the young are too feeble to endure the long journey, and either do not set out, or fall by the way. Their return is by nearly the same route they went thither. They make no stop at Cape Cod, unless compelled to do so by stress of weather, and the time of their passage is the latter part of October and whole of November, but at this season they are poor and not prized, either by sportsmen or epicures. They spend the Winter months along shore from Barnegat to Florida, or possibly Gulf of Mexico, where they again recuperate and on their return North in Spring are regarded as among the finest fowl on our coast.

W. HAPGOOD,
in Forest and Stream.

THE TESTIMONY OF BIRDS.—We copy the following very interesting letter from the London *Times* of Aug. 17 :—

SIR:—Is there a warm zone at the North Pole? Most probably there is. The last American expedition saw a vast expanse of open water in that direction, but were unable to reach it. The brant geese and the knot also answer in the affirmative, but especially the former. A few nests of the latter have been found as far south as the Hudson's Bay territory, &c. But it may be interesting to many of your readers to know that only one nest of the brant goose has ever been found, either in its wild or domesticated state, and that was found at Melville Island, and it contained three young ones. All who have visited Ho land, the Baltic, or our own eastern coast during a severe winter, or even Tobay, must know this bird; it is at times sold in large quantities in Leadenhall Market, for a mere trifle, its delicious flavor being unknown here, it having the name of being fishy, which is a mistake, as it never dives, unless wounded, and is a vegetarian. It leaves our coasts in the early Spring, and appears in the Gulf of St. Lawrence and the coast of Labrador, where I have seen it in millions, directly the ice breaks up (about the middle or end of April), where it is highly prized by epicures, and is now shot in a novel manner in vast quantities, with decoys, out of a punt sunk in the middle of an eight-foot raft (b-low the water line), and sent to the United States, where it is highly prized.

Long after the wild geese and ducks have gone to Labrador or the Hudson's Bay territory to breed, the brant goose is seen in the Gulf of St. Lawrence, finally disappearing early in June, probably just in time for the Arctic Summer. It generally makes its flight on a moonlight night, and they are constantly seen in their progress northwards. If there is open water and land at the North Pole, we may fairly presume the brant geese breed there, as they have been seen at Melville Island; nor can it be extremely cold there, otherwise the eggs would be addled; and there must be land uncovered with snow, otherwise, being a vegetarian, it could not live there.

Several brant geese have recently been sent out to the Australian Colonies by our ever active superintendent at the Zoological Gardens, to see if they will breed there. I only trust our Arctic voyagers may find them in the vast quantities that I have seen them in during their flight northwards; then, indeed, they will have a delightful change from their potted meats, &c.

I am, Sir, yours obediently,
FREDERICK SWABEY.

A BRASHEAR editor offers a reward of \$5 for the best treatise on "How to Make Out door Life Attractive for the Mosquito."

A RURAL editor, wishing to be severe upon an exchange, remarks: "The subscriber of the —— in this place tried, a few days ago, to carry home some lard in a copy of that paper; but, on reaching home, found that the concentrated lie had changed it to soap."

CORRESPONDENCE.

THE EXCHANGE COLUMN AGAIN.

FRIEND WADE:

On reading my complaint in JOURNAL No. 8, Mr. ———, Philadelphia, immediately shipped me a good trio Dark Brahma chicks, (Herstine strain) saying—"Had I made complaint to him instead of sending to JOURNAL he would have made trade satisfactory; it being his invariable rule to satisfy all his customers." Which I do not doubt. Of course everything is lovely, and the goose hangs altitudinously. The New Yorker's conscience don't disturb him.

Through exchange in your JOURNAL, I received from H. Burchard, Corry, Pa., two fine female Maltese Kittens; the larger one is a well conducted lady, taking up her quarters in the barn, and giving the house a wide berth. The smaller one is just as fond of the house, as the other of the barn.

From Dr. J. G. Reagan, Shenandoah, Pa., I received a large Maltese Tom. The Doctor said he was large, with a very fine coat. He is all the Doctor represented him, and alas! a great deal more. I am somewhat peculiar—I want everything to be very good or very bad—saints or devils. No milk and water people or animals for me. Tom is as great a devil as ever walked on four legs. In the short time he has been here, he has almost destroyed a carpet in one room, and rendered the house nearly uninhabitable from the stench arising therefrom; killed a fine canary; licked the cream off innumerable pans of milk; carried off everything eatable within his reach, and a good deal that was almost out of his reach. Finding a strict watch was exercised over his movements, he betook himself to the cellar, where he sleeps through the entire day, (a positive fact) and as soon as the house gets quiet at night he starts out on his predatory excursions, crawling through cracks and holes it would seem impossible for him to get through. I do not reflect on Dr. Reagan for sending him—not at all. The cat being such a complete devil, I have a great admiration for him. But I think after he has performed certain duties required of him, I will tie a stone around his neck and deposit the stone in the deepest hole in the creek running past my place.

From offer on my part of certain birds in exchange for Plymouth Rocks, I received two offers to exchange. Having accepted an offer for a trio from a party East, I offered the parties making second offer (Streeter, Son & Co., Youngstown, Ohio,) a pair of turkeys for a pair of P. R. pullets, and received a very fine pair pullets. Did not receive trio for some days after receiving pullets. Not being pleased with trio, expressed my displeasure in emphatic language; party who sent them, retorts "you're another." Having, previous to shipping P. Rocks, received birds from me and expressed no dissatisfaction when he acknowledged their receipt. Will await further developments before I have anything more to say.

Yours,

A. A. MILLER.

VENANGO COUNTY (PENN.) POULTRY SOCIETY.

At a meeting held on the 17th inst., the following persons were elected officers of the above society, for the present year:

President, Joseph Bell.

Vice-President, Wm. A. Blakely.

Treasurer, W. A. Cooper.

Secretary, W. T. Bell.

Executive Committee, Dr. I. St. Clair, B. F. Smiley, T. D. Adams, J. M. Lambing, Jacob Sheasley.

Dec. 19th, 20th, and 21st, 1876, was the time fixed for holding the next exhibition.

W. T. BELL, Secretary.

FRANKLIN, PA., March 17, 1876.

HARTFORD, March 20, 1876.

J. M. WADE, ESQ.:

DEAR SIR:—In your last number, the question is asked "how many eggs to a pound?" for pure White Leghorns. On reading it at noon, I went directly to my hen-house and found fifteen eggs. This was just what had been layed that morning. They weighed 34½ ounces, or an average of 2 3-10 ounces per egg. Average weight of seven, 16 1-10 ounces. In picking out, I found one weighing 3½ ounces, two that weighed 6½ ounces. Through years of experience, I find my White Leghorn's eggs to average 27 to 28 ounces per dozen; have picked out a dozen that weighed 32 ounces.

C. A. PITKIN.

IMPORTATIONS.

JOS. M. WADE:

DEAR SIR,—I have just received per steam ship "Germanic," from Rev. G. W. Joyce, Tavistock, England, one pair very fine Dark Brahmas, they arrived in splendid condition.

Yours truly,

MACK. W. MINER.

WYOMING, ILL., March 13, 1876.

I have just received direct from Lewis Wright, his best pen of Dark Brahma Chicks, (4 Pullets and Cockerel.) they arrived in very good order, and are fine specimens of that variety.

CHARLES E. PERRY.

WOLLASTON, MASS.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

No *Exchange* or *Want* will be inserted unless accompanied with 25 cents.

BLACK LIST.

We have several complaints against Wm. S. Knox, of Allegheny City. Will Mr. Knox please explain.

G. W. CHIDSEY, Elmira, N. Y. will exchange two pairs of Silver Duckwing Bantams for Fancy Pigeons, or offers.

M. L. & M. W. GRAVES, Northampton, Mass., offers eggs for setting from high-class Light Brahmas, Brown Leghorns, and American Dominiques, in exchange for Fancy Pigeons. What offers?

F. G. PATTERSON, Portland, Me., will exchange three Blue Carrier cocks from imported stock, and common Pigeons for breeding, for Light Brahma (Duke of York stock) eggs for hatching, or Guinea Pigs, or offers.

W. H. RATHRONE, Uncasville, Conn., will exchange a few sittings of eggs from his superior Light and Dark Brahmas, (of the most fashionable strains), for Brown Leghorn or Black Hamburg eggs from fowls of equal merit. Those interested, address as above.

DE. J. DEVILLE DENNIS, Watrousville, Tuscola Co., Mich., will exchange thirty splendid Light Brahma pullets, for Partridge Cochins and Brown Leghorns. Must be pure, as mine are. Will also take a trio of pure Houdans.

T. TREGONIN, Box 17, Foxburg, Clarion Co., Penn., will exchange a trio of Duckwing fowls, and a trio of Duckwing chicks; each took first and special premiums at Foxburg show. What offers? Speak quick, or off come their heads.

N. H. JONES, Bridgeport, Conn., will exchange Dark Brahma hens, Crosby's strain premium birds, two for D. B. cockerel; three for two D. B. pullets; 3, 4 or 5 for equal number Plymouth Rock hens; 4 for trio Aylesbury ducks; 2 for pair Red Barbs.

JAS. H. PHILLIPS, Coventry, N. Y., will exchange 1 pair Partridge Cochins, 1874 hatch, (one Bradley, one Williams bred); cost \$12.00, for 1 pair Brown Leghorn hens, 1874 hatch, of as good strains, and well marked.

G. G. PALMER, Albion, N. Y., will exchange two pairs Black Belgium or Big-Eye Tumblers, for Yellow Carrier hen, or pair Blue Pied Fouters. All good stock, nothing else wanted.

J. R. SHELDON, Hornellsville, N. Y., will exchange a silver-plated Tea Set, six pieces, as has no use for it, for Wright's Illustrated Poultry Book, bound, and a first-class Light Brahma hen, dark hackle. Tea set worth \$50. What offers.

A. C. VAN DOREN, Washington, N. J., will exchange 1 pair Game chicks, (Strychnine and Chipper cross,) for Red or Yellow Pied Pouters, or good singing Canaries.

J. H. FASSETT, 1639 Locust St., Philadelphia, Pa., will exchange a number of Mayne Red's and Oliver Optics books, for Fancy Pigeons; any kind but Tumblers.

WM. B. HARRIS, Dodgeville, Wis., will exchange an English Benge bitch, 1 year and ten months old, Black, White and Tan, about 14 inches high; ears from tip to tip 1 1/2 inches. She is as handsome as a picture, for a young No. 1 bitch or female whelp of same breed.

WM. B. HARRIS, Dodgeville, Wis., will exchange one 1 year old Rose comb White Dorking cock for same or cockerel; also three Silver Grey Dorking hens for two Plymouth Rock pullets or hens. Must be No. 1, as mine are.

E. & C. VO CULIN, Delaware City, Del., will exchange a Black and Tan Terrier bitch, 9 months old, for Fancy Pigeons or Poultry; or offers. Also will exchange printing for Fancy Pigeons. Have small printing press to exchange; also Kule, Square, Bevel and Spirit Level combined. Make offers!

PHIL. M. SPRINGER, Springfield, Ill., will exchange Partridge Cochins, Pea fowls, or Light Brahmas, for Canaries, Aylesbury Ducks, or Terrier Pups. Offer good stock and get the same.

E. D. ANDREWS, North New Salem, Franklin Co., Mass., will exchange Pigeons, male Pouter, or male Runt, for female Runt; 1 pair premium Pouters for White Calcutta Fans, or Black Carriers.

C. W. HOITT, Nashua, N. H., will exchange one trio each for Dark Brahmas and G. L. Hamburgs, for Brown Leghorns or Plymouth Rocks. Good stock only wanted.

V. C. GILMAN, Nashua, N. H., will exchange a pair of Shepherd pup about four months old, and a watch dog. (Bloodhound,) one year old, color black, weight 90 lbs.; is not cross, for carriage harness worth forty-five to fifty dollars.

G. W. CHIDSEY, Elmira, N. Y., will exchange one extra fine crested White Fan cock, for one crested White Fan hen. Must be good, as the cock is extra.

EXCHANGE AND PURCHASING AGENCY, Minneapolis, Minn., offers fine, illustrated cards, circulars, envelopes, &c, for fanciers, in exchange for good Leghorns, Houdans, and other fowls, trios or hens; also eggs from high class Brahmas, Cochins, Leghorns, Houdans, &c., (20 varieties,) for fowls, merchandise, or offers. Satisfaction given.

W. WOODBURY, Niagara Falls, N. Y., would exchange one American Knitting Machine, Florence, Vtroy, Wilcox & Gibbs Sewing Machine, one Bass Rod, for Lop-eared Rabbits, Brown Leghorns, P. Rocks, Black Hamburgs, Carriers, or Pouters. What offers?

FRED LUCAS, 1127 South 8th St., Philadelphia, Pa., has a No. 1 pair of Moorcocks, color black and white, 2 months old, no bad mark, but out of good stock, (beauties,) will exchange them for a pair of Solid Owls, or a good Blue Pied Pouter hen, (booted.) None but good stock wanted, as mine are. Write soon, or else will be sold.

HAYDEN H. TSHUDY, Litiz, Penn., will exchange S. S. Hamburg, P. Rock, American Dominique, P. Cochins, or B. Leghorn eggs, for Pekin Duck, Dark Brahma, P. Rock, or Buff Cochins eggs.

JOHN DOYLE, 115 Richmond St., Providence, R. I., will exchange a full-blood Mastiff dog, 11 months old, value \$25, for Light or Dark Brahmas or Plymouth Rocks; also one Rabbit hound, for ferrets.

F. C. SHEPHERD, Ithaca, N. Y., will exchange 1 trio S. S. Hamburgs, 1 trio Black Cochins, for Pouters, Carriers, or Antwerp Pigeons.

CHARLES LIPPOLD, Lancaster, Pa., will exchange Rabbits, Guinea Pigs, one pair of B. B. Red Game Bantams; one pair of mated Trumpeters, cock mottled, hen solid black, heavy booted; one German Gold-finch; two good Lianets, in full song; Canaries, male and female, for a G. L. Sebright Bantam cock, or cockerel, must be A No. 1; or a White Owl hen, A No. 1; or pair of pure White Jacobins, pearl eyes and good ruff.

H. C. WICKER, 71 West Clifford St., Providence, R. I., will exchange one pair Blue Pied Pouters, or one light colored cock Pouter, and a pair of White Fans, for Brown Leghorns, Light or Dark Brahmas, Verchins, or Essex Pigs, or Wright's Illustrated Poultry Book. My birds are very nice; same wanted. What offer?

GEO. M. WOSNOL, East Gloucester, Mass., will exchange first premium Aylesbury Duck eggs, for premium White or Brown Leghorn eggs.

GEO. T. REDPATH, Hyde Park, Luzerne Co., Pa., wishes to exchange a pure white Bull Terrier Pup, 5 weeks old, or a Stag dog, 15 months old, for a trio of white-faced Black Spanish, or a European Thrush, for same. Good stock given; same wanted.

B. HULSE, Box 23, Allentown, N. J., will exchange Shepherd Slut, Essex pigs, eggs from 8 varieties of Fancy Poultry, Pigeons in variety; two Ring Dove hens, for an Archangel cock, or B. B. K. Game Bantam cock, Barbs or others.

T. J. McDANIEL, Hollis Center, Me., wants Brown Leghorns in exchange for plans and specifications of Poultry Houses, which I will give to those intending to build, upon receipt of a description of locality, breed and number of fowls to be kept. Will send plan for approval.

ANDREW RAMSEY, Manor Station, Westmoreland Co., Pa., will exchange one double barreled shot gun, London laminated steel barrels, 32 inches long, bore No. 12, weight 8 1/2 lbs., and one young male Ferret, trained on rats, for lop eared dics, or Japanese chicks pullets or hens.

BREDER, South Vineland, N. J., has for exchange Brown Leghorn and Partridge Cochins eggs, for merchandise and a bronze turkey, or books and stationary.

L. A. THOMPSON, Basking Ridge, N. J., has 8 White Cochins (3 cockerels, 5 hens,) 1 trio B. B. Red Games, and a Setter dog, 10 months, shot over last winter, to exchange for any thing but live stock.

S. K. FERRIS, Stamford, Conn., would like to exchange "Doyle's Illustrated Book of Poultry," 380 pages, 40 illustrations, for a good trio of Plymouth Rocks; also have a fine yellow-legged Red Pyle Game Bantam cockerel, value \$10, for offers.

THOS. STEVENSON, 14 Knox St., Lawrence, Mass., has a pair A No. 1 Black Barbs, imported from England last summer, cost \$16.00. Will exchange for pair White African Owls, or pair black, or good family fow. Sent on approval, and want the same.

JOHN B. CONANT & WILLIAM ON, Springfield, Ill., have for exchange one Alto Brass Horn, very fine, valued at \$15, to exchange for Parrot, Monkey, Ferrets, or a Black and Tan Pup; also 1 sitting of Poland eggs for female Snell, red head and tail; one male Snell for a pair of Red Jacobins. Be good.

W. V. PECK, Box 2, New Richmond, Ohio, will exchange books for a trio of P. Rocks and trio of White Leghorns. Have Greeley's American Conflict, \$10; Grant's Campaigns, \$3; The Four Great Powers, \$3; Life of Webster, \$2; Chambers Commercial Law, \$5, and many others. Will take eggs if the others cannot be furnished. Books as good as new.

S. K. FERRIS, Stamford, Conn., wants a choice sitting of White Crested Polish Eggs in exchange for Eggs of White Leghorns, Dark or Light Brahmas, Partridge or Buff Cochins, or Golden Sebright Bantams. Stock strictly high-class, and bred with extreme care.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

G. W. CHIDSEY, Elmira, New York, wants a crested White Fan hen. Must be A No. 1.

JAMES F. HELYARD, Rancocas P. O., Burlington Co., N. J., wants from ten to thirty Brown Leghorn hens, and two B. L. roosters. State age, average laying, "strain," and lowest cash prices in proportion to number purchased.

G. W. PLEASANT'S, Wright City, Mo., wants a choice trio each White and Brown Leghorns, Part Cochins, B. B. K. Bantams, Aylesbury and Pekin Ducks. Write immediately, and give full particulars, as to age, weight, quality, strains, &c.

J. W. BROWNING, Indianapolis, Ind., wants an A No. 1 Buff cockerel, for which I will pay \$25, or more, if worth it. I advertised some time since for buffs, received many replies; bought several lots; none came fully up to description. Want no more such.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word. Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS AND BLACK-BREADED RED GAMES.

We are breeding from well selected birds of the
above varieties, and are prepared to furnish Eggs for
hatching for the Centennial Year. Our Plymouth
Rocks took first and special at the Northwestern Penn-
sylvania poultry show, held at Mendota, December
22, 23, 24, and 25, 1875, and cannot be excelled any-
where. Games.—We are breeding an imported cock
with choice imported and mated hens. Orders booked
now. Plymouth Rock Eggs, \$5 per sitting of thirteen.
Black-breasted Red Game Eggs, \$4 per sitting of
thirteen. Address

WASSON & CO., Corry, Pa.

JOURNAL AGENCY.

Established for the convenience of those of our sub-
scribers and friends, who desire to avail themselves of
the advantages of dealing with *first hands*, either as
buyers or sellers. We will supply anything at the market
price, and many things below that price; our profits
being the commission allowed us by the dealer. Satis-
faction guaranteed. Correspondence accompanied with
stamp, cheerfully answered. Address

HOWARD I. IRELAND, Camden, N. J.

HAVANA, N. Y.—Send 10, 15, 20, or 25 cents,
and I will send you a package with full directions, and
you will never regret the trouble. I do not make any-
thing out of the matter, only to impart good. Will
have it for sale at 12c. per lb., and $\frac{1}{2}$ lb. will be enough
for a season, if used judiciously.

Respectfully, F. P. BUTTS.

WHITE LEGHORNS,

Winners wherever exhibited. Send for circular con-
taining list of premiums won at Chicago, Utica, Detroit,
Ithaca, and Elmira, and price of eggs.
NEWTON ADAMS, Utica, N. Y.

PLYMOUTH ROCKS.

Winners of first or second prizes, at Chicago, Utica,
and Elmira. Eggs from same stock I breed from my-
self, \$3.00 per 13.

WORK AND THINK.

Work, boys, work, it is useless to be talking,
By labor not by prayer nations thrive;
If bees in summer hours,
Only buzzed around the flowers,
There never would be honey in the hive.

Think, boys, think, the mind improves by thinking,
And freely criticises everything,
Untrammelled by tradition,
Unchained by superstition,
Regardless of Pope, President, or King.

On, boys, on, the world expands before you,
And Nature the true goddess leads the way,
Over mountain and through hollow,
Her foot-prints boldly follow,
She never yet was known to lead astray.

Courage, boys, courage, though bigots may assail you,
Their curses and their prayers are in vain,
They may crush down by oppression,
But they cannot stop progression,
Evolving from the hand and the brain.

PETER PEPPERCORN.

A LUCKY DIVER.

In a recent-published book, entitled "Log-Book of a Fisherman," by Frank Buckland, the writer gives the experience of a Whistable diver:

Mr. Wood made his first real start in life by an extraordinary, and, as it turned out, a very lucky, piece of diving. If the reader will look at the map of Ireland, he will see that outside of Belfast Lough, and a little to the southwest, opposite Donaghadee, are situated the Copeland Islands. It so happened that a Whistable man was a coast-guardsmen in this district. He heard a legend that a ship laden with a heavy cargo of silver had been wrecked off the Copeland Islands some half-a-century ago. He therefore communicated with some of his friends at Whistable who were divers. Accordingly Mr. Wood and four others put their diving dresses on board a vessel, and sailed from Whistable to Donaghadee. The story they heard when they got to their destination was, that the wrecked vessel was in the slave-trade, and that she had on board a large number of slaves when she struck on the rock, and also a considerable sum of money in the form of silver dollars. Nothing would have been known of the wreck having taken place had not somebody discovered human legs projecting above the surface of the water. It appears that the people on board the ship had tried to escape, having first filled their shirt-sleeves with dollars; but in getting up the rocks many of them had fallen back and come to an untimely end, as the weight of the dollars had kept their heads under water. No one had ever disturbed the wreck since the vessel went down. So Mr. Wood and his friends set to work to find out where she was. They put on their diving dresses, and for two or three days walked about to and fro at the bottom of the sea in about forty feet of water,

searching for the treasure. This they did by clearing away the weeds and turning over the stones with crowbars, and feeling for the dollars with their hands, as the water was too thick to see. The wood part of the wreck itself had entirely perished, through lapse of time and the ravages of the sea-worms. After a long and careful search, at last they came upon the dollars. They were mostly spread about among the stones. But many had slipped down among a heap of iron ore which had formed the ballast of the ship. Many of the dollars were worn thin by the action of the water. Some were lying separate, others in great lumps, like rocks, soldered together by iron. In some cases, certainly, this iron had been handcuffs used for the slaves. Some days the divers got two hundred dollars, some times three hundred, sometimes a thousand; the best day they got five thousand—i. e., £1000. In all, the number of dollars they got up from the wreck was about twenty-five thousand, which, when reduced to English pounds, equals £5,000.

When hunting among the wreck for the dollars, Mr. Wood had some curious under water adventures. One of the divers complained that he was annoyed by a lobster, and couldn't work. Mr. Wood learned the whereabouts of the lobster, and went down after him. He soon discovered Mr. Lobster sitting under a rock, looking as savage as a lobster can look. His feelers were pointed well forward, and he held out his two great claws wide open, in a threatening manner. Wood, knowing the habits of lobsters, offered his fellow his crowbar, which he immediately nipped with his claws. Then, watching his opportunity, he passed the signal-line over the lobster's tail, made it fast, and signaled to the men above to "haul away." Thus they did, and instantly away went Mr. Lobster, flying up through the water into the air above, with his claws still expanded, and as scared as a lobster could be. A great conger-eel also paid the divers a visit. He was an immense fellow, and kept swimming round Wood, but would not come near him. Wood was afraid of his hand being bitten, as a conger's bite is very bad. He once knew a diver whose finger was seized by a conger. The brute took all the flesh clean off the man's finger. A conger is a very dangerous animal to a man when diving in the water. However, this conger kept swimming round about Wood. So he took his clasp-knife out and tried to stab him; but the conger would not come near enough to be "knifed." It was a long while before the conger would go away. And even after he had gone away, Wood could not go on working, because he was not sure that the brute was really gone for good, and he might have come out of some corner at any minute and nipped his fingers.

"Here's your money, boy, and now tell me why your rascally master wrote eighteen letters about that contemptible sum?" "I'm sure, sir, I can't say; but if you'll excuse me, sir, I sort o' reckon 'twas because seventeen didn't fetch it."

"If Smith undertakes to pull my ears," said Jones, "he will just have his hands full, now." The crowd looked at the man's ears, and thought so, too.

POULTRY DEPARTMENT.

(For Fancier's Journal.)

A LAY FROM MY POULTRY-YARD.

A LEAF FROM A DIARY.

I had a flock of chickens,
The sweetest little things,
With tiny coats of creamy down,
And little hints of wings,
And bills like finest ivory,
From Indian jungles brought,
And slender, polished legs, that seemed
Carnelian finely wrought.

How round and bright their beady eyes,
And cunning sidelong peep,
As 'neath their clucking mother's wings
They nestled down to sleep!
How sweet their chirping twitter
As they clustered at her side;
How nimbly on her slippery back
They hopped up for a ride!
Oh, it would take the graphic pen
Of a Hawthorne or a Dickens,
To picture half the beauties
Of my charming little chickens!

Ah, vain was all my tender care!
Wild March, with stormy breath,
Breathed o'er my little nurslings,
Three slept the sleep of death—
And three of those stern March had spared
In one sad, baleful hour,
A cruel, wicked, murderous cat
Did ruthlessly devour!

More earnestly the rest I strove
To shield from hurt and harm,
And fortune seemed to favor me—
The air grew soft and warm.
I deemed them safe, when—one by one—
To crown the sad mishaps,
The remnant of my little flock
Fell victims to the *gaps*!

Alas! alas! all words are vain
To picture my dismay;
And vainer still, poor Mother Hen,
Thy sorrow to portray—
A voiceless, tearless Niobe,
By Fate's fell arrow stricken,
Thou standest by the empty coop,
Bereft of every chicken!

No need for me, at noon and eve,
The dainty crumbs to bring;
No need for thee, poor lonely hen,
To spread the sheltering wing.
I gaze around, and o'er my eye
A dewy dimness thickens,
And, with bereft Macduff, I cry,
"What! all my pretty chickens?"

K. K. T.

(For Fanciers' Journal.)

GAME FOWLS.

Game fowls are the aristocrats of the poultry yard. With their graceful form, handsome carriage, fine feather, and undeniable courage, who can help admiring them? And then we must not overlook their useful qualities. Good layers, although not rivaling some other breeds perhaps, whose only redeeming quality is in their egg production, their eggs being of the finest known quality. The best of sitters, steady and careful, differing from some of the Asiatics in the fact that they do not care to sit regularly after laying five or six eggs, and then when they bring off their young, almost always coming off with a good percentage, there are no equals, as mothers. Always on the alert for any lurking intruder, they are ready to fight for their young, generally coming off victorious, too. Then when they come to maturity they can be caught and dressed at any time, always being plump and fat, and a fit subject for the palate of the epicure. Look for a moment at their exquisite feathering. What can be more pleasing to look upon than the rich and glistening plumage of the Black Breasted Red, or any of the less common varieties? The courage and fighting qualities of the Game fowl which are something remarkable, is not to be passed over. For my part I had just as soon see a good Game-cock fight as to eat a good dinner, of which I am very fond. There are, I very well know, persons who can stand up (or sit down as to that) and preach against cock-fighting, but such persons I should not care to trust with my pocket-book. In connection with the subject of cock-fighting, let me relate a little anecdote. One Sunday, while recuperating from the labors of the week, I noticed a cock in the yard above us, walking out towards the street where another cock was crowing, ready to give battle. They did not get near enough to "strike," however, for the owner of the first bird, having heard their noise, came out and drove his bird back. One of the ladies who was sitting with us exclaimed: "Oh! dear! What did he come out and drive in his rooster for?" Taken as a whole, Games are, I think, (and I hope that many of the readers of the JOURNAL will side with me) the only fowl that will "fill the bill" every time. I have been very much interested in reading "Will. Burleighs" papers relating to Game fowls, in his articles on "Youthful Follies," and hope that he will give some more of his pleasant and instructive articles at no late date.

BLACK RED.

THE MALLARD DUCK.

BY O. D. FOULKS.

Genus *Anas* embraces two species: the common Mallard or Green Head (*Anas boschas*), and the Black or Dusky Duck, (*Anas Obscura*). Mallard: head and neck bright grass green, with a violet gloss; a white ring encircles the middle of the neck, below which, and on the fore part and sides of the breast, the color is a dark brownish chestnut; under parts and scapulars grey, undulated with minute lines of brown. Back, reddish brown; rump, black, glossed with a bluish green; speculum purplish violet, terminated with black. Length of drake, about twenty-three inches; stretch of wings, about thirty-seven inches.

From this species originated all the domestic varieties, and presenting one of the rare cases where the original is known of a domestic animal. Still there are several marked differences. In the wild state the Mallard always pairs, and during the period of incubation the male, although he takes no part in the process, always keeps in the neighborhood of the female; half breeds, between the wild and tame varieties, always exhibit the same habit. Now the domestic drake is entirely the opposite. Every one who has had the care of ducks, cannot fail to have noticed how an old drake will fight and drive the younger ones in his en-

deavors to obtain as many wives as possible. A domestic drake is also a greedy, selfish animal, never welcoming the females to enjoy any delicacies, but like some men, gobbles it all himself; neither does he strive in their defense, but takes wing or paddles away at the first approach of danger. Another difference between the wild and tame Mallard is to be found in the much broader, harder and more horny feet of the latter.

The Mallard is a migratory duck, passing to the north in the spring to breed; in the autumn they return southward, scattering over the western lakes and prairie ponds as well as over the eastern bays, rivers and sea coast. As a general thing the nest is placed upon the ground among reeds or sedge grass near the water; but sometimes holes are appropriated, and even hollow trees and logs, but this is rare. The eggs are not uniform in number, varying from eight to fourteen. The young are covered with a light grey down, and shortly after the little ducklings extricate themselves from their brittle covering, they are led to the water by the female; here they are joined by the male, who swims behind acting in the capacity of a rear guard.

Mallards were once very abundant around the head waters of the Chesapeake, but of late years, from some unknown cause, they have almost entirely abandoned these once favorite feeding grounds.

Another peculiarity of this bird is the wonderful change of plumage which the drake undergoes. The molting commences about the middle of May; the breast and back of the drake then exhibit the first appearance of change of color, next the curled feathers in the tail drop out, and grey feathers appear in the green around the eyes, then the change becomes rapid, until by the first of July, every feather of the once brilliant plumage has disappeared, and the drake has received the brown, spotted and streaked garb of the female, only a shade or two darker. There is not the slightest clue offered by which we can trace this strange phenomenon, nor can we understand the cause which produces this wonderful change of plumage. All that we can say is, that once a year, from the middle of May to the first of July, there is, neither in the poultry yards of civilized man nor through the vast range of nature, a single drake in that plumage which, at other seasons of the year, is so remarkable for its splendor. About the middle of August this brown plumage begins to drop off and by the first of October he again appears in his brilliantly magnificent dress.—*Practical Farmer.*

(For Fanciers' Journal.)

THE BRAHMAS AT SPRINGFIELD.

To say that the show of Brahmas, at the Consolidated Exhibition at Springfield, was the best ever made in America, is but true, and probably was the best ever made in the world. Your correspondent acting as judge, found it the grandest class he ever was called to examine, and the task not an easy one to award the prizes satisfactorily.

The glass in the hall was colored, and red predominating in it cast a reddish color on all white birds.

In considering the disadvantage of light, the judge conceived it safest to judge the birds in the light, letting it have its effect on all, rather than to allow for its effect, for should he forget in any case to make its allowance it would militate against such specimens, so it will be seen that each and every specimen, won richly all the score they got, and no doubt by their owners, in some cases the judge was thought severe.

The coops were far too small and did not show the birds to advantage, for they could not stand naturally in them, which made it necessary to remove each bird to a large coop, which was done, thus subjecting each bird to the same light and conditions while being scaled. The judge scaled in Light Bra-

mas, 20 Fowls, and 29 Chickens, and in Dark Brahmas, 8 Fowls, and 20 Chickens. The cards, as in pairs, sealing the most indicating the prize birds. But to make his position sure before announcing the awards, Geo. G. Johnson and A. P. Amidon were called in as umpires on Light Brahmas, and H. G. Felch on Dark Brahmas, who ratified the decision of the judge. Mr. Johnson scoring the pair receiving 1st in Lights, and agreeing within one-half a point with the scaling of the judge. There was much fault-finding and many harsh remarks made of the judgment, and it was to be expected when we consider that the 1st prize birds of Brooklyn, Bristol, Portland, Spencer, Northampton, Utica, the Grand National and many other exhibitions were competing for the three prizes in each class, and with the fact of 77 specimens being scored and the poorest of the scaling $87\frac{1}{2}$ points, the best 96 points, is it strange when the three best pairs in Lights scaled 185, 185 $\frac{1}{2}$, and 186, that the owner of each should believe his was the best. You could see as pairs there was little or no difference. The criticisms were, as is usually the case, based on individual tastes and not on the standard. For instance, one called the judge to account for cutting his Cockerel entered 421 $\frac{1}{2}$ points in the tail when said Cockerel did not show his sickle feathers at all, but they were then under the coverlets, and the tail was small and rounded in like a Cochins'. The 1st prize bird was cut 1 in the tail because his sickles run up straight, and the tail was pinched a little; both of these tails were elegant in color. Now read the description of the Standard: "Full, well spread, carried tolerably upright, and well filled underneath with soft, curling feathers, sickle-feathers short and spreading laterally, &c." People are too apt to consider their own taste as the embodiment of the Standard, and when they are asked to apply the Standard to answer as did the above individual. "That that was the tail they were going for in his section, and that he should continue to breed to it regardless of the Standard," this he certainly has the right to do, but he has no right to censure the judge because he does not in it see the results required by the Standard.

The comb of the Cockerel in pen 657 was a matter of much comment, but let us consider this. The Standard gives you a perfect comb, and by actual measurement we find that a comb, which is in height just one-half the distance from the top of the head to the lower line of the lower jaw fills the bill exactly. Now, the Cockerel 657 had a comb that was straight and firm on his head and had every one of the 17 serrations; the back of the comb was on a line with the center, and while the rear point did not fall below the center it did not rise above. The comb was just two-thirds the width of the head high, which will be seen was one-sixth of the width of the head too high, for coarseness and size of this comb, he was cut 2 $\frac{1}{2}$ points or 31 $\frac{1}{2}$ per cent. of the whole. Entry No. 421 had a comb that turned in a ceral to the right, thus crinkling all three of the serrations. This comb was cut 3. Your judge cannot see any injustice in his action. With these two specimens another *seeming injustice*, viz.: the cutting of tails 2 points, when it seemed all right in color, is accounted for as follows: In the meeting of the Judges before commencing their work, it was remarked that at Chicago 5 birds received 1st prizes whose tails had no sickle-feathers in them, and it was considered by the judges at Springfield, that the absence of sickle feathers should be cut 2 points, the same as sickles that showed white, and your judge wishes to say in his class, there were 8 Cockerels in which he found no sickles or found them broke off one inch from the "apex vertebrata," and the stubs were white.

Of the 8 best Light Brahma chickens none were cut in condition except the 1st prize Pullet. She was as white naturally as any pullet on exhibition but being dingy with dust she was cut one for condition. The 1st prize pair were 2 lbs. over weight, thus getting a credit of excess of 2 points, but the dirt made the pul-

let less attractive, and thus drew censure on the judge by some. Again the second best Cockerel had legs that turned in slightly, very little, however, and was cut 2 points, but he weighed 13 lbs., getting a credit for extra weight of 3 points. Now visitors exclaimed that the judge gave the preference to this specimen to the disadvantage of the Cockerel that was second in the regular award when the best latter only weighed 10½ lbs., and had not as good a comb as the 13 lbs. Cockerel. Visitors do not consider these differences in weight and censure where they have little right to do so.

Some found fault because a specimen was cut in symmetry, when it stood upright like a game but had a breast that was flat, yet broad, and followed up the censure with the remark, "What station the bird has." "I think station belongs to the game class. No specimen can be full in symmetry and not be full in breast and body but a bird can be full in breast and body and not be full in symmetry, if the color be all right. There were not 5 specimens that literally filled the Standard in breast and body, which is, "Full, broad, and round, and carried well forward." And in the case cited above the judge could see no reason to change his award.

Visitors invariably compare the poor specimens of one coop with the good one of another when they are disposed to criticize, but when birds are exhibited as single specimens then all this trouble and harsh criticism falls to the ground. If visitors would look to the score cards to ascertain the merits of specimens they would see then which is the best specimen of the exhibition, and in the Springfield Exhibition they were found there in coops not winning in the regular class.

For instance, in the Light Brahma class of Chickens:

Entry No. 657 won 1st prize, scoring 187, and was the best as a pair.

Entry No. 727 won 2d.

Entry No. 421 won 3d.

Entry No. 724 was 4th, as a pair.

Entry No. 209, in which was the best Cockerel, was disqualified on account of his mate, a black-back hen.

In Fowls—C. C. Plaisted won 1; P. Williams 2 and 3. But had the awards been made on Light Extras, they would have been as follows:

Cocks—C. C. Plaisted 1, score 94½; P. Williams 2; F. O. Bailey 3; P. Williams 4.

Hens—1 and 2 to P. Williams and 3d to C. C. Plaisted. Thus you see the 1st cock and 3d hen won 1st prize; the best hen and 2d cock won 2d prize and 2d hen and 4th cock won 3d prize.

Chickens—Cockerels:

Entry 210, 1st, scoring 96 points.

Entry 427, 2d best, scoring 93½ points.

Entry 657, 3d best, scoring 92½ points.

Entry 421, 4th best, scoring 91½ points.

Entry 724, 5th best, scoring 91½ points.

Pullets:

Entry 734, 1st, scoring 94 points.

Entry 657, 2d, scoring 93½ points.

Entry 421, 2d, scoring 93½ points.

Entry T. H. Allhech Pullet, 4th, scoring 92½ points.

Entry 727, 5th, scoring 91½ points.

And you see the 3d Cockerel and 2d Pullet winning 1st prize as a pair; the 5th Cockerel and 1st Pullet taking 2d prize, and the 4th Cockerel and 3d Pullet winning 3d prize, while the 1st and 2d best Cockerels win nothing. We will never see the time when a Judge can satisfy all till we show single birds. Were a man to believe what he heard as he went around through the different classes Friday morning he would be astonished to learn that there was not an honest judge employed by the Consolidated Exhibition at Springfield. The Dark Brahmas were a fine class.

The magnificent hen in the 1st prize coop carried to the front with her a cock good in front but little faulty in color.

While the 2d prize pair was "worthier" and merited. The 3d prize birds being a fine pair which, but for the white in the flights of the cock, would have won 1st prize. The awards in this class called out but little criticism. The belle of the class of Chickens being the Pullet exhibition by Mr. Lamb, of Chicago, her mate failing to have points enough to place her among the winners, although she scaled herself 95½ points, the evil again of showing in pairs. In closing I will say that when one does judge an exhibition "By the imperative demands of the American Standard of excellence, laying aside all personal prejudices and preconceived tastes," he must not find fault, nor do I in this case, if for the time of their disappointment the owner of specimens does censure him.

Fraternally yours,

I. K. FELCH.

No. 3.

THE EGYPTIAN MODE OF RAISING CHICKENS.

is a very simple one, and it could be imitated in this country, perhaps to good advantage, and no doubt on a considerable scale, in the hot season, any where, or at the extreme south during seven or eight months in the year. "The first thing however, to do towards cooking your trout," says quaint Izaak Walton, "is to catch him." And intelligent Californians have a proverb among them advising that "you secure your bear, before you offer to sell his skin."

In this view, we add that the first thing to perform in the raising of chickens, in small or large quantities, is to successfully hatch them. The Bermeans do this on an enormous scale. How they do it, is a matter that must be studied attentively, and experimented upon largely, before the American breeder will be able to do it as they succeed with it. But—given the chickens in hand—successfully hatched, the mode adapted in Berme to raise them is by no means complicated, since they do this, by the million there.

But they have a vast advantage over us in the temperature of their warm climate, to begin with. In Europe or America, even if it were easy at any one time to collect several hundred thousand eggs suitable for hatching, (which is hardly possible,) and if we were then able to so manipulate them in the incubators, or properly prepared "ovens," or heating houses, as to get out even five or ten thousand at a time, what could we do—in many of our cold localities—with so many chickens, produced on the same day? What must become of the poor little creatures, fresh from their shells, without mothers to brood and shelter and keep them from perishing in infancy?

"Artificial mothers" are already invented, replies the maker of incubators. We are aware of this fact. But how far will those machines go toward the desired end, when we are speaking of what is to be done for tens of thousands of chicks, possibly to be produced? "Multiply the number of machines?" Very good. But this would not remedy the objection, in our wet, cold days and nights, while in Egypt, it scarcely ever rains, and the climate is constantly sufficiently warm to permit of dispensing with "mothers," natural or artificial. They do not use them there, at all, and thus they can raise chickens in quantities as we can not.

Mr. Reaumer tried many experiments, upon a larger or lesser scale, to provide for the broods of young chicks which he hatched from time to time by artificial heat; and his "hot beds" and "equally heated chambers," were the most successfully carried out, for this purpose. In his day the means of heating an apartment with steam-pipes was of course unknown. He used stoves in the center of his rooms, keeping up a regular heat, graduated attentively from the indications of the thermometer, and never

intentionally exceeding a temperature of 60 to 70 degrees—by night or by day.

He was thus able to rear large numbers of chickens, until they were old enough to bear the climate out of doors. These, at an early age, were killed off for market or table use, and answered the purposes of his long tried experiments. But our breeders in this country have never yet given the time or attention to this subject that De Renumer did—a hundred and twenty years ago, and they probably never will. So we make no recommendations to American fanciers, on this score, and have only referred to the matter of artificial chicken-raising briefly, with a few quotations from the old work we started with, as items of curiosity in their way.

That chickens *can* be multiplied among us artificially, and that they *can* be reared through means similar to those long in vogue among Egyptians, there is little question. That hundreds of batches of chickens are nowadays hatched and raised, at least to goodly marketable size in America, we are assured is the fact by those who have in the last three or four years used the Yankee "incubators," invented by our people in New York, and Boston.

How this may continue to be increased, by advancing knowledge and experiments in the use of these machines, or how we may improve upon these modes by and bye, as we become more enlightened and more skillful in this direction, remains to be seen. But on the principle that "which man *has* done, man *may* do," we see no reason to doubt that sooner or later we shall be able to turn out chickens by the hundred or thousand, artificially, as easily as we now produce the clutches of dozens or scores, by the natural method. And whenever we reach such proficiency in getting the chicks out of their shells in quantities, successfully, there is no doubt that we shall also with the at present known modes of heating their quarters evenly and appropriately, during their young days—be able to contrive to raise them to advantage, and subsequent profit.

(For Fanciers' Journal.)

THE SHANGHAI.

The shanghai is a pretty bird,
He wakes us in the morning
With dulcet sweets so long drawn out,
To tell us day is dawning.
The milkman rings his little bell
To start us from our sleeping.
Then too, there is the big fire bell,
Its fearful "boom, boom" keeping.
But the shanghai beats them *both* for noise,
He's *never* tired of calling,
His "cook-a-doodle-doodle d-r-r-r—"
"Get up I tell you it's morning."

In armies and in navies too,
The revellè is sounded,
And always in the good hotel,
The chinese gong is pounded.
E'en the iron horse with noise and jar,
And whistle, din and rattle
Cannot compare with notes sometimes
Drawn by the feathered cattle.
Yes! the shanghai beats them *all* for noise,
When in his tones of thunder
He calls ten thousand times a day;—
"Who'll feed me *next*, I wonder-r-r-r-r."

E. S. S.

THE GHOST of Noah Webster came to a spiritual medium in Alabama, not long ago, and wrote on a slip of paper: "It is time times." Noah was right, but we are sorry to see he has gone back on his dictionary.

When an Indiana girl gets tired of a lover and determines to dismiss him, she doesn't throw much fresco work into her speech. "I guess you can pull off, now, Sam," is her icy remark, "this egg won't hatch."

The song of the repentant husband after knocking his wife down—"Come to my bosom, my own stricken dear."

SPORTSMAN'S DEPARTMENT.

SHEPHERD DOGS.

In southern California you may see on plains and hills thousands of sheep, but not a man to watch them. Around each flock or band of, say a thousand sheep, are half a dozen dogs, of a peculiar breed; dogs whose progenitors were imported from the sheep pastures of the Old World. These dogs take the entire care of the sheep, drive them to pasture in the morning, keep them from straying during the day, and bring them home at night. These dogs have inherited a talent for keeping sheep; but the shepherds do not depend wholly on that. They cultivate it in this way: "When a lamb is born it is taken away from the mother sheep before she has seen it, and a puppy put in its place. The sheep suckles the puppy and learns to love it. When the puppy grows old enough to eat meat, it is fed in the morning and sent out with the sheep. It stays with them because it is accustomed to be with its mother, but it cannot feed with them. As they get full the dog gets hungry. At length, impatient to return where it hopes to get another piece of meat, it begins to tease and worry its mother, and finally starts her toward home, the other sheep follow, and thus the whole flock is brought in. If the dog brings the sheep home too soon, or comes home without them, he gets no supper, or is punished in some way. Hence he soon learns when to come, and to see to it that none of his charge are left behind. These animals are trained by taking advantage of their instincts and appetites."

SPORTSMAN AND SPORTING MAN.

There is a wide difference between a sportsman and a sporting man, by popular abbreviation a "sport." To the sportsman the appellation is objectionable, for the reason that while it is true that a sporting man may be a sportsman, yet as a rule, where the former begins the latter ends. The sportsman enjoys pleasure for the pure, undefiled pleasure it gives, for the recreation and rest it affords from active labor, and for its health-giving powers; since as a necessity much exercise must be taken in the pursuit of game, and exercise is the price of health. The sporting man, on the other hand, is a speculator on chance, and goes into it for the profit and gain quite as much as for the excitement of the moment it affords.

The sportsman is generally a man engaged in some active business or professional pursuit, who contributes in one way or another to the benefit of the community, while the sporting man is a drone, a consumer without being a producer—profiting by the chance opportunity of the occasion, and receiving but giving nothing in return, therefore of necessity adding neither to the wealth of the community nor benefiting mankind. It is but natural that society should place a ban on him, and that the sportsman should object to being identified with him.

It is but a short time since that same society has learned to

distinguish the one from the other; and although there are those who are not yet sufficiently educated up to the subject to discriminate between the two, there is cause enough for gratification that daily it is becoming better understood, and doubtless those who yet confound the two will eventually learn to distinguish between them.

Not so very long ago, with many, a sportsman, a vagabond, and a lazy fellow were synonymous, and to the young man engaged in business being fond of a dog, a gun, or a horse, seriously affected his business standing, and predicted for him ruin from his older business acquaintances. A party of sportsmen going off on a shooting excursion, was accredited with making shooting only a pretext for the real motive of carousing and gambling. If married their wives were looked upon with pity by their more sanctimonious acquaintances, and among the female portion of them there was much cause for congratulation that their own matrimonial lines had not been cast in the same waters. Even spinsters, who had reached the meridian of life and were traveling rapidly past that goal which every woman, more or less, hopes to reach, a period when opportunities are not to be thrown away, looked with disfavor on him who was a sportsman.

It was against this odium the sportsman had to contend, a prejudice begotten of ignorance, a relic of Puritanism, and but little in keeping with the intelligence of the American Nation and the enlightenment of the present century. But now it is different. Being a sportsman is not considered incompatible with being a gentleman, a useful member of society, nor even with being a Christian, since in the ranks are to be found ministers, doctors, lawyers, merchants, and farmers, and the various other branches of business and professions. No longer is the horse, dog, or gun the insignia of the sporting man, the loafer, or the vagabond, but rather of the manly man.—*Chicago Field.*

A WELL-TRAINED DOG.—"Yes, Sir, this is Tompkins' saloon. Possibly the most aristocratic place of the kind in town. But one objection to Tompkins', and that is its situation, right in the greatest thoroughfare in our populous burgh. That is my dog. Julius and I are constant companions. Now, Tompkins' place is so extra select that dogs are not allowed to go inside. Once, it is said, a strange dog eat a free lunch there." Here my informant waved his hand to a poodle, who crossed over the other side of the street, and seating himself on a curb stone, gazed at us. "Wonderful dog. He knows Tompkins' dislike to animals. Now, pray observe him. Just as soon as he sees us enter, he will make the circuit of the block, and then bolt for the back door of Tompkins'. People—for they are great busybodies in this town—might infer that, since Julius was outside on the street I was inside taking some quite necessary refreshment, but I can afford to look down upon public opinion." Desirous of testing Julius' sagacity, though his master was quite unknown to me, I put my hand on the latch which opened the door to Tompkins' aristocratic establishment. Instantly the dog disappeared around the corner. "If," said my quondam friend, "you was to invite me to keep on drinking here all night, that dog never would budge from the back door. He would wait for me until to-morrow morning." As I was as fully assured of Julius' sagacity as of his master's capabilities, I did not insist on making a more detailed experiment.

A BARBER'S ASSISTANT.—Mr. J. Griffin, hair-dresser of St. Andrew's Hall Plain, has succeeded in training a really noble-looking dog (of the Retriever breed) to be of eminent service to him in his business. On entering Mr. Griffin's *sanctum sanctorum*, if the object be a further reduction of the hair or a pleasant shampooing, the visitor will observe a handsome Retriever reposing in dignified ease on a mat evidently carefully arranged for his comfort. The

proprietor touches a bell; the dog eyes his master for a moment with a look of intelligence, then with a few active bounds ascends the stairs to "regions above." Presently the machinery connected with hair-brushing is set in motion. The visitor's curiosity being aroused, he is courteously invited by the proprietor to observe the log at his work. For our own part, we must confess we were both astonished and amused. The animal was "hard at it" in a large wooden wheel, which he turned rapidly with his feet. On our appearance, as though anxious to display his ability and proud of his acquisitions, he redoubled his efforts and the wheel revolved at a great rate. The dog continued his work after we had left him until the signal was again given him by a touch of the bell, when he at once reappeared in the lower apartment, taking his position on the mat, evidently prepared to "wait for further orders."

DOGS DISLIKING TO BE RIDICULED.—I once had a Skye terrier which, like all of his kind, was very intelligent. When in good humor he had several tricks, which I know to have been self-taught, and the sole object of which was evidently to excite laughter. For instance, when lying upon one side and violently grinning, he would hold one leg in his mouth. Under such circumstances nothing pleased him so much as having his joke duly appreciated, while if no notice was taken of him he would become sulky. On the other hand, nothing that could happen displeased him so much as being laughed at when he did not intend to be ridiculous. Mr. Darwin says: "Several observers have stated that monkeys certainly dislike being laughed at" (p. 71.) There can be little or no doubt that this is true of monkeys; but I never knew of a really good case among dogs save this one, and hence the signs of dislike were unequivocal. To give one instance. He used to be very fond of catching flies upon the window panes, and if ridiculed when unsuccessful, was evidently much annoyed. On one occasion, in order to see what he would do, I purposely laughed immoderately every time he failed. It so happened that he did so several times in succession—partly, I believe, in consequence of my laughing—and eventually he became so distressed that he positively pretended to catch the fly, going through all the appropriate actions with his lips and tongue, and afterwards rubbing the ground with his neck as if to kill the victim; he then looked up at me with a triumphant air of success. So well was the whole process simulated, that I should have been quite deceived had I not seen that the fly was still upon the window. Accordingly, I drew his attention to the fact, as well as to the absence of anything upon the floor; and when he saw that his hypocrisy had been detected he slunk away under some furniture, evidently very much ashamed of himself.

BULL-DOG COURAGE.—An evidence of the courage and pugnacity of the English bull-dog was shown in a remarkable manner a few days since, in England. A dog of this description, who had never been accustomed to see trains until lately, has taken a great aversion to them, and has made a point of chasing them whenever he has had an opportunity of doing so, but, of course, without being able to catch them. On the morning in question, being out with his owner's brother, in the vicinity of the Somerset and Dorset Railway, between the Midford and Wellow station, the early train from Bath was heard to be rapidly approaching. The dog, as usual, was off directly. The gentleman, knowing they were in advance of the train and fearing the dog would be killed, called loudly to him to come back; but quite in vain. He then ran to see what would be the consequence of the brute's folly, and was just in time to see the dog boldly charge the cow-lifter of the engine and disappear. The gentleman then closed his eyes for one moment, not wishing to see the dog's remains torn to pieces, and on opening them the next moment, much to his surprise, he distinct-

ly saw the dog under the rapidly passing carriages, evidently waiting an opportunity to make a dash between the wheels, but their, to him, unusual velocity rather bothered him; he therefore remained until the last carriage had passed over him, and then emerged, wagging his tail as though he had done something to be talked about, and having only sustained a few cuts about the head, and loosing all the hair from one side of his tail.

♦♦♦
A BOY THAT DESERVES A MEDAL.—He was a very small boy, all in tatters, and his clothes were dripping. In his arms he had a miserable little dog, and both boy and dog were shivering in the cold January weather. This is about what he told me: "You see, Mister, Bill Bostwick and me was playing by the river, betwing cents on the chunks of ice, a seeing which one would go first over the dam, when this 'ere little dog came trotting past. Says Bill to me—says he, 'Let's have this 'ere dog for a passenger.' So we took him and put him on a real big hunk of ice, and Bill, who is an everlasting mean kind of a boy, was for shoving him off into the water just so, but I wouldn't. I had a bit of twine in my pocket, and I hitched it to a jagged bit of the ice, so as it couldn't get off. Oh, we had lots of fun at first, with that 'ere pup, as a passenger. But Bill is an awful ornary boy, Mister, so when it was his turn to play two-horse with the chunk of ice and the dog for a passetger, he just let the cord slide on purpose, so he did. Then I pitched into that ere Bill Bostwick and guv him fits. But you see there was the ice, and the pup as was passenger, sliding down that ere river like thunder. I felt sure the passenger was going to be drowned; as I happened to know that pup's mother I felt kind of sorry, so I went again for Bill Bostwick, and went for him good. Just then the cake of ice, with the poor pup a yelping and kiespieing on it, was just over the dam. I dursn't look, Mister. That ere night tho' I must have slept good, that pup's howling I kind of dreamed about. Well, arter breakfast, I ventured to look onto the river, and there was the pup still a yelping, just like Moses in the bullrushes. The ice had kind of sot during last night as it was cold, but wasn't yet real hard. I just skinned across that dam on the logs—sakes! it was slippery, and I tumbled in over my head twice, and was just able to get that pup off, as was passenger, by the scruff of his neck. Now, Mister, I am going to keep that ere dog until he is grown up, and just as sure as ever Bill Bostwick whittles to him, I am going to teach him to bite Bill, and if he is too small to do it, I ain't too little to lick two boys like Bill. I say, Mister, if you know of any society as gives medals to boys as saves dogs' lives, send em to me, as my name is George Washington Ostergood, of Perry, Iowa." If there should exist, we thought, such a thing as a society awarding medals to heroic urchins for saving an animal's life, we feel certain, poor ragged George would have been entitled to one of them.—*Perry Chronicle*.

THE URSINE BABOON.—The Ursine Baboon (*Cercopithecus Ursinus*) is well-known to naturalists from descriptions given by scientific travelers, and of late years has been much hunted by English sportsmen. It is an animal of considerable strength, and when full grown attains the size of a Newfoundland dog. It resembles the dog in the shape of its head, and is covered with shaggy hair of a brownish color. On level ground it always goes on all-fours, but among rocks, its natural refuge, it principally uses its hind feet, and springs from cliff to cliff with great agility. It subsists entirely on wild fruits and edible roots and bulbs which abound in the district which it inhabits. For defence against its enemies—the leopard, hyena, wild dog, &c.—it is armed with formidable teeth about half an inch long, and when severely pressed will defend itself successfully against the most powerful wolf-hound. It has a mode of grappling its antagonist by the throat with its fore-paws, while it tears open the jugular vein with

its teeth. In this manner I have known a stout baboon to dispatch several dogs before he was overpowered; and I have been assured by the natives that even the leopard is sometimes defeated and killed by a troop of these animals. It is, however, only in large bands that it can successfully oppose this powerful enemy. In many of the mountainous districts the leopard, it is said, subsists chiefly by preying upon baboons and monkeys; lying in wait and pouncing suddenly upon them, in the same manner as the domestic cats deals with rats.

Although sometimes troublesome to mankind by robbing gardens, orchards, &c., I have never known it either singly or collectively to attack individuals, although I resided for several years in a locality where this baboon is numerous. It is told, however, at Cape-Town, that a party of these animals on one occasion playfully carried off an infant from the pleasant village of Wynberg, seven miles from Cape-Town. My informants were persons of respectability, and assured me that this incident occurred within their own recollection, and that the child was recovered by the inhabitants after a long and perilous pursuit, without having sustained any serious injury.

The strong attachment of these animals for their young is an interesting trait. When a band are discovered by the colonists in an orchard or cornfield, they are driven to the mountains with dogs and guns. On such occasions if the females are separated from their young they will return to search for them in the midst of their pursuers.

It is the habit of this animal to descend from its rocky fastnesses in order to enjoy itself on the bank of the mountain rivulets, and to feed on the nutritious bulbs which grow in the valleys. While thus employed it usually takes care to be within reach of some steep rock to which it can fly for refuge on the appearance of an enemy. Sentinels station themselves on large stones to give warning to the others if necessary. While riding along secluded valleys I have suddenly come upon a troop of forty or fifty baboons, while suddenly turning a sharp rocky corner in the road. Instantly a loud cry of alarm would be raised by the sentinels, and the entire band would rapidly scamper off, and would soon be many hundreds of feet up the mountains where it would be impossible for any creature without wings to follow them. The large males would bring up the rear, ready to turn with fury upon any hounds if they molested them. I consider the Ursine Baboon one of the most interesting of the many wild animals of Africa.—*German-town Telegraph*.

♦♦♦
TAKING THE RISK.—The other day, a colored resident of Vicksburg found a bottle of whisky in the suburbs of the city, and, hailing a pedestrian, he inquired:

"Dat's whisky, ain't it?"

"Smells like it, and I guess it is," was the reply.

"And there ain't no pizen in it?"

"Well, there may be—I can't tell. I shouldn't want to drink it."

"If dere was pizen I'd be a dead nigger, eh?"

"You would."

"And if dere wasn't any pizen, I'd be wastin' a pint of good whisky."

"Yes!"

The finder turned the bottle over and over, smolled of the contents three or four times, and finally made ready to drink, saying:

"Dare's heaps ob pizen lyin' around loose; but dere's also heaps ob niggers in Vicksburg, an' Ize gwine to tip up de bottle an' run de chances."

♦♦♦
 "No, sir," said a weary looking man on a street car to an individual by his side. "I wouldn't marry the best woman alive. I've been a dry goods clerk too long for that."

ASSISTED BY A CORPS OF THE ABLEST WRITERS, ON OUR SPECIALTIES, IN THE UNITED STATES.

EDITORIAL DEPARTMENT.

THE A. P. A. GROUP.

Mr. G. O. Brown, of Brooklandville, Md., wishes us to state that he has delayed completing his A. P. A. group in consequence of there being several that had not responded to his circular, and in order to get all the new members recently elected at Chicago, the time will be extended until May 1st, when it will be closed and completed whether all have responded or not. Every member of the A. P. A. should respond at once and then they will have no cause to regret when too late.

CHICAGO.

Below we give extracts from a few of the letters received since our last issue. We notice one of our correspondents alludes to a reply by the Secretary of the "National." Trusting it will clear up matters, and show that only mistakes were made, we patiently await its appearance.

MORE ECHOES.

FROM DES MOINES, IA.

I am of the opinion that when the smoke clears off, your motive in showing up the management at Chicago—I notice with pleasure that you do not charge them with dishonesty—will be fully understood and appreciated by the fanciers of the country—I know some small minded persons who haven't honor enough in their own make-up to credit any one else with pure intentions, will impugn your motives, and say you do it for many purposes other than the correct ones. But you keep right on, don't get excited, but carry an even head, and deal justly as you have, so far, and you will have done a work, for which you will get the hearty thanks of the best men, and this is what you desire, I know. I have talked with many breeders, and have letters from six who showed birds at Chicago, and they all say the same thing, that you have done your duty in a manly way.

FROM AUBURN.

On the whole, I am sick of the affair, sick of it, because the promises were so big and so easily laid aside, sick of it, because I can very clearly see that unless the strong voice raised against the procedure is listened to, other societies will follow its bad example, and very soon we shall not know which to trust. Why, as you said, even the Judges were unfairly dealt by, one gentleman was invited from this place *officially*, and never so much as received a complimentary thank you; another gentleman at Buffalo was telegraphed to, and not a cent of his expenses were paid. There may not be "fraud" out there, as some are charging, but if it is simply mismanagement as you intimate, then if there are to be great national shows and exhibitors are to suffer if there is a loss, the exhibitors had better take the responsibility of the management.

FROM BLOOMINGTON.

Have had the satisfaction of reading the proof of an article prepared by the Secretary of the National Show, in reply to your severe arraignment of its management. While on the face of it, it appears very

plausible, there is an underlying current which isn't pleasant to consider. He attempts to reply to some of the charges, but the defense is very weak, at the least; by his own showing there was only blundering and dullness all through. I suppose you will see it in some western journal, and will give it your own treatment. * * * *

FROM ST. JOE, MO.

I was much pleased, and at the same displeased, in reading your comments on the Chicago Show. Pleased at the way you handled it, and displeased at the showing. I hope that you will "not let one of the guilty parties escape" until you have all their crooked ways made straight, and those that cannot be made to bend, put them on the black list, as it is an outrage on Breeders and Fanciers who are in the habit of exhibiting their birds, and do so much to assist in getting up our fine exhibitions of Poultry and Pets. If it is allowed to go on it will not only break down the National, but all other societies. I should like to ask who has reaped the greatest amount of benefit from this Show? Was it the first class breeders, who are well known, and have spent so much money in preparing their stock, paying freight, hotel bills, and many other incidentals? or is it the citizens of Chicago, who have, as individuals, contributed but a very small portion, and as a city or a municipality, not one dollar towards the great and fine display. It was the means of thousands visiting their city, and they all spent more or less money there. I do not wish to dictate, but I do think it would have been doing but little, if the city of Chicago had furnished the hall free of all cost, and those citizens who had bills against the society too could have held them at least long enough for the exhibitors to pack up and receive their small amount of premium money, I think it would have been much to their credit, as a city, if they had not the generosity to do the fair thing, I think it would be well for the good of the society to hold their next show in some other city where they would have some consideration and where help and fuel is not quite so high. I do not wish to blame any particular person, but there certainly was bad management connected with their first show. I am very much afraid that it will hurt our local shows throughout the west, not so much with home breeders as those from a distance. This year at our show we had some Breeders from a very great distance represented, and I now fear we will have none next year. Still as we did all we promised to do, it ought not to hurt us.

FROM ALLEGHENY.

In the last number of the JOURNAL, I read with a great deal of interest your article on the Chicago show.

Now, Mr. Wade, can we call this a National Show? It may indeed be one as far as the entries are concerned, but as to the payment of premiums, losses, &c., methinks it plays to the tune of "Home, sweet Home!" or in other words, it was merely a local show, where Chicago got paid first, and the distant ones got the "leavings."

I entered two pair of pigeons, and only one pair was returned. When I enquired about the missing pair, they stated that they "supposed" they were stolen. I immediately said that I "supposed" they would hold themselves responsible. "No indeed!" said they, "all we promise is that due precaution shall be used." Now what is due precaution, but proper precaution?

AUBURN, N. Y., March 8th, 1876.

I have this day sold to Mr. D. Frank Ellis, Cambridge, Mass., my entire stock of Black African Bantams, including my imported cock, Black Prince, and mates, which are prize winners in both England and America. This trio, with the birds of my own breeding, will give him one of the best, if not the best breeding yard of Black African Bantams in America. This also includes the cockerel, Henry Beldon, which scored 98 points at the Springfield exhibition.
(Signed) E. S. ONGLEY.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—An Irishman talking with a friend says, "The laws uv the country is corrupt, the outhay day whin me cillar was fluded wid wather by ther grate rain, I wint down stairs an found me hins all flootin around. I tuck me case to ther court, an all the satisfaction I got out of it was ther sludge tould me to kape doocks."

—A letter from Cape May to the *Evening Star* says that a large shoal of porpoises, followed by great flocks of "codfish gulls," both very unusual winter sights, passed that place the other day close ashore, giving assurance that codfish were coming along on which these were preying—the former on the fish, and the gulls on the fragments and blood left by the devourers.

As codfish are unlooked for less than six miles off shore, no one wet a line for them. A fine specimen washed ashore, chased in by a porpoise, it is supposed. A steamer put out from the break-water recently and caught 900 pounds in a few hours. They are caught while at anchor or hove to, and clams are used for bait.

—SIOUX asks—"Do the bovines ever perspire?"

One day, when I was a boy, I remarked in the presence of an old uncle, who had been all his life among cattle, that somebody or something "sweat like a bull." "Hoon," said the old man, "never say that again. A bull does not sweat, nor any of his kind. No animal is sweat but man and the horse." Since that time I have had no reason to contradict him by ocular proof, though I have heard of a breed of dogs which is said to sweat, or in Sioux's words, to "perspire." Will some one who knows speak for the dog? I, certainly, have never seen one in a state of perspiration. Hoon.

—YOUR correspondent, E. S. S., calls my attention to a very large owl. I wish that writer had told us to what family it belonged. An owl with an alar extent of 43 inches is worth knowing. It may have been a *Bubo virginianus* (great horned owl), which has been known to measure 60 inches from tip to tip of wing; or may have been a barn owl (*Strix pratineola*), which measures, when full grown, 44 inches; or perhaps it was the long eared owl (*Otus Wilsonianus*), which, though its general alar extent is 40 inches, has been found to go beyond that in one or two instances. The grey owl (*Syrnium cinereum*), the largest North American owl, measures 48 inches from tip to tip. Now will E. S. S. be kind enough to state to which of these, if any, the owl in question belongs? Hoon.

—SAGACITY OF RATS.—Incredible as the story may appear of their removing hens' eggs, by one fellow lying on his back and grasping tightly his ovoid burden with his fore-paws, while his comrades drag him by the tail, we have no reason to disbelieve it, knowing, as we do, that they will carry eggs from the bottom to the top of the house, lifting them from stair to stair, the first pushing them on its hind, and the second lifting them with its fore legs. They will extract the cotton from a flask of Florence oil, dipping in their long tails, and repeating the maneuver until they have consumed every drop. We have found lumps of sugar in deep drawers at a distance of thirty feet from the place where the petty larceny was committed; and a friend saw a rat mount a table, on which a drum of figs was placed, and straightway tip it over, scattering its contents on the floor beneath, where a score of expectant brethren sat watching for the windfall.—*Philadelphia Press*.

—The birds which remain in the vicinity of New Haven, Conn., during the entire year, and their comparative abundance, I have observed to be as follows:—

Red tailed hawk. Common in summer; rare in winter.
Red shouldered hawk. Common in summer; rare in winter.
Great horned owl. Rare at all times.
Mottled owl. Common summer and winter.
Barred owl. Common at all times.
Downy woodpecker. Common summer and winter.
Golden winged woodpecker. Common in summer; rare in winter.
Kingfisher. Common in summer; rare in winter.
Robin. Common in summer, and not rare in winter.
Blue-bird. Not rare in winter, and common during the summer.
Chickadee. Rare in summer; common in winter.
Cedar-bird. Common throughout the year.
Purple Finch. Rare in summer; common in winter.
Yellow-bird (*Chrysomitris*). Common summer and winter.
Song sparrow. Common in summer; rare in winter.
Meadow lark. Rare in winter, but common during the summer.
Crow. Common both winter and summer.
Blue Jay. Commonly found all the year.
Wild pigeon. Rare in summer; rare in winter.
Ruffed grouse. Common summer and winter.
Quail. Common throughout the year.
Dusky duck. Rare in summer; common in winter.
Possibly there may be one or two more species, but having carefully observed the habits of our birds, I am inclined to believe that all are included in the above list.—*Forest and Stream*.

"How are ye, Smith," said Jones. Smith pretended not to know him, and answered hesitatingly: "Sir, you have the advantage of me." "Yes, I suppose so. Everybody has that's got common sense."

SMALL PET DEPARTMENT

(For Fanciers' Journal.)

ZOO NOTES, NO. 15.

SNAKES.

Though as yet the largest of snakes are not exhibited in the Zoo, still we need not travel with Sinbad to the "Valley of Diamonds" to find some of a respectable size. In the reptile room, solitude, are specimens of dimensions great enough to make delicate nerves shiver and shake to quite an uncomfortable degree. I suppose every visitor to "Our Zoo," goes at least once into the reptile room, but very few, however, seem much in love with what they see there,—like the traveler, when invited to partake of a celebrated dish by his Indian friend—they don't "*Hanker after rattlesnake*"—short is the stay, in that room, by most visitors, and general are the expressions of dislike, disgust, and even horror, on their exit from it.

Now why is this? Has the serpent been improperly made—or should he not have been made at all? This disgust, and repugnance even to look at him cannot all be owing to that old "old story" about him and mother Eve. When we come to know the serpent tribes we find as much beauty among them, that multitudes of them are quite as harmless, quite as useful, and that they fit quite as well in the groove nature prepared for them, as the other animals of God's creation. That they fill a place in the great economy of nature, and fill it properly, which is more than can be said of some of God's "nobler" creatures, no one will deny upon consideration, and upon which, for my present purpose, no more need be said.

The aptitude of the whole serpent tribe for being tamed, which, considering we must have pets of some kind or other, is a great recommendation the snakes carry with them.

John Watson, in his *Annals of Philadelphia*, says a child had a pet snake which ate porridge with her out of the same bowl, and when the snake would advance beyond a certain line she would say in her Quaker language "now thee shan't do it again—keep to thy own side." Maria Edgeworth tells the same story as happening in England, with this addition, when the snake would intrude its head beyond the proper line, its mistress would give it a rap with her spoon, with the admonition, "Eat on your own side, I tell you." Watson's child was Rebecca Colman, who died at the age of 92 years! It does not appear that living in close communion with a snake was of much injury to her health.

W. I. Broderip, F. R. S., once knew a lad who rendered a common snake so tame, that it became very fond of its owner, would wind itself round his neck and face, and when tired would go to sleep in his bosom! and it is well known that the N. A. Indians were famous for making pets of Rattlesnakes, the most dangerous of all the American reptiles.

A great improvement has been recently made in the reptile room, namely, a bath tub has been given to all those who love the water—and that includes nearly all snakes, especially the boas and pythons, who always haunt the neighborhood of waters, in their wild state; and therefore it is quite natural to see the Zoo snakes availing themselves of the accommodations provided for them, and from which they seem to derive so much pleasure and comfort, especially on the hot days in summer, when those which have not bath tubs, will improvise one out of their drinking basin, and lie there coiled up, with nothing out of water but head. Any one who has ever observed the peculiarly graceful sinuosities of the snake in crossing a pond knows how much of snake-beauty is lost in depriving the reptile of the power to obey its instinct by swimming.

Water snakes will take fish as well as frogs, for food, but only when driven to it by a scarcity of the latter. The water snake

does not kill the frog as the Rattlesnake does the rat, or the boa does the rabbit,—he takes him alive! nor does he take his victim head foremost, as they do, but “vasey varsey”—catching him as he tries to escape from his deadly enemy, the snake doubles the hind legs of poor froggy, under the body, and, rump foremost, entombs him alive—“feathers and bones.” In my younger days when fishing, I have more than once witnessed this operation, to which my attention would be called by the piteous cry of the frog—and more than once, thinking it most cruel on the part of the snake, have I went to the rescue and by a tap with my fi-hing-rod on the neck of the snake, made him release his prisoner—though I do not remember that I stopped pulling out the fish when I had one on my hook. “Questionable humanity toward the frog,” you say? True, but then you see the fish did not cry for help; and the process of swallowing the living frog is not pleasant to behold, and a certain naturalist was once made glad by seeing a small one which had been swallowed by a very large snake, take advantage of an unlucky gape—an action quite common to snakes immediately after they have swallowed their prey—and leap out of its enemy’s mouth! Sometimes two snakes seize upon one unfortunate frog at the same time, and then it is “pull Dick, pull Devil” indeed. (I think it is said the snake was the devil in Eden, that Zoo-garden No. 1?)

All the constrictor serpents kill their prey by crushing, and when a comparatively small one seizes a rabbit, or anything as large, to get power, it winds itself round and round it many times, but a large boa, or python, takes but one turn round its victim, one fold is enough, it will do the business, and why use this muscular power, and thus waste it, when there is no necessity? “Wise as the serpent,” has not been said without some truth; and there is wisdom shown, too, on the part of the common snakes, which live on birds, lizards, &c., when they swallow their prey head foremost, very obvious is the reason—self-security.

The “fascination” by the serpent has been stoutly maintained by some, and as stoutly denied, by others.

Catesby (in History of Carolina, 1714) says he found Rattlesnake there weighing between 8 and 9 lbs., and that they had the power to charm rabbits and squirrels in such a manner that they run directly into their mouths.” “This” he says, “I have seen myself, by a squirrel and a rattlesnake.”

Acrell (Swede—residing in Philadelphia, 1756) says “as the snake lies under the shade of a tree, opening his jaws a little, he fixes his bright and glittering eyes upon the squirrel, which soon utters a mournful, feeble cry, and as if foreseeing his fate leaps from bough to bough on every side, seemingly to attempt a sudden escape, but struck with the fascination he comes down the tree and with a spring flings himself into the open jaws of his enemy.” The observations of some experiments confirms the truth of this—for instance—

A naturalist, having some doubt in the matter, shut a mouse up in a box with a rattlesnake. The poor little rodent crouched up in a corner with its bead eyes upon the reptile which lay coiled up in the opposite corner. From head to foot the mouse trembled as the snake fixed his terrible eyes upon it, and at last, without power to resist it, actually threw itself into the serpent’s open mouth! This was in America, while beyond seas, the same experiment was tried, with exactly the same result!

Ah, but is not this charming belief the result of the same “old story,” together with the desire to excuse poor mother Eve for that miserable false step of hers? Perhaps. Let us look at the other side, even if the dear “old lady” will have to suffer for it.

The fascinating power of the snake is said to be, in some, the terrible fixed gaze, in others a subtle emanation from the body. It is well known that most serpents exhale a disgusting odor,

especially after gorging themselves with food, (I hope it was not this perfume that charmed poor Eve), but it is now believed that this odor gives the snake no power of attraction, but is wisely bestowed upon it as a protection during the time it lies torpid and inactive from over-eating, nor is it believed by the non-charmers that the gaze can, or ever does produce the effect in question. They say all suppressed cases of charming can be explained very satisfactorily on other and more reasonable grounds, such as fear amounting to a panic, and solicitude for the young. This, after personal investigations, was Dr. B. S. Barton’s opinion (book published in Philadelphia, 1796). And W. Bartram, naturalist, from personal observation agrees with him, and the celebrated ornithologist, Wilson, quotes and corroborates Bartram, (interesting articles all, but too long to farther notice in this paper). It would clearly seem then from all these personal observations of capable naturalists that the clue to the “fascinating” theory is, that the bird or quadruped is terrified, yet urged by instinctive solicitude for its young exposes itself to imminent peril in their defense and thus falls an unwilling sacrifice.

The translators of the present edition of the Bible seem to have possessed very little zoological knowledge. The Psalmist says the “Adder is deaf,” “she stropeth her ear,” Psalm lviii: v. 4, and Proverbs xx: 32, says the vine cup “stingeth like an Adder.” Now there is no snake of whatever family, that stings—all either crush or bite, and to say the Adder “stops her ears,” seeing that neither it, nor any other snake has ears, externally, is, zoologically speaking, a simple absurdity.

There is another popular error which says all snakes are poisonous. Were they so, their existence would be a sore evil indeed. Happily, however, multitudes of them are harmless, having neither power or venom—to hurt man—still to the human race none are general favorites, while most of them are beautiful in coloring and graceful in form. Man is evidently at enmity with them, can we wonder at it? Holy writ is against them at the beginning, and the unalterable expression of cunning and ferocity shown in the fiery gaze of their fixed eyes does make one in love with them. Their winding, silent, insidious mode of progress, the rapid, noiseless manner in which the head is raised in search of prey, and then so suddenly dropped at its approach, the poison of some and the unconquerable strength of others all combine to render the whole family objects of both alarm and aversion.

But the serpent room at the Zoo. is well worth a visit by all lovers and students of natural history or the curious who may be neither lovers nor students. Much may be learned about the snake kind. There are worse snakes in the world than are found there, or in any Zoo. garden in the world; for

You’ve heard of the snake in the grass, my lad;

Of the viper concealed in the grass;

But now you must know,

Man’s deadliest foe

Is a snake of a different class; Alas!

’Tis the viper that lurks in the glass!

And if you are partial to snakes my lad!

—A passion some think very low—

Don’t enter to see em’!

The Devil’s Museum!

’Tis very much better to go

To the Zoo—That’s so—

And visit the regular show.

HUON.

THE FRIEND who shows me the mirror of myself, who conceals no defects, gives me friendly warning, and heartily scolds when I have not fulfilled my duty—he is my friend, however little he may appear so.

ADVENTURES OF A CAT.

A vessel visited Garliestown Harbor, the captain of which had a favorite cat that hunted at will over the ship, and amply repaid board and lodging by the destruction of rats as well as mice.

Tired, however, of the sea and its perils, puss gave her old friends the slip, by landing unnoticed, and establishing without leave asked or given, her headquarters in the garden attached to the principal village inn.

Here, however, she was a welcome guest to all save the small birds that hop among the twigs of trees in summer,—entered the house occasionally, and was fed regularly for a period of five months.

But some farmer friend having seen and taken a fancy to the stranger, she was dispatched far inland, packed in a basket to diminish the probabilities, if not possibilities, of ever finding her way back again.

But puss repudiated the idea of becoming a thrall at pleasure; the home assigned might be all very well in its own way, but its novelties she liked not. The moors were too near, the hills high, and the dogs especially pert and uncivil.

Again, therefore, she became a tramp, and at the end of ten days reappeared at her former domicile, guided by some curious instinct, which is as useful to the feline species as the compass to the mariner.

If the old folks looked surprised, the young ones were delighted, while all admired the sleekness and plumpness of the far-traveled mouser.

After a little time, notes were compared, from which it appeared that the cat had been eight days on the road, shifting as she best could, and in a district where plovers and other birds were life, observing carefully the old maxim, "As we journey through life, let us live by the way."

CORRESPONDENCE.

PEKIN DUCKS AGAIN.

EDITOR FANCIERS JOURNAL:

I notice that our friend J. Y. Bicknell improves every opportunity to speak unfavorably of Pekin Ducks. Now, if he has any quarrel with the gentlemen who introduced this variety into the country, would it not be in better taste for him to write *them* up, or down, as the case may be, in place of slandering the "Pekins?" If Bro. Bicknell don't like them, he is not obliged to keep that variety, but he ought to consider that many of his friends and customers have tried the "Imperial Pekins," and are as much prejudiced in their favor, as he is against.

He further goes out of the way to say that Rouens are *far superior* to Pekins—and yet advertises the former for \$10, and the latter \$15, per pair! We have nothing to say against Rouens or any other variety, but we have some choice "Pekins," and we like them. "Live and let live," is the best principle.

Respectfully yours, F. G. BATTERSON.

PORTLAND, March 21, 1876.

WHITE LEGHORNS AGAIN.

MR. WADE:

DEAR SIR,—Your valuable JOURNAL is again at hand. I have felt very much lost for the past two weeks without it, as there is always something to be derived from it, both in Gallina culture and improvement of the mind, as nature, or intentions will prove themselves in time—requiring a little time and experience in cultivation. Strict attention to business, with a little pride attached to the same, makes one master of his trade, and therefore he is able to speak boldly of what he knows to be facts. I see by the

JOURNAL of the 14th of February, Mr. C. A. Pitkin is writing of Leghorns in regard to the proper color of ear-lobs. I have had both cream and white—the white are very small in comparison to the cream colored, and are no better layers—therefore I prefer the larger ones, believing them to be two separate breeds. He also refers to an article in the *Rural Journal* of February, 1876, signed H. I should suppose Mr. H. to be a man of much experience, as he says "any mixture of the blood shows itself very plainly in the color of the egg-shell; and, further, such information as this, ought immediately to educate all." As regards this variety, any admixture of blood does not show in color of egg shells, because there is no color to change; and it will only show when mixed with such variety as lay colored eggs, or eggs that are not white. This is what I have been contending for—"just so much coloring as the egg contains beyond its natural color to suit the breed, just so much foreign blood are in the male or female parent;" which all Fanciers will admit before another centennial.

Yours truly,

WM. I. PYLE.

ED. JOURNAL:

DEAR SIR,—I have what is said to be a genuine first cross between a Light Brahma cock and a speckled Guinea hen. I will be able to give history and particulars soon. Its color is mostly white, with some dozen regular Guinea feathers in wings and tail, and a very few on the body. All its feathers are of more than average length for either chicken or Guinea. I herein send you a colored tail feather. This kind is very long from head to tail, and does not stand up very well. It looks to be as big as a Brahma hen, and yet weighs but five pounds and a quarter. Its neck is somewhat longer and its legs some shorter than those of a Brahma hen. It has no comb, no ear lobes, and no wattles. Its stiff feathers stand out high up on its neck, and it is feathered on the top of its head to its bill. The latter is hawk shaped, blood red near the head and dark and very hard at point. Its face is white, legs rough with no feathers. It can fly like a Guinea, and makes a noise in distress somewhat like one. I don't know its sex, as I have had it but two days. I might add that the boy who brought it to me, told me he had but one Guinea on the farm, and that she hid her nest out, and hatched this thing.

J. W. GREENE.

CHILLICOTHE, Mo., March 16, 1876.

CORRECTION.

JOS. M. WADE, ESQ.:

DEAR SIR,—I notice an article published in the JOURNAL of the 9th inst., which states that Dr. A. M. Dickie has accepted the position of Supervisor of Poultry, &c., at the Centennial Exhibition. I write to inform you that I have been appointed by the Centennial Commission, Superintendent of the Poultry Department, at the International Exhibition. The time for holding the Poultry display, has been definitely fixed as follows: commencing Oct. 27th, and closing Nov. 6th, 1876, you can so state it.

Yours truly,

JOHN E. DIEHL.

BEVERLY, N. J., March 20, 1876.

SCOTCH COLLIE.

EDITOR FANCIERS JOURNAL:

DEAR SIR,—In No. 10, of JOURNAL appeared a communication from "Inquirer," asking for a description of the Scotch Collie or Shepherds' Dog. I think the following is a true description: Height at shoulder, 21 inches; very gracefully shaped muzzle, pointed ears, half-erect coat, long but fine and silky tail, and hams fringed with hair, color usually black and tan or sandy yellow. I send you this for the benefit of "Inquirer."

COLLIE.

March 21, 1876

ED. FANCIERS JOURNAL:

DEAR SIR,—Do you know Mr. R. Grist of Philadelphia? I sent an advertisement to him in December, for a directory he was publishing, he said would be issued in two months. I have written him two letters and can hear nothing from him. *Is he a fraud?*

Yours truly,

J. K. CAMP.

WINSTED, CONN., March 25, 1876.

[We saw Mr. Grist several times in Philadelphia, he then said he was preparing his directory, but it would not be out for some time, we have heard nothing from him or others in reference to the subject for some time.—Ed.]

EDITOR OF FANCIER'S JOURNAL:

In Vol. III, No. 10, of FANCIER'S JOURNAL, in the list of Awards of the Eastern Poultry Association, for Golden Penciled Hamburg chicks, it mentions Howard Swinning, as taking 1st and 2d premiums. It should be Howard Twining, Doylestown. Please make the correction, and oblige,

HOWARD TWINING.

DOYLESTOWN, Buck's Co., Penn.

CORRECTION.

I see in my inquiry of weight of eggs, you omitted the number 8 weighing the amount. If I omitted in my letter, my mistake. Please state 8 weighed 1 lb. $\frac{1}{2}$ oz., or the inference may be 10 weighed it, as it reads.

Respectfully,

D. GILPIN.

THE CLOVE CROP.

For a few weeks past there has been considerable speculation in cloves, the principal cause of which is the reported short supply and the deficiency in the coming crop. Advances state that the Amboyna crop is almost a total failure, and that the yield will not probably exceed 200 bales, while that of Zanzibar is also said to be short. As Amboyna cloves are not largely used in this country, being consumed mainly in Europe, the deficiency will not be directly felt here. But as European dealers, in the absence of the Amboyna cloves, will have to make up the loss with the Zanzibar production, the prospects are that our own supply of this latter kind will be curtailed, and it is this that has given rise to the present activity.

From a recent circular of Messrs. Symons & Co., of Rotterdam, we take the following in regard to the future of the clove crop:

About three and a half years ago nearly all of the clove trees at Zanzibar were destroyed by a heavy hurricane, thus depriving the trade of one of its most important sources of supply, the plantations of the Isle of Pemba, which represent about one-third of the whole crop, almost escaping. According to trustworthy accounts, it takes not less than seven years for the tree to bear fruit even in limited quantities; and not until fourteen years does it attain its full growth and yield its maximum quantity of fruit. This proves that nothing can be expected from Zanzibar for four years at least, while the production will be light for a further period of seven years to come.

Amboyna, a clove growing country second in importance to none but Zanzibar, will produce a very small quantity, owing to the almost utter neglect of the trees, which are in many instances overgrown by weeds and shrubs.

In comparing the actual demand with the visible supplies, we find that the consumption has increased during the last five years about 9,500 bales annually, according to the deliveries in Holland and London alone. The stock held in Europe and America at the time of the hurricane has so far provided for the wants of the trade, as holders of course rushed their supplies, which at that time

were large, into the market and obtained very remunerative prices, a sudden advance following the destruction of the trees.

The total yearly consumption at all places is estimated at 50,000 to 60,000 bales, whilst the production, since the destruction of the trees, has been only 27,000 bales; Amboyna producing about 7,000 bales. During the last five years the average of yearly arrivals at London and Holland amounted to 13,523 bales, against deliveries of 15,452 bales; thus the shortcomings of that period amount to 1,929 bales a year.—*American Grocer.*

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To exchanges for cash" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

"No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

We have several complaints against Wm. S. Knox, of Allegheny City. Will Mr. Knox please explain.

C. C. WHEATON, Zoar, Mass., will exchange No 1 Golden Spangled Hamburg Cocks, for Brown Leghorns. Must be good.

L. S. HUDSON, Lansing, Mich., will exchange two fine pair of 1 $\frac{1}{2}$ inch steel spurs, for Fancy Pigeons. Spurs cost \$5 00 per pair.

F. A. PENNINGTON, Delaware City, Del., will exchange a first-class Flute, right, new, cost \$11, for Black, Red, and Yellow Fans.

S. K. FERRIS, Stamford, Conn., would like to exchange "Dove's Illustrated Book of Poultry," 380 pages, 49 illustrations, for a good trio of Plymouth Rocks; also have a fine yellow-legged Red Pyle Game Bantam cockerel, value \$10, for offers.

W. M. SHAW, East Lemon, Wyoming Co., Pa., will exchange Golden Poldards for Duckwing, or B. R. Games, also for one Black Spanish cock.

JOHN D. WHITE, Chicopee, Mass., has Yellow Jacobin hen to exchange for cock of same variety; also Suabian cock for Suabian hen.

GEO. H. NORTHRUP, Danvers, MeLean Co., Ill., will exchange L. Brahma, W. Leghorn, and Bronze Turkey Eggs, for Pekin Duck's eggs; also for copy of New Standard and other books, or Toulouse Geese eggs. We keep nothing but first class stock. (Stamp.)

FRANK I. BARDEN, North Attleboro, Mass., will exchange new seven-barreled Revolver, pure nickel plate, with box of cartridges, and one pair White Crested Fans, one pair Black Tumblers, good stock, for pair of Yellow Jacobins, or White Pouters. Either must be good.

F. A. PENNINGTON, Delaware City, Del., will exchange 2 pairs of Black and White Fans, 1 pair White Dutchess, 1 Blue Dragons, 1 pair Dun Carriers, 1 pair Ruffles Black hen, and Red cock, 1 Black Barb cock, 1 Yellow Owl hen, 1 White Carrier hen, for Red, Black or Dun Carrier hens.

STEPHEN BOLT, Norwalk, Ohio, will exchange P. Cochins, Light and Dark Brahma, Houdan, Black Spanish, S. S. Hamburgs, B. R. Game Bantam, and Bronze Turkey eggs, for Aylesbury Ducks, Red Pyle, Black African, and White Game Barans, Scotch Terrier Dog, or merchandise.

T. P. MONTGOMERY, 9 South 3d St., Harrisburg, Pa., will exchange a fine Coon and squirrel Dog, well trained, for Fancy Pigeons; pair of Pouters, for female Red Wing Turbit; Dun Carrier cock, for Black Trumpeter cock, or offers.

F. C. SOMES, North Attleboro, Mass., will exchange a pair of common pigeons for a mated pair of Red or Black Jacobins. Must have good hood, chain, pearl eyes, and no foul feathers.

JOHN K. CAMP, Winsted, Conn., will exchange fine large Light Brahma pullets, P. Williams' strain, for fine Colored Dorking hens or pullets. Speak quick.

JOHN MOORE, Toulon, Ill., has 2 W. Leghorn hens, good combs and white ear lobes, No. 1 birds, to exchange for P. Rock eggs from No. 1 stock, or Newfoundland pup, or offers.

I. VARONA, 226 East 32d St., New York, has six pairs Ferrets, three cream and three black, all imported, young, and in first class condition, to exchange for young and extra large Cochins and Brahmas, or for good Berkshire pigs from two to four months old.

M. LYNCH, Petrolia, Butler Co., Pa., will exchange two Game hens (Pit strain), warranted dead game, bred by Dr. Betts, for anything useful; would prefer small Black and Tan dog. What offers?

BOX 86, Tamequa, Pa., will exchange a White Spitz pup about 8 weeks old, very finely bred, for pigeons, or offers.

G. B. MILLS, Box 841, Schenectady, N. Y., will exchange Waltham watch, Sewing and Knitting Machine, Cabinet Organ, all new, for fowls, gun, rifle, revolvers, printing press, turning lathe, or offers.

H. F. WHITTIER, P. O. Box 154, Baltimore, Md., will exchange a pair of Dun Curriers for Barbs or an, color, or offers.

M. W. MINER, Wyoming, Ill., will exchange 4 flying squirrels for a good revolver. No more games wanted; but I do want the revolver.

WILSON HARVEY, Brownsburg, Bucks Co., Penn., will exchange 1 good double barrel shot gun, 1 Colt's new seven shot revolver, 1 violin, 1 fish net, 10 yards long, 1 set net, for common or Fancy Pigeons, or bees, or offers. Write for particulars.

WILLIAM FREY, York, Pa., will exchange a thorough bred white and liver Pointer pup, 3 months old, of the celebrated Prince of Wales stock, for a good trio or pair of Brown Leghorns, or other approved varieties. Send along your offers.

G. H. GOODRICH, Toledo, Iowa, has a fine young Newf-landland doe, large, hand one, and A No. 1 watch dog, to exchange for a well broken Setter, or any desirable pet stock. What offers?

MATT HAFLE, Foxburg, Pa., will exchange eggs from first and special premium stock, G. S. Hamburgs, Brown Leghorns, and Rouen Ducks, for Bantams, Geese, or Pekin Duck eggs. Write!

T. D. HAMMOND, Mayville, N. J., to reduce stock, will exchange Light Brahmas, cocks or hens, for double barrel breech loading shot gun, Straw Cutter, Erie Lawn Mower, Milch Cow, Pigeons, or offers.

HOWARD TWING, Doylestown, Bucks Co., Pa., will exchange four Golden Penciled Hamburg cockerels, (last summer's hatch, good stock, two of which took premiums last winter) for almost anything that offers. Let me hear from you soon.

J. P. H. BROWN, Augusta, Georgia, will exchange a few pure tested Italian Queens, of imported mothers, for Dark Brahma hens and cock of genuine stock, or for eggs of same.

J. B. PERRY, Cuyahoga Falls, Ohio, will exchange White Cochins cock, Todd's stock, for Brown Leghorn hen, or sitting of Red Game Bantam eggs.

G. K. LINDEMAN, Searles Mills, Pa., will exchange eggs from Dark Brahmas, Plymouth Rock, and White Leghorns, for Brown Leghorns, W. F. B. Spanish, and Silver Spangled Hamburg eggs. Must be from first class stock, and the same will be given.

J. M. SKILES, JR., No. 9 Margaret St., Allegheny City, Pa., will exchange one pair Mottled Trumpeters, one pair Yellow Jacobins, one pair Stars, one Yell v. Pouter hen, one White Dutch hen, one Hufflecock Moore cap cock, for Magpie Quakers, Snells, and Bl-ck Jacobin cock. Want nothing but first-class birds, as mine are. What offers?

A. E. ABBOTT, East Hampton, Hampshire Co., Mass., will exchange one liver colored, pure blood, unbroken Setter, about 2 years old, for anything that won't eat. What offers? Rejected offers unanswered.

C. G. WILSON, Millbury, Mass., wants to exchange eggs from Dark Brahmas and Plymouth Rocks, from the best of strains, for any kind of Bantam eggs, (name the strains of your fowls), or Pigeons.

A. S. BEEKMAN, South Branch, N. J., will exchange Lop-eared Rabbits, 11 months old, 16 inch ears; Angoras, 10 months old; Fire doo, 3 months old; Fancy Pigeons, Red Jacobins, Tumblers; one handsome pair Yellow Tumblers; one Red Tumbler cock, and several others: one Red Barb cock, very tame, regular pet; White Fans, and Antwerps, for Houduans, White Leghorn pullets, or offers. Nothing but first-class stock wanted.

S. K. FERRIS, Stamford, Conn., wants a choice sitting of White Crested White Polish Eggs in exchange for Eggs of White Leghorns, Dark or Light Brahmas, Partridge or Buff Cochins, or Golden Sebright Bantams. Stock strictly high-class, and bred with extreme care.

D. FRANK ELLIS, Cambridge, Mass., will exchange Golden Spangled Hamburg cock or cockerel, for Fancy Pigeons. Send wants.

ORVILLE FLINT, Westhampton, Mass., will exchange Bass Drum, 30-inch heads, and Double Barreled Rifle, for Brown Leghorns, fowls, or eggs, Wright's, Tegetmeier's, Cooper's, or Doyle's Poultry Books, Webster's revised Unabridged Dictionary, or what offers.

W. WOODBURY, Niagara Falls, N. Y., would exchange one American Knitting Machine, Florence, Victor, Wilcox & Gibbs Sewing Machines, one Bass Rod, for Lop-eared Rabbits, Brown Leghorns, P. Rocks, Black Hamburgs, Carriers, or Pouters. What offers?

JOHN K. CAMP, Winsted, Ct., will exchange eggs for hatching from first class Light Brahmas, (P. Williams' strain), for first class S. S. Hamburg, colored Dorking, or B. B. Red Game Bantam hens or pullets.

JOHN E. SCHUM, 150 South Water St., Lancaster City, Pa., will exchange a fine trio of Angora Rabbits, a few Dutch Rabbits, one Light Brahma cockerel; two pullets, good stock; one male Canary bird, one good single barrel shot gun, for most anything useful. Make me offers.

W. ATLEE RUPPEE, 1832 Arch St., Philadelphia, Pa., wants Fancy Pigeons, especially Jacobins, of all colors. Give particulars and prices. Only first-class birds will be purchased. Large lots preferred.

T. D. HAMMOND, Mayville, N. Y., wants Mocking Bird, must be a good singer; B. B. Red Game Bantam pullets, Ferrets, Scotch Terrier Bitch, Pigeons, Garden Seed, in exchange for Light Brahmas, old or young, male or female.

W. G. TRACY, Towanda, Pa., wants a pair of Black Nuns, a pair of Yellow African Owls, and a trio of Gold Laced Sebrights, 1875 hatch. Good stock wanted. Send full description and lowest cash price. Pigeons must be mated. No postals wanted.

D. FRANK ELLIS, Cambridge, Mass., wants a solid Yellow Fantail cock, solid Red Turbit cock, short face Blue Bearded hen, and a pair of good Black Beards; also Red or Yellow Nuns, and Black Crested Fantail hens.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanicians, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number to initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

FOR SALE.—Two pairs of crested White Polish, at \$5.00 per pair, if ordered quick. G. W. CHIDSEY, Elmira, N. Y.

PLYMOUTH ROCKS.—First and Special Premium, at Buffalo, 1875; First Premium at Utica, 1876. Eggs, \$2.40 per 13. S. S. MORLEY, Clyde, N. Y.

FOR SALE OR TRADE for Buffs or Duckwing Bantams, one pair of fine large Dark Brahmas, 75 hatch. Mine are No. 1 stock—shall expect same. J. W. BROWNING, Indianapolis, Ind.

20c. **S. K. FERRIS**, Stamford, Conn., can ship Eggs from choicest strains of WHITE LEGHORNS, (well-known, popular laying strain of J. F. FERRIS, 50 choice pedigree birds.) Cochins, Brahmas, Bantams, Ducks! Twenty large breeding yards! Safe transportation guaranteed!! No chomus!!! Eggs, 20 cents each—\$20 per 100!! Fowls, \$3 to \$20 each!! Write!!

PURE and Fresh Eggs from Choice L. Brahmas, P. Rocks, and Brown Leghorns. Thirteen for \$2.00; 39 for \$5.00. St. Address C. A. ANDREW, West Boxford, Mass.

FREE.—Send your address to Geo. Resseguie, Jr., North Ridgeway, N. Y., and receive his circular and price list of Eggs for hatching. Low prices and choice stock. 8c too

FANCY PIGEONS AND EGGS FOR HATCHING.

I have a lot of young Red and Yellow Barbs, at \$4.00 per pair; White Fanails, \$3.50 per pair; Bald Tumblers, \$3.00 per pair; and other varieties at low prices. Can furnish Eggs from Light Brahmas, \$4.00; Brown Leghorns, \$3.00; P. Cochins, \$4.00; American Dominiques and White Leghorns, \$3.00 each per setting of 13. My stock is all guaranteed to be pure bred. Eggs carefully packed. J. C. LONG, JR., 39 North 9th St., Philadelphia, Pa.

WHITE LEGHORN EGGS for sale at \$2.50 per 13, from my stock that took first premium at Pennsylvania State Poultry Show in 1870-74 and '75; also 1st and special for best cock, and special for best hen at Maryland State Show at Baltimore '76. Birds I raised have taken more first premiums at the Pennsylvania State Show at Philadelphia than all other Leghorns combined! Deny it who can; it can't be did. ew Address WM. MCANALLY, Newark, Del.

G. S. HALL, Gustavus, Trumbull Co., Ohio, can spare Dark Brahmas, Buff Cochins, Partridge Cochins, Brown Leghorns, Plymouth Rocks, and B. B. Red Game Bantams. Write for circular giving full descriptions of breeding stock, price list of eggs, etc.

P. S. Having bought of G. W. Dickinson, of Warren, Ohio, his entire stock of Buff and Partridge Cochins, and B. B. Red Game Bantams, including some grand imported fowls and a number of prize winners, I am better prepared than ever to fill orders for first-class stock.

R. F. SHANNON,

Breeder of High Class Light and Dark Brahmas.

Importer and Breeder of

GAME BANTAMS AND FANCY PIGEONS.

EGGS PACKED TO HATCH, AND SATISFACTION GIVEN.

Light Brahmas, \$3 per 13; Dark Brahmas, \$5; Pyle Bantams, \$4. No circulars. Enclose return postage.

P. S. See premium lists of Chicago and Pittsburgh, '76. Address P. O. BOX, 668, Pittsburgh, Pa.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

J. C. LONG, JR., 39 North 9th St., Philadelphia, Pa., wants good White Jacobin cocks, with clear plumage and pearl eyes; also good Black-winged Turbits, and Blue and Black-winged Swallow hens. State quality and price.

FANCIERS' AGENCY, 12 Courtlandt St., New York.

THOROUGHbred FOWLS, PIGEONS, AND RABBITS,

SOLE AGENT FOR UNITED STATES FOR

WALTON'S ROUP PILLS AND TONIC PASTE, AND BROWN'S AROMATIC COMPOUND, WELCH'S NON-FREEZING FRINKING FOUNTAINS.
Poultry and Pigeon Fixtures of all descriptions. Douglass Mixture, Long's Atrophy Lozenges, Salt Cat, etc.

RICHARD KIRBY.

THE LARGEST POULTRY ESTABLISHMENT IN WESTERN NEW YORK.

LIGHT BRAHMAS, DARK BRAHMAS, PARTRIDGE COCHINS, WHITE LEGHORNS,
BROWN LEGHORNS, HOUDANS, GOLDEN SEEBRIGHT BANTAMS,

From stock imported by me and from selected specimens of the best strains in this country.

Fowls for sale at all seasons. Eggs for hatching from same pens I use for this purpose, \$3.00 per sitting of 13, or £2 for \$10.00, any or all varieties. No circulars.
When you write, please state explicitly what you want.

GEO. S. JOSSELYN, Fredonia, Chautauqua Co. N. Y.

AMERICAN STOCK JOURNAL.

THIS POPULAR MONTHLY HAS BEEN ENLARGED AND IMPROVED.

IT IS DEVOTED TO EVERYTHING OF INTEREST

TO THE STOCK-BREEDER AND FARMER.

PRICE ONLY \$1.00 FOR FIFTEEN MONTHS.

POTTS BROS., Parkersburg, Pa.

B. & V. HASBROUCK, Box 27, South Orange, N. J., breeders of Fine Poultry and Eggs, have a few more Choice Fowls to sell at low prices, for 30 to 40 days. Fowls are all from No. 1 strains: Buff Cochins at \$5 a trio, eggs \$1.50 for 13; and nice Rose-Comb Dominiques, only \$7.50 to \$10.00 per trio, eggs \$2.00 per 13. Nothing sent C. O. D. Please state where you saw this advertisement. Orders received now.

HAMBURGERS.—Wheaton Bros., Zoar, Mass., are making a specialty of Golden and Silver Spangled Hamburgs, from imported stock. Eggs \$2 per 13.

T. T. PRESTON, Candor, N. Y., breeder of Light Brahmas, Buff and Partridge Cochins, Golden Sebright Bantams. Can spare a few eggs from the above varieties, at \$5.00 per dozen.

C. G. TREXLER, Allentown, Pa., can furnish earthen nest pans at half the usual price; they prevent vermin and promote cleanliness. Price, \$1.25 per dozen, or \$5.00 for five dozen, including packing. Can be shipped either by freight or express.

X. L. C. R.

Duncan Kay, Galt, Ont. Canada, importer and breeder of Black Spanish, Black Hamburgs, Golden Pencilled Hamburgs, Silver Pencilled Hamburgs, Golden and Silver Duck Wing, and Black Breasted Red Game Bantams. Eggs \$4.00 per sitting of 13, three sittings for \$10.00. A few birds of each variety for sale.

EGGS! EGGS!! EGGS!!!

At half price, from Williams' Light Brahmas and Aylesbury ducks, (Todd's strain).

Address W. W. ELLIOTT,
2t McEwensville, Pa.

The Cheapest and Best

way to get good birds, is to purchase Eggs. I am shipping Eggs from my best Game birds, fresh and carefully packed in baskets, at \$5.00 per dozen for Black Reds and Duckwings, and \$6.00 per dozen for Brown Reds. All of the above stock are equal to any in the country, and are, many of them, imported birds of the best strains.

JOHN STONE,
Coatesville, Chester Co., Penn.

FOR SALE.

Ten good Light Brahma cockers, 15 to 20 good pullets

I have given careful attention to breeding these fowls for several years.

My birds are pure and my prices reasonable. Write for particulars.

3t T. D. HAMMOND, Mayville, N. Y.

A GOOD OPENING FOR AN ENERGETIC BIRD MAN.

A Bird Store, stock, and fixtures, \$300; the only store known in 100 miles radius. The advertiser wishing to embark in other business. One cage in the above cost \$120. A good bargain to those interested. The stock will retail, at a rough calculation, about \$300. Any stock objected to will be deducted from the same.

Address BIRD STORE,
Hyde Park, Penn.

FLYING ANTWERPS.

To arrive in March, fifteen pairs of Flying Antwerps, from Antwerp, Belgium, at from \$6 to \$10 per pair. Also, extra trained birds, from \$15 to \$20 per pair. Orders taken for young birds.

JOHN VAN OPSTAL,
4 Lewis Street, New York.

Bronze Turkeys and Pekin Ducks.

Eggs, \$5.00 per Dozen.

LIGHT BRAHMAS, \$3.00 per dozen. Premiums awarded in 1876: At Maine Poultry Exhibition, 1st, 2d, and all specials on Bronze Turkeys; also premiums for best collection of Bronze Turkeys and Pekin Ducks. At New England (Springfield) Exhibition, 1st and 2d on Bronze Turkeys, and 2d and 3d on Pekin Ducks. I am breeding Light Brahmas to the cock which took 1st premium at Maine Exhibition of 1875, and to another which took 1st at Maine Exhibition of 1876. Eggs, \$3 per dozen. White Crested Black and Silver Spangled Fowls, White and Brown Leghorn eggs from premium stock, \$2 per dozen. Birds of all the above kinds for sale. Send for catalogue.

C. P. MATTOCKS, Portland, Me.
P. O. East Baldwin, Me.

EGGS FOR HATCHING.

I will sell a limited number of Eggs for Hatching from my best mating of Light Brahmas this season, at \$3.00 per dozen.

I make a specialty of these fowls, and have 8 breeding pens of choice birds.

6t T. D. HAMMOND, Mayville, N. Y.

WHITE GUINEAS.

I have about five or six more pairs of pure White Guineas for sale; also one pair of Dominiques.

Address C. H. FRY,

HARTFORD, MARCH 30, 1876.

No. 13.

AMERICAN DOMINIKES.

HOME-LOVE.

My heart goes back to a cottage home
 Away 'mid the ferny fells;
 Now the guelder roses are out like foam
 And the crown imperial's leafy dome
 Is heavy with tremulous bells.

Laburnum and lilac, gold and gloom,
 And the snow-white chestnut spires,
 And the bountiful hawthorn's drifted bloom,
 They lend me the wings of their swift perfume
 To flee where my soul desires.

Over the town that is friendless and bare,
 O'er tower and steeple and dome,
 Over great houses and gardens rare,
 Over wide forests and pastures fair,
 Till I come to my cottage home.

To my home that is hid in the Past's great tomb
 I can go with the scent of the flow'rs,
 And pass, by the magic of each perfume,
 Through the garden paths and the shaded room
 Where I lived Life's happiest hours.

AMERICAN DOMINIKES.

This is an old-fashioned breed, so to speak, which is probably quite as widely known, and has been as well liked as any of the now fashionable ones, which are now sought after at extraordinary prices. The Dominique is a breed adapted to all uses, being very hardy, both as fowls and chicks, excellent layers, and especially as winter layers, they have few if any equals. The hens are good setters and mothers. The color of plumage may be described, as bluish-gray each feather having a light grey ground, barred cross-wise with a dark, slaty, blue penciling. The cocks have a proud carriage, full neck, and saddle hackles, and full tails, with well curved sickle feathers. The hens are active and domestic. We

should add that a broad back, and full deep breast, with short thighs set wide apart, and well tucked wings, are essential points. They are fine birds for the table, their flesh being very tender and juicy, and of excellent flavor, and their bones being small, they afford much more meat than large framed birds of greater weight, and the color of plumage contrasting with their bright red faces, combs, earlobes, and wattles, and yellow legs, render them very attractive wherever seen. And their many good qualities commend them to the notice of both farmer and fancier.

THE SPANISH CHESTNUT.

In all the mountain regions of Spain, France, Italy, and Switzerland, their declivities, half way up from the plains below to the snowy peaks above, are clothed with magnificent forests of a species of chestnut, the edible fruit of which, imported into this country, is known as the Spanish chestnut. Gardener's Farmer's Dictionary contains the following brief description of this "famous European tree;" The European, also called the Spanish or Italian chestnut, is of immense size and longevity, trees being known which have a girth of sixty feet. The wood, except in very old trees, is admirable, being more durable than oak in most situations. The bark is also used in tanning. It prefers a dry, silicious soil, abounding in silicious matter and potash. The European variety is easily raised from the seed, grows rapidly, and bears in seven years. The fruit is five times larger than ours, and commands a good price in the market; chestnuts are used boiled, roasted and raw. In southern France, Italy, etc., they constitute the bread of a large population.

An old lady hearing of a pedestrian's "great feat," wondered why they didn't interfere with his fast walking.

POULTRY DEPARTMENT.

RAISING TURKEYS.

Last year while traveling in the Visalia country, we met a flock of 300 turkeys, which were being driven to San Francisco to market. It seemed very strange that turkeys could stand so long a trip, but Mr. Johnson, one of the proprietors, informed us that he drove his turkeys to market every year in this manner. Thinking that he must be a very successful poultry raiser, we questioned him as to his method of raising and feeding them, and as we camped together that night, we learned the following facts: "I own half this flock," said Mr. Johnson, "and I raise from 150 to 200 turkeys every year. I have about ten acres of alfalfa, over which I run the water. I have had it fenced off in two fields, turkey tight, and then I clip their wings. I have good warm houses and attractive places for the hens to lay, and when they begin to hatch, I shut up the brood for a week or two. At first I feed them coarse corn meal, corn being very plenty in my locality, and mix it up with scalding water or sour milk. I commence from the very first to mix a little black pepper in their feed, and I am careful not to over-feed, nor let them have anything to eat later than four o'clock in the afternoon.

When the young are about two months old I allow the hens to take them into one of the alfalfa fields, and after that they require very little feeding, though a little scalded meal and black pepper, and occasionally a little sulphur, is very good. All the thick milk I put in troughs where they can get all they want of it. He informed us that his present number of turkeys would bring in San Francisco over four hundred dollars. It was his calculation to keep them somewhere near Oakland, in a suitable field until they had recruited from the trip, before offering for sale.—*Sacramento Valley Agriculturalist*.

NON-SITTING FOWLS.

The non-sitters comprise all the different kinds of Hamburgs, Spanish, Leghorns, and Polands, and also some of the French fowls. To eradicate the instinct, which is so inherent in wild birds and so necessary to their existence, poultry keepers have taken the least constant sitters for many generations, to lay eggs for hatching. This is a curious instance of what can be done by the breeder's art, and is quite valuable, as division of labor works as economically in the poultry-yard as in human society. Non-sitters, if well-bred, will not give one confirmed case of sitting among fifty birds, though they sometimes sit for a few hours or a day, but soon leave off. They often have periods of leaving off laying for several days or a week. These correspond to the sitting fever of the incubating breeds. The instances of fowls sitting steadily, although belonging to a breed of pure non-sitters, show reversion to the primitive type when incubation was universal.

If you wish your stock fully up to the mark, do not breed from such. A cross between two different breeds of non-sitters

produces a race that sits as regularly and persistently as any fowls. Some crosses between breeds are very desirable, but non-sitters should be kept pure, or the trait which constitutes their principal value, is lost. Where many fowls are kept it is better to have the larger part consist of some non-sitting breed. A great saving may be made in a sitting breed to produce a few good mothers, and the rest, say three-quarters of the whole of your stock, of some breed of non-sitters. Labor is so high in this country, that the time of man, woman and child, capable of managing poultry, is worth saving. It is as easy to take care of two hundred non-sitting hens during the warm season as one hundred of a sitting variety. Suppose the non-sitters are kept in eight yards, each yard having twenty-five layers, with no trouble from obstinate, clucking hens; also the latter in four yards, of twenty-five each. It being well known, among managers of poultry, that fowls must be kept quiet to do well, and therefore must not be mixed with strangers; the sitters from a yard must be confined in a particular jail-pen, to cure incubating inclinations, and then returned to their own friends in the same yard. Now, four yards each with its jail-pen, make eight in all to be supplied with food, water and dust-bath, to be cleared often, and also to be whitewashed or to be treated with carbolic acid, the work being about the same as that required by the eight yards of non-sitters in the first case; and if we make any account of time spent, in looking after and removing sitters, which is considerable, where there are a great number of fowls, the sitters compare at a still greater disadvantage.—*American Stock Journal*.

SIZE OF FLOCKS.

Persons wishing to realize the best results per capita should not keep too many fowls together. The larger the flock, the smaller the average number of eggs to the hen. A smaller number than fifteen kept together, will give a better average of eggs than a greater number.

Flocks do pretty well until they number twenty; but a greater number will not give profits corresponding to numbers of ten, twelve, or even six in a flock.

To illustrate what we mean, we say, if we had thirty six hens, we would expect to get better returns from them if they were separated into three colonies and kept apart, than if they all ran in one flock. Three flocks would take no more feed, but would require a little more time to look after them, than if they all ran together, and would give from thirty to forty per cent. better returns. We do not claim that it will pay farmers to arrange the necessary accommodations for separating their flocks and keeping them apart, but simply state the fact that small flocks are more profitable than large ones, unless the necessary care be given to the large flocks. We would not undertake to keep more than twenty-five hens in one flock, and generally keep from ten to fifteen in a flock.—*Journal of Agriculture and Farmer*.

RAISE FOWLS.

In view of the fact that grasshoppers and other insect plagues are spreading over the country from the West, and that they generally accompany a dry summer and may be expected to reach this state soon, it would be well for farmers and all who can do so, to raise many chickens, turkeys, and other domestic fowls, which, like the birds, are among the best destroyers of insect life. Shooting of all insectivorous birds should also be prevented. Even crows will do more good by destroying potato bugs and grasshoppers than is generally supposed. An instance is related of a flock of crows having cleared of potato bugs a patch of potatoes planted near the edge of a wood, and it is suggested that a dead snake or any small carcass placed near by would draw them to

any potato-patch not too close to the farm buildings. Our readers will no doubt remember the account published last year of a vast army of black caterpillars in California being destroyed and the crops saved by turning into the field two thousand turkeys, collected wherever they could be found, for that special purpose. The small grasshoppers are increasing in numbers most remarkably every year, even in this section, and domestic fowls will be found a valuable aid in their suppression. The wise laws against the destruction of insectivorous birds have already checked the alarming increase of caterpillars, and largely augmented the yearly fruit crop in this region; and now, as we have destroyed nearly all the woods in which the game birds found shelter, we must defend ourselves against the larger insect pests by raising armies of domestic fowls. Every one owning even a small lot of ground can help, and they will generally more than pay for the trouble and expense of keeping them.—*Reading Eagle.*

A DOUBLE EGG.

Less than a mile from Pillow, Pa., lives a farmer that had a double, or double shelled, egg. It was an extra large egg, and drew the attention of the family, and came to the conclusion that it must have two yolks.

When the lady came to use the egg, she made a small hole in the shell to let it run out, but only a small quantity of white came out. When nothing more came she began an examination, and to her amazement found another perfect egg inside the shell. She preserved it till the family came together, when she showed it, and told them what she had found.

When the second shell was broken, nothing more was found than a real and natural egg. The egg was also shown to neighbors who can testify to its truth.

FACTS IN TURKEY BREEDING.

The American *Agriculturalist* has these comments and quotations on turkey breeding and raising:

There is nothing like facts to confirm a theory. If it were really believed that good selection and good feed would increase the average size of turkeys a third, it would not be difficult to get intelligent farmers to pay attention to these points. We find a very important item in a local journal from North Stonington, Ct., which confirms this view. This town is on the borders of Rhode Island, and represents the district where the Narragansett turkeys are principally raised, known in the market as Rhode Island turkeys. The writer says: "Probably more than fifty thousand pounds of poultry were sent from this vicinity for the Thanksgiving market in Boston last season, at 23 cents per pound. The quality sent this year is better than that of last year, some lots of turkeys averaging more than twelve pounds, and one monstrous old fellow bore down thirty-six and a quarter. The size of turkeys raised hereabouts has increased steadily for twenty-five or thirty years, owing to attention to propagation. The time was when the average at Thanksgiving did not exceed eight pounds, and brought only as many cents per pound; whereas the weight has been increased fifty per cent., and the price two hundred per cent."

From Stonington, the town immediately south, a still larger quantity was sent, and the quality was a grade heavier. Said an old farmer who bought a large bronze gobbler of premium stock last season: "I must have some more of that stock, for I have the heaviest turkeys in the neighborhood." Good feed, especially during the first fall and winter, is almost as important as good stock. A farmer feeds a bushel of corn a day to a hundred turkeys in November, at the cost of a dollar, and it looks a little extravagant. But it is less than the third of a quart, and the cost of a cent a day for each bird. We once tried the experiment

of feeding some second litter turkeys through the winter, and found the hens gained about two pounds a month and the gobblers three. The feed was principally boiled potatoes, and meal and corn. At this rate, the gain in flesh, at twenty-five cents a pound, would be worth seventy-five cents a month for each gobbler, and fifty cents for each hen. If thirty cents worth of feed will make this gain, it cannot be very bad business to feed turkeys liberally through the winter. By all means have large, well-fed stock to breed from in the spring, and the time to make them is now.

WOMEN AS POULTRY RAISERS.

The special capacity of women for caring for pets is so well established that it is a matter of surprise that a larger number do not make their natural inclination a matter of profit in the raising of poultry. There is no reason why woman may not be as successful as man in this branch of productive and profitable industry. Indeed, when it is considered that the business requires close attention to minute details, patience, and gentleness of manner, woman seems to be peculiarly fitted for the business. The Danbury man's humorous description of the different ways in which woman and man attempt to get a hen into the coop, and the superiority of the former's method, is as true as it is funny. After the hennery or coop is built there is no department of the work that a woman cannot perform without exhausting labor or too heavy demand upon her time. "Down South," poultry raising is a woman's special department, and one need not go farther South than Baltimore or Washington to find the markets thronged with the female vendors of their own feathered products. That the business is profitable, the experience of hundreds testifies, and that it is healthful, and may be attractive, is susceptible of demonstration.—*Iowa Fine Stock Gazette.*

HEREDITY.

How far external conditions will influence a being, and then that being communicate it to a race, is brought up prominently by a discussion now going on as regards the origin of a breed known as Tailless Fowls. These breed and continue to breed chickens that have no tails; and there is a sort of tradition, believed in by chicken-fanciers, that this breed originated by some one cutting off the tails of a pair and continuing to cut them off for several successive generations. Once started in that way by art, the habit became second nature to them, and they continue to communicate this nature to their progeny. This is the idea, and it seems very absurd to entertain it for a moment. Ever since the Normans conquered England, men of that country have used the razor and shaved their faces clean. No doubt some families could be found in which for many generations not a hair of their beard has been allowed to grow; yet we venture to say that if any young sprig of such a family were ambitious to raise a mustache, he would have no more trouble in doing so than any average young blood of the present day. We pare our nails and clip our hirsute head-covering continually, and some say only to make them grow all the more! Surely all this should show that nothing permanent could come from clipping feathers from the birds in the way of finally suppressing them. Still there is no doubt that continuous habits have some influence on heredity. For an instance it is said, and it is probably true, that the operatives of India have a finer sense of touch than we have, and that this has been wholly brought about by handling silk for so many generations. The one who now may never have handled silk, yet inherits the delicate sensation from those who have. In cattle also, many injuries inflicted externally become hereditary spavin, a disease wholly from over-work in the first instance, according to Hugard, an authority among veterinarians, will reappear in the

offspring, as well as other weaknesses arising in the same way. Hugar even believes that a blind race could be formed by continually breeding from parents that had their eyes put out; and simple disuse for want of light to use their eyes, produced in time the family of blind fishes which inhabit the Mammoth Cave.

As we have said, there does not seem any more reason why continuous shaving should not in time end in a beardless race, than in the idea that continuous cropping produced the Tailless fowls; but the whole subject is one that is not well worked out, though it is of great interest to every stock-breeder.—*Journal of Agriculture and Farmer.*

THE EXHIBITION OF THE NATIONAL POULTRY ASSOCIATION AT CHICAGO.

The much talked of show came off according to programme.

The entries numbered about 2,200—a large number, but still not equal to the general expectation. It was the universally expressed opinion that there would be from 3,000 to 4,000 entries, especially as the premiums were awarded to single birds. In point of excellence, the show was fully equal to the average, and, perhaps, a little above.

The exhibition was held in the north wing of the Exposition Building—a fine hall, three hundred feet long by one hundred feet wide. The fowls were well arranged, leaving broad, spacious aisles between the rows of pens, and frequent cross passages, so that, while there were hundreds of people present, the room did not seem at all full. Some defects in management, which are always incidental to a first show, were perceivable, but these will be rectified after the experience of this exhibition.

Of the breed shown, the Asiatics and Games were the largest classes. Of Light Brahmas, there were one hundred and fifty-five entries; of Dark, one hundred and ten. The first were a good show, but not equal to Brooklyn in quality. The application of the new scale-of-points did not meet with favor by all the exhibitors, although the judges are (or seem to be) quite satisfied with its working.

In Cochins, of Partridge there were sixty; Buff, eighty; White, twenty-four, and Black, twenty; all excellent classes,—the Whites the poorest, many of the birds having been the rounds of the shows for the past two months, and being greatly out of condition in consequence. The Partridge were excellent, and the Buff probably the finest class seen for some years.

In the Games, the Black Reds numbered seventy-four entries, and a grand class they were. The celebrated Pure-Gold strain of Dan. Allen, Galt, Ont., were exhibited in four generations, and succeeded in carrying off their share of prizes. It was a hard class to judge, for competition was very close. In the other varieties of Games, there were one hundred and thirty-seven pens, and a grand display they made. The Yellow Duckwings were very fine, as a class, which is unusual. Silver Duckwings, also good. The prize birds of Brown Reds were of extraordinary merit, but the remainder not above the average.

Of Polish there was a total of ninety-six pens divided into Silvers, fifteen; Golden, twenty-eight; White, thirty-seven, and White-Crested Black, sixteen. All the varieties of unusual excellence, and forming a class, the like of which we have never before seen. Sperry, of Hartford, was there in strong force with his Whites, and carried off all the prizes in that variety. The White-Crested Black were splendid. One exhibitor had some grand birds, which would have won high honors, but he was over anxious, and plucked out the few black feathers there were in the crests; the birds were, of course, disqualified, and he was made a wiser, if not a happier man. Golden and Silvers were both of a quality rarely seen. The judge on Golden, however, was some-

what green, for he threw over cocks, or cut them severely, because they had white feathers in their crests, when, as every breeder knows, old fowls of this variety are never without them.

Of Dorkings, there were but twenty pens. Whites good; Silver Grays fine in size, but bad in plumage; Colored, very large and fine.

Hamburgs were also a grand class. Silver Spangled, thirty-seven coops, of high merit; Gold Spangled, nineteen pens, ditto. Ongley, of Auburn, was well represented here, and won high honors with his celebrated "Beldon's stock. Silver Penciled comprised the largest and best class of this variety we have ever seen. Golden Penciled, a large class, twenty-eight coops, also excellent. Blacks, the smallest in numbers, but not at all behind in excellence, reflected credit on Wright of Sandwich, Ont. Competition was very close, and much dissatisfaction prevailed among exhibitors, each claiming *his* fowls should have been first. The judging, in our opinion, was faulty.

In the French class, Houdans led with twenty-two coops. Creves, only four pens; all of fair quality. La Fleche, four coops, were good.

In Spanish, there were twenty-two pens, a good class, better than usually seen.

Leghorns, a poor class. Whites, thirty pens; many of the prize winners had very yellow ear-lobes. The present Standard allowing this "creamy" tinge, deteriorates sadly the quality of the birds for the show pen. Brown, only seven pens, but enough and plenty for the quality,—a very poor lot. First cockerel and pullet both dark colored, dull and cloudy, and small; ear-lobes and comb the only good points about them. There was nothing in the class worthy of a first, and very doubtful if of second. Dominique Leghorns, only two pens of very fair birds.

Of Plymouth Rock there were twenty pens. A good show of good birds. Competition very close, and some very good birds just shut out by only one or two points.

Game Bantams numbered one hundred and twenty-two pens, and were, without doubt, the finest lot ever shown in America. Spaulding, of Jaffrey, N. H., had it nearly all his own way on Black Reds and Duckwings, and also considerable of a "File" of premiums on other varieties. Smith, of Buffalo, N. Y., McLaren, of Meadville, Pa., and Seamans, of Waawatosa, Wis., were his strongest competitors. Of Sebright, the Golden numbered seven coops, only fair. Silvers, nine pens, were unusually fine in color. In fact, the best we have seen for a great many years. Plumage was clear white and lacings fine. Black Africans, twenty-seven coops, also a most excellent collection, probably never excelled on this continent. The birds were overfed, and when the judges finally examined them, some of the best and handsomest birds were disqualified for over-weight. The best cock of the whole lot, in our opinion—owned by Allen, of Galt,—exceeded the prescribed weight by one-half ounce, and was shut out. The first prize cockerel—owned by Enos, of Milwaukee,—was a perfect beauty, and deserved his honors. Elben, of Pittsburg, carried off high laurels in this class.

The Turkey class was small, but good. The same may be said of the Geese, which comprised only seven pens.

Ducks numbered thirty-eight pairs. Aylesburys, nine pens, of fine quality; Rouens, ten pens, also fine; Pekins, eight pens (as usual, much lighter in weight than either Aylesburys or Rouens, although apparently of double the weight). Cayugas, good, and White-Crested also good.

In the miscellaneous class, Erminets and Silkies disputed the palm.

Of Rabbits, there were seven entries of Lops and two of Himalayans, all fine specimens.

Ferrets, four entries, Reinhardt, of Buffalo, having the finest collection, which were exclusively of the "fitch" variety. They

were very gentle, allowing strangers to handle them with perfect impunity. They are noted for their gentleness, and fine ruffling and hunting qualities. Johnson, of Wisconsin, also exhibited largely some fine Whites, and of other colors.

Pigeons counted up two hundred and sixty-five pens: Spear, of Milwaukee, and Beier, Jr., of Buffalo, the largest exhibitors. The collection was a fine one, and quality very good; some of the high-class pigeons extra fine.

Axford, of St. Louis, exhibited his "Lightning Steam Hen." (a misnomer, as there was no steam about it, neither "lightning"). The machine had been running in the office of the building for three months previous to the show, and the chicks were hatching out daily, to the delight of the ladies and children, who constantly surrounded the stand. The principal points of the machine are the regulation of the heat, by means of electricity, and the mode of providing humidity in the egg-drawer. It is, however, too complicated to meet with general favor, as well as too high priced. The capacity of the machine on exhibition was one hundred and fifty eggs, and the price \$150. In strong contrast, was the "Self Regulating Incubator," standing close by: a simple (apparently) square box, holding one hundred and fifty eggs, price \$35; regulating itself, and keeping the heat at 101 to 103°, without any attention other than trimming the lamp, and filling it as often as required.

The dog show was held in another part of the building during the three last days of the Poultry exhibition, and was a grand success. Over three hundred dogs were shown, comprising all sorts and sizes. We hope to have a special report of this department for some future issue.

LIST OF AWARDS.

NATIONAL POULTRY SOCIETY, CHICAGO, JANUARY 20 TO 28, 1876.

BRAHMAS. *Light*, Cocks. First, Woodward Brothers, Hyde Park, Ill.; second, Wright & Butterfield, Sandwich, Ont.; third, P. Williams; fifth, Jarvis & Lamb, London, Ont. Cockerels. First, P. Williams; second, Woodward Brothers; third, P. Williams; fourth, C. G. C. Alden, Sunman, Ind. Hens. First, P. Williams; second and third, Woodward Brothers; fourth and fifth, P. Williams. Pullets. First and third, same; second, C. G. C. Alden; fourth, W. R. Phelps, Chicago. *Dark*, Cocks. First, S. H. Seamans, Wauwatosa; second, third and fourth, P. Williams; fifth, W. H. Doel, Lancaster, Ont. Cockerels. First, P. Williams; second, C. A. Sweet, Buffalo; third, William Horn, Janesville, Ill.; fourth, J. W. P. Hovey, Glencoe, Ill. Hens. First, C. A. Sweet; second, P. Williams; third, H. M. Thomas, Brooklyn, Ont.; fourth and fifth, C. A. Sweet. Pullets. First, third, fourth, and fifth, P. Williams; second, R. F. Shannon, Pittsburg; third, C. A. Sweet.

COCHINS. *Partridge*, Cocks. First, third and fourth, P. Williams; second, Wright & Butterfield; fifth, Jarvis & Lamb. Cockerels. First, second and fourth, P. Williams; third, B. N. Pierce, Corning, Iowa; fifth, W. B. Shyrigh, Urbana, O. Hens. First, P. Williams; second, J. N. Barker, Thornton, Ind.; third, Wright & Butterfield; fifth, A. P. Groves, Philadelphia, Pa. Pullets. First, second, third and fourth, P. Williams; fifth, Lapham & Co., Northfield, Ind. *Buff*, Cocks. First and third, Jones & Sons, Tecumseh, Mich.; second, T. F. Barnes, Blairstown, Iowa; fourth, S. H. Seamans; fifth, S. Platt, Geneva, Ill. Cockerels. First and fourth, Wright & Butterfield; second, J. T. Boyden, Lincoln, Ill.; third and fifth, T. F. Barnes. Hens. First, Jones & Sons; second, Wright & Butterfield; third, Dodge & Kelley, Ravenna, O.; fourth, J. N. Barker; fifth, T. F. Barnes. Pullets. First, J. T. Boyden; second, Wright & Butterfield; third and fourth, T. F. Barnes; fifth, J. T. Boyden. *White*, Cocks. Second, J. J. Berry, Hackensack, N. J.; third, S. H. Seamans. Cockerels. First and second, S. H. Seamans; third, J. J. Berry. Hens. First, S. H. Seamans; third and fifth, J. J. Berry; fourth, W. B. Shyrigh. Pullets. First, W. E. Stitt, Columbus, Wis.; fourth, S. H. Seamans. Hen. Second, J. J. Berry. Pullets. Second and third, J. J. Berry. *Black*, Cocks. First and third, P. Williams. Cockerels. First, Mrs. J. C. Dawell, Elmwood, Ill.; second, third, fourth and fifth, P. Williams. Hens. First, P. Williams; third, C. W. Heaton, Farmington, Ill. Pullets. First and third, P. Williams; second, Mrs. D. W. Dawell.

GAMES. *Black-Breasted Red*, Cocks, First, Curtis & Whiton, Buffalo; second, D. Allen, Galt, Ont.; third, Miller & Fraser, Polo, Ill.; fourth, H. M. Thomas; fifth, Mrs. J. C. Dawell. Cockerels. First and second, D. Allen; third and fourth, John Snider, Homer, Mich.; fifth, Curtis & Whiton. Hens. First and fourth, same; second and third, D. Allen. Pullets. First, second and third, same; fourth, S. E. Law, Norwood Park, Ill.; fifth, Curtis & Whiton. *Brown Red*, Cocks. First, D. Allen; second, Curtis & Whiton. Hens. First, A. F. Bradley, Jeffersonville, Ill.; second, Curtis & Whiton; third, D. Allen. Pullets. First, A. McLaren, Mendville, Pa. *Silver Duckwing*, Cocks. First, second and third, Curtis & Whiton. Cockerels. Second, H. M. Thomas; third, Curtis & Whiton. Hens. Third, same. Pullets. Second, same. *Yellow D. W.*, Cocks. First, Curtis & Whiton; second, H. M. Thomas; fourth, J. D. Olcott, Milwaukee. Cockerels. First and fourth, Curtis & Whiton; second, D. Allen; third, H. M. Thomas. Hens. First, second and fourth, J. H. Hammill, St. Louis; third, D. Allen. Pullets. Fourth, Curtis & Whiton. Cock. Third, John McGraw. *Red Pile*, Cocks. First, H. M. Thomas; second, Curtis & Whiton; third, Grant & Leonard, Davenport, Ind. Cockerels. First, Curtis & Whiton; second, J. D. Olcott. Hens. First, H. M. Thomas; second, Curtis & Whiton. Pullets. First, same; second, J. D. Olcott. Cock. Fourth, J. Munroe, Chicago. Hens. Third and fourth, same. *Black*, Cocks. First, S. E. Law. Hens. First, same; third, Curtis & Whiton. Pullets. First, same; second, Miller & Fraser. Cockerel. First, S. Cameron. Hen. Second, same. *Spancoled*, Cocks. First, J. D. Hammill; second, S. Cameron, Beaver, Pa. Hens. First, J. S. Hammill; second, S. Cameron. *Blue*, Cock. First, Grant & Leonard. Hens. First, same. Pullets. First, Hughes & Wachter, Sparta, Wis. Cockerel. First, S. Cameron. Pullet. Second, John Snider. *Grey*, Cocks. Second, E. C. Dietrich, Buffalo. Cockerels. E. C. Dietrich. Hens. First, D. Allen; second, E. C. Dietrich; third, Miller & Fraser. Pullets. First, same. Cock. First, J. Munroe. Cockerel. First, S. Cameron. Pullets. First, same.

LEGHORNS. *White*, Cocks. First, J. B. Smith; second, N. Adams, Utica, N. Y. Cockerels. First, J. B. Smith; second, O. L. Taylor, Freeport, Ind.; third, S. H. Seamans; fourth, L. D. Ely, Rochester, N. Y. Hens. First, S. H. Seamans; second, J. B. Smith; third, L. D. Ely; fourth, N. Adams. Pullets. Second, O. L. Taylor; third, J. B. Smith; fourth, S. H. Seamans. Cock. Third, O. Howland. Pullet. First, same. *Dominique*, Cockerels. F. M. Moeller, Plymouth, Mass. Pullets. First, same. *Brown*, Cockerels. First, O. Foester, Chicago. Pullets. First, same; second and third, J. G. Lapham, Northville, Ill. Cockerel. First, S. Cameron. Pullet. Second, O. Cameron.

BLACK SPANISH. Cocks. First, R. McMillan; second, H. M. Thomas; third and fourth, F. M. Bradley, Chicago. Cockerels. First and third, J. Bennet, Sunman, Ind.; second and fourth, R. McMillan. Hens. First, H. M. Thomas; second, O. Howland, Auburn, N. Y. Pullets. First, R. McMillan; second and third, J. Bennet. **HAMBURG.** *Black*, Cocks. First and second, George Wood, Ithaca, N. Y.; third, Wright & Butterfield. Cockerels. First, George Wood; second, Wright & Butterfield; third, W. E. Shedd, Waltham, Mass.; fifth, Wright & Butterfield. Hens. First and third, George Wood; second, R. McMillan; fourth, Wright & Butterfield. Pullets. First and second, J. M. Lymbing, Parker's Landing, Pa.; third, George Wood; fourth, Wright & Butterfield. *Golden Spangled*, Cocks. First and second, E. S. Ongley, Auburn, N. Y. Cockerels. First, second and third, same. Hens. First, C. B. Elben; second and third, F. Sturdy, Guelph, Ont.; fourth, E. S. Ongley. Pullets. First, second and fourth, same; third, F. Sturdy. *Golden Penciled*, Cocks. First, C. S. Burt, Seneca Falls, N. Y.; second, R. McMillan; third, C. S. Burt. Cockerels. First, same; second and fourth, R. McMillan; third, Wright & Butterfield. Hens. First, C. S. Burt. Pullets. First, R. McMillan; second and fourth, C. S. Burt; third, Wright & Butterfield. *Silver Spangled*, Cocks. First and second, W. A. Worden, Auburn, N. Y. Cockerels. First and second, same; third, Wright & Butterfield; fourth, A. Kephart, Berrien Springs, Mich. Hens. First and fourth, Wright & Butterfield; second and third, W. A. Worden. Pullets. First and second, same; third, Lapham & Co., Northville, Mich.; fourth, C. B. Elben, Pittsburg. *Silver Penciled*. First and second, W. A. Worden. Cockerels. First and third, same; fourth, Wright & Butterfield. Hens. First and second, W. A. Worden. Pullets. First and second, same; third, Wright & Butterfield; fourth, Duncan Kay, Galt, Ont.

POLISH. *White Crested White*, H. T. Sperry, Hartford, Conn., took twenty-four premiums, all that were awarded on this variety. *W. C. Black*, Cocks. Third, Stowe & Leaton, Bloomington, Ill.

Cockerels. First, Wright & Butterfield; second, S. H. Seamans; third, Jarvis & Lamb. Hens. First, Dr. H. Enos, Milwaukee, Mich.; second, Stone & Leaton; third, S. H. Seamans. Pullets. First, Wright & Butterfield; second, Jarvis & Lamb; third and fourth, S. H. Seamans. *G. S. Cocks.* First, A. Fosgate, Auburn, N. Y.; third, H. M. Thomas; fourth, Jarvis & Lamb. **Cockerels.** First, Cartwright & Co., Fairport, N. Y.; second, H. M. Thomas; third and fourth, Cartwright & Co. Hens. Second, H. M. Thomas; third, Cartwright & Co. Pullets. Second, H. M. Thomas; third and fourth, Cartwright & Co. *G. S. Barded.* Cocks, Second, H. M. Thomas; third, Cartwright & Co. Cockerels. First, H. M. Thomas. Hens. First and second, A. Fosgate; third, H. M. Thomas; fourth, Cartwright & Co. Pullets. First, H. M. Thomas. *S. S. Cocks.* First, Cartwright & Co.; second, H. M. Thomas. Cockerels. First, Cartwright & Co.; see, Geo. H. Gilfat, Auburn, N. Y. First, Cartwright & Co. Pullets. First, G. H. Gilfat.

HOUDANS. Cocks. First, S. H. Seamans; second, George Butters, Oak Park, Ill.; third, Mrs. J. C. Darwell. Cockerels. Jarvis & Lamb; second, J. C. Walters, Leardville, N. Y.; third, Geo. Butters. Hens. First, Cartwright & Co.; second, J. M. Willis, Bloomington, Ill.; third, S. H. Seamans; fourth, George Butters. Pullets. First, Jarvis & Lamb; second, Mrs. J. C. Darwell; fourth, George Butters. Pullets. Third, F. P. Sigel, Oscola, Iowa.

CREVEOEURS. Cocks. First, J. Henry Symonds, Boston. Cockerels. First, same. Hens. First, same. Pullets, same.

DORRINGS. *White.* Cocks. First, Jarvis & Lamb. Cockerels. First, same. Hens. First, same. Pullets. First, same. *Colored.* Cocks. First, S. H. Seamans; second, H. M. Thomas. Cockerels. First, S. H. Seamans. Hens. First, H. M. Thomas; second, S. H. Seamans. Pullets. First and second, same.

PLYMOUTH ROCKS. Cocks. First, A. P. Coddington, Trumburgh, N. Y.; second, J. J. Berry. Cockerels. First, A. P. Coddington; second, D. White, New London, Ohio; third, E. N. Sanders, Oshkosh, Wis.; fourth, N. Adams, Utica, N. Y. Hens. First, J. J. Berry; second, Lapham & Co.; fourth, J. J. Berry; fifth, A. P. Coddington. Pullets. First, D. White; second, N. Adams; third, S. Beard, Polo, Ill.; fourth, A. P. Coddington.

DOMINQUES. Cocks. First, E. K. Smith, Wolcottville, Conn. Cockerels. First and second, J. Y. Bicknell; third, E. K. Smith; fourth, O. Howland. Hens. Second, same; third, J. Y. Bicknell; fourth, E. K. Smith. Pullets. First, J. Y. Bicknell; second, O. Howland.

BANTAMS. *B. B. R. Game.* Cocks. First and second, E. R. Spaulding; third, E. B. Smith, Buffalo; fourth, A. McLaren. Cockerels. First, second and third, E. R. Spaulding; fourth, E. B. Smith. Hens. First, second and third, E. R. Spaulding; fourth, D. Allen. Pullets. First and second, E. R. Spaulding; fourth, E. B. Smith. *Silver D. W.* Cocks. First, E. R. Spaulding; third, S. A. Seamans; fourth, McMillan. Cockerels. First, T. Mason, Jacksonville, Ill.; second, Duncan Kay; third, A. McLaren; fourth, R. McMillan. Hens. First, E. R. Spaulding; second, E. B. Smith; third, S. H. Seamans; fourth, Duncan Kay. Pullets. First, T. Mason; second, R. McMillan; third, S. A. Philbrook, Brookville Center, Wis.; fourth, E. B. Smith. *Yellow D. W.* Cocks. First and second, E. R. Spaulding; third, D. Allen; fourth, Duncan Kay. Cockerels. First, E. R. Spaulding; second, E. B. Smith; third and fourth, E. R. Spaulding. Hens. First and second, same; third, D. Allen. Pullets. First, E. B. Smith; second, third and fourth, E. R. Spaulding. *Red pile.* Cocks. First, R. F. Shannon; second and third, A. McLaren. Cockerels. First, E. B. Smith; second, R. F. Shannon; third, G. A. Spear, Milwaukee; fourth, S. H. Seamans. Hens. First, E. B. Smith; second, G. H. Spear; third, A. McLaren. Pullets. First, E. B. Smith; second and third, S. H. Seamans; fourth, R. F. Shannon. *White pile.* Cocks. First, E. B. Smith. Cockerels. First, same. Hens. First, same. Pullets. First, same. *Ginger Red.* Cockerel. First, C. H. Hodge, Buffalo. *Black.* Cock. First, C. H. Hodge. Hen. First, same.

BANTAMS. *Black African.* Cocks. First, C. B. Elben; second, E. S. Ongley; third, S. A. Seamans; fourth, C. B. Elben. Cockerels. Second, same; third, E. S. Ongley. Hens. First, S. H. Seamans; second and fourth, E. S. Ongley. Pullets. First, S. H. Seaman; second and third, E. S. Ongley; fourth, C. B. Elben. *Golden Sibrigt.* Cocks. Third, J. N. Barker, Thorn-ton, Ind. Cockerels. Third, Stone & Leaton. Hens. Second, J. N. Barker. Pullets. First and second, same; third, Stone & Leaton; fourth, S. H. Seamans. *Silver Seabright.* Cocks, First, A. Fosgate. Cockerels. Second, same. Hens. Second, same.

TURKEYS. *White.* First, J. M. Willis.

GEES. *Toulouse.* First, Jarvis & Lamb; second, S. H. Seamans. *Emden.* First, S. H. Seamans. **DRUCKS.** *Cayuga.* Old. First, J. Y. Bicknell; second, O. Howland. *Young.* First, O. Howland; second, J. Y. Bicknell. *Aylesbury.* Old. First, J. Y. Bicknell; second, F. Sturdy. *Young.* First, J. Y. Bicknell; second, F. Sturdy; third, J. Y. Bicknell. *Rouen.* Old. First, F. Sturdy; second, J. Y. Bicknell; third, W. E. Still; fourth, H. L. Brown, Peru, Ill. *Young.* First, J. Y. Bicknell; second, F. Sturdy; third and fourth, S. H. Seamans. *Pekin.* Old. First, second, third and fourth, A. Merrill, Meadville. *Young.* First, S. H. Seamans; second, third and fourth, A. Merrill.—*Poultry Bulletin.*

LIST OF PREMIUMS

Awarded at the First Annual Exhibition of THE SULLIVAN COUNTY POULTRY ASSOCIATION, held at Newport, N. H., February 9th and 10th, 1876.

Asiatics—Light Brahmas—Chicks, 1st, J. H. Johnson, West Springfield; 2d, B. F. Spalding, North Grantham; Fowls, 3d, B. F. Spalding. Partridge Cochins—Chicks, 1st, Mrs. J. G. McKeen, South Acworth; 2d, G. H. Woodbury, Newport; 3d, A. P. Wigcome, Newport; Fowls, 2d, A. V. Hitchcock, Newport. Buff—Fowls, 2d, Charles H. Lewis, Newport. White—Chicks, 3d, N. E. Reed, Newport.

American—Dominique—Fowls, 2d, Chas. H. Lewis, Newport; Plymouth Rocks—Fowls, 1st, C. G. Britton, Keene; 3d, Henry A. Wilcox, Newport; Chicks, 1st, C. G. Britton; 2d, H. A. Wilcox.

Bantam—Golden Seabright—Chicks, 1st, M. M. Straw, Unity. Black-breasted Red—Fowls, 1st, R. S. Dudley, Newport; Chicks, 1st, J. G. McKeen, South Acworth.

French—Houdans—Fowls, 2d, J. G. McKeen, South Acworth; Chicks, 1st, W. D. Hall, South Acworth; 2d, C. H. Wats, Newport. Plumbagos—Chicks, 1st, Fowls, 2d, W. D. Hall, South Acworth.

Game—Black-breasted Red—Chicks, 1st, J. G. McKeen, South Acworth. Brown-Red—Chicks, 2d, Ira Stowell, Newport.—Heathwood—Chicks, 1st, 2d and 3d, R. S. Dudley, Newport.

Hamburg—Golden Spangled—Chicks, 1st, Mrs. J. G. McKeen; Fowls, 2d, Mrs. J. G. McKeen, South Acworth. Silver Spangled—Chicks, 1st, J. G. McKeen, South Acworth; 3d, F. W. Richards, Newport; Fowls, 2d, A. W. Rounsevel, Newport.

Polish—White-crested White—Fowls, 1st, G. H. Woodbury, Newport. Golden Spangled—Chicks, 1st, E. H. Carr, Goshen.

Spanish—White-faced Black—Fowls, 3d, Will Stearns, 3d, S. H. Edes, Newport. White Leghorns—Fowls, 1st, C. G. Britton, Keene; Chicks, 1st, E. A. Pollard, Newport; 3d, J. B. Haven, Newport. Brown Leghorns—Chicks, 1st, Isaac Woodbury, Newport; 2d, H. P. Coffin, Newport; 3d, A. V. Hitchcock, Newport. Dominique Leghorns—Fowls, 1st, Curtis G. Britton, Keene.

Guinea Fowl—1st, G. H. Woodbury, Newport.

Pea Fowls—1st, J. B. Smith, West Springfield; 2d, Benj. N. Mazze, Newport.

Turkeys—Grades—1st, Henry A. Wilcox, Newport.

Pigeons—White-Fanrills—1st, M. E. Hatch, Newport.

Rabbits—White English—1st, Jimmey Kingsley, Newport.

Colored English—1st, Mrs. J. G. McKeen, South Acworth.

Kittens—Maltese—1st, Dell Graves, Newport.

Dogs—Bull Pup—1st, Joseph Gamash, Newport. Cocker Spaniel Bitch—1st, R. S. Dudley, Newport. Scotch Shepherd—1st, Fred J. Allen, Newport. Spitz—1st, E. P. Fisher, Newport.

Grades—Bitch with Pups, 1st, Joseph C. Kimball, Newport.

Hen and Chickens—1st, J. B. Haven, Newport.

A. J. TUCK, } Judges.
A. BEARD, }

The following Officers of the Association have been elected for the ensuing year:

President. A. V. Hitchcock, Newport.

Vice-President. A. W. Rounsevel, Newport.

Secretary. H. P. Coffin, Newport.

Treasurer. F. W. Richards, Newport.

Directors. J. G. McKeen, South Acworth; E. A. Pollard, Newport; R. S. Dudley, Newport; E. H. Carr, Goshen; G. H. Woodbury, Newport.

A jawbone six feet long is to be exhibited at the Centennial by Massachusetts. Put it in the woman's department, by all means.

SPORTSMAN'S DEPARTMENT.

THE BEGGAR AND HIS DOG.

Translated from the German of Chamisso.

A tax of three crowns on my dog do they say?
May Heaven's bolt strike me dead if I pay!
Of what are they thinking then; will the police
Their griping extortions to levy ne'er cease?

I'm old, I am feeble, bowed down by pain,
Not one single penny can I ever gain;
No money have I, and no bread in my scrip,
'Tis but from the cup of distress that I sip.

When stretched on the bed of sickness, and when
I was poor and in want, who pited me then?
And who, when I was forlorn, and alone
In the world, united his fate with my own?

In sorrow by whom was I loved and consoled?
Who was it that warmed me when I was cold?
And when I murmured, hungry and faint,
Who hungered with me, nor whined with complaint?

We both now are going down hill apace,
My friend we must part; one last embrace!
Thou art like thy master, both sickly and old,
And he must drown thee for service untold!

Such is the reward, such is gratitude's worth!
And thus it is oft with the sons of the earth.
By heavens! in battle I've wielded my blade,
But never as yet I the hangman have played.

See! there is the cord, and here is the stone,
And there is the water—it must be done.
Come hither, you hound, look not in my face,
One push with the foot, so ends thy disgrace!

Now o'er his neck drawing the noose of the band,
The dog fawned caressingly, licking his hand,
Then quickly he drew the cord with a check,
And suddenly threw it around his own neck.

He spake a dread curse, through the silence it rang,
The remains of his strength then collecting he sprang
With a bound in the waters, which, foaming, arose
In circles around him then sank in repose.

Though the dog, to the rescue, plunged into the deep,
And waked with his howling the boatmen asleep,
Though whining he dragged them along to the shore,
Alas! when they found him he was no more.

At midnight they buried him in the deep gloom,
The dog alone followed the corpse to the tomb;
And where the earth covers his master and friend,
He laid himself down, and awaited his end.

The following hints copied from one of the leading sporting papers in the country, will perhaps be read with interest by the sportsmen hereabout: "Guns and rifles can be easily cleaned from lead by the following process: If a muzzle loader stop up the nipple or communication hole with a little wax, or if a breach

loader, insert a cork in the breach rather tightly; next pour some quicksilver into the barrel, and put another cork in the muzzle, then proceed to roll it about for a few minutes. The mercury and the lead will form an amalgam, and leave the barrel as clean and free from lead as the first day it came out of the shop. The same quicksilver can be used repeatedly by straining it through wash leather; for the lead will be left in the leather and the quicksilver will again be fit for use.

NAMING THE DOG.

By reference to the city clerk's records, says the Worcester *Gazette*, where dogs are compelled to register their names, we find that he has licensed 1,606 dogs this year, including 161 females. It is with the names of these dogs that we have to do just at present, and the list is suggestive and curious. To the ordinary observer, who is generally no observer at all, it appears that all the dogs he knows are called Major, or Jack, or Tiger, but a reference to the city clerk's lists indicates that while these names are quite frequent, there is a wide list of less common names, from which to select, if it should happen that you should have a dog for which a name is wanted.

In the first two hundred and fifty names recorded in Mr. Smith's dog-register we find that Jack is entered eighteen times, while Jip appears nine times, Carlo eight times; Fido, Major, and Rover seven times each; Don, Skip, Fanny and Prince, six times; Dick and Spot four times; Topsy, Pedro, Captain, Sport, Fan, Da-h, and Nellie, three times; Tige, Tige, Jennie, Beauty, Sailor, Ned, Bruno, Charlie, Pink, Dick, Shepherd, Dot, and Dan, twice each; and beyond these a list of single names as Major, Zack, Spry, Duke, Ben, Ned, Pomp, Lion, Nero, Dick, etc., all of no especial merit as names, or of oddity in application.

But there is oddity in the list, for one man calls his dog Bunkum, and another calls his Nigger, while Punch, Hunter, Duke of Kent, Pat, Sporter, and Wallace are in the first two hundred and fifty names. Beyond these, all along the list of prosaic names we find such gems as Smartie, Bruiser, Pup, Patsey, Joke, Cube, Turn, Gunner, Squiz, Gash, Gaston, Bear, Toady, Boss, Teaser, Doctor, Savage, Troy, Prime, Sig, Gloster, Sweep, Basher, Chico, Pilot, Wag, Tottle, Bady, Braman, Tonpeti, "Dog," Neat, Danger, Moses, Scamp, Calvin, Chubba, Pepper, Saint, Josh, Chance, Carl, Rosa, Deacon, Tag, Steamer, Bender, Brandy, Posey, Merite, Turker, Curl, Judge, Mixey, Rather, Luke, Guess, Dutchman, Doggie, Shady, Slumbo, Web, Snib, Lucky, Limpey, Heater, Button, Faith, Joker, Primp, Veto, Rupee, Chippy, Satan, Loafer, Keeper, Smoker, etc., etc.

Such a list shows no little invention in the aggregate, and indicates that names are cheap. None of these are copyrighted, and if any luckless owner of a nameless dog can read the list without finding a name to his taste, the accommodating city clerk will, if he pays the license fee, allow him to select from the full list, "free, gratis, for nothing."

A certain parson, who is also a school-teacher, handed a problem to his class in mathematics, the other day. The first boy took it, looked at it awhile, and said: "I pass." Second boy took it, and said: "I turn it down." The third boy stared at it awhile, and drawled out: "I can't make it." "Very good, boys," said the parson; "we will proceed to cut for a new deal." And the switch danced like lightning over the shoulders of those depraved young mathematicians.

In a country churchyard there is the following epitaph:—"Here lies the body of James Robertson and Ruth his wife;" and underneath this text, "Their warfare is accomplished."

"My dear," said a rural wife to her husband, on his return from Edinburgh, "what was the sweetest thing you saw in bonnets in town?" He innocently replied, "The ladies, my love."

EDITORIAL DEPARTMENT.

THE MONTH OF APRIL

is the best in the year in which to commence operations in fowl rearing. It is early enough to assure successful hatchings, and from this period forward to cold weather again there is sufficient time to mature the chickens, and bring pullets to the age that gives us good average "winter layers."

For "fancy" specimens, such as our ambitious breeders aim to possess for the late fall and winter exhibitions, the early April chicks are usually the most promising, if they have the right care constantly, and a fair chance.

It is important that all young gallinaceous stock shall enjoy as free a range as is convenient, and that they should be fed from the start with good wholesome food, in variety.

The better the care in their early lives, the better fowls they make, on maturing. In all cases, we should see that they are kept free from the annoyance of vermin, as they advance, and as the warmer weather comes on.

This precaution taken, and a supply of sound food, pure fresh water, cleanly quarters, and the liberty of dry grass run afforded, will give you good chickens.

A NEW CONTROVERSY

has recently been set afoot upon a subject of considerable interest to poultry dealers, to wit, regarding the purity of the "Plymouth Rock" fowls, and the preference that should be given to this or that "strain," among the three or four different ones now claiming to be "the best."

Dr. Dickie has written quite exhaustively upon this topic in the early numbers of the present volume of the FANCIER'S JOURNAL, and from his stand point a very good case was made out for one of the contestants.

The Plymouth Rocks are a cross-breed, however, and though recognized in our Standard as a distinct variety, they are made up of two (or more) original varieties. This, we believe, is not denied at all, by any of the breeders. But there are certainly three, and we think four different parties who breed this cross very finely, who claim that their original stock comes from sources not related to the others.

As nearly as we can learn from the published accounts there are the Essex County, and the Norfolk County, Mass., strains, as well as the Connecticut birds. And in the latter State, the Upland and the Ramsdell strains (both probably in the first instance from Spaulding's birds,) claim the palm, each by their own admirers.

In an early number of the first volume of our paper, Mr. G. P. Burnham gave an account of the "Plymouth Rocks" as at

present bred in Massachusetts. Mr. B., we think, exhibited (in 1849) at Boston, the first Plymouth Rocks ever shown in public. But these were the old-time variety, originated by Dr. Bennett. They were not like the modern Plymouth Rocks, and were made up from an entirely different source. These were of all colors—but large and fine. Those of to-day are not unlike the "Dominique" fowl in color, as a rule, some being darker, however, in plumage.

The best we have seen in the past three years at our fairs, are those said to have come from the Spaulding (Connecticut) stock. And those who have bred these and the others mentioned deem the former the best. This variety comes from a cross of the Black Java and the Dominique.

They breed imperfectly (any of them) as to color—a large portion, however, in the second and third, remove from the progeny of the original cross, giving the Dominique feather clearly. But many are darker plumed than the rest in the same flocks, out of the same parentage. Some come black like the Javas, but most are nicely plumed with the Dominique markings.

They have proved a very good bird, where they have been carefully bred. They are of good size, square bodied, handsome build, comely in appearance, and the hens are excellent layers. The Plymouth Rocks have been in demand the past season, and we hear very good accounts of them, from all directions.

They are not high-priced fowls, and for the farmer, they are a vast improvement upon the old barn-yard poultry—being hardy, prolific, yellow-legged, smooth shanked, and moderate feeders for their size.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Game cockerels should be dubbed before they are six months old.

—The English are more successful than we with smooth-headed Fans, but with Calcuttas we are ahead of them.

—Wm Perry, of North Strabane, Pa., on March 1st, shot an owl measuring four feet and eight inches from tip to tip.

—CAGE BIRDS.—When attempting to breed cage-birds, old mortar should be broken up and thrown in the bottom of the cage to assist the hen in shelling her eggs.

—Will some one be kind enough to inform "R. S." through the columns of the JOURNAL, what sort of grain is the *taves*, so often referred to in English books on pigeons.

—The habit of breaking eggs, to which cage birds are sometimes addicted, can be effectually cured by putting some putrid eggs—"stinkers," they are called by the fancy—in the cage for them to pick at.

—Last week Josh. Brady caught a hawk in a trap. The hawk measured five feet from tip to tip. It flew away with the trap and came very near carrying Josh. along; but finally the trap proved too much for the hawk and he came down ignominiously.

—The number of feathers in a good Fan's tail is a matter of choice merely; many good birds have only twenty-six and twenty-eight. Thirty-six, however, is the perfection of a good tail, if well carried, but if you get a well carried tail containing thirty feathers, consider yourself fortunate.

—The tail of the Fantail should form about seven-eighths of a circle, and should be flat, the under tail-coverts smooth. The carriage is a thing most important; the fan should be carried so that the ends of the middle feathers would come in a straight position over the centre of the feet, and touching the head, and must lean neither to the right or to the left.

—The *Société libre d'Abeond*, of Brussels, the oldest Columbarian society in Belgium, considers in-and-in breeding as the shortest way to degenerate a species or race; that the separation of pigeons for six months is contrary to nature; that its an infallible means of disgusting the carrier with the pigeon-house, and has a bad influence upon laying and reproduction, and that repeated doses of soft meat rarely give satisfactory results.

—HEDGEHOG'S COAT.—In the bristles of the common hedgehog we find a very curious bit of mechanism. The hedgehog has no horny studs, either fastened into the skin, as in the armadillo, nor yet has he a bone-formed dome, covered with horny scales as in the tortoise. Instead of this his horny covering assumes the form of spines, or bristles, each set firmly into the skin at one end. These bristles the owner can erect in groups, with all the points outward, presenting a most formidable array of weapons; but the hedgehog has also power to lay back all these sharp-pointed spines in one direction, viz., from his head backwards. In this position they form a carpet, which, if smoothed the right way with the hand, is as soft as velvet. In order to find out how all this mechanism was carried out, I have dissected a hedgehog, and was surprised to find how very slight are the muscles which command the spine. They are fine strings of fibre, very similar to the *corrugator supercilii*, or frowning muscle in our own forehead; in fact, when a hedgehog curls himself up, he begins to work with a tremendous frown as he tucks his head inwards. The muscles that work the spines are attached to prominences which project from the backbone, and especially do they spring from the ribs, which I find to be of unusual strength and abnormal width for so small an animal. * * * Being anxious to settle the point mentioned by White, as to whether the spines of the hedgehog at birth are soft, I obtained a hedgehog from my brother-in-law, the Rev. H. Gordon, Harting Rectory, Petersfield. To my great delight I one morning found, among the straw in the box, one baby hedgehog just born. There had been probably a large family born, but the mother had eaten them all except this one. Here is a life-sized picture of him. White was correct. The spines were soft and flexible at the birth of the little beast; they were little dumpy spikes, much resembling the incipient feathers of a young bird. Even in the few hours the hedgehog lived these bristles grew considerably.—*Frank Buckland's new edition of White's "Selborne."*

ZOO NOTES, NO. 16.

HIBERNATION.

While standing before the bear-pits, in the Philadelphia Zoological Garden, watching the antics of Rose Grizzly, on one of the cold days last winter, I was asked the question, "Why do the bears not hibernate in the garden, when they always do so in their natural state?" This was a natural question to ask, and one easily answered, but it led me to thinking of the matter more generally, and of other hibernators than the bears. First, then, why do bears hibernate in their wild state, and omit it in that of domestic? Simply because,

* Two were born dead, the third, an active young whelp, was killed by the mother a few hours after its birth.

in the former condition food is always scarce; in the latter it is always plenty; and this answer will apply to all other hibernators, be they beast, bird, fish, or insect.

Look over the fields, and into the forests during the month of December, and for several weary months afterward, and what do we see? Field, wood, and water, all locked up in the icy embraces of King Winter; yet there are millions of living things to be nourished, and carried over to the time when genial Spring with her warm, sweet breath, shall break the frozen chains, and let them free. Until then, access to food as anything like a certainty is impossible. How then is the difficulty to be met and overcome?

There are three ways provided by Mother Nature—1st, Migration, 2d, Hibernation, 3d, Entire change of diet.

The first, only birds are capable of doing, and as wonderful as the gift of migration is, it seems quite as wonderful, that it does not always set toward warmer latitudes, for while some of the feathered tribes seek warmer climes, others go to the regions of ice and snow, because they cannot exist save in a cold atmosphere.

Thus with the birds. The beasts cannot migrate, yet they too must bridge over the bad season. This they must do by retiring to their dark homes, where rolled up in the shape of a ball, they enter upon a good long sleep—this is hibernation.

We all know that the object of food is to renew the tissues, used up in the actual energies of life, and we know too, that we cannot lift a foot, raise an arm or finger, without losing some of these tissues. Now if this waste can be checked by a masterly state of complete inactivity, life can be preserved, and well preserved, for Sir Bruin has been found after his long sleep, fatter and plumper than he was before he entered upon it!

Here we have then the philosophy of hibernation; and thus the creatures who are not able to dine, are put to sleep, which sleep to them is a substitute for food, but in his domestic state, Sir Bruin, having plenty of food provided for him, forgets his power to sleep—has indeed no need of it, and seems quite unwilling to loose so much of active life.

But there are many other creatures besides the bears debarred from obtaining food during the winter and which would perish were it not for the power to sleep—or hibernate. There are the frogs, toads, and tortoises, and the like, all of which sink themselves down, far down below the freezing point, and there pass the long winter waiting for the spring. Yet of all creatures, the frog, one would think, was the one least able to bear extreme cold, as he has a highly porous skin, and dresses in neither feathers or furs.

Then the bats, who feed entirely on flies, and all manner of winged insects. What would their bat-ships do for food in the severe winter, when not a fly, or even a gnat, which is the hardest of all flies, will not venture to put his delicate nose out doors! Why die, die all of them, before the first fortnight of cold weather could they not sleep.

Passing over reptile and insect hibernation, let me say a word or two about the squirrels, who are however, but intermittent hibernators, and rank among those who change their diet. In the summer your squirrel is a fruit eater, but he well knows that in the winter the fruits he loves so well will be all gone. He seems to have sense enough too, to know that they will not keep, as he does not hide them away as he does nuts; so in autumn, his instinct (or reason, which is it?) tells him to put away a good store of his favorite nuts, and whether he is fearful they will not hold out, I know not, but certain it is, he takes very long naps, only waking up when a warm day comes; then will he take a respectable lunch only, and back he goes to his cosy, warm nest, and his deep, happy slumber.

The delicate rodent, called Dormouse (*Muscardinus arellanarius*) behaves much the same as the squirrel, and though it wakes much less frequently, when it does, it flies to its store house for

a small repast. The dormouse when kept as a pet, gives much trouble to its owner, to keep it from going to sleep, which nothing but a very warm room will prevent.

Now let us consider those creatures who live an *active* life all through the winter, and who, deprived of their regular food, change the bill of fare entirely. The Rabbit and Hare are sufficient examples.

Unless the snow lies very deep, both of these can subsist very well as grass and other herbage affords them sufficient food. But when the snow is deep, and hard frozen, then poor "lepus" is sore put to it for food, and his dire hunger at length drives him through the snow to the nearest clumps of trees or copse, and with his sharp, chisel teeth he soon makes sad work with the barks. He is not a fool by any means, however, if he is hungry, as he always takes the youngest trees, and saplings first, but should the cold continue, not a single tree larger or smaller, will escape him, or his tribe. As the hares and rabbits are not climbers, they must stand on their hind legs and reach up for the bark, and it is really wonderful how far they can reach when thus compelled by hunger. In this business the hares being larger, fare better than the rabbits, besides having longer hind legs they can reach higher, so when the rabbits have got all the bark they can, the hares can go several inches "better," as Gen. Schenck would say, and have a good feast, which was beyond the reach of their relatives.

These then are the three ways of getting through the winter. Those which like not the climate migrate to others. Those which cannot migrate or find food, sleep, which is hibernation; and lastly, those who will not, or cannot sleep, change their diet.

How wonderfully has God provided for all his creatures!

And now Haichen Mio, is your question answered? If not, in a future paper, I may say a word or two about reptile and insect hibernation.

HUON.

CORRESPONDENCE.

SCOTCH COLLIE.

ED. FANCIERS' JOURNAL:

A correspondent in a recent number of the "Journal" asks for information regarding the Scotch Collie. I have not the query now at hand and may not therefore answer definitely and fully in every particular; but being an admirer of the Collie and having owned several and read from time to time all I could find regarding them, I venture to offer the following description for the benefit of your questioner and others interested in these very intelligent and useful dogs.

Scotch Collies differ in size from 17 to 56 inches in height. Those of medium size are to be preferred. One of good average size and proportion will measure 22½ inches in length at the shoulders; 9½ inches in length of head; 14 inches girth of head below the ears, and 8½ inches in girth below the eyes.

The coat of the Collie is long and thick, particularly over the shoulders, where, and thence along the back it is inclined to part. The hind quarters are well covered with long hair. The hair on the sides is shorter, that on the chest long, very abundant and soft, and sweeps upwards to beneath the chin with a graceful curve. That on the face is short, fine and silky. The fore-legs are "feathered" behind, while the hind legs from the hocks downwards are smooth, and furnished with dew-laps.

The tail is long and bushy, and when the dog stands quiet and unexcited, it is carried almost straight till near the hocks, whence it takes a gentle outward curve. When "on his nerve," the dog carries his tail very gracefully over his rump—not to one side or the other—and on a level with his head.

The Collie's head is comparatively small, and the teeth quite sharp. The neck is rather long and somewhat arched. The chest

is deep, the shoulders broad, the fore-arm short, the fore-leg straight as a dart, with posterns rather long; feet, round, and close, well padded, and with toes firm and not spreading apart. He should stand with hind legs rather wide apart, without any turning inward of the hocks, while the loins should be strong; the hips broad, and the ribs well arched.

In color the Collies vary from a light tan, to dark linnet and black and tan. A dash of white in the face, a little on the chest, and a white ring round the neck gives to the dog a dressy appearance that most persons admire. At the same time purity of color and decision in markings are deemed of no little importance.

SPRINGFIELD, ILL.,

P. M. S.

"THE LICE QUESTION."

JOS. M. WADE:

DEAR SIR,—My brother having written to F. M. Butts, about the "Lice Question," received the enclosed postal card, and small package of powder, which he does not know the name of, a sample of which I enclose to you. What is your opinion of the man and powder? Also, what you think of Charles B. Jaques, Metuchen, N. J., in regard to his Incubation Circular? Do you think he is a reliable party? No doubt these questions, answered through your paper, would be of some benefit to Fanciers generally.

I remain yours respectfully,

CHAS. B. SCHNIDER.

PHILADELPHIA, March 23, 1876.

I send you a package of insect powder, and by using a tin pepper-box, and sprinkling the powder in the fluff of the birds, you will destroy all vermin. I do not know the name of the powder or would give it to you. [See FANCIERS' JOURNAL.] I know it is of great use, so please give it a thorough test, and if you think it worth it, send me 25 cents. I intend to do just as I agree, so far as I can. I have been run over with letters. Use it freely on sitting hens, and you will see the effect. If you have lice in your coops this of course will not reach them, but will kill all on fowl. Send 20 cents, I forgot the stamp.

Respectfully,

F. P. BUTTS.

The sample of powder was duly received. It is a yellow powder very much resembling ground liquorice, in color, but smells of tobacco only, we should judge that it is the stems of tobacco ground fine. We know nothing of Charles B. Jaques other than receiving his advertisement, and pay for the same. If there is anything "crooked" about any one using our advertising pages we would like to know it.—Ed.]

EXCHANGES, ETC.

MR. EDITOR:

There is a case illustrating what may have happened heretofore to many readers of the Journal, it is this: A. wants a nice Brown Leghorn Cockerell, he sees B's advertisement and thereupon writes describing just his bird from beak to toe nails. B. in return says: "I have a very nice bird that I think would suit you! (italics are mine) Well, perhaps A's gullibility tempts him to pay from ten to twenty five dollars for B's "think," and though B at first a little honest, but he gets A's money and then after looking at his best or second-best bird, and then at said money a few times picks up a third or fourth rate bird, pulls out or breaks off a feather or two and "puts him up."

Now there is but one remedy and that is the C. O. D. plan, and then B sees his goods before parting with his money. I have dealt with several fanciers in making exchanges through the ex. column of this Journal, and in all (only two) cases where they have sent first, have I been used "on the square." I once sent two pair of Brown Leghorns to a veteran pigeon fancier in exchange for two pair of pigeons. The Tumblers never mated together themselves

nor with other birds, and the carriers were both males and I have succeeded in getting out of this branch of the Fancy (the pigeon) by giving away my birds, while he has been offered quite a sum for one cockrel alone that I sent him.

It is not always thus, but now let us "initiate a new era" in the Poultry business, and that is give every disaffected purchaser (if he is posted) say five to ten lines in which to ventilate at about half price, and the offending parties ditto, but no lengthy disquisitions shall be entered into. I recollect of sending to several parties postal cards and letters of enquiry as to their prices for a B. L. cock, nearly all thought they would suit me, but one, a true fancier, wrote: "I have not such a bird to breed from myself, nor do I think there is one for sale with solid white ear lobes." This was when the white lobe mania (a nuisance any way) was raging with Brown Leghorn fanciers to such an extent. I have watched that man since and he is true.

Yours, &c.,

T. J. McDANIEL.

HOLLIS CENTRE, MARCH 23d, 1876.

"WHITE LEGHORN EGGS."

MR. WADE:

DEAR SIR,—In answer to Mr. D. Gilpin's "White Leghorn Eggs," in regard to the number required to make a pound, I will say that it depends upon the manner in which they are fed while young chicks. If fed five times a day the first two months, and three times the next two, it will put one and a half pounds more on the fowl than if they were fed but twice a day during that time. Therefore, it is the size of the Leghorn Fowl that makes the difference in the size of the egg. My neighbor has them that it takes eleven for a pound. To-day I weighed four of my largest and four of my smallest, and the eight weighed 1 pound 2 ounces. Mr. Gilpin says he weighed eggs from his stock that weighed 1 pound $\frac{1}{2}$ ounce. This beats mine by far.

Yours truly,

W. I. PYLE.

March 20, 1876.

A QUEER OFFER.

MR. EDITOR:

Being very desirous to aid you in obtaining new subscribers in the N. E. States, I make the following "queer offer."

To any New England Fancier who has not heretofore been a subscriber to the FANCIERS' JOURNAL, and who now subscribes and wishes any suggestions on plans in aid of building a henry, I will give them freely, but all applicants must be particular to give the number of fowls to be kept, breeds, and particularly the "lay of the land," where the poultry house is to be situated.

With the subscription price to the JOURNAL may be sent the request in a copy of JOURNAL, receipt, date, &c., direct to me. This holds good only till May, then comes my busy season.

T. J. McDANIEL.

HOLLIS CENTRE, ME.

THE LICE QUESTION.

FRIEND WADE:

I have received from F. P. Butts, a package of insect powder. It seems Mr. B. purchases the powder at a drug store, and is ignorant of the ingredients of which the powder is composed. When I wrote to you I supposed the powder was compounded by Mr. B., and thought it strange that he should say that as a true Fancier he was willing to tell all he knew, and at the same time keep the composition of the powder a secret, for the purpose, as I suppose, of making money out of it.

Yours truly,

A. A. MILLER.

ROOMS OF THE CONNECTICUT STATE POULTRY SOCIETY.

HARTFORD, CONN., March 21, 1876.

Whereas, HENRY T. SPERRY, Esq., who for two years past has served the Connecticut State Poultry Society as its President, positively declines a re-nomination, and an assured reelection, for "a third term," owing to the pressing demands upon his time in his professional and official duties, be it

Resolved, That we, his associate officers and members of the Society, tender our thanks and acknowledgements to President Sperry for his untiring devotion to the interests and welfare of our association.

Resolved, That the Connecticut State Poultry Society is indebted in no small degree to our retiring President for much of the good reputation, and the high position our association occupies to-day, in the estimation of the Poultry Fanciers of our State, and of the United States, and that it is with pride we can by this humble tribute so evidence to him our respect, confidence, and personal esteem.

Resolved, That although Mr. Sperry declines to take the executive head of our Society for another year, it is gratifying to us that we may still have the benefit of his counsel, aid and support, in our Board of Direction, and as an associate in the business conduct of the affairs of our Society.

Resolved, That a copy of these resolutions, handsomely engrossed at the expense of the Society, be presented to Mr. Sperry, and that the Fanciers Journal and Poultry World be requested to publish the same in an early issue of these periodicals.

E. S. BREWER, Pres't.

HENRY CHAPIN, Cor. Sec'y.

W. J. TULLER, Rec. Sec'y.

B. S. WOODWARD, Treas.

RATS.

MR. EDITOR:—

Having had trouble all the spring with rats, I wish some one would through the columns of your JOURNAL, give me advice how to get rid of them. The greatest trouble is in destroying my pigeon nests and in two instances they have so injured the female, who was sitting, that they died. What is the remedy?

T.

ELECTION OF OFFICERS.

TAMAQUA, March 27th, 1876.

Editor Fancier's Journal:—

The following is a list of the officers elected by the Central Poultry Association, of Pennsylvania, for the year of 1876:

President—Wm. S. Allenbach.

Treasurer—Moses Lutz.

Secretary—Samuel B. Graeff.

The next annual exhibition of the Society, will be held, commencing December 12th, and ending December 15th, 1876. Please insert in the Journal.

SAMUEL B. GRAEFF, Sect'y.

PEKIN AND MUSCOVY DUCKS.

RALEIGH, N. C. March 23, 1875.

EDITOR FANCIERS' JOURNAL:

DEAR SIR:—Will you please inform me whether Pekin and Muscovy ducks will mix. I have some of both and want to know whether it is necessary to keep them separate to keep the stock pure. Please also state what number of ducks can well be put under the care of one drake. Yours Respectfully,

J. W. HINSDALE.

[There is no doubt but Pekin and Muscovy ducks will mix, whether the offspring of this cross will be sterile or not we cannot

say. A cross of the Muscovy with Aylesbury or Rouen will not breed. Mr. J. Y. Bicknell will no doubt answer the question of how many ducks to one drake in his continuation of the Articles on Ducks.—Ed.

SNEEZING FOWLS.

NEWCASTLE, March 17, 1876.

MR. JOS. M. WADE:

DEAR SIR:—For a week my fowls have had a kind of sneezing, as if there was something in their head or throat they wanted to get clear of. Can you tell me what it is? and a remedy? I have been feeding on screenings and whole corn, with cracklings twice or three times a week.

Yours Respectfully,

G. L.

Will some of our readers whose fowls have been similarly affected, please answer the above.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"TO EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

H. F. WHITMAN, P. O. Box 154, Baltimore, Md., will exchange a pair of *Dun Carriers* for *Barbs* of any color, or offers.

T. D. HAMMOND, Mayville, N. J., to reduce stock, will exchange *Light Brahmas*, cocks or hens, for *double-barrel breech-loading shot gun*, *Straw Cutter*, *Erie Lawn Mower*, *Milch Cow*, *Pigeons*, or offers.

JOHN K. CAMP, Winsted, Ct., will exchange eggs for hatching from first class *Light Brahmas*, (P. Williams' strain), for first class *S. S. Hamburg*, colored *Dorking*, or *B. B. Red Game Bantam* hens or pullets.

M. W. MINER, Wyeoming, Ill., will exchange one year's subscription to the *Poultry Argus*, and one year's subscription to *Farmers' Journal*, also two young *dark Brahmas* cocks, and a *Creve Coeur* cock, for *Common Pigeons*, or *Book Field*, *Cover* and *Trap Shooting*, by *Bogardus*.

H. J. EATON, Concord, N. H., will exchange *Dark Brahmas* chicks, (Hatch of 1875), or eggs from choice *Dark* and *Light Brahmas*, and *Black Spanish* fowls, for *Canary birds*, or *Dog* or *Pigeon* books.

PETER LAPP, P. O. Box 833, East Saginaw, Mich., will exchange one *Red Irish Setter* bitch, five months old, good pedigree. She will stand point, retrieve, carry by raising the hand, for *gold watch chain*, or first-class *Pouters*, or *Carriers*. Value of dog, \$40.00.

B. E. SMITH, Potis Grove, Pa., will exchange *B. B. Red Game* eggs, for *Coppers Game* fowl, or eggs from the following varieties: *Light* or *Dark Brahmas*, or *Brown Leghorns*, or offers. My eggs are warranted.

A. M. CAREY, Selina Grove, Pa., desires to exchange eggs of choice fowls, 18 varieties, (see circular), for eggs of strictly first-class *Pekin Ducks* or *Bronze Turkeys*.

THOMAS W. HOPKINS, Goshen, N. Y., Box 67, has for exchange 1 pair of fine young *Rabbits*. Any one making me a fair offer in the *poultry line*, or anything of equal value I will exchange.

WARREN BECK, York, Pa., has to exchange *B. B. Games*, one *Black Game pullet*, one *Pit Game pullet*, eggs from fine *poultry*, one pair *White Pouters*, 1 pair *Red Wing Turbils*, *Black Carriers*, 1 *Maggie* cock, 1 *Fan* hen, 1 *Turbit* cock, 1 *Pied Pouter* cock, 1 pair *Priests*, &c., for *Silver Duckwing Bantams*, *Wright's Illustrated Book of Pigeons*, *White Carrier* hen, *Jacobins*, or offers.

T. W. COX, West Chester, Pa., will exchange two pair *A No. 1 Dutchess*, for two sittings of *Rose Comb Dominiques*, 15 eggs each.

T. HALE, Albion, N. Y., will exchange 1 trio *G. P. Hamburgs*, for trio *Black Hamburgs*, or *Golden Spangled pullets*. None but first class stock wanted, as mine are.

GEO. M. WILSON, East Gloucester, Mass., will exchange 1 pair *Black Carriers*, 1 pair *Red Tumblers*, 1 pair *Red Mottled Tumblers*, 1 pair *Black Winged Swallows*, and 1 pair *White Fans*, for other varieties of *Pigeons*.

A. A. MILLER, Oakdale Station, Pa., will exchange *Dark Brahma* chicks, (in pairs only), for small fruit plants; fruit and ornamental trees.

HOWARD I. IRELAND, Camden, N. J., will exchange a copy of *Bartrum's "Hen Fever"*, for a pair of *Fancy Pigeons*, of any kind except *common* *Burmans*.

W. I. ROW, Greensburg, Pa., has a lot of moveable *comb* *bee hives* he will exchange for *double-barreled Remington breech-loader shot gun*, No. 12 or 13 bore, all complete, or offers.

HAYDEN H. TSHUDY, Litz, Pa., will exchange *Brown Leghorn*, *P. Cochins*, *White Cochins*, *Houdans*, and *S. S. Hamburg* eggs for *American Dominique*, *Pekin Duck*, *P. Rock*, or *Buff Cochins* eggs.

R. E. HAWLEY, Clevelo, Ohio, will exchange a set of *Pacific Railroad Survey*, for *Light* or *Dark Brahmas*, or offers.

J. A. LAUDENSLAGER, Fillow, Dauphin Co., Pa., has eggs of *White*, *Blue*, *Red*, or *Parrish's* *Light* or *Dark Brahmas*, and *Houdans*, to exchange for *Creve Coeurs*, or *Plymouth Rocks*. Who has them.

WILLIAM CALL, JR., Haverstraw, N. Y., will exchange *White* and *Dominique* *Leghorn*, *Light* *Brahmas*, *Partridge Cochins*, and *Golden Poland* eggs, for *Rouen Duck*, *Plymouth Rock*, *W. C. B. Polish* eggs, or *Fancy Pigeons*. My stock is first class.

OLIVER D. SCHOCK, Hamburg, Berks Co., Pa., will exchange 1 *Blue*, 1 *Black* *swallow*, 1 *Black* *Bald-head*, 1 *Black* *Magpie*, 2 *Blck Moore* *Cap* *cocks*, *Eggs* for *Hatching*, (see advertisement,) for 2 *Black Barb* *cocks*, 2 *Carriers*, 2 *Yellow Jacocins*, 2 *solid* *Yellow Turbit* hens. Want *first class* birds, or will buy.

E. G. FLANDERS & CO., Manchester, N. H., have to exchange 1 pair of *Blue* *Bald-head* *Tumblers*, and the following odd cocks: 1 *White Crested Fantail*, 2 *Highflyers*, 1 *Red Tumbler*, 1 *Black* *Bald-head*; also one *Springfield Rifle*, for *Brown Leghorns*, or offers. Must be *A No. 1*.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the *Exchange* and *Want* columns, will be placed at the head of *Exchange* column.

MARK SCHOFIELD, 71st St. and Darby Road, Phila., wants *Winged Turbils* of all kinds. Must be good. Send price and description.

A. K. MARTIN, Binghamton, N. Y., wants a *B. B. Red* *cock* or *stag*, also a *white* *male* *Fantail* *Pigeon*; will give a good *exchange* *Duckwing*, or *B. B. Red* *Bantams*, *S. S. Hamburgs*, or *B. B. Red* *pullets*. Good stock wanted, and the same given. Write.

I. P. LORD & BRO., Waupun, Wis., wants three or four first-class *Black* *Red* *Game* *hens* or *pullets*, for eggs from a variety of fowls or ducks named in their own illustrated catalogue. Send a stamp for postage. Speak quick.

MONTEVUE POULTRY YARDS, Brooklandville, Md., wants a few *No. 1* *American Dominiques*. Any one having a few *pullets* or *hens* and a *cock* to spare at reasonable prices, will address above.

T. D. HAMMOND, Mayville, N. Y., wants *Mocking Bird*, must be a good singer; *B. B. Red* *Game* *Bantam* *pullets*, *Ferrets*, *Scotch Terrier* *Bitch*, *Pigeons*, *Garden* *Seed*, in exchange for *Light Brahmas*, old or young, male or female.

ADVERTISEMENTS

From reliable parties, on any subject interesting to *Fanciers*, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS.—First and Special Premium, at Buffalo, 1875; First Premium at Utica, 1876. Eggs, \$2.00 per 13. S. S. MORLEY, Clyde, N. Y.

FOR SALE OR TRADE for *Bufs* or *Duckwing* *Bantams*, one pair of fine large *Dark Brahmas*, '75 hatch. Mine are No. 1 stock—shall expect same. J. W. BROWNING, Indianapolis, Ind.

PURE and *Fresh Eggs* from *Choice* *L. Brahmas*, *P. Rocks*, and *Brown Leghorns*. Thirteen for \$2.00; 39 for \$5.00. 5t Address O. A. ANDREW, West Boxford, Mass.

FANCY PIGEONS AND EGGS FOR HATCHING.

I have a lot of young *Red* and *Yellow* *Barbs*, at \$4.00 per pair; *White* *Fantails*, \$3.50 per pair; *Bald* *Tumblers*, \$3.00 per pair; and other varieties at low prices. Can furnish Eggs from *Light Brahmas*, \$4.00; *Brown Leghorns*, \$3.00; *P. Cochins*, \$4.50; *American Dominiques* and *White Leghorns*, \$3.00 each per setting of 13. My stock is all guaranteed to be pure bred. Eggs carefully packed. J. C. LONG, JR., 2t 89 North 9th St., Philadelphia, Pa.

POULTRY AND PIGEONS.

A breeder of high-class *Fowls* and *Pigeons*, retiring from the *Fancy*, has placed in my hands for immediate sale, his entire stock, including some pairs and trios of valuable *Fowls*, and 200 pairs of *Fancy Pigeons*, besides many odd birds. If you want *Fowls*, send for price lists; if *Pigeons*, write for what you want. Everything at bottom prices.

HOWARD I. IRELAND, Camden, N. J.

J. H. SCHOCK, Sec. W. corner 74th and Buttonwood Streets, Philadelphia, Pa., dealer in *S. S. Weekly Paper*, *Stationery*, etc.; will also supply *Fanciers' Journal* promptly by mail or at the store.

REDUCTION IN THE PRICE OF ADVERTISING.

In consequence of the hard times and scarcity of money, we have determined to put the price of advertising within the reach of all; also to make the width of column uniform with other poultry journals. After this date, only TEN CENTS per line of about eight words will be charged for each and every insertion.

EGGS FROM PREMIUM STOCK.

G. P. Hamburg, \$2.00 per 13 Eggs.
S. P. Hamburg, \$3.00 " "

THOS. HALES, Albion, N. Y.

FOR SALE.—A fine lot of Dark Brahmas and American Dominiques. Reference to pedigree if required. Eggs in season at \$3.00 per setting. No circulars. Address A. R. GALLOWAY, Monroe, Orange Co., N. Y.

ALMOND-BRED TURBULES.—Premium birds at the late Baltimore Show. Choice birds at reasonable prices. G. O. BROWN, No. 1 N. Gay St., Baltimore, Md.

G. O. BROWN. Brooklandville, Md., has one pair each of S. S., G. P., and Black Hamburgs (each won first premium at last Baltimore show), and one pair Golden Poland (first at same show)—to exchange or for sale. What offers? Immediate.

HAMBURGERS.—Golden-splangled and Silver-pencilled, having made three importations during the last four years I can now spare a few trios of good birds; also, B. B. Red Game Bantam cockerels. Eggs \$4 per dozen. F. TAYLOR, Oakdale, Delaware Co., Pa.

FOREIGN COINS IN 1876.

During the Centennial, large quantities of foreign coins will be circulated by visitors to the International Exhibition. To prevent annoyance, delay, and loss, everybody should at once secure a copy of the New Edition of PETERSON'S COIN BOOK, containing perfect fac-simile impressions of the various Gold, Silver, and other metallic coins throughout the world, with the United States Mint value of each. The whole being placed in proper order as regards the various governments to which they belong, arranged according to their different denominations and value. Together with a complete index, alphabetically arranged, of the coins of each nation, and fac-similes of the State Arms of each of the United States. Published in one full volume, bound in paper, price \$1, and will be sent by mail, postage paid, on receipt of the price by the Publishers, T. B. Peterson & Bro., 306 Chestnut Street, Philadelphia, Pa. Do not wait until the foreigners arrive to purchase the needed Coin Book, but secure it at once.

A. N. RAUB. Lock Haven, Pa., has left with him for sale a first-class double-barreled Rifle—stubb and twin barrels, silver-mounted, cost \$60, made to order. Write also if you have a first-rate Setter to exchange.

THREE SILVER CUPS AT BALTIMORE SHOW! Eggs from my cup B. B. Red Games, and W. C. R. Polands; also from my choice Houdans, L and D Brahmas, W. Leghorns, Game and G. Sebright Bantams. Address MONTVUE POULTRY YARDS, Brooklandville, Md.

DOMINIQUE'S, FANCY PIGEONS, AND WARREN GAMES.

Also, Black-breasted Red Games. Eggs for hatching in season, \$3 per sitting of thirteen. Address W. H. HELLINGBET, Edgewood, Bucks Co., Pa.

W. H. BRACKETT Boston, Mass., Offers for sale at prices varying with quality of specimens, Partridge Cochins of his well-known prize-winning strain; Lop-eared, Angora, Himalayan, and Dutch Rabbits; Guinea Pig, some of which are white; and Pigeons of many varieties. Write for what is wanted, and address

Care of Washington National Bank, Boston, Mass.

EAGLE POULTRY YARDS,

OLIVER D. SCHOCK, PROPRIETOR, Hamburg, Berks Co., Pa.

Eggs from premium birds of the following varieties, at \$3.00 per setting of 13, 2 to \$5.50, warranted fresh and genuine:—Dark and Light Brahmas; Buff and Partridge Cochins, and White-Faced Black Spanish. My fowls took leading premiums this season in this section. Truly, OLIVER D. SCHOCK.

CHOICE EGGS FOR HATCHING.

From high class White Cochins, Light Brahma, and Plymouth Rock fowls, winners at the exhibition of the "Maine Poultry Association," of forty-one premiums, including silver pitcher, silver, and six cups. My eggs are hatching finely this season. I warrant every egg to reach its destination in safety. Address JOHN A. LORD, Kennebunk, Maine.

THE MOUNTAIN STREAM.

I spring from the rugged mountain side,
Where *Moss* and *Lichen* grow ;
And bound along like a courser strong,
To the woody dell below.

And there I fall with a murmuring sound,
And then I make a sally,
And leave the Fern clad rocky glen,
And sparkle down the valley.

Through woods I bawl, and slowly glide,
Amid the Grass and Sedges,
And make my way through sand and clay,
And tumble over ledges.

From underneath the eddying foam,
I ripple over shallows ;
And then I break into the lake
O'er-hung with weeping willows.

And there, I like a lover, pause
A while, to pay caresses,
To pickered weeds, and cardinal flowers,
Forget-me-nots and cresses.

Cat-tail and arrowhead I court,
And many another treasure,
But 'mid the water lilies sweet
I puri and take my leisure.

Now here, now there, I twirl around,
In one spot never staying,
And where the sunbeams on me glance,
Gyrators are a playing.

And sunfish near my margin sport,
Small roach and little perches,
And as I move around the lake,
I kiss the pendant birches.

Pent up and ruffled by the wind,
In time my strength I double,
And overshoot the old mill wheel
Below, to boil and bubble.

And then I onward rush again,
'Midst broken stones and ridges,
Through crumbling banks and marshy fields,
And under rustic bridges.

But here and there I make a turn,
To greet the reeds and rushes,
And then I whirl aside and twirl
Beneath the alder bushes.

Now fast, now slow, I onward flow,
Round curves and over gravel,
And freely glide from side to side,
But straight, I never travel.

And where I puri, the speckled trout
Are sporting in the eddy ;
And as I go, I broader grow,
More turbid, deep and steady.

Thus from my rugged mountain home,
I travel onward ever,
In a zig zag course, until
I mingle with the river.

PETER PEPPERCOEN.

NAKED FOR FORTY YEARS.

Incredible as the following may appear, says the *Charleston Place* (Canada) *Herald*, it is an authentic fact, to which hundreds can bear testimony.

"About forty years ago a man named Wilson, residing near the town of Perth, conceived the lunatic idea of leading a hermit's life. The youth had from his early age shown symptoms of derangement, and this proceeding on his part was not considered strange by his friends.

The chosen place of his hermitage was off about three-quarters of a mile from his parental homestead, in a recess of dense bush, where he erected a small hovel, and furnished it with an old log canoe which he used as a couch to sleep in. Divesting himself of all clothing he has ever since remained perfectly nude, with the exception of a tattered remnant of a shirt which his fancy leads him to retain. In this nude state for forty years he has lived, walking in the depths of winter through the snow, and yet he has never been known to receive a frost bite. When he requires a drink he walks deliberately into the river, it mattering not to him what season of the year it may be, and wades out until the water reaches his waist, and then he stoops and quenches his thirst.

His food is brought to him by his friends, and when given to him is eaten with the voraciousness of an animal, which he now resembles more than man, his body being as heavily coated with hair as that of a cow. He never shows a dangerous disposition, and chatters in monosyllables. When people cross his path he invariably begs for tobacco, for which he has an evident partiality and in chattering tone will utter "bacca" until his request is granted. His hair is long, gray and unkempt, falling over his shoulders, and his beard, which is similar, reaches down below his waist. He is now between 60 and 70 years of age, and is possibly the only living being ever known to have lived, year after year, perfectly naked and exposed to all the inclemencies of weather which mark our Canadian winters.

♦ ♦ ♦
FAST TIME.—On Wednesday evening, while the Louisville Short Line train was poking along towards Lexington, a passenger stopped the brakeman as he was going through and asked : "How fast does this train go ; a mile an hour ?" "It goes fast enough to suit us. If you don't like the rate of speed get out and walk," was the rejoinder. "I would," replied the disgrusted passenger, settling back in the corner of his seat, "but my friends won't come to meet me until the train gets in, and I don't want to be waiting around the depot for two or three hours." The brakeman passed on.—*Lexington Dispatch.*

♦ ♦ ♦
A CAT caught a sparrow, and was about to devour it. But the sparrow said : "No gentleman eats till he has first washed his face." The cat, struck with the remark, set the sparrow down and began to wash his face with his paw ; but the sparrow flew away. This vexed puss extremely, and he said : "As long as I live, I will eat first and wash my face afterward." Which all cats do to this very day.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

CROTCHETS OF THE POULTRY FANCY.

BY PETER SIMPLE.

No. 11.

It is so long ago that I furnished the *FANCIERS' JOURNAL* with ten articles under this head, that they were some time since forgotten, probably.

When the original series was concluded, the writer thought he had used up the principal subjects, for the time being, which had presented sufficient point for criticism in that channel.

But having in good faith gone into the late National Poultry and Dog Show, in the west, and come out among the worsted, I discovered subsequently what I deemed a remarkable "crotchet," or two among the Hoosier fanciers, which struck me would bear ventilating. I may be wrong. But "that is my opinion."

Somebody has written that "Figures don't lie." *This depends!*—Figures may be made to lie, as we all know. They lie often strangely, sometimes foolishly, oftener wilfully, and oftentimes unreasonably.

Judging from certain printed reports I have read of the "greatest fowl exhibition ever seen in the world," (this was the way the western show was originally announced) I am satisfied that some figures lie very easily, as well as unreasonably. But that is the business of the—figures, I presume. Peter Simple is not a good arithmetician, so he cannot cipher out the algebraical, financial condumrums that appear in the reports above referred to.

Peter did not chance to be on any of the "committees" who engineered the muddled details of that great western affair, and he never affiliates with any "ring." What he had to do with the show was strictly of a business character.

He paid his money—and would, but could not take his choice. He entered his stock (*good stock it was, too*) and went for some of the stunning premiums promised. He didn't get any very large award—and after the award was made, he didn't get what was promised (and what his entry-fees, coop-hire, etc., helped to make up) by 35 per cent. in amount.

But Peter learned something, shortly afterwards. And this was, that he and others similarly situated, would be permitted to help carry the load of debt which the mammoth show had apparently contracted, until this great-national-western-fowl-dog-and-pet-stock-association should be able to take the burden off the shoulders of himself, and his deluded friends.

Now Peter thought this a rare "crotchet," naturally; but he found another, that was (in his experience) rarer still.

He discovered that the figures mentioned (which in *this* respect did not lie, he believes) set forth that all the boys in the ring, at HOME, were paid at the least, one hundred cents on the dollar for their services; and the little bills sent in from parties in and around the great western city where the show come off, were similarly cleared up, very promptly.

This was an honorable crotchet—so far as it went. But Peter

(who is rather obtuse in such matters) is thus far unable to discover why sauce for the goose should not be sauce for the gander! And if it was found that the money received and "donated" so generously, was likely not to hold out, Peter thinks that according to the golden rule (not the rule of three which was substituted) *all* the creditors should have been treated *alike*, as to a percentage of payment upon their equally rightful claims.

Here, again, Peter admits that he may be in error. But that is the way *he* looks at this crotchet.

Peter does not forget that *before* the show came off, he learned from the advertisements and circulars sent out, that the premiums named were "not put at an inflated figure, for the purpose of swelling the list," and he thought this very creditable.

Then he learned that thousands of dollars were contributed for premiums [(in addition to what the big association was to give) and he thought he would go in for the chances; for it looked, on paper, "like a big thing," that's a fact!

But a third crotchet shortly turned up, and the figures either lied in the first instance, or in the last. Even Peter Simple, who is by no means an able calculator in arithmetical problems, is sufficiently level-headed to discover *this*—if John Smith, William Jones, James Brown, and Henry Robinson "donate cups," for example, valued at \$25 each, and they swell in the Society's hands to \$35 value each, Peter thinks this looks like a sudden unwarrantable inflation of silver (plate) or bald-faced humbug—as far as it goes. And this "figuring" appears to P. S. very silly—though it is only a crotchet, perhaps.

There are other points in this lively, stalwart, national show management really worthy referring to; but not just now. Peter will close this paper with a suggestion or two, therefore—and in a future number (some time, say, before he gets the 35 per cent. balance of premiums due him!) he will add a word or two more upon the crotchets he discovered in connection with his rather costly but unsatisfactory experience with this "great-western" exhibition.

This crotchet in passing suggests itself to P. S. and he enquires how many of the victims at a distance who were cut short of their dues—under the peculiar circumstances—will *probably* be contributors to the next show of this big association?

The declaration of Lord Bacon may well be commended to parties having this sort of affair in charge—even though it be but a chicken show: "Clear and round dealing is the honor of man's nature; and the slightest mixture of falsehood is like alloy in coin of gold or silver, that may make the metal work the better—but it embaseth it. For all windings and crooked courses in these affairs are like the goings of the serpent—which goeth basely upon the belly, and not upon the feet."

NEW YORK, APRIL, 1876.

(For Fanciers' Journal.)

"TRIPS AMONG THE FANCIERS."

BY W. E. FLOWER.

Having several days of leisure time before us we concluded to take a trip to Baltimore and vicinity, and as the journey thither would scarcely be worth reciting to your readers, we will merely say that by means of the "iron horse" and steamboat, we arrived in the "monumental city." Proceeding to the Northern Central Depot we took our seat in the cars and were soon "en route" for Brooklandville, Md. Leaving the cars upon our arrival there, we started for "Montvue Poultry Yard," one mile distant from the railroad at this point. The morning air being rather keen, we walked rather briskly, and soon reached our destination, and received a hearty welcome from Mr. G. O. Brown, the courteous and gentlemanly proprietor, and as a matter of course we were invited to inspect his stock. We first turned our attention to his

yard of Light Brahmas. Of this variety Mr. B. has some really fine specimens, the hens particularly, being of good size and well marked. Next we were shown his Dark Brahmas, of which he has quite a good collection. The next yard contained his B. B. R. Games, including his first premium cock and hen at the late Baltimore show. This pair not only won first in their class, but also won the "silver cup" for the "best pair of games" of any variety, and the competition was very strong. The cock is a remarkably fine, large bird, and we doubt not his progeny will prove "worthy of their sire." Passing on we came to a fine yard of Houdans. Take them altogether we think Mr. B. has one of the best yards of this variety that we ever remember to have seen, many of them being almost perfect in crest and beard. His two imported hens were really excellent. Next we were shown his White Crested Black Polish, here again were prize birds, Mr. B. having been awarded first and special of "silver cup," on this variety, at Baltimore. He has a fine yard of this beautiful variety, having sought to obtain the best, regardless of expense, and we should say that he had succeeded. Turning reluctantly away from them we were next shown a first premium pair of Golden Spangled Polish. These did not please our fancy as well as the beautiful White Crested black ones, and we passed on to his yard of White Leghorns. Those, said Mr. B., I got from "J. Boardman Smith," and as every body knows that Mr. S. never sends out poor stock, of course they were all right, and we passed on to view the Bantams. First came the B. B. R. Games. Of this variety of Bantams Mr. B. has undoubtedly some choice specimens, having in his yards descendants of prize winners, at "Buffalo" and elsewhere. Next we were shown some very pretty Golden Sebrights, and further on we came to the Black African Bantams, and last but not least, we came to the Dominique Bantams. Having told the readers of the contents of "Montvue Poultry Yards," it might not be amiss to state that they are so called because of their elevated site on "Montvue Place," the home of Mr. Brown. From the front porch are fine views of Lutherville, and Townsontown, each being some four miles distant. Mr. B. is afforded excellent facilities for raising Poultry, the sixty acres at his command being high and rolling, and so situated that no neighbor's fowls are near enough to ever stray upon the premises. Mr. B. also breeds "Fancy Pigeons," and showed us some very nice White and Blue Pouters, Black Carriers, White Fantails, Blue Magpies, Priest and Yellow Barbs, and last but not least, our attention was directed to several pairs of well-bred Lop-eared Rabbits, and a fine pair of White Angora Rabbits, also several pairs of Guinea Pigs. We saw no white mice, but Mr. B. assured us that he had a large number of the brown variety roaming at will through the corn crib, and other out buildings. Having seen all, we entered the house and received a cordial greeting from Mrs. B. and were also presented to the father and mother-in-law of our host, to whom we shall ever feel grateful for their manifold efforts to make our visit a pleasant one. Dinner being announced we were soon seated around the table, and were agreeably surprised when Mrs. B. placed at our hand a magnificent "silver cup" (filled to the brim with rich milk,) which was awarded to Mr. Brown at the late Baltimore show, "for largest collection of pure bred fowls." We won't say how often we emptied the cup of its contents during our stay, but "certainly," we never remember to have drunk milk that tasted better. After dinner Mr. B. showed us some two hundred photographs of members of the A. P. A., and stated his desire to complete the "group" before the first of May; having notified all the members he will proceed to finish it. All in or not, he intends exhibiting it at the leading shows next season. The afternoon and evening passed pleasantly and quickly as we conversed on chickens, dogs, pigeons, etc., and ere we were aware of it the clock on the mantel pointed to the "wee sma hours ayant the twall," and our host

conducted us to our room and left us to enjoy our much needed sleep.

To be continued.

SHOULD HOUDANS HAVE RED EAR-LOBES.

Editor Fancier's Journal:—

DEAR SIR:—When the revised edition of the *Standard* appeared, I turned with much interest to the pages devoted to Houdans. I was greatly astonished to find, first, that as many as five points had been assigned to ear-lobes and wattles, and second, that a standard ear-lobe should be "bright red." "Ear-lobes," it says, "should be bright red, and partially, if not entirely concealed by the crest feathers, and beard." Now is not the *Standard* asking for an impossibility, when it demands, underneath a full beard, which almost, if not entirely conceals the lobes, (bright red lobes?) In a long experience with this breed, I have always found that bright red lobes, and full beards are not seen on the same bird. Whenever you find a beardless bird with coarse, large wattles, you find also, the red ear-lobe in perfection; but full, well rounded beards, quite concealing from observation the ear-lobes, rarely cover those of a bright red color. If we cannot then get both, full beards, and red lobes, which shall we take? Which of the two adds most to the appearance of the bird? One of the most competent judges of this variety, and a gentleman who in his capacity as judge, has seen more specimens of this class than any other man in the country, said to me at the recent Springfield show, that breeders of the present day were losing the full heavy beards we used to see years ago, and that while improving in other points they were degenerating in this respect. And he was right, it is so. With this tendency, is it wise to fix in the *Standard* a feature like red ear-lobes, which invariably accompanies scanty beards? I think that it is entirely immaterial what their color is, as the beard should make them quite invisible, and for that reason it should not be at all considered in the scale of points. Take the heaviest bearded bird, so much so that the ear-lobes do not show at all, and on parting the feathers, you will almost invariably find the lobes a pinkish white, the pink deepening a little towards the center, and in many cases almost pure white. While preferring the pinkish white lobes, simply because usually under the heaviest beard, I would in judging give it no preference over the nearly white, if the latter was covered by an equally heavy beard; or to speak more correctly, would disregard one as well as the other, and only mark on the beard. The inevitable result of establishing the red lobe, will be the gradual disappearance of the feature of the Houdan, which with the crest is so important a characteristic as to be thought worthy of eighteen points.

In behalf of a number of the most careful and scientific breeders of this variety, I protest against any notice whatever of the ear-lobes in the scale of points, and especially against bright red as their color.

I have taken pains to ascertain the opinions of some of the most eminent breeders, have asked them to look carefully over their best Houdans, and especially their premium birds, and write to me, if they found a single well bearded bird with a bright red lobe. I have received a number of letters, and not one such bird has been found. From Mr. E. C. Aldrich, of Hyde Park, Mass., of whose success as a breeder of this variety the various premium lists of New England exhibitors testify, I received in answer to my letter the following: "In looking for the ear-lobe I found it in every case as you say; where well muffed, pinkish white, the less muffed, the more red."

From Mr. L. B. Root, of New Hartford, Oneida Co., N. Y., of the firm of Warner & Root, so many times victorious at Utica and Buffalo, I received a long and interesting letter, from which I quote only a few sentences: "I think that the ear-lobe on a standard Houdan should not be visible at all, and that the only way to

detect the color would be by pulling out the beard. Some of the finest specimens of the variety I ever saw, have pinkish white lobes. My convictions on the point are as follows:

"1st. Ear-lobes on Houdans are not a fancy point.

"2d. They should only be visible, by taking the bird in hand and opening the feathers.

"3d. That their color is a matter of absolute insignificance, and they are entitled to no place whatever in the scale of points."

Mr. Root still further fortifies his already strong position, by the announcement of the entire concurrence of Mr. Edward Warr, of Utica, in the above statement.

One of the most careful and systematic breeders of Houdans, in the country, is Mr. Daniel Pinckney, of South Onondaga, N. Y., who, though not often an exhibitor himself, has raised many birds which have achieved the highest honors. In reply to my letter he says:—"After receiving your letter, I commenced giving my fowls a careful examination in regard to the ear-lobes. I have examined every bird possessing strong characteristics of the race, and of fine points, and have failed to find one with solid red ear-lobes. All were more or less pink and white, pink being the ground-work. I have had my attention called often to birds without muff and beard, and with large wattles, and have invariably noticed solid red lobes. With an experience in breeding of six or seven years, I have never yet noticed a well bred bird with solid red lobes, and if I were to breed them I should not know where to commence, as I consider red ear-lobes an accident in a well bred bird."

There are many more breeders with whom I have conversed on this subject, and all are of the same opinion concerning it, but whose words I do not now sufficiently remember to put in form here. I feel quite confident there are also very many to whom I have not written, who I am sure will agree with the position we have taken, and will unite with us in demanding a revision of the Standard at the next meeting in Boston, of A. P. A., a revision which ought to exclude ear-lobes entirely from the scale of points, and cut down the number assigned to wattles. I would suggest that the five points given to ear-lobes and wattles, in the case of hens and pullets, be added to breast and body, as in a hen or pullet I claim the wattles should be no more visible than the ear-lobes. In the case of cocks or cockerels, I think three points should be assigned to wattles, and the remaining two to breast and body. Should the committee think breast and body have already points enough, which I very much doubt, there is still size and weight to add to.

Yours truly,

H. A. GRANT, JR.

(For *Fanciers' Journal*.)

AYLESBURY DUCKS.

BY J. K. FOWLER.

The most popular domestic hobby of the present day is the rage for rearing and exhibiting poultry displayed by all classes of the community; and great thanks are due to fashion, which has led to the formation of so many varieties of the feathered tribes. Not many years ago the country was busy talking of the extraordinary Cochins that had just been sent over as a present to Her Majesty the Queen, and when some of the earliest fanciers began to breed them, folks laughed at the idea of such ungainly brutes, as they were then thought, ever becoming common denizens of our poultry yards; and the late John Leech, in a series of humorous sketches in *Punch*, held these feather-legged beauties and their patrons up to ridicule in such a way that must for ever mark the period of their introduction into this kingdom. The popularity of poultry keeping, however, was not to be shaken, and if we look to the number of distinct varieties that are yearly taking up a position in the exhibition world, we cannot fail to

admire the perseverance with which we are endeavoring to improve the breed of fowls, and, by that means, to help on the great question of our food supply in this country.

As there has been during the last ten years an increase in the number of breeds of our domestic fowls, that are acknowledged by show committees as distinct varieties, and treated with separate classes, so, also, has there been a proportional increase in the variety of ducks that now have individual classes allotted to them at our great exhibitions. Referring to an edition of Mrs. Ferguson Blair's "Henwife"—an excellent little work on poultry, published in 1861—we see she commences her remarks on ducks, by saying—"There is not a great variety in our domestic ducks; only three distinct exhibition breeds exist, viz., the Aylesbury, Rouen, and Buenos Ayres, or East Indian." But if we look to the schedules of the large shows held during the past year, we shall see that not only are those varieties allowed classes to themselves, but prizes are offered for the best pairs of Mandarins, Carolinas, White Calls, and Brown Calls, separately, still leaving many other valuable specimens to struggle for the posts of honor in the "Any other Variety" class. Some amongst these are peculiar in shape or color; others make strange noises, and others combine both beauty and utility. There are the Cayugas (about which more anon), the various descriptions of Whistling ducks, the Kasarks, Shieldrakes, Spotted-billed ducks, Muscovys, and many others. It would require far too much space to enter into the merits of all these, and I shall therefore remark only upon those breeds which are thoroughly adapted for ordinary farmyard purposes, and which are calculated to assist in solving the great problem of "how to feed the people," and I regret that I cannot add more than one breed to those three which Mrs. Blair has noticed, so that I must confine myself to speaking of the Aylesburys, Rouens, East Indians, and Cayugas. I shall give a brief description of the points necessary for exhibition birds of these varieties, with the results of my own practical experience, and add what hints I can as to the rearing and management of them.

Before all these the white Aylesbury ducks stand pre-eminent; their reputation is universal; they are well adapted to almost every climate and soil—indeed, they are like the shorthorns amongst cattle, thriving anywhere and everywhere, from our warm southern coasts to the bleak mountain districts of the Highlands; in the burning tropical sun of Australia and the icy coldness of the Canadian "fall." As their name denotes, their chief centre is Aylesbury, in Buckinghamshire, in which town and its neighborhood, they appear to have been an established breed for more than a century past. For the farmyard let us strongly recommend them, as for that purpose they excel in every requisite. In the first place they reach maturity sooner than any other ducks; they are as hardy as sparrows, attain to a very great size, and are remarkably prolific. The London markets are supplied with enormous quantities of them—in fact, though it may perhaps appear to strangers almost incredible, oftentimes in the spring in one night, a ton weight of ducklings, from six to eight weeks old, are taken from Aylesbury and the villages round about, by rail, to the metropolis. During the first week in January, this year, the trade commenced again—it is, by the way, unusually early!—and I know of one "ducker" who then sent up his first batch of them, which, at eight weeks old, returned 12s. a couple. They are generally not killed till between seven and eight weeks old, when good birds will be about 4lb. weight each. Prices vary considerably during the season—from 9s. to a guinea a couple being obtainable; the latter price they sometimes reach towards the middle of March and the beginning of May, then they decline gradually in value till July, after which there is but little demand. It has been computed that upwards of £30,000 per annum is paid into the town and neighborhood, for this

early delicacy. The "duckers," as the breeders of them are called, are for the most part a superior class of laborers—men who by their industry have saved up money enough to secure an independence from downright hard work, and who do not grudge giving their whole time and attention to the young broods, so long as the supply is in demand. But before I go further, it will be well to describe as clearly as possible the system by which this curious trade is carried on. In and about the town of Aylesbury very many of the cottagers maintain, each of them, their set of ducks, about four ducks to a drake. These they keep in any out-building attached to their dwelling; and, failing such a place, in the cottage itself. From them the "duckers" collect the eggs, and generally bargain with the owners for their whole supply at a given rate for the season. They begin their collection in October, and the contract is often made for the whole produce up till June; a fair price being 3s. 6d. a sitting of twelve eggs throughout that time. During the last and present month I know that as much as 12s. per dozen have been constantly offered. The purchaser has to stand the chance of their proving fertile. The breeding stock of a "ducker" who does an average trade, consists of six drakes and twenty ducks; these all run together, and the brooks and ponds are looked upon almost as common property. It is a strange and pretty sight to see some hundreds of these snow-white beauties on the river Thames (which winds round, and through a part of the old town, all with a large patch of red, green, black, or blue paint, on head, neck, or wings, the distinctive marks of ownership. They are separated at night, driven up to their respective homes, well fed and warmly housed. The eggs which were laid during the night time are set as soon as possible under large and attentive hens, for which purpose good Dorkins and Cochins are considered best. The ducks themselves are never allowed to sit, though they may desire to do so, the result of this practice is almost certain to prove a failure. Thirteen eggs comprise a sitting, and these are easily covered by a large hen. Whilst speaking of the eggs, it will be well to dispel a stupid fallacy to which many give credence, viz., that drakes hatched under hens are objectionable, through having a partiality to fowls when grown up, and thereby causing a disturbance in the poultry yard. The eggs are either a clear or creamy white, or a very pale *eau-de-Nil* green. This diversity seems to be a mere freak of nature, and there is no truth in the old woman's story that the color varies with the sex of the duckling in embryo. Such is not the case, nor does this variation of color point to any impurity of the breed, for I have known my best ducks lay both green and white eggs, and this change has taken place within a week.

To return to the process of rearing: the hens are set either in fish pads, small hampers, or, in what I have found most serviceable, the round boxes in which cheeses are packed. In the bottom of these is placed some lime or wood ashes, and then a nest of hay or soft straw; there the hens must be kept as quiet as possible. Special care should be taken to guard against the intrusion of rats or other vermin, by which the hen mother may be disturbed, and, as is often the case, the whole sitting destroyed thereby. The period of incubation is twenty-eight days, and during the last week of that time, care must be taken to sprinkle the eggs daily with lukewarm water, which softens the shells, so that when the time comes for the duckling to make its appearance, it has not much difficulty in breaking through its covering; this is only an imitation of nature, for in the wild state the parent bird leaves her nest in the early morning when the grass is covered with dew, and as she seeks her food of worms, grubs and such like, her feathers become well moistened, and returning to her eggs she imparts to them that moisture which we by artificial means are obliged to give. When the young are hatched they should be left with the hen till well nestled, well dried and strong

enough to stand; many scores of ducklings are lost by inexperienced persons, through their impatience to remove them from the nest. The little duckling is at first clad with soft yellow down which gradually disappears as the feathers grow. After a few days, three or four broods are put together with one hen, which is quite able to take care of them all. For market purposes the treatment of the ducklings is as follows: they are not allowed to go into any water, but are kept in hovels, or the rooms of cottages, each lot of thirty or forty separated by low boards; it is no uncommon thing to see 2000 to 3000 all in one establishment. They are kept very clean and dry on barley straw; their food consists of hard-boiled eggs chopped fine and mixed with boiled rice and bullock's liver cut up small. This is given to them several times in the day for about a fortnight or more. When they are capable of consuming more, they are fed on barley-meal and tallow greaves mixed together with the water in which the greaves have previously been boiled. My poultryman also uses horseflesh to mix with their other food.

The above constitutes all that is necessary to produce early ducklings for the table. Now, as to the treatment of such as are intended for breeding and exhibition: to produce birds of great frame and weight, the same food is given during the earliest stage, but after about three weeks they are allowed to go to the water, and their food is varied as soon as possible, by giving them maize and barley alternately, when they can eat the same. They should be fed three times a day, and always have a trough of water by them, and it is an advantage to have some gravel or sand at the bottom, so that when drinking they also get hold of some grit, which helps digestion, and tends to keep the bill the proper color.

Little description is needed as to the plumage, for it must simply be the purest white throughout—a single discolored feather points to impurity, and would necessarily be a disqualification. There is no difference between the drake and duck, except that the male bird has one or two beautifully curled feathers in his tail, and is larger than his mate. When the birds are very young it is not easy to distinguish the sex, for the drake's feathers are not developed till they have once moulted. The question, however, can be solved by noting the difference in the cry, which in the duck is a loud "quack, quack," whilst the drake makes a much fainter and not so distinct a noise. The bill should be long and broad, and coming straight from the skull, like that of a woodcock. It must be a delicate pale flesh-color, and is so naturally; but a ferruginous soil will often affect them in such a prejudicial manner that it becomes quite yellow. Any spots of black, or any discoloration on the bill, should disqualify. Birds for exhibition must be kept out of the hot summer sun, and not allowed to run too much on the grass, both of which are likely to spoil the delicate pink and turn it yellow. The legs are deep orange. The whole body should be as symmetrical as possible, the neck fine and long. First-rate prize birds, when well fattened, will reach 10lb. but that weight is seldom obtained even by the best specimens exhibited at Birmingham. I consider 7lb. at twelve months old almost beyond the average. Very hot weather is sure to cause mortality to a great extent amongst young broods, and the expression "Like a dying duck in a thunderstorm," often applied to a person who looks dull and stupid, is derived from the fact that when there is thunder in the air young ducks are sometimes affected thereby in a peculiar manner, turning, as it were, giddy, becoming unable to walk, and frequently dying from the effects of the close atmosphere, which produces a sort of apoplexy. I think I have exhausted my subject, and will conclude with the following facetious lines from the pen of a local bard, who writes:—

"But of the ducks—the Aylesbury ducks,
There is no need to tell;
Through England broad their fame has spread,
And they themselves as well.
And there's no man throughout the land,
Nor yet beyond the seas,
Who loveth not the Aylesbury duck,
When served with early peas."

JUST SO:

—“Dear, dear! who broke my favorite egg?”
 Cried Biddy Bantam to her daughter;
 “Some lazy cur, too proud to beg,
 Has mashed it—and hadn’t ought ter.”
 The child gave one pathetic crow,
 Her rueful tears began to thicken,
 She sobbed aloud, “I broke it, ma!—
 This little person is my chicken,
 Some almonen and lime I’ll buy
 And make another one to match it;
 O ma! I cannot tell a lie—
 I did it with my little hatch it!”

THE EMBDEN GEESSE.

The Canada Farmer has the following on this variety:

The Embden goose has prominent blue eyes, is remarkably strong in the neck, and the feathers from near the shoulder to the head are far more curled than is seen in other birds. The plumage is uniformly pure white, the bill, flesh colored and free from dark blotches, and the legs and feet, orange. In carriage, they should be tall and erect, with fine, square bodies which in fat specimens touch the ground. They come to enormous size; a three-year old gander has weighed as much as thirty-two pounds, and a goose of the same age, twenty-six, but a good bird of any breed weighing twenty pounds is considered very fine, and for breeding purposes such weight is quite sufficient to insure good stock.

The Embden goose seldom lays till after a year old. Their eggs are white in color, very large and rough in the shell, which is extremely thick. Regular goose breeders rarely, if ever, allow the geese themselves to sit, but put from three to four eggs under a Cochon or Dorking hen, which can well cover and take care of them. A turkey hen makes a capital mother. The eggs should be regularly sprinkled with lukewarm water to prevent the shell becoming so hard as to check the egress of the young.

Sometimes, but not often, they lay two sittings in a season. The period of incubation is thirty days.

The goslings are easily reared on the same food as ducklings, but they require green food as well, and for this purpose, young green onions are strongly recommended. When once fledged they will thrive well with no other food than can be procured by them in the field or by the wayside, until later in the fall, when they should be shut up for a few weeks and fed on meal, oats, etc.; they will lay on flesh quickly and come to great weight. Embden geese do not necessarily require much water, but of course, to look well, the pure Embden geese will require a large pond or brook to wash themselves in.

One of the great advantages of the Embden geese, is, that all of their feathers being perfectly white, their value, where many are kept, is far greater in the market than is even the case with “mixed” feathers. The quiet domestic character of this variety causes them to lay on flesh rapidly. They never stray away from home, the nearest pond and field satisfying their wants, and much of their time is spent in quiet repose. Their flesh is equal to that of the famous Toulouse of France, Mr. Hewit says, “these birds have an advantage even over the Toulouse. In instituting comparisons between the white and colored geese, I have noticed that the pendant abdominal pouch of the Toulouse tells sadly against it when dressed, and would undoubtedly be prejudicial against the sale, in accordance with current opinion of such an appendage being indicative of advanced age.”

All white aquatic poultry are considered to dress of a clearer and better appearance than the parti-colored or dark feathered birds, more especially when young. This arises from the patches where the dark feathers grow, showing even after being carefully plucked, more particularly if the plumage at the time they are killed, happens to be immature.

DIVERSIONS OF A PET CROW.

CURIOUS FEATS OF A DOMESTICATED BIRD—THE MISCHIEF HE PLAYED.

A lady resident in this city was the delighted owner of a pet crow, whose oddities of disposition and love of mischief transformed him into a household pet. He was the “social lion” of his day, and company were always entertained by an interview with “Jim Crow,” as he was called. Though “Jim” has doubtless passed over into the happy hunting grounds of his ancestry, and may now possibly be diverting himself in the same old way, the recollections of this inveterate mischief-maker and his remarkable freaks are deemed worthy of a rehearsal. His discovery and the subsequent incidents of his eventful history are thus related by the lady herself:

Sitting in the trunk of a tree beside the cabin of a wood-chopper in the Alleghanies, I first saw “Jim Crow.” He was too young to fly, and, only partially covered with feathers, looked so queer, so helpless, and withal so mischievous, that I bought him, tied him in my handkerchief, and hanging it on the pommel of my saddle, rode twenty miles to my home. The long ride in no way disagreed with him, but seemed to have only increased his appetite, for from his perch on the apple tree his continuous “caw-caw” could be heard all day from morn till eve. It was the amusement of all the family to fill up “Jim Crow,” which meant to take pieces of bread and clover-heads, and indeed anything, almost, to “Jim,” drop it in his wide open-mouth, till his crow, his throat, and his mouth were filled. There he would sit with his bill wide open, unable to shut it till the food slowly digested, then re-commence his “caw, caw, caw.” With the wings came—what the quiet twinkle in these black eyes foretold—mischief, sly and deep. Mischief premeditated and unpremeditated, and mischief purely because he couldn’t help it, and this propensity was exercised chiefly against the cook, because she most felt his presence and resented it.

He delighted in going into the cook’s room, whose careless habits made that place a paradise to him. He would gently put his bill under the lid of her sewing-box and turn off the cover on the floor—and then the fun began. The needles were all carefully stuck over the bed one by one. The cotton was hid in the wood-house, and the scissors nicely tucked under the pillows in the room quite removed from the scene of his labors. The wax and thimble were dropped into the aquarium. And after all this delicious fun, he one day took a little pot of pomade in his bill, and, hopping to the edge of the veranda roof, ate the pomade with evident relish, and then dropped the glass pot on the stove-pipe below with a satisfied air at its demolition. He then flew down and carefully picked up each piece and put it in the grass.

This room was his favorite resort. To it we always went to find a missing comb, a tooth, or a hair brush, and were sure to find it behind the glass or under the carpet or bed. During the short illness of one of the family, regularly at 9 A. M., “Jim Crow” hopped along the veranda roof, gave a quiet tap on the closed window, and, on being admitted, gravely brought with him to the bed-side and laid on the table a chicken bone or leg, or something equally tempting. Seeing that he was duly observed, he would ruffle up his feathers, make himself appear like a large round ball of black feathers, “caw” and then open his mouth wide for a part of the invalid’s breakfast. After stirring up things for half an hour or more, opening the clock, picking at the hands, stopping the pendulum, dropping the soap in the water pitcher, and taking all the pins out of the pin-cushions, he would take his leave.

The fish in the course of time disappeared from the aquarium, and although all the haps and mishaps of the house were attributed to demure little “Jim Crow,” no one suspected that he was the cause of the fish mystery, when one morning he was discovered taking a bath in it, and a fish breakfast afterwards.

The mystery was solved, and when the aquarium was emptied

there came to light two thimbles, a pair of scissors, a penknife, and a spoon.

To carry away small chickens and drop them into holes and cover them with dirt, was his intense delight, and when we saw a distracted hen rushing madly about the barn-yard, some one looked up "Jim Crow" and went to the rescue. One day, after a day's fishing, we were cleaning the fish on the race bank, and busy watching the operation was "Jim Crow" and some ducks. One little fish was considered too small and thrown into the water. A duck quickly seized it by the head and "Jim" took the tail, and then they pulled and pulled for a few seconds. The scene was exceedingly amusing, for "Jim" planted his little black feet firmly on the edge of the bank and was slowly drawn into the water, holding on to the fish. As soon as he found that he was getting in too deep, he let go his hold and flew to a tree to take his usual revenge in scolding, and with his head on one side he scolded till all the fish were cleaned. Jim's scolding consisted of a succession of guttural sounds said over and over with a very solemn face and mournful mien, and has moved many people to hearty laughter because it was so intensely droll. He loved to tease the peacock who came every day after dinner to the veranda to be fed with pieces of bread. He would eat quickly all that he possibly could, to take it away from the peacock. He would eat till his craw, throat, and bill were full, and then he would hump about unable to shut his mouth and still try to eat. But as the pieces were too small and his bill too wide apart he could not rob the poor peacock any more, and he would fly away, dispose of it, and soon return to repeat the operation, and, strange to say, he was the terror of the barn-yard. The peacocks were afraid of him, and the geese ran away at his approach. While he was quite young he was tyrannized over, and all the fowls, large and small, had a pick at Jim. But one day a happy thought seized Jim. He took a long straw in his bill and chased the geese, who fled before him, and Jim reigned supreme from that day, and often repeated the scare, we thought, for his own amusement. Carefully arranged among the loops and bows of our best bonnets we found apple-cores, according, no doubt, to Jim's taste, a great improvement. In the pockets of our coats there were stones and sticks, and never a pen or pencil could lie loose on the table. Jim's strong point was butter, and on churning days Jim stayed at home and behaved himself. He could eat a half a pound. But one day he ran his bill through a pound and tried to fly away with it. He was caught rolling over and over the floor with it, and from that time he was banished.

As the Summer faded into Autumn Jim stayed away more and more from home, and occasionally would return with friends, evidently showing them around. One Sunday afternoon the attention of the family was drawn to a vigorous cawing on the veranda roof. There was Jim, with three friends all cawing in elegant crow language. They solemnly walked in at the cook's window and remained in the room some time, keeping up their conversation. When they left, all movable things were found overturned, and the room left in the state Jim always left it. The pleasures of that place had no doubt been described by Jim to his friends, and he had brought them along for a frolic. His visits from home became more and more extended, but whenever he came he scolded as much as ever and seemingly tried to talk. He would sit before the house and deliver long harangues on subjects and in language too abstruse for us to comprehend.

One rainy September day he sat for hours on the apple-tree, delivering, it must have been a farewell address, for when night came he flew away and never came home again.

Jim was a great nuisance on wash days; between dropping sticks and stones unobserved into the tubs, and flying away with the soap, and pulling out the clothes-pins from the clothes on the line, he was kept very busy. He regularly dropped small stones

every evening on a pet toad, who lived under the kitchen and who came out to be fed by the cook and he tormented by Jim. He would come quietly, meekly, hopping into the kitchen, looking so innocent and hungry, and as he passed by the cat asleep, he would give her one fearful hard peck and fly out at the door or window. This was repeated so often that the cat feared him and assumed the defensive at his approach. He stole a quantity of butter one day and hid it near the chimney of an out-kitchen. We were as much surprised to see grease trickling down the wall as was Jim when he went for his treasure and found it gone. The outburst of caws that followed revealed the culprit. Jim loved to steal, and for the pure fun of being chased he would come into the kitchen, try to pick up something and fly away, and if he failed in his object he would hastily alight and pick up a leaf or stone to make believe he had been successful.—*Reading (Penn.) Times.*

WHERE IT CAME FROM.—A Detroit girl picked up a new beau the other evening at church, and when they reached her father's gate he accepted her invitation to go in. He was perfumed to kill, and it wasn't long before his musk reached the back room where the old folks sat. The old man was heard stumbling around, muttering and growling, and presently he opened the door and passed out, and walked round the house. He came back after snuffing around for a few minutes, and, pounding on the parlor-door, he inquired:

"E-vangeline! where's that piece of candle?"

"I don't know, father; why?" she inquired, in return.

"There's a skunk, or something or other, under the addition, and I've got to hunt him out or we can't live here over night."

The young man didn't stay long after that.

JUST AFTER the trial of a petty case, says the Virginia (Nevada) *Enterprise*, in which one Hank Fisher was a witness, three or four of the lawyers were discussing among themselves the variety of testimony deduced, when General B——, with his usual vehemence, said, "There was never such a liar on the witness-stand as that Hank Fisher! He is undoubtedly the biggest liar I ever knew!" When the whole party were somewhat abashed at seeing Hank, who heard the General's remark, step up to him.

"Did you say I was the biggest liar you ever saw?"

"That is about what I said," stammeringly came from the General, who expected a fight.

Hank eyed him for a moment, and then said:

"I guess you don't know my brother John!"

A SCHOLAR in a country school was asked "How do you parse 'Mary milks the cow?'" The last word was disposed of as follows: "Cow, a noun, feminine gender, third person, and stands for Mary." "Stands for Mary! How do you make that out?" "Because," added the intelligent pupil, "if the cow didn't stand for Mary, how could she milk her?"

The proverb says: "Laugh and grow fat." What a saving of corn it would be if pigs would laugh.

"SICH IS LIFE."

Old time first covers our heads with hair;
Afterwards quietly mows them bare.
First cuts our teeth with a mighty fuss;
Anon takes care that our teeth "cuts" us.
First manufactures us nimble legs,
And then converts them to "stiff old pegs."
Coming to earth with squalls and tears,
Pleasure beguiled a few brief years,
Harassed thereafter by Care and Doubt,
Fighting for much we might do without,
Hoping and trusting for bliss to come—
So, in amazement, we reach the tomb.

EDITORIAL DEPARTMENT.

THE ADVANTAGES ACCRUING

To the active poulterer or pet-stock breeder, in having before him regularly every week a paper to which he may turn for information and practical suggestions relating to his avocation, are plainly apparent.

The contents of a *weekly*, as compared with a monthly paper that treats upon these specialties, are always fresher, and necessarily relate continually to the duties and requirements of the present time.

The patron of the weekly does not have to wait from the beginning of one month to the commencement or middle of another, to learn what is going on in the poultry and live stock world,—since every seventh day in the year his FANCIER'S JOURNAL, for example, comes to hand—in which he finds notes taken of all that is transpiring in this line, and upon all interesting current points of suggestion or information, in this particular channel he is thus able, either through the editorials or communication-columns, to keep constantly “up with the times.”

For this reason of frequency in its visits, and the fact that its columns are devoted to the interests of breeders of fowls, pigeons, dogs, birds, and pet stock generally, we deem the FANCIER'S JOURNAL (which is the only *weekly* of its class in America) the paper that should be generally supported by the fraternity.

AS THE TIME APPROACHES

When the spring fumigation of the hen-houses is necessary, it may be well to remind our readers that after six months of confinement, (during the cold weather) in a close building, the fowls need to have their premises thoroughly smoked and purified.

This is best done on a clear warm day, when the birds can be driven out of doors, and kept out during the process, which not only serves to disinfect the interior, but will, if properly done, kill off the vermin that may have collected in various parts of the houses since last fall.

The best way to do this, is, to place in an iron vessel (an old pot or small furnace) three or four pounds of common “roll brimstone,” and a pound of lump rosin, upon a bed of live charcoal.

First, however, all the windows and openings should be fastened tightly, and all the fowls should be got out. Then set this mass at work, and get out of the place yourself, directly—closing the door snugly behind you. Three hours will be long enough to leave the smudge in operation.

Then open all the doors and windows, for a thorough ventilation again, and all insect life within will have been destroyed, for the present.

FROM ALL QUARTERS, THIS SPRING,

We hear encouraging accounts of the success of poultry breeders, in getting out chickens. Last season was comparatively a disastrous one, in this respect.

The winter of 1875 was an exceptionally cold one, while the past season has been much more mild; and the last few weeks have been good for hatching purposes. There are many handsome young flocks already started, and there is bright promise that the results in poultry-raising will be much more satisfactory in 1876, than in the prior year.

The improvement in the general quality of the fowls raised in 1875, was, nevertheless, quite noticeable, and the fine exhibitions we have latterly had, afforded good evidence that American poulterers—as well as amateurs—were not idle during the last twelve-month.

There is at this time a large quantity of superior breeding stock on hand in this country, and from the frequent out-look, our people are determined to make the work of this year an advancement even upon former successful efforts.

STILL MORE EVIDENCE. A LOST INCUBATOR.

NEW YORK, March 27, 1876.

FRIEND WADE:—As an instance of the management at Chicago, I send this statement.

I exhibited my incubator there, and before leaving I boxed and marked it “Central N. Y. Poultry Exhibition, Utica, N. Y.” After being exhibited there it was to go to Mr. Ernest Wider, of East St. Louis. The machine was shipped (or taken) from the Exposition Building at Chicago, but by whom or when, no one seems to know. I cannot get a receipt from the Society, although I have written twice for it, and I can get no satisfaction except that “the machine is not in the Exposition Building,” and that they “will try and hunt it up.”

Of course Mr. Wider is indignant at not receiving his machine, and I shall have to send him another. I am out the value of it, and the sales and benefit which would have resulted from its exhibition at Utica. As the N. P. A. treasury is empty, I suppose I can whistle over my loss.

Yours truly,

A. M. HALSTED.

MORE NEGLIGENCE.

ST. PAUL, MINN., April 1, 1876.

MR. WADE:—Dear Sir:—I thought I would write to you respecting the Chicago show. First I fully determined to attend it, and heartily endorsed the preliminary arrangements, hoping thereby to assist in consummating a first-class exhibition. Well, I contributed a mite of \$5.00 towards premiums, and entered eight birds and one dog, costing me \$13.50. I forwarded the fowls at a cost of \$8.40, and in the mean time met with an accident of a broken shoulder, preventing my going. I sent Mr. Willard word to take good care of birds, also forwarded a letter to Mr. Ward, requesting him to ask Mr. Felch to specially “scale” three or four of my L. B's, for me, so as to compare his with my own opinion—which duty Mr. Ward did, but Mr. Felch would not, as Mr. Ward was the regular judge. Mr. Ward then endeavored to find the birds, and says in his letter to me that they were not entered in his book for judging at all, and he was utterly unable to find them. Now there were two Cockerels and two Pullets coming under his jurisdiction. Well, three days after the show was over we had six out of the eight returned—one L. B. Cockerel and Silver Poland Hen, muffed, kept. I had the express agent here take note of the fact, and I at once notified Mr. Willard. In his return answer he says that they must have been sent elsewhere, and he would endeavor to hunt them up and see that they were returned. I have waited until to-day, keeping silent, and as yet have seen no inquiry in any journal soliciting information as to their whereabouts. Now, sir, what is my best course in the premises? Mr. Ward has done his part as a gentleman, but am I to suffer through the culpable carelessness of the officials in this way?

Surely the Association could not have done less than to have seen that the birds were properly entered for competition, even were I absent, and returned them when through.

Hoping for your success, I remain,

Yours, etc.,

J. H. BRYANT.

A MAN addicted to snoring remarked to his bed-fellow in the morning that he slept “like a top.” “I know it,” said the other—“like a humming top.”

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—When speaking of the nest of the hare, I alluded *only* to *Se. Sylvaticus*, not to hares in general. J. M. McCANN.

—INCREASE EXTRAORDINARY.—We are informed that a Sotter Bitch (Dove) owned by Frank Palmer, whelped 21 pups at one litter. The pups are by Colburn's "Sancho," all doing well. Her last litter was 18, making 39 at two litters.

—WALKING PLANTS.—Some time ago, the Bombay Geographical Society, in a report of its proceedings, announced the reception of the *walking leaf*, with eggs and larvae from Java, and what seems more curious still, a walking flower described as a *creature* with a white body, crimson, spotted and pink border!

—The most magnificent oak ever known to have grown in England was that dug out of Hatfield bog; it was 120 ft. in length, 12 ft. in diameter at the base, 10 in the middle, and 6 at the smaller end, where broken off; so that the butt for 60 feet squared 7 ft. of timber, and 4 for its entire length. £20 were offered for this tree.

—SAFFRON PLANT.—By the laws of Greece, at one time, whoever should be detected in smuggling the saffron plant out of its native country, were punished with death. It was by means of a hollow cane or staff that the seeds, a single head, was brought into Europe. There could not have been very vigilant custom-house officers in those days. ADUM.

—The largest animal known, is the *Rorqual*, which is about 100 feet in length. The smallest is the twilight monad, whose dimensions are 12,000th of an inch. It is evident that the middle term is $\frac{1}{4}$ of an inch, about the length of the common house-fly, which may therefore be considered as an animal of medium size in the creation.

—As Huon has not answered the question asked by "Sioux," "Does the Bovine race perspire?" I reply in the affirmative. I have seen working oxen during hot summer days wet with perspiration; I have seen them frosted over with it in winter, when undergoing great fatigue. There is no terrestrial quadruped that does not perspire.

—HAIRS.—The varieties of hair are very great, their limits not being confined to the quills of the porcupine on the one hand, or the delicate hairs of the butterfly on the other. The horn of the rhinoceros is but a mass of hairs firmly united together, while the revelations of the microscope render it difficult to say how small those hairs may be which the insect world possesses.

—GERMAN PASTE.—Stale wheat bread, $\frac{1}{2}$ lb; pea meal, (not pea flour); blanched sweet almonds, 1 oz; lard, a piece as big as a walnut; and a teaspoonful of honey or treacle. The bread can hardly be too stale, half of which, crush into powder, and soak the remaining half in cold water, which squeeze out as much as possible; pound the almonds and mix all together; dry before a hot fire, but do not bake it, and add a pinch of maw-seed.

—Destructive as it may be, the ship-worm will ever be an object of interest, inasmuch as its shell-lined burrow gave to Sir I. Brunel the idea which was afterward so efficiently carried out in the Thames Tunnel. And though, from the alteration of surrounding circumstances, that wonderful monument of engineering skill has not been so practically useful as was anticipated, it has proved of incalculable value as pioneer to the numerous railway tunnels of this and other countries.

—A standard for Fantail breeding:

1. Color, White.
2. Style, Nervous, continual shaking of head.
3. Size, Small.
4. Back, Short.
5. Tail, Well carried, with even and broad spread.
6. Feet, Coral-red, unfeathered.
7. Eye, Hazel in white, pearl in color.
8. Neck, Long.
9. Head Plain.

[English paper.]

—Is the beech-tree ever struck by lightning? I read somewhere, years ago that beech trees are never injured by lightning. I have traveled very extensively since then, through the great beech woods of Virginia, and have never yet seen one of these trees so injured. As they are all elegant lawn trees, and the blood-leaved weeping one of the finest in cultivation, contrasting beautifully with the green, gold, and silver leaves of other trees. This fact should give them an additional value for planting on pleasure grounds, in cities, or near dwellings in the country.

J. M. McCANN.

—INSTINCT OR REASON, WHICH?—About a year ago a friend of ours imported a Saint Bernard Pup. During the past year a small Black and Tan belonging to a neighbor has been in the habit of making daily visits, and the big dog was pleased to see him, and they always had a romp together, but it appears that during the past winter some hogs had been killed and hung in a shed, and the big dog had taken a position where he could keep watch over the hogs. The little dog came over as usual, but being attracted by the fresh meat, went over to smell of it. But he had no sooner done so than the big dog got up and took him by the back and killed him instantly.

—BEES.—The bee which makes our honey had its origin in Asia, spreading first over Europe, it was introduced from there to America. Three sorts go to the making up of a hive; females, males, and "workers." The females are queens, but as but one can Queen it at a time, the others are quickly put out of the way. The "workers" are by far the most numerous. They collect the honey, secrete the wax, build the cells, and raise the young. The males do not sting. The poison of the bee sting is very powerful, and kills a fellow bee almost instantly. Animals have been killed by an enraged colony, whose hive has been upset. The Queen lives in the centre of the hive; is quite a home body, never going away from it more than once in her life, and that is for the purpose of finding a husband.

—LEAF-TEACHINGS.—Sir Joseph Paxton has acknowledged that to the ribbing so peculiarly adapted for bearing up the broad floating leaf of the vast *Victoria Regia* and its massive inflorescence, he was mainly indebted for the idea of his palace of glass, which has so wonderfully resisted, in its fairy-like frailty of appearance, the storms of time. Smeaton was indebted for the design of the Eddystone Light-house to the bole of a tree. The leaf is to a great extent, the model of the tree.

For instance, the beech leaf has little or no leaf-stalk; now, the beech tree in its growth is naturally feathered from its base, with branches. Accordingly, the leaves of the beech, the oak, the elm, the box, the holly, the laurel, the privet and the snowberry, whose natural tendency is to cover the ground from the base, have either a very short petiole or none at all.

—COMPARATIVE INTELLIGENCE OF DOMESTIC ANIMALS.—He would be a bold naturalist who would now deny to the inferior animals the gift of reasoning faculties. No great naturalist since the efforts of Waterton, so far as I know, has come forward on the other side, and a thousand well authenticated anecdotes have been recorded that cannot be accounted for by any other hypothesis. Domestic animals, like men, differ greatly in natural ability and acquirements; some have great talents, others are intellectually feeble—some are idiotic. From my own observation I would place

The Dog, 1st,	The Ass, 5th,
The Mule, 2d,	The Goat, 6th,
The Horse, 3d,	The Cow, 7th,
The Pig, 4th,	The Sheep, 8th,

J. M. McCANN.

—A TRAP TO CATCH A RATTLESNAKE.—While hunting in the mountains last fall, an old woodsman told me the following snake story. He had long known of a den of rattlesnakes under a cliff of rocks on the river bank near his dwelling. Had often seen great numbers of them basking in the sunbeams on sultry summer days. When the first frosts of autumn appeared he threw a quantity of straw down from the cliff upon the rocks, where they congregated. After the nights grew more chilly, and when he supposed that the snakes had crept into the straw in search of warmth, he set the pile on fire; and says that when the flames reached and scorched them, the scene was terrible. Wild with rage, and mad with pain they struck each other, and rattled and fought among the flames until they died. He says that great numbers of the reptiles were destroyed, and that their oil ran down the rocks, and floated off upon the water.

I can but think that Audubon, notwithstanding the many years he spent in mountains and forest, knew but little about the habits of the rattlesnake. As has been pointed out by Waterton, he pictures the fangs as curving *outward*, instead of backward into the mouth, and says that they chase squirrels up trees, and seize them among the branches. It is a popular error to suppose that they always rattle before striking; they rarely bite when they "sing," but usually glide off, and in truth they seldom strike at all, except the animals they use for food; unless they are provoked. When they do strike, they do so without warning; at least in the majority of cases. They are eaten by hogs, and trampled to death under the feet of deer. All animals have an instinctive dread of them, and it is impossible to force a horse near them.

J. M. McCANN.

ZOO NOTES, NO. 17.

WOLVES.

North of the foxes' home on the western side of the Zoological Garden, are situated the wolf pens. At present they are occupied by the prairie wolf, the gray wolf, the common wolf, and one specimen of the old world animal, called the Italian wolf, a small, but very fair representation of the family *Canis lupus*.

The PRAIRIE WOLF (*Canis latrans*), the COYOTE of the Mexicans, and the so called "barking wolf"—on account of its snapping bark,—is found all over the vast plains of Missouri and their neighborhoods. It is the representative in America of the old world jackal, and in size is intermediate between the fox and true wolf. The Gray wolf (*Canis occidentalis*) with its varieties, is found in most of the states and territories where such animals are allowed to live. The common wolf (*Canis lupus*) is one of these varieties, to which may be added the giant wolf of Oregon, the white wolf of the upper Missouri, the dusky wolf of the north western states, the black of the southern, and the red or "rufous" of Texas. A few gray wolves still linger in the middle and eastern states, where there are woods dense and wild enough to hide, and deer enough to feed them, for your wolf has a delicate tooth, and will not invade the sheep-fold for even a lamb, until his supply of venison fails him.

We may safely suppose that the wolf figured among the primary animals, as he is represented on Egyptian tombs which existed 4000 years ago. In the Bible the first mention of him is made by Isaiah, but he seems then so well known that he may have been named by Adam in the garden, certainly by Noah when he made that grand collection for his ark.

For several reasons a peculiar interest attaches to the wolf, not the least of which is the close analogy, which in all its essential features it presents to the dog, man's faithful companion. Indeed more than one naturalist, the great John Hunter among the number, believes that dogs in all their varieties, and wolves have descended from a common stock.

Another point of interest arises from the stories told of the wolf now and then having acted as a nurse to the human race, and though we know not how much truth there may be in the story of Romulus and Remus, yet there is some reality underlying the wildest fictions ever created about the matter. Some years ago an officer in British India made a long course of observation on the "wolf nurse," which he gave to the world in pamphlet form, in which he proves he had actual demonstration of the fact that children have been nursed by the wolf. He gives an instance of a female wolf being discovered in her den with three whelps and a little boy, the latter appearing to be about nine or ten years old. He went on all fours, seemed on the best possible terms with his companions, and was protected with as much care by the mother wolf as if he had been one of her own flesh and blood.

This boy was captured by the officer who writes the account, and in whose family he lived three years, leading a very inoffensive life, except when teased—but never speaking a word until a few moments before he died, when he said his head ached—asked for water, drank it and died. He was never reclaimed from his wolf state. Human beings he always shunned, though of dogs and jackals he seemed very fond. He would never walk upright without force, preferring always to go on all fours, especially to his food.

Numerous other well authenticated cases occur, all in India, however, in some parts of which country the wolf is yet looked upon as it was formerly, in Northern Europe, as a sacred animal, and where almost all the Hindoos have a superstitious dread of doing it any harm. A common belief there, is that the village within whose boundary a drop of wolf's blood has been spilled is certainly doomed to destruction.

There is no end to the superstitious fictions which prevailed among the ancients regarding the wolf. One was if a wolf looked upon a man before the man saw him, the latter would lose his voice; while the power of human beings to turn themselves into wolves was most firmly believed in, and even to this very hour it is a matter of the firmest faith in some remote places of Europe, and where some of the rude, superstitious peasantry would sooner doubt a future state of existence, than the doctrine of "Lycanthropy," or the existence of "were-wolves."

Was there any filthy thing under heaven or earth, or in the waters that cover the earth which the ancients did not in some way use for medicine? It would seem not. Among other delectable concoctions of the "saw-bones" of those days, we find that the "dry pounded liver of the wolf steeped in sweet wine," is a most excellent and certain cure for diseases of the liver. Other portions of the animal formed a part of the pharmacopoeia of those good old times, which, however, has no place here.

The dried snout of the wolf was for ages held as a preventive of the witches' power, if nailed upon a door, as a horse shoe, and new married ladies in the ancient time were wont to anoint the door post of the new home with wolves' grease, to defeat the devil and all his works. A necklace of wolves' teeth placed on the neck of a horse, would prevent him from ever getting tired, no matter how heavy the load, or the number of times he might be urged round the race course.

The whole race of wolves are more cunning than courageous. An old trapper has said that he had frequently taken a wolf out of the trap and compelled it by blows to lie down by his side while he re-set his trap. It appears that when the wolf is trapped he is universally subdued, silent and unresisting. A gentleman once stated he was present when a fine young wolf about fifteen months old was taken by surprise, and suddenly attacked with a club. The poor beast offered no resistance, but crouching down in the supplicating manner of a whipped dog suffered himself to be knocked on the head.

"Hav'n't you a single good word for the wolf?"

Well, not much more than one. Like dogs they are capable of strong attachment, but the cases are so rare, that they seem but exceptions. Cuvier tells a good story of the attachment of one, and Lloyd in his "Sports of the North," another, both of which however are much too long for Fanciers. Of the affection of the wolf for its young (or was it the mother's vanity?) I will give this instance, which will conclude my notes on wolves. The author of this statement is Mr. Thos. Bell, the very able English naturalist; he says:

"There was a wolf in the Zoological Garden (London) which would always come to the front bars of her den as soon as I or any other person whom she knew, approached. She had whelps, and so eager was she that her little ones should share with her the notice of her friends, that she killed all of them one after another,

by rubbing them against the bars of her den as she brought them forward to be fondled."

HUON.

CURIOUS BIRDS.

THE HORNBILLS.

These singular birds are seldom seen alive anywhere except in their native lands; and even there they are extremely rare. They are large and clumsy birds, possessing little beauty of plumage, the ground color of all the larger species being black, sometimes tinged with bronze, the tail and lower parts varied with white. They are natives of Africa, tropical Asia, and the islands of the Malay archipelago. Forty-two species are now known. The most remarkable feature about the bird is the bill, which attains enormous proportions, and varies in every species, and even in the sexes of the same species, and often in the same bird at different ages. In the most remarkable species a large recurved horn rises up above the crown of the head, almost as large as the bill itself. "In the great Rhinoceros Hornbill (*Buceros rhinoceros*)" says Mr. Alfred R. Wallis, the bill attains perhaps its greatest size and beauty, the rich hues of orange, crimson and ivory white, with which it is adorned in the living bird, being scarcely capable of imitation. It is this bird which excited the wonder of the early voyagers to Ceylon, who believed it to have two heads, a statement which was long credited in Europe. The Rhinoceros Hornbill sometimes exceeds four feet in length."

The bill is wonderfully light for its size, though containing a compact core of porous bone to its very extremity. The horn adds but little to the weight of the bill, being completely hollow, except at the base, where it has a bony core. The upper and lower mandibles seldom meet except at the base and tip, all the middle portion gaping from an eighth to a quarter of an inch apart. The only use of this anomalous structure is, that it enables the birds to carry a considerable quantity of food in the closed bill. Rev. J. Mason says, "That when the female *Buceros bicornis*, is setting on its nest, the male brings her a continual supply of fruit, but all must be unbroken, for if a single fig or any other fruit is injured, she will not touch it." Mr. Wallis says, "That as soon as the female has deposited her eggs, the male imprisons her in the tree by closing up the entrance with clay and gummy substances, leaving only a small hole, out of which she puts the tip of her bill to receive the fruits, with which he keeps her well supplied." She is kept shut up in this manner, some say till the young are hatched, others till they are fledged. A most extraordinary habit is attributed to a species found in Java, the *Buceros plicatus*, called by the natives "The Jealous bird." They assert that if any traces appear of the nest having been visited during the absence of the male bird, he will on his return completely close up the opening with mud, and leave his wife and babes to die. The hornbill makes a horrible noise when captured, which may be heard at the distance of more than a mile. It is said to be not unlike the shriek of a locomotive.

J. M. McCANN.

HINTS ABOUT LIVE-STOCK PETS.

The natural love of most children for a live pet of some kind, is so common, and the little ones in the family, of both sexes, are so fond of their cage birds, their pretty squirrel or guinea-pig, their rabbits, dogs, or chickens,—that it is surprising how few there are, comparatively, among the tens of thousands of households in this country, who indulge their boys and girls with this pleasant gratification, in some shape.

The wholesome amusement thus afforded to the young is valuable by itself. These animate beings entrusted to the care of the children afford them highly satisfactory occupation at times, and they watch their growth, their development, their playful habits,

and their pretty ways with great gusto, as they become constantly more interested in the daily lives of such pets.

The prime cost of these little animals is but trifling. Their keep amounts to mere nothing. Not one boy or girl in a hundred, in all this land, can be found, who does not entertain a natural like for one or another of the tiny creatures mentioned, or who would not enjoy sincere pleasure, continually, in caring for their petty needs, and in looking to their comforts, if any of them once come into their possession.

The time requisite to be occupied each day in attending to the welfare of such pets, and the further hours certain to be devoted to observing their winsome habits, or antics, are well spent by the children. They are thus frequently "kept out of mischief," while they acquire wholesome and satisfying knowledge of a certain kind, by this means. They are amused, instructed, delighted, and employed innocently, at the same time—if they have something novel of this kind to love and feed and care for.

Where the variety of birds and small domestic animals is so large as it is with us, and when the advantages derivable from their possession is in many ways so healthful to mind and body, among our little ones, we cannot but deem it highly desirable that children should have their pets, universally; and we feel very confident that parents who have never thought to offer this small indulgence to the young members of their families, will find their account in it—in many respects—if they try the experiment, hinted at in these brief suggestions about pets.

CORRESPONDENCE.

NEW SOCIETY.

WOOSTER, O., March 20, 1876.

JOSEPH M. WADE:

DEAR SIR:—Would you please insert the enclosed notice, and very much oblige many fanciers, and several subscribers to your valuable paper.

Yours Truly,

A. C. MCGREEN.

At a preliminary meeting held at the office of Dr. B. J. Jones, Wooster, O., March 8th, 1876, for the purpose of organizing a Poultry Association, P. J. Spreng was called to the chair and Jos. Baumgardner was appointed Secretary, when the following was adopted:

Resolved, That the Secretary be hereby instructed to publish a call in our city papers, and request other papers in this section of the State to copy, for a general meeting to be held at Wooster, Ohio, at 1 o'clock P. M., April 9, 1876, for the purpose of forming a permanent organization.

A general invitation is hereby extended to all Fanciers throughout the State of Ohio.

P. J. SPRENG, Pres.

JOS. BAUMGARDNER, Sec'y.

ALBANY, N. Y., MARCH, 1876.

JOS. M. WADE, ESQ., ED. FANCIERS' JOURNAL:

DEAR SIR:—Herewith I hand you an article for publication, relative to the formation of a new club in this vicinity for the scientific breeding of Poultry.

In addition to the enclosed, I give you a brief memoranda of some of the original features of our organization, which I trust will entitle the enterprise to editorial comment in your next issue.

In the first place, the club have established a "Pedigree Book," in which they require all breeding stock to be entered. No birds to be admitted that are deficient in essential points, the aim being to restrict members to thoroughly first-class stock.

This stock, their eggs, and progeny, will be offered for sale by the club, in a club advertisement, through the medium of your valuable Journal, and other similar publications that meet the

eyes of fanciers; that is to say the club will advertise all the varieties owned and offered for sale by its individual members.

Their stock will include most of the leading varieties, and it is their purpose to make a lasting reputation for thoroughly first-class stock, fair dealing, and reasonable prices.

I append a list of the officers:

President, A. W. Slingerland.
Vice-President and Librarian, J. W. Hutt.
Recording Secretary, George W. Slingerland.
Corresponding Secretary, J. White Sprong.
Treasurer, John E. Heath.

The style of the organization is "The Avis Club of Albany."

Very truly yours, J. WHITE SPRONG,
Corresponding Sec'y.

Address the Journal to

J. W. HUTT, Vice-President,
SLINGERLAND, N. Y.

THE AVIS CLUB OF ALBANY.

ED. FANCIERS' JOURNAL:

DEAR SIR,—Enclosed find \$2.50, the price of one year's subscription to your excellent JOURNAL, by The Avis Club. This club is an organization of gentlemen who are engaged in various professional avocations in the city of Albany, but reside with their families at this place, (a growing village on the Albany & Susquehanna R. R.) and who have been engaged in breeding pure varieties of poultry for some time past, more for pleasure and recreation than for profit. They have quite a number of fowls, and will soon find it necessary to reduce the number of fowls in their yards, by disposing of their surplus stock. For the purpose of the mutual interchange of ideas, sentiments, and benefits in relation to poultry culture, and to realize the truth of the old adage that "In union there is strength," "The Avis Club" has been organized.

The ten members with which the club begins its existence, are gentlemen of experience, some are "one variety" men, some are breeding three or four varieties, but all are breeding on the principle that quality is more to be sought after than quantity, and the twelve varieties of pure bred fowls, now owned by the club, contain, probably, as large a percentage of first class birds, as can be found in the same number of yards in this country.

Our Constitution and By-Laws, although similar in some respects to those of like organizations elsewhere, contain some original features, specially adapted to meet the wants of this organization. No member of the club will be allowed to dispose of birds for breeding purposes, unless they are pure, and no eggs are to be sold for hatching, except those of pure bred fowls, and our motto is, "Honesty is the best policy," and it pays. The nucleus of a library of works on poultry culture is already in our possession, to which we propose to add new publications as they are issued, and not the least valued of which, you may be assured are the files of the FANCIERS' JOURNAL.

As there is no such word as "fail" in our "nomenclature," we shall advise you from time to time of the success of

Yours respectfully, "THE AVIS CLUB."
SLINGERLAND, N. Y., March 28, 1876.

ENQUIRY ANSWERED.

MR. WADE:

DEAR SIR,—I see in your paper a correspondent who calls himself "Black Red," who wishes to know what to do for his Game Stag. We would advise him to get some alum and burn it, then pulverize it with equal parts of white sugar, then procure a small quill and blow it in the eye, and after a few applications of the above, the blemish will disappear. We have tried it in similar cases, and have never known it to fail.

Yours truly, "HAMBURG."
April 3, 1876.

HEMP SEED.

MR. WADE:

DEAR SIR:—What effect will a handful of hempseed, given every day, have on pigeons; that is, whether it is injurious or beneficial.

Your friend,

W. F. WHITMAN.

[Hemp seed is a stimulant for pigeons, given moderately, especially at the commencement of the breeding season, it is very good, and will make them pair more readily. It will also tame them, as they are so fond of it they will soon fly on the hand to obtain it. A little flax-seed is also good, and will assist them in casting the old feathers, and will add new lustre to the new ones.—Ed.]

NORTHAMPTON, MARCH 24, 1876.

JOS. M. WADE, ESQ.,

DEAR SIR: Why don't I receive the "Journal" regularly? The Last copy I have received is No. 9, March 2.

Other subscribers in this town received theirs five days ago. I value the Journal too highly to lose any numbers or have them delayed. Its visits are very welcome and having paid in full, not deducting agent's commission either for myself or others. I hope it will come regularly in future. I appreciate your extra labor caused by change of location, but think my paper ought to arrive within five days of other subscribers' in this town. Do not think that I am vexed, for I am not. I know that there is some reason for it.

Trusting it will all come out right, I am

Yours very respectfully,

M. L. K.

We often receive letters like the above. In answer we can only say that all the papers are mailed at one time and if any are delayed or lost we cannot help it but will cheerfully replace them when notified. When we reached Hartford we occupied a temporary office kindly placed at our service by the officers of the Connecticut State Poultry Society. While occupying this office our boxes were not unpacked, and this will explain why the delay in mailing back numbers, books, and electrotypes, &c. We are now occupying the office vacated by the Poultry World. It has been enlarged and refitted, and we are now prepared to fill all orders more promptly than for some weeks back. Fanciers are cordially invited to visit our new office.—Ed.]

NEST BOXES FOR PIGEONS.

LEROY, MOWER CO., APRIL 3, 1876.

FRIEND WADE:

I made my nest boxes as per "Wright's Practical Poultry Keeper," page 38, and found, upon setting my first hen, that a "tight box" was inconvenient, so, instead of nailing the top fast I made it a moveable cover by nailing two inch strips on three edges of it, and on the fourth edge, nailed laths, perpendicularly, to meet the strips in front of the box. When not in use for setting, I make a laying box of it, by reversing the cover so that the laths come to the back of the box.

If I am the "first discoverer," you may tell the readers of the "Journal" that I won't charge them a cent for the use of it.

Yours truly,

"JONATHAN SQUAB."

ALLEGHANY CITY, March 24th, 1876.

FRIEND WADE:—

I have come to the conclusion that tobacco stems are the best thing to keep varmints, or any kind of insects out of your pigeon loft. Last season I was troubled a great deal with them, so I tried them, and have not been troubled with them since. I give them to the pigeons to build their nests with, after rubbing them in my hands till they soften. Most of the pigeons will build the greater part of their nest with them, and line them with straw, making a

very good nest. The lice never trouble the squabs, it is very healthy for the birds. Once a month I burn a lot in the loft, which smokes it thoroughly, keeping the lice off the perches and walls. You can get them of any tobaccoist for the taking, and think if your young readers adopt this plan they will not be troubled with insects or lice of any kind.

Respectfully yours,

J. M. SKILES, JR.

"Sassafras" wants to know a cure for worms in dogs. Will some one please send information.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"TO EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the **Exchange** or **Want** column.

No **Exchange** or **Want** will be inserted unless accompanied with 25 cents.

A. M. CAREY, Selins Grove, Pa., desires to exchange eggs of choice fowls, 13 varieties, (see circular,) for eggs of strictly first-class Pekin Ducks or Bronze Turkeys.

J. F. FERREIS, Stamford, Conn., would like to exchange a few sittings of White Leghorn Eggs from a very fine select yard of his popular laying strain, for Maple Sugar! Eggs will be "pure," and want the sugar the same.

A. L. BANKS, Mount Kisco, N. Y., will exchange four India Silkies, 3 hens and cock, imported; trio Spangled Leghorns, and trio Dominique Leghorns, 1st premium birds, for a gold watch or books.

D. P. VAN HORNE, Bainbridge, N. Y., will exchange a fine pair of Buff Cochins chicks for a pair of P. Rock pullets.

F. C. SHEPHERD, Ithaca, N. Y., will exchange 1 pair S. S. Hamburgs, 1 pair Black Cochins, 1 White Leghorn pullet, for Fantails or Pouter Pigeons. Good stock offered; same expected.

DR. A. B. MASON, Springfield, Ohio, will exchange a few sittings of eggs from premium White Leghorns, for Dominique Leghorn eggs of like purity, and for Italian Queens.

S. P. BULLAS, Providence, R. I., will exchange a Scotch Terrier Slut, 3 months old, full blooded, for a pair of Ferrets, or other offers.

J. WILLARD LORD, Gildersleeve's Landing, Conn., will exchange a female Ferret two years old, good hunter, tame as a kitten, for Dog Breaking, by Hutchinson.

JOSEPH E. LORD, Gildersleeve's Landing, Conn., will exchange Plymouth Rock eggs from No. one birds, for Dog Breaking, by Hutchinson.

GEO. REEPATH, Hyde Park, Penn., has a Bull and Terrier Dog, 13 months old, brindle, good watch dog, to exchange for a pair of Black Spanish or White Leghorns; also a Black and Tan Slut with 3 Slut pups, for same, carriage paid, or the two trios for the whole, carriage paid.

M. L. & M. W. GRAVES, Northampton, Mass., offer eggs for hatching from high-class Brown Leghorns, Light Brahmas, and American Dominiques, in exchange for trio White Crested Fan cocks; also Doilies, Tegemeier, or any other standard work on Poultry or Pigeons in good condition.

HENRY C. WICKES, 71 West Clifford St., Providence R. I., will exchange Allen's nickel-plated seven barrel revolver, for Brown Leghorn pullets, Dark Brahma cock, or Light Brahma pullets; or a full blooded English Pointer dog pup, four months old, for a good express harness, not been in use over six months. What offers.

R. C. KEAR, Minersville, Schuylkill Co., Pa., will exchange a good full bred Maltese Tom Cat, one year old, clean about the house, good ratter, for Fancy Pigeons, Fowls, Eggs, or offers.

F. M. LOWE, Fitchburg, Mass., will exchange eggs for sitting, from 1st premium P. Cochs, for Black or Dominique Leghorn's eggs. Eggs from fine stock only, wanted. Speak quick.

WM. H. NONNERMACHER, P. O. Box 413, Allentown, Pa., has seven Dark Brahmas to exchange for Houdans. Must be good stock, same as mine are; cock has solid black breast. Will exchange for two trios.

"FELIX," P. O. Box 2,335, Philadelphia, Pa., will exchange a pair of Dark Brahmas, or trio of White Leghorns, for a male Maltese kitten, not younger than one month, nor older than three months.

ROBERT LEAVER, Saxony Woolen Mills, Trenton, N. J., will exchange eggs for hatching, from first-class Dark Brahmas, (P. Williams and Wade strain), for first-class W. Leghorns, or P. Rock, or Colored Dorking Eggs; also a good trio of Dark Brahmas, 1874 hatch, for Fancy Pigeons, Newfoundland Dog, or offers.

JACOB SELAK, York, Penn., will exchange Yellow Carrier hen for Yellow Carrier cock; two pairs Black Tumblers, for White Carrier cock; pair of Trumpeters, Silver and Dun, for a Yellow Trumpeter cock and a red Trumpeter cock. Must be as good birds as mine are.

I. O. THURSTON, 786 Broadway, N. Y., will exchange 1 pair White Barbs (young) for White or Brown Leghorns, or offers.

C. KING, JR., Plainville, Norfolk Co., Mass., has Fane, Barbs, Magpies, Tumblers, and Jell, to exchange for guns, pistols, violin, Houdans, &c.

R. B. PLUMBY, Elk Dale, Chester Co., Pa., will exchange one Skye Terrier dog, thirteen months old, or pups of the same stock, ten weeks old, for B. B. K. Game cock, or cockerel and hens, or pullets. No inferior stock wanted.

G. L. BOSKETT, Winsted, Ct., will exchange 1 new Incubator, (Corbett's), cost \$20, for Wright's "Illustrated Book of Poultry," or Canaries with their cages, Poultry Books, American Dominiques, or offers.

S. O. CHASE, Killingly, Conn., will exchange eggs for hatching, from a superior stock of Partridge Cochins and Plymouth Rocks, for White Crested Calcutta, Yellow or Black Fantails, or merchandise. Stock must be first-class.

HARRY E. OVERHOLT, Mt. Pleasant, Westmoreland Co., Pa., will exchange 1 White Leghorn cockerel and 4 pullets, for a good trio of Dark Brahmas. Must be first-class, as mine are nothing else.

SAMUEL H. BRADBURY, Waukegan, Ill., has for exchange fine large Maltese cats and kittens; any age can be given, for Partridge Cochins, Dark Brahmas, W. C. B. Poland, G. S. Hamburgs, Heathwood, Duckwing, or B. B. R. Games; or eggs of above varieties. None but good stock taken.

J. H. FASSITT, 1630 Locust St., Philadelphia, Pa., will exchange a Yellow Mottled Trumpeter hen for either a blue, black, or white hen, same variety. Must be a good bird.

L. A. THOMPSON, Basking Ridge, N. J., wants books of recent publication, or Silver Gray Rabbits, in exchange for an Orange and White Setter Dog, 10 months old, fine size, and partly bred. Write for particulars.

W. ATLEE BUGBEE, Philadelphia, Pa., wants Toulous Geese, and Bronze and White Turkey eggs, or stock, Dominiques, Houdans, Dominique and Black Leghorns, and Dorkings, in exchange for Leghorns, Asiatics, P. Rocks, Eggs, Mammoth seed corn, Fancy Pigeons, &c.

OLIVER KENDALL, Providence, R. I., will exchange cocks, Black Moorcock, Black Jacobin, Red Jacobin, and Antwerp, for hens to match.

M. W. MINER, Wyoming, Ill., will exchange one pair very fine Dark Brahmas, just imported, for Berkshire, Essex, or Poland China pigs; Ayreshire, or Alderney calf, or (\$40 forty dollars cash).

GEO. W. DIXON, Box 188, Worcester, Mass., will exchange imported Lop Eared Rabbits, grand ear size; and Yorkings, also young, from imported stock; Himalayan, old and young, fine black points; and White Guinea Pigs. See Wants.

G. M. TWITCHELL, Fairfield, Maine, offers 1 pair Black B. R. Game fowl; 1 B. cockerels, Felch strain; 1 pair Plymouth Rock chicks, Drake stock; 1 W. F. B. Spanish pullet, Chamberlain stock; all good birds, in exchange for P. Rocks, S. S. Bantam hens, or offers. Speak quick.

T. D. ADAMS, Franklin, Pa., will exchange his thorough-bred Irish Red Setter Dog, (1 year old) Roy, worth \$50, for a first-class female Cocker Spaniel; pedigree wanted, and same given. What offers?

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES. The name and address of any person acting dishonestly through the **Exchange** and **Want** columns, will be placed at the head of **Exchange** column.

OLIVER KENDALL, Providence, R. I., wants two Black Priest cocks, and Swanion cock; No. 1 birds.

GEO. W. DIXON, Box 188, Worcester, Mass., wants Irish Gray Game Bantams, Black Game Bantams. See exchange column.

GEO. SHIRAS & BRO., Allegheny, Pa., wants the address of all Pigeon Faniers, (breeders and dealers) of Wheeling, Cincinnati, Louisville, Cairo, Memphis, Vicksburg, Natchez, Baton Rouge, New Orleans, and Galveston, (Tex.) Send address on postal card; I intend to start soon.

J. F. FERREIS, Stamford, Conn., wants pure Maple Sugar in exchange for choice Eggs of any popular variety. Would prefer to send eggs from his well-known strain of White Leghorns! All communications answered.

E. KRAUSE, Zanesville, Ohio, wants one imported Switzerland Goat, (Female). Must be a good milker, with teats extending nearly to the ground. Also, a pair of young Deer wanted. Any party knowing any of above for sale, will please address.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Faniers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance: six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS.—First and Special Premium, at Buffalo, 1875; First Premium at Utica, 1876. Eggs, \$2.00 per 12.

S. S. MORLEY, Clyde, N. Y.

PURE and Fresh Eggs from Choice L. Brahmas, P. Rocks, and Brown Leghorns. Thirteen for \$2.00; 39 for \$5.00.
6t Address C. A. ANDREW, West Boxford, Mass.

POULTRY AND PIGEONS.

A breeder of high-class Fowls and Pigeons, retiring from the Fancy, has placed in my hands for immediate sale, his entire stock, including some pairs and trios of valuable Fowls, and 200 pairs of Fancy Pigeons, besides many old birds. If you want Fowls, send for price lists; if Pigeons, write for what you want. Everything at bottom price.

HOWARD I. IRELAND, Camden, N. J.

THE LARGEST POULTRY ESTABLISHMENT IN WESTERN NEW YORK.

LIGHT BRAHMAS, DARK BRAHMAS, PARTRIDGE COCHINS, WHITE LEGHORNS,
BROWN LEGHORNS, HOUDANS, GOLDEN SEBRIGHT BANTAMS,

From stock imported by me and from selected specimens of the best strains in this country.

Fowls for sale at all seasons. Eggs for hatching from same pens I use for this purpose, \$3.00 per sitting of 13, or \$2 for \$10.00, any or all varieties. No circulars. When you write, please state explicitly what you want.

GEO. S. JOSSELYN, Fredonia, Chautauque Co., N. Y.

AMERICAN STOCK JOURNAL.

THIS POPULAR MONTHLY HAS BEEN ENLARGED AND IMPROVED.

IT IS DEVOTED TO EVERYTHING OF INTEREST

TO THE STOCK-BREEDER AND FARMER.

PRICE ONLY \$1.00 FOR FIFTEEN MONTHS.

POTTS BROS., Parkesburg, Pa.

HAMBURG.—Wheaton Bros., Zoar, Mass., are making a specialty of Golden and Silver Spangled Hamburgs, from imported stock. Eggs \$2 per 13.

F. F. PRESTON, Candor, N. Y., breeder of Light Brahmas, Buff and Partridge Cochins, Golden Sebright Bantams. Can spare a few eggs from the above varieties, at \$5.00 per dozen.

C. G. TREXLER, Allentown, Pa., can furnish earthen nest pans for Pigeons at half the usual price; they prevent vermin and promote cleanliness. Price, \$1.25 per dozen, or \$5.00 for five dozen, including packing. Can be shipped either by freight or express.

X. L. C. R.

Duncan Kay, Galt, Ont. Canada, importer and breeder of Black Spanish, Black Hamburgs, Golden Penciled Hamburgs, Silver Penciled Hamburgs, Golden and Silver Duck Wing, and Black Braunted Red Game Bantams. Eggs \$4.00 per sitting of 13, three sittings for \$10.00. A few birds of each variety for sale.

Pekin Duck Eggs.

Fifteen eggs for \$3.00. Rouen Duck eggs, \$4.00 per 13, from my first premium stock that weighed 46½ lbs. per pair at Doylestown show.

Will have the above breeds of Ducks for sale in the fall at a low figure, and satisfaction guaranteed.

P. Q. HOLCOMBE, Reaville, N. J.

The Cheapest and Best

way to get good birds, is to purchase Eggs. I am shipping Eggs from my best Game birds, fresh and carefully packed in baskets, at \$5.00 per dozen for Black Reds and Duckwings, and \$6.00 per dozen for Brown Reds. All of the above stock are equal to any in the country, and are, many of them, imported birds of the best strains.

JOHN STONE,
Coatesville, Chester Co., Penn.

FOR SALE.

Ten good Light Brahma cockerels, 15 to 20 good pullets.

I have given careful attention to breeding these fowls for several years.

My birds are pure and my prices reasonable. Write for particulars.

T. D. HAMMOND, Mayville, N. Y.

FLYING ANTWERPS.

To arrive in March, fifteen pairs of Flying Antwerps, from Antwerp, Belgium, at from \$6 to \$10 per pair. Also, extra trained birds, from \$15 to \$20 per pair. Orders taken for young birds.

JOHN VAN OPSTAL,
4 Lewis Street, New York.

EGGS FOR HATCHING.

I will sell a limited number of Eggs for Hatching from my best mating of Light Brahmas this season, at \$3.00 per dozen.

I make a specialty of these fowls, and have 8 breeding pens of choice birds.

T. D. HAMMOND, Mayville, N. Y.

BRONZE TURKEYS AND PEKIN DUCKS.

Eggs, \$5.00 per Dozen.

LIGHT BRAHMAS, \$3.00 per dozen. Premiums awarded in 1876: At Maine Poultry Exhibition, 1st, 2d, and all specials on Bronze Turkeys; also premiums for best collection of Bronze Turkeys and Pekin Ducks. At New England (Springfield) Exhibition, 1st and 2d on Bronze Turkeys, and 2d and 3d on Pekin Ducks. I am breeding Light Brahmas to the flock which took 1st premium at Maine Exhibition of 1875, and to another which took 1st at Maine Exhibition of 1876. Eggs, \$8 per dozen. White Crested Black and Silver Spangled Polish, White and Brown Leghorn eggs from premium stock, \$2 per dozen. Birds of all the above kinds for sale. Send for catalogue.

C. P. MATTOCKS, Portland, Me.
P. O. East Baldwin, Me.

SPANGLED LEGHORN EGGS FOR HATCHING.

My fowls have won 33 premiums and 9 special premiums this season. I shall have a few eggs to sell from my choice fowls. I shall sell my 1st premium Spangled Leghorn eggs, 13 for \$5.00; 1st premium American Dominique, 13 for \$5.00; Rose Comb White Leghorns, 13 for \$3.00; also American Dominique, P. Rocks, W. P. B. Spanish, White, Brown, Dominique Leghorns, S. S. Hamburgs, G. S. Hamburgs, G. S. Polish, and Light Brahmas.

E. H. SMITH, Wolcottville, Conn.

VOL. III.

HARTFORD, APRIL 24, 1876.

No. 15.

AFTER MANY DAYS.

BY CAROLINE NORTH.

How lonely seemed her life now she had lost
The love that gave to life its grace and worth!
How cold the clouded skies, how low and dull
What erst she deemed most beautiful on earth!

Hers was a feeble mind that could not rise
Out of herself to things of higher power;
Busy with trifles, while an aching want
Deepened and widened every listless hour.

And friends were kind, but, careless, passed her by;
One of themselves, and happy as things go;
Talked with her, helped her not, nor soothed
The leaden sorrow that they did not know.

None gave her word to pass the weary days,
Nor sought she any, lived in dull content,
Yet thankful if a passing sunbeam strayed,
For any joy that God in pity sent.

Then came the Lord to that deserted door
That all men passed with hurrying, heedless feet,
And she rose up, and opening; found at last
All she had lost, within His presence sweet.

—[Good Words.]

(For Fanciers' Journal.)

A SNAKE STORY.

'Tis said "a fish story never loses anything by telling," neither does the snake story, and I have one to tell which has the merit of never having been told before, and is also all a true story.

Time was, when I had a good old uncle who ran a saw mill among the New Jersey pines. The pond, which supplied the water, was old and large, and therefore well stocked with pike, and small fry, and on it and about it I spent many days in Izaak Walton fashion, though I believe the gentle Izaak never took a gun with him, which I did, at those times, for many a wild duck, aye and a wild goose, now and then, flying westward from the Atlantic bays, were wont to settle down on the old pond, some of which left it not again alive. Indeed there was at times other game around "Whitas'" as it was called. I was standing in the saw mill one bright morning, in converse with my uncle, when suddenly a fine young buck deer bounced over a fence just in front of us, which, after fixing his beautiful eyes upon us for full a minute, bounded away again as suddenly as he came.

"Did you not 'put up' at him?"

No sir, I did not—he was much too fine a specimen of animal life for me to shoot and I would not have harmed him on any account, but my good uncle was much vexed that, his old "Blue-trigger" was not in the mill. He had in his day been a mighty hunter, and "Blue-trigger" had brought down many a fine buck and doe, to say nothing of bear, which were all plenty, but a few years ago, in the pines of New Jersey.

"Are you never coming to your snake?"

Yes. Well, one day I was standing on the margin of the pond in a favorite spot, and with rod and line, having a good catch of "sunnies," as broad as your delicate hand, young lady, with gun lying handy for a stray duck, blue heron, (*Ardea herodias*) or belted king-fisher—(*Ceryle alcyon*) the two latter being continually on the move around the pond.—(Do you know there is a certain time when both the above are good for food?)

"Yes, yes,—come to the snake."

Well, while I was engaged with the "sunnies" I more than once beheld a very large water snake, (*Natrix torquato*) appear and disappear in quite a mysterious manner.

Now I had heard my uncle say that one of these snakes would destroy more fish in a week than I would catch in a month, and that a pair of them if left alone, would, in a few seasons fill the pond, to the entire destruction of the fish. So I concluded, under the law of self-preservation the serpent was fair game, and therefore determined to bag it, should it put in another appearance. It did. It came, and became the spoil of my gun; and it then being near the hour of noon, taking my prize with me I wended my way to the saw-mill, that I might take lunch with uncle, and show him what care I was taking of "fish culture" in the pond. Upon my arrival, my uncle did not seem surprised at the great size of the varmint, but merely said "Now Huon, I think I will demonstrate to you a fact in natural history, which has often been disputed, but which I know to be true." So saying, he laid the reptile on a log, and with an ax "made twain of one flesh," by cutting it in two at that point where the neck widens to near the size of the body. I now had the "fact." It was in the escape of young snakes from the body of the old one. Forth they came to the number of twenty-five, which with the old one, my uncle remarked "made twenty-six snakes at one shot!" They were all of a size from 6 to 7 inches in length, and about as thick as the pen-holder with which I am to-day enabled to write their history.

Some naturalists have for long, stoutly denied that in a moment of danger, the parent snake opens its mouth and takes in its young brood entirely. Others as stoutly declare it to be true, among which, are "Selborne" White, who was present when a viper was killed, "which contained fifteen live young ones." And the Rev. J. G. Wood who has no doubts on the matter whatever, and remarks that it is a fact too well known to be disputed." The great trouble of the deniers, seems to be with the gastric juice in the serpent's stomach, but F. T. Buckland has discovered by dissection, two facts. First, that the young may be concealed within the expansible body of the parent without entering the true stomach at all, and second, should they happen to do so, the gastric juice would do them no harm. It is somewhat strange, to say the least of it, that Prof. Thomas Bell, president of the Linnæan Society, London, Fellow of all Zoological Societies of Europe, in his great work on reptiles, does not make the least mention of the matter.

I shall not pretend to say who are right, or who are wrong. I only know what I saw, and that was quite enough to convince me that that snake had taken in its young, however much or little others have been taken in by—snake stories.

HUON.

POULTRY DEPARTMENT.

BREEDING IN-AND-IN

Is a subject to which we have given some attention in our columns, and the opinions of experienced breeders of poultry and live stock have been occasionally given through our correspondents' favors, from time to time. Yet a great deal may be said, pro and con, upon this important and always interesting topic.

In animal breeding, numerous decisive experiments are authenticated, the results of which go to confirm the generally accepted or popular opinion, that in and-in or close breeding of family relations, successively, is retrogressive in effect. In poultry, but few comparatively among modern fanciers have given this subject very close attention—of a thoroughly experimental character. But with these few, certain results have been attained that are worthy of note.

We have in mind, for example, a strain of poultry stock that has been bred in-and-in say for a score of years past in this country, necessarily; because no fresh blood of a similar character and color has within that twenty or more years been imported, or otherwise made its appearance among us, with which to change or reinforce this blood.

This stock has been thus consecutively bred into and from the original family, from 1850 down to 1875-76. But, strange to record, it has not deteriorated! There was but a single family of these birds, originally, that were ever known in America or England; and these (and their progeny) have furnished the poultry world with all the "*Light Brahma*" fowls that have ever been bred in this country or in England. We are not now speaking of the actual origin of this stock—but of the known fact that, wherever it came from in the first place, there has been but the one lot of genuine Brahmas; from which all the subsequent fowls of this notable variety have been produced.

Thus we have been breeding thousands and tens of thousands of this class, annually, for near a quarter of a century. And by selection, and judicious mating—taking the best, and the most promising individuals from season to season, without regard to relationship, near or remote, we have gone on, actually improving the variety; until in 1875 and '76, we have hundreds of yards in this country, and there are other hundreds of yards in England, which are stocked with broods of this remarkable parti-colored fowl, all of which are to-day in size, quality, color, form, beauty, and fine points quite equal to the "first family" from which they sprung.

We deem this fact a very weighty argument in favor of the theory that breeding in-and-in from sound, strong-established, vigorous "blood," and making the proper selections from year to year, is not a deteriorating process. And one such clearly demonstrated fact is worth a million theories or arguments to the contrary.

Until it can be shown that, in the case we have cited, there has been more than one original family, from which all this vast quantity of prime poultry has descended, the fact remains; and wheth-

er this family was the Chamberlin stock, the Burnham stock, or some other, it matters nothing as to the point assumed touching the results realized. From a single family (or pair) of these famous fowls, come all that we have produced and bred, since their appearance in American poultry circles.

Thus then, we have the immensely diversified, and oft repeated experiment of breeding the father and mother upon the daughters and sons of this breed, the sisters and brothers together, the cousins of both sexes, the second and third cousins, the uncles and aunts, the grandfathers and grandchildren, etc., down to the hundredth generation of progeny, and back again—intermingling all these "relatives," near or distant, over and over again, for years and years, (without the accession of any fresh blood, from any source, save the original,) and still they are the same thing, in the average, that they were five and twenty years ago. They breed from the progeny of this year as true to the parentage as the first product came from the earliest birds of this variety that we, any of us, have any knowledge of.

In horses, we may point to the well-known "Morgan" race, which, originating with the famous Dustin or Sherman Morgan, has come down to our time, after forty years of in-and-in breeding, the same animal, essentially, in size and characteristics that marked the peculiarly fine original. While the "Duchess" race of Short-horn cattle, known the world over, as a superior, and peculiar strain, after many years of breeding from mother through daughter, grand daughter, great-grand daughter, and so on, to the more than hundredth direct descendant, shows the same rare old "Duchess," every time.

But we shall resume the subject, hereafter. This point is very clear to our mind, to-day, namely:—in the instance of the *Brahma* fowl, the "in-and-in" principle of breeding is a prime success.

(For Fanciers' Journal.)

"PERHAPS"

Well, Mr. Young Breeder, you have crawled out of your hole and shot your pop gun, and who did it hit? Cockrobin, a "snipe," or a rooster gracefully "scaling the fence?" After reading your article, I fail to see that you raise many objections against breeding Game fowls, for general purposes; you go all over a "ten acre lot" to express your disgust, but if you don't aim better you cannot expect to kill snipe: and right here Mr. Young Breeder, I will ask:—how you "can retire to your 'little bed'" and thank God for the pleasures of the day," after a day's "sport" shooting at snipe? I don't think you would bring many home, your luck being like the fisherman's—"wet ——— and hungry ———," but in the eyes of Him the intent equals the act.

You compare the Games of to-day to the "Home Guards" during the war, "supplanted by a uniform." Weren't there any "Home Guards" before the war? And those were the "Home Guards" who met in the conflict, and the many scarred veterans of to-day, both North and South, bear evidence of their gameness, many being left on the Battle Fields. And where was it but West Point that the leading generals of both sides in "uniforms" learned the tactics of warfare? Now I wish to ask if the "uniforms" did, or does the fighting? No sir! Some of the most handsome plumaged Games the writer has seen, have nobly won their battles with the steel.

I most heartily agree with you: "because if a small dirty faced boy should make his appearance at my yard, with a 'pit' Game under his arm, spoiling for a fight," &c., &c., I should fight him (the Game) for the simple reason that none but a "bully" would take advantage of a small boy, but if a man, partial to cocking, should "make his appearance" "spoiling for a fight," &c., why, as the boy said, "you can't most always sometimes tell," perhaps ——— I should get my "dander up."

Now let us take a little different view, and enter the large exhibition room to hear the "unearthly" noise of the happy chorus, all vying with each other to out do the other; hear that crow forty octaves below the gander "hang on;" will it ever cease? Walk around and hear the various comments! Here at the right we encounter the Asiatics; see the Brahmas, nearly all squatting like a Turk; get a club and *boost* him up and stick a pin into him, to make him "show off" to advantage, tell your friends how much he weighs, (exaggerate it a little, his fashionable but please forget to shake hands with visiting acquaintances if it was necessary to *raise* your bird (?) with the hand, because *so large* fowls have an immense space to breed vermin, and they are too eager to "kick" them off by rolling in the sand. After we have admired the various classes, let us "fetch up" with the Games; how *small* they look, lift them, "gracious! I didn't know they were so heavy, come here Jennie and lift this fowl." "Why!" she exclaimed, "what is it made of?" *not* the "delicious tit-bits flavored with the extracts of the barnyard;" but there is a provision for the fowls of the air and birds of the fields, by Him who created them. Can you improve upon it Mr. Young Breeder? Note their graceful carriage, bold defiant eye, ever alert to defend their charge.

Now let us make a brief comparison of Brahmas with Games, for general useful purposes.

A good size Brahma cock will weigh at maturity 15 pounds, a Game 8 pounds; (we know of Games between 9 pounds and 10 pounds,) now I claim there is as much *meat* on an 8 pound Game as a 15 pound Brahma, if you doubt it, kill and pick out the *bones* and see for yourself.

It costs more to bring your Brahma to 15 pounds than it does (large size of course,) a Game to 8 pounds, and when you have killed, the flesh of the Game is *far* more palatable than the Brahma.

On the table the Brahma looks larger, but the anticipated meat, like the flea, when you put your finger on him he isn't there. For early *market* purposes, "perhaps" you could sell more Brahma bones, and that might be one point in favor of Brahmas. As to eggs, I claim that you will get *more* eggs in a year from Games, and they are *by far* the richest, and for sitters they are extraordinary, and make the best of mothers, ever ready to defend their young, against any intruder, be it dog, cat, or hawk, and the quarrelsome disposition of the maturing chicks is *easily* overcome by Game Fanciers—while your Brahma, unless extremely careful will break nearly all the eggs at the first "squat," or should she manage to hatch a fair percentage, I greatly fear the chicks would be killed by that clumsy, awkward foot: and so far as the "uniform" is concerned, the Games have the undisputed advantage.

Having made a brief economic comparison of Games with Brahmas, I leave it with your readers to judge from their *experience*, how far I have deviated from the facts, in the above assertion.

Now Mr. Young Breeder permit me to say, that for *all practicable* purposes I don't believe that *either* the Games or the Brahmas "fill the bill." "Perhaps" I shall tell you more about it sometime.

I will now doff my hat, bid you "Au Revoir," and request that you *bear in mind*, that BURLING is a "capable, energetic writer," and there is a *host* of friends, patiently awaiting the reappearance of Youthful Follies.

UNICORN.

THE MODERN PLYMOUTH ROCKS

Have no relation, save simply in *name*, to the old-fashioned (Burnett's) stock, so called, originally. We once more give Dr. Burnett's description of his fowls, which appeared over his signature in 1850, who says: "I have given this name to a very extra breed of fowls I produced by crossing a cockerel of Cochinchina with a hen which was a cross between a fawn colored Dorking, the great Malay, and a wild India fowl."

Now the lately denominated "Plymouth Rocks" have none of this blood in them, that we know of. They are formed by a cross of the Black Java with the Dominique (or some Gray hens so designated, being in the first instance in the possession of Mr. Spaulding and Mr. Clark) and whatever any of the disputants may argue, it is very clear that the present Standard-recognized Plymouth Rocks have the plainly marked feathering of the *Dominiques*.

This peculiarly barred feather cannot be mistaken. And whether the Upham, the Ramsdell, the Norfolk Co., or the Essex Co. strains takes precedence in point of time as to its production, it may safely be set down that the Dominique blood is a prevailing element in the admirable crossing that has given us the "Plymouth Rocks" of the present day.

(For Fanciers' Journal.)

GOSSIP WITH AN OLD FARMER.

We chanced upon a sterling old-fashioned farmer, not long ago, who interested us in a pleasant chat of an hour or two upon the subject of poultry keeping, as he viewed it.

Many of this worthy man's ideas were good, and though not altogether novel, will be appreciated by the large class of his brother farmers, who, we are happy to say, are subscribers and readers of the FANCIERS' JOURNAL.

"I've bred chickens to a considerable extent for over forty year," he said, pointing away across his garden-patch to a large flock of very good looking barn-yard fowls; "and yender's the kind I've kept on the place, year in an' year out, for a'most half a century."

"What breeds do you fancy, as best for your purposes?" we enquired, walking over towards his collection, in the open field. "Ah, yes," he returned. "I know this is your hobby. I read the poultry papers. Been a subscriber to the FANCIERS' JOURNAL two years. I like your paper. It contains a deal of good sound instruction and information on fowl matters, always. But I'm on'y a plain farmer, not a "fancier," as you term it."

"You have got a nice lot of birds here, nevertheless," we suggested, upon reaching a point where they could be seen.

"Bred on the place, sir," he continued. "It comes out o' good old-fashioned stock, raised in Massachusetts long afore I begun with it."

"The Dominiques prevail here," we said, looking the flock over.

"Well, that is what some call 'em, I know. But we never minded much about *names* for our fowls. We think them very good for every-day uses, and we only know they are of the race long ago designated as—

"The old gray hens with yellow legs,
That lay its owner many eggs."

"You've heard o' that breed, of course? It's a good 'un. Eggs are what we farmers go for. An' the chickens are very good eatin', as well. We raise a great many, eat all we want, and dispose of a hundred or two in the fall, to a fair profit in market, without looking for "fancy" prices, o' course."

"They are in very thrifty condition, and are quite uniform in color for the most part," we suggested. "You take good care of them, evidently."

"Yes, we do. What's the use o' keepin' live creeturs about a farm, except with an eye to profit, more or less?"

"You are correct, sir."

"And you *can't* keep 'em so, 'nless you *do* take good keer of 'em."

"That is so," we agreed.

"Now we don't bother about the fancy or now-fangled breeds much. We are satisfied with our own. I go to the chicken

shows, sometimes. They are very interesting exhibitions. An' I see and hear a great deal there about this an' that foreign breed. But I come home, look our flocks over, an' say to myself—let well enough alone, old boy. You're on'y a farmer.' The Cochins, an' Shanges, an' Bramies, an' Spanglers, an' Derbies, an' so on are all well enough for them that likes novelties. We are content with ours, for the purposes we breed 'em."

"What are these?" was our next inquiry, noticing a dozen or two smallish, dark brown, duck-legged fowl amongst the rest.

"Ah, them's the birds for eggs, sir. We call 'em Creepers. That's all the name we've ever had for 'em, to distinguish them from the longer-legged gray chickens."

"And they are prolific, you say?"

"Excellent layers, an' the best mothers, for hatchin, on the place, sir."

"And you have never tried the introduction of Asiatic or other foreign blood amongst them?"

"No! What do we want o' that, here?"

"It increases the size and weight, for age——"

"Yes, very likely. We haven't tried it. That may be desirable. But we've got in the Creepers the best o' sitters and mothers. In the Grays, we've got layers that can't be beat easy, take 'em the year through—and they don't plague us with broodiness."

"But the fresh blood will tend to increase the size of your fowls, and this gives you more marketable meat, in a given time, at about the same cost."

"It may be," said our agricultural friend. "I don't dispute that. But I'm old-fashioned in my notions, I s'p'ose. I know what I've got, now. An' though I notice the experiments, as you print 'em, an' often hear how well some poultrymen do with the new-fangled breeds, I don't care to run no risks. Mine are good enough, an' they breed regular enough, for my use. We set from fifteen to twenty o' the Creepers" every year. We get out a hundred an' fifty chickens, may be. Some years more. From an average of fifty layin' hens we obtain six hundred dozen eggs—which we send to market, at about a quarter of a dollar a dozen. Then we eat a good many eggs, and have plenty of poultry on our table, besides the increase of stock killed off annually in the fall."

"And this pays you well?"

"Satisfactory. But, though it isn't a large operation, it helps, you see. An' it's more profitable than pork or sheep in proportion to cost, care and feed. How do you like my birds, sir?" he concluded, pleasantly.

"They show good care, they are in excellent thrift, and there is strong evidence of Dominique blood amongst them," we suggested. "This is one of our best American varieties, and is a very popular race. The new "Plymouth Rocks" are made up in part from this blood and they are becoming very notable among fanciers of good stock."

"Yes, I've seen 'em. The Plymouth Rocks are a'most exactly like our Grays, or Dominicks, as you call 'em. On'y they have dark legs, often. An' in market the yellow leg is what is preferred. The Plymouth Rocks are good, I reck'n."

But still the old gentleman favored his own.

They were cross bred but a splendid lot of common fowl. And he takes pride in caring for them as poultry should be attended to.

After an examination of his stock and premises, and his mode of raising fowls for eggs and marketing purposes, we left him, satisfied that he understood his business, and that his "Grays" and "Creepers" though emphatically old-styled, were very good birds for this farmers' uses.

When is a schoolboy like a postage stamp? When he gets licked and put in a corner to stick to his letters.

ANNUAL MEETING OF THE NEW ENGLAND POULTRY CONGRESS.

The annual meeting of the New England Poultry Congress was held at the Lincoln House, Worcester, April 12th, the president, A. D. Warren of that city, in the chair. The principal business transacted was the election of officers and the recommendation of judges for the ensuing year. The officers elected were: President, A. D. Warren of Worcester; Vice Presidents, Philander Williams of Taunton, V. C. Gilman of Nashua, N. H., I. K. Felch of Natick, H. T. Sperry of Hartford, Conn., and P. W. Hudson of North Manchester, Conn.; Secretary, Laurin Martin of Lowell; Treasurer, E. S. Brewer of Hartford, Conn.; Auditor, A. F. Stevens of Natick.

The judges recommended were as follows:

For Light and Dark Brahmas—P. Williams of Taunton, I. K. and H. F. Felch of Natick, C. C. Plaisted of Hartford, Conn., H. S. Ball of Shrewsbury, John P. Russell of Clinton, E. C. Comee of Quincy, C. A. Johnson of Newburyport, W. M. Ward of Peabody.

Dark Brahmas—H. A. Mansfield of Waltham.

Cochins—Mark Pitman of North Beverly, Albert Noyes of Bangor, Me., P. Williams of Taunton, W. H. Brackett of Boston, G. W. Bradley of Hamden, Conn., John Swinerton of Danvers, C. H. Crosby, of Danbury, Conn.

Spangled Polish—J. Henry Simonds of Boston.

White Crested White Polish—H. T. Sperry of Hartford, Conn.

Polish Class—H. S. Ball of Shrewsbury.

French Class—John P. Russell of Clinton, C. A. Johnson of Newburyport, P. Williams of Taunton, E. C. Aldrich of Hyde Park, H. S. Ball of Shrewsbury.

Game and Game Bantams—S. J. Bestor of Hartford, Conn.; P. W. Hudson of North Manchester, Conn.; Geo. S. Merritt of Hartford, Conn.; A. D. Warren of Worcester; E. A. Moseley of Newburyport; H. S. Ball of Shrewsbury; E. R. Spaulding of Jaffrey, N. H.

Hamburgs—P. W. Hudson of North Manchester, Conn.; H. S. Ball of Shrewsbury; Andrew J. Tuck of Nashua, N. H.; N. C. Berlin of Berlin, Conn.; James Shepard of Bristol, Conn.; E. A. Peckham of Danielsonville, Conn.

Bantams other than Game—P. W. Hudson of North Manchester, Conn.; H. S. Ball of Shrewsbury; Wm. Jennings of Weston; A. F. Stevens of Natick, P. Williams of Taunton.

Water Fowls—Anthony Sheffield of Florence; Winslow S. Lincoln of Worcester; C. A. Johnson of Newburyport; H. S. Ball of Shrewsbury; M. I. Ellis of Norwood, Mass.; Dr. J. N. Bates of Worcester.

Pigeons—Henry Ramsdell of Natick, H. S. Ball of Shrewsbury; A. Sheffield of Florence, A. Rubenstein of Portland, Me.; D. F. Ellis of North Cambridge.

Spanish Class—I. K. Felch and A. F. Stevens of Natick, W. F. Bacon of Lexington, Laurin Martin, of Lowell, Gardner Blanchard of Wilton, N. H.; M. L. Kidder of Northampton, J. Boardman Smith, C. R. Hart and C. A. Pitkin of Hartford, Conn.; Albert Beard of Nashua, N. H.

American Class—V. C. Gilman of Manchester, N. H.; A. H. Drake of Stoughton, E. H. Heywood of Easton, E. S. Brewer and W. H. Lockwood of Hartford, Conn.; M. I. Ellis of Norwood, John Swinerton of Danvers, Mark Pitman of North Beverly.

Dorkings—A. F. Stevens of Natick, E. S. Brewer of Hartford, Conn.; W. S. Lincoln of Worcester, W. H. Brackett of Boston, W. G. Garmon of Manchester, N. H.; W. F. Daniels of Franklin, N. H.

Turkeys—W. S. Lincoln of Worcester, A. F. Stevens of Natick, A. Sheffield of Florence, William Clift of Mystic Bridge, Conn., C. A. Johnson of Newburyport.

Ornamental—P. W. Hudson of North Manchester, Conn., C. A. Johnson of Newburyport.

Fur-bearing and Minor pets—Arthur Colburn of Boston, Geo. W. Dixon of Worcester, W. H. Brackett of Boston, A. F. Stevens of Natick.

The secretary requested any person selected as a judge, who does not wish to serve, to notify him immediately, so that his name may be dropped when the list is revised.

It was voted that hereafter no person will be recommended as a judge unless written application stating his qualifications shall be made for such recommendation, endorsed by a poultry club

represented in the congress, or by two members of the same. Also that the various poultry societies of New England be, and hereby are, requested to promptly notify the secretary of the New England poultry congress of any reasons which in their opinion, after actual experience with any judge recommended by the New England congress, disqualifies him to act in such capacity.

The meeting adjourned to meet at the Evans House in Boston at the time of the exhibition of the Massachusetts Poultry Association in 1877, and the secretary was directed to notify the several associations represented in the congress to send delegates to the meeting; also to have the constitution and by-laws printed and sent to the several associations.

The N. E. C. will hold "open house," at the Evans House, during the Mass. exhibition. Committees will be in attendance to receive officers, fanciers, and breeders from the Central, Western, and Southern States. A cordial invitation is extended to visitors to call at the head-quarters of the N. E. C., at the Evans House.

CORRESPONDENCE.

MASSACHUSETTS POULTRY ASSOCIATION.

The Nominating Committee would respectfully present the following List of Officers of the *Massachusetts Poultry Association*, for the year 1876-77:

President. Philander Williams, Taunton.

Vice-Presidents. William J. Underwood, Belmont; Elbridge C. Comey, Quincy; Henry F. Felch, Naick; Charles L. Copeland, Milton; John P. Buzzell, Clinton; Thos. L. Surtevant, So. Framingham; Gen. Chas. A. Johnson, Newburyport; William B. Atkinson, Newburyport; Mark Pitman, No. Beverly; Col. Geo. A. Mearns, No. Cambridge.

Corresponding Secretary. Edward H. Harshorn, Boston.

Recording Secretary. Chauncey W. Chamberlain, Arlington.

Auditor. Horace K. Osborn, Cambridgeport.

Treasurer. Nath'l Foster, Jr., Belmont.

Executive Committee. Henry S. Ball, Shrewsbury; Samuel H. Warren, Weston; Edwin C. Aldrich, Hyde Park; Nath'l B. Perkins, Jr., Salem; J. Henry Symonds, Woburn; D. Frank Ellis, Cambridge; Charles H. Edmonds, Melrose; Rev. Henry A. Shorey, Spencer; Charles E. Perry, Wollaston Heights; George V. Fletcher, Belmont.

C. W. CHAMBERLAIN,

Recording Secretary.

Boston, April 10, 1876.

THE CHICAGO SHOW—AN EX. VICE-PRESIDENT SPEAKS.

WORCESTER, April 11, 1876.

TO THE ED. OF THE FANCIER'S JOURNAL:

MY DEAR SIR.—I desire through your columns to express my views regarding the settlement of premiums, by the National Poultry Association at their late exhibition in Chicago. When the matter of a great national exhibition was first broached, it was I think, at the exhibition of the Western New York Association at Buffalo, in January, 1875, and during the sessions of the American Poultry Association. This idea from our western friends met with a very hearty support, and I also saw, for the purpose of aiding it, the Buffalo gentlemen gave up for 1876, the holding of any exhibition. Contributions from the north and from the east were asked for, and liberally tendered, and, as I am informed, were all paid with but two or three exceptions. Sickness and the press of business kept me from being present during the exhibition, and what I learned either in or out of favor regarding the success, was from those whom I knew had been firm friends to this enterprise, and had contributed largely both by entries, personal attendance, and money. I had been placed by the association one of its vice-presidents, and I was not consulted by any one regarding their choice, or in fact any thing even pertaining to it in any way. I took the honor as a compliment,

and probably never would have objected to my name being used, but for the sad management regarding the paying of premiums. I noticed the numerous complaints in the Poultry Journals, and received quite a number of communications from friends expressing an opinion that I could not with any self-respect allow my name to be used as an officer. I wrote to the president, Mr. Teal, for an explanation, and in reply received a printed private opinion of the secretary, Mr. Willard, which was sufficient for me to determine upon my course of action, and I at once tendered my resignation. The opinion of Mr. Willard will probably be published. When an organization for the first time attempts its inaugural, mistakes are liable, yes, expected; such we could easily overlook, but for this national association both by name, and with the aid of the strongest men in America, it was nearly so by nature, to attempt the keeping back of a single cent even for a month, never should have been here countenanced, better would it have been for the officers, then and there to have made good the loss, paid the premiums in full and *hoel*, without any feeling of adding insult to injury. I sincerely hope that Boston and Buffalo, in the winter of '77 will show our western friends how to manage throughout a Poultry Exhibition.

Yours very truly,

A. D. WARREN.

"ZOO NOTES"—SNAKES.

EDITOR OF JOURNAL:

DEAR SIR.—In "Zoo Notes," No. 15, Huan states that "there is no snake of whatever family that stings." I think he is mistaken. We have two kinds of adders here, one is very light-colored, and is harmless, I think; the other is very dark-colored, and is more lively than the light variety, when irritated they defend themselves with their tails, and their sting is quite poisonous. Many times in the hay-field I have held them down with a stick to see them snap their tails, which they will do very spitefully. The sting is black, it is larger and much longer than a black wasp's. This variety grows to three or three and a half feet in length; they are found in wet swampy ground.

Yours truly,

W.

MASSACHUSETTS.

LARGE YIELD OF EGGS.

MR. WADE:

DEAR SIR.—I have 18 laying hens of the Golden Hamburg stock, from which, for the month of March, I gathered three hundred and fifty-five eggs, (355) and I think that is hard to beat, from the same amount of other stock. Eight to the pound, average weight.

JAMES TAYLOR, JR.

OKDALE, DEL. CO., PA., April 3, 1876.

CORRECTION.

DEAR SIR:—On page 156 of "FANCIERS' JOURNAL," current vol., in the description of Scotch Collies, several mistakes occur. The paragraph on size should read, "Scotch Collies differ in size from 17 to 26 inches in height," instead of "17 to 56 inches."

Again, "One of good average size and proportion, will measure 22½ inches in height at the shoulders," instead of "length at the shoulders." For "postimo rather long," read "pastimo rather long."

SPRINGFIELD, ILL., April 10th, 1876.

P. M. S.

HOUDANS AHEAD YET.

FRANKFORT, April 1st, 1876.

MR. JOS. M. WADE:

DEAR SIR.—I see my article on the Houdan has had its desired effect in bringing out another breeder on "which is the best breed for profit." I only wish it would bring out a dozen or more

on the same subject, an article or two each week would prove profitable both to the JOURNAL, and its readers. Now I contend the Houdan is the best, yet F. F. J. places the White Leghorn at the head of the list, but he will have to bring better arguments forward to keep them there. In the first place he only gives us a trial of them during the best six months in the year, when almost any chicken will lay if there is any lay in it. He says he received 106 eggs from each hen in 184 days (or six months, which is the same) with 78 days to receive none from each hen; he does not tell us what they did the other six months, may be he had flannel hoods made for each of them, to get them to lay from the first of March until the first of September; thanks to nature the Houdans do not require any hoods to keep their combs or wattles from freezing and making them an eye-sore forever after. Now the Houdans will lay, I think, more than 106 eggs in 184 days, after laying all the winter, and then in the fall will make a good roast. As I said in my first article, they will average 12 pounds to the pair, while I suppose it will take two pairs of the White Leghorns to weigh the same. Who comes next?

HOUDAN.

ELECTION OF OFFICERS.

JOS. M. WADE, Esq.:

DEAR SIR,—At the annual meeting of the Rhode Island Poultry and Columbarian Society, April 12th, 1876, the following officers were elected for the ensuing year.

President. Henry J. Reynolds, Providence, R. I.

Vice-Presidents. Caleb Westcott, Apponaug, R. I.; James H. Hammett, Newport, R. I.; Otis Monroe, Bristol, R. I.; W. E. O. Roberts, South Scituate, R. I.; Daniel H. Brown, Peace Dale, R. I.

Recording Secretary. James Dennis, Jr., Providence, R. I.

Assistant Recording Secretary. Horton H. Adams, Pawtucket, R. I.

Corresponding Secretary. C. G. Sanford, Providence, R. I.

Auditor. Joel M. Spencer, Washington, R. I.

Treasurer. Henry T. Post, Providence, R. I.

Executive Committee. Samuel P. Bullas, Providence, R. I.; B. F. Gilmore, Providence, R. I.; Henry A. Rhodes, East Greenwich, R. I.; E. M. Bidwell, Natick, R. I.; E. B. Pendleton, Westerly, R. I.; Nathan F. Dixon, Jr., Westerly, R. I.; John H. Chase, Newport, R. I.; A. H. Carson, Newport, R. I.

It was voted to hold our next Annual Exhibition from Jan. 30th, 1876 to Feb. 2d, 1877. Yours truly,

C. G. SANFORD,

Corresponding Secretary.

PROVIDENCE, R. I., 1876.

TARES.

BALTIMORE, Apr. 12, 1876.

GENTS:—In reply to an inquiry made by R. S., through your JOURNAL, as to what is meant by English Tares, I will state what I know about Tares. They are known also as Vetches, the seeds are of a dun or brownish color, and pleasant flavor. The plant is principally cultivated for its seeds, the flour of which is mixed with that of wheat or rye, and made into bread. It is also fed to stock; and, in some localities, the plants are given as green food to horses and cattle. Pigeons are very fond of the seed, and I think it is very good for them. Yours truly,

H. F. WHITMAN.

FRIEND WADE:—

I have been looking for a letter in answer to my last "personal." Send it along. I am always glad to hear from you, as you generally say something cheerful, and that's more than I can say of many of my correspondents. Hope you are doing well, and that FANCIER is growing fat. I send you some stuff, though you must have much of *Huon* on hand. Did you see "Snapper" in "Forest and Stream?" Well I send you the companion picture in a

snake, herewith. Both "ower true" tales I assure you. If "Snapper" will bear telling over again, let FANCIER tell it, if you mind, and have room.

Yours,

HUON.

"WAY DOWN IN MAINE," Mar. 22d.

MR. WADE:

Honored and Respected Sir:—Please don't take anything for flattery that I write now, for I am glad you are in N. E. We are going to use you well if you can put up with our snow and Yankee idiosyncracies, which we can not spare at any rate, but "*Ad ogni uccello sno nido e bello*," and with all the deference due to whom respect is due, and in the name of all the fanciers in Maine, I will say "Greeting."

And now, you promised a change, have we it all? I don't see much of a chance for improvement as to the typographic arrangement, and you advertise for us at about one cent per word, now what next? T. J. M. D.

DEAR EDITOR:—

The description which I sent you of the Collie dog came out in this week's JOURNAL. It is not as I sent it, not by any means. The punctuation is fearful. If you will take the trouble to re-insert it in your paper, you would do me a favor as well as "INQUIRER."

He stands about 21 inches high at the shoulder; is very gracefully shaped; muzzle pointed; ears half erect; coat long, but fine and silky; tail and hams fringed with hair; color usually black and tan, or sandy yellow. Yours, &c.,

LANCASTER, Pa., April 5, 1876.

COLLIE.

FRIEND WADE:

A friend of mine, who takes a California paper, (*Marysville Weekly Appeal*) drew my attention to the enclosed, which, striking me as being the largest egg story I ever heard of, I thought I would "clip" (the enclosed, not the egg,) and send to the JOURNAL. Yours truly,

TEMPANY & REINWALD.

LE ROY, MOWER CO., MINN., March 30, 1876.

"A hen owned by Seaver of San Jose, of the Brown Leghorn variety, has achieved immortality of fame by having an egg measuring 10½ inches in circumference and weighing 11 ounces."

NORFOLK, Va., April 11, 1876.

JOS. M. WADE, Esq.

DEAR SIR:—Can this be beaten? On 10th March set 16 Game eggs. Hatched out on 31st March, 17 chicks—all fine and doing well at this writing. Truly Yours,

JNO. W. STEVENS.

ITEMS.

MR. J. A. POPPE, of Sonoma, California, calls attention of the farmers of the United States to the subject of carp raising, in which he refers to his own experiences, in the introduction of this fish into the country. In August, 1872, he arrived at Sonoma from Germany with five small carp, six inches long, all in very poor condition, one dying as it was placed in the water. In the following May he states that the fish had grown to be sixteen inches long, and had produced over three thousand young fish. He now has a very large stock, and all that he can send to market sells readily at \$1 per pound as an article of food, and has no difficulty in disposing of all the living fish he is willing to spare at \$5 each. He remarks that when well fed the fish will grow one inch per week for the first two or three months, after which the growth in length is slower, but that they increase in weight very rapidly.

WE CAN MAKE HOME HAPPY.

Though we may not change the cottage
For a mansion tall and grand,
Or exchange a little grass-plot
For a boundless stretch of land—
Yet there's something brighter, dearer,
Than the wealth we'd thus command.

Though we have no means to purchase
Costly pictures, rich and rare;
Though we have no silken hangings
For the walls so cold and bare:
We can hang o'er them the garlands,
For the flowers bloom everywhere.

We can always make home cheerful,
If the right course we begin;
We can make its inmates happy,
And their truest blessings win.
It will make the small room brighter—
It will let the sunshine in.

We can gather round the fireside
When the evening hours are long;
We can blend our hearts and voices
In a happy social song;
We can guide some erring brother—
Lead him from the path of wrong.

We may fill our homes with music,
And with sunshine brimming o'er,
If against all dark intruders
We will firmly close the door.
Yet, should evil shadows enter,
We must love each other more.

There are treasures for the lowly
Which the grandest fail to find;
There is a chain of sweet affection
Binding friends of kindred mind;
We may reap the choicest blessings
From the poorest lot assigned.

"NOT MUCH! NOT MUCH!"—Chowder is a dish fit to set before a king, provided it is well made, and—the king likes it. It is relished by dwellers on New England's "rock-bound coast," but, you know the saying, "What's one man's meat is another man's poison." The Boston *Transcript* illustrates this by an incident that occurred at a dinner party given many years ago by Mr. Prescott, the historian, at his Nahant residence. The guest of honor was an English baronet:

Just as the first course was removed, the historian, and host, turning to his guest, said,—

"I'm afraid you'll miss your soup. We have given you instead our usual side dish."

"Indeed," answered the baronet; "and what do you call it?"

"Chowder."

"How?"

"Chowder."

"Would you kindly spell it for me?"

"C-h-o-w-d-e-r. How do you like it, Sir John?"

"Well," said the noble Briton, "I've traveled a good deal in my time, and I confess I've eaten things that were worse, but not much, not much."

The guests kept their faces straight as long as they could, but the roar came at last, and it was a hearty one.

MISTAKEN HUMANITY.—The Boston *Transcript* relates that "there is an old gentleman that comes down town on foot every morning, who appears to be a great friend to dumb animals. Whenever he sees a dog scratching at a store door to be let in, he promptly opens it for the animal. The other morning he made a mistake in the dog business. He let one in, and soon the same canine came rushing between his legs, nearly throwing him down, and covering the lower part of his pantaloons with paint. A man with overalls on was chasing the dog trying to get a line shot at him with a paint brush he had in his hand. The old gentleman

seemed to care nothing for the paint on his trousers, but expostulated with the irate painter, for such he proved to be, saying:

"My good man, why do you wish to hurt that dog?"

"Because he has tipped over my paint and made an infernal mess of everything."

"Some blasted old idiot let him into the store when we were all trying to keep him out while I was doing some painting; he jumped through the door, stuck his fore-legs into the paint pot and tipped it over."

"Brown paint on a marble floor looks well; don't it?"

"I wish people would mind their own business!"

And the benevolent old gentleman wended his way to Brattle street to get his clothes cleaned, thinking to himself there is discretion to be shown even in works of humanity.

CHINESE MAXIMS.

1. Let every one sweep the snow from his own door, and not busy himself about the frost on his neighbor's tiles.
2. Great wealth comes by destiny; moderate wealth by industry.
3. The ripest fruit will not drop into your mouth.
4. The pleasure of doing good is the only one that does not wear out.
5. Dig a well before you are thirsty.
6. Water does not remain in the mountains, nor vengeance in a great mind.

MR. SETH GREEN, by his recent letter asserting that the most effective fish-hook is made from a needle without a barb, has drawn out a sarcastic reply in *Forest and Stream* from Mr. Shields, a rival angler of Boston, who ridicules Mr. Green's assertion, and says that without a barb it is next to impossible to take large fish, as the line is certain at times to become slack and allow the hook to slip from the fish's mouth. Mr. Shields thinks that Mr. Green, "instead of giving us an advanced idea of fish-hooks, takes us back to our juvenile days, when we drew our supplies from our grandmother's pin cushion."

SOLD.—He had made a hearty meal at a restaurant, and getting up, he said to the waiter, "I declare, if I haven't forgotten my purse!" The waiter fired up, and hurled big words at him for full three minutes before pausing for breath. When a chance came, the stranger continued, "But I have a five-dollar bill here in my waistcoat pocket." The waiter couldn't smile, to save his life.

A BASHFUL young clergyman, recently rising to preach for the first time, made a terrible mix of it, announcing his text in this wise: "And immediately the cock wept, and Peter went out and crew bitterly."—*Oberlin (College) Review*.

PERHAPS NOT.—"Bless you," said John Henry, with tears in his eyes, "she takes her own hair off so easy that perhaps she doesn't know how it hurts to have mine pulled out."

A PORTFOLIO New Hampshire editor, speaking of trees, says: "Every tree is a feather in the earth's cap, a plume in her bonnet, a tress upon her forehead; wherefore plant trees!"

FRIENDSHIP.

Yes, hope may with my strong desire keep pace,

And I be undeluded, unbetrayed:

For, if our affections none find grace

In sight of heaven, then wherefore hath God made

The world that we inhabit? Better plea

Love cannot have, than that in loving thee,

Glory to that eternal Peace is paid,

Who such divinity to thee imparts

As hallows and makes pure all gentle hearts.

His hope is treacherous only whose love dies

With beauty, which is varying every hour;

But in chaste hearts, uninfluenced by the power

Of outward change, there blooms a deathless flower

That breathes on earth the air of Paradise.

EDITORIAL DEPARTMENT.

EXPLANATION.

CONCORDVILLE, PA., April 17, 1876.

FRIEND WADE:—

FANCIERS' JOURNAL April 6th just received, taking eleven days to receive it. Can you advise why this is? This is the way it has been coming since you left Philadelphia. I think there must be a great deal of negligence on part of Post Office department, either in starting or transferring from one office to another. It seems to me to require a very long time to ship mail matters from so short a distance, according to above account, which is correct. Can you advise through columns of FANCIERS' JOURNAL?

Respectfully,

D. GILPIN.

We have received a large lot of letters like the above, which seem to call for an explanation. Had our readers been very observant they would have noticed that we lost one week, in moving the JOURNAL, consequently the date is one week behind, but to prevent any further misunderstanding, we this week change the date, but the numbering will still remain one week behind until we issue two numbers in one week.

A WORD TO BEGINNERS.

To those who are about embarking for the first time in the poultry business, whether for profit or for a source of pleasure and recreation, and who may feel the need of advice and counsel from older and more experienced "Fanciers" and breeders, yet hesitate from fear of ridicule or irrelevant remarks, which some uncharitable persons often indulge in, we would say: Don't be afraid, let your wants be known, and we will gladly answer all questions through the "JOURNAL," to the best of our ability. We have a large corps of contributors who are able and willing to let their light shine through our columns, for the benefit of all who stand in need thereof. Hence we trust our young friends will avail themselves of this privilege.

ONE OF THE FIRST REQUISITES

Towards success in the breeding of poultry, pigeons, etc., is a fondness for the work, and a love of the stock kept. No one can do this thing well, who is not interested in the occupation from sympathy with whatever he may attempt in this direction.

If he does not himself have the personal care of such stock, the next important consideration is to employ some one to see to his stock, who is similarly well disposed towards the creatures he is deputed to feed and care for.

This is a necessity, and unless this provision be faithfully ob-

served, no man—however fine his originals may be, or however good his provided quarters may be for the accommodation of the birds or animals—must expect to reproduce their like, or have them around his place in good health and high condition.

To realize the best results, system should be adopted in feeding poultry, for instance, and the fowls should have their food regularly. If we look for eggs, the hens must have plenty of good food. Their nests and houses should be kept clean, pure water should be at hand daily and constantly. A portion of their allowance should be green food, and otherwise it should be varied—whether cooked or given raw. Not too much meat, or scraps, but a little at a time. If they can have a pasture run, in warm weather, all the better. Don't have too many in one building. Never try to keep more than forty to fifty (old and young) together, and half this number is best.

From twenty-five laying hens, under one roof, you will get more eggs, than from twice as many if huddled in the same apartment. This is a sure thing. Don't dose them. Keep the vermin from annoying them, and you will have few sick birds to "doctor." These suggestions will be found reliable, and the reader cannot too often be reminded of their importance.

THE DOMINIQUE FOWL,

Which has been brought into prominence latterly in connection with the evident mixture of this strong original blood with the "Plymouth Rocks," is a very well known and highly esteemed variety, and has been so largely bred in Massachusetts and New England for years, as to be called in many sections "the farmers' fowl," par excellence.

The plumage is very distinctly defined in its character—a slaty blue, all over, and each feather is barred across from the center of the shaft to the outer end, with black. Twenty-five years ago they were designated in the poultry books as "perfect bloods," and were then pronounced "good layers, very hardy, careful nurses, and as affording most excellent eggs and flesh."

Mr. Pierce of Danvers, Essex Co., Mass., at that time a very successful and well-known poultry breeder, believed the Dominiques "taken all in all, one of the very best we have;" and adds, "I know of no fowls that alter so little by in-and-in breeding as these."

They have not changed or deteriorated since then, where they have been carefully bred; and any one who knew this variety twenty or thirty years ago can make no mistake in them when he sees the well-bred Dominiques of 1875 and '76.

AN EGG FARM.

In 1871-2, there appeared in the American Agriculturist a series of papers by H. H. Stoddard, upon the subject of poultry raising and the production of eggs, on an extensive scale—which articles Messrs. Judd & Co. have published in book form since, revised and corrected.

This work is very nicely and properly illustrated, and goes into the merits of producing eggs and chickens for market, in a skillful manner; recommending all the better modes of breeding, and the economies for the multiplication of egg-layers and obtaining eggs for consumption, that are known to modern experience.

The work is quite exhaustive, in this direction. The project of getting together and successfully keeping in health and to profit a very large number of domestic fowls, upon one estate, has long been a dubious question. And many experiments in this undertaking have proved failures.

The recommendations of the author of "An Egg Farm," however, are very clear towards attempting this work, but only upon the colonization principle. Not more than 50 birds should be kept

in one house together; and there should be between the houses a sufficient space on the farm to keep each colony at home, and always at a distance from the others.

This is the true principle, and to carry it out to success, for a thousand laying fowls, several acres of land are necessary, to give them due range and at the same time keep them from intruding upon each others' premises. This is the *village* system, of course—under one general superintendence. So long as each family keeps but forty or fifty fowls on the place, a hundred or five hundred fifties may be kept by as many different individuals. When a thousand or two thousand birds are intended to be kept by one poulterer, they must be divided up into these smaller lots, or colonies of fifty or sixty together, or they will not do well.

The object of having them in spots widely apart upon "an egg farm," is to imitate Nature, in the original field and forest condition of the wild birds, to avoid the expense of *fencing* (which would cost more than all would come to), and to keep the flocks in health, precisely as if they were in different or separate domiciles, in the village for example, yet so that any given number may be brought under the supervision of one person and his assistants—to profit.

This neatly printed and well written work, suggests how this may be done. And any one who desires concise information as to raising eggs for market upon a large scale, will do well to consult the pages of this book,—which may be had of Judd & Co., New York, or at this office, by mail, for one dollar.

IN BREEDING ANIMALS,

No matter of what race or species, where the least improvement is aimed at, as every one is aware, the mode of selecting those of both sexes from one's stock which show the finest points of value, and which possess the greatest amount of stamina, and other high qualities, are always those the most desirable from which to reproduce their kind.

It is with poultry—as it is with cattle, horses, dogs, sheep, swine, or any other pet stock. If we would have the best, the inferior birds we hatch should be discarded, and none save those that are well formed, good sized for their kind, in sound health, and of the most vigorous character, should ever be made use of to breed from.

And poultry is susceptible of great improvement through this means. No one can breed a hundred or a thousand fowls, from among which many fit only for the butcher will not be found. In hatching fifty chicks, of almost any variety, a score or more will be either lacking in symmetry, good color, or other nice points. There, as their defects show themselves, should be culled from the flock, and either eaten (when in condition) in the family, or sent to the nearest market. An imperfect, deformed, undersized, or otherwise objectionable fowl, either cock or hen, should never be bred from, or sold to be bred from.

By judicious selection then, and proper mating of the sexes for points and color, the fancier will not only constantly improve his own, but he will aid those to whom he sells his stock for breeding purposes, to keep up their best character, usefulness, and beauty, and he will thus help the establishment of a good reputation for such stock, as well as for himself.

THE "PLYMOUTH ROCK" QUESTION

Promises to be well ventilated, judging from the numerous articles, statements as to origin, and spirited communications we have lately received regarding these fowls, which are duly incorporated in the American Standard of excellence, as a distinct variety.

There are clearly three or four prominent, different strains, bred in Connecticut and Massachusetts, of the "modern" Plymouth

Rocks. They all resemble each other strongly. The Standard fully sets down their qualifications, and the accepted description of this valuable cross is therein clearly defined.

The details set forth in this official *Standard* description, are not to be mistaken. Emphasis is repeatedly given to the statement that the plumage should be "bluish-gray, each feather distinctly penciled across with dark bars." And the legs must be "bright yellow in color, and smooth"—for "feathered legs, or legs any other color than yellow" are pronounced a disqualification, decidedly.

Now, if the simon pure, modern Plymouth Rocks come from Mr. Spaulding's original crossing of the Dominique with the Black Java (as Mr. Clarke, Mrs. Spaulding, Mr. Upham, and Mr. Ramsdell, all agree is the fact,) how will the breeder of this progeny of such a cross escape the invariable black feathering and dark colored legs of the Black Java, sooner or later, in his flocks? The requirement in the Standard is *only* "yellow legs"—or "bright yellow legs," for Plymouth Rocks. And this rather favors Dr. Dickie's theory, or assertion, that the *true* modern Plymouth Rocks, are not formed from the two varieties, the other gentlemen declare they come from, originally!

Upon reference to the language used in the new Standard regarding the plumage of the *Dominiques*, it will be seen that it is described as being slaty blue, each feather "penciled across with dark bars."

The next variety described in the Standard is the *Plymouth Rocks*; and the plumage of this breed is called bluish gray, each feather distinctly "penciled across with dark bars," etc. The color of the legs in *Dominiques* must be "bright yellow, and smooth." The legs of the *Plymouth Rocks* must be "yellow only, and smooth."

This rather looks as though there is *Dominique* blood in the Connecticut and Massachusetts *Plymouth Rocks*, notwithstanding the fact that Dr. A. M. Dickie asserts very earnestly that this is not the original cross with the *Javas*, if we remember his early description of the *Plymouth Rocks* afloat.

CHANGE OF ADDRESS.

Mr. Fred Mather formerly of Honeoye Falls, N. Y., has now located permanently at Philadelphia, and is hard at work preparing the Aquarian Department for the opening day, which he is sanguine will be accomplished. Mr. M. will send us a copy of the letter for publication, describing just what fish, reptile, &c., are wanted, and will be pleased to hear from any one so favorably located as to render any assistance. Address, Fred Mather, Supt. Aquarian, Ag. Dept., Centennial, Phila., Pa.

A REMARKABLE PULLET.

Our Stillwater correspondent sends us the particulars of a remarkable case in that vicinity. Frederick Williams is the owner of a Buff Cochin hen, whose remarkable history is exciting a great deal of interest in this vicinity at the present time. On the morning of Feb. 2d, 1876, during the prevalence of the extraordinary gale which took place on that date, the Buff Cochin was missing, and her owner supposed that she had been either carried away or destroyed by the force of the wind. On Saturday the 11th of March, just *thirty-nine* days from the date on which she was missed, Mr. Williams heard a slight sound issuing from an old dog-kennel in his garden, the door of which was fastened tightly by the ice which had frozen on the sill. His surprise and astonishment may be imagined when, upon forcing the door he beheld his missing hen, alive. She was unable to walk, but could swallow food quite naturally. When first missed, her weight was about eight pounds and at present it is *three-fourths* of a pound. She will

undoubtedly recover entirely, and her experience certainly demonstrates a very important fact, viz.: that one of her species can sustain life for thirty-nine days without one particle of nourishment *solid or liquid*. We should consider this remarkable instance well worthy the attention of physiologists.—*Troy Press*.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Scalding cages is the best remedy for bird-mites that we know of.

—Broom-splints cut into short lengths make excellent material for pigeon nests.

—Pigeon eggs will hatch after being kept a week, or in cold weather they can be kept a month.

—Occasionally there is an intermission of four days between laying the eggs of the pigeon, instead of one, the usual period.

—In pigeons a dose of castor-oil, and gentle kneading with the fingers is almost always a sufficient remedy for the disease called "crop-bound."

—Dogs quite white, no spot of color, are generally deaf, and if put to others the deafness generally goes with the color, the white pups being so, and the others not.

—Will not "PACIFIC" tell FANCIER something about spiders? I feel sure that pleasant writer knows from personal observation much about them, especially those of a kind never seen in the Middle States.

HUON.

—The Arabs it seems who are as fond of pigeons as the ancient Egyptians, have a superstitious notion that, if they place in their pigeon houses small scraps of paper, written over with learned characters, the birds are always sure to thrive the better; and the Monks, who are never slow in profiting by superstition, have at all times, a supply of such amulets for purchasers.—*From Moore's Epicurean*.

—It is a good plan to keep with your Homing birds, a pair or two of high-flying Tumblers, lively and strong, as they take out the young birds and get them in the habit of flying high. When they are without Tumblers, some of the young birds will fly very low, whereas when Tumblers are with them they will fly very high, and when thrown will mount to a great height, and a bird that does not go well up when it is thrown will never do long distances. How can it see its way if it will not rise to such a height as will allow it to see over the physical obstacles that lie between its home and the spot where the throw took place?

—INDIGNANT.—Speaking of the Massachusetts law making it necessary that a "dozen eggs weigh one and one-half pounds," Max Adler says: "We approve of this. The hens have too long had their own way in this business of laying eggs, and they have constantly defrauded the public. It is high time this outrage was crushed, and we are glad that the Legislature of Massachusetts is going to do it. If free American citizens are to be imposed upon with impunity by debauched and corrupt chickens, the government, for which William Penn fought and John Hancock died, is a disgraceful failure. Hereafter, Massachusetts hens will either have to lay two-ounce eggs or emigrate. The people will submit to their tyranny no longer. They have borne the yolk until it has become unendurable. They denounce present prices for present eggs as eggstortion, and hens, they demand a reform with the determination to draw up this chicken bill, and pullet through the Legislature."

—All the spider family, find them where you may, and they are found in all habitable parts of the globe, are Cannibals. Father spider will make a breakfast, without the least hesitation, of his children, while the mother seems at times to be so tenderly attached to her young, that she would prefer to perish with them! She does not seem to have the same love for her mate however, for she has been known, after a vain endeavor to prevent "hubby" from eating the children, to come to the conclusion that he would make a good meal, and falling upon him would gobble him up in short order. Even in the reproducing season will madam spider attack her lord, and conquering him in fair fight, will at once devour him. Certain of the small spiders are supplied with a small bladder, somewhat similar to a drum, and the sound made by it, called by the superstitious the "death watch," is nothing more than the spider drumming for his mistress to come

forth from her hiding place. Allusion is made to this by Lacon, where he says "an old man like the spider, can never make love without beating his own death watch."

—THE SAGACITY OF ELEPHANTS.—The services rendered by elephants to the English army during the Abyssinian expedition have suggested an article in the "*Revue des Deux Mondes*," by M. Guido, on the use of these animals in warfare. Such an elephant as that described by Major Skinner, whose narrative is quoted by M. Guido, would be a valuable auxiliary at any time. According to this account, the major was riding in a forest near Kandy, when he heard a muffled sound of ourmurf, ourmurf, the peculiar cry of the elephant, and soon came upon a tame animal of this species, who, being left to himself, had undertaken to carry away a large beam, which he carried across his tusks, progressing, however, but slowly, owing to the narrow limits of the path, which forced him to turn his head first on one side and then on the other, uttering ourmurf of vexation. Seeing the major approach, he throwing his load, and stood aside to let the man and horse pass. The major's steed trembled in every limb, when the sagacious beast, noticing his terror, backed still farther into the jungle, uttering his ourmurf in a gentle and encouraging tone; and, as soon as the horse had summoned up courage to proceed, he re-appeared, took up the beam once more, and resumed his arduous undertaking. It seems almost sacrilege to contemplate employing animals so considerate and reasonable in the questionable operations of man against man.

—BEARS AT HOME.—A writer on the Zoological Gardens in London writes: "A pretty, winding path through the shrubbery at the left of the terrace brings us down a slope to the place where the pair of white bears live. They have a beautiful stone house, covered with flowering vines, and in front a pond with flagged path around it, on which, as we approach, the huge creatures are pacing up and down, waiting for dinner, growling savagely every now and then at the visitors who stand in tantalizing nearness, just out of their reach. Their whole domain—house, garden, and pond—is not only fenced in but roofed over with the strongest iron bars. Once, they say, it was only fenced; but, though the top of the fence was made of pointed spikes, turned inward, one of the bears got out early one morning and nearly killed a blacksmith who happened to cross his path; and after that they were roofed in. The white bear and his wife once had two little ones, soft, pinky creatures, but the unnatural mother killed her own children, much to everybody's disappointment. The mother bear's fur is purer, softer, whiter than the father's, whose hair looks rather yellowish when he stands close to his great snow-hall of a wife, and she seems to be generally in a fit of sulks, while he tramps about in a chronic state of active fury. They suffer terribly from the heat of an English summer, and great blocks of ice are constantly kept in the pond to make the water cool enough for their bath."

ARRIVALS AT THE ZOOLOGICAL GARDENS,

FAIRMOUNT PARK, PHILADELPHIA,

(For the week ending April 8, 1876.)

- 1 Woodcock, (*Sceloporus rusticola*). Presented by Fred. Lentz, Philadelphia.
- 1 Great Horned Owl, (*Bubo Virginianus*). Presented by E. S. Mason, Philadelphia.
- 1 Woodchuck (*Arctomys monax*). Presented by Rev. A. J. Hires, Baltimore.
- 1 Red Fox, (*Vulpes fulves*). Presented by J. M. Wilson, Esq., Washington, D. C.
- 1 Opossum, (*Dydelphys Virginianus*). Presented by J. M. Wilson, Esq., Washington, D. C.
- 1 Black Squirrel, (*Sciurus niger*). Presented by Thos. M. Robinson, Pa.
- 1 Opossum, (*Dydelphys Virginianus*). Presented by J. B. Eshelman, Pa.
- 1 Raccoon, (*Procyon lotor*). Presented by Ed. MacHarg, Philadelphia.
- 1 Opossum, (*Dydelphys Virginianus*). Presented by Emmet Enright, Lancaster Co., Pa.
- 4 Adult Angora Goats, (*Senus capora*). Purchased.
- 3 Young " " " " " " " "

HUON.

(For the week ending April 15, 1876.)

- 1 Fisher, (*Mustela pennanti*). Purchased.
- 1 Black Iguana, (*Metopoceros carolinus*). do.
- 2 Irish Hares, (*Lepus timidus*) Presented by P. I. Lauber, Philadelphia.
- 2 Black-tailed Deer, (*Cervus macrotus*). Purchased.
- 4 French Rabbits, (*Lepus cuniculus*). "
- 3 Prairie Wolves, (*Canis latrans*). Born in garden.
- 1 Java Porcupine, (*Hystrix javanica*) "
- 1 Pintail Duck, (*Dafila culas*). Presented by ———

(For Fanciers' Journal.)

ZOO NOTES, No. 18.**TWO OF THE ZOO PIGEONS.**

The Zoological Society possesses quite a number of the *Columbidae*, and a most interesting family it is, though but two of its members come prominently under the notice of the visitors to that now famous and celebrated institution. These two are, 1, the Crowned pigeon (*Goura corona*), 2, the Nicobar pigeon (*Caloenas Nicobarica*), each of which, both for size and beauty are well worthy of the notice of all pigeon lovers. I do not presume to think that I can tell the "Fanciers" anything about pigeons, but I wish to say a few words about the above beautiful specimens, and ask respectfully why there is no endeavor to introduce, and domesticate them in our country.

THE CROWNED PIGEON.

This, the largest of all pigeons, belongs to the subfamily *Gourinae* or Ground pigeons, and a native of Java, New Guinea, and the Moluccas. So large and unipigeon like is it that few seeing it for the first time would allow it to be one. It is about 28 inches long, with a bill 2 inches long and black. The crest is composed of long silky barbeles plumed at the end. This is always expanded as though the bird was very proud of it. The head, neck, and lower parts, are grayish blue; back, with the feathers black at the base, with tips of purplish brown; a central broad white bar seems to be laid across the closed wings. It is readily tamed, soon comes to know its keeper, and will readily "drum" for him, which drumming is a remarkable performance that must be seen to be understood. The walk of the Crown pigeon is quite majestic and stately, and well accords with the beautiful crown which gives it its name. It is quite fond of the hot sun, and in it will lie upon the floor of its cage, on one side, with head flat down, for a long time. It is said that while lying in this manner in its native forests, the bird at a little distance might pass for a heap of leaves, a stump of a tree, or a moss-covered stone. The nest of the Crowned pigeon is said to be made in trees, and that the eggs are but two in number, though I think there has been but one laid at a time by those in the London Zoo. The young are fed by the parents as other pigeons are—that is, from the crops and mouths of both parents. This reminds me of a trick the smart boy plays on the greenhorn in every generation, and which was played on the writer when in a state of verdancy—namely, send him to someone on April 1, for "pigeons' milk," and get him heartily laughed at. I have long since found out that the joke was not so groundless, and that the young squabs are nourished by a curd-like material, secreted by special glands, like milk in the mammalia, which is distributed to them by both parents, though it is said that the male has the most plentiful supply. Specimens of this curd or "pigeons' milk," can be seen in some of the museums of the Old World.

While on the subject of pigeon-food let me mention as something out of the common order, that the Crown pigeon in the Zoo is a dear lover of meat! In fact, he has turned himself into one of the carnivorous birds. Whenever keeper Pavonarius goes his rounds among his meat-eaters, with both hands full of chopped meat, Gaura Corona asks for a full share, and will not be put off

without it! Did you ever know of a pigeon that was a meat-eater before?

The NICOBAR pigeon, is one of the most beautiful of the genus *Caloenas*. It is but 15 inches long,—but half the size of the Crown, with a plumage of rich metallic green, which changes with the light into a goldish, coppery, purplish, red color. The tail is white and the quills are blackish blue with shadings of green. As its name imports it is a native of Nicobar, but it is found in Java, Sumatra, and several other places. In the breeding season a rounded fleshy knob makes its appearance on the upper mandible of this pigeon, which would be more remarkable, but that the same thing appears in the whole family or genus of pigeons known as the *carphipaga*, the most noticeable of which is the Oceanic Fruit pigeon. All the above birds are excellent for the table.

Can any of your readers tell me where the pigeon was first used as a "letter carrier?" It is found upon the temples of Egypt among the hieroglyphics. By it, Brutus was informed of the movements of Marc Antony in Egypt, and far back in Asia was the bird used for the same purpose as the Romans put it to.

The flight of some of the species seems almost incredible! Audubon says that a wild pigeon (*Columba migratoria*) has traveled a distance of 300 miles in about six hours, which it will be seen is at the rate of *one mile in one minute*! At that flight, could the bird's strength hold out, it could cross the Atlantic in less than three days!

Doctors will disagree. Audubon says this pigeon lays but one egg when the sitting commences—now Wilson, quite as correct an ornithologist, says it lays *two*. But even if two are laid, the number of the species exceeds all belief. Wilson says he saw in Kentucky a flock which stretched north and south upwards of forty miles, with a breadth of several miles! This was in the dense woods where every tree bore nests, wherever there was nest room in the branches. Some of the trees were felled by hunters, when two hundred squabs, not much inferior in size to the old ones, and as fat as butter, were taken from one tree!

Audubon made a calculation of a mass of wild pigeons Wilson came in contact with, and he says that the whole length of the mass was 240 miles, and that the numbers composing it must have amounted to 2,230,272,000 pigeons at least, and remarks that as large as this number seems, it is most probably below the actual amount! Can you think how much food such a crowd would require? Wilson thought of it, and allowing each bird but a half pint of food per day, he found the whole quantity would be 17,424,000 bushels daily.

Hyon.

ARRIVAL OF ANGORA GOATS FROM ASIA.

Mr. John S. Harris, of California, reached Baltimore recently by the steamship Sardinian, from Liverpool, with twelve Angora goats, which he brought all the way from Asia Minor, after a most romantic and difficult journey, occupying a year. Angora and Cashmere goats had been considered identical, but a sample of real Cashmere wool sent to Mr. Harris from Madras, disclosed the fact that it was essentially different from the wool grown on goats called Angoras, which he and others owned in this country. This discovery led the adventurous breeder to go to Asia and see and learn for himself, as well as to study the habits and mode of raising goats, with a view to making them profitable in the Sierras of California. He started April 16, 1875, from California, via Japan and China, intending to go overland into Thibet, but found that impracticable. He then went to Calcutta, and going through India reached the Cashmere district and saw the animals for which he had made so great a journey.

He found the Cashmere goats covered with a rather sparse coat of coarse, long, black hair, underneath which is a fleece of extremely white silk like wool, used in the manufacture of Indian shawls

and other goods that are highly prized for their fineness of texture and capability for receiving and retaining colors. The home of the Cashmere goat is in the Himalaya mountains, 22,000 feet above the level of the sea, in a region of eternal snows, and there are none in America. The traveler found these goats could not be profitably acclimated in California, but he gained the information that mohair wool goats can be successfully raised in a high altitude and low latitude, such as the Sierras of Southern California.

Mr. Harris concluded then to go to Angora, but found he could not proceed overland on account of war, nor via the Persian Gulf on account of the unsettled state of the country. He therefore returned to Calcutta and went via Ceylon, Indian ocean, Red sea, and Suez canal, to Port Said, over the Taurus mountains, in crossing which he was occupied twenty one days, and suffered intensely from cold, snows, &c., with no other food but native black bread and a kind of molasses. When finally he reached Angora, and bought his goats, two rams and ten ewes, he ran short of money, and had to telegraph to California for credit at Constantinople. He borrowed from a friendly Scotchman, and started for the coast. He had nine mules and three donkeys, on which the precious goats were slung in boxes, while other of the animals were loaded with provender and baggage.

He tried to reach Smyrna, but after floundering in the mountains some days was obliged to return to Angora. He then turned north to Ismid, where he struck rail to Constantinople. There he found money from his partner, paid his debts and the export duty and "bucksheesh" demanded by the Turks. He went from Constantinople to Liverpool, and thence to Baltimore safely.

Mr. Harris says, that including all his expenses since leaving home, the goats have thus far cost him \$525 apiece in gold, or a total of \$6,300, and he has yet to take them across the continent to California by rail. Mr. Harris is a middle-aged Scotchman, decidedly modest, and does not think he has performed a remarkable journey in the wilds of Central and Western Asia. When he left California he and his partner had 1,700 goats on their ranges at Hollister, Benito county, where he has been 17 years. He thinks he has found that by proper breeding California is especially adapted to producing mohair wools.

The goats on the Sardinian are smaller than the ordinary animals, and have long silken fleeces of white wool. Both sexes have flat, corrugated horns about eighteen inches long that diverge from the front of the head. All are yearlings, and show no ill effects from their travels. Several kids have been born since leaving Angora, one of which, several days old, is alive and well. The goats were visited by thousands of people at Liverpool, where Mr. Harris was a sort of lion. He has with him specimens of cashmere and other wools, together with their manufactured products, obtained in Asia. The goats will remain at Locust Point until Monday.—*Sun*.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

For "To Exchange for Cash" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the Exchange or Want column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

F. C. SHEPHERD, Ithaca, N. Y., will exchange 1 trio S. S. Hamburgs, for Carrier pigeons.

MRS. FRANK E. CLARK, Washington, N. J., will exchange one pair White Crested Fantail, 30 and 28 feathers in tail, for a good wire squirrel cage, better inside, all in good condition.

J. B. PERRY, Cuyahoga Falls, Ohio, will exchange Partridge Cochins cockerel, or S. S. Hamburg cockerel, for Light Brahma pullet, or Brown Leghorn pullet, or Black African Bantam, or Dark Brahma Eggs. Speak quick.

AMATEUR PRINTER, Box 92, Myerstown, Penn., will exchange pair common Tumblers, White Fantail hen, and Faniers' Journal for '74 and '75, for either of the following pair Fancy Pigeons, (no Tumblers or Fans): parts of Illustrated Pigeon Book; pair Canaries, type, or good receiver. What offers?

A. L. BANKS, Mount Kisco, N. Y., will exchange four India Silkies, 3 hens and cock, imported; trio Spanglers, and trio American Leghorns, 1st premium birds, for a gold watch or brook.

M. L. & H. W. GRAVES, Northampton, Mass., offer eggs for hatching from high-class Brown Leghorns, Light Brahmas, and American Dominiques, in exchange for trio White Crested Fan cocks; also Doyles, Tegetmeier, or any other standard work on Poultry or Pigeons in good condition.

WM. H. NONNERMACHER, P. O. Box 413, Allentown, Pa., has seven Dark Brahmans to exchange for Houdans. Must be good stock, same as mine are; cock has solid black breast. Will exchange for two trios.

W. ATLE & BURPEE, Philadelphia, Pa., wants Toulouse Geese, and Bronze and White Turkey eggs, or stock, Dominiques, Houdans, Dominique and Black Leghorns, and Dorkings, in exchange for Leghorns, Asiatics, P. Rocks, Eggs, Mammoth seed corn, Fancy Pigeons, &c.

T. D. ADAMS, Franklin, Pa., will exchange his thorough-bred Irish Red Setter Dog, (1 year old and some \$50, for a first-class female Croker Spaniel; pedigree wanted, and gave given. What offers?

H. F. CHURCH, Newtown, Bucks Co., Pa., will exchange Brown Leghorns, B. B. Game Hen, \$12 violin, Black and Tan dog pup for Game Bantams. Good stock, and expect the same.

G. C. LEONARD, 115 Baldwin St., Elmira, N. Y., has to exchange for offers, a very fine pair of Angora Rabbits, from imported stock, warranted premium stock. What offers? Anything that does not eat.

IRA C. BROOKS, Petersburg, Menard Co., Illinois, will exchange a No. 1 violin, cost \$35, for Pekin ducks. Must be good.

W. E. FLOWER, Shoemakerstown, Pa., will exchange Light Brahma Eggs, for an equal number of Houdan Eggs, from good stock only; no other offers wanted.

FRID LUCAS, 1127 South 8th St., Philadelphia, Pa., has a fine new first-class German Concertina, (Zimmerman's), 20 keys, in fine tone and order; also a first-class pair of Black Moorcocks, which he will exchange only for first-class Fancy Pigeons.

C. M. GRAY, Trenton Falls, N. Y., wants to exchange Silver Duckwing Game Bantams, for Partridge and Black Cochins, Bronze Turkeys, or Light Brahmas; also eggs from Brown Leghorns, for Poles, &c.

C. V. HOLDER, Bloomington, Ill., will exchange 2 female Ferrets, Fowls, &c., for Pigeons, B. B. R. Bantam cock, Italian Greyhound, must be fine, not over two years old, or other stock.

R. G. FAIRSERVICE, East Newark, N. J., will exchange the P. C. cock, winner of 1st and special, (94 points), at Mount Kisco, for Partridge Cochins hens, or L. B. hens.

R. G. FAIRSERVICE, East Newark, N. J., will exchange L. B. cockerel, winner 1st and special, (90 points), at Mount Kisco, for P. C. hens, or L. B. hens.

BOX 27, PRESTOTT, ONT., CANADA, will exchange one Black Trumpeter hen, one White Fantail tom, and a sitting of Blue Andalusian eggs, for one Blue Pied Pouter hen. A first-class one wanted, or no exchange.

D. A. CARTER, 37 Kimble St., Utica, N. Y., will exchange 1 small steam boiler, suitable for running a small engine, or make steam for heating purposes—will bear 30 pounds of steam—for Himalayas and Lop eared Rabbits, or Poultry.

D. A. CARTER, 37 Kimble St., Utica, N. Y., will exchange fine White Turtle Mail Kid Goats, and White Angora Rabbits, for common or fancy poultry. Price, \$10 in cash. No one need apply after April. Who offers for Goats.

J. A. WALFORD, 257 Fountain St., Providence, R. I., will exchange Fancy Pigeons, consisting of Owls, Barbs, Swallows, Fantails, and Tumblers, about 30 pairs. What offers?

G. W. LITTLE, Sherburne, N. Y., will exchange the following Games, hatch 1875: one pair Spanglers, one pair Blue Reds, one pair Brown Reds, and a number of Silver Duckwing Bantam stage, for Brown Leghorn hens, or pullets. Second class breeders need not apply.

P. H. HORNE, Stoughton, Mass., will exchange Brown Leghorn eggs from premium and selected stock, for offers in books, jewelry, or anything useful; also trained male Ferret, perfectly tame, fifth clutch. Make offers.

DR. MARTIN, Mercersburg, Pa., will exchange any of the following for Fancy Pigeons: Nice aquarium tank, with pebbles and shells, all complete, large enough for 8 fish, worth \$12.00; trio S. S. Hamburgs, or B. Cochins, L. Brahmas, Houdans, or Black Spanish eggs; apple and peach trees, grape vines, strawberry, or boxwood plants.

G. O. BROW, Brooklandville, Md., has one pair each S. S. Hamburgs, Golden Poles and Houdans, will exchange for Rose-comb American Dominiques, or offers; also choice stereoscopic views, for eggs from same fowls, or other offers.

T. J. McDANIEL, Hollis Centre, Me., has to exchange, one G. S. Bantam cock, a fine bird; one pair Mottled Tumblers, one revolver, and a few Brown Leghorn eggs, from stock scaling \$7 to \$7 points, for watching subscriptions to this Journal, poultry books, old or new, or good setting hens of any breed or crosses.

No. 16.

ADVICE.

Fly away pretty moth, to the shade
Of the leaf where you slumbered all day;
Be content with the moon and the stars, pretty moth,
And make use of your wings while you may;
Though yon glittering light may have dazzled you quite,
Tho' the gold of yon lamp may be gay,
Many things in this world that look bright, pretty moth,
Only dazzle to lead us astray.

I have seen, pretty moth, in the world
Some as wild as yourself and as gay,
Who bewitched by the sweet fascination of eyes,
Flitted 'round them by night and by day;
But though dreams of delight may have dazzled them quite,
Many at last found it dangerous play!
Many things in this world that look bright, pretty moth,
Only dazzle to lead us astray. [Ledge.]

(For Fanciers' Journal.)

TRADITIONS RELATING TO BIRDS AND ANIMALS.

Certain traditions relating to birds and beasts are only explainable on the supposition that they were once objects of divination or worship. The old Germans, we know from Tacitus, used white horses, as the Romans used chickens, for purposes of augury, and divined future events from different intonations of neighings. Hence it probably is that the discovery of a horse-shoe is so universally thought lucky, some of the feelings that once attached to the animal itself still surviving around the iron of its hoof. For horses, like dogs or birds, were invariably accredited with a greater insight into futurity than man himself; and the many superstitions connected with the flight or voice of birds resolve themselves into the fancy, not inconceivable among men surrounded on all sides by unintelligible tongues, that birds were the bearers of messages and warnings to men, which skill and observation might hope to interpret.

Why is the robin's life and nest sacred, and why does an injury to either bring about bloody milk, lightning, or rain? The Christian legend says that it extracted a thorn from the crown of Christ, or that it daily bears to hell a drop of water to put out the flames, and accounts in either way for the red dye on its breast. But this is evidently a mediæval gloss to some heathen belief, like the unluckiness of the magpie, that it would not enter the ark, but sat jabbering outside over the drowned world; or like the idea of the aspen still trembling at the part it played in the crucifixion. It has been suggested that the robin, on account of its color, was once sacred to Thor, the God of lightning; yet, is it not possible that its red breast singled it out for worship from among birds, just as its red berries the rowan from among trees long before their worshippers had arrived at any ideas of abstract divinities?

All over the world there is a regard for things red. In the highlands women tie some red thread around the cows' tails before turning them out to grass in spring, and tie red silk

around their own fingers to keep off the witches; and just as in Esthonia mothers put some red thread in their babies' cradles, so in China they tie some around their children's wrists, and teach them to regard red as the best known safeguard against evil spirits. Indeed, one of the chief lessons of comparative folk-lore is a caution against the theory which deduces popular traditions from Aryan or other mythology. We have already alluded to the fact that in parts of China, the same feelings prevail about the swallow as in England or Germany. But there are yet other analogies between the east and the west. A crowing hen is an object of universal dislike in England and Brittany, and few families in China will keep a crowing hen. The owl's voice is ominous of death or other calamity in England and Germany, as it was in Greece (except at Athens); but in the Celestial Empire also it presages death, and is regarded as the bird which calls for the soul.

And the crow, also, is in China a bird of ill omen. Is it not, therefore, likely that all popular fancies about birds and animals have begun in the same way, among the same different races of the globe, and were subsequently adopted, but never originated by mythology? May it not be that certain birds or animals became prominent in mythology because they had already been prominent in tradition, rather than that they became prominent in tradition because they previously had been prominent in mythology? For instance, instead of tracing a dog's howling as a death omen to an Aryan belief that the dog guided the soul from its earthly tenement to its abode in heaven, may we not suppose that the myth arose from an already existing omen, and that the latter arose, as omens still do, from a coincidence which suggested a connection subsequently sustained by superficial observation? The St. Swithin fallacy which arose within historical memory and still holds its ground in an age of scientific observation, well illustrates how one striking coincidence may grow into a belief which no amount of later evidence can weaken or destroy.

Just so, if it happened that a dog howled shortly before some calamity occurred to our Aryan forefathers, thousands and thousands of years ago, long before they had attained to any thoughts of soul or heaven, we can well imagine that the dog, which already betokened death, should, when they came to frame the myth, be conceived as the guide which was waiting for the soul to take it to heaven, and that the belief thus perpetuated by the myth might survive to the latest ages. It, at all events, militates against the exclusively Aryan nature of the belief, and exemplifies the extraordinary coincidence of ideas among different people, that the Esquimaux lay a dog's head by the grave of a child, for "the soul of a dog can find its way everywhere, and will show the ignorant babe the way to the land of souls!"

A well known dentist in Paris has been arrested accused of having for four year past, while drawing and cleaning teeth, introduced slow poison into rich patients' mouths at the instigation of their heirs, and thus committed many murders. Two hundred witnesses are said to have been suborned.

POULTRY DEPARTMENT.

(For *Fanciers' Journal*.)

"TRIPS AMONG THE FANCIERS."

BY W. E. FLOWER.

The shrill crowing of the cocks in "Montvue Poultry Yards," awakened us in the morning from our slumbers, and after a hearty breakfast Mr. Brown accompanied us to Baltimore. Here we met Mr. S. H. Slifer, President of the Maryland State Poultry Association, who kindly volunteered to drive us around the city; which offer was gratefully accepted. A few minutes' drive brought us to the residence of Mr. S. where we were shown his excellent collection of Almond-bred Tumblers. Mr. S. makes a specialty of Tumbler Pigeons, and has in his breeding pens some of the prize winners in this class (birds of his own breeding,) at the late Baltimore show; he also has several pairs of very fine Blue Owls. Our attention was next directed to a very pretty trio of Brown Red Game Bantams. We regretted our inability to visit Mr. S.'s farm, some ten miles out from the city, which contains some eight hundred acres, upon which Mr. S. contemplates (at some future time) starting in the "Poultry business" on quite an extensive scale.

From Mr. Slifer's, we drove to the Pigeon Loft of Mr. David Mordecai, through which we were conducted by a son of Mr. Mordecai. We used to think that "friend Wade" fixed up a great deal for his pigeons, but we had never seen a loft fitted up with all the "modern conveniences," such as "gas," "fire, and water," but as this loft has been fully described once before in your columns, we will simply state that its occupants are equally as "high class" as their handsome and well appointed home. Mr. Mordecai, probably, has one of the finest collections of Black and White Barbs that can be found in this country, and as we gazed admiringly at them, and the diminutive Owls and Turbits, the splendid Carriers, and Antwerps, the snow-white Fantails, Trumpeters, and Clean Cut Magpies, we are afraid we broke at least, one of "the ten commandments," and we doubt if any of your readers could visit this loft and not covet some of its beautiful feathered occupants.

From Mr. M.'s we drove to the residence of Mr. T. S. Gaddes; Mr. S. having previously called upon Mr. G. at his place of business, and obtained an order for our admission. We were told that we might congratulate ourselves upon obtaining the "entree" to this loft, as there are probably not one-half dozen men in Baltimore who could obtain permission to enter it. The interior is fitted up in the same manner as that of Mr. Mordecai's; in fact, we believe Mr. M. built after the plan of Mr. Gaddes. Here we saw a beautiful collection of Carriers, Archangels, Almond Tumblers, Swallows, and Antwerps: we had expected to see something fine; and were not disappointed. The Carriers were grand birds, both in eye and beak; the Swallows were beautiful in color and markings, as were the Priests, and the pretty little Almond Tumblers; having feasted our eyes to our satisfaction, we signified our readiness to depart.

From thence we were driven to the loft of Mr. Charles Becker, and found that gentleman in readiness to show his stock. Mr. Becker makes a specialty of Pouters of the various colors, and will have the best specimens that money can buy, and prices were named for specimens we saw in his loft, which would purchase a good "Morgan horse;" and added to this, Mr. B.'s skill as a breeder, has enabled him to obtain one of the best collections of Pouters in this country. Possibly some "Fanciers" may have single birds, or even a pair or two which will equal Mr. Becker's best birds; but, take them as a whole collection, we doubt if their equal can be found. As we watched them in their graceful movements, we mentally wished that "Tennet," or our mutual friend Shannon, were with us to enjoy the pleasure the sight afforded.

Leaving Mr. Becker's we returned to Mr. Slifer's for dinner, where we were joined by friend Brown, who assisted in doing ample justice to the bountiful meal presided over by the amiable wife of our host. After an hour passed pleasantly with Mr. Slifer, we bade him adieu, and with friend Brown for our "chaperon," we once more started forth. A few minutes walk brought us to the residence of Mr. Charles D. Parker, dealer in nearly all the various varieties of "fancy" Pigeons. Mr. Parker has in his loft some choice young Barbs, and Carriers, and many other kinds which it would be impossible to enumerate, and as the day was far spent we wended our way to the depot, and were soon bound once more for Brooklandville, with friend Brown.

As a matter of course after tea, the conversation reverted to the different incidents of the day, and the evening passed quickly and pleasantly away, and "you know how it was yourself," so we retired for the night well pleased with the manner in which we had spent the day.

To be continued.

(For *Fanciers' Journal*.)

A LEAF FROM THE LIFE OF A CHICKEN.

A NARRATIVE BY A DARK BRAHMA HEN AS RELATED TO THE WRITER.

"The first recollection that I have of my existence was of finding myself one morning in a soft, warm nest, in company with a whole brood of bright-eyed, downy little chicks, just like myself. Our master (who was a pleasant looking man) gently lifted our mother off the nest, and then counted us out into a little basket, 'two, four, six, eight, ten, eleven out of thirteen, and two dead in the shell,' I heard him say, and he seemed quite well pleased at the number, but our mother said it would take 'hard scratching to find food for so many little mouths.' Our master placed us in a nice, clean, dry coop, along with our mother, and fed us some nice hard boiled eggs, and gave us some pure, clean water to drink. We were very happy, enjoyed ourselves very much; but that night, after we had all gone to bed, and were fast asleep under our mother's wings, a great big rat came and carried off five of my little brothers and sisters, so that when our kind master came to give us our breakfast in the morning, there were but six of us left. You may be sure he was very angry, and said it was 'too bad, after all the trouble and expense he had been at, to get us' (for I learned that we were a choice kind, Dark Brahmas.)

Well, our master went and got a little dog, they called him 'Scotch,' he had long, coarse hair, and sharp pointed ears, and a little short, stumpy tail, and he looked so fierce, I was afraid of him, and ran into the coop to our mother; but she said, 'he would not hurt me, but would kill the rats that had killed my brothers and sisters.' Our master and another man tore up the floor of the pig-pen, and I heard them say that 'Scotch' killed nine big rats, and I guess that was all of them, for they never troubled us again.

But one day after we had grown a great deal larger, and were able to run and catch grasshoppers, bugs, beetles, and scratch for

worms, one of my little brothers who was chasing a big, fat cricket a long way from the coop, was caught and killed by a big hawk. Out mother saw the hawk, and screamed loudly for us to hide, or run into the coop, but little "black breast," as he was called, was too far off to hear, and the hawk swooped down and caught him in his cruel claws and we never saw him again. Our master was very sorry, as he said that "little black breast" was one of the best of the lot, and that between the rats and hawks he would not have a chick left for exhibition." He said he would give any one five dollars if they would "kill the hawk," so the next day a man came with a gun and sat under a tree to watch for the hawk, but he waited a long while, and at last fell asleep. It was a very nice warm day, and the grasshoppers and crickets were so plenty and tasted so good, that we forgot all about the hawk until we heard our mother "scream that the hawk was coming." We all ran back as quick as we could, but the hawk caught one of my little sisters this time, and started for its home in the woods, but our mother's "screaming and crying" had wakened the man, and he took aim at the hawk, and shot it quite dead, who had thrust his sharp claws deep into the body of our little sister, and she was dead too; they took the hawk and nailed him up against the side of the barn. A few days after the man shot another one which they said was its mate.

When we had grown quite large, and were all covered with nice feathers, our mother told us that we "were large enough to take care of ourselves," besides our kind master fed us every morning and evening, so that we could get along very well without her, and she commenced to peck and beat us out of the coop. Our master then took her away, and I heard that she was sold to a man who kept "summer boarders," and killed and eaten for a "spring chicken." A great many people called "Fanciers," used to visit our master, and they used to look at our combs, feet, wings, breast and tail, and they talked a great deal about the A. P. A., and the "New Standard," and the "FANCIERS JOURNAL," "BULLETIN," "WORLD," and about Wade, Williams, Sweet, Todd, and a great many things that we did not understand.

Time passed, winter came with frost and snow, and one day we (that is, one of my brothers and I) were put in a nice, wire cage, and we went a long way in the cars, and at last came to a place called "Boston" where we were taken to a large hall where we found a great many other chickens of all kinds, and such a noise and bustle as they made, crowing, cackling, and singing. A great many people came and stood in front of our cage and talked about penciling, symmetry, fluff, condition, and a great many other things that I do not remember now. Then there were a great many ladies and children came to the hall to see us, and the other chickens. Then two men (they called them Judges) came with a book and a pair of scales, they took us out of the cage and weighed us. At first I was very much frightened as I thought they wanted to see if we were "fat enough to kill," but I learned afterwards that it was to find out which were the best birds. Well, after a great deal of talking, they agreed that my brother and I were the best pair, and then they tacked a card upon the front of our cage which said "First Premium." Our master was very much pleased, and was offered a large sum of money for us, but he refused to sell us, and said he would keep us as long as we lived. We were very tired before the show was over, as they made us stand up whenever we wanted to sit down and kept us up every night until past ten o'clock, which was quite contrary to our usual custom at home, and returning home from the show the expressman left us out in the cold, biting wind, which after our week's confinement in a warm room gave us the "roup," a frightful disease, from which I did not recover for some weeks, and which caused my brother's death a few days after his return home. I am an old hen now, my dear little chicks, and have been to a great many shows since then. My brothers and sisters are all dead, and I am

the only one left of the family of eleven little Dark Brahma chicks which first saw the light of day under the manger, in the horse stable, over yonder. And the old hen clucked softly to her brood as they nestled beneath her wings as the night settled slowly over hill and dale.

W. E. F.

PACKING EGGS.

We again have the egg season upon us in full swing, and once more we have a few words to say upon the subject, but it is more to the packing of the eggs that we would refer to on this occasion. Everyone nearly has their pet way of sending their eggs, and doubtless there is something to be said for each system whether boxes or baskets, chaff or hay, be in use. We would not pretend to dictate or to say that one way is especially superior to another, for we should be inundated with letters from indignant egg-packers, each exemplifying their assertion in praise of their own method by some wonderful successes, and we should believe them, for we have known eggs to hatch, and hatch well, which have been packed in divers ways. Perhaps the most remarkable of all cases which have come under our own knowledge is when twelve eggs were brought from Malta in a *pie dish*, and eleven of them hatched. We actually saw the chickens and know it to be true.

In just touching on the various ways of packing in use we would only put our young hands on guard against faults they may be led to make. When boxes are used the labels must be nailed on before the eggs are placed in them, and the lid be screwed down, not nailed. Although we have known eggs hatched in boxes where nails have been used, still it is a great chance if the eggs do not get jarred by the hammering. Then the points of the nails used for fastening down the label should be clenched on the under side, or the points might run into the eggs; for only last week we had a package of eggs from a gentleman where the utmost care had been taken to screw down the box, but the label had been afterwards fastened down with inch nails and had penetrated the shells of several eggs. We cannot consequently recommend amateur packers to be too careful over this. Then every egg should, in our opinion, be securely wrapped in a piece of paper; it helps so much towards guarding the eggs from being jarred in transit. But even here we know of one of our greatest Dorking breeders who has marvellous success with the eggs he sells, and who simply places the eggs in chaff and ties down the box, using neither nails or screws; and we saw a letter the other day from a gentleman in Jersey, stating he had hatched nine chickens from twelve eggs so packed; but the secret here is the string—we are convinced of it. It makes something for the many hands a parcel of this kind has to go through to hold by, and this is the greatest point of all. We would urge on every-one, never mind whether you pack in hay, or chaff, or sawdust, or moss, let the box or basket, whichever is used, have a handle, either made of string on the box or of wicker on the basket, but let there be a handle. No one but an eye-witness has any conception how a handleless package gets knocked about. One porter passes it to another, and perhaps he to the guard; or it has, may be, to go by a carrier, or a servant is sent to the station for it, and so the harm is done. It is not the distance does the injury, but the knocks and tumbles the packages get. Now if they all had handles they would in most cases certainly be taken up by them, and the chance of the eggs hatching would be greatly increased.

As we said, we wished to disparage no pet ways of packing, but we would venture to warn our friends against the use of bran, oats, or sawdust—i.e., when they are used alone; for however full the packages may be filled with such mixtures, a long journey will shake the contents down much closer, and the eggs will very probably come in contact, when they will necessarily be

cracked, and the contents running out from one or two so cracked eggs might ruin a whole sitting. We have, moreover, ourselves seen eggs in a package pierced by the sharp ends of oats; but this would not often be the case except in very thinly-shelled eggs, and such should not be sent out at all as a rule. One or two of our friends use moss, and we believe with immense success, but even then we should always recommend the box being lined with good and soft hay first.

In the use of baskets we have noticed so many which are made with a small round bottom, sloping up to a larger top; but these baskets are so liable to tilt over. We should always have them made sugarloaf-shaped, when they are able to withstand a good shaking without fear of falling over. We have used, ourselves, with great success, baskets of the shape of the wicker cases in which spirit jars are often encased. But of all egg baskets a long way ahead are, in our opinion, those used at Early Wood. They are oval, and are just as country women go for the Saturday shopping with, having huge, upright handles, which it is impossible not to take hold by, for they, being tied together at the top, form a most perfect handle.

All most allow it is but correct for a sitting of eggs to be properly and securely packed when sold, that have to go any distance by rail or carriage, and that the purchaser naturally looks for it. We would, however, ask purchasers not to be too quick in writing sharply about the non-success of a sitting, for often the blame may be traced to their own doors; and, if not, one severe fall at a station or one heavy jarring would often ruin the whole success of a sitting. And we hear, too, repeatedly of failures among the eggs of our most honest and upright vendors, whose other eggs sent out have done well, when the cause could only be traced to some such accident as mentioned above. But that a handle easy to lay hold of is of great value to every egg-package we are quite sure, and would always recommend purchasers to insist upon it.—*W. in Journal of Horticulture.*

"THE BULLETIN AND OUR STANDARD."

Such was the heading of an article in a late number of *FANCIERS' JOURNAL*, signed by "Young Breeder."

Y. B. starts out well, in quoting the advice of his legal friend, but unfortunately he forgets the application of the advice in *this* case, and does not exercise his common sense. He quotes, "the Law is common sense and nothing else." Next he says, "Now the *Standard is Our Law*," and then goes into a learned dissertation to prove that every one who will not swear by his law, and who possesses more than his modicum of common sense must, perforce, be a "sore-head."

Now, taking his assertion as fact, that the *Standard* is our (his) law, and that that law is common sense, I must call the attention of your readers to a few illustrations of that commodity in this model law.

But first this young fledgeling is greatly distressed about the toe-feathering of the Brahmas. He states, "The Editor of the Bulletin says, * * * the outer toes being well feathered to the ends thereof." No! young one, we didn't say any such thing and the *Standard* don't say so either; it says, as one of the disqualifications, "Shanks not feathered * * * to the extremities of the outer toes." (What shanks your chicks must have, Y. B. if you practice what you preach). But we'll drop that subject, for Mr. Felch has already acknowledged what the committee "meant to have said."

To proceed:

In the Brahma and most of the Cochin classes, twisted wings are not mentioned as a disqualification.

In the Partridge Cochin the under-plumage of the cock is given as "a rich black."

In the description of Blue Games, the plumage of the hen is stated as "throughout, a rich, dark blue."

The standard for Colored Dorkings, we have already shown up, (see March issue, *Poultry Bulletin*, page 184.)

In Silver Polish, the beard of cock is given as "silvery white, each feather distinctly laced with black." Belden—do you know who he is, Y. B.?—says "very dark." "Our Law" says of the tail of same variety, "silvery-white in color, each feather ending with a rich black spot." Belden says "gray," and that the dark tailed birds always breed the best chickens,"—but he must be a "sore-head."

Then in Creveceurs, "colored" feathers, (red, yellow or brown?) are *not* a disqualification in the crest; and as black *is* a color, and white is *not*, white feathers must (by Y. B.'s law) be allowed in any part of the plumage, and we shall have a "Standard" Creve with a white body and black crest. And then the hen has a "large and globular head."

But why extend this any further? If the *Standard* is Y. B.'s law, as he claims, we expect to see him exhibit fowls agreeing with his description. If he takes no prizes, he can fall back on his dictum that "The *Standard* was not made principally for the use of Judges and newspaper men."

Ah! It was not made principally for the use of Judges. Oh! Then "we trust we may be allowed to surmise" that it *was* made principally for the Y. B.'s. Well on the whole, we do think they have most need of it, and sincerely hope that they may follow up that "thumbing" process, and learn what a Blue Game hen, or a Silver Polish cock, or a Colored Dorking "shall be." Y. B. says, "the *Standard* tells how they are breeding them," so we shall not need to "go to their homes."

EDITOR P. B.

OUR HENS.

MR. EDITOR:—I think it must be quite provoking to those who are trying to find out the best methods for taking care of hens so as to secure the best pecuniary results, when they see such lengthy and often, in some respects, conflicting advice given as to how it is to be obtained. Very few writers whose views I have seen, agree in all respects on this matter. Some no doubt reiterate the views of others, combining them with some experiences of their own.

Long catalogues of needed food are given as being requisite to obtain the greatest number of eggs. Others tell us how and when to give it, and still others, with much sincerity, tell us to what breed we should give it. With many, no doubt, *fancy* plays an important part and influences, in some measure, the selection of the breed commended. I suppose it will be as impossible to harmonize the views people entertain respecting the profitableness of different breeds of hens as it is the views they have as to the qualities of different breeds of farm stock, and best modes of management to attain the same end.

This fact, however, shall not deter me from naming my own choice of fowl, why I prefer them, how I feed them, why I feed as I do, and the results of my practice, which is, after all, the great desideratum. In 1863, I commenced with a flock of Light Brahmas, twenty-five in number. Their return in eggs and chickens netted me over four dollars each. This result decided me in preferring them to all others. It was of little consequence to me what were the merits of other breeds so long as I could secure so satisfying results from these. As may be naturally inferred, I enlarged my flock and their quarters, keeping fifty fowls the next season, furnishing them with a house of two stories, so as to give them all the sun that shone.

The lower story had a room for storing food, another for roosting; the upper story for nursery and laying; the whole plastered; chimney and stove in the nursery. The roosting room was dug

down two feet into the earth and cemented, both floor and walls. The coldest weather rarely carried the thermometer below freezing point. The result of all this care and comfortable provision for the fowl was that they did not make so good returns *pro rata* as I received the previous year by more than thirty-three per cent. I may as well say that I had no reason to expect as good returns as the first year's as that experience was exceptional. We cannot expect to have fowls do as well in large flocks as they do in small ones. There are many reasons for this that are quite obvious. Another reason is one I have never seen in print I think, and one too that is of much practical importance. Fowls do not like a plastered wood, brick, or stone wall. For some cause, they will go any way, and almost anywhere to roost in preference to going into such rooms.

My experience of this fact was when I first began farming. A stone house, 10x14, covered with stone flagging and earth, over that was my hen-house. I kept it clean. Had loam to use under the perches, nice clean rests, &c. The hens would lay anywhere rather than in that house, and I had, excepting in the roughest weather, to drive them into it to roost. Several houses of the kind were in the town, and so far as I learned, the same result was experienced.

I know of several like experiences with my own. I have said enough to turn thought in this direction. I would prefer, on some accounts to have plastered walls, but am sure the fowls do not like it.

AS TO FEED.—On the farm where corn and oats were always grown, equal quantities of them were given; ground scraps, boiled turnips and potatoes, in the winter—turnips preferred; mix with the roots, while hot, two quarts of scraps and five of Indian meal to the bushel; cabbage in the winter as a substitute for grass; wheat and wheat screenings occasionally for a change. I am not sure but that wheat all the time and a feed of corn once or twice a week (the vegetables and cabbage in winter) will give better returns than any other feed. I incline to this opinion. Keep gravel, shells, and old mortar accessible at all times, and good clean water. The foregoing articles are what I have used. I give all the grain I feed in troughs, so that it cannot be wasted or soiled in any way, keeping a supply all the time accessible.

It is much less trouble to feed in this way—better for the fowls, and they consume less food. The first idea, as to being less trouble to keep food by the fowls all the time will be admitted, without question. The other two propositions, some will question, therefore I will explain how it can be so. We have fed fowls know how voraciously they will eat when the food is thrown to them from the hand, and how they will gorge themselves until they cannot swallow any more. They appear to act as if they did not expect to be fed again until night came, and when it did they were prepared by hunger to eat as greedily as in the morning. By reason of this unnatural stuffing of themselves at night, they are, without doubt, liable to weaken their digestive organs and impair their health.

I am aware that some think that having food at all times accessible accomplishes the same result. With me, it is not so. The Brahmas come from their perch in the morning, eat but little, drink freely; if a cold day or snow on the ground, go to some comfortable place about the buildings, bask in the sun, if it shines, use the dust box, eating but little until the after part of the day, when they eat a hearty meal. This has been the habit of my hens for many years. They appease their hunger whenever it occurs, never gorge themselves, never get too fat, of which there is no danger, unless they are kept to be over two years of age, which I never do, now I have found the truth respecting the matter. The result of this method is a good, generous contribution of eggs at all times, healthy fowls, which at the age of 18

to 20 months will weigh from six to eight pounds each, ready for the table or market, as they have to give place to the pullets that were hatched in February or March and are ready to lay about this time. I will here say that early-hatched chickens will make larger fowls and lay better than late-hatched ones. By this method I think our tables can be supplied with flesh food at less cost than by any other. Another item of no small account as to income from poultry ought not to be omitted, viz.: the manure. When properly attended to, each fowl ought to be credited with one dollar annually. At this price, it is the cheapest fertilizer I use. Some who read of the success of others in keeping hens and their method of attaining it, undertake to accomplish the same results. They fail, and scold because of being duped, as they suppose, when in reality there was a radical neglect or omission on their part that caused their failure.—*New England Farmer.*

February 16, 1876.

THE POULTRY FARM.

At this season of the year there is naturally an increased interest in the poultry yard, though we think the plan ought to be to treat fowls in such a manner as to have them lay in winter, at a time when eggs are at the highest price. With eggs at forty or fifty cents a dozen there is some sense in having a few dozen a day, and that the thing is practicable we know from one or two instances that have come under our observation the past winter. It has been done and it can be done again.

There is now a wide spread interest in the subject and we hope instead of being a temporary fever, it will go on hopefully till the poultry interest takes its natural and relative position in the rank of farm labors. As compared with other countries, this department has been neglected, but of late years it has fast grown in popularity. The French have always produced a greater number of fowls and far finer ones than we have, poultry forming an important part of the live stock of the farmer, and it is said the poultry yard supplies more food to the masses than the butcher's shops; while in Egypt, and other countries of the east, from time immemorial, vast numbers of chickens have been hatched in ovens by artificial heat, to supply the demand for poultry. In this country, however, poultry-breeding has been neglected, eggs are dear and all kinds of poultry so great a luxury that the lower class seldom, if ever, taste it, except in the shape of a Christmas turkey or goose, while hundreds of thousands cannot afford even this.

It is a great mistake feeding our cattle upon corn and grudging it to our poultry; although the return from the former, it is generally admitted, is not over five per cent. beyond the value of the corn consumed, whereas an immense percentage can be realized by feeding poultry. While it takes five years to fatten an ox to the weight of fifteen hundred pounds, which will bring \$120, the same sum can be realized in five months by feeding an equal amount of poultry for the table. A man who expects a good return of flesh and eggs from fowls insufficiently fed and cared for, is like a miller expecting to get meal from a neglected mill, to which he does not supply grain.

It becomes an interesting wonder every year why rural cottagers of this country do not rear fowls almost universally, seeing how little the cost, and how great the demand. Wherever there is a family living on potatoes or better fare, and grass growing anywhere near them, it would be worth while to nail up a little house, and make nests of clean straw, and go in for a speculation in eggs and chickens. Seeds, worms, and insects go a great way in feeding poultry in such places; and then there are small and refuse potatoes from the heap, and outside cabbage leaves, and the scraps of all sorts, and these, with very small purchases of inferior grain and a little meal, would be all that would be necessary.

To those who are breeding poultry we would say, keep only good, healthy, vigorous, well bred fowls, whether you keep them

to produce eggs or chickens or both. The ill bred, mongrel fowls which are commonly kept, are the most voracious, and consume larger quantities of food, without turning it to any account; while well bred fowls eat less, and quickly convert their food into fat, flesh, and eggs.—*Ploughman.*

I VAS AD SHECOWGO MISELEF.

How dot vos about dot Shecogwo shows? Id vos becular, dond id? I read me purdy much about him, bud more as I read, de more I got confussed mit myselef. Dings vos managed ynsd like id vos conducted mit *cabined* ossifers from Vashington—Katrina she vos a purdy goot shudge mit human nadure, (I expose acause her fader he vos a shudge) ond she dold me long dime ago she say "Hans, dot "Nadional" bromise do much, id vos do much sbread eagles sdile mit id; I dink dey vos *bie crused* bromises made do pe spoken." About she vos ridt, dont it.

Vell: go ahet, "sdeal my gooses and sidick medown a feader." Id vos acases mit, "sudden glory soon gone ride away ond" (dat lasd skendense I found in a Batent ossif Report for 1865). *Vell*; ve all as fanciers dit feel a bride mit dat Shecogwo shows, and dried do make id a successes. Id looked brilliant from dot outside vey of dings, bud "the credid cot mit a lie, lasds only dill dot drudh bops ond," and den ve know how id vos myselef. "*Cabined fecor*" vos contagious and do check ids sbreading doctor *Reforms* must adminisder a few doses of investigations. *Vell*, of Greecae Horly he didnt gone and dold beoble do gone vesi, dere dond would have been so many beobles ond dot vay, and den ve wuld nod have hab dot Shecogwo elefant to easd ids shadow over mit all of our assosiations. *Vell*, I vos glat do see dot de Shournal had game ploat enough to speak ride away ond about id. No doubt ids good intendions vill be miscondruct (by dose who will nod be anxious do have the ride side ond) and exblanations as clear as mud be given to show every ding vas O. K. *Vell*, I go me ond do Shecogwo miselef, and as I vos had such a good dime ad Paffalo mit a disguise dot I disguise myself ven I gone do Shecogwo. —I pud on mit my shird a new baber kollers, *chalket* my noses, pud on green sbecdacles, and ven I go me do dot Bost ossif and call for my ledders, I say "of you please." I go me do Shecogwo mit dot next drain expresses, and I dook my ledders ride away ond, dat pome smader he say—"Vell, vot your name vos," I dold him "vy vots mit you de madder you yost so vill as me no dot I vos Hans Schneider." "I dond see id," he said. "*Vell*," I say as I bulled off dem green glasses, now vos you no me, aind id." He dold me of I yust keep my noses *chalket* like dot vay, no vould ever no me. Dot forsd berson I need vos misder Sweed, and I say "Miser Sweed you vos so glat to see me how vos I, vos beaufeul vether demorrow, fine show, dond id." He give me a beculiar look and said

"My friend you vos cot mit me de adwantage."

I set if so dot vos de first berson vot I ever did cot any adwantage mit, I dold him my name vos Shon Smidt—den he say does de A. P. A. belong do you id ond do be von of your members; Vos I a live member. I dold him Katrina she say about meal dime I vos a live member. Yust then Mr. Bicknell he come smiling, and Mr. Sweed he say:

"Bicknel dis vos Misder *Shon Smidt*, maybe you vos hear mit him afore, he vos I dink from dot *strain* of Smidts dot saved dot life of King Powhatan, ven he vas about do be thomas hawket mit a big vor Klubs by Pockahontas." Mr. B, said he vas *acsdonished*—Vell, so vos myself, I dont know afore dot Mr. Sweed know anything about pedigree. *Vell* Mr. B, he explain me about differend Breets mit ducks—I got the duck fevor, and send do a man for a trio of peaufeul *decay ducks* and ven dey gone do me dey vos *Wooden ducks*. *Vell* I vas sold—I buy me a fine looking pull dog—and de man vot own him, dold me he vos a good

vatch dog and vould greatly gid attached mit his masder ride away. I dook dot dog home, bud him in do barn, and by shimminy he dont led no von come in; I dried for three days do coax him, bud he didnt vas on the coax—the fourth day he made no fuss, so I vent in, and I see a beculiar exbression of his eyes so I dry do get out, bud he come for me, and he dook me by the send of my breeches, bud I didnt sdob—but let him keep a big moudful of my bands. A liddle vile affer I give him seven buckshot, two denbenny nails, and an ounces of bowder, ven he laid ride away down and vas kwied. Of you ever pay a pull dog, dond pay dot kind vot ged so *addached* mit der maslers.

Druly Vours, efry diem,

HANS SCHNEIDER.

April 12th, 1876.

UNITED STATES CENTENNIAL COMMISSION.

BUREAU OF AGRICULTURE,
PHILADELPHIA, April 1st, 1876. }

SIR:

The Exhibition of Poultry will open on Oct. 27th, and close on Nov. 6th.

The display will be made in coops, provided by the Commission, and located under the shelter of the Cattle stalls, which will be prepared for their reception.

To meet the expense of coops and feeding, an entry fee of one dollar upon each bird of the Gallinaceous division, and two dollars upon each pair of the Aquatic division, must be paid to the Commission before the Chief of Bureau finally signs the permit of entry.

Transportation and terminal charges must all be paid in advance, or the Commission will not receive consignments.

Full information relative to transportation will be furnished upon application.

Each coop used in the transportation of birds must be of sufficient strength to serve for their return, and must be marked with the proper shipping directions.

Numbers alene will distinguish birds in the show yards preceding the award of prizes.

All specimens except Games, and Game Bantams, must be exhibited in natural condition; pulling, splicing, or inserting feathers, coloring, or otherwise altering the appearance of birds, will bar them against entry.

Misstatements as to age, or breed, will cause the exclusion of birds from the stock yard.

Birds of evident inferiority will be denied admittance even though the owners may have received a permit.

Birds may be sold at private sale at any time during their exhibition; but no bird, in the event of being sold, will be allowed to be removed prior to Nov. 7th.

Special premiums from societies and individuals, must be awarded through the hands of the Centennial Commission.

Application for entry must be accompanied by a certificate from a recognized Poultry Society, to the effect that birds offered are considered to be worthy of competition.

Application forms for space can be had from this office. Entries are now being made, and will be in order till July 1st.

Yours respectfully,

BURNET LANDRETH, *Chief of Bureau.*
per C. HENRY RONEY.

REPLY TO YOUNG BREEDER.

I pity Young Breeder, to think that he has exposed himself to the attacks of so many breeders of Game fowls. Permit me to say that Young Breeder is certainly on the wrong scent. If he will just notice more closely he will find that the Game is not one half as likely to fly over that high fence he speaks of, as

those Brahmas and Cochins, and if he waits for practice of that kind before he goes snipe shooting, he will never go snipe shooting, and for a fact, I do not believe he could hit one, if he can not make a better shot at them than he did at the real facts in this case. He seems to think the Game is not himself till he has crowded, and I admit the Game is some like him—he likes to hear himself—but the Game means business, and he does not. And again, if he thinks that fowls will not do well in a barnyard, he had better make mine a visit, and I will give him a nice Black Red pullet, fattened on that very filthy article, manure, and I will bet my whole ranch that he cannot taste it in the fowl. As for laying, my Games outlay my Brahmas, two to one, the year round, especially in the winter. Perhaps he doubts that the Games are alert, graceful, and juicy-fleshed, I do not.

I can pick my Game cocks and most of the hens up at any time in broad daylight, and do not have to chase them two steps—even if he does not take any stock in a ten acre lot, for catching Games. Now for a little instance that happened yesterday. A next door neighbor has a Buff Cochins cock which had been in the habit of promenading along on his side of the fence all day long, and occasionally putting his head through between the pickets and crowing. And all this time my Duckwing cock, Johnny, was minding his own business; and, as usual, engaged in scratching that awful manure, never offering to return the Buff's insults. But yesterday, a gate between the yards being left open, Mr. Buff marched through, and right up to Duckwing and crowded, and in about two minutes rapid fighting the Buff ran home minus one eye, and Duckwing returned to his hens and manure—and I will say that he did not offer to chase the miserable Buff.

I keep Brahmas, and also Games, but like the Games best, and am convinced that one good plump Game is worth six pairs of standard legs and necks. Yet the Brahmas are not without their good qualities. Let us, by all means, hear from Burleigh again, and if Young Breeder will send me his address, and promise to give them a fair chance to show their good and bad qualities, I shall be most happy to give him a setting of eggs from those awful Game fowls.

MACK W. MINER.

P. S. If that small boy puts in an appearance at my yards, I will take my best exhibition bird, and in the course of an hour one of us two human beings will own a dead Game cock.

CONVENTION OF FANCIERS.

Pursuant to notice, a number of poultry fanciers met in convention in Wooster on Monday of last week, for the purpose of organizing a state association. A. C. Megrew was called to the Chair, and Joseph Baumgardner elected Secretary.

After discussion of various points, it was resolved that a Poultry Association be organized under the name of "The Ohio Mutual Poultry Association." Election of officers for this organization was next proceeded with, resulting in the selection of the following gentlemen:

President—D. R. Firestone.

Vice-Presidents—P. J. Spreng, of Plimpton, W. H. Todd, of Vermilion, E. J. Worst, of Ashland, R. H. Peck, of Earlville, J. M. Kelley, of Ravenna, W. B. Ely, of New Richmond, R. M. Close, of Sullivan, L. A. Dosch, of Brookville, and W. H. Nichols, of Ravenna.

Recording Secretary—Wm. Landis, of Wooster.

Corresponding Secretary—A. C. Megrew, of Wooster.

Treasurer—J. C. Cumberland, of Wooster.

Executive Committee—G. W. Fox, of Wooster; A. Bignos, Canton; R. H. Peck, Earlville; Benj. Mitchellson, Polk; A. J. Hice, Barbanks; E. D. Williams, Huntington; W. H. Nichols, Ravenna.

On motion, Messrs. Megrew and Baumgardner were instructed to draw up and present at next meeting a Constitution and By-laws for the Association.

Adjourned to meet in Wooster the first Monday in August next.

JOS. BAUMGARDNER, Sec'y.
A. C. MEGREW, Pres't.

SPORTSMAN'S DEPARTMENT.

1876. INTERNATIONAL EXHIBITION. 1876.

UNITED STATES CENTENNIAL COMMISSION.

BUREAU OF AGRICULTURE,
PHILADELPHIA, April 1st, 1876. }

SIR:

The Centennial Commission has provided for a Bench show of sporting and non-sporting dogs, to be held in conjunction with the International Exhibition of Horses, commencing September 1st and continuing for eight days. Benches will be furnished free of charge. Exhibitors may themselves assume the costs of attendance upon their animals; but to provide for those who cannot conveniently attend the exhibition, the Commission will assume the expenses of feeding and daily care, upon the payment of an attendance charge of three dollars upon each animal.

Numbers alone will distinguish dogs in the show-yard preceding the award of prizes.

Transportation and terminal charges must all be paid in advance, or the Commission will not receive consignments.

Full information relative to transportation will be furnished upon application.

All specimens must be actually the property of the exhibitor, and only those will be admitted which possess unmistakable signs of merit. Each dog must be provided with a substantial collar, and four feet of chain of a strength sufficient to hold him.

Dogs may be sold at private sale at any time during their exhibition, but no dog in the event of being sold will be allowed to be removed prior to the 9th of September.

The Veterinary surgeon of the Commission will inspect every dog before admission, and will examine the stock daily to guard against infection.

When animals are taken sick the exhibitors may direct the treatment themselves, or allow the Veterinary surgeon to treat the case.

Dogs will be exhibited in the Prize Ring before the Judges, and at such other times as may be considered expedient by the Chief of the Bureau, either for display or exercise. Special premiums from societies and individuals must be awarded through the hands of the Centennial Commission. Entries are now being made and will be in order till July 1st.

Forms of application for space may be had by applying to the Bureau of Agriculture.

Yours very respectfully,

BURNET LANDRETH,

Chief of Bureau of Agriculture,
per C. HENRY RONEY.

EDITORIAL DEPARTMENT.

OUR THANKS

are due to a number of friends who so kindly sent us copies of No. 1, of this volume, in response to our request for the same.

We would like a few more copies of that number, and if our friends will let us know when they mail them, we will gladly supply extra numbers of later editions instead.

A LITTLE BRIEF ADVICE.

In looking over the secular exchanges which come weekly to our editorial quarters, we find among the published notices and advertisements of poultry and live stock breeders, numerous announcements which must be costly, while many are ambiguous, long-drawn, or over-done, in their way, of late.

The man who is desirous to purchase does not, through this style, obtain the information he seeks; and the party who is thus seeking to sell, is not doing what he aims at, by this means. His intentions may be good, but his plan is not the wisest.

In the first place, as we have hinted before, the right channels through which such information is conveyed are not appropriately chosen, as a rule. The great bulk of ready purchasers of pet stock of pigeons, rabbits, poultry, etc., are not the mass who subscribe to, and receive only the secular, or agricultural papers, even.

We do not claim that the advertising of heavy live stock, horses, cattle, or sheep, for example, in the journals devoted exclusively to poultry and minor pet stock, would be the best medium to announce such information. But we do insist that the publishing of expensive ad's in the secular or agricultural papers, only, of chickens for sale, or of any of the lesser classes of small stock, is a mistake—for the reason that the notice of desired purchasers of such pets is not reached in this way; no matter how extensive may be the circulation of these papers.

The grand secret of advertising any given description of goods, wares, or stock, to the best possible advantage, is to place the facts before the right kind of people—namely, those who want to know these facts, and who may be inclined to buy what is offered for sale.

Persons who are in search of the best and cheapest dry goods, silks, or laces, jewelry, household furniture, carriages, or machines, don't naturally go to poultry or live-stock papers to find out who has these articles for sale. And by the same rule those who are after any of the specialties to which our labors are

devoted, never think to look into the advertising columns of the daily or weekly secular papers, to learn where they can be procured. This, in our opinion, the money paid for notices we frequently meet with, as first alluded to in these paragraphs, is simply thrown away.

Poultrymen and pet-stock breeders should bear these hints in mind, and patronize the papers with their advertising, which cater for their benefit, especially. This is where such money may be placed to "do them the most good," every time. Fanciers should announce just what they have to dispose of, fairly and honestly, and they should do this where such notices will be read by the interested in the specialties they give their attention to. And we believe that the wide circulation which the FANCIERS' JOURNAL has attained among these buying and selling classes, in every quarter of this country, renders our weekly one of the best media, in its line, now published in America, for all who are engaged in the business, for the interests of whom we cater.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Hoon shall have a feather from the wing of that owl—also one of its feet. Then will he name it please? for a naturalist, it is said, can build a bird from his track in the sand. E. S. S.

—J. M. McCann, in vol. 3, No. 14 of Fanciers' Journal, inquires if the beech tree is ever struck by lightning; If he means *Fagus feruginea* I can answer in the affirmative; although I never knew of but one occurrence of the kind.

J. F. HICKEY, M. D.

—DEAR JOURNAL.—I have a Black Fantail Cock that has mated with two hens, both now having eggs and all the eggs fertile. He helps both in the task of incubation, and fights any other cock that attempts to make love to either of them. I shall take the eggs from the hens and substitute Commons, having two pairs of Commons with eggs of the same age, and will see if he deserts either hen when the young ones "cry for bread."

LON HARDMAN.

—I clip the following from a report of the proceedings of the California Academy of Science, April 3, 1876.

Dr. Hale, a visitor, related an instance of "mimicry," which he observed on the Santa Cruz mountains; a milk-white spider, in shape, size, and color, the exact counterpart of the flower *Medrono*. It had no web, and appeared to be on an ambush of false pretences against insects. The Doctor had never seen the like in the States, and thought it was remarkable. The Academy did not throw any light on the phenomenon. Adjourned.

—BEST ANIMAL FOOD.—In a recent work on different foods physiologically considered, the author argues that the best animal food is the flesh of the sheep, and the best vegetable food that of or from wheat. The variety and proportion of the ingredients in a pound of wheaten flour furnish fair evidence of the value of this grain as a general aliment; Water, 2 ounces, 106 grains; gluten, 2 ounces, 21 grains; albumen, 126 grains; starch, 8 ounces, 242 grains; sugar, 385 grains; gum, 119 grains; ashes (salts), 112 grains. Ingredients such as these, in the proportions peculiar to wheat, are admirably adapted to maintain the human body in health and vigor.

—The Mahomet is a variety of fancy pigeon very seldom seen in America, and is, I believe bred but little in Europe. The original Mahomet were in color, (see Eaton,) light cream, with black bars across the wings, the back and eye-wattles are black. The most curious thing connected with this bird, is that while the outer face of the feathers are cream color, the part next to the body, and even the skin is sooty and black, very much like the Mohamedan religion, "fair to look at but foul underneath."

There are now several distinct varieties of Mahomet, differing both in form and shape, from the original Mahomet, most of them originating from crosses.

TERRE FILIUS.

—SACRED IRIS.—The existence of the sacred Iris in Egypt in modern times has been doubted by ornithologists. In Shelley's work on the birds of that country, the authors say no authenticated instance of its occurrence within recent periods has come to his knowledge. Mr. Greville I. Chester, however, a correspondent of the Academy, writes from upper Egypt that a few years ago he

certainly saw two of these birds on a small island left by the Nile as it fell, about three miles from Mansoorah. Among the ruins of Abydos, west of the river, excavations are now going on, and in the center of a vast walled enclosure a large number of long, red pots have been found, containing the dried bodies of ibises. Although they have probably been there thousands of years, the feathers are described as being wonderfully perfect.

—In the Northern part of Russia there is a large district called Archangel, also a port of the same name situated on an inlet of the White Sea, in the district of Archangel. From this place it is supposed the Archangel pigeon originated; it is still common here, but in America it is like an honest politician rather scarce at present. It is about the size of a common pigeon, but very unlike any other variety of fancy pigeon in color. The head, neck, and the fore part of the back and body are a beautiful copper color, in some specimens almost yellow. The tail, wings, and the hinder part of the body are a bluish black; the change between the two colors does not terminate abruptly, but is gradual. The Archangel has a crest at the back part of the head, it is in reality but a point, as it turns up but slightly. The eye is orange-red, feet unfeathered, and bright red.

TERRE FILIUS.

—WOLVES IN FRANCE.—The *Journal d'Agriculture* says that the annual damage to cattle alone in France from the depredations of wolves reaches a sum of 2,000,000 francs, to say nothing of the loss of sheep from the same cause. It is estimated that there are about 1,000 breeding wolves, and that about 2,500 whelps are born in May and June of each year. So that, notwithstanding the fact that about 1,800 wolves are killed annually, there must be at least 2,000 depredating by April of each year. The *Journal* suggests that the representatives from the ravaged districts pay a little more attention to the interests of those who have elected them, and commends the action of the United States in offering a bounty of \$10 for the scalp of every wildcat killed. Doubtless such a bounty would soon exterminate the wolves, and would also be a national economy, since, according to the foregoing estimates, each wolf in France cost the nation 1,000 francs at least.

HOOX.

(For Fanciers' Journal.)

ZOO NOTES, NO. 19.

THE FOXES IN THE ZOO.

In a very comfortable house on the west side of the garden, the Fox family will be found. It is made up of five varieties; the Red, (*Vulpes fulvus*), the Gray, (*V. virginianus*), the Silver, (*V. argentus*), the Cross, (*V. decussatus*), and the graceful, little Arctic Fox, (*V. lagopus*), all of which may be found somewhere in North America; the latter, however, though found near the extreme northern boundaries, is never seen in its wild condition within the limits of the United States. The red fox is distributed about from northern New York and Pennsylvania, to Canada. The gray fox is very rare north of Pennsylvania, but is common from that State south, and from the Atlantic to the Pacific. The silver fox is pretty much confined to Washington Territory, the cross fox is found from northern Michigan to Wisconsin, and as far north as Canada. Of the fourteen well ascertained species, six of them are found in the United States; they are distributed over both hemispheres, most abundantly in the north, but none are ever seen south of the equator.

From the earliest ages the fox has formed a conspicuous part

among the animals. He is mentioned many times in the Bible, the first being where Samson worked so much mischief to the cornfields of his father-in-law, by tying fire-brands to the tails of three hundred of them, and then letting them loose among the ripened grain, a trick which cost the lives of wife and father-in-law as well as causing the performer to come to perpetual grief.

In the fables of all authors, and languages, has Reynard held prominent place. What a perfect courtier he is, and how well he knows the value of flattery, when profusely bestowed! witness his interview with the crow. How he praises her beautiful feathers! according to him they were more gorgeous than those of the gayest Macaw or even the Bird of Paradise! "And what a beautiful form you possess," pretty true Mr. Fox, for the crow has quite a graceful form. What could poor Miss Corrus do under such a pressure of flattery brought to bear upon her, but open her mouth to thank her admirer, and thus be made to drop the coveted morsel of "Suetzenkase,"—or was it the aromatic "Limburger?" Again, behold Sir Reynard as one of the courtiers of King Lion. How low he bends before the monarch of beasts! How reverentially does he address him, calling him the "father of beauty and awe!" Well does the cunning fellow know that vanity, even in a King, is the most salient point to attack! "The Fox and the Grapes" is too much of an every-day simile to need further mention here. Is there any one who has not read the curious story of "Reynard the Fox," so wonderfully well illustrated by the artist Kelbach? If there is one who has not, I envy that person the great pleasure yet in store, be it who it may.

Of all the beasts of prey, the fox is certainly the most cunning, crafty, and sagacious; either in hunting its food, or in the evasion of its enemies, the two only important matters in beast life. As the sun goes down, and the shadows lengthen, out comes Foxy, starting at once in search of provender. In this pursuit nothing comes amiss to him which he is able to capture, have and hold, from the hare on her farm, to the fowl on the roost, or the unhappy clam at low water—for Reynard, when hard pressed for food has been known to seek the water side, and when the tide was out to then and there have a right royal feed on clams, mussel, or whatever mollusks his worship could find!

Like the squirrel, the fox has a keen eye to his future subsistence, for after a feast, gorging himself to the fullest extent first, he is as careful as King Arthur was with his pudding, to put away what is left for to-morrow, selecting for that reason some secluded place adapted to the purpose.

So numerous are the stories told of the fox that I shall not inflict my readers with a repetition of any of them, but here is a very brief one, which I think is quite fresh:—

A certain naturalist watched the proceedings of one of the cunning fellows, one moonlight night. A hare was crouched down in the furrow of a fresh plowed field, when Reynard, out on the poach, spied her out, and creeping along the adjoining furrow, slowly and noiselessly drew nearer and nearer to the intended victim. Reynard only now and then peeped over the ridges of the furrow, lest the hare should notice him. When sufficiently near, the poacher made a sudden rush, and seized poor puss, before she was even aware of her enemy's presence!

Many instances are recorded, where foxes have, under the influence of extreme terror, feigned death, and like the opossum, have suffered themselves to be dragged about without showing any signs of life, until the danger had ceased, when they would spring up and scamper away unscratched.

That the prey should be more cunning than the preyed on, is an essential law of nature, but the predatory gift of cunning has been very largely dealt out to the fox family.

The fox as a pet does not give much satisfaction, for in the most domesticated condition, it never manifests the obedience and gratitude characteristic of the dog. Foxes have been tamed thoroughly,

treated with every possible kindness, and every artifice tried to win their regard and confidence, but in vain, for there would still be a certain amount of timid, sly suspiciousness, which could never be overcome, charmed the charmer ever so wisely. HUN.

THE WHIPPOORWILL

Which is familiar to many of your readers, like the deer, loves the solitude of the forest. Where you find the rattlesnake, the trout, the pheasant and the deer, there you will hear the mournful note of the whippoorwill. As the forests become cleared before the advance of population, this shy bird retires, hence I was much surprised to hear his well-known note a few evenings ago, on the margin of the Delaware, three miles below Gloucester. But then this is one of the most retired spots on the river in the vicinity of the city. A heavy growth of forest trees line the shore on the Jersey side, and an extensive "flat," two miles in length and extending into the river a half-mile, is only partly covered with water at low tide. This attractive place is known as "Howell's Cove," and located there is one of the most productive shad-fisheries on the river. After sunset, the whippoorwill, the great night-heron and the green heron frequent the place, the two latter birds no doubt in search of small fishes which are numerous near the shore. Cranes, fishing-eagles and turkey-buzzards are often seen there during the day.

The whippoorwill makes its appearance in this State between the twenty-fifth of April and the first of May. The peculiar note of the bird is heard in the dusk of evening and when the dawn of the morning appears. In June, when the young are in the nest, the notes of the male are but rarely heard. In September it migrates to the south. The bird likes high ground and is consequently most numerous in the vicinity of mountains, and is but seldom encountered on the seacoast. The Barrens of Kentucky are said to be its peculiar home, and the bird abounds in larger numbers there than in any other portion of the United States. It measures nine and a half inches in length, and has a blackish bill an inch long, and an unattractive garb. Its mouth is remarkably large, at the side of which project long elastic bristles, which assist the bird in capturing insects, on which it exists. It is said that there are twenty species known to naturalists, of which one belongs to Europe, one to Africa, one to New Holland, two to India, and fifteen to America.

A GOAT STORY.

For some time past the clerks at the station on Fourteenth and Main streets, Louisville, have been annoyed by goats that infest that immediate locality. Not satisfied with the other devilments these sly rascals are guilty of, they chew all the tags off the cotton bales sent there for shipment, thereby causing a great deal of trouble in shipping the cotton. The other day the clerks surrounded about a dozen goats and succeeded in driving them into a box car alongside the platform and fastening the door. That night there was a car load of goats going north, hitched to a freight train. The car was left at Indianapolis, and the next day the door was thrown open and the goats rushed out and made a raid through the town, upsetting and butting clerks, hands, boxes, bales, etc., as they escaped. Not being apprised of the shipment by way bill the Indianapolis clerks chased them all over town, endeavoring to catch them, of course believing the company would have to pay for them as "lost freight" if they were not caught. By night all were caught and put back in the car. A dispatch was sent to the station man at Louisville: "Send on your way bill. Got all the goats." A dispatch went back in reply: "Don't want any. Let 'em go." The race in Indianapolis was said to be very exciting.

CORRESPONDENCE.

PIGEON RACES.

PHILADELPHIA, April 19th, 1876.

FRIEND WADE:—

I send you an account of two pigeon races which came off on the following dates. The first being for a handsome silver cup, given by that esteemed young gentleman, Mr. J. H. Fasset, for a race from Trenton to Philadelphia, on April 1st, distance 28 miles, and was won by T. Grist, time 47 minutes. Second being a money prize, won by Mr. J. H. Fasset, time 53 minutes. Third prize, a revolver, won by Mr. Jos. Buckley, time 1 hour 3 minutes. The second race took place on April 17, from Chester to Philadelphia, distance 14 miles, for a gold medal, given by that well known fancier, Mr. Jos. Buckley, 2211 Callowhill, St., who has given so many prizes for the encouragement of pigeon racing, and won this medal himself, time 18 minutes 11 seconds. Second prize being a money prize, won by John Grist, time 19 minutes 32 seconds. Third, money prize won by that well known fancier, Wm. Gladwin, time 18 minutes 16 seconds, having to allow time to Mr. Grist and Mr. Buckley, whose birds had to fly some distance farther. Another race will also take place on April 22d, from Wilmington to Philadelphia, of which I will send you an account.

T GRIST, Timekeeper.

ANSWER TO MR. CHAPMAN.

FRIEND WADE:

As you are aware, I did not receive any numbers of the JOURNAL after Feb. 1, (through some mistake of your mailing clerk,) until nearly the first of this month. Looking them over I found Mr. Chapman's letter regarding one exchange I sent him, as he states, a pair of Angora Rabbits, receipt of which he acknowledged.

Nov. 27th Mr. Chapman writes "Sir; I found the largest Rabbit that you sent me dead in the pound this morning. It had shown no signs of sickness. When I received them I was very much disappointed in their appearance but hoped they would improve with age. The death of the Rabbit was not therefore chargeable to me." I wrote him Dec. 5th offering him another and older one for \$3 half price. To this letter I have received no reply: as it had my return imprint on the envelope and did not come back to me, I infer the letter was received.

If Mr. Chapman feels aggrieved, I am willing to do by him as I have done by others, and as I wish to be done by. I have one pair of Angoras left (and only one pair) these he may have at \$6 just half price; they are seven months old, out of my "snowball" stock and I consider them fine.

I may add that out of a number of exchanges made through the Agency of the JOURNAL. Mr. Chapman is the only person who has ever complained, and who has not expressed himself perfectly satisfied.

Yours Respectfully,
A. M. HALSTED.

"PETER PEPPERCORN."

SALEM, Mass., April 17th, 1876.

Editor of Fanciers' Journal:—

DEAR SIR:—The piece of rhyme entitled "The Mountain Stream," in the April 6th No. of the JOURNAL, shows that Peter Peppercorn—as the author of it chooses to call himself—may possess some susceptibility to poetic impressions from running water, and may have had some acquaintance with mountain streams; but it is quite possible—almost probable—that he has been acquainted with, and received impressions from a not universally unknown brook-rhyme, written not many years ago, by a fellow-poet of Peppercorn, indeed by one who has the honor, at the present day, of wearing the laurel-wreath among British poets. Se-

riously, I felt heartily ashamed of my poet-Peppercorn's audacity in patching together from Tennyson's *Brook* his otherwise not contemptible production. I should be interested to learn if such were not the fact. If "The Mountain Stream" is an original flux from the brain of P. P., if he has never read the other, what a coincidence! how interesting to the phrenologist would be the comparison of the bumps upon the head of the Laureate with the protuberances upon P. P.'s cranium! Let him try his pen, forsooth, at the Idyls of the King.

"And there I fall with a murmuring sound,

"And then I make a sally,

"And leave the Fern-clad rocky glen,

"And sparkle down the valley."

Peter Peppercorn.

"I came from haunts of coot and hern,

"I make a sudden sally

"And sparkle out among the fern,

"To briker down a valley."

Alfred Tennyson.

I believe the above is the stanza in which the plagiarism is most evident, but there is the same general idea in the two pieces, and many of the rhyming words in both are identical. In short, Tennyson's beautiful little rhyme has been mutilated, and, with the admixture of other, and rather ordinary matter, re-set to a similar though halting meter, and palmed off as an entirely original poem by our worthy Peppercorn. I don't know who this person may be, and perhaps you will not wish to insert this in your paper even over my own name, I assuming all responsibility, but I beg of you to do so. I shall be ashamed for your paper (and the reputation of the JOURNAL will not be improved) if such Peppercorn-poems are inserted in its pages. Mr. Peppercorn has not, in my judgment, begun to climb the ladder which leads to *fame*, but, the rather to *infamy*.

Yours, very respectfully,

WM. GARDNER BARTON, 88 Bridge St.

JAQUES' INCUBATOR.

I saw in your last issue a few lines asking information in regard to Charles B. Jaques, of Metuchen, N. J. I saw his advertisement in your JOURNAL, and thinking it was all right, sent him 50 cents for his illustrated circular, "How to make and manage an incubator that will hold over 100 eggs," and cost less than \$4. I will say that Mr. Jaques used me in a gentlemanly manner, he sent his circular by return mail, and I went to work and made an incubator after his directions. The eggs have been in it at work two weeks, the 12th of this month. It is very easily managed. I have only used four quarts of kerosene oil so far. I call it very simple. I have kept good heat; also done everything according to directions. This afternoon I tested some of the eggs. I should say every one contained a chick. However, I shall try to hatch all I can, and some future day I will let you know how I succeeded.

Yours, respectfully,

NORTH ATTLEBORO, Mass.

JOHN BISHOP.

INQUIRY ANSWERED.

SAVANNAH, GA., April 19, 1876.

In the Journal No. 14, received this Morning, I notice that "Sassafras" wishes a cure for worms in dogs. The *Forest and Stream* of New York, recommends powdered Arca nut, but I have never used it. I have, however, used a small quantity of Santonine powder, which any druggist can put up, with very beneficial results on a small Skye pup of about two months old. The quantity to be given depends on the age of the dog. Let your correspondent give his druggist the age of the dog and he will put him up about the right dose.

Yours Truly,

NELSON V. KETCHUM.

THE JOURNAL'S ADVERTISING.

TURBOVILLE, North Co., Pa., April 19th, 1875.

Mr. J. M. WADE:—

MY DEAR SIR:—Please change my advertisement. I have sold all the Poland eggs I can spare. Since advertising in the FANCIERS' JOURNAL, I have had no lack of orders. My advertisement last spring, for eggs for sale, sold me many eggs, and even all the surplus fowls I had to spare last fall. It worked the whole year, even when discontinued.

Very truly yours,

U. MYERS.

ITEMS.

Strength is seen not in spasms, but in stout bearing of burdens.

"I would not for any money," says Jean Paul Richter, "have had money in my youth."

Mankind are always happier for having been happy; so that if you make them happy now you make them happy twenty years hence, by the memory of it.

Formerly it was a maxim that a young woman should never be married until she had spun herself a set of body, table and bed linen. From this custom all unmarried women were termed spinsters.

Five hundred dollars reward has been offered by a lady in London for the conviction of persons who are going about that city systematically poisoning dogs, by throwing down poisoned food in the streets.

The Menasha, Wis., *Press* says: A washerwoman in Appleton died last week, leaving a husband and two children without visible means of support. Women seem to be getting more thoroughly heartless every year.

A modest editor says that he mentions the fact that the most distinguished men of America are to be invited to the Centennial celebration, that his readers may understand why he is away if he should leave town for a day or two next month.

A new ballot box has been invented by a citizen of Great Barrington, Mass. A thumb spring opens a slit in the top of the box for the depositing of the ballot, and on the front are two dials, one registering every ballot and the other every hundredth ballot. The ends are of plate glass, so that the inquisitive citizen can watch the accumulation of votes.

More work for R. G. White. The expression, "Everything is lovely and the goose hangs high," is a corruption of the saying, "Everything is lovely and the goose *honks* high." The honk is the note sounded by the wild goose in its flights, and is about the only music in which that graceful bird indulges. The meaningless word "hangs" should be immediately eliminated from this beautiful and popular description of the situation.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged. "To EXCHANGES FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the Exchange or Want column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

B. J. King, Providence, R. I., is complained of by several who claim to have been unjustly dealt with by him.

T. A. WINFIELD, Hubbard, Ohio, will exchange 1 pair Black and Tan Terriers, dog weighs 44 lbs., bitch 3 lbs.; 1 fine Irish Red Setter dog, 13 months old, and fine Black Red Games, John Douglas stock, for Cocker Spaniels, Brown Red Games, or Common Pigeons.

EDWARD W. FOX, New Ipswich, N. H., will exchange eggs from his pure bred White Leghorns, for eggs from Game or Sebright Bantams, or offers. Write.

F. HARDING, 5 Broadway, Cleveland, Ohio, will exchange new Buggy Hares, small Black and Tan Terrier pups, and Pointers and Setters, for Lop-eared Rabbits, or Ferrets. Send stamp for reply.

F. N. COAGNE, Cape Vincent, N. Y., will exchange a good bred, small and handsome Italian Greyhound bitch, from Italy, for 7 Light Brahma pullets, and 8 P. Rock pullets.

WM. GARDNER BARTON, Salem, Mass., will exchange a copy of J. M. Eaton's Treatise on Fancy Pigeons and Tumblers, for Yellow Tumbler cock, White Pouter hen, fine Magpies, Fantails, Jacobins, Pouters, and other sorts. Correspondence solicited on the subject of Pigeons and Pouter Books.

R. C. TAYLOR, Post Office Box 248, Racine, Wis., has a fine black Water Spaniel, well trained to retrieve on land or water, which he will trade for a good breech-loading rifle, or offers. Dog valued at \$50.

E. J. FRY, Tamaqua, Pa., has for exchange full bred Jersey Bull, one year old, March 10th, 1876, is very large and of dark solid color, bred from stock imported direct from the Island of Jersey, (as per certificate) via Liverpool to Philadelphia in ship Tonawanda, September 1871. Chester White or Berkshire Pigs of best stock preferred.

GEO. F. LAWRENCE, Worcester, Mass., will exchange Angora Rabbits for Doyle's Illustrated Poultry Book revolvers, dress patterns, Carrot's Pottery, or any kind of history, or one English Gray Duck. See advertisement.

GEO. SHIRAS & BRO., 8 Stockton Ave., Allegheny, Pa., will exchange the following odd birds, all first-class, 2 Yellow Cap Magpie cocks, 2 Blue Magpie hens, 1 Black and 1 Blue Swallow cock, 1 Red Bald hen White Fan hen, Blue-winged Turbit hen, for mates, offers, or B. B. Rock pullets.

GEO. SHIRAS & BRO., 8 Stockton Ave., Allegheny, Pa., will exchange the following odd birds and pairs: 1 pair of Archangels, 1 pair of White Calcutta Fans, 1 pair of Blue Pouters, 2 pair of Mott. Trumpeters, Swallows, six colors, for offers of first-class varieties.

WM. COURTNEY, Mantua Station, Portage Co., O., will exchange the Victor California peach blows, or Late Rose potatoes for seed, for Fancy pigeons, or fowls. What offers.

A. W. MCKINSTRY, Chicopee, Mass., offers two sittings of eggs from his choice W. F. Black Spanish fowls, for Vols. 1 and 2 of the Fanciers' Journal; also two sittings for Vols. 1, 2, and 3 of the Poultry World. Eggs will be fresh and true to name.

J. S. GOODNOW, Millington, Mass., has Dark Brahma eggs to exchange for eggs from Japanese, Cockerin, and Silver Duckwing, Red Pile and Blue Pile Game Bantams, or one pair Red Priest pigeons. Nothing but first-class stock dealt in.

A. W. THURSTON, 786 Broadway, N. Y., has imported Flying Antwipers to exchange for fowls of any kind. Hens preferred.

PETER LEPP, P. O. Box 833, East Saginaw, Mich., has one first-class double-barreled muzzle-loader shot gun, barrels, 34 inches, No. 10 gauge, cost \$35.00; will exchange for first-class Pouters, Carriers, White Jacobins, and Fantails, the latter must have 50 counts; Red and Blue Swallows, heavy bodied.

J. B. TUCKERMAN, Eaton, Madison Co., N. Y., will exchange Golden Polders, Bicknell strain, 1875 hatch, for Scotch Terrier or Newfoundland dog pup; also eggs from all the leading varieties for rare copper coin, "bogus" pennies, &c. Write. All letters answered.

H. W. BARNES, 1 Stockton Ave., Allegheny, Pa., will exchange 1 first-class Almond Tumbler cock for a first-class B. B. R. Game Bantam hen or pullet, weighing not over 18 ounces, or offers.

F. N. COAGNE, Cape Vincent, Jefferson Co., N. Y., will exchange a good time (hunting) silver watch, value \$25.00, for 10 S. S. & G. S. Hamburgs, and 5 Pekin ducks and one drake, (1 year old or more).

JOHN BOERGERT, East Saginaw, Mich., will exchange one Hineck Knitting Machine, (new) worth \$35.00; one American Shuttle Sewing Machine, (new) worth \$60.00, and two Davis Sewing Machines, one cost, new, \$85.00, and the other \$65.00—all the above in good running order—for Fancy Stock or Game. What offers.

PHIL. H. SPRINGER, Springfield, Ill., will exchange a fine Light Brahma hen, an exhibition bird, and one or two Light Brahma cocks of 1874, or Light Brahmas of 1875; or Scotch Collie pups, for Canaries, Terrier pups, or Maltese kittens.

T. A. WINFIELD, Hubbard, Ohio, will exchange Partridge Cochins, D. Brahma hens, G. P. Hamburgs, 2 Yellow Duckwing sets, for White Game, or Fancy Pigeons.

T. D. ADAMS, Franklin, Pa., will exchange Eggs from Ongley's stock of Golden Spangled Hamburgs, 1st and 2nd premium birds, for 2 White Pouter hen pigeons, and 1 (hen) Blue Fantail. What offers?

R. B. WILKINS, Albion, N. Y., wants to exchange Burnham's History of Hon FEVER, letter press, lot of new trolling line, large fish hooks, and G. P. Hamburg eggs, for Houdans, Pyle, or Black Game Bantams, or eggs of same from good stock.

ALFARD, 17 Clinton Place, N. Y., will exchange beautiful White Spitz dog, fine Golden Pencilled Hamburg cockerels, pair Black Polders, splendid Black Carrier cock, heavily wattled, and fine Pied Pouters, for Yellow Fantails, good Owls and Barbs, imperfect but heavy Light Brahmas, and Buff Cochins, and extra small Bantams.

B. HULSE, Box 22, Allentown, N. J., will exchange 1 imported Sheep-herd slut, in pup; 1 Shepherd slut, 14 months old, out of imported slut; Fancy Pigeons, in variety, for B. or W. Leghorns, or any kind of Poland eggs, Yellow owls, or Black Jacobins, or other offers.

H. H. SMITH, Davenport, Iowa, will exchange eggs from pure bred "Sharpless strain" Dark Brahmas, for a few sittings of D. B's from the Lady Gwydir strain. Must be pure.

FANCIER, Box 233, Tamaqua, Pa., wants to exchange 1 bird organ, playing six tunes, valued \$10; 1 violin, valued \$15; 1 single barrel shot gun, value \$7.50; 1 electric battery, value \$20; 1 Parrot cage, valued \$5; 1 Fancy Squirrel house, with large wheel attached, valued \$10; 1 fancy white mice house, cottage style, glass front, containing 5 pair mice, valued \$7.50; three triple exhibition cocks, standard size, valued \$5 each; 2 rabbit hutches, to accommodate 8 pair rabbits, valued \$15 each; 1 good rabbit dog, first-class hunter; also Fancy Pigeons and Light Brahmas, for offers. Want no live stock.

J. J. MCKINSTRY, P. O. Box 123, Globe Village, Mass., will exchange printing, for eggs of the following varieties, sent to me, express charges prepaid: Brown Leghorn, Dark Brahma, Partridge Cochins, Golden Poland, Iowa Game, and Pekin Duck eggs.

H. F. CHURCH, Newtown, Bucks Co., Pa., will exchange Brown Leghorns, B. B. R. Game Hen, \$12 value, Black and Tan dog pup for Game Bantams. Good stock, and expect the same.

FANCIER, P. O. Box 1041, Williamsport, Pa., has 4 Black and Tan male pups, eight months old, pure bred, and well marked; also a full blooded Irish Cocker Spaniel bitch, eight months old, liver color, to exchange for first-class Brown Leghorn fowls, or eggs from same.

C. V. C. ALDEN, Sumner, Ripley Co., Ind., will exchange the following choice varieties of seed potatoes: Victor, Carpenter's Feeding, Extra Early Vermont, Compton's Surprise, Brownell's Beauty, New York Late Rose, for Strawberry Plants, or Chester White Pigs—pure stock as mine. I warrant true to name.

D. SHIELDS, Florence, Mass., will exchange eggs from high class Black Hamburgs, Black Cochins, and Light Brahmas, for first class White Fantail, Owls, Trumpeters, Barbs, or Carrier pigeons. None but white and good stock wanted.

F. H. RUMMEL, Florence, Mass., will exchange five Blue Red Game pullets and cockerels, for Black Reds. Nothing but good stock wanted, as mine are first-class.

N. V. KETCHUM & BRO., 7 Fifth St., Brooklyn, E. D. N. Y., will exchange a Yellow Bald Tumbler hen from premium stock, for either a Yellow or Red Bald Tumbler cock. Bird must be A No. 1, as mine is.

S. D. McCALEUM, Hornellsville, N. Y., will exchange six Ferrets, two females and four males, of the white variety, for B. B. R. Game Bantams or Fancy Pigeons, White Fans preferred.

DR. J. R. HOUSEL, McEversville, Northumberland Co., Pa., will exchange a very fine Black Carrier hen, for an extra Black Carrier cock. Ship at once, and on return I will send hen.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGE.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

JAMES W. AVERY, No. 94, Ononda St., Milwaukee, Wis., wants one Golden Sebright Bantam cockerel, well marked. Write quick, and give full description of bird.

CHARLES D. PARKER, 308 Gay St., Baltimore, Md., wants consignments of Pigeons, Guinea Pigs, Rabbits, Maltese Cats, Dogs, and all kind of pet stock. Write before you ship, and give me a complete description of stock, and the price wanted. Commission, 20 per cent.

WM. H. FRY, Indianapolis, Ind., wants White Jacobins with pearl eyes. Only first-class stock wanted; either in pairs or odd birds. Give lowest cash prices.

J. O. THURSTON, 786 Broadway, N. Y., wants White Leghorn hens.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS.—First and special premiums at Buffalo, 1875; first premium at Utica, 1876. Eggs, \$2.00 per 13.
no. 16 4t S. S. MORLEY, Clyde, N. Y.

200 BROWN LEGHORN FOWLS AND PULLETS for sale, suitable for breeding, finely marked. Eggs for hatching from selected birds; also eggs from two pens of Partridge Cochins, well penciled and pure bred stock.
eow M. A. FRY, Vineland, N. J.

HARTFORD, MAY 8, 1876.

No. 17.

THE SUICIDAL CAT.

There was a man named Ferguson,
He lived on Market street;
He had a speckled Thomas cat,
That couldn't well be beat;
He'd catch more rats and mice and sich
Than forty cats could eat.

This cat would come into the room
And climb upon a cheer;
And there he'd sit and lick hisself,
And purr so awful queer
That Ferguson would yell at him—
But still he'd purr-severe.

And then he'd climb the moon-lit fence,
And loaf around and yowl,
And split and claw another cat
Alongside of the jowl;
And then they both would shake their tails,
And jump around and howl.

Oh, this here cat of Ferguson's
Was fearful then to see;
He'd yell precisely like he was
In awful agony;
You'd think a first-class stomach-ache
Had struck a small baby.

And all the mothers in the street,
Waked by the horrid din,
Would rise right up and search their babes,
To find some worryin' pin;
And still this vigorous cat would keep
A hollerin' like sin.

And as for Mr. Ferguson,
'Twas more than he could bear,
And so he buried the boot-jack out,
Right through the midnight air;
But this vociferous Thomas cat,
Not one cent did he care.

For still he yowled and kept his fur
A stundin' up on end,
And his old spine a doublin' up
As far as it would bend,
As if his hopes of happiness
Did on his lungs depend.

But while a curvin' of his spine,
And waiting to attack
A cat upon the other fence,
There came an awful crack;
And this here speckled Thomas cat
Got busted in the back.

When Ferguson came down next day,
There lay his old feline,
And not a life was left of him,
Although he had nine;
"All this has come," said Ferguson,
"Of curvin' of his spine."

Now all ye men whose tender hearts
This painful tale does rack,
Just take this moral to yourselves,
All of you, white and black;
Don't ever go, like this here cat,
To gettin' up your back.

STICK TO YOUR BUSH.

Mr. Morgan was a rich, and also a good man. The people of the town respected him, sent him to Parliament, and seldom undertook anything without asking his advice. If a school house was to be built, the plan had to be talked over with him. Widow P——asked him what she should plant in her field, farmer S——always got his advice in buying cattle, and Mrs. R——consulted him about bringing up her boys.

When asked how he was so successful, Mr. Morgan said: "I will tell you how it was. One day, when I was a lad, a party of boys and girls were going to a distant pasture to pick whortleberries. I wanted to go with them, but was fearful that my father would not let me. When I told him what was going on, and he at once gave me permission to go with them, I could hardly contain myself for joy, and rushed into the kitchen and got a big basket, and asked mother for a luncheon. I had the basket on my arm, and was just going out of the gate, when my father called me back. He took hold of my hand, and said, in a very gentle voice: 'Joseph, what are you going for, to pick berries or to play?' 'To pick berries,' I replied. 'Then, Joseph, I want to tell you one thing. It is this: When you find a pretty good bush, do not leave it to find a better one. The other boys and girls will run about, picking a little here and a little there, wasting a great deal of time, and not getting many berries. If you do as they do, you will come home with an empty basket. If you want berries, stick to your bush.'

"I went with the party, and we had a capital time. But it was just as my father said. No sooner had one found a good bush than he called to the rest, and they left their several places and ran off to the new-found treasure. Not content more than a minute or two in one place, they rambled over the whole pasture, got very tired, and at night had but very few berries. My father's words kept running in my ears, and I 'stuck to my bush.' When I had done with one, I found another, and finished that; then I took another. When night came, I had a large basket full of nice berries, more than all the others put together, and was not half so tired as they were. I went home happy. But when I entered I found my father had been taken ill. He looked at my basket full of ripe blackberries, and said, 'Well done, Joseph. Was it not just as I told you? Always stick to your bush.'

"He died a few days after, and I had to make my way in the world as best I could. But my father's words sunk deep into my mind, and I never forgot the experience of the whortleberry party—I 'stuck to my bush.' When I had a fair place, and was doing tolerably well, I did not leave it and spend weeks and months in finding one a little better. When other young men said: 'Come with us, and we will make a fortune in a few weeks,' I shook my head and 'stuck to my bush.' Presently my employers offered to take me into business with them. I stayed with the old house until the principals died, and then I had everything I wanted. The habit of sticking to my business led people to trust me, and gave me a character. I owe all I have and am to this motto—'stick to your bush.'"—*Moore's Rural New Yorker.*

POULTRY DEPARTMENT.

THE SEASON HAS COME ROUND AGAIN,

When the poultry keeper is, or should be, busy. The fine warm days in late April and the beginning of May have been highly favorable to the young chicks already out, and those coming, about this time.

We are a month or six weeks ahead of last season, therefore—April and March especially, in 1875, having been unusually cold and unfortunate for early spring work in the hatching-houses for that year. In the north, and throughout New England generally, much better success has attended the sitting of hens this season, over last year's efforts.

Great care should now be exercised, that the young broods realize no drawbacks for the next few weeks. The nights are still chilly, and many days will be too cold yet for exposing them unduly. Feed them often, keep them well housed during May, supply them with nourishing food and pure water, and the attention especially bestowed at this time will be amply repaid in their increased and increasing thrift.

EXTRAORDINARY BIRDS.

It is amusing to an experienced poultry breeder and handler of this kind of live stock, to peruse occasionally the wondrous accounts that find their way into print, from time to time, in certain agricultural papers. Here is a yarn, for instance, that fell under our notice recently in one of these papers that pretends to give advice to its readers about "the management of hens, to make them lay constantly."

The writer tells how he fed his birds, and says "I once had a trio of Black Spanish chickens with, with one golden Pheasant hen, were confined in a yard four feet by twelve, and feeding them thus, at five months old they began laying, and for eight months afterwards they never failed to lay one each day, with the exception of a few of the very coldest days of winter, the number of their eggs in that time reaching almost seven hundred. But the food and care necessary for egg producing were continued during the whole time."

Now we call this "trio of chickens and one hen," a quartette of very extraordinary birds! There were but three females, and for eight months they never failed to lay one egg each, daily, except a few days in the very coldest of winter. They were hatched in March—and consequently "at 5 months old" they began to lay in August—and kept right on for 8 months afterwards. This would have made them over a year old, when they stopped laying.

Now we would like to know when these fowls moulted? We all know that once in a year these birds must naturally have shed their feathers. Did they lay "every day" during this process? In eight months there are (including Sundays) 245 days. If they laid seven hundred eggs in that period, the three hens must have averaged 233 eggs apiece—or, they must all

have laid on 233 of the 245 days after commencing—including the usual 2 or 3 months *all* fowls occupy in moulting, annually—when, within our experience, they lay no eggs!

Verily these chickens must have been a very valuable and exceptional trio—if this tale could be verified. But as it is evidently a gross error, or a clear humbug and impossibility, we leave it as we find it; with the single remark that such nonsense should not obtain currency in a public journal that ought to be better informed about egg-laying, or else that the edition should cease recommending their false ideas about such matters to intelligent readers.

It is not impossible that a hen may lay from the time she begins—under the most favorable circumstances—230 eggs in a full twelvemonth. But to do this in the first year of her existence, and shed her feathers meanwhile, would be a performance that we never knew of, and which we do not believe ever occurred in the world.—"Next!"

THE CHICAGO EXHIBITION.

TO THE PUBLIC:

I have received issues of *Fanciers' Journal* of March 2d and 9th, containing the articles "A Singular Proceeding," "The Chicago Exhibition—More Light," and having given them a careful examination, I pronounce them a series of misrepresentations from beginning to end.

At the conclusion of the second article it is stated that I have sent in my resignation, the inference being that I have severed my connection with the association. This I beg to state is *not* the case. I am still Secretary and Treasurer of the association, and do not propose to desert the ship, at least not until the present "squall" is over.

It was well understood by every gentleman present at the election of officers, that I only accepted a reelection for the purpose of closing up the business of the exhibition, and a vacancy was left on the Executive Committee for me when my place as Secretary was taken by another. I have stated to some of my correspondents that I had expressed to the Executive Committee a wish to be relieved from the duties of the office when my accounts had been audited by the Finance Committee; but I have authorized no one to announce my resignation, and such use of the contents of a private letter I consider a gross breach of faith.

The first charge laid at our door—that we paid our bills before paying our premiums seems too silly for refutation. Is the *Fanciers' Journal* aware that when the National Association commenced business it had no money in its treasury; that up to the time of the exhibition it never received enough to pay current expenses; that it never had a corporate existence, and that the only way it could obtain coops to put the fowls into, and stoves to keep them warm, was by pledging the credit of individual members, and would the F. J. have these gentlemen who so kindly guaranteed the payment of the bills pay them out of their own pockets?

I don't think the fanciers of America demand any such sacrifice of individuals, and I have the best of reasons for believing that the *Fanciers' Journal* in its present utterances is not the organ of the fanciers of this country, but the mouthpiece of a small faction of sore heads, who endeavor to make up in noise what they lack in number and influence.

If any testimony as to the course usually pursued in such cases were needed, I would say that an Ex-President of the Illinois State Agricultural Society stated to me that his association always paid their bills first although they were several times unable to pay their premiums in full, and he had never known an association to pursue any other course, and I can procure such testimony from scores of men if necessary.

The second charge of disorderly conduct brought against us is

as follows: "*But why the exhibitors are to carry this debt we are unable to tell. * * * It would have been an easy thing to have made an arrangement with the gentl man who furnished the stoves and pipes, \$486.00 (he certainly ought to have confidence in the society), with the owners of the Exposition Building, \$1,011.00, and other debtors in that city by which their claims could have been deferred at a fair rate of interest until the future receipts come in.*"

In the first place, exhibitors were asked to bear the burden, because they reaped the greatest benefit from the show, and received sixty-five per cent. of the premiums offered, which in itself constituted a large premium, and because they were many of them officers and members of the society. With very few exceptions they were satisfied with the arrangement, and do not, as the F. J. would have us believe, ask the man who put up the stoves, and the man that made the coops, who knew nothing of, and cared nothing for, the association, to wait a year for pay for work which was done cheaply and well; and *lastly* the exhibitors were asked to do this because it was believed they would be willing to share with those who did the work, the burdens of the exhibition, and because we do not believe them what the Fanciers' Journal represents them to be,—a band of Shylocks clamoring for their pounds of flesh. If the exhibitors were unwilling to take the promises of the Association for thirty-five per cent. of their claims how could they expect others to take them for the full amount due them?

The charge that money donated by poultry fanciers was used to pay premiums on dogs, *I deny*.

The charge that money donated for premiums was appropriated for expenses of the exhibition, *I deny*.

The charge that exhibitors have not received the full sixty-five per cent. of the premiums awarded them, *I deny*, and I challenge the Fanciers' Journal, or any one else, to show proof of any of these assertions so recklessly made.

The fact that the amount of cash received in donations falls short of the amount in the published list is explained by the fact that all of the newspapers and journals paid part of their donations in *advertising*, and some of them paid all in that way. Had the FANCIERS' JOURNAL been one of the papers that assisted the Association by a donation it would have understood this.

The assertion that a pair of pigeons were sold without orders, and the owner can not get a satisfactory explanation, undoubtedly refers to a Pittsburgh party, as it is the only case of the kind, and shows how slight a foundation the F. J. required for its charges. The pigeons were sold by a gentleman in Milwaukee (who supposed he was authorized to sell them) to a gentleman in this city, and the money delivered to me to be sent to the owner. As the birds did not go back with the other fowls, the Pittsburgh party inquired for them and I informed him that they had been sold as above, supposing he had forgotten that he commissioned any one to sell them, and he would get the money (\$5.00) when his premiums were sent him. He replied that he had authorized no one to sell them, and demanded their return. I immediately wrote him that both buyer and seller were gentlemen of character and he would undoubtedly get his pigeons at once, and wrote to the buyer to send them back, prepay charges, and send bill to me. He replied that he bought them in good faith and would not return them until he had conferred with the Milwaukee gentleman, etc., etc. After writing five or six letters, I refunded the money to the buyer and referred the parties to each other for settlement, and suppose that all is now satisfactorily arranged. Neither the association nor myself were in any way to blame for the muddle.

Some of the accusations by the editor of the F. J. are so stupid as to be actually funny. He complains because the "*miscellaneous disbursements in small sums * * * which had nothing to do with the exhibition, were promptly paid.*" In other words, he thinks

we ought not to have paid for the book in which we enrolled the names of the members as they came in at the organization of the society until after we had paid our premiums.

And then again he says, (referring to the statement), "*It shows over \$3,000 on hand, and yet does not state what was done with this amount.*" If our editorial friend had examined the statement more closely he would have seen it showed the condition of things before any of the premiums were paid, and as sixty-five per cent. of \$4,618.00 (the amount awarded) is \$3,003.00, it might have suggested that there was where the \$3,003.00 would "do the most good."

In reply to the general charge of fraud made by the FANCIERS' JOURNAL, I desire to say that the Finance Committee of this Association is composed of three gentlemen who are believed to be both honest and capable, and until they discover some crookedness in the management of affairs (to say nothing of the injustice of the thing), it will become the FANCIERS' JOURNAL to impugn the integrity of any individual or association of individuals.

What incentive the FANCIERS' JOURNAL can have for weaving such a tissue of falsehoods I know not, except it be the hope of gaining a cheap popularity, or the hostility which it, circulating chiefly on the Atlantic seaboard, naturally feels to a movement which tends to centralize the interest which supports it at some distant point. But even these do not account for that malignity which denies to a cause to which it is ostensibly friendly the fair treatment which honorable journalism grants to an acknowledged foe.

The gist of the matter is simply this: The officers of the National Association inaugurated a movement, not for their own aggrandizement, but for the good of this interest, and, cheered on by the fanciers of the entire country, they became over sanguine, and offered a list of premiums, amounting to *over nine thousand dollars*, an unprecedented amount. The number of entries fell far short of what they had been led to expect, and the expenses amounted to double what they supposed they would be, in consequence of which they fell short 35 per cent. on their awards.

This balance they promise to pay from the proceeds of the next exhibition, and as they have all necessary coops and fixtures on hand, the outlay for the next show will be much less. If the exhibitors do not believe in the permanence of the poultry interest, and are not willing to take the promises of the Association for this amount, then I think those gentlemen who have spent their energies in promoting the poultry interest in the West, particularly those officers of the National Association who are not pecuniarily interested in the breeding or sale of fowls, and who have enlisted solely for love of the thing, had better "hang up the fiddle and the bow," and devote their attention to things which yield more solid satisfaction.

Respectfully yours,

CHAS. P. WILLARD.

P. S.—I have written this article without consultation with other officers of the Association, and they should not be held responsible for the views which I have expressed.

BREEDING TO STANDARD.

A subscriber in New Hampshire is informed that it has long been held as a settled thing among breeders of either animals or fowls, that the influence of the *sire* is pre-eminent. In horses, cattle, swine, sheep,—with dogs, rabbits, fowls, or pigeons, the principle is the same. The blood of the male predominates, in all cases.

In breeding domestic poultry, a prime, vigorous cock of any given variety, bred to well selected hens, gives us the best average

progeny. It does not matter that the mate be over-sized, of his kind; but in stamina, good constitution, condition, accurate plumage, etc., it is requisite that your favorite male breeding bird should be in no respect deficient.

With such a sire, and hens of their sort the largest and best developed specimens to be had, from your own flocks or otherwise, you may best succeed in producing subsequent stock to your liking.

But in all cases the impress of the sire (if he be full bred) will be unmistakably seen in the chicks, at maturity, and amongst the cockerels especially. To continue your strain to best advantage, breed only your pullets back to the old cock, and dispose of the young male birds. Select the finest for successive breeding, and never use brothers and sisters, if you would have uniformity, in a general way, among the progeny of your original stock.

By following this rule alone, can you hope for the best results, but the strong blood of the first sire will drop out for many years in succession, and with careful selection and mating a "standard strain" may be thus established that will commend itself, in a very few seasons. SPANGLE.

LISTEN TO THE DUNGHILL.

Cock-a-d-o-o-dle-do-o,
I'm a ye-e-ar older than you-u-u.

Thusly comes Zero to the front, like unto a big charge of powder and a small portion of shot from an old flint lock musket, hurting as usual no one except the man in the rear. What we "surmised"—that the attack on the Standard was merely the result of a personal quarrel between different parties, was perfectly correct. Please do, Mr. Zero, allow us to surmise just once more that if any man on this continent knew all about the whole thing, "Thou art the man." What are our individual efforts at breeding, whether they are good, bad, or indifferent, to do with the Standard? Who cares a penny whether you are a fair or unfair man? Stick to the text, cold blooded friend, your self admiration don't come in now. Who said the Standard was perfect? We did not. Perfection is a scarce article just now in this world, but the Standard is, as said Miss Watts of the Brahmas, "about the best we ever had." Where do you find in the Standard, instructions for mating up breeding stock? We suppose that even the youngest know that in Light Brahmas, we use more color in breeding stock, than we wish to produce in the offspring. The Standard does not need to mention these things. As to birds "mating in the pen," don't you know that this rule will apply only in exhibition trios, when the plumage of the male differs from that of the female, and that birds are often exhibited in pairs, or singly, principally to avoid this disqualification? You seem to be old enough to use even a little common sense in connection with the subject, even if you are disposed to leave it all at home, when judging by the Standard. As to the "certain instrument," (you have a fashion of saying nothing for sure) we suppose you mean the constitution of U. S. Well! We sincerely hope you enjoy the labor of the "wisest," and frequently read, mark, learn, and inwardly digest, the whole batch, amendments end all, and swallow your nigger on toast with an humble air. But as you seem to enjoy any change in the Standard, if you will take the trouble to read, you will find that at Chicago, some alteration was made which was thought advisable by some of the representative breeders of the nation, also steps taken for other changes, thought to be desirable. Is this not the true course? If not, please enlighten our feeble mind. Tell us and our friends how you breed —s. If not bred to Standard, perhaps it would be a godsend to your customers if not to you, to advertise the fact. Tell us of the 1st class (or any other class, for that matter) show, of the past season, which did not

use our Standard. Tell us of the Brooklyn show which could not run without the Standard, after advertising to ignore it. Oh! In certain cases you "accept it faithfully, and abide by it loyally." We are too little and too young to give advice, but do accept our little "peep," which is when you win prizes, or dispose of stock, you will "accept it faithfully, abide by it loyally," and breed to it joyfully. Put this one little chew "in your pipe and smoke it." We did not deny its use to Judges or Editors. What we did say was, it was not made "principally for judges or newspaper men," meaning that hundreds, yes, thousands of breeders study it and use it, where one judge or editor does. and if you would take the trouble to think, or ask some one, you would know this without being informed through the JOURNAL. Your disgusting attempts at fawning and caressing the A. P. A., while attempting to shoot their offspring (the Standard) in the back, need no comments. Do tell us, in your winning way, why are you kicking like an enraged mule? It cannot be at the A. P. A., for in your own words, "there is no accusation against them." Not at the Standard, for in cases of importance, you "accept it faithfully, and abide by it loyally." Not only is the Standard our law, not law forced upon us, but law willingly obeyed by a law abiding band. It is in the well chosen words of one of the brethren, "one of the links that binds together in unity the Fanciers of America." Lastly, Mr. Zero, in your next effusion on infants, your personal behavior at shows, &c. &c., tell us, do tell us, what on earth you are kicking at. Are you only trying to get warm? Is it the personal quarrel referred to, or is it the feeble, gentle, soothing "chirps" of

YOUNG BREEDER.

POULTRY SHOW AT DUNKIRK, N. Y.

FREDONIA, N. Y., April 26th 1876.

FRIEND WADE:

Herewith I send you report of Chatuanqua Co. Poultry Show, at Dunkirk, N. Y.

Yours,

GEO. S. JOSSELYN.

THE PREMIUM LIST.

ASIATIC CLASS—Light Brahmas, cock, 1st, G. S. Josselyn; 2d and 3d, T. D. Hammond; hen, 1st and 2d, Geo. S. Josselyn; 3d, T. D. Hammond; cockerel, 1st and 3d, T. D. Hammond; 2d, G. S. Josselyn; pullet, 1st and 3d, T. D. Hammond; 2d, G. S. Josselyn. Chas. Rest, Buffalo, Judge.

Dark Brahmas, cock, 1st, Geo. Resseguie; 2d, O. T. Briggs; 3d, W. S. French; hen, 1st, Geo. Resseguie; 2d and 3d, G. S. Josselyn; cockerel, 1st and 3d, G. S. Josselyn; 2d, Geo. Resseguie; pullet, 1st and 3d, Geo. S. Josselyn; 2d, Geo. Resseguie. G. L. Williams and W. P. Atkinson, Judges.

Buff Cochins, cock, 1st, A. McLaren; 2d, Wm. A. Fox; hen, 1st, A. McLaren; 2d, Wm. A. Fox. G. L. Williams, Judge.

Partridge Cochins, cock, 1st, W. A. Koch; hen, 1st, W. A. Koch; 2d and 3d, G. S. Josselyn; cockerel, 1st, 2d and 3d, G. S. Josselyn; pullet, 1st and 2d, G. S. Josselyn; 3d, A. G. Barlow. G. L. Williams, Judge.

Black Cochins, cockerel, 1st, S. O. Meiniger; 2d, C. A. Fletcher; pullet, 1st, S. O. Meiniger; 2d, C. A. Fletcher. G. L. Williams, Judge.

White Cochins, cockerel, 1st, C. A. Fletcher; 2d, Wm. Cranston; hen, 1st, Wm. Cranston; 2d and 3d, C. A. Fletcher. G. M. Williams, Judge.

DORKING CLASS.—No entry.

GAME CLASS.—B. Red, cock, 1st, H. A. Record; 2d, A. McLaren; 3d, Geo. B. Starr; hen, 1st and 2d, H. A. Record; 3d, A. McLaren; cockerel, 1st, W. P. Atkinson; 2d, A. McLaren; pullet, 1st, W. H. Atkinson; 2d, A. McLaren. S. Curtis, Judge.

Earl Derby, cock, 1st, H. McLaren; hen, 2d, A. McLaren. Brown Red, cock, 1st, A. McLaren; 2d and 3d, Jennings & Richardson; pullet, 1st, A. McLaren.

Silver Duckwing, cock, E. Hayler; 2d, A. McLaren; hen, 1st, E. Hayler; 2d, A. McLaren; cockerel, 1st, A. McLaren; pullet, 1st, A. McLaren.

Golden Duckwing, cockerel, 1st, A. McLaren; pullet, 1st, A. McLaren.

Red Pile, cock, 1st, A. McLaren; 2d, T. E. Pierce.

White Game, cockerel, 1st, A. McLaren; pullet, 1st, A. McLaren.

Ginger Red, cockerel, 1st, Jennings & Richardson; pullet, 1st, 2d and 3d, Jennings & Richardson.

Irish Grey, cock, 2d, A. McLaren; hen, 2d, A. McLaren.

Spangled, cock, 1st, A. McLaren; hen, 1st and 2d, A. McLaren; pullet, 3d, F. E. Pierce.

Black Game, cock, 1st, A. McLaren; pullet, 1st, A. McLaren; 2d, Jennings & Richardson.

Blue Red, cockerel, 1st, W. J. Oaks, 2d, Jennings & Richardson; pullet, 1st, W. J. Oaks.

LEGIONS CLASS.—White, hen, 1st and 2d, J. M. Beebe; 3d, A. G. Barlow; cockerel, 1st and 3d, W. P. Atkinson; 2d, E. J. Thompson; pullet, 1st and 2d, W. P. Atkinson; 3d, A. G. Koch. Fred. Maston, Judge.

Brown, cock, 1st, W. P. Atkinson; hen, 1st, W. P. Atkinson; cockerel, 1st, J. M. Beebe; 3d, Dr. Pond & Son; pullet, 1st and 2d, J. M. Beebe; 3d, E. J. Thompson.

Black, cock, 1st, Dr. Pond & Son; hen, 1st, Dr. Pond & Son; pullet, 1st, Dr. Pond & Son.

HAMBURG CLASS.—Silver Spangled, hen, 1st, E. J. Thompson; 2d, W. P. Atkinson; 3d, C. A. Fletcher. Fred. Maston, Judge.

Golden Spangled, cock, 1st, Dr. Pond & Son; hen, 1st and 2d, Dr. Pond & Son; cockerel, 1st, Hiram R. Iph; 2d, Dr. Pond & Son; 3d, C. A. Fletcher; pullet, 1st, Dr. Pond & Son.

Golden Pencil, hen, 1st, Dr. Pond & Son; pullet, 1st, A. McLaren; 2d, Dr. Pond & Son.

POLISH CLASS.—Golden, plain, cock, 1st, A. McLaren; hen, 1st, A. McLaren; pullet, 1st, A. McLaren.

Golden Bearded, cock, 1st, W. P. Atkinson; pullet, 1st, W. P. Atkinson.

White Crested Black, cockerel, 1st, J. M. Beebe; pullet, 1st, J. M. Beebe.

FRENCH CLASS.—Creve Cœurs, hen, 1st, F. S. French.

Houdans, cock, 1st, F. H. Koch; hen, 1st and 2d, F. H. Koch; 2d, W. H. Scott; cockerel, 1st, J. M. Beebe; pullet, 1st, J. M. Beebe.

LaFleche, cock, 1st and 2d, S. W. Bond; hen, 1st and 2d, S. W. Bond; cockerel, 1st, S. W. Bond; pullet, 1st, S. W. Bond.

CLASS GAME BANTAMS.—B. B. Red, cock, 1st, Edw. B. Smith; 2d, A. McLaren; 3d, A. S. Rigdon; hen, 1st, Edw. B. Smith; 2d, A. McLaren; 3d, A. S. Rigdon; cockerel, 1st, Edw. B. Smith; 2d, A. McLaren; 3d, W. P. Atkinson; pullet, 1st, Edw. B. Smith; 2d, A. McLaren; 3d, A. S. Rigdon. S. Curtis, Judge.

Yellow Duckwing, cock, 1st, W. P. Atkinson; hen, 1st, W. P. Atkinson; cockerel, 1st, Edw. B. Smith; 2d, A. McLaren; pullet, Edw. B. Smith; 2d, A. McLaren.

Silver Duckwing, cock, 1st, Edw. B. Smith; hen, 1st, Edw. B. Smith; cockerel, 1st, A. McLaren; 2d, Edw. B. Smith; pullet, 1st, Edw. B. Smith; 2d, A. McLaren.

Rumpless, cock, 1st, L. Haggerty.

TURKEY CLASS.—Bronze, 1st, C. L. Woodward; 2d, O. F. Briggs. W. P. Atkinson, Judge.

GESE.—Toulouse, 1st, C. L. Woodward; 2d, E. J. Thompson.

Brown China, 1st, O. F. Briggs.

DUCK CLASS.—Pekin, Old, 1st, C. L. Woodward. Young, 1st and 2d, A. Merrill.

Kanake, 1st, C. L. Woodward.

ROUCH, 1st, E. J. Thompson.

PIGION CLASS.—There were 34 various pairs in this class, and being without competition, W. P. Atkinson took all the premiums. Geo. S. Josselyn, Judge.

BIRDS.—N. A. Parrot, W. P. Atkinson, best.

African Canary, Geo. P. Isham, best.

Virginia Cardinal, 2d, A. G. Koch.

South African Parrot, Carl Zentz, best.

Schwastzenwald Canary, Carl Zentz, best.

Gorman Canary, C. Heintz, best.

RABBITS.—Lop Ear Madagascar buck, (self color,) 1st, W. P. Atkinson.

Lop Ear Madagascar buck, (broken color,) 1st, Pond and Son.

Lop Ear Madagascar doe, (self color,) 1st, W. P. Atkinson.

Lop Ear Madagascar doe, (broken color,) 1st, Pond & Son.

Angora buck, 1st, Atkinson; 2d, Pond & Son.

Angora doe, 1st, W. P. Atkinson; 2d, Pond & Son.

Himalayan buck, 1st, W. P. Atkinson; doe, 1st, W. P. Atkinson. Geo. S. Josselyn, Judge.

TURKEYS—HATCHING UNDER DIFFICULTIES.

Talk about "eternal vigilance" as the price of liberty—and poultry; but from the following bit of experience it would seem that the highest success, in turkey management, at least, is not always dependent on conformity to established rules, and the most tender handling and care.

I had one hen sitting on ten turkey eggs at the side of the door of the sitting-room in the hen house. The door fastens by a wooden latch on the inside, and is opened from the outside by putting one's finger through an inch hole and pushing the latch up.

My "nephey" a two-and-a-half-year-old piece of enterprise, got into the way of poking a stick into this hole, by which he could raise the latch and thus enjoy an occasional peep into precincts he knew he was not allowed to enter. The hen at the door seems to have particularly engaged his attention. Her threatening attitude, I had noticed, kept him at bay, and although I had several times seen him with the door open, I felt sure he would never pass the threshold while that hen sat there.

But the time spent at the door was not unemployable, as I discovered a few days afterwards, when the time came for taking the hen with her newly hatched brood from the nest. What all do you suppose I found in that nest? Well, there were two corn-cobs, one piece of grape-vine, two brick-bats, a small piece of a grind-stone, a harrow tooth, a tin cup, a piece of boot leg, four good sized chips, and a number of smaller chips and scraps of various kinds.

But with all these, there were the ten young turkey chicks from the ten eggs, all strong and lively, and ready to leave what was certainly the most novel looking hens' nest I ever saw.

If the success achieved by these turkey chicks in this their first battle for existence may be taken as an indication of their future vigor and powers of endurance, who can estimate the glory which awaits them in the poultry world a few years hence? Had the case come under the observation of Darwin, he would, no doubt, have predicted them at once the progenitors of a new race.

ILLINI, Jr. in *Prarie Farmer*.

LAST YEAR'S COCKERELS.

We suppose that nearly all who go in for breeding fowls to any extent find at the end of the autumn that they have a lot of superfluous cockerels, and do not know what to do with them. We think there are many of our fresh hands, who are but as yet young in the craft, that then want to part with these birds at any cost. They fill up the runs and get in the way of the growing chickens, or break through their bounds and appear in forbidden places, worrying the hens, and altogether getting terribly in the way. So, perhaps, these cockerels are offered for sale at ridiculously low prices, or are made into soup and used in the kitchen. Now, many of these birds are really the birds which make the winning two-year-old cocks. We would recommend great care being taken in weeding out these cockerels. So many of our young hands fancy because such birds never won a prize in their youth that they will not in time to come. No idea can be more deceptive, for over and over again we have noticed that the best two-year-old cocks are the birds which, as cockerels, were nothing very grand. We should state that we allude to Dorkings, Cochins, Brahmas, French and Polands more especially.

Very rarely have we noticed that these cockerels (especially in Cochins) which make such a sensation in their first year come much to the front after their moult, and their places are filled in the second year by birds which, though they were perhaps of the same brood as the winning chickens were looked upon as "ugly ducklings," and ran risks of being eaten or sold cheaply. The old hands know better, and can often spot a bird which is to make the winner in his second year; but the amateurs, for whom

A NEW TEST.—Aunt (in alarm). "Surely you've eaten enough, haven't you, Tommy?" Tommy (in doubt). "F-f-f-eeel me!"

we especially write, are not up to the full knowledge of breeding, and so repeatedly make away with valuable birds. We did it ourselves when we began, and we can well remember selling a late cockerel many years ago for 15s., which after his moult came out a winner over and over again at good places. The best of this case, however, was that the purchaser expected for 15s. to get a show bird then and there; so when the bird came he wrote back indignantly, saying a "weed" had been sent which was not worth 2s. 6d., and we then in our simplicity sent the man a sitting of eggs to induce him to keep the bird, as we had no room at home. It was consequently very mortifying to see the "weed" winning in the next year wherever he went. This, however, is annually happening to very many—we mean the parting with valuable birds because they do not then come up to the ideal standard which the eye tells them they should do.

We know of several breeders who go round at the Birmingham and the Crystal Palace shows, thoroughly examining every specimen, to see if they can see there any bird which promises to make up into a good two-year-old, and if they find such they will buy them at any price in reason, and over and over again those birds are birds which do not in their first year even get a commendation card. Only a few days ago we read in a contemporary how Mr. Hinton had a Polish cockerel which never won a prize as a chicken, and yet after his moult became a notorious bird. And to quote a case which came quite under our own eyes: One of the first-prize Cochins at the last Bristol show was a bird which not only never won as a chicken, or looked even approaching the exhibition form, but was not thought even worthy of being bred from, though we confess we never did agree in this respect. Still this bird with plenty of good living thickened and filled out, and came out from his moult one of the best cocks of the color of the year, and has never been shown without winning a first prize or cup.

We shall, perhaps, be asked to account for this. We can only answer that we conclude that exhibiting a young bird of a large or heavy breed to any extent weakens his constitution; or he is marked as a promising bird and a likely future winner, and is petted and pampered with meat or spiced foods, and so being forced on in his early months, he has not the vigor and constitution to thicken out and develop, and come out from his moult large and bright in plumage. It is not always so, of course, but we repeat that overshadowed birds and champion cockerels rarely make old cocks of note, and we look forward to next autumn to see how the Buff Cochins which has so often come to the front in the past season will then appear after his moult; that he will never make the bird that Mr. W. A. Burnell's is we feel pretty sure. But to return to last year's cockerels generally. Let us not discard any birds which, possessing in moderation the proper points, want only weight or size, for such birds when allowed to run together in a good run will amply repay all trouble and food expended upon them. We would recommend such birds not being bred from the first year, and being well fed on good food twice a day, allowing them to have as much as they will eat at a meal. They can live together, in a shady run if possible, all through the summer, and then about the early part of September, or even in the last weeks of August, they would do well if taken up and placed in little pens—four or five feet square would do perfectly; and then when well fed three times a day, and supplied with plenty of green food and dust, they will moult out well, and often make up well into valuable two-year-olds. We mean that discretion must be used, and the birds selected, as we before said, which, possessing the required points, only need size and weight. Nearly every breeder has such birds, and two or three worthy of this treatment can generally be selected in January or February from the superior cockerels which are usually found in establishments of any size.—W., in *Journal of Horticulture*.

CHICKENS.

"I didn't!" says Chip. "You did!" says Peep.
 "How do you know?—you were fast asleep!"
 "I was under mammy's wing,
 Stretching my legs like anything,
 When all of a sudden I turned around,
 For close beside me I heard a sound—
 A little tip and a little tap."
 "Fiddle-de dee! You'd had a nap,
 And when you were only half-awake
 Heard an icicle somewhere break."
 "What's an icicle?" "I don't know;
 Rooster tells about ice and snow—
 Something that isn't as good as meal—
 That drops down on you and makes you squeal."
 "Well! swallow Rooster's tales, I beg!
 And think you didn't come out of an egg!
 I tell you I heard the old shell break,
 And the first small noise you ever could make;
 And mammy croodled, and puffed her breast,
 And pushed us further out of the nest,
 Just to make room enough for you;
 And there's your shell—I say it's true!"
 Chip looked over his shoulder then,
 And there it lay by the old gray hen—
 Half an egg-shell, chipped and brown,
 And he was a ball of yellow down—
 Clean and chipper, and smart and sery,
 With the pertest bill and the blackest eye!
 "H'm!" said he, with a little perk,
 "That is a wonderful piece of work!
 Peep, you silly! don't you see
 That shell isn't nearly as big as me?
 Whatever you say, miss, I declare
 I never, never, never could get in there!"
 "You did!" says Peep. "I didn't!" says Chip;
 With that he gave her a horrid nip,
 And Peep began to dance and peck,
 And Chip stuck out his wings and neck.
 They pranced, and struck, and capered about,
 Their toes turned in and their wings spread out,
 As angry as two small chicks could be,
 Till Mother Dorking turned to see.
 She cackled and clucked, and called in vain—
 At it they went with might and main—
 Till at last the old hen used her beak,
 And Peep and Chip, with many a squeak,
 Staggered off on either side,
 With a very funny skip and stride.
 "What dreadful nonsense!" said Mother Hen,
 When she heard the story told again;
 "You're bad as the two-legs that don't have wings;
 Nor feathers nor combs—the wretched things!
 That's the way they fight and talk
 For what isn't worth a mulein-stalk.
 What does it matter, I'd like to know,
 Where you came from or where you go?
 Keep your temper and earn your food;
 I can't scratch worms for a fighting brood.
 I won't have quarrels—I will have peace!
 I hatched out chickens, so don't be geese!"
 Chip scratched his ear with his yellow claw,
 The meekest chicken that ever you saw;
 And Peep in her feathers curled one leg,
 And said to herself: "But he was an egg!"

REMEDIES FOR LICE ON ANIMALS.

There are several excellent remedies for lice on animals; but among them all, perhaps, oil is the most efficacious and harmless. None but sweet oil, or the best kind of lamp oil, or winter strained machine oil, should be used for such a purpose. If linseed oil, or some other kinds of oil, be used, it will dry, and the hair of the animals will all stick together in dry, hard bunches. Let oil be poured on the backs of live stock and on their necks and tails, and rub it in thoroughly. If lice take up their quarters on the dewlap, give it a good oiling, and they will soon bid adieu to such oleaginous climes. Oil should be applied when the weather is warm, rather than when it is very cold; because in cold weather lice keep quiet,

and will not deposit many eggs. Let it be kept in mind that lice never deposit their eggs on oily hair.

We were once raising a lot of turkeys which were about as large as quails, when they began to drop and appeared lifeless. Upon examination they were all found to be as lousy as an Egyptian. Every one of them was caught, and sweet oil was rubbed on their heads and poured on them, under the wings—giving them a good sopping; and in three days not a louse could be found, and the turkeys soon began to flap their wings and move about with agility.

Mercurial ointment or "unguentum," which is made of mercury mingled with lard, is often recommended for lice. But it is a dangerous remedy; and is no more efficacious than oil. I applied mercurial ointment once to my calves, which were lousy; and it made them so sick, that I feared, for some time, I should lose them. Such a remedy never should be used, when there are enough besides, of a milder character. A decoction of tobacco is frequently recommended for destroying lice. But oil is much cheaper and more efficacious, and will not make animals sick; but tobacco, when applied bountifully, will often make them sick.

Fowls roll in the sand in order to mingle the dirt and grit with their feathers, which will scratch the lice to death. Neat cattle frequently throw dirt on their backs, which destroys the lice mechanically, just as scores of people are smashed up among the rubbish of a huge building when it falls. But it is difficult to make sand or ashes remain among the hair on the dewlaps of animals, or on their sides. Therefore, oil seems to be preferable to almost any other remedy. Fat cattle will sometimes be covered with lice. I once owned a yoke of fat oxen, which were the louiest beings that I ever heard of; but a good sopping of oil soon dispersed the vermin. Keeping animals in a thriving condition is usually a good preventive; but it will fail some times as a remedy for lice.

Why do lice flourish best, and increase much more rapidly on very poor, emaciated animals? Because the surface of the skin and hair of poor animals are quite free from oil. Well, what of that? Why, no lice can ever propagate their species among oily hair. Whether lice have any brains or not, they will never deposit their nits among oily hair. If the nits after they have been deposited or stuck to the hair should be oiled they will never hatch. Lice seem to know that fact, and therefore do not find a congenial locality in the hair of an animal which perspires freely. Consequently if lice are found on a fat animal, they will always be more numerous near the end of his tail than on any other part of his body. Lice are like sheep in one respect, they like a warm and dry place. Let a few nits be placed in a warm place for a few days, and they will hatch; but let them be oiled, and it will be impossible to hatch them. So with the eggs of birds and domestic fowls. Give the shells a thick coat of paint or grease, and the eggs will never hatch.

The bees, which are such a great annoyance to horses in the summer, which fasten their eggs to the hair of horses, seem to understand this principle much better than most people do; and therefore they deposit most of their eggs on the hair, which will be least liable to be moistened with sweat. For this reason we always see many more bot-eggs on the legs, below the knees of horses, than on any other part of them. If such eggs should be greased or moistened with sweat a few times, they will never hatch.—*Agri-cola in Practical Farmer.*

PIGEON DEPARTMENT.

WILD PIGEONS.

In the article by "Huo," entitled "Zoo Notes, No. 18," that very agreeable writer tells all about the *Crowned* and *Nicolars* varieties, and winds up with Audobon's and Wilson's stories about the enormous numbers (millions or billions) of wild pigeons, those noted ornithologists met w.h. in the course of their travels and researches. In keeping with the almost fabulous accounts thus given, in the former experience of such authentic writers as those above mentioned, the following recent article tells us about a flock of wild pigeons twelve miles long, and five miles in width.

"About a month ago, early one morning, the people living at Barnum's, Sullivan County, N. Y., were surprised to see the air thick with the flight of an apparently endless flock of wild pigeons, which was passing over that section to the northward. For over a quarter of an hour the flight continued in an incessant stream,

obstructing all view of the sky, and giving to the surroundings that sombre appearance caused by the gathering and passing of thunder clouds. It was not known at the time how far the flock extended to the eastward, but it was subsequently learned that it reached over twelve miles in a continuous line. Old hunters said that the pigeons were seeking nesting places, that from the altitude of their flight it was not supposed that they would rest short of the North Woods, in John Brown's tract. Two days afterward, however, lumbermen from the head waters of the Beaverkill and the beech woods of the upper wilderness of Sullivan County, brought in the news that these sections had been taken possession of by wild pigeons in enormous numbers, and that they were preparing for the nesting season.

The woods were found to be literally swarming with pigeons. Deputy game constables were stationed in considerable force in the wilderness, cabins being erected for their accommodation. They had orders to deal as summarily with all gunners or trappers seeking to disturb the birds as the law would warrant. Unparalleled sport was anticipated in due time; but unfortunately severe weather intervened, snow falling to the depth of nearly a foot along the Beaverkill a few days after the pigeons rested. After the storm had ceased the constables noticed an unusual stir among the birds through the region, and about noon the fifth day of their stay they began taking flight, and in a few hours there was not a pigeon to be found in the entire territory. They took a direction northwest, and in due time was heard of as having passed over the counties of Delaware and Broome, N. Y., and Susquehanna and Bradford in Pennsylvania, and took up their quarters in the beech woods of Pike and Monroe counties.

The beech woods of these counties comprise thousands of acres of almost primitive wilderness, they being invaded only by lumbermen, bark peelers and sportsmen. In their fastnesses the black bear roams at will, and the wild deer finds security from hunter and hound. On Friday last Clinton Waters and Isaac Bennett, two bark peelers, were in the depth of the beech woods, selecting a place to build a cabin for the ensuing bark peeling season. The sun was shining brightly, not a cloud being in the sky, when suddenly the sun was hidden as if by a dark cloud, and a noise like that produced by a gale of wind or the roll of distant thunder, broke on their ears. Simultaneously the woods commenced filling with wild pigeons. Tree after tree was filled with the rapidity of lightning, and still the air was black with one great moving mass of birds as far as the eye could reach.

After the first excitement attending the appearance of the pigeons had passed off and it was apparent that the great body had found resting place Waters and Bennett, true to the instinct of the human race, began to wage war against the birds. They were possessed of no guns, but taking each a long pole, they swooped about them among the pigeons, right and left. With every blow, dozens of the birds fell killed and maimed to the ground. The men slew hundreds in this way.

For the purpose of seeing how far the woods were occupied by the pigeons, they walked for five miles through the forest. As far as they could see on either side the birds occupied the trees, and when they stopped in their walk they could not discover the end of the flock. When they brought the news of the great pigeon roost, the excitement was great among the lumbermen and others, and dozens of men started out to kill them at night on the roost. On reaching the roost a continuous slaughter was kept up for two hours. It is estimated that 10,000 were killed and wounded.

The birds had chosen the beech woods as their nesting place, but the determined cruelty and barbarity of the inhabitants resulted in their again taking flight. They took a course directly west, and have settled probably in the wilderness of western Pennsylvania. Old and experienced hunters say that this was the largest flight of wild pigeons ever known in this region. The flock was certainly twelve miles long and four or five wide.

EDITORIAL DEPARTMENT.

WILLARD'S TIRADE.

We have waited very patiently and hopefully for a *satisfactory* explanation of the curious proceedings of the so-called National exhibition at Chicago, and have waited, we are sorry to say, in vain; Patience exhausted, we are obliged to turn our attention to the only matter relating to the affair accessible which comes to us in the shape of a screed signed by Willard, and a long and good natured report signed by Judge Luce. At present we will pay our respects to Willard's acrimonious and bilious address "to the public," which is given on another page of this issue, and which will undoubtedly furnish those of our readers who have followed this matter very closely, considerable amusement. It will be remembered that the FANCIERS' JOURNAL has been careful to avoid anything like a personal controversy in the matter, has made no direct charges other than those it has fully corroborated, and has only (in a very plain and direct manner of course), given voice to the many complaints and rumors of bad management in order to have them cleared up and laid at rest. In answer to this, Willard stands up before the "public," waves his ears with a sort of an "injured innocence" air, and makes a ridiculous effort to buy up the entire church parish with a bent sixpence. Unless forced into it we shall avoid the personal controversy which Willard is so anxiously soliciting, but we promise our friends if we are obliged to take it up that we shall make it short and as decisive as the English language will permit. His slurs and contemptible insinuations in his address to the public in connection with ourselves will only awaken disgust in the minds of our readers and so need little attention in this column. The article itself will probably produce the same effect upon them that it did upon the mind of one of the officers who was in doubt as to the action he ought to take until he received this so-called reply of Willard's, when he immediately wrote that gentleman that it had very clearly decided the matter for him and enclosed his resignation.

Stripped of its verbiage there is very little in the article that need be alluded to. Willard gets into a state of mind over the fact that we have alluded to his resignation, and says, "the use of a private letter I consider a breach of faith." This information was not conveyed to us in a private letter. The notification came from three officers of the society to each of whom Willard had given it over his signature as secretary. Speaking of private letters, we have had none from Willard since the exhibition, but we received a few before the show, one of which we should like

Willard's permission to publish in answer to his scurlous insinuation which he throws out in his "reply," in these words: "Had the FANCIERS' JOURNAL been one of the papers that assisted the association by a donation it would have understood this." The same sort of a letter, written to the publishers of other journals before the premiums were donated, would have saved them the chagrin of having it said that only 65 per cent. of the prizes offered by them and in their names were paid, and right in the face of the fact Willard taunts us with not having donated anything, and that, too, before he has hardly finished ranting about a breach of faith.

Well, let's see. Now here is a man who is noisily solicitous lest his honor should be questioned. Well, now, will you please answer a few simple questions while you are up before the public, Mr. Willard?

Isn't it true, as stated, that the executive committee voted to pay you \$500, provided there were funds in the treasury after all the expenses and all premiums were paid?"

And isn't it true as reported, Mr. Willard.

That you took \$300 before all the premiums were paid and even before all the expenses were paid, if we count the expenses promised by yourself or other officers to Messrs. Felch, Ongly, Marston and others?

Give us your answer to this and if it is not so we will promptly correct the erroneous impression (if it so proves to be,) that prevails all over the country.

As the reader will see at once, Willard bases his article upon a false assumption and begs the whole question.

He labors assiduously to make the reader believe that Chicago was doing great things for the fanciers', and that it had nothing but their interests in view. Will Mr. Willard please tell "the public" when the fanciers of the country asked him and others to organize the society and assume obligations for them? Isn't it true that Chicago went to Buffalo and urged the fanciers' to go to that city and promised splendid things for them if they would? Isn't it true that Chicago prevailed upon Buffalo to give up her exhibition and help out Chicago, under the promise that Chicago would reciprocate this year? And is she going to do anything of the kind? Isn't it true that the gentlemen organized the society of their own free will, and then called upon the fanciers' of the country to help them by donations for premiums and birds for exhibition? And didn't they do all this and more too in a very prompt and generous manner, and now Willard attempts to show that they are the last ones who should be considered. This is where our criticism falls, that those who managed the affairs of the society, and which management was *self imposed*, didn't so much as lift a finger toward fulfilling the promises they had made them, but taking good care that they did not suffer by their own mismanagement, and that some favored ones got pay for their work, let the loss fall upon those who had made the premium list and the exhibition something to be proud of.

Then Willard saddens the public with this pathetic conundrum: "Would the F. J. have these gentlemen who so kindly guaranteed the bills pay them out of their own pockets?" Well, ordinarily speaking, this is the course of those who keep in mind the fact that this life is too short for petty meannesses, but we answer with another conundrum: If the National had been well managed and had made instead of lost several thousand dollars, would the profits have been paid over to those who had to carry the loss? In our humble opinion,—mind now we don't make it as an assertion—some of the gentlemen "who are not peculiarly interested in the breeding or sale of fowls and who have enlisted solely for the love of the thing," would have received more than \$300 for their services. It was simply, "Heads I win, tails you lose." Then Willard indulges in more of that everlasting gush about the unprecedented amount of the

premium list." Considering the fact that the fanciers' of the country outside of Chicago furnished nine-tenths of the amount, and that Buffalo, Boston and Springfield have paid more in premiums than Chicago did, this nonsense may as well be dropped first as last. Why, Willard, you can just as well make your premium list in the future \$20,000 as \$9,000, provided you fulfill your promises in the same honorable (sic) manner that you have in the past. So we might go on through the whole tirade Willard has furnished us, for there is an embarrassment of riches in it, but we can use our time and space to better advantage. There are only a few other points worth touching upon. He says we represent a lot of sore heads. Well, as many of them were and still are officers of Willard's society, many of them gave handsome sums to his premium list, and large numbers of them were exhibitors at his show, he certainly ought to be willing to allow that it is a very respectable constituency. The only sore head would probably be found on the shoulders of the secretary if he should happen to speak to some of them to their faces as he does of them in his letter. Willard's effort to make it appear that there is a jealousy between eastern and western fanciers' is not very successful. The handsome donations to the National's premium list by eastern breeders, the large number of birds shown at western exhibitions by eastern men, the thousands of western subscribers to the FANCIERS' JOURNAL, *Poultry World*, *Poultry Bulletin*, and other eastern papers, all testify in a very tangible manner to the good fellowship which exists between the east and the west. No, Mr. Willard, your hopes and those of any other individual who may entertain them, to see a break between the two sections will never be realized, and any one who attempts to cause an unpleasant feeling between eastern and western breeders will find he has made a very serious mistake for himself.

Willard's "P. S." we are informed by one of the officers is in very good taste.

CORRESPONDENCE.

VERTIGO IN PIGEONS.

BALTIMORE, April 27, 1876.

FRIEND WADE:—I have a very fine Yellow Turbit hen "solid" diseased with what I suppose to be the Vertigo. I put her from the loft, in a cage by herself. Whenever any one approaches she commences to flutter, lays on her back, twists her head skull down, and lays in this position for about a minute. I have tried one of two remedies, viz: bleeding her in the head which did no good; the other is infallible but very apt to prove fatal, viz: twisting her head off. Now if you or any of your subscribers can name a cure, you will greatly oblige.

Most respectfully yours, &c.,

W. B. COCHRAN.

VILLYTELFF, April 24.

MEISTER VADE:—

Dot Nadural History is a vine stooody, bud I dond hafe soom vylosyfit mit efery kint ov animals—ov vat bragdical use is te Schiraff vor insdans? Dot animal schtrikes me as a voolish bece ov vork mit nadure. Und sooch a hi-doned peast do. Vy von mool is more usevel as all te Schiraffs in te vorld, and a mool dond hafe no kint ov schtaming mit te animal kingdom—Und how is dot Meister Vade? Is dot a unifersal law ov nadure? I vint te same kint ov brincable among te human family—Te bachend halt vorking kint is nopody and hafe halt schratching to got along, und id look as iv brovidents gife dot lasy kint soom kint of long vingers, or a kint ov inschun rupper gonshens, or somdings in gonbensashun so he can got along esy. I dransmogrovoy dot schiraff indoo a vurst class mool, und pud him in a hugder gart poody gwick. I like to dake te gonseide oud ov dot kint of animals vot dont do somdings, und vant to stand so high ofer efery pody els. Dods te kint of veller I am. Soom kint of peasts you can ead iv it cand make idself usevel, bud a man dond make a vordune vrasing dot kint of peef. Dot neck and legs dond pring no brice on a butchers schtall, dond it? I tink id petter pe exterminadet. I dond exosd dot soobject yed bud you hear vrom me some dime agane apoud id.

SCHONNY SPROAGLE.

FRIEND WADE.—I would like to ask through your paper, the opinion of all those who have had any experience of hatching double yolk eggs. I find quite a difference among those I have talked with, some claiming that they produce monsters, &c., four-legged, four-winged, double headed, &c., &c. Others claim that monsters come from single yolk, and that if double yolk hatch they will produce perfect twins.

Yours truly,

M. H. C.

CHAGRIN FALLS, O.

MR. WADE:

SIR.—In the Weekly Gossip of the specimen number you sent me, J. M. McCann inquires "is the beech tree ever struck by lightning?" I can answer in the affirmative. Nine (9) years ago this spring there was a beech tree struck by lightning on the place where we lived: the bark was torn off in a diagonal course from the top to the bottom.

Mrs. M. A. STEPHENSON.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Have any of the readers of Weekly Gossip remarked the fact that dogs can only with difficulty be made to see objects very near them? I have tried many experiments to test their vision at "close range," and have found them deficient in every instance. Another peculiarity is, that dogs with white about the neck or body, invariably have white on the end of the tail. J. M. McCann.

—A NATURAL CURIOSITY.—George Van Derveer, the poultry raiser of Florida, has shown us a very interesting curiosity in the form of a double egg eight and a half by nine inches in size and perfect in formation, laid by a full blood Cochon hen. Inside of the shell there was a perfect egg, and within that egg there was another perfect egg of common size. The outer egg and shell were taken off, and the inner egg is now being hatched.

—Writing some time ago of the Skunk, I stated that they were never seen in any other colors than white and black; a gentleman has since informed me that he once saw one of a beautiful cream color. This is the only instance of which I have ever heard when a variation from these colors was found, and during the past winter I examined hundreds of their pelts which had been collected by the fur traders. They are very easily trapped, and the less white that appears on the hide the more valuable it is.

J. M. McCann.

—THE TORTOISE.—(*Testudo*), lives to a great age, in some instances to 100 years, or more. The variety common in the Eastern States is beautifully marked with dark brown and bright yellow; the head, neck and legs being especially brilliant. It passes the winter in a dormant state, selecting for itself a place of hibernation at the beginning of frost, or preparing it by scooping out a hole in the earth. I found one last summer "dated" 1846. The love season, which is the beginning of summer, is one of great activity, and they express their amorous desires by striking their shells against those of their mates. Their eggs are round, white and numerous, and are hatched by the heat of the sun. I have found colonies of them—beautiful, active little things not larger than a nickle. They are quite easily domesticated, and will soon

take food from the hand, though they seem to possess little intelligence, and no affinity for their keeper; and really become so tame that they will not escape if opportunity offers. They are particularly fond of mushrooms, but feed on a great variety of vegetables. I will take pleasure in sending specimens to any of your city readers who may be willing to pay the express charges.

J. M. McCANN.

—HUNO would be well pleased to know the names of the Adders his friend M. thinks have a "poisonous sting." Snapping tails "spitefully" is no evidence of either sting or poison; all snakes do that, as well as fish, when occasion requires. How does M. know that his Adders are "quite poisonous?" Has he ever experimented with them, or known any one else to do so? Nothing can be easier than a demonstration in the case. Rats, mice, and other small quadrupeds are generally lying around loose. Please try an experiment, M., and should you prove what you have asserted, then you can safely say there are snakes which sting.

HUNO.

—THE MURRE.—The murre is a bird but little known. Can "Huno" tell us anything about this queer bird? An article in a juvenile paper arriving lately, says it is of about the size of a small duck, and it sits on only one egg at a time. If her nest is robbed, the mother murre lays another egg and sits again. The strangest part of the story is that the eggs are not alike; in fact, it would be almost impossible, among thousands of them, to find a single pair that matched in color. They are brown, green, white, blue or gray, as the case may be, with streaks or spots of blue, black, green, olive or brown. But all these fancy styles are only shell deep. The little murrets that come out of the eggs are all after the same pattern, and in time they take after their parents in a way that is beautiful to behold.

—It is said by most naturalists—and I believe it—that most domestic animals inherit from their parents their characteristic traits. This is supposed to be especially true of dogs. I saw a young pointer pup in Tennessee that would point at bugs and flies when he was only a few weeks old. It is said the young pups of the St. Bernard breed will instinctively dig in the snow. I have a well bred black and tan terrier, whose parents were both noted "ratters," who will not even kill a mouse. He is a very beautiful dog, about 14 months old, and remarkably fierce and courageous, attacking dogs of the most formidable appearance, and size. He will play with a mouse like a kitten, and almost invariably allows it to escape. Surely genius was not hereditary in his case.

J. M. McCANN.

—THE CAT.—The origin of the domestic cat is not certainly known. By some naturalists it is described as a distinct species, under the name of *Felis domestica*. Others suppose it to be only a domesticated variety of the common wild cat, (*Felis catus*) of Europe, and Northern Asia. But to this it is objected that the domestic cat is always smaller in size than the wild variety spoken of, which is contrary to what is usually observed of the effects of domestication in animals; and that cats of the domesticated race which have run wild, show in their known progeny no appearance whatever of a tendency to return to the type of the true wild cat. The cat has been domesticated from the most ancient times, and was a sacred animal among the old Egyptians. Temples were erected to their honor; sacrifices and devotions were offered up to them as though they had been gods. To kill one even by accident, was considered a crime worthy of death, and the family in whose house a cat died went into mourning, and shaved off their eyebrows. During the middle ages they were regarded as the familiars of warlocks and witches, and Satan himself was often thought to assume the form of a black cat. Of its variety in Britain in early times, when all the forests were the homes of the wild cat, an evidence is afforded by a Welsh law, of the reign of Howell the Good, who died in 938—fixing the prices of cats according to their ages and qualities, beginning with the price of a kitten before it could see, and enacting that if any one killed the cat that guarded the prince's granary, he was to forfeit a milch ewe, its fleece and lamb; or as much wheat as when poured on the cat suspended by its tail, the head touching the floor, would form a heap high enough to cover the tip of the tail.

The story of "Whittington thrice Lord Mayor of London," is well known. The fable says that he was a poor boy and went to sea, his only wealth being his cat. In some distant land he visited the court of a King, where the rats were so numerous that they consumed the food on the royal tables before the very eyes of the majesties. Whittington produced his cat, the rats were destroyed, or banished the palace, and the King in gratitude loaded the sailor boy with gold and gems. The story is entirely fabulous, and was current in the Eastern ages, before the birth of Sir Richard Whit-

tington, who was of noble family, and was four times Lord Mayor of London. The varieties of the domestic cat are not numerous, neither do they very greatly differ. The tortoise-shell cat is beautiful in color, and graceful and elegant in form. The Angora is an interesting variety, remarkable for the length and fineness of its hair. The Chinese has long glossy fur, and pendulous ears. The Chartreuse is of a bluish color, and the Manx cat is without a tail. They have but little intelligence compared with the dog, and manifest but slight affection for their master.

J. M. McCANN.

SMALL PET DEPARTMENT

(Reported for the Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDENS,

FAIRMOUNT PARK, PHILADELPHIA,

(For the week ending April 28, 1876.)

- 1 Common boa, (*Boa Constrictor*). Purchased.
- 1 Alligator, (*Alligator Mississippiensis*). Presented by Mas. G. English, Philadelphia.
- 3 Gold Pheasant, (*Thaumalia pieta*). Purchased.
- 5 Silver " (*Gallolophis nyctemerus*). "
- 1 Robin, (*Turdus migratus*). Presented by J. Pearsall, Philadelphia.
- 1 *Red crested Cockatoo, (*Catcata moluccensis*). Deposited by I. Springer, Lancaster, Pa.
- 1 Pied-bill Grebe, (*Podilymbus podiceps*). Presented by Wm. Phillips, Philadelphia.

(For Fanciers' Journal.)

ZOO NOTES, NO. 20.

SEA LIONS. (*Eumatopias stelleri*).

Yes my dear HUMAN "ess," I have seen that your legislators were about to order all of the sea-lions, your "beautiful eyed creatures" to be exterminated, and with yourself and Seth Green I join in denouncing the act, as one very cruel, barbarous, and uncalled for, and for which the perpetrators ought to be sorry for the balance of their lives. If the harmless sea-lion be killed, as proposed, the whole party should be considered as inhuman and unchristian, for he

"Prayeth best, who loveth best
All things both great and small,
For the great God who loveth us,
He made and loves them all."

In "Our Zoo," Fairmount Park, Philadelphia, we have a family of these interesting marine mammals consisting of four in number; father and mother, a little daughter which we call Nellie, (she comes at our call, too,) and an old gent whom we think must be some sort of an uncle. I assure you that this family attracts quite as much attention, if not more, from all classes of visitors than any family in the Zoo, with the exception of the monkeys, those "poor relations" some of us so much resemble, which is perhaps the cause of their drawing such crowded houses—"a fellow feeling makes us wondrous kind."

But to our Seals, or Sea-Lions, for you know they belong to the Phocina, and therefore constitute part of the genus which Linnacus called *phoca*.

The name of Sea-Lions has been given to a number of large Seals of both hemispheres, for their savage appearance, powerful voice, great teeth, or maned neck, but the appearance is all of the *savage* there is about them, as they will flee the moment "man pursueth," yea, even at his approach. The Sea Lion is as much a non resistant, and non combatant, as the mildest Quaker who ever wore shad or broad brim—unless you drive him too extremely—at which point the quaker too will stand up for his corner.

The whole Séal family is interesting now, and it would seem the

*This bird was imported into New York in 1826, and is consequently more than 50 years old! It has been a beauty in its youth, and in form and color is not to be despised in its old age.

ancient writers, in the earliest ages so thought. Hence the poetic fables of Tritons, Nereids, Mermaids, Sirins, and many other attendants upon old mythological Neptune. They seem even to have had a natural confidence in man, though they have been shamefully abused by him for his sport or profit, to their destruction. They are quite docile, naturally affectionate; and capable of being taught to perform many curious tricks, such as to sit up in a chair, kiss their keepers, pretend to sleep, and actually to snore! Some years ago, there was a seal on exhibition in New York, which shouldered a gun, shook hands with its friends, and turning the crank of a hand organ, ground out most excellent music; and all for a miserable morsel of fish or a loaf of stale bread! And now your Fish Commissioner would murder the innocent mammals merely because they eat a few fish! Does your great Pacific and its boasted bays furnish such a scant supply of *Pisces* that you must murder a whole family per consequence? Besides the Sea-Lions, the particular species to be slaughtered are not such *Ichthyophagi* as you imagine, gentlemen, the Commissioners; they do not live exclusively on fish, and if they did, I question whether they have not the right of "What e'er they sees upon the seas to sieze upon it," and hold it—if they can.

Some years ago a number of farmers, who were far from being Solomons, in one of the Yankee States, got an idea into their wise heads that crows were destructive to the sprouting corn, and had their legislature pass a law against them, giving a premium for the heads of the poor birds. The work of murder to extermination accordingly soon began—but mark! at the end of five years the same farmers who had demanded the death of *corvus*, found they had plentiful crops of grubs and worms, and that their fields were overrun with moles, mice, and other small quadrupeds, while he had but a sparse crop of corn to operate upon when husking time came round; and they now asked for a law making it five dollars fine for any one to kill a crow! Time, you see dear Human-ess; brought about his revenge!

There's room and food for all in the world, my friends the Commissioners, and if your "Great Pacific," and its bays give you not enough of fish, we of the Atlantic seaboard, with Seth Green's advice and consent, will endeavor to send you a supply. At all events, you sea-dogs let the Sea-Lions live.

HON.

(For Fanciers' Journal.)

THE AQUARIUM, NO. 3

There is a supposed necessity for an exact balance between the animal and vegetable life in the aquarium, which would be as impossible to obtain and regulate as would be the equilibrium of the atmosphere by the weather bureau. I quote the following from the "American Parlor Aquarium:" "If too much animal life be placed in the tank, the want of sufficient oxygen is soon experienced by the finny inhabitants thereof, causing them to sicken and die; if too much vegetation exists therein, the water becomes overcharged with oxygen vitiating their systems with its enervating powers so that the same result necessarily follows. In the aquarium the nearer we can arrive at an equalization of the two powers, the nearer we approach perfection. But another point must be considered; it is not alone necessary that these two life sustaining powers should be equalized, because you may have too much of both, and in this case the health of your animal life is equally jeopardized."

To the first of these propositions I assent; to the second and third I must say that my experience is exactly to the contrary. I have never found fish to suffer from an excess of vegetation, and I very much doubt whether water ever is overcharged with oxygen in a natural condition. If so it is exactly contrary to the conditions governing the atmosphere, where we never find an excess of oxygen except at an uninhabitable altitude. Suppose for instance

we had a large pond devoid of animal life but fully stocked with vegetation, and that we placed therein a single pair of fish, would their chances be lessened in the struggle for existence by the excess of vegetable life around them? The aquarium properly stocked is simply a miniature pond with the same elements at work as in the larger pond. Under the action of sunlight, oxygen can be seen issuing from the plants and escaping from the water in streams of minute bubbles. Does not this look as though water would hold but a certain proportion of oxygen, and that all in excess of that amount escapes in that manner? I have found the ideas quoted from the American Parlor Aquarium in English works as well, and lately in an article on the aquarium in a catalogue of a prominent New York bird and fish dealer, and I am daily asked whether it is not possible to overstock the aquarium with vegetation. I am satisfied however from my own experience that no injury ever results from an excess of growing vegetation. I have endeavored but so far without success to obtain from some chemist an opinion as to the relative maximum amounts of oxygen and carbonic acid gas which will be taken up and held by water in a natural condition; perhaps some reader of the Journal can enlighten me. An argument in favor of my opinion may be found in a late paper by Prof. Huxley, on social science, Gossip for March, entitled "The border land between the animal and vegetable kingdoms," in which he says "that vegetation gives off oxygen only under the action of strong sunlight, and only from the green portions, and that in the dark this action is reversed and gives off carbonic acid gas." If this be true, and we may believe the high authority, the difficulty of obtaining in the aquarium even a sufficient amount of oxygen (even supposing that the water could be charged to excess) may be appreciated. This will also serve as an answer to an article in the weekly gossip of No. 9, Vol. 3, of the Journal, in which it is recommended to place the aquarium between two windows to protect it from too strong a light; I tremble for the success of an aquarium so situated. Fortunately however, the writer in providing for a contingency which must necessarily arise under such circumstances gives us proof that his aquarium is not a success. In an aquarium properly stocked and managed the fish are never found at the top of the water "gasping for air." This denotes a lack of oxygen, necessitating removal of the fish, change of water, or aeration by some artificial means; and unless self-sustaining it is not entitled to be called an aquarium but simply a fish-tank.

1776. U. S. CENTENNIAL COMMISSION. 1876.

BUREAU OF AGRICULTURE,
PHILADELPHIA, April 10th, 1876. }

SIR:

The Centennial Commission has provided thirty Aquaria for the display of the fish of our rivers, lakes, and seas. The fresh and salt water will be of about equal quantities, the aggregate approximating to fifteen thousand gallons. Full preparations have been made for thorough filtration and aeration, and when necessary, for refrigeration. The expenses attendant upon the Fish Display will be assumed by the Centennial Commission, and it is expected that Fish will be contributed by the various State Fish Commissions, by associations, and by individuals interest in Fish Culture. Parties so desiring, may exhibit Fish in tanks of their own contribution, the care of which will be gratuitously assumed by the Commission. In addition to the display of living fish, will be exhibited, the processes of hatching fish, and a full series of all the apparatus used in hatching and transporting roe and young fish.

Those who are in a position to contribute rare fish to the display, will receive all necessary information by addressing,

Yours respectfully,

BURNET LANDRETH,

Chief of Bureau of Agriculture.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To exchanges for cash" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

B. J. King, Providence, R. I., is complained of by several who claim to have been unjustly dealt with by him.

GEO. W. SKIFT, Box 163, Harrisburg, Pa., will exchange 4 Black hens, 3 Light Brahma hens, for Fancy Pigeons; also 1 cock and 4 hens of the Houdan breed, good stock, for offers.

BOX 12, Winoosboro, So. Carolina, offers pair Crows, for pair Nuns, Turbys, Fans, Jacobins, Bantams, or offers. Cows warranted black, and to make good rogues.

MRS. M. A. STEPHENSON, Chagrin Falls, Ohio, will exchange Brown Leghorn eggs from standard birds, Todd's stock, for a standard Dominick Leghorn cockerel; will also exchange Buff Cochins or Brown Leghorn eggs for Genuine Pekin Duck or Bronze Turkey eggs.

JOHN E. SCHUM, 150 South Water St., Lancaster City, Pa., will exchange a No. 1 Gray Talking Parrot, very fine built, and well feathered, in sound condition. Make me offers. Speak quick.

J. VAN BLARCOM, Davenport, Pa., has six Speckled Guinea to exchange for a watch. The watch must be good, and worth \$20. What offers, or anything that will not eat.

L. F. WHITMAN, Detroit, Mich., will exchange eggs from premium Partridge Cochins, Brown Leghorns, and Black Breasted Red Game Bantams, for White Crested White Fans in pairs. Must be good, as mine are first-class.

THOS. P. MONTGOMERY, 7 South 3d St., Harrisburg, Pa., will exchange one Carrier cock for Black Trumpeter cock; one Antwerp cock for hen; one Carrier cock (Dun and White) for hen; one Trio Houdans, for Fancy Pigeons of any kinds; one Coton Dog, well broken, for offers.

G. C. PEASE, Reading, Pa., will exchange a first class Blue Owl hen, very small, and a No. 1 Black Magpie cock, very good bird, for a No. 1 White Jacobin cock, pearl eyes and go-d in hood; a chair and Red Jacobin hen. Must be No. 1, as mine are.

WM. DICKEL, Reading, Pa., will exchange a first-class pair of Blue Pied Pouters, cock measures 19 inches, hen 16½, for a pair of Blue or Silver Dun Carriers. Must be good, as mine are.

CHAS. F. HAWKINS, Goshen, N. Y., will exchange Seed Potatoes at catalogue prices, or eggs from my best Partridge Cochins, for Eggs of Brown Leghorns, P. Rocks, or Houdan, or birds or eggs of Bronze Turkeys, Ducks or Geese. Only first-class stock wanted. What offers? Write.

CHARLES LIPPOD, Lancaster, Pa., has a fine Golden Setter pup, 7 months old, color Black and Tan, James Tilley stock, pedigree given, to exchange for Fancy Pigeons, Yellow Trumpeter cock, must be well booted; White Owl hen, Ferrets or offers.

W. W. TIBBITS, Knoxville, Onida Co., N. Y., has English Pointer pups to exchange for Pekin Duck eggs, Bronze Turkey eggs, or offers.

N. G. GREEN, Box 115, Westchester, Pa., will exchange 7 Fancy Pigeons, cocks, which are, a Black Wing Swallow, Red Ruff Neck, Black Ruff Neck, Black Magpie, capped, Blue Beard, Red Pouter, for White Trumpeter hen, A No. 1, and a Snail hen, brown or black, and a Black Turbit cock for a Black Turbit hen.

L. A. HAYES, Spring City, Chester Co., Pa., will exchange 12 pairs of White Fans, double shakers, 1 trio of good Rouen Ducks, 1 very fine Peacock, 1 superior Cherry Seeder, for good Light Brahmas, and white booted Bantams, or offers. No mongrels wanted.

E. R. MAYO, Fairfield, Me., has trio Buff Cochins, Williams' strain, and 1 pair Par. Cochins, Dalton strain, to exchange for S. S. Hamburgs, or Bantams of any kind. Must be good birds, as mine are.

FANCIER, P. O. Box 350, Milton Pa., will exchange a hunting or pleasure boat, round bottom, cost \$45.00, for Fancy Pigeons, or offers.

W. D. CRAWFORD, Kittanning, Pa., will exchange 1 pair of Creve Coeurs, Todd's strain, for Black Hamburgs, Gold-Penciled or Gold-Spangled Hamburgs, or offers. Want nothing but No. 1 stock, as mine are. Give strain, and speak quick.

HOWARD TWINING, Doylestown, Pa., will exchange Black or Golden Penciled Hamburg eggs, (1st premium stock) for Plymouth Rock eggs. Must be from good stock. Let me hear from you soon.

E. K. MEYERS, Harrisburg, Pa., will exchange a trio of Buff Cochins, for Ferrets, Lop-eared Rabbits, White Leghorns, Fancy Pigeons, or offers.

J. S. GOODNOW, Millington, Mass., has Dark Brahma eggs to exchange for eggs from Java, Cochin, and Silver Duckwing, Red Pile and Blue Pile Game Bantams, or one pair Red Priest pigeons. Nothing but first-class stock dealt in.

T. W. COX, Westchester, Pa., will exchange 1 Parrot cage, and 1 Squirrel cage, almost new, for a No. 1 Almond Tumbler hen, and a No. 1 Red Barb hen, or a No. 1 Blue Pied Pouter hen. Write quick.

L. L. WHITNEY, Millbury, Mass., will exchange 1 trio Black B. R. Game Bantams, for a trio Houdan, or White Leghorns, J. Boardman Smith stock; also one Yellow Duckwing Game Bantam cockerel, for Houdan or Lehoru hen. None but first-class stock wanted, as mine are such.

W. W. ALBRO, Elmira, N. Y., will exchange one pair premium La Fleche, 1875 hatch, for Dark Brahma, or Partridge Cochins pullets, or Aylesbury Duck eggs. Fowls must be first-class.

PETER LEPP, P. O. Box 833, East Saginaw, Mich., has one first-class double-barreled muzzle-loader shot gun, barrels, 34 inches, No. 10 gauge, cost \$35.00; will exchange for first-class Pouters, Carriers, White Jacobins, and Fantails, the latter must have 30 counts; Red and Blue Swallows, heavy booted.

JOHN ROBERTS, East Saginaw, Mich., will exchange one Hinchley Knitting Machine (new) worth \$35.00; one American Shuttle Sewing Machine, (new) worth \$50.00, and two Davis Sewing Machines, one cost, new, \$85.00, and the other \$65.00—all the above in good running order—for Fancy Stock or Game. What offers.

C. Y. CALDEN, Sumner, Ripley Co., Ind., will exchange the following choice varieties of seed potatoes: Victor, Carpenter's Seedling, Extra Early Vermont, Compton's Surprise, Brownell's Beauty, New York Late Rose, for Strawberry Plants, or Chester White Eggs—pure stock as mine. 1 warrant true to name.

FANCIER, Box 133, Tanques, Pa., wants to exchange 1 bird organ, playing six tunes, valued \$10; 1 violin, valued \$15; 1 single barrel shot gun, value \$7.50; 1 electric battery, value \$20; 1 Parrot cage, valued \$5; 1 Fancy Squirrel house, with large wheel attached, valued \$10; 1 fancy white mice house, cottage style, glass front, containing 5 pair mice, valued \$7.50; three triple exhibition coops, standard size, valued \$5 each; 2 rabbit hutches, to accommodate 8 pair rabbits, valued \$15 each; 1 good rabbit dog, first-class hunter; also Fancy Pigeons and Light Brahmas, for offers. Want no live stock.

H. H. SMITH, Davenport, Iowa, will exchange eggs from pure bred "Sharpless strain" Dark Brahmas, for a few sittings of D. B's from the Lady Gwydr strain. Must be pure.

F. HARDING, 5 Broadway, Cleveland, Ohio, will exchange new Buggy Harness, small Black and Tan Terrier pups, and Pointers and Setters, for Lop-eared Rabbits, or Ferrets. Send stamp for reply.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

E. F. FERLAND, Plymouth, Mass., wants a pure bred Black and Tan male pup, weight 1½ to 2½ lbs., full grown; smallest preferred. State age and price.

A. H. KRUM, P. O. Box 4138, New York City, wants eggs from first-class White Crested Black Polish; Aylesbury, Pekin, or Black Cayuga Ducks, in exchange for Brown Leghorn eggs.

OLIVER D. SCHOCK, Hamburg, Berks Co., Pa., wants 1 White Owl, 1 Solid Yellow Turbit, 1 Blue Owl, 1 Blue Jacobin, all cocks; 2 Black or Dun Carrier hens, in exchange for Fancy Pigeons of many varieties. Bird to be first-class.

CHARLES D. PARKER, 308 Gay St., Baltimore, Md., wants consignments of Pigeons, Guinea Figs, Rabbits, Maltese Cats, Dogs, and all kind of pet stock. Write before you ship, and give me a complete description of stock, and the price wanted. Commission, 20 per cent.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS.—First and special premiums at Buffalo, 1875; first premium at Utica, 1876. Eggs, \$2.00 per 15.
no. 16 at S. S. MORLEY, Clyde, N. Y.

RABBIT BOOK FOR THE MANY.

Containing the HISTORY OF THE RABBIT from the earliest times. Descriptions with illustrations of all the show and fancy varieties, and full directions for their selection, breeding, and management; the treatment of their diseases, and the construction of their dwellings. Sent post paid on receipt of 30 cents. Address FANCIERS' JOURNAL, Hartford, Conn.

HARTFORD, MAY 15, 1876.

No. 18.

CALIFORNIA QUAIL.

"And Pacific will occasionally send us notes from California," so said the prospectus, so I suppose I must put in an appearance, to fill the bill; but it seems wrong in me when there are so many pleasant writers, that could fill the spare so much better. A most delightful time to write of California—apple snow falling, and the breath of the tea rose in the air. Our rose gardens a wealth of bloom, and our fuchsias "a sight to be seen." Lamb and green peas on our bills of fare, with strawberries and oranges, freshly picked, for dessert. You poor just-beginning-to-show-out dwellers in the East, what an aggravation to you. But it's true, whatever nature attempts in California, she makes a better job of—whether it be climate, flowers, hare, birds or fruit—than elsewhere in the world. I fear it would not be safe to tell of—what I might. If Paul Logic were to know of our squirrels, and the aquaria material this one little creek of ours affords, something more than a shaking would be necessary to keep him with you, and of birds; my orchard is like the mosquito bed of the Comic's man. "There's millions in it." Of mosquitoes, we have belief that our swallows keep us free from them; but of fleas, they are purely Californian, so are of a variety peculiar to every denizen of the Pacific Coast, and how they do love strangers. If any one doubts, let him come and "ye little flea" will prove beyond a doubt my assertion. Of birds, we have many that you also have, but you will hardly find there the number and variety that each neighborhood affords here. The cowbunting and starling, lionets, robins, wild canaries, meadow larks, yellow-hammers, blue-jays, and quail are but my every-day companions. Huon thought it strange that birds of any spirit would submit to being ruled over, and ordered 'round in their own house too, by another as inferior as the cowbird!

But I think I know the why, at least I know all I want to. Why, Huon, they're savage as kangaroos. I had one in my hand. Yes, decidedly, it was in my hand, one foot clasped a finger round once, and made the claws, sharp, keen as needles, almost meet as they sank in the flesh, and that long, sharp bill took a piece out clean from my hand. Yes, I think if I were a bird, and didn't know enough to move out, I'd do anything for peace.

Of quail we have two varieties, the Mountain and Valley. These are found the length and breadth of California, and in Nevada. Being Californian, they are of course the largest, handsomest, and most graceful of the quail family. Of the two, the mountain quail is the larger, but it is very shy, whereas the valley quail comes around our doors, feeding with our poultry, and showing but slight signs of fear. Ten years ago it was rare to see a flock of quail in this neighborhood. They were to be found among the hills, and in unfrequented places, but now each ranch has its flock ranging in numbers from a dozen birds to more than a hundred. I should have written flocks, for after a time the old and young separate and go by themselves. They are very familiar; when you approach they scarcely do more than to move from your way, and I wonder at it, for in this country there is no quail law; such pests have they proved in the vineyards, that are the source of Sonoma's wealth, that they may be shot at any time. There is not, as yet, a bounty offered for their extermination, but I think there will be in time. In one of the Northern counties they were so numerous and destructive in the grain-fields the farmers poisoned them, but these birds are so beautiful and graceful, a farmer, if he has but half an eye, will endure much before he will have them molested. Their call is not the "bob-white" of the East, but the boys imitate it well, when they sing ker-ker-ker through

their nose to the tune of

then again

Some say they hatch twice in the year,

but I have spent years among the hills where quail were very many, and I never saw young birds except in the early spring.

We are close now upon their hatching season. Already the flocks have broken into pairs, and have gone to places favorable for nesting, in the grain fields and brush heaps. Their nest is simple, almost such as a hen would make—a few leaves gathered together. Last evening I came across a pair that had made their home in a hoof track, in the now dry mud. The eggs vary in number. A friend tells me that he has counted twenty in a nest, but I have never seen over fourteen. Those were of the color of a guinea hen's eggs, about the size of a pigeon's egg, and shaped like the turkey's egg. So careful is the mountain-quail if you drive her from her nest, and so much as lay a finger upon the eggs, she will not return to it. The young are active as soon as hatched.

Not far from us there is a pleasant little grove of bay trees on a hillside shading a spring that trickles through the rocks into a moss grown reservoir. The owner enclosed trees, spring, and a level space with lattice work, and drove a flock of valley quail into the enclosure. There he bred them, but so great is their increase, he has repeatedly had to thin them out. They feed upon grains, seeds, and green food. When I have had them caged, I have given them apple, and of chickweed the demand exceeded the supply, though I gave with a liberal hand. I have taught them to feed from my hand by keeping them in close quarters with pet chickens of about their size, that had rather eat from my hand than the ground.

The quail does not fly high. It can clear a picket fence, and

that is about all. Its wing is small compared with the wing of the lark or robin—birds of equal size and weight. Comparing its wing with the wing of the meadow-lark, the feathers number the same, but the primaries of the quail are only as long as the secondaries of the lark. The feathers of the quail's are narrower, more compact, and of finer texture. The lark's wing opens flat, and cuts the air. The inner surface of the quail's is slightly convex, and scoops it with a quick whirl. In the old times, when the sportsmen went for quail among the hills, they would be on their ground at night to find their game at feeding time in the early morning, and would remain late for the evening's feed, shortly before dusk. Their only other sure chance would be at noon, near some brook or spring, where they came to drink. But now a days, I will hear a bang at my very door, and as likely as not will see some of my beauties dead or fluttering under the orchard trees, and that too, in spite of the notice upon almost every fence board and tree, "No shooting." The sportsman will shoot, and declare that he cannot read.

I've yet to find one that cannot hear, though some have wished they couldn't, for I've been in no wise
CALIFORNIA, April 10, 1876.

PACIFIC.

POULTRY DEPARTMENT.

THE MARKET VALUE OF POULTRY AND EGGS.

Annually raised and consumed in the United States is immensely greater than most of us have any idea of. To say nothing of the thousands of prime "fancy" fowls and pigeons every year disposed of to amateurs, small breeders, and public exhibitors in America, the quantities of farm-poultry and eggs—including the products of the turkeys, geese, ducks, fowls, and pigeons produced on this side of the Atlantic—are enormous.

There is no doubt of the truth of the statement recently made by an agricultural lecturer, that "the aggregate weight of dead poultry sold yearly in this country exceeds by many tons the weight of dead beef consumed in our markets!"

The product of poultry is continually on the increase, also. There never has been, and probably never will be any glut in the market of these desirable edibles—good chickens and fresh eggs. The price has kept steadily up to paying figures, too; and whether the times be hard or easy the change in the current value of this product is not noticeable.

If we were to set down here some of the figures lately given of the estimated millions of dozens of eggs sold in a single large city market, in 1875, or note the millions of pounds of chickens and other poultry there disposed of in the same year, the facts would be almost startling, and seem incredible. Yet it is true that no class of live stock in the country foots up in solid money value, annually, the sum that is realized by farmers, poulterers, and egg-dealers in the United States, at the present time, for these always desirable and readily saleable commodities.

Of course the business of poultry and egg-production is disseminated over a wide field, and great numbers of persons are engaged in producing this aggregate, which is brought about in individual small quantities, monthly. But when we know that in a single county of Ohio, last year, according to official statistics there were over \$430,000 worth of eggs and chickens market-

ed, we can fancy what the grand total value of all the counties in all the States may be!

It is by no means a trivial business, indeed. There be those, as we hinted lately in these columns, disposed to ridicule this occupation, and the parties who follow it. But if those who incline to jest at the chicken fanciers and fowl breeders of this country would reflect upon the solid importance and large value of this interest in America, such ridicule would be turned to wonder at the real facts in the case.

THE SEASON IS NOW FINE

For the advancing work of the poultry-keeper, and the genial days are propitious for the young chickens got out last month, as well as for those now being hatched in these pleasant sunny May days.

The present and the next month are fruitful usually, in the forthcoming of young stock. Care should be exercised towards keeping the tender chicks well housed at night—for the air is still chilly, and they feel it, if exposed. On stormy and wet days, too, they should be warmly sheltered, until they get well upon their feet, and attain to a month or six weeks' age.

As "planting time" is now in order, the adult stock must be limited for a period to their enclosed runs. Hens with broods of chicks, should be cooped upon the grass lawns, or pastures—if possible—where the little ones may have a free run among the tender new herbage, and enjoy the fresh air during the day.

But old fowls will scratch up the seed in newly spaded or ploughed ground, and can not be allowed their liberty longer, for a few weeks. While in their temporary confinement again, they should have a supply of green food—cut grass or vegetables chopped up—daily, in addition to the essential needs also of clear fresh water, gravel, occasionally chopped meat, broken bone, etc., for their comfort and convenience. Within the next thirty days, the hatching will be over mostly, for this year—and as far as we have heard from, this season, much better success has been realized in 1876, than in the last unlucky year, in this respect.

The hen-houses where the older stock must now be confined should be thoroughly cleansed, if this necessity has not already been attended to; for, as the warm weather comes on, vermin will accumulate and injure the stock, inevitably, if precaution is not taken to keep this pest at bay.

READ THIS TWICE.

Pure air at all times must be admitted into the poultry houses where chickens or adult fowls are confined, by day or at night. This is indispensable to their health, their comfort, and their thrift; precisely as this same precaution is essential to the bodily welfare of human beings in their dwellings, and especially in their sleeping apartments.

Closely confined buildings where the poultry roost is a most pernicious practice—at any season, and particularly where such premises are over-crowded. Small holes or slits near the eaves may be so easily made through which the ascending vicious and obnoxious air can escape, that this arrangement ought never to be omitted, in the absence of some more elaborate mode of certain ventilation.

The roosts should be entirely below the range of such openings, of course, to avoid the draughts of cold air which may be forced inward, in severe weather. But these apertures may be secured in winter, inside or outside, effectually, and still afford ample outlet for the rising offensive effluvia that emanates from the bodies of even the healthiest birds, in confinement.

This question of thorough ventilation in the fowl-house or pigeon-loft, is a matter of great import; and its constant appropri-

ate observance tends vastly to keep our feathered pets free from many of the ailments caused (when we least comprehend it), by compelling them to inhale over and over again the foul air generated in completely closed, unaired apartments.

Duo.

INFORMATION OF VALUE.

To the breeder of pet stock, pigeons, poultry, etc., can best be obtained through the columns of the journal of the present day which is expressly devoted to these specialties. Books upon the subjects of rearing and treating fowls and small live stock are very well in their way, but in a year's time, the amount of practical and experimental work described in the pages of such a weekly as the *FANCIERS' JOURNAL*, is clothed in such familiar language, and is so directly adapted to the every-day practice and understanding of the fancier, that he more readily and surely acquires a knowledge of all these matters, than he can otherwise obtain through extended reading and at much greater pecuniary cost.

For these reasons, we urge it upon those who have not hitherto patronized the paper which is exclusively devoted to the concerns of the fanciers, to consult their own interests by making a beginning in this direction. In the course of a twelvemonth, the man who keeps and breeds a clutch of rabbits, a loft of pigeons, a run of domestic fowls—or other valued pets—can save, often, five times the subscription price of the *FANCIERS' JOURNAL*, in observing the hints it contains, or through practicing the recommendations to be found in its columns from week to week, from the ready writers who constantly contribute their practical experience to the pages of this paper.

SPANGLE.

ADVICE TO FARMERS.

The mistake constantly made by poultrymen and farmers who raise fowls for market only, as a rule, and who do not care about "your fancy breeds," is that in their grasping disposition, and the attempts they make to squeeze out of their poultry-stock every penny-worth of value that can be extracted, or turned into money from season to season, they disregard the necessary mode of procedure to continue to keep and make good their lines of breeding-stock, from year to year.

These men inconsiderately sell or kill the largest and most thrifty of their mature fall broods, and content themselves with any of the culls or meaner samples, to carry over the winter for next season's uses as breeders. Anything (in their judgment) is good enough in common breeding purposes, to re-produce chickens for the market; and so they make the most of their flocks year by year, send off the best, and keep the scallawags to produce their future stock—since, in their opinion, too often "a hen is a hen."

Now, although it would appear almost self-evident that this course is fatally erroneous, yet it is so commonly the practice, that it is found necessary certainly to repeat a word of warning against this wrong mode in practical chicken raising—where good profits are desired, continuously—for the benefit of those who keep the commonest breeds, for marketing purposes only.

The best of your flocks should be carried over, from season to season, as future breeders. Select the largest, thriftiest, and earliest maturing fowls for your own stock, and kill off all the rest. Thus only can you continue to improve your product, and make the business pay you fairly, in the end. The prime cause of the deterioration in what is known as our barn-yard fowls—as to quality, size, and prolificness—is traceable directly to this careless method we mention. The reversed mode, which is never advised, will be found the true remedy for this erroneous and fallacious kind of management, and the farmer or poulterer will quickly find this change a profitable and judicious plan, if regularly followed up.

CRICKET.

THE CAUSE OF DISEASE.

Among poultry, pigeons, and other pet stock that may be confined within close quarters which are badly ventilated, or not ventilated at all, has proved to be one of the first in magnitude, and a most prevalent evil as well, with fancy stock in this country.

Leading scientists have latterly proclaimed the fact as resulting from studied and repeated experiments that in human beings the primal cause of diphtheria, scarlatina, sore throat, typhoids, diarrhea, dysentery, mumps, and other common ailments originate from zymotic or foul air influences, generated in our badly or non-ventilated dwelling houses.

If this be true, and there is little reason to question the premises, how advantageous must be a good system of ventilation for the houses in which are confined our live stock, of any description.

With poultry, pigeons, or rabbits, the places they occupy in which to breed and live by day and by night, most of the year through, should be rendered more healthful than is generally the case, in this respect, for much of the common illness that affects them undoubtedly originates through the lack of a circulation of pure air in their houses.

A provision for good ventilation is so easily accomplished, we are surprised that so little attention is given to this important measure among fanciers who buy and keep fine stock, who erect costly buildings for the comfort of their birds, and who expend money in various ways for the convenience and improvement of such stock, without looking to the advantages derivable from some system whereby their imprisoned fowls, &c., may be saved from the pernicious effects of the "close confinement" imposed upon them, as a rule.

Among the first needs in good breeding, towards the continuous health and thrift of our favorite stock, then, let it be remembered that fresh air and plenty of it, is a desideratum in the fowl house, pigeon loft, or rabbitry—at all seasons. The openings for such circulation should be arranged diagonally at the top of the apartments, above the roosting and nesting places. A direct (or cross-wise) draught of air is not desirable. The current should be so conducted in and out that it may enter and pass away in a circuitous channel. And the nests or perches should be so situated as that the birds shall roost or sit below its passage. This plan affords ready ventilation, without subjecting the inmates to sudden chills, in severe weather.

In the colder nights, these openings may be screened, or temporarily. But, at any season they may be opened during the day, mostly. And this process will be found a most excellent help to the condition of the birds, by a continual and effective removal of the fowl fever-burthened air that is generated from their bodies, always, however nicely their premises may otherwise be kept.

CROSS BREEDING.

We read a few weeks ago in an exchange, an account by an experimenter with poultry, who affirmed that a new breed of fowls cannot be made, by any system of crossing two already established breeds.

In principle, no doubt this assumption is very nearly correct. But there exists ample evidence, nevertheless, that all "breeds," or varieties of poultry stock in the known world, to-day, came from the wild originals, and are made up by a crossing of their progeny—which, in various climates and with the new surroundings of domestication, have come to be the Game, the Dorking, the Cochins, the Brahmas, the Leghorns, the Spanish, the Hamburgs, the Bantam breeds, etc. Else, why this diversity of color, form, size, and different marked characteristics, which define these separate varieties?

Again, how is it, if a new breed cannot be made by crossing, that we have the Seabright Bantams, gold and silver-laced—the

modern Duck-wing Games—the Gray Dorkings—the Light and Dark Brahmas—and lastly the later Plymouth Rocks—all recognized as “new breeds” within half a century; each being a made-up fowl from crossing, without any doubt in recent years, and all of which now breed their like, with close fidelity?

We consider it a mistake to assume that “a new breed” can not be made that will produce its like as truthfully, in a general way, as do *any* domestic birds we now have—provided sufficient time be taken to establish the variety, and the proper method be adopted by successive selection and correct mating of the progeny of the cross to obtain the color and points derived.

This cannot be consummated assuredly in a year, or two—or in five, perhaps. But with patience, perseverance, judicious selection, and care—the purpose eventually may be accomplished, because we know it has already been compassed. And what man *has* done, man *may* do again.

CLEANLINESS.

Clean, pure houses for poultry, like those for all animals, are always the most healthy, as they are the most comfortable. Whenever the premises where chickens are kept—be the numbers great or small—become foul from accumulation of the droppings of the birds, the tainted air that rises from this foulness is swift to engender disease; and it will quickly affect the inmates more or less disastrously.

From this impurity of the atmosphere which poultry is compelled to breathe over and over again, when confined to narrow limits especially, come roup, sore heads, and other filthy diseases which we too commonly meet with or hear of in certain places.

Next to vermin, this condition of interior foulness in the hen-house is the worst trouble we have to contend with, where we are obliged to keep the fowls shut up closely—for example in cold or bad weather. And like this first-named evil, few breeders comprehend how serious an evil this actually is.

Domestic birds must be kept diligently free from the lice-nuisance, to prosper, but they should also be kept cleanly within their quarters; and the air they breathe should be kept untainted, if you would avoid diseases amongst them.

While the floors should be swept, raked, or scraped out every few days, in cold weather, if you have many birds together in one apartment, then it is a good plan to sprinkle charcoal dust and finely broken charcoal about the floors. This is an excellent absorbent and deodorizer. The birds will peck it, too, and eat more or less of it, while it is clean and fresh. It will benefit them, largely.

Ventilate your houses daily, any way. Let the foul air out. Observe due cleanliness within your coops, and you will find this a preventive to disease—which is far better than the attempts to cure illness, that will follow your neglect in this matter.

WILL FANCY POULTRY PAY BEST.

We often read that pure-blooded fowls will “shell out” best, but such has not been my experience.

I find that hens with a standing comb, which fanciers call a lop-comb, or one with legs not colored as the books demand, or one slightly faulty in some other direction, will provokingly lay just as many as the perfect beauties. Of course this should not be so, but such is the case.

In fact I have been the most successful by crossing the different breeds. A flock of fowls looking like “two peas in a pod,” are a beautiful sight to behold, but there the great advantage ends. It is perfectly legitimate for persons with strong tastes for looks to gratify that taste by the perfect uniformity of his fowls, or in any other direction, but this may be carried beyond the point of profit.

The old lady who whitewashed her coal was very likely a pattern of neatness and taste, but she evidently carried her hobby to excess.

In poultry-keeping the person who cares only for looks, will frame a different management from one who cares only for profit; or from one who desires to combine these two desirable ends.

One can easily see that persons selling eggs at high prices for hatching, are the greatest gainers by this “keeping up to the standard of excellence,” as it is called.

Should people learn to be less particular about appearances then “Othello’s occupation would be gone,” or at least greatly interfered with, and then we should hear less complaint about “fancy eggs” hatching.

I desire to cast no reflections upon honest “hen fanciers,”—for such there are—but at the same time there are some who are evidently dishonest, and many more who are so careless in shipping eggs that it almost amounts to dishonesty, to the buyer at least.

My own experience in paying two to four dollars per dozen for eggs has proved very unsatisfactory. Many others are constantly making the same complaint.

Honest dealers will not object to these remarks, for it is the “galled jade that will wince.” Persons who are at great expense in importing and breeding fancy fowls, should of course be well-paid; and it would be very unreasonable to object to this, but they have counterfeit followers who should be avoided as far as possible.

I know of several instances where some of this latter class have picked up some very fine looking fowls—not well-bred—and palmed them off for pure bloods.

I recall one instance, where two fanciers traded cocks and then reported that they had paid \$100 for them. That is, C had bought a cock for \$100 of H, and had paid him with another at the same price. This practice is not so very uncommon either.

A person purchased one dozen Dorking eggs and succeeded in hatching out two Black Spanish chickens, the balance of the eggs refused to yield anything. Buy only of those you have reason to believe will deal honestly, and remember that the hens you now have will with proper care probably prove as profitable as will any of the (to you) new breeds.—*German town Telegraph.*

(For Fanciers' Journal.)

CROTCHETS OF THE POULTRY FANCY.

BY PETER SIMPLE.

No. 12.

The longer we live the more we learn—as a rule. Sometimes this result does not follow; because with *all* rules there are the exceptions. Peter Simple is but a simple-minded individual, and he feels that he must be “an exception” in the way of learning—frequently, if not oftener. But he has just discovered a formidable crotchet among our so-called “poultry fancy,” which he desires to note in the series of everyday crotchets he observes.

It is quite as easy to deceive one’s self, oftentimes, without realizing it—as it is difficult to fool others without their finding it out. But “we never deceive anybody for a good purpose,” says Bruyere; and knowing, adds malice to falsehood—be the deception direct or implied.

Peter is struck with the force of this brief sentiment, upon reading in a recent issue of the FANCIERS’ JOURNAL a very lengthy story from the secretary of a western “National” fowl association, relating his woes in connection with the late Chicago exhibition muddle.

In view of this “disinterested account” afforded us by the official referred to, Peter recalls the fact that *prior* to the above mentioned show, (in common with many friends to so “promis-

ing" an enterprise) he was the recipient of a neatly printed and very liberally worded programme, inviting him and the rest of mankind to come to the exhibition; where "unprecedented" offers of "thousands of dollars in premiums not inflated in value" were to be paid to contributors, who would join in making the affair a success.

In that shrewdly worded programme, (which Peter has referred to again this week) he can *not* find any intimation that those who "inaugurated this movement (not) for their own aggrandizement," (?) according to the secretary's late screed in the *FANCIERS' JOURNAL*, made any mention that "they were over sanguine in offering this unprecedented amount." And so every-body took it for granted that this handsomely prepared circular meant what it professed to intimate, in such very polite and winning phrasology.

But alack! Peter was deluded. For how true is it that "there is falsehood which represents truth so well that it would really be judging ill not to be deceived by it." Yet P. S. is not different from most other men, who, like musical instruments, seem made to be played upon. But trickery, though at first sufficiently cautious, is pretty certain in the end to betray itself. However, the official now mentioned may characterize other criticisms in the poultry journals which have spoken of the bad management at Chicago, he certainly will *not* "pronounce" the above statement "misrepresentation from beginning to end," because Peter writes with the documents before him—he had contributed to that show in good faith—he was "awarded" one of the promised premiums—(which cost him five times its *whole* value to compete for), and he did not get but 65 per cent. of what the programme *agreed* beforehand to pay him.

And why was this thus?

Simply because the society did not inform him (and the rest) "in the first place," when it cheerfully asked us "will you come into our parlor?" that the real gist of the invitation was that if they didn't draw all the foolish flies into the net preparing for them, that the bottom of the mesh might drop out; and—while the insiders would meanwhile look out for themselves—the de'il might take the hindmost! This is what turned out to be the "English of it."

Now, the official who attempts so sharply to write down the editor of the *JOURNAL* and his correspondents (in No. 17 of your paper) in this controversy, does not make a single point, that Peter can discover—and he has "given his article a careful examination." But the editor is quite competent to take care of his own affairs in this matter. Peter speaks only for himself, and speaks at all only because he has been fooled, and dislikes to be caught napping by anybody—even in this smooth, sly manner, and in comparatively so small a way. "It is the principle of the thing."

But of all things, *cant* in the hen trade is the meanest. This is worse than fowl itch! Carlyle says that "cant is the *materia prima* of Satan; from which all falsehood, imbecilities, abominations body themselves—and out of which *no* truth can come."

This secretary now writes, "in the first place, exhibitors were asked to bear the burden, because they reaped the greatest benefit from the show," etc. Now I cannot find in the circular issued before the event came off "in the first place," any such request. Had there been any intimation of this kind, I should not have touched it. Nor would a score of others I wot of gone near the exhibition from this section. Nobody "in the first place" asked us "if the exhibitors were willing to take the promises of the association for 35 per cent. of their claims"—nor did anybody contemplate, with that wily circular before him, that they would "expect others to take such promises for the full amount due them."

There was no such proposition. The association agreed to do certain things, if we would contribute. We contributed, won prizes, paid our own large expenses to the show, in entry-fees, etc.,

and did not get what we and the society fairly bargained for, while they took care *not* to intimate to us in advance, "in the first place," that we *might* possibly be fugged out of a third of what was rightfully due us, and at the same time that *they* and the ring immediately around them would, any hour, get their *full* pay for services, and for everything furnished the society for this exhibition.

Now Peter Simple is a very innocent young fancier, but he is no "sore head." Not muchly! And he belongs to no faction, or ring, that he is aware of. How others who have taken this Chicago chicken-fizzle in hand may be conditioned, Peter neither knows or cares. What he likes is open, fair play "in the first place," and in the last place—every time. That's all.

The management of the Chicago show was *wrong*—from the start. It was managed wrongly in the end. And the evidence of this is found in the repeated resignations of its leading officers, since the report of the show and the condition it is in was published.

The secretary does well to inform the fraternity that he rises to explain in the *FANCIERS' JOURNAL* "without consultation with other officers of the association." This is undoubtedly true! And, as he concludes, "they shall not be held responsible" for the cant and bosh of his recent ridiculous and false tirade—which does not change a single fact or position presented by those who have fairly criticized the doings at the great western show, while the author of this original crochets simply assumes anew a deceptive and unwarrantable (though semi-official) attitude throughout—in Peter Simple's judgment—by his futile attempt to induce the readers of the *JOURNAL* to believe that "two and two make five!"

New York, May 10, 1876.

THE LAYING HEN OF THE PERIOD.—An exchange says: "We have found that hog's lard is the best thing to mix with the dough, to give hens, to make them lay. One out of this fat, as large as a walnut, will set a hen to lay immediately after she has been broken up from setting, and by feeding them with the fat occasionally, the hens continue to lay through the winter." A better plan still to make hens lay, is to place under them the Connecticut hen trap nest. An ingenious false bottom is so contrived as to allow the egg, when once deposited, to drop through into a cushioned sack; the hen rises up and is just on the point of cackling furiously, when, as she casts her eyes around and spies no egg, she holds her pence, out of a modest dislike to make "much ado about nothing," and immediately lays another egg—when, to her astonishment, the same joke is repeated. A Jersey farmer exhibited a patent nest of this description, recently, at the Farmer's Club, in this city, with a hen on, and produced a bushel of eggs in sixty minutes. Besides, the hens are warranted not to set.

THE PATENT HEN'S NEST.—The Kilkenny cats have passed into a proverb. Even that tale is almost matched by one more recent, of a hen which went to lay in a new patent hen's nest, in which the eggs drop through a trap door, and so deceives biddy that she keeps on laying. This particular hen went on the persuader, as the invention is called, and never came off again. The owner visited the persuader at night. In the upper compartment he found a handful of feathers, a few toe nails, and a bill. In the lower compartment were three dozen and eleven eggs. The delicate constitution of the hen had been unequal to the effort; and, fired by young ambition, she had laid herself all away.

CAUSE AND EFFECT.—Publian. "Your dog's very fat, Sir. Pray what do you feed him on?" Traveler. "Well, he has no regular meal; but whenever I take a glass of ale I give him a buscuit, you know!"—*Punch*.

PIGEON DEPARTMENT.

SCOTCH HOUSE AND AIR TUMBLERS.

To the uninitiated it will no doubt seem somewhat strange that birds bred from the same parents should in some cases prove Air Tumblers, and in others House Tumblers; this, however, is easily understood when it is explained that the most successful method of breeding performing birds is to cross birds of high merit in the one class with equally high merit in the other class, the object aimed at being, by the use of the Air Tumbler, to prevent the tumbling of the House Tumbler from degenerating into rolling, an evil which cannot be too carefully guarded against in birds which tumble so near the ground. On the other hand, if it is wished to add to the amount of tumbling done by the Air Tumbler, with regularity in the performance of it, there is nothing to equal the cross with the House Tumbler for producing it. Of this fact I had lately a striking testimony from an old fancier of probably between sixty and seventy years of age, who told me that he had bred Flying Tumblers during the greater part of his life, but that until he obtained a cross of some House Tumblers some four or five years ago he had done comparatively little good with them. On account of the method in which numbers of these birds are bred the produce must vary considerably in the character of their performances, and, besides high-class House and Air Tumblers, many birds of fair quality are produced whose characteristics are of an intermediate type, and many possessing little merit at all, even when the parents are highly bred and the matching all that could be desired. Indeed, if one-half the young produced prove of first-rate or medium quality, the owner may be considered to have extraordinary good luck, as this would be much above the average rate.

I shall now endeavor to describe some of the characteristics displayed by these birds from the time of their leaving the nest until they finally develop into the full maturity of high-class performers, leaving out of account altogether birds of an intermediate or inferior type, as it would be impossible to describe in a brief space all the vagaries which one observes.

House Tumblers vary greatly in the age at which they begin to tumble; some commence almost as soon as they can fly; in some rare instances they have been known to do so the first time they were seen to come out of the nest; others, again, do not begin until they have reached some considerable age, one of the best I ever had never having been known to tumble until it was three years old. In fact they may begin at any age between six weeks and three years, or possibly even later, although I never knew of any older, but I suspect very few birds which have not previously shown any tumbling properties, are allowed to reach this age, the one to which I have alluded having been discarded by two different owners who knew how it was bred, and ultimately developed into a "first-class incapable" in the hands of a party who bought it for 6d., and knew nothing about its parentage.

I incline to think, although ultimately there comes to be little

difference between the performances of the two sexes, that as a general rule hens begin at an earlier age than cocks, but in the majority of cases both sexes are tumbling by the time they are fit for pairing; in either sex, if a well-bred bird possesses any special merit in shape or coloring to make it desirable to breed from it, it should not be parted with for want of tumbling until thoroughly well tried, as it is a popular belief, perhaps not without some foundation, that it is the best birds which develop latest. The great bulk of young birds, before beginning to tumble, "back" for some time, but in a few cases they go clean over at the very first attempt. I have among this season's birds two hens which I never saw "back" at all; the one is now tumbling excellently in the house, and the other doing as well for its age outside; the latter I counted doing twenty times a minute when it was little more than two months old.

After the young House Tumblers begin to tumble, as a general rule they do not do any great amount of work at the very first, but perhaps tumble only at intervals few and far between; if kept, however, in regular training they generally all improve more or less, and many of them soon do a pretty fair amount of work, tumbling moderately if not extensively when flying in the air. At this stage it is very difficult to say to what class they will ultimately belong, but if they reach thirty times a minute I set them down as Air Tumblers, as but few House Tumblers ever come to do this amount of work when flying, the change from an Air Tumbler into a House Tumbler generally taking place before this point is reached.

The transition generally takes place very suddenly; in one instance, which I have on the authority of a gentleman on whose word I rely as much as if I had seen the performance myself, it took place in a bird which had never previously tumbled at all, while it was sitting on the top of his house, the bird all at once becoming unable to fly for tumbling, and ever afterwards remaining a first-rate House Tumbler. In birds which are kept in training the change is generally preceded for a few days by a rapid improvement in the amount of work done, but as the performance becomes more regular and steady the style of doing it generally becomes worse, the tumble being accompanied with a greater sweep in going over; and although they may now do less steady flying between the performances than an Air Tumbler, doing forty times a minute, they will rarely come more than twenty times. When the flight rises a bird at this stage will now be speedily seen in the rear unable to rise with it or make the same progress, and if, finding its inability to continue with the others, it turns in time and settles on the top of the house, it will be better to confine it afterwards, as it will probably be tumbling inside in the course of a few days, if it is not already doing so. Should it persevere and go too far from home it may become exhausted, and be obliged to settle down on the top of some house from which it may not be able to rise for hours, and perhaps not at all, as some prowling cat may put an end to all further efforts on its part, or perhaps it may come down to the ground by gradually descending tumblers resembling a flight of stairs. But it should not roll down; if it do so, the probability is that if it come from any great height it will be killed, or at least severely injured; if it descends in the way I have described it will reach the ground from any height totally unharmed. Should it happen to alight in the public street it will probably be seized by the first boy who passes, instantly thrust out of sight under his jacket, and without loss of time exchanged for 6d. in the first poulterer's shop he comes to, in happy unconsciousness that he might have made a better bargain by returning it to its disconsolate owner.

While it would be impossible to set down any certain time for Air Tumblers to begin performing, I think they make a commencement more uniformly when young than House Tumblers do, and in their case the improvement in the amount of work

they do goes on steadily increasing with age, until it reaches the full maturity of growth, without any of the spasmodic spurts to which House Tumblers are subject; and not only does the amount of work they do increase, but the more numerous the tumbles become the more cleverly is the performance made, the improvement in style being more particularly noticeable after they have reached the stage at which House Tumblers begin to deteriorate.

The only reason which occurs to my mind for the difference between the two birds is that the Air Tumbler is by far the gamier bird of the two; that while the House Tumbler gets frightened and overpowered by the weight of tumbling which is upon it, the Air Tumbler through sheer courage learns to catch himself so quickly that the tumbling proves but little impediment to his flight. This does not, however, account for the whole difference, as a House Tumbler will develop into an "incapable," even if never trained, but only allowed liberty in the open air, and some, even although never flown out of the loft; such birds never having been under the influence of any great amount of tumbling cannot possibly succumb to that. I may here add that I have experience of never allowing them out of the loft, of giving them entire liberty, and of training them, and of the three ways have found least success in the first, and the greatest in the last. It undoubtedly requires a good deal of attention to keep them in proper condition, but without it the qualities of the best Air Tumblers must remain hid.

In structural differences there is but little to note between the two classes. I find amongst my own birds that the Air Tumblers possess eyes of surpassing clearness in the pearl, decidedly superior to the House Tumblers, but I am told by persons of more experience than myself that this is not at all a general rule. I have also two first-class House Tumblers, a cock and a hen, with drop wings, but do not recollect of having seen a good Air Tumbler with such, and do not think that they would give sufficient power to keep the air and tumble much, as I look upon a drop wing as an indication of a weak wing.

In my next communication I shall give some notes on the House Tumbler as a bird of the loft or aviary.

SCOTCH THISTLE, in *Journal of Horticulture*.

ITEMS.

Salem, Mass., is the least bit amused at a recent recognition of Darwinism by Coroner Walton. An officer reported the discovery of the body of an infant, and the coroner solemnly "proceeded to the spot," where he "viewed the remains," after which he had them conveyed to an undertaker's. A physician, having examined the body, found it to be that of a monkey.

In a crowded horse-car the other evening, a gentleman who was seated, resigned his place in favor of a slender, pale woman, who carried a large child in her arms, and was being jostled this way and that with the motion of the car. To the gentleman's surprise a burly individual took the seat before the lady could reach it. "I meant the lady to have my seat," said the gentleman, angrily. "Vell," replied the other, settling comfortably back in the seat, "Dat ish my wife."

A SLEEPY SOVEREIGN.—Some people—potentates as well as privates, lose by travel, while others gain. Among those who gain nothing the Sultan of Turkey is to be classed, if we may credit the testimony of the London *Times'* correspondent. He is said to present the appearance of a man "consummately bored." His harem education is said to have "buried his mental faculties in gloomy ignorance." His memorable tour of Europe in 1867, is said to have left on his mind a confused memory of "that bustling

outer world which goes, Whirr! whirr! all by wheels, and whizz! whizz! all by steam." He buries himself in the concentrated selfishness of his harem, apparently unconscious of the influences, war-like and diplomatic, internal and external, which threaten one day to awaken him disagreeably from his dreamy existence, and perhaps to change the crescent into a waning moon, and to dismiss the Moslem from his European holdings.

A HINT TO COAL CONSUMERS.—A very common mistake is made and much fuel wasted in the manner of replenishing coal fires, both in furnaces and grates. They should be fed with a little coal at a time, and often; but servants, to save time and trouble, put on a good deal at once, the first result being that almost all the heat is absorbed by the newly put on coal, which does not give out heat until it has itself become red hot. Hence, for awhile, the room is cold, but when it becomes fairly aglow the heat is insufferable.

The time to replenish a coal fire is as soon as the coals begin to show ashes on their surface; then put on merely enough to show a layer of black coal covering the red. This will soon kindle, and as there is not much of it, an excess of heat will not be given out.

Many almost put out the fire by stirring the grate as soon as the fresh coal is put on, thus leaving all the heat in the ashes, when it should be sent to the new supply of coal. The time to stir the fire is just when the new coal laid on it is pretty well kindled. This method of managing a coal fire is troublesome, but it saves fuel, gives a more uniform heat, and prevents the discomfort of alternations of heat and cold above referred to.

TROUT IN WELLS.—Few people are aware of the quantity of dirt that falls into a well and increases the impurity of the water. The filth comes in the form of worms, flies, bugs, grasshoppers, and everything in the insect tribe that flies or crawls about the yard. Nine-tenths of this insect filth would be eaten by a good sized trout, and when once put in a well a trout requires but little attention, other than to give him a few bread crumbs in winter and flies and grasshoppers in summer, for in eating habits a trout is as voracious as a crow, or, like him, can subsist on a very small quantity of food. In my well a common brook trout had nothing to eat save what fell into the well by accident and a few grasshoppers in summer, for five years, yet, in the aquarium, a trout six inches long will regularly eat two or three minnows a day, and when first taken from the brook he will eat double that number of minnows two inches long. Yet in the well tended aquarium this speckled member of the finny tribe excels the trout in his native haunts as much as does the high-grade or full blood Short-Horn, the native steer. In fact I think this is a truthful comparison, and any one who is familiar with the trout in the shade pool of sparkling water and in the aquarium will endorse this assertion.

Although a trout has a very large mouth, and "can eat his bigness," for breakfast, dinner and supper, I would not put a smaller than a six-inch trout in a well, and only one unless great care can be exercised to feed them regularly, for the larger will devour the smaller.

Considerable pleasure can be derived from seeing a trout in the well come to the surface of the water and sometimes quite out of the water to take a fly or grasshopper thrown to him. Aside from the pleasure, the greatest argument in favor of putting him in our wells is that of cleanliness. The measure of the dirt we must eat in a life time has been fixed at one peck, yet our ancestors wisely kept from settling the quantity we should drink, for open coverings and untight curbs make a wide variation in the circumstances attending our draughts. Let us divide with the trout, who is better entitled from his cleanly habits to share with us the undesirable.

EDITORIAL DEPARTMENT.

We have received the statement made by Judge Luce of Iowa City, in relation to the management at Chicago, and as soon as room can be found for them will publish such portions as may bear upon the "points of interest."

CHANGE OF NAME.

The name of The Western New York Poultry Society has been changed to "The Buffalo International Poultry Association."

A NEW MARKET.

Messrs. McKeen & Hulick of Easton, Pa., have sold, to be shipped to Venezuela, South America, one trio of Light Brahmas and one pair of Partridge Cochins. The L. B. cockerell weighed 12½ lbs., and P. C. cockerell weighed 13 lbs. Good prices were realized. They also sold for the same destination two Short Horn Calves. Messrs. McKeen & Hulick have been very successful, and we are pleased to notice the above sale.

The *Fanciers' Journal*, the excellent publication of Mr. Wade, of this city, has been discontinued here, an I united with the *Poultry Exchange* at Hartford, Ct., where the joint paper will be issued in the future once a week. If it continues to be as valuable as it was in the hands of Mr. Wade, it ought to prove a success in its new home.—*Germantown Telegraph*.

We transfer the above to our columns, not to show that the Editor has been misinformed, but we are proud of such a notice in a journal like the *Germantown Telegraph*, where notices are not bought but earned. Had the Editor of the "Swine and Poultry Journal" read the editorials in the above paper for the past 10 years he would have been too honest to have written the editorial in his last paper about this Journal. Policy before principle seems to be the motto of Mr. Ward.

THE CHICAGO MUDDLE.

As our readers are aware, the *Poultry Bulletin* of New York, very severely, but very justly criticised the management at Chicago. It returns to the matter in its last issue in the following manner:

April 17th, just as we were preparing this number for the press, we received the April number of the *American Poultry Journal and Record*. In it we find a very long editorial devoted to the above matter, and containing this paragraph:

"We have received the April number of the *POULTRY BULLETIN*, which echoes and prints a re-hash of the *Fanciers' Journal* articles. We regret this

hasty action on the part of the *BULLETIN*, and are sure the owners of that Journal will not endorse its editor in being led into this thing by the *Fanciers' Journal* clique. The *BULLETIN* is too old to be caught by such chaff, and should know better."

Had the editor, or the secretary, or whoever wrote the above, carefully read the article referred to in last month's *BULLETIN*, he would have noticed that we made no charges against the N. P. A. that are not substantiated by their report. We have been led by no one. We feel ourselves perfectly competent to judge of the policy of the action and straightforwardness of the Ex. Committee of the N. P. A., without consulting with "owners" or any other man. The *BULLETIN* is now in its seventh year; half of that period we have stood at the helm, during which time we have never published a statement which would not bear investigation, or which we had to retract.

It has always been our rule to publish nothing which is not backed up by positive proofs. If any better proof of mismanagement is needed than the circulars of the N. P. A. itself, we must confess we cannot see it.

The N. P. A. cannot complain of injustice; we give this month the gist of the letter of Mr. Willard, and the report of Messrs. Luse, Enos, and Seamans. And while we are glad to see and say that their report exonerates the Ex. Committee from any fraudulent intent, we still remain convinced that it does not clear them of the charge of ill-advised and narrow-minded action, and a culpable and careless expenditure of the funds donated.

The *Bulletin* quotes the few lines worth attention in Willard's splurge, and after intimating that all it amounts to is a simple denial of the *JOURNAL's* statements, exonerates the officers of charges of misappropriation of funds, and fraudulent action, and says:—

"But still there remains the palpable proofs of gross mismanagement. While the "report" absolves the officers from guilt, or rather wrong doing, it does not explain how the money was spent.

It is evident that Mr. Willard was very insufficiently paid for his labor; but where and how the remainder of the large sum of \$1,900 was expended, we are not enlightened. We have received many letters from Western fanciers upon this matter, all regretting the action of the Association, and while acknowledging that our criticism in April issue was just, still deprecating too hasty judgment, and endeavoring to palliate the matter as much as possible. Of course, as Western men, it is natural for them to defend their leading Association as far as possible; yet one of the acknowledged leaders of the fraternity in the West, who was one of their Vice-Presidents, says in his letter, in speaking of this same labor account, "I would like to have contracted for the job at \$1,000."

We alluded to the matter in our last issue as a "fatal mistake of a few ill-advised and narrow-minded men." We cannot say that we yet see any reason for modifying that language. It is certain that but a very small minority of the Executive Committee had any hand in this action; and they had no right to involve the good name of prominent officers of other Associations in their own mistakes.

The statement that other associations have taken the same action is a poor excuse. Had the printed Rules and Regulations on Premium List, contained the statement that in case of a deficiency of receipts the premiums would be paid pro-rata, then the action would have been perfectly proper; but no such notice appeared. The duty of the managing committee was to immediately notify all the officers of the N. P. A. of the deficiency, and ask for an assessment or loans to make up the deficiency. Failing in that, the next step should have been a loan, secured by the Association, to be paid at the next Exhibition. This could readily have been effected in so large a city as Chicago.

To our own personal knowledge it has been done by other societies in a like situation. But should both these resources have failed, then a statement to that effect, accompanying the pro-rata dividend, would have been proper and satisfactory to all the exhibitors.

It is an unfortunate affair to all concerned, and its effects will not soon be dissipated. The Association had and still has our most cordial wishes for its success, and we sincerely hope that the present trouble may not in any way damage its future prospects."

CORRESPONDENCE.

DO DOGS REASON.

MR. EDITOR:

In conversation with a friend a few evenings since, speaking of dogs, he related the following circumstance, which certainly goes to show that dogs have reasoning faculties as well as man, notwithstanding statements to the contrary, by those who have looked into the matter. The gentleman has a Newfoundland dog a year and a half old, who acquired the trick of catching chickens,

and being detected was punished quite severely. A short time afterward the gentleman missed more chickens, and ascertained that the cause of their disappearance was a cat, which the family prized highly. He thought he would cure her. So taking a chicken into the house, and placing it upon the floor, in the presence of the cat and dog. Pussy immediately sprang for it, when the dog, who had anxiously watched proceedings, although being a most excellent friend of the cat, at once interposed, and giving a warning growl, placed one fore paw on pussy's back, holding her so that she could do no damage. Now Nero evidently knew that he had been punished for doing that which the cat was about to do, and probably argued, or reasoned with himself this way, if 'tis "wrong for me, it must be wrong for her," so stop.

OCCASIONAL.

JOS. M. WADE, ESQ.:

DEAR SIR:—Is there any remedy for a sick fowl? Any hope but the grave, for a diseased rooster? I have never known one to recover, with the best and fondest care, inspired by a genuine love for the fowl as a pet, and as a source of profit; with clean quarters, roomy, and free from vermin, weekly changes of food, pure, clean water in abundance, a 20 acre field of grass to run in. My chickens have, during the past week, sickened and died, one by one. Every night brings its funeral, and the day is occupied with hospital duties and cares. Is there any "balm in Gilead," or elsewhere?

The fowls which have thus died, have been hens of Buff Cochins variety, 12 to 15 months old, in good condition, and laying regularly.

The symptoms are, loose, green and white discharge, loss of appetite, (refusing all food,) indisposition to stir from one spot, combs and wattles nearly white.

As I have already stated, they have had the best of care, and have not been crowded in their quarters, only 12 fowls roosting in a coop ten feet square, and nearly six feet high, well ventilated, and unscrupulously clean.

Heretofore I have bragged about the freedom of my little flock from disease of any kind, and have attributed the contrary experience of others to lack of care, or improper feeding; but now I have nothing to say, only to

"Bury them darkly at dead of night."

Please open wide the fountains of wisdom, gathered from experience, and tell me through your columns what is to be done to remedy this sort of disease? Something practical, not merely theoretical. I have tried many nostrums, including charcoal, pepper, ginger, garlic, and onions, &c., &c., but all without avail.

Please allow me through your columns, to ask advice.

Truly yours,

HOW HE WAS CURED.

[From my Diary.]

January 20, 1876.

Going to the chicken house this morning I found St. Patrick, my \$20 Partridge Cochins Cockerel, doubled up in a corner; his comb black and drooping; he was so weak he couldn't stand, and was shaking as if with a chill.

I put him into a roomy nest box and hurried him in by the kitchen fire. I medicated two half glasses of water, one with No. 6, and the other with No. 1 of "Humphrey's homeopathic family specifics," and gave him a teaspoonful of No. 6—a half hour afterwards I gave him the same quantity of No. 1; after that alternating them an hour apart, until to-night, when he seems better; his comb is brighter and he feels equal to standing. I put him on the floor and he took two steps.

"The Croaker" called about noon and seeing my patient

pronounced him "beyond relief—will die for sure before to-morrow this time." "Not if I can help it," I answered.

Jan. 21st. St. Pat. continues to improve, but seems to have much diarrhea. Have given him No. 4 in place of No. 6. Have put a pellet of the medicine dry in his throat instead of bothering with the water every hour.

Jan. 23. St. Patrick weak, but otherwise all right. Have kept him in the hospital yard, allowing him to drink but four times to-day, and keeping him on boiled milk, and bread diet.

Jan. 27. St. Patrick discharged from hospital to-day—cured. I crowded for him, when I saw the croaker passing at noon.

Mem. To tell the Fanciers' Journal at some time that "Humphrey's homeopathic specifics," used as if for children with the same symptoms, are ahead of anything for ailing poultry. I treat my birds "as if they were human," as G. W. Burnham once said—and death has got to have a tight grip on them to get them from me.

PACIFIC.

ARE WHITE LEGHORNS GOOD LAYERS?

Results from thirteen hens, from Nov. 1st, 1874, to Nov. 1st, 1875, two thousand six hundred and thirteen eggs; is it good or not? Also, from two hens for March 1876, forty-six eggs.

ABRAHAM PERRY,
MONROE, Orange Co., N. Y.

WEST CHESTER, April 26, 1876.

FRIEND WADE:—

If A. Witzel, of No. 16 Keeler block, Rochester, N. Y., still lives, I would like to know, for I sent him one pair, and one odd Yellow Barb, in October last, for which, I was to receive a pair of White Pouters. In two or three days I received a letter from him saying he had sold the White Pouters the day before he received mine, but he had a very fine pair of Blue Pied Pouters which he would send. I wrote him to send them. He said he would send them in two weeks, and that has been four months ago. I wrote him six letters, and he will not answer them.

Yours truly,
T. W. COX, WEST CHESTER.

NEW YORK, May 1st, 1876.

FRIEND WADE:—

No. 16 just received. Your compositors have made me say some very ambiguous things.

In my "answer to Mr. Chapman," fourth line from top should read, "Mr. Chapman's letter regarding our exchanges. I sent him etc.," very materially altering the sense of it, you see.

Again, in second paragraph, my quotation from Mr. Chapman's letter should have ended with the word "age." The sentence "The death of the Rabbit was not therefore chargeable to me" was my own, not Mr. Chapman's, as your compositor put it. Please correct, and oblige,

Your's truly,
A. M. HALSTED.

BUFFALO, May 4th 1876.

FANCIERS' JOURNAL, Hartford, Conn.:—

At our last meeting it was unanimously decided to hold our next show, Feb, 1st to 8th, 1877, inclusive. We shall make every endeavor to have this show excel in every respect, all our former efforts in that line. The meeting was a full one, and by an unanimous vote every member donated \$25 apiece, (inclusive of the premium list) as a "contingency fund."

Yours truly,
GEO. W. WHITE, Sec.,
Buffalo International Poultry Association.

HUBBARD, O., April 22, 1876.

JAS. M. WADE, ESQ.:—

DEAR SIR:—I received this day by steamer Idaho, one trio of Black Red Gams. The birds were selected for me by Maj. J. H. Cryer, Southampton, England. The stag sent me is a splendid bird, he has been exhibited in England three times, and won two 1st premiums, and one 2d, in very large classes, and severe competition.

Yours,

T. A. WINFIELD.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Elderly agriculturist to season-ticket-holder in the train: "You don't have no ticket?" "No, I travel on my good looks!" "Then," after looking him over, "probably you ain't goin' very far!" General smile.

—At the show the other evening a gentleman sarcastically asked a man standing up in front of him if he was aware that he was opaque. The other denied the allegation: he said he was not opaque—his name was O'Brien.

—A white robin was seen Monday on Garden street in Hartford. The bird had the same red breast as the rest of its kind, but the crest of its head and all the trimming which with ordinary robins is black, was in this one entirely white.

—A SHORT STAY.—At the meeting of the Academy of Sciences, at San Francisco recently, a specimen of the Madrona spider, captured in the Santa Cruz mountains, and mentioned a short time before, by a visitor, was received. When presented to the Academy, this little fraud was alive and creeping.

—The delusion which the Elm City has been nursing so many years, that the oak which stands in front of Farnham Hall, New Haven, is a seedling of the famous Charter Oak of Hartford, is now dispelled by a matter-of-fact old gentleman, who proves it to be a white oak, while the Charter Oak was red.

—It is said that the female fox during pregnancy is scentless, and from observation I am disposed to believe it. Surely this is one of the most remarkable instances of the care with which Providence watches over the welfare of inferior creatures, and the precautions that have been taken to insure the perpetuation of the races. I have known a pack of English fox hounds to be unable to follow the scent of Reynard during the breeding season—I cannot believe that they were unwilling to do so.

J. M. McCANN.

—The *Scientific American* says "in Algeria there is a river of genuine ink. It is formed by the union of two streams, one coming from a region of ferruginous soil, the other draining a peat swamp. The water of the former is strongly impregnated with iron, that of the latter with gallic acid. When the two waters mingle, the acid of the one unites with the iron of the other, forming a true ink. We are familiar with a stream called Black Brook, in the northern part of this State, the inky color of whose water is evidently due to like conditions."

—MR. WADE: I heard a story the other day, that I'll send you to serve up for gossip if it isn't too big. Messrs. McCann and Huon may not be able to swallow it entire. But 'twas the gunner himself that told the tale. A gunner went out gunning. A flock of several thousand cowbuntings alighted upon a side hill. (That much I think I can vouch for, for I've seen as many as that get in the acacia trees by my door, and keep up their shrill trill upon two notes, with an occasional chirp thrown in, until I envy the deaf, and wish my serenaders were dumb.) The ground was black with them, the gunner fired, resting his gun so its contents should sweep the flock.

He says he had for game, 158 dead, and many wounded! Maybe Wm. Perry, of North Strabane, Pa., can do better than that.

PACIFIC.

—THE PUMA.—(*Felis concolor*), is found in both Americas. They are quite numerous in the wild mountain districts of West Virginia, and are found in most of the Atlantic States. They subsist principally upon deer, watching their paths and springing upon them from trees; They also lay in wait for them at "licks," and spring upon them when they come to drink. They are extremely cowardly, never attacking man unless they have been wounded; though they will carry off and drown children if they find them in the thick woods unprotected. It is said by travelers

that the lion will hide himself in the jungle at the approach of a white man, though he will boldly attack and carry off a negro. So the Puma will hide himself in the laurel thickets at the sight of a hunter, but seems to recognize the fact that he has nothing to fear from a child. They are popularly called "Panthers," and are very destructive to the domestic animals in the mountains. They are active and powerful, and are said to be often victorious in battle with the bears. Though taken when quite young they never become domesticated, but are always uninteresting and dangerous pets.

J. M. McCANN.

—We have a little bird here—in California—smaller than the yellow bird of the East, smaller than the smallest full grown canary I ever saw, and the local name for it is Wild Canary. I have not been able to examine them closely, but the males, I think, have a bright yellow breast, whereas the females are dusky yellow, almost a dark gray. The first time I noticed them was on a bright, warm day in March. Walking through the orchard, I noticed an apple tree that seemed to have leafed out. Said I "is it possible that one day's sun can do that?" Getting nearer to it, I saw that it was filled with these tiny birds. For weeks they flitted among the orchard trees, until the linnets came. For ten days now I have not seen them. Where have they gone? Their flight was quick, and in the sunlight the dash of their wings was almost a sparkle. Their note was simple, but sweet. I noticed them feeding upon nothing but the egret of the thistle and dandelion. I have seen the whole colony settle upon the mass of green and gold that we call California dandelions, and so light were they not a stem seemed to bend with their weight.

I wonder are they wild canaries?

—THE "RICE PAPER" PLANT.—The *Washington Star* states that a new door-yard plant has been distributed from the Botanic Garden at the capitol this year, denominated the *Aralia papyrifera*. This plant produces the beautiful substance known as rice paper; it has soft, downy palmate leaves; it grows ten feet high, with a stem four inches in diameter, full of white pith like the elder; in a full-grown specimen the pith is about one inch in diameter. It is divided into pieces three inches long, and by the aid of a sharp instrument is unrolled, forming the thin narrow sheets known as rice paper, greatly used by the Chinese for drawing figures of plants and animals, and also for making artificial flowers. Until 1850 the source of this substance was unknown to scientists. The Chinese, on inquiry, gave very fanciful figures and descriptions of it, illustrating the fact then, as now, "for ways that are dark and for tricks that are vain, the heathen Chinese is peculiar." It was first introduced from the island of Formosa to Europe, at Kent gardens, in 1853; from there it has been widely disseminated. It is almost naturalized in some part of Australia; in the Southern States, and perhaps California, it will flourish. As an outdoor ornamental foliage plant it is well worthy of cultivation in any part of the country.

—HUON has received the feather of the owl which winged its way with the foot of the same bird, from distant California, and thanking his unseen friend E. S. S. for both, will endeavor to classify and call the "dear defunct" by its proper name. It is pleasant, very pleasant to be held in such kindly remembrance, at such a distance, with so many miles of continent-lying between. May the time come when the distance will be less, and for the kindly feelings may they never decrease whatever distance divide.

From the feather and foot sent, I name the bird to which they belonged, as one of the genus *brachyotus*, species *cassinii* (Brewer) or "American short-eared owl," which is found in North America, from Greenland to Cuba, and from the Atlantic to the Pacific Ocean. It has been found also, in the Sandwich Islands, Brazil, and near the straits of Magellan.

In color "short-eared" is a very pretty bird, its plumage being a reddish buff, streaked and spotted with dark brown, the tail feathers of the latter color barred, and tipped with reddish buff. The ruddy brown primaries are bound with dark brown, tipped with ashen-gray—several very decided bars of dark brown cross the tail, and the facial disc is to the eye, becoming lighter towards the circumference, and edged with a white line. With the exception of the white skin, the whole under-surface of the body is light buff with dashes of brown upon the breast, and a few long streaks of the same color upon the abdomen. The legs and thighs are pale buff, the claws and beak black, and the eyes golden yellow, and its measurement, when full grown, is 15 inches in length with an alar or wing extent of from 42 to 44 inches.

In habit, short-eared is much like other owls. His food is of mice, bats, and birds, and in the stomach of one shot some time since was found the remains of a half grown rat. Mrs. Short-eared makes her nest of grass and moss, in which she lays three eggs, seldom more. Neither she or her husband are high-flyers, nor are they

very powerful on the wing, as they will never fly more than a hundred yards. Indeed they seem great lovers of terra-firma, remaining on it as long as undisturbed, and locomoting over it in long leaps—that seemingly is a specialty with it:

"In the hollow tree, or the old gray tower,
The Short-eared Owl doth dwell;
Dull, hated, despised in the sunshine hour,
But at dusk he's abroad, and well!
Not a bird of the forest e'er mates with him,
All mock him outright by day;
But at night, when the woods grow cold and dim,
The boldest will shrink away.
O! when the night falls, and roosts the fowl,
Then, then is the reign of the Short-eared owl."

Does the description and the picture fill the bill, my dear E. S. S.
HUN.

SMALL PET DEPARTMENT

(For Fanciers' Journal.)

HOW THE BEAUTIFUL GATES CAME AJAR.

'Twas whispered one morning in Heaven, how the little white angel sat e'en beside the portal, sorrowing all the day. [glad May, How she said to the stately warden, he of the golden bar,
"O, angel sweet angel, I pray thee, leave the beautiful gates ajar. I hear my dear mother there weeping, she is lonely, she cannot see A glimmer of light in the darkness, when the gates close after me. One gleam of the golden splendor, O, warden, would shine so far," But the angel he whisper'd, "I dare not leave the beautiful gates ajar." Then up arose Mary the blessed, sweet Mary the mother of Christ, Her hand on the hand of the angel she laid, and her touch sufficed. Then turned was the key in the portal, fell ringing the golden bar, And lo! in the little child's fingers stood the beautiful gates ajar. "And this key for no further using to my blessed Son shall be given," Said Mary the mother of Jesus—tenderest heart in Heaven. Now never a sad-eyed mother, but may catch the glory afar, Since safe in the Lord Christ's bosom are the beautiful gates ajar.

HELEN L. BOSTWICK.

THE MOOSE.

This magnificent deer, the largest of its tribe, like the reindeer, is confined to the colder portions of the northern hemisphere. They abound in the northern parts of Maine and New Hampshire, in Labrador, Nova Scotia, New Brunswick and Canada. A few are still found in New York, west of Lake Champlain, in the counties of Essex, Lewis, Hamilton, etc., especially in the neighborhood of the giant Adirondacks, a region almost as wild as when the white man first penetrated its recesses. The southern limits of this species here is about latitude forty-three degrees; they are especially numerous in the northern Rocky Mountains; in this range they extend as far north as Mackenzie's river, in latitude sixty-nine degrees. Farther east they do not exceed sixty-five degrees. Bachman, on the Quadrupeds of North America, has an excellent article on this animal, from which the following extracts are made.

"The moose are abundant in the north of Quebec, and in the northern part of the State of Maine. In the neighborhood of Moose river, near the southern parts of Hudson Bay and the lakes of its vicinity, they are abundant. In the summer they are fond of frequenting lakes and rivers, not only to escape insects which then molest them, but to avoid injuring their antlers, which during their growth are soft and very sensitive, besides, such situations afford them abundance of food. They there feed on the water plants, or browse upon the trees fringing the shores. In winter they retire to the dry mountain ridges, and generally yard, as it is termed, on the side facing the south, where there are abundance of maples and other hard wood trees upon which to feed, either by browsing on tender twigs or peeling the bark from the stems of such as are three or four inches in diameter. Their long pendulous upper lips being admirably adapted for grasping and pulling down the branches, which are held between

the fore legs until all the twigs are eaten. They peel off the bark by placing the hard pad on the roof of the mouth against the tree, and scraping upwards with their sharp gongelike teeth, completely denuding the tree to the height of seven or eight feet from the surface of the snow. They remain near the same spot as long as any food can be obtained, seldom breaking fresh snow, but keeping to the same tracks as long as possible.

The antlers begin to sprout in April, and at first appear like two black knobs. They complete their growth in July, when the skin which covers them peels off and leaves them perfectly white; exposure to the sun and air, however, soon makes them quite brown. When we consider the immense size to which some of them grow in such a short period of time, it seems almost incredible that two such large excrescences should be deposited from the circulating system alone. The first year the antlers are only about one inch long; the second year four or five inches, with perhaps the rudiment of a point, the third year about nine inches, when each divides into a fork, still round in form; the fourth year they become palmated with a brow antler and three or four points; the fifth season they have two crown antlers, and perhaps five points, the points increasing in size each year, and one or two points being added annually, until the animal arrives at its greatest vigor; after which period they decrease in size, and the points are not so fully thrown out. They expand five feet nine inches, to the outside of the tips, the breadth of the palm eleven inches without the points, circumference of shaft clear of the burr, nine inches, weight seventy pounds. The old and vigorous animals invariably shed them in December; some of four or five years old have been known to carry them as late as March; but this is not often the case. The rutting season commences in September. The male then becomes furious, chasing away the younger and weaker ones. When two of equal strength meet they have dreadful conflicts, and do not separate until one or both are severely injured. At that season they are continually on the move, swimming lakes and crossing rivers in pursuit of the female. The female brings forth in May. The first time she brings forth one fawn, but afterward two.

The seasons for hunting the moose are March and September. In March, when the sun melts the snow on the surface and the nights are frosty, a crust is formed which greatly impedes the animal's progress, as it has to lift its feet perpendicularly out of the snow, or cut the skin from its shanks as they come in contact with the icy surface. It would be useless to follow them when the snow is soft, as their great strength enables them to wade through it without any difficulty. If you wish to see them before shooting them from their yard it is necessary to approach to leeward, as their senses of smelling and hearing are very acute; the crack of a breaking twig will start them, and they are seldom seen any more until fatigue compels them to knock up. Hunters sometimes find out the beaten tracks of the moose (generally leading to water) and bend down a sapling and attach to it a strong hempen noose, hanging across the path, while the tree is confined by another cord and a sort of trigger. Should the animal's head pass through the dangling snare, he generally makes a struggle, which disengages the trigger, and the tree springs upward, lifting the animal off its legs and strangling it. Another method of hunting them is as follows: In September two persons in a bark canoe paddle by moonlight along the shores of the lake, imitating the call of the male, which, jealous of the approach of another, answers the call and rushes to the combat. The canoe is paddled by the man in the stern in the most death-like silence, gliding along under the shade of the forest, until within short shooting distance, as it is difficult taking a sure aim by moonlight. The man in the bow fires, when if the animal is only wounded he makes for the shore, and is tracked by his blood the next day to where he has lain down, where he is generally

found unable to proceed any farther. None of the deer are more easily domesticated, the remainder not excepted. In Canada they have been often trained to draw sleds or carts with great swiftness and steadiness.—*Waverly.*

THE TULIP MANIA.

The first tulip seen in Europe was beheld at Augsburg, in Germany, in 1559, and was imported from Constantinople, where it had long been a favorite. Ten or eleven years after this the plant was in great demand in Holland and Germany. Wealthy burghers of Amsterdam sent direct to Constantinople for their precious bulbs, and paid extravagant prices for them. The first roots planted in England were brought from Vienna in the year 1600, and were considered a great rarity. For thirty years tulips continued to grow in reputation.

In 1634 the rage for tulips among the Dutch was so great that the ordinary industry of the country was neglected, and the whole people turned to the production of tulips. As this mania increased, prices increased with it, until in 1635 merchants were known to have spent \$40,000 in the purchase of forty tulips. At this time each species was sold by weight. A tulip of the kind known as the Admiral Lietkin, and weighing 400 grains, would sell for \$1,800; the Admiral Von der Eycke, weighing 450 grains, was worth \$500; a Viceroy of 400 grains would bring \$1,200. Most precious of all, a Semper Augustus, weighing only 200 grains, was thought to be cheap at \$2,200. This last species was much sought after, and even an inferior plant would readily sell for \$800. When this species was first known, in 1635, there were only two roots of it in Holland, and those not of the best. One belonged to a dealer in Amsterdam, and the other was owned in Haarlem. So anxious were the purchasers for this new variety that one person offered twelve acres of valuable building land for the Haarlem tulip. That of Amsterdam was sold for \$1,840, a new carriage, two gray horses, and a complete suit of harness.

Strangers who came for the first time into Holland were wholly unable to comprehend the great mania that spread among the people. One wealthy merchant, who prided himself not a little on his magnificent tulip bed, and on the new flowers he was expecting to grow the coming year, received a call one morning early from a sailor, who told him that a ship of his had just arrived, and that he was sent to give him the news. The glad merchant immediately went to the back of his store, selected a nice red herring, and gave it to the sailor for his breakfast. The sailor loved herring very much, and onions more; and having just arrived from a foreign voyage, his appetite for vegetables was proportionately sharpened. Seeing a small pile of onions, as he supposed, lying on the merchant's counter, he slyly seized his opportunity, took the top onion, and deposited it in his pocket as a companion to his herring. He then left the store and proceeded to his ship and his breakfast. Hardly had he left when the merchant missed his valuable Semper Augustus bulb, worth \$1,400. The establishment was soon in an uproar, for the valuable root had just been brought in that morning, and had been noticed by many. After every clerk had been examined and declared his innocence, one of them remembered to have seen the sailor drawing his hand away from the pile of roots and putting it in his pocket. The merchant instantly started for the door, and hurried down to his vessel. The first thing he saw was the sailor sitting on a coil of ropes eating his breakfast. No sooner had the merchant sprung on board and advanced toward him than the sailor put the last bite of his onion into his mouth, and leaned forward to hear what the owner had to say. He sternly denied stealing any tulip, but admitted he did take one onion. "but it didn't have much of the taste of an onion either." The merchant, as he turned away, told the astonished sailor that "it would have been cheaper for him to have breakfasted the Prince of Orange and all his court."—*Harper's Magazine for April.*

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each, and every insertion. For every line extra 10 cents will be charged. "TO EXCHANGES FOR CASH" or "ORDEZINANCES," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., cannot under any circumstances be admitted to the **Exchange** or **Want** column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

BLACK LIST.

B. J. King, Providence, R. I., is complained of by several who claim to have been unjustly dealt with by him.

T. J. McDANIEL, Hollis Center, Me., wants a good patent lever hunting watch in exchange for a nice G. S. Bantam cock, and eggs from a flock of 9 Brown Leghorns, scaling from 87 to 97 points.

W. ATLEE BURPPE, Philadelphia, Pa., will exchange Dark Brahma eggs for eggs of first-class Geese, Ducks, White Turkeys, Polish, Games, Spanish, &c.; will also trade Chester Mammoth Seed Corn.

GEO. B. COBB, Lake View, Paterson, N. J., will supply immediately any selection of Vegetable, Field, or Flower Seeds, Plants, Bulbs, &c., at cash prices, and take in exchange good breeding stock of most any breed of thoroughbred Poultry, or eggs from same, at cash value. What offers? State wants, and particulars and prices of stock you will exchange. Write at once.

LON. HARDYAN, St. Joseph, Mo., has Wright's Illustrated Book of Poultry, (bound in Vol. I. of the *Fancier's Journal*, (bound in 1874) Red-wing Blue Swallow hen, 1 White Jacobin cock, 2 White Calcutta Fantail hens, extra, to exchange for Italian Greyhound bitch, (to be lined before being sent); Black and Tan Terrier bitch, (must be a good rat-ter); White Spitz bitch, pair of Black Spitz or Fancy Pigeons. Will accept nothing but first-class stock, and am willing to pay difference in value, if any, in cash, if stock is satisfactory.

W. H. BRACKETT, Boston, Mass., will exchange Top-eared, Dutch, or Himalayan Rabbits, or Guinea Pigs, for choice Black Rose-com Bantam hens or pullets. Address, care of Washington National Bank, and name price of Bantams.

JOS. M. BECK, Hammoncton, N. J., will exchange a pair of Bismark Setter pups, liver and white, 9 weeks old, male and female, for a pair of Blue Pouters, or six Brown Leghorn pullets, or offers. Nothing but good stock wanted, as mine is first-class.

C. W. BOYCE, Albion, Mich., will exchange White, Black, or Brown Leghorn Eggs, of best strains, for Fancy Pigeons, Pouters, Blue Fantails, or Black Tumblers preferred; a Black Tumbler hen wanted also. Tumblers must be warranted to tumble, and none but fine birds wanted. Will buy if stock and price is satisfactory.

H. F. WHITEMAN, Box 154, Baltimore, Md., will exchange a No. 1 pair of Blue Crested Magpies, for Owls, Turbitts, or Antwerps. Must see the birds before exchanging.

STREETER, SON & CO., Youngstown, Ohio, have Black Bald Head, Solid Black, Mottled, Splashed, Dun, Sil. Dun, Red and Yellow Game-bantams, Fancy Poultry, and eggs from same, to exchange at a bargain; for one small White African Owl hen, one or two Black Jacobin cocks and one Yellow Jacobin hen, all with pearl eyes.

BOX 86, Tamaqua, Pa., will exchange one B. B. R. Game Bantam cock, and two Ginger Red Game Bantam hens, for the same number of B. B. Red Game hens, not older than 1874 hatch. Will give good stock; want no other. Please write and describe.

FRED. H. GATES, Super Notch, Luzerne Co., Pa., has three large and fine Newfoundland pups, (one male, two females), about three and a half months old; will exchange for fancy Poultry, Pigeons, small Black and Tan dog, or offers. Give full description, and write quick.

C. N. BROWN, Unadilla Forks, Otsego Co., N. Y., will exchange eggs from La Fleche, Silver Grey Dorkings, White Leghorns, Brown Leghorns, Plymouth Rock, or Bronze Turkey eggs. Will give two dozen hen's eggs for one of Turkey's.

B. HULSE, Box 23, Allentown, N. J., will exchange Eggs from L. & D. Brahmas, P. Cochins, P. Rock, S. C. Hamburgs, Houdans, and Fancy Pigeons, for Eggs of W. C. B. Poland, S. C. Poulards, Brown Leghorns, or Silver Duck Wing Game Bantams.

BROSE, No. 27, Hand St., Rochester, N. Y., will exchange one pair choice Starling Priests, one Blue Swallow cock, (barred), one Red Trumpeter cock, and one White African Owl hen, for White African Owl cock, Yellow Trumpeter cock, Blue Jacobin cock, Black Swallow cock, or Red Pile G. Bantam hens. Only extra good birds will be received, as mine are first-class.

H. O. LAMASON, Milton, Northumberland Co., Pa., will exchange Fantails, Common Pigeons, Geological Specimens, Confederate Bills, and rare Coins, for Black or Dun Carriers. Good birds, none others wanted.

L. J. NEWHARD, Allentown, Pa., will exchange a fine Wire Trap Cage, can be used to trap Indigos, Goldfinches, Catbirds, Cardinals, &c.; also Bird Line for Black, Blue, and Yellow Fantails, or a good Solid White Turkey hen, or a Blue Pied Pouter cock. Pouters must be large and heavy bodied.

WEATHERLY, Druggist, 24th and Spring Garden, Philadelphia, Pa., will exchange a few very select and No. 1 Fancy Pigeons. These birds are bred from my imported stock that I selected for my own fancy, and imported at great expense, consisting of Solid Yellow Fantails, Solid Yellow Turbitts, Yellow Owls, Yellow Jacks, White Owls, and a few young Antwerps, bred from my birds, imported from Mr. Brunin, editor of *Journal L'Esperier* Brussels. What is offered.

DR. J. W. GREENE, Chillicothe, Mo., will exchange one five-toed "Frizz" rooster, or a chicken-guinea hybrid, (a rare curiosity), for a pure Black Red Game cock, or for thirty pure Game, Houdan, Dorking, or White Leghorn eggs; or for two tested Italian Queens.

HELIOTROPE.

How strong they are, those subtle spells
That lurk in leaves and flower-bells,
Rising from faint perfumes;
Or mingling with some olden strain,
Strike through the music shafts of pain,
And people empty rooms.

They come upon us unaware,
In crowded halls and open air,
And in our chambers still;
A song, an odor, or a bird,
Evokes the spell, and strikes the chord,
And all our pulses thrill.

I loitered but an hour ago,
With lagging footsteps tired and slow,
Along the garden walk;
The Summer twilight wrapped me round,
Through open windows came the sound
Of song and pleasant talk.

The odor-stealing dews lay wet
And heavy on the mignonette
That crept about my feet;
Upon the folded mossy vest
That clothed the ruby rose's breast,
It fell in droppings sweet.

It fell on beds of purple bloom
From whence arose the rare perfume
Of dainty heliotrope;
Which smote my heart with sudden power
My favorite scent, my favorite flower,
In olden days of hope!

Ah, me! the years have come and gone,
Each with its melody or moan,
Since that sunshiny hour,
When, for the sake of hands that brought,
And for the lesson sweet it taught,
I chose it for my flower.

Faint-scented blossoms! long ago
Your purple clusters came to show
My life had wider scope;
They spoke of love that day—to-night
I stand apart from love's delight,
And wear no heliotrope.

Between to-night and that far day,
Lie life's bright noon and twilight gray,
But I have lived through both;
And if before my paling face
The midnight shadows fall apace,
I see them, nothing loth.

Only to-night that faint perfume
Reminds me of the lonely gloom
Of life outliving hope;
I wish I had been far to-night,
What time the dew fell, silver-white
Upon the heliotrope!

lost in which we do evil.

(For Fanciers' Journal.)

A WORD ABOUT AARON BURR.

The very recent death of Gen. Alexander Hamilton, naturally recalls to mind that of his father, the celebrated statesman, which, as is well known, was caused by the pistol of the no less celebrated Aaron Burr.

Every reader of American History is so well acquainted (or supposed to be) with the character of Hamilton, and Aaron Burr, and the circumstances which led to their duel, fought at Weehawken, July 11th, 1804, and the consequent death of Hamilton at his home in New York, on the following day, that it is needless for the purpose of the present article to further allude to it, but there is something in connection with one of the duelists which is called to mind at this time by the death of the youngest son of the other.

Aaron Burr, the elder one of the presidents of Nassau Hall, Princeton, N. J., and Aaron Burr, his son, one of the Vice-Presidents of the U. S., are both mouldering in the dust in Princeton grave yard, or what is now called in the fashion of the day—"The Cemetery"—and the writer of this has in his younger days stood many a time and often by the grave of the elder Burr, and pondered over the long Latin inscription on his tomb stone.

An account has frequently gone the rounds of the newspapers, and though often contradicted, still it will ever and anon come up again, taking a fresh start as a fact, that the body of Aaron Burr the younger was carried to Princeton by night, and secretly buried at the foot of his father's grave! The story is wholly untrue, and without the shadow of a foundation! As though a grave yard nearly surrounded by inhabited houses, could have its gates unlocked or broken open in the night, a grave dug, and a funeral cortege after passing without detection through the main street of the town, there being no other way of travel, be admitted, the duties of burial performed, and depart without notice! And all this without the least necessity! Burr's vices had been forgotten or forgiven in the thirty-two years which had rolled away since the duel, and its sad consequences, and up to the hour of his death, fallen as his fortunes, and he still had friends who were willing to pay respects to his remains under the light of the sun. But to the fact.

Aaron Burr died in his home on Staten Island, Sept. 13th, 1836; and his body was carried to Princeton in open day, arriving on the 16th, when it was at once taken into the chapel of Nassau Hall College, when and where the funeral service was performed, the writer of this being one of the audience then present.

The funeral sermon was preached by the Rev. Dr. Carnahan, the President of Nassau Hall. The text was from 2 Corinthians, vii, and 31 v. "For the fashion of this world passeth away," the whole discourse being eminently appropriate to the large company of students who constituted the main portion of his hearers. In the course of his remarks, Dr. Carnahan gave the reason why the remains of the deceased were brought into the chapel, and the services held there rather than the church. On account of his

ancestry (Burr's father and grandfather, the learned Jonathan Edwards, were both Presidents of Princeton College, and he himself a graduate) he had peculiar claims on the college, and therefore in his dying moments he had requested that his remains should be brought to Princeton, and placed at the feet of his father and grandfather. I remember, much to my disappointment, that the preacher declined to enter into any details in speaking of the character of Burr, but there was one sad event he said he could not pass without special notice, and that was the duel in which Burr had made himself a murderer in the eyes of God, if not of man, and here the Dr., knowing he had before him a class of just such hot-bloods as Burr represented, gave solemn warning by the melancholy example of the deceased, to avoid similar errors, which, he said must "inevitably lead to similar results." "Hamilton," said the speaker, "must bitterly acknowledge his guilt in the duel, sinning with open eyes—entering into it against his conscience as well as against his feelings, for he himself had been a sorrowful victim to the murderous law of dueling, his own son, a promising youth of but twenty years of age, having been killed about two years before, in a political duel. Nor did Burr," said the speaker with great emphasis, "escape his share of punishment, for there is no doubt that the fatal result of that duel was a subject of the most bitter and painful regret to the survivor for the remainder of his days."

Now, in this particular, Dr. Carnahan has been contradicted by almost every writer who has had a word to say about Aaron Burr, nearly all agreeing that he never, at any time, expressed a single regret for the killing of Hamilton, or the consequent misfortune he brought upon the bereaved family, but it seems that Dr. Carnahan was justified in his assertion, and the evidence appears to be here.

Dr. John McCan, ex-President of Princeton College (Nassau Hall) has among his papers a letter written by Aaron Burr, in which Dr. McCan thinks is found the real convictions and feelings of the writer. This letter was written under the following circumstances.

Very soon after his return from Europe in 1812, Burr went on a visit to an acquaintance residing some miles from New York, on the banks of the Hudson. He was not aware that just at that particular time a death had occurred in his friend's family, and the first object which met his eyes as he entered the parlor was a corpse, laid out in the usual way for burial. Burr gazed on it for a moment, and with the exclamation of "good God!" sank into a chair; covering his face with his hands, he remained, apparently in the utmost agony for the space of ten minutes. Suddenly he arose, and without another word he left the house, and took the first boat back for New York, the next day he wrote the letter now in the possession of Dr. John McCan. In this letter Burr apologized to his friend for his abrupt departure, alleging that his feelings were so excited at the unexpected sight, that he could not remain, nor at the moment give any explanations of his conduct; then follows these strong expressive words, "Ever since that sad event which severed me from the whole human race, I have been as incapable of giving, as of receiving consolation. I became palsied in body and mind by such scenes." [True or false? True, Dr. Carnahan thought, who knew of the letter, for among Burr's vices lying does not seem to appear.] If this letter be genuine, of which there is no doubt, then Burr has expressed deep regret for the crime, and told us that he was haunted by the appalling image of the fatal scene while even the sight of a corpse "palsied him in body and mind." So much for the secret burial by night, and Burr's cold, heartless indifference, disposed of by the funeral services in broad day. And now a word about another absurd statement.

The mysterious raising of the monument over Burr's remains is a story which has also gone the rounds (and is still going) of

the newspapers, has formed an article for more than one magazine, and even has place in Parton's life of Burr.

This too (the story goes) was done in the dead of night, and with such expert secrecy that nothing was known of the matter until the citizens of Princeton, one morning waking up beheld the marble memorial in all its pristine freshness glittering in the rising sun! All romance! Think of a thickly populated "Country city," every mouth gaping for news—allowing the necessary mason work for a foundation to be done in secret, in a grave yard where funerals were taking place constantly, and a monument of considerable dimensions carried through the main streets of the town, and finally placed in position, without detection or exciting the curiosity of a naturally inquisitive community! Says Mrs. Beecher Stowe (Ministers Wooing, chap. xlii): "It is well known that for many years after Burr's death the odium that covered his name was so great that no monument was erected over him lest it should become a mark for popular violence." Sheer nonsense, and only created as a preface to the tombstone story. Mrs. Stowe herself, declares Burr to have been "no worse than the men of his time," and gives him credit for many real acts of kindness and generosity to the poor, friendless, and unfortunate. It is well known that Burr, up to the hour of his death, was still possessed of a circle of warm, obedient friends! Where then was the popular violence to come from? Distant enemies were not going to follow him to the rural grave yard of Princeton! It was surely not to come from the residents of Princeton, one half of whom were too much employed in their daily avocations to care anything about the matter, while of the other half it is more than likely very few remembered anything of Burr, if they had ever known, and now cared less! There was nothing to fear from the students of Nassau Hall, for it may safely be said two-thirds of them almost worshipped the memory of Burr, for his character of both gallant and duelist. Seeing this then, there would be no necessity for all this mystery, and as there was none about the burial, neither was there any about placing the marble stone over the grave. Further says Mrs. Stowe:

"A laborer in the vicinity who first discovered it [the monument] found lying near the spot a small *porte monnaie* which had been used in paying for the workmanship." How did the laborer or you Mrs. Stowe know that? All very good romancing, madame; about as true as your Byron story, but the truth is the "*memorial*" marble was put up first as all such work is done—in broad day light, and under the gaze of many lookers on—the mason and stone cutter performing their work in the usual manner, were paid for the same at the usual place, at a cash drawer in an office in daytime, and not in a grave yard at dead of night, from a *porte monnaie*, to be thrown away (very stagey, this) when payment was made, as though the owner had no more use for money nor pocketbooks in this world. In conclusion, if any person is curious enough, and thinks it will pay, let him make a pilgrimage to Princeton grave yard and read the name of the stone-cutter, and the locality of his marble-yard on the mysterious tombstone which marks the spot where lies all which may now remain of the gallant, courageous, but restless and unscrupulous intriguer, Aaron Burr.

EDWARD E. HULFISH,
Princeton, N. J.

—AIR AND SUNLIGHT.—From an acorn weighing a few grains, a tree will grow 100 years or more, weighing several tons. A large part of this growth is derived from the sun, air and water—but little from the earth. Wood and coal are but condensed sunshine, which contains three elements equally important to animal and vegetable life—magnesia, lime, and iron in the blood, which gives it its sparkling red color and strength; the lime in the bones imparts to them the durability necessary to bodily vigor, while the magnesia is important to many of the tissues. Thus the more sunlight we enjoy the healthier we shall be and the longer will life endure.

POULTRY DEPARTMENT.

THE HOPE EXPRESSED

By Mr. A. D. Warren in a late number of the FANCIERS' JOURNAL, (in his comments regarding the recent National Poultry Exhibition in Chicago,) is one that all the fraternity will certainly join in—to wit, that "Boston and Buffalo, in the winter of 1877, will show our Western friends how to manage a Poultry Exhibition."

There is no doubt our eastern brethren will be able, not only to improve upon the western style, as demonstrated in the Chicago attempt early in 1876, but that they are quite competent to conduct the details of such an undertaking creditably, honorably, and satisfactorily.

With one of the largest and finest halls in the country (Music Hall, Boston), and under the supervision of the responsible and energetic gentlemen who have heretofore had charge of the Massachusetts shows there, it need not be feared that the exhibition of the "National Society" will not be in 1877 conducted as it should be, and that all who unite in making it a success, will be treated fairly and justly on this occasion. * * *

THE CHICKEN SEASON.

We are very near to May-day now, and by this time we should be able to speak about the chicken season, whether it has been a good one or no, and in what quantity chickens are to be found. We are sorry to say we have no very good news to write. The long winter seems to linger with us even now, and the broods have fared but badly. The new year opened satisfactorily, and those who had some chickens out early in January are the best off, for after then came snows, and frosts, and winds, and cold rains, all jostling one another to see which could come the fastest and do the most harm, and consequently chickens died in the shells, or struggled into life and out of it again as quickly as possible. Then came the most unsatisfactory of all calamities—clear eggs. Nests after nests of eggs were thrown away all over the country, because they were not fertile; and then followed the scarcity of broody hens. We never knew them so scarce as in this year, and we positively could not get our own to sit. They would lay and then leave off, and never become broody at all; and all through February there were some who fared even still worse, for they could not obtain eggs from their best birds. It certainly has been a pitiful sight to see the birds this spring run straight from their houses when let out in the morning to the corner of their run, which they had found from experience of many days and weeks was the most sheltered, and there they would crouch all the day long, and look the picture of misery, with the east winds blowing upon them. In the face of all these troubles it is not wonderful that the chickens are scarce and small. We have tried to have news from all parts of the country, and from a few yards the reports are satisfactory, but on the whole we think there is but little improvement from last year, which was then looked upon as being

so black and unprecedented. We glean from our correspondents that there are a few good January chickens about, but that February and March afford but a miserable average, and with hardly one exception we find that where there are chickens they are to be found in warm localities, or where the runs are very sunny and well sheltered with high hedges or walls.

This year will we think, be celebrated above all others for the clear eggs and the difficulty to get hens over a year old to lay. The utter indifference of the cocks in many yards to every single hen in his run is remarkable, consequently, egg-purchasers have been unusually disappointed, and those who bought cocks or cockerels last year for breeding from again write back that they "must have been tampered with." Of the various breeds we find that Dorking chickens are as numerous as any, for we hear of many yards being well off with them both in the Colored and Silver-Greys. Whites seem to be but few, but we have often noticed that in the White varieties, especially in Dorkings and Cochins, the percentage of unfertilised eggs is greater than in the colored varieties of the same breeds. Brahmas, too, are weak for Brahmas, but this breed is so enormously cultivated, and has so many friends, that chickens are sure to be found in abundance somewhere or other. Spanish seem to be very few, and French not so good as usual. We know of yards which in other years had Houdans by now, crowing lustily, but this time they are all behind. Still we do not fear for Houdans; they are very hardy, and have so many admirers. Cochins we fear are not plentiful. They came so nobly out of the 1875 ordeal that we lament it the more if the report is true—that they are few and far between. Of them Buffs seem most numerous, and we hear of a few good Blacks. Whites, we are afraid, save in two or three places, make no better muster than in last year, still we hope that those old ladies who so often did duty for their daughters in the past season have gone to a better land, or that time has dealt less kindly with them, for their appearance again would be indeed monstrous. Polands seem to have done as well as any breed until lately, when the Good Friday snow seems to have been too much for many broods, and left colds, and roup, and gapes behind where it did not entirely destroy. Game we hope have done better, for we hear of breeders bestirring themselves about champion cups, which looks hopeful; still our letters tell us they are not too plentiful. Of the less cultivated breeds which go into the variety classes we have had but little news. We know, however, of several good broods of Leghorns, Minorcas, and Silkies in various places.

This, then, is a summary of the letters we have had. We do not mean to imply that good chickens of various breeds are not to be found in many places and in good numbers, but we believe on the whole that it has been a very bad season, and that but few early chickens will be ready for, or up to any high standard, at our summer exhibitions. We would urge, then, upon show authorities to be careful how they embark in chicken classes in their schedules, and rather allow their classes to be "for any age," for even then a fair pair of chickens stands more chance of a prize against adult birds in their ragged summer plumage. We speak now, of course, for the summer shows, as from this week we hope chickens will hatch out better and grow up strongly. We must remember that many a May-hatched chicken has made a noted winner, and so it is not too late to be setting eggs now. For ourselves, we mean to go on setting and hatching all we can up to the end of June, for birds hatched even then with judicious feeding and good management will grow into good stock birds, and many of them be quite ready for the late winter shows; only in setting eggs during the coming weeks we should as much as possible try to use those from hens in preference to those from pullets, as they produce stronger chickens and birds which feather more quickly, and so come to maturity and adult plumage earlier. We know eggs from two-year hens have been very few this season, and in

fact we know of Brahma, Dorking, and Cochins which up to last week had not laid an egg this year; but now, however, in the bright sunny days which we hope are before us these hens should be laying freely, and we would collect and use every egg from them.—W. i. *Journal of Horticulture*.

POULTRY, PIGEON, AND RABBIT SHOWS.

NORTHERN COUNTIES COLUMBIAN SOCIETY.

The first monthly meeting of this society's year was held at the Cathedral Hotel, Manchester, England, on the evening of Feb. 21. Mr. Ridpath, the president for the year, in taking the chair, proposed a vote of thanks to, and the health of Mr. E. E. M. Roysds, who has for three years so ably filled the chair as president, which proposal was heartily responded to. A good number of prominent fanciers was present, amongst whom were Dr. Pinder, Major Cryer, Messrs. Unsworth, Morgan, Clay, Blohm, Bowman, Brierley, Pass, Eggar, Brown, Crosby, &c. A very agreeable evening was spent by all present. In Black Carriers Major Cryer was awarded two equal firsts on a fine young stylish cock—a bird with good length, very fine in head, eye, beak, wattle, and color—and his well-known young black hen. The class was a good one, and contained seven Carriers, every one of high quality. Short-faced Almond Tumblers only produced four entries, but two equal firsts were deservedly awarded to a bird of each sex belonging to Mr. Crosby. In Blue Dragons Major Cryer won with a fine old cock, of the London type, a bird of good color, dark eyelash, wattle, and beak, and good barrel head. Red Jacobins were a grand class: Mr. E. E. M. Roysds was a decided winner, but there was a little difference of opinion as to which of his two best birds ought to win; the cock which won, was perhaps best in color by a slight shade, and the same in flights, whilst the other was a smaller bird, with a shorter face, but the length of feather in each bird was so good that it was difficult to tell which was best in face without handling the birds. The variety class must have been a puzzler to the judges, as some of the highest-class birds in the fancy of different breeders competed. Five equal firsts were awarded—one to Mr. Unsworth for a wonderful blue English Owl, one to Major Cryer for a fine young Dun Carrier hen, two to Mr. Crosby for a Spangled Ice and a Yellow Dragon, and one to Mr. Brierley for one of the best Short-faced Silver Dun Antwerps in the fancy.

MAKING IT ALL RIGHT.

As a rule, we believe the breeders and shippers of fancy poultry are fully as reliable as other business men. There can certainly be no doubt but that they generally mean to be strictly honest, in so far, at any rate, as to giving to each customer, that which, in his estimation, at least, is an equivalent for his money. Buyers will differ as to exactly what is an equivalent, but the prudent seller always aims to perfectly satisfy the reasonable expectations of each of his customers, even if he must in doing so give at times a little more to one than to another.

To some shippers, however, the temptation to send off stock which they cannot fully endorse, is too strong to be resisted. To be sure they do not know it to be defective; they merely have doubts regarding it, and their hope is that it will at last turn out all right, or at any rate that those to whom they sell may never discover its defects. Yet to satisfy their own sense of honesty, as well as to assure the great public that it will be fairly dealt with, they use freely in advertising, such expressions as, "Perfect satisfaction guaranteed," "All mistakes promptly rectified," and in their correspondence are flush with promises of "making it all right." They no doubt often truly intend that in case anything they ship proves to be worthless, or seriously deficient, to make immediate and full reparation. In this they may be perfectly

conscientious, and unless intervening circumstances beyond their control render it impossible, they most certainly will, in case of a failure, "make it all right."

But questions of conscience and honesty aside, are they acting wisely? Does it pay to send off, at high rates of express, eggs or fowls which we have the least reason to think will not of them selves give the most perfect satisfaction?

It may, perhaps, do well enough for second to fifth rate breeders and shippers to carry on business in this way. They may succeed for a time, since the chances are they will not be asked to rectify every mistake. Buyers often prefer to look elsewhere rather than claim "satisfaction" at the hand of one whose reliability they already have some cause to doubt.

It is very generally conceded that the net proceeds from the poultry business are not proportionally greater than in most other branches of business wherein an equal amount of ability, tact, perseverance, and advertising are employed. Hence those who aspire to the first rank in the profession cannot afford to incur the risks incident to questionable dealings with their customers. It is to them the height of folly to sear the ground over which they pass.

Permanent and honorable success can only come from the most careful management and most judicious husbanding of the forces with which we work. The breeder's margin for profits is not so great that he can afford the draft upon his resources which the frequent duplication of orders would entail. He whose reputation for fair dealing is well established, usually finds but little difficulty in disposing of his surplus of well-bred stock, and when from any cause he feels bound to duplicate an order, he as truly feels the loss as if he were to throw to the flames the amount of cash represented by the stock.

The faithful and truly reliable breeder cannot therefore afford to be spending time and means in rectifying mistakes and duplicating orders. He cannot afford to work by the "Making it all right" rule. His true policy is to make and to keep all right at home, and avoid with the utmost care sending out anything which is not strictly as it is represented to be. By such a course he is not liable to suffer from either loss of stock or reputation.

P. M. S. in *Prairie Farmer*.

(For Fanciers' Journal.)

TRIPS AMONG THE FANCIERS.

BY W. E. FLOWER.

The morning dawned dull and dreary, and before breakfast was over the rain descended in torrents, (and continued with but little abatement during the entire day,) confining us to the house, and effectually putting a damper upon our anticipated explorations and rambles in the vicinity of Brooklandville, but those of our readers who have enjoyed the "vivacious humor" and genial good nature of our host will agree with us that it is a treat to be shut up in the house with him for company on a stormy day; in fact all the members of the household from the oldest down to little "Joe Wade" (a frolicsome boy of ten months, who grasped the ears of a pet rabbit in a manner which convinced us that he like his namesake will be "a Fancier,") seemed to "vie" with each other in their effort to make the day pass quickly and pleasantly. On the following morning we bade them farewell and started upon our return. Friend Brown accompanied us as far as Baltimore where we again had the pleasure of meeting Mr. Slifer, and in company with him and friend Brown we visited the room of Maryland State Poultry Association, No. 1 North Gay St. This room is very comfortably furnished and its walls are to be adorned with paintings of pure bred fowls, dogs, pigeons, and other pet animals. We beg permission to digress "just a little," in order to say "unbeknownst" to them, that the Maryland State Poultry

Association has paid all premiums (awarded at their last show,) in full, have secured an excellent hall for their next annual show; have purchased a lot of new coops, and have several hundred dollars in bank ready for the next show; hence we predict for them a grand turnout in December next, as Baltimore is easy of access to "Fanciers" from Eastern Pennsylvania, also New York and New Jersey, and as many of them are members of the A. P. A., we think that Association should (for that reason if no other) hold a meeting at Baltimore in December, at the time specified by the Maryland State Poultry Association. We have no desire to detract from or in any injure the Boston show, but as the A. P. A. has on previous occasions held meetings at Boston and Buffalo, we think it would be for the interest of the "Fraternity at large" to hold a meeting at Baltimore the coming winter. After our visit to the aforesaid room we bade Mr. Slifer adieu, started for the boat but the boat not being ready to start we accepted friend Brown's invitation to "run down a few Baltimore bivalves." This feat being accomplished we returned to the steamer; the last box was trundled aboard, the bell rang, and friend Brown wishing us a safe journey home walked down the gang plank; and the captain's orders to "cast her loose" was speedily obeyed, and we were soon ploughing through the rough waters of the Chesapeake Bay. The night being too rough and windy to remain upon deck, we sought the cabin, and after supper retired to our berth. Arriving in Philadelphia next morning, we concluded to make a "detour" by way of "Chestnut Hill," and were not long in making our way to "Spring Grove Poultry Yards." Here we received a cordial welcome from Mr. A. P. Groves Jr., who still makes a specialty of Partridge Cochins. Mr. G., before showing his fowls requested us to step into the house and examine an oil painting of his first prize Partridge Cochin hen (at Philadelphia last winter). The picture is a faithful likeness and admirably executed by Mr. Henry Erdman (who in our humble opinion is unrivaled as an engraver or painter of fowls by any artist in this country). Leaving the "inanimate" we passed out to look upon the animated inhabitants of Spring Grove Poultry Yards. Mr. G. in addition to his hitherto fine flock of P. Cochins, introduced to his yard and its occupants a prize winning Partridge Cochin Cockerel at "Springfield," bred by P. Williams; hence those who propose beating Mr. Groves on P. Cochins at Philadelphia next winter, will have to be "up and doing." Our attention was next called to a fine yard of Light Brahmas. These were fine, large, well marked birds, from some of the best strains in this country, and they and their progeny will doubtless make their mark at some of our various shows the coming season. We were shown some fifty or more young chicks of both Light Brahmas and Partridge Cochins, and although too young yet to form an opinion as to their merits, we doubt not some of them will be heard from the coming winter. "We walked and talked" until "the day was far spent," and our friend accompanied us to the train, and we were once more "homeward bound."

To be continued.

EFFUSION NO. 2, ON INFANTS—i. e. "YOUNG BREEDERS."

In the Fancier's Journal of May 8th, is a reply to the communication from "Zero," which appeared in the Bulletin for April.

This person, who so aptly calls himself a "Young Breeder," says, "what we surmised"—that the attack on the Standard was merely the result of a personal quarrel between different parties, was perfectly correct."

If Y. B. refers to the criticisms on the Standard which have appeared in the Bulletin, from time to time, we must be permitted to deny the "surmise." We shall not try to convince him that he is wrong—it would be a bootless task. His juvenility and self conceit render him perfectly unsusceptible to all ordinary argu-

ments: and of the use of the mulish substitute, which he so much admires, we shall defer to Y. B.'s exceeding adaptability to that mode of conviction, as well as his superior knowledge of its manner of application.

We have never, to our knowledge, had any personal quarrel with Y. B., yet we shall criticise him whenever and wherever we find, that—like the *Standard*—he needs improvement (and we must say that the two very much resemble each other in this respect.)

His next "surmise" is also just as far out of the way. "Mr. Zero" does not know all about the whole thing. He knows nothing whatever about it, except from hearsay. We feel that we are fully authorized in making this assertion, for "Zero" is comparatively a new correspondent, and we are very positive neither Y. B. nor any of the regular correspondents of the Journal, nor its editor, have ever met him.

Lastly, when Y. B. has had as many years experience in judging all varieties of Poultry; and as long a study of the *Standard* in all its parts as we have, he may, possibly, be qualified to take up the cudgel in defence of it, as an entirely acceptable work to the Fanciers of America.

Editor, P. B.

P. S. We didn't know that Y. B. was behind that "old flint lock" when it went off. Sorry he is hurt, but he must remember the old adage: "children and fools, must beware of edge tools (and old flint lock muskets)."

NOTES UPON A LATE NUMBER.

BY SPANGLE.

I have just concluded the reading of No. 16, of the *FANCIERS' JOURNAL*. It is a good number, as usual. The article from the *London Journal of Horticulture* is very well; but in this country boxes are so universally used, in which to transport eggs for incubation, that the best mode of packing such eggs should be well known by this time.

I have sent away many hundreds of dozens, in all directions, and have never had but one plan of late years. This has always proved successful, so far as avoiding breakage or ordinary jarring of the eggs, in transit.

I roll each egg separately in two or three thicknesses of common newspaper—twist up both ends—place a thick layer of clean hay at bottom of the box, and pack the eggs snugly on top of this in bran or dry hard-wood sawdust; so that no two eggs will touch each other by half an inch. Then add an inch or two of sawdust over all, and another layer of the hay to fill the box full, then screw the cover on, and tack (not nail) on the card of address. A better way is, however, to mark the directions on the box-cover, with a small brush and black ink. I always add, with a stencil prepared for this purpose, the words "EGGS FOR HATCHING—WITH CARE;" and they may then be sent to California without risk of breakage.

"Hans Schneider," it appears was ad Checawgo himself. His pleasant account of the doings there, "a la' Cabinet ossifers in Vashington," was a good hit. But I was astonished dot Mynheer Schnieder should puy himself a pull tog vot vood ged so teeply attached mid der madders, mitout dakin mit him der muzzle—aint it? Arx him, av you please.

The "Weekly Gossip" column of the *FANCIERS' JOURNAL* grows more and more interesting with each successive issue. This can be made a fixture, if all your spicy ornithological and zoological correspondents will look after it. I find it very readable and instructive both. But "Hyon" always interests us most in his "Zoo Notes," which are valuable contributions to our favorite weekly poultry and pet stock paper.

I was surprised at your publishing the singularly illustrated article on the Chicago Exhibition, in No. 17, by C. P. Willard, although you send in the same paper, in editorial shape, an antidote

to the bane noted. Mr. W. has not made out a great deal, in his lengthy "defence," that I can discover, since the chief causes of complaint which all of us have presented since the "great western" show closed, remain in *statu quo*! and his flings about sore-heads reminds one of the old query of Philander Doesticks, P. B., years ago, on a somewhat similar occasion—"düz the gentleman think us *all dampholous*"—outside of the Chicago ring? Perhaps so.

Agricola's lamp or sweet oil remedy for lice will answer, no doubt on animals; but it won't work so well on buff or white fowls. It soils the feathers, dust and dirt sticks to it, and is not near so efficacious as dry sulphur and lard (in small quantities) mixed with one third kerosene, rubbed in under wings, around the tail-feather roots, and at the back of the neck. This will destroy vermin, every time—and we should "not forget it!"

SPORTSMAN'S DEPARTMENT.

A CONSCIENTIOUS DOG.

A *Journal of Science* correspondent says, "I had had a terrier dog for several years, and had never—even in his puppyhood—known him to steal. On the contrary, he used to make an excellent guard to protect property from other animals, servants, etc., even though these were his best friends. [Mr. Romanes here adds in a note, "I have seen this dog escort a donkey which had baskets on his back filled with apples. Although the dog did not know that he was being observed by anybody, he did his duty with the utmost faithfulness; for every time the donkey turned back its head to take an apple out of the basket, the dog snapped at his nose; and such was his watchfulness that, although his companion was keenly desirous of tasting some of the fruit, he never allowed him to get a single apple during the half hour they were left together. I have also seen this terrier protecting meat from other terriers (his sons) which lived in the same house with him, and with which he was on the very best of terms. More curious still, I have seen him seize my wristbands while they were being worn by a friend to whom I had temporarily lent them."] Nevertheless, on one occasion he was very hungry, and in the room where I was reading and he was sitting, there was within easy reach a savory mutton chop. I was greatly surprised to see him stealthily remove this chop and take it under a sofa. However, I pretended not to observe what had occurred, and waited to see what would happen next. For fully a quarter of an hour this terrier remained under the sofa without making a sound, but doubtless enduring an agony of contending feelings. Eventually, however, conscience came off victorious, for, emerging from his place of concealment, and carrying in his mouth the stolen chop, he came across the room and laid the tempting morsel at my feet. The moment he dropped the stolen property he bolted again under the sofa, and from this retreat no coaxing could charm him for several hours afterward. Moreover, when during that time he was spoken to or patted, he always turned away his head in a ludicrously conscience-stricken manner. Altogether I do not think

it would be possible to imagine a more satisfactory exhibition of conscience by an animal than this, for it must be remembered, as already stated, that the particular animal in question was never beaten in its life."

THE GREAT SPRINGFIELD BENCH SHOW.

From Forest and Stream.

The members of the Rod and Gun Club of Springfield have reason to congratulate themselves upon the success which has attended, for the second time, their efforts at holding a Bench Show of Dogs. But one other in any way approaching it has ever before been held in this country, and that was the show at Chicago in February last. The number of entries, which at Springfield reached 362, was about equal in both places. Chicago had somewhat the advantage in having, through the kennels of Mr. Turner of St. Louis, Mr. Smith of Strathroy, Canada, and others, a larger representation of imported setters, which was counterbalanced in the case of Springfield by the largest and finest collection of pointers ever gotten together in this or perhaps any other country, and it is also a notable fact in connection with this last show that the list of entries, large as it was, was made up almost entirely of sporting dogs, there being but comparatively few of the smaller classes of pets, etc., on exhibition.

The City Hall, in which the show was held, is admirably adapted for the purpose, and the arrangements in the way of boxes for the dogs could not be excelled, affording abundant space for the comfort of the dogs, as well as ample promenading room. It was rather unfortunate that, owing to a ball which was in progress, the committee were unable to obtain possession of the hall until after midnight on Tuesday, so that it was late on Wednesday before the dogs were placed and classified. It was, therefore, not until Thursday morning that the judging began, and what with the large number of entries and the delay in the appointing of the judges on the champion and special premium classes, it was late in the evening before the awards were made "up"—too late, indeed, to announce them to the public, or to placard the winners.

We consider this to be a misfortune, as not only were the spectators deprived of the satisfaction of inspecting the winners, but one great object of the show—the instruction of the uninitiated—was lost. Of course the members of the Rod and Gun Club were not to blame for this, for the various committees worked like beavers; but the vast number of entries, together with the impossibility of getting the hall until such a late hour, upset their calculations, and threw the bulk of the work into the last few hours. We trust that hereafter Bench Shows of the magnitude of this one will be arranged and carried out on some plan similar to the one in vogue in England, where the first day is set aside for the judging, and the public are not admitted until after the awards are made. In the present case it was not until ten o'clock at night—the last moments of the show—that the awards were declared, leaving little, or indeed no time, for those so inclined to inspect the dogs, and, if need be, criticize the action of the judges.

Prominent dog breeders and fanciers were present from New England and the Middle States in large numbers; but the West was almost entirely unrepresented, scarcely a compliment, considering the assistance given by entries and otherwise from this section to the Chicago show. Dr. Goldsmith of Vermont was present with his celebrated prize winner, Plunkett, a splendid specimen of the red Irish dog, but scarcely seen to advantage within the limits of a box, or even when led by a chain. Mr. Wm. Jarvis of Claremont, N. H., the vigorous defender, through our columns, of the red as the true color of the Irish setter, was also on hand, with the celebrated Dick and his imported Shamrock. Dick is getting old, but is a good dog still, as any one can

see who inspects his portrait in our gallery. Mr. Charles H. Raymond of Morris Plains, left his Pride and his Fairy at home, and relied upon native Dimity to take the rag off the bush. Mr. Theo. Morford of Newton, N. J., was represented by a Don who, although not a Hidalgo of blue blood, was yet good enough for any company. Mr. Luther Adams of Boston, had probably the strongest team of setters to be found in this country, headed by the champion Rock. Mr. George Delano of New Bedford, although not present in person, sent three capital representatives from his kennel. Mr. Nicholas Saltus of Brooklyn, had Dash and imported Lill III, together with their litter of five puppies. Dr. Webb had a large delegation of pointers, representatives of his own and Mr. F. Schuchardt's kennels. Mr. S. J. Bestor of Hartford, had his celebrated cocker spaniels entered, and notwithstanding strong opposition, carried off two prizes. Dr. S. Fleet Speir of Brooklyn, had a pair of puppies from his Gordon stock. The local kennels of Springfield and vicinity were largely represented, and that of Mr. S. T. Hammond was successful in several classes. The veteran sportsman, Ethan Allen of Pomfret Centre, was of course on hand, with several choice specimens of his well-known strain of setters, both from his own kennel and that of Mr. J. Dwight Francis.

The class of English setters, judged by Mr. N. Saltus, was not a numerous one and was soon gotten through with. There could scarcely be a dissenting voice as to the decision so far as the winner of 1st prize was concerned. Mr. Luther Adams' Scout, by his Rock out of imported Pickles, is a good dog, with a head that is simply perfect, and with much more size and substance than could be expected from a little bitch of Pickles' kind. But Rock appears to possess the faculty of transmitting his own quality to his progeny. Mr. Delano's Charm, by Pride of the Border, out of Fairy, took second honors; but, although his breeding is so good, and notwithstanding his possessing the good traits of the Laveracks, he was so fat that we did not consider his chances so good as those of his kennel companion, Adonis. Mr. Parker's Blue Blood, by Rock, out of Dora, who has grown into a fine dog since we saw him last fall, was third.

We were glad to see Mr. Jarvis' Dick take the place of honor in the red Irish class, although it was almost a walk over, as Mr. Saltus' Dash, who would have pushed him very closely, was already a first prize winner. This gentleman took first for bitches with his imported Lill III, and his brace with their litter of handsome puppies attracted much attention. Snipe, placed second, was first last year in a much smaller collection.

In imported Gordons or their progeny, the "bar" clause shut out the finest specimens exhibited, notably the bitch Norah and old Shot (late Jeromes') the property of A. F. Copeland, Esq., of Boston, both being first prize winners. Mr. Jerome Marble's Grouse was deservedly placed first of those left in, although Dr. Strachan's Sport (second) was very close, and probably had he been marked with tan, according to the recognized standard in this country, would have taken first honors. Sport is black with a little white, and is from Mr. James Gordon Bennett's stock. Monarch (third) a large, finely formed dog of the Belmont strain, was much out of condition, but being a youngster will show to advantage later. Lou, first in the bitch class, was imported as a puppy by Mr. Munn, and barring a somewhat short head, shows in coat and color the finest characteristics of the Gordon type. Mr. Emerson Foote was very close to the winner with Mab, half a point only separating them. Mr. Hammond's Flash, a St. Kilda bitch, was well placed as third.

The class of native setters was not very large, there being over forty entries, but was very difficult to judge; Gordons, red Irish, and native English, being thrown in together in a manner which must have been most confusing to a judge who was called upon to decide upon the merits not only of different dogs, but of

rival strains. Mr. Jarvis, however, stood up to his work nobly and scarcely erred in placing Mr. Morford's Don and May, first in the dog and bitch entries respectively. We think that this award gave general satisfaction, and we congratulate Mr. Morford upon his success. No one has worked harder, more persistently, or more successfully, to bring to perfection a strain of native setters. A certain amount of chance enters into bench show exhibitions, and it is scarcely fair to criticise the action of a judge who is obliged to score his points on each dog according to his judgment, and it is not improbable that a very superior dog would show to the least advantage when under the hands of a judge, through timidity or fear. Among the native setters which appeared to us worthy of mention were, Lieut. Harry Metcalfe's red dog Jim, and Mr. J. Dwight Francis' March, of the old Ethan Allen strain. Mr. D. P. Charles, of Albany, also showed a very fine red dog named Fritz. Dimity was worthy of the place she received next to May. Her pen, in which was a fine litter of puppies by Pride of the Border, was a great centre of attraction throughout the show.

The pointers were also very numerous, and Messrs. Orgill and Saltus, who judged respectively the large and small classes, had their hands full. Some confusion was created in judging the first named, from the fact of no distinction having been made between dogs and puppies, some of the latter being so well grown that when they were brought before the judge he was in doubt as to how he should judge them. Mr. Schuchardt's veteran, Tom, now eleven years old, was awarded first position by judge and spectators alike, but we confess that we should have preferred to have seen him followed by Mr. Brook's fine imported dog Bingo, or the fine lemon and white dog Cal, owned by Mr. Hixon, of Springfield. Mr. Stephenson, of West Meriden, showed a very fine young dog in Phil, a son of the champion Pete. Mr. Schuchardt was fortunate also with his bitch Fan, taking second for this sex; nor do we think that there was the twelve points difference between her and the winner, Nellie, as shown by the judges card. In the small pointer class, the entries were not so numerous, and we doubt if the judge could have done differently in placing Grouse first. Whisky was followed very closely by the "Squire's" Belle, only one point separating them, and one of Whisky's first litter, Rex, was named as the best dog puppy.

The spaniels were very much mixed up. Mr. Bestor deservedly took first for cockers, with his Snip, and his bitch Juliette was second in her class. Mr. Morford had anything but an easy task in judging the various classes entrusted to him, so mixed were the entries. In fact, it seems that while most sportsmen have been devoting their time and attention almost wholly to setters and pointers, the smaller breeds of sporting dogs have been neglected to such an extent that but few are well posted as to the characteristics of the various strains, and a general commingling is the result. The cockers were many of them clearly marked after water spaniels, and it was difficult to decide which strain was most prominent. So of the Clumber, in which only the color was left, together with size and characteristic of the setter. The water spaniels were better, and seemed to be very distinct. There was one entry, a dog, Ned, a Norfolk spaniel which bore evidence of being very pure blood, and was undoubtedly a fine specimen of this strain of Springer spaniels, for which there was no class. This dog is owned by Mr. J. F. Jones, of Springfield.

Our space will not permit us to review the various classes of toy, pet, or watch dogs; although mention must be made of the two magnificent Scotch stag hounds, Sir Walter and Spider, exhibited by Mr. H. G. Bixby, of Nashua, N. H. These dogs were each awarded 100 points, the maximum figure, denoting perfection. M. J. H. Seaver, of Malone, N. Y., exhibited a fine specimen of the Italian greyhound, which we considered superior to the one placed first by the judge.

BIRDS OF NORTH AMERICA.

Nos. 18 & 19 of this valuable work have just been received, and are equal to any of their predecessors. The work will be complete in about 36 monthly parts, at \$1.00 each. For further information address Jacob H. Studer, Columbus, Ohio.

FELLOWSHIP AMONGST FANCIERS.

"He prayeth best who loveth best
All things both great and small."

The old prejudice of one hundred years ago, covering a man like a mantle, with a degree of disgrace, who was known to be a fancier of birds and agile pets generally, is fast being dissipated, like the morning dew, under the beams of a cloudless sun, and as the ancient superstitions melt away by the enlightening power of the press, the mind begins to assert its independent right to think for itself. In no channels of reform, or advancement in the arts of civilization, has man made greater strides than in restoring the love which was due to the wise and beneficent handiworks of his Creator—to the vast family of multifiform creatures, evidently made for his use and pleasure. But there is no greater mistake which fanciers could make, no error which would more tarnish the credit due to them, than to allow that love to excel that which ought to exist, unalloyed and uninfluenced by money or station, amongst themselves, honor and circumspection of character being assumed to be the only standard of equality. To have an innate admiration for the beautiful, is noble. But to love our neighbor as ourself is sublime. To be recognized as a true fancier, in the highest sense of the word, must, invariably, preclude limiting the scope of our affections to the varied plumage of the bird, or to the agility of the quadruped; but renders it as the first indispensable duty to extend the cordial hand of fellowship, on every convenient occasion, more especially to every brother, whose labors in the animal kingdom is in unison with his own.

The reason why, in some rare cases, clubs and societies are not continued with that fervor and enthusiasm with which they are commenced, is because they lack the two cardinal virtues, equality and fraternity, the two pillars upon which all prosperous and successful societies rest, and without which they droop like a plant without moisture. If true democracy exists anywhere, it ought to be found in a corporate body of men, united for the propagation and development of animated nature. But if a members finer sensibilities go no further than the improvement

of the brute, and allow their lower attachments to supersede the higher; then we must pronounce their motives to be sordid and selfish and unworthy of the highest encomiums. The grand purpose for which a community is formed, is for the furtherance of some specific object or principle which created it.

Consequently, from its first inception and organization, grave responsibilities rest upon it, and is certainly very remiss in the performance of its duties, should its highest ends be confined to its own aggrandizement. As in mercantile firms it may present an exhibit of its labors to the criticizing eye of the public, but the question may be asked, how many does it take by the hand, and lead into the fold, fostering in their minds the charms connected with caring for fur and feathered flocks. We have the happiness to know there are some shining lights, whose complacent beams is a magnet to all within its rays, and there are others whose light is limited and varying, but are nevertheless useful.

While pride, vain-glory, and hypocrisy, exist, we shall never expect to see that unanimity between man and the whole family of animal life, so much desired by the ancient naturalist. "The wolf to dwell with the lamb, and the leopard to lie down with the kid, and the calf, and the young lion, and the fatling together; and a little child to lead them."

Amidst the amazing number of clubs which has uprisen to this end within the past ten years, we cannot presume they will all come through fine gold, when winnowed by time and experience, but we see tokens of success, and prospects of a grand future. More liberal awards, and expedition in awarding, more appreciation amongst capitalists, in their donations, and grander exhibitions. And here we would point out, as a model of excellence, both in quality and promptness, and liberality of prizes, the Consolidated Exhibition at Springfield, Mass., Feb., 1876, but we regret to put at the other end, the Chicago Exhibition of the same season, in unsatisfied and unhonored promises and programmes. Amongst the reforms already mentioned, we would mention another which is not the least refreshing, and that is the general tendency to purge out men void of integrity and honor, the selfish, parsimonious, and deceitful; and confidence in each other more and more strengthened.

In fraternizing, and reciprocating favors there are certain boundary lines, and the usual amenities of life should be attended to. In desiring to see a brother's stock, or even in purchasing, we cannot reasonably expect the mechanic to leave his bench, the lawyer the court, the minister the pulpit, or the editor the sanctum, for that special purpose except upon previous mutual agreement; therefore depending upon the mail as we have to in the transaction of business, makes confidence in each other more sternly necessary. And in conclusion, the true Fancier belongs to that honorable body of men who puts a higher estimate upon God's works than upon man's—upon the original, more than the imitation, and his devotion to his flock, he finds himself their loved and acceptable servant, in guarding and protecting their forms and color from deviating from the true standard of taste, which far transcends that of the painter. Let fanciers then feel their ennobling position, working together in harmony and concord in Nature's fold, not dimming the lustre of his high calling, by using it as a means to obtain craftily, filthy lucre, but adhering to the moral standard—every one striving for the mastery in honor and courtesy at all times, as well as in beauty of breed, then we shall gladly see the black list banished, which so dims the pages of our journals.

The London *Saturday Review* has started a project for a novel society to be organized for the purpose of stocking uninhabited islands with pigs and rabbits, so that shipwrecked sailors who happen to reach them may find an abundance of food awaiting them.

CORRESPONDENCE.

DOGS.

FRIEND WADE:—

Mr. J. H. McCann says in your last number that "dogs with white extremities invariably have a white tip to their tails." If he ever comes to Boston, he can see on the street any day, a Red Gordon Setter, with white points, whose tail is of natural length, and red to the tip—also, a black mongrel, that follows a butcher's cart, whose tail is solid black to tip, while his feet and face are white.

T. F. SMITH.

THANKS RETURNED FOR FAVORS RECEIVED.

Editor of *Fanciers' Journal*:

DEAR SIR:—Permit me to tender my most sincere thanks, and also to express my heartfelt gratitude to Wm. Gardener Barton, 88 Bridge St., for his friendly notice of my "piece of rhyme, entitled *The Mountain Stream*," as it is not every day such a trifling thing raises so tremendous

"A tempest in a teapot."

But how thankful I am that Wm. Gardener Barton, 88 Bridge St., has kindly ventured to take all the responsibility, actual and consequential, arising from said tempest; ah, Mr. Editor, how much sooner the Millennium would be here if all men were as good as Wm. Gardener Barton, 88 Bridge St., who has kindly volunteered to take all the responsibility; and when I reflect on the awful sinfulness of causing so polite a gentleman to feel ashamed, I cannot help exclaiming in my wretchedness, "Did Thomas Jefferson steal the Declaration of Independence, from Locke on civil government," as he is accused of doing? But I humbly ask the pardon of Wm. Gardener Barton, 88 Bridge St., who has kindly volunteered to take all the responsibility, and sincerely regret that I cannot visit 88 Bridge St. and have my cranium phenologically examined by Wm. Gardener Barton, who has kindly volunteered to take all the responsibility, and would it not be strange if the organ of plagiarism should coincide both in a Peppercorn and a Poet Laureate? Of course I would not have the presumption to say they would; but there is no doubt at all that Robert Burns stole the following verse in his poem called "Halloween," out of Tennyson's Brook:

Whyles owre a linn the burnie plays,
As thro' the glen it wimpl't;
Whyles round a rocky sear it strays;
Whyles in a wiel it dimpl't;
Whyles glitter'd to the nightly rays,
Wi' bickering dancing dazzle;
Whyles cookit underneath the braes,
Below the spreading hazle,
Unseen that night.

Moreover, Shakespeare has been accused of stealing from Middleton, Milton from Dante, Sterne from Burton, Addison from Marville, Byron from Schiller. Washington Irving is charged with filching Rip Van Winkle from the German, and Poe with stealing his Roman from the Persian.

In fact there is not a Poet from Chaucer to Longfellow, who has not been accused of plagiarizing, and if such is infamy, I feel proud of being in such good company.

But I had almost forgotten to state that Wm. Gardener Barton, 88 Bridge st., who has kindly volunteered to take all the responsibility, says: "I shall be ashamed if such Peppercorn poems are inserted in your paper. Please Mr. Editor, don't let him do it, rather let all the Peppercorns perish from the face of the earth, as there is no knowing what the consequence might be, if Wm. Gardener Barton, who has kindly volunteered to take all the responsibility, should feel ashamed; never mind me, save the reputation of your Journal. But above all, and I ask it as an especial

favor, do in the name of mercy, cost what it may, keep the blush of shame from the benevolent face of Wm. Gardener Barton, 88 Bridge St., who has kindly volunteered to take all the responsibility.

Yours reduced to powder,
PEPPERCORN.

MARYLAND POULTRY AND FANCIERS' ASSOCIATION.

List of officers elected at May meeting of the *Maryland Poultry and Fanciers' Association* for the ensuing year.

President—S. H. Slifer.

Vice Presidents—David Mordecai, W. T. Walters, A. K. Shriver.

Secretary—G. O. Brown.

Treasurer—J. E. Koons.

Executive Committee—Chas. Becker, T. S. Gaddess, J. E. Lloyd, Geo. Colton, Thos. A. Symington.

Very truly yours,
G. O. BROWN, Sec'y.

FREDONIA, N. Y., May 14th, 1876.

FRIEND WADE:—

The judge of Light Brahmas at Dunkirk show was *not* Chas. Street, but Mr. C. A. Sweet, of Buffalo, who kindly consented to act, on account of there being no other available judge present for this variety.

Yours truly,
GEO. S. JOSSELYN.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Rabbits in Australia are more numerous than squirrels in California.

—THE LATEST POULTRY FOOD.—Our poultry-man announces that he keeps his spring chickens on ice during the winter.

—The proper name of the bird commonly known as the English Sparrow, is not German or European Sparrow, but House Sparrow. (?)

—What is the difference between a man and a chicken? Man has his eternity in the next world, and chickens have their necks twisted in this.

—White cats for exhibition should be washed with warm water and fine toilet soap, and after dipped for a moment or so in luke warm water containing borax and indigo. Partially dry with a damp clean wash-leather. (?)

—IS IT THE ROC?—Various accounts have lately been received of the appearance of an enormous rapacious bird in the interior of New Guinea, which has been called *Harpyopsis Novae Guineae*. May it not be the "roc" of the Arabian nights?

—According to the report of the savans, the flesh supposed to have fallen from the clouds in Kentucky turns out to be the flesh-colored notic (*N. carneum*), composed of semi-liquid cellulose and vegetable proteine. And don't you forget it!

—In the Jardin d' Acclimatation in Paris are some hundreds of kangaroos recently arrived from Australia. The kangaroo has been introduced into several large estates in France, and is now hunted there like other game. The flesh is sold in market, and is considered a great dainty.

—LICE ON BIRDS.—The only effectual means of ridding a wood-cage of red mites is to apply freely, with a painter's brush, either naphtha or camphine, taking care not to approach a light for fear of combustion. The birds, of course must not be put into the cage for a week at least, and even then it should be scalded to rid it of the naphtha or camphine. (?)

—This little lesson for women is given by Eliza F. Pollard in her last novel *The Lady Superior*:

"Extraneous duties may come to her, but they are and remain extraneous. Home and home virtues, husband and children, brothers and sisters—let them be served first; then, with enlarged sympathies and increased powers for good, we may extend our helping hands to those needy ones beyond the charmed circle. Men seek for rest, for forgetfulness, in the world and its dissipa-

tions, in the wine-cup, on the race-course, until, weary and dissatisfied, they turn at last to *home*. Let women then beware; from henceforth the power for good and evil is in their hands."

—The method of sowing grain on the sandy land in the San Joaquin valley, as practiced successfully by many farmers, is to have a box or sack containing the wheat on the plow, with a spout leading the seed just back of the mold-board, and so regulated that it will drop uniformly and be covered by the lap of the furrow to the depth of an inch or two. This constitutes the whole process, there being no harrowing of any kind done or required.

—A lady in Philadelphia who keeps one of those curly dog favorites known as poodles, lately lost her pet, and called upon a detective to find it. The next day the officer came in with the dog, which was very wet and dirty. The lady was overjoyed, and asked forty silly questions; among others, "Where did you find the dear darling?" "Why, marm," replied the officer, "a big fellow had him tied on the end of a pole, and was washing windows with him."

—PECULIAR FLOWERS.—At Santa Clara, Cal. they have a black lily with three large blossoms, each nine inches long, and perfectly black outside of the green petals. At Constantinople they have a flower which represents a perfect humming-bird. The breast, of a perfect emerald green, is a complete copy of this bird, and the throat, head, back and eyes are a perfect imitation. The hinder part of the body and the two outstretched wings are of a bright rose color—one might almost say flesh-colored.

—THE MISSING LINK FOUND.—A farmer in the vicinity of Charlottetown, Prince Edward's Island, while digging for marsh mud in a deep pit on his own farm, unearthed the well-preserved skeleton of a full grown human being with the osseous framework of a tail consisting of nineteen articulated bones. These remains are described as having the general appearance of the skeleton of a North American Indian, with the skull very much flattened and the jawbones very large and thick. All were carefully secured, and are now on exhibition at the house of Silas Wilcox, near Charlottetown.

—RABBITS IN THE ORCHARD.—A reader of the PRESS in one of our mountain counties, (Calaveras,) says he is troubled, and suffers loss every year from the depredations of rabbits. That as certain as the ground is covered two or three days with snow, the rabbits commence girdling his young orchard, and have caused the loss of some valuable trees; and asks if there is any better remedy than dog and gun.

Wrap them with any kind of old cloth or stiff paper, and occasionally saturate it with coal oil or coal tar, which prevents their attacks; but if you are near a slaughter house, procure half a bucket of blood, and with a swab or coarse brush, spread upon that portion of the tree liable to their attacks. It is a sure preventive, and two applications are enough for the whole winter.

—A BOTANICAL CURIOSITY.—The Rev. T. J. Bissell, of Phelps, N. Y., has in his sitting-room something, in the vegetable kingdom, decidedly remarkable. It is the leaf and petiole of a geranium plant, severed from the stalk, and suspended by a cord, through the base of the petiole, near a window. From the points of the segments into which the leaf is divided, which are the lowermost points, as the leaf hangs suspended, small plants of geraniums have started, and are growing. These plants have stalks and leaves, are in fact perfect plants.

We have never heard of such a case before, and would be glad to hear from any of our readers who attempt. If we were to attempt an explanation of the phenomenon, it would be in this way: It is supposed, by some, that every cell in a plant, as well as the seed or bud, contains the rudiments of the plant, and has the power, under favorable conditions, of reproducing it. In this case, it may be possible that the sap contained in the severed leaf, settled to the lower points, caused the cells to expand and burst into the young plant.

—A PLEA FOR THE HUMMING BIRD.—*Land and Water* publishes the following extract from a letter from a lady living in Westmoreland, Jamaica, in deprecation of the cruel fashion of destroying the humming bird for the purpose of decorating ladies' hats; "We have two magnificent ceibas, or silk cotton trees, not far from the house, on which there must be many millions of dark crimson and maize-colored blossoms, with a perfume very much like that of the Turk's cap lily—rather too powerful for a bouquet, but when mingled with those of other trees by the breezes is truly delicious. I see the humming birds darting about the branches like sparks of emerald and crimson fire; but, unfortunately, their number is being rapidly reduced by the womankind of England, who will decorate their silly heads with the lovely little bodies, which ought never to be seen except on the wing. Unfortunately,

too, such is the course of fashion, the negro women here are adopting the same mode, and I fear there is not much doubt that the humming bird will soon be exterminated. It is, indeed, a shame to destroy these little beauties in the ruthless manner they are being destroyed at the present time."

—INSTINCT, OR REASON?—As a farmer in a neighboring town was getting in his hay, he noticed an unusual commotion among the swallows, which had built a long row of nests under the eaves of his barn. They appeared greatly excited, flying rapidly about, and filling the air with their cries of distress. As the load of hay upon which he was riding passed into the barn, he saw that a young swallow in a nest directly over the door had caught its neck in a crack between two shingles and was unable to liberate itself. He stopped his team and set the young bird free, restoring it to the nest. Upon his return to the barn with his next load of hay, he examined the crack and found that they had filled it completely with mud, so that no matter how enterprising or how foolish the young swallow might be he could not again endanger his life or the peace of that community by any experiments upon that crack.—*Our Dumb Animals.*

—AS OTHERS SEE US.—In these days of free thinking, speaking and writing, few of us can escape learning how we appear to others; and many men, and women, too, in public positions, must often be led to hope that they do not quite answer to the current descriptions of them, and to question of the efficacy of the poet's suggestion, in the interests of private or public virtue.

But in fact, as other people see us, is but one out of four aspects which we present. To our own consciences we must indeed at times appear even blacker than our enemies would paint us, and the All-seeing God views us just as we really are. His sight piercing even the disguises which hide us from ourselves.

But there is a fourth aspect which, as human beings, we present to the animals by which we are surrounded; we seldom think of them, or, if at all, with unconcern; yet, could we put ourselves in their places, how strange a creature man would appear to us! by turns a giant and a dwarf, a monster of cruelty and a tender guardian, a devourer of thousands and a dainty morsel, a preacher of morality and a practitioner of frightful crimes, a tyrant over others, and the abject slave of fashion, caprice and prejudice.

If animals could indulge in abstract thought and could utter their sentiments after the human fashion, what volumes would be produced; what observations would be made of the manners and customs of that strange two-legged creature called man; what criticisms upon his morals and his dealings with his fellow-creatures; what caricatures of his peculiarities; what sarcasms upon his follies and inconsistencies.—*Burt G. Wilder.*

—WOMAN'S SPECIAL PET—

It is the miller's daughter,
And she has grown so dear, so dear,
That I would be the pug-dog
That sits beside her cheer.

Of all the dogs, the most to be envied are, decidedly, these pugs. It is a pleasing sight to behold an elegantly-dressed and queenly woman sweeping from her carriage to a fashionable store, attached to an animated muff of a poodle, by a silken cord. The poodle is too well known to need description. The "pug" is rarer, in this country, and more aristocratic. He is an importation from China and Japan. He is a dog of proud bearing, and has a thousand pretty ways, different from those of other dogs. He will sit for hours, staring with tender eyes into his mistress' face, silently adoring, then jump up behind her chair, and place his black side close to her cheek, and keep quiet as an image, for fear of being displaced.

These are the points of beauty and excellence in Mr. Pug. He wears a black mask of a muzzle, as if he were going to a maquerade; his eyes are large, bulging, dark, and tender; his nose short and saucy. When he is excited or romping, he pops out a rose-leaf of a tongue, which glows against his velvet snout like the Magenta ribbon in the hat of the American girl at the International Regatta; his forehead is wrinkled like an English walnut, but the wrinkles are not the furrows of a frown, but the crumpling of a merry countenance. In the center of the forehead is a small dark patch—the "spot,"—which should be dark enough to increase the luster of the eye; and, along the backbone, there should run a black line, connecting the head with the tail. He should have a broad chest, a sloping shoulder, a round, compact body, and legs like a dancing master's, small feet, and a curly tail. A pug without a curly tail is a *gone dog*; for the tail, after all, is the chief point of excellence. It should curl with a double coil, and rest close against the hip.

It is the happy lot of the pug dog that he must be kept fat and warm, to appear to perfection. Who would not be a pampered minion like a pug?

SMALL PET DEPARTMENT

AND YOUNG FOLKES' CORNER.

(For Fanclers' Journal.)

ARRIVALS AT THE CENTENNIAL AQUARIA.

[For the week ending May 6, 1876.]

Five thousand gallons of sea water. Presented by the Camden and Atlantic rail road.

1 Spotted Tortoise, (*Emys guttata*.) Presented by Milton P. Peirce, Wenonah, N. J.

4 Graylings (*Thymallus tricolor*), habitat Michigan. Presented by F. M.

Collection of Larva of water-breeding insects, habitat New York. Presented by Sara J. McBride, Mumford, N. Y.

5 Rock Bass (*Centrarchus aeneus*).

2 Sun-fish (*Pomotis vulgaris*).

3 Suckers (*Catostomus communis*).

1 ———? (*Percopsis guttata*).

1 Black Sucker (*Catostomus nigricans*).

3 Yellow Perch (*Perca flavescens*).

1 Roach (*Stilbe chrysolaemus*).

3 Catfish (*Pimelotus catius*). Presented by W. M. Locke, Honey Falls, N. Y.

1 stand of Coste Hatching Trays.

1 Hatching Box. Presented by Mrs. J. H. Slack, Bloomsbury, N. J.

FRED MATHER, Sup't.

FALCONS AND FALCONERS.

It appears to us singular that so little reference is made in this country to that ancient and fashionable sport called falconry. To all appearances it is practically ignored in deference, perhaps, to the sensibility of Henry Bergh, whose excessive tenderness on behalf of all rights save those of humanity, possibly points out traces of tyranny in the training of a falcon. Certain it is, however, that our ancestors derived abundant amusement from this graceful pastime, whose merits appear still recognized in many parts of the world.

For the benefits of the advocates of this imperial sport in America, we beg to translate the following from a recent French publication. The article is entitled "*Fancons et Fauconniers*"

"Captain Saint Sandys-Dugmore's flights of falcons at the "*Jardin d'Acclimation*" in Paris, have somewhat chafed the feelings of French importers.

Jelous of ancient times, many of them, and not the least conspicuous, at this moment cherish the idea, to make the chase with this soaring bird, once more fashionable.

This resolution is not calculated to please the Society for the Protection of Animals, for there are few tortures not inflicted on these unfortunate birds in behalf of their education and in order to render them docile to the wishes of the master.

Amongst all animals reduced to servitude for the gratification of the pleasures and pageantries of the great, the falcon is without doubt the one whose disposition is the most savage and independent. By dint of art, of patience, and privations, it has been made possible to utilize his courage, vigor, and the rapidity of its flight, but it has never in any falconry been possible to reproduce its species. According to Buffon "it remains captive without becoming domesticated; the individual alone is a slave, its species are always born to liberty and foreign to the empire of man."

It is at the price of servile obedience that the unfortunate bird purchases each day of its existence. Each hour of sleep, each allotment of food, are exchanged for value received. Under these conditions the captive may well regret the dusky skies of Norway and the banks of Iceland.

This is the proceeding used in order to impart to the falcon that education which will render him an instrument in the hands of the hunter.

He is first of all shackled, that is, each leg is imprisoned in an

iron ring attached to a chain, the end of which is riveted to a metallic weight, engraved with the master's name. As an exercise of flight the falconer, with his hand covered with a thick skin glove, takes the bird on his fist and carries him thus for entire hours without permitting him an instant of repose, nourishment or sleep. The moment arrives when the bird, vanquished by fatigue and hunger, abandons all haughtiness of deportment. He is then hooded with a leather cap which closes his eyes, and he is left plunged in profound darkness to meditate over the duties expected from him. Three days and nights spent through this ordeal is generally found sufficient to dispose him to the most entire docility. He is then restored to light. He soon learns to acknowledge the hand whose ministrations dispel the sensations of fatigue and of hunger, and allows himself to be hooded and unhooded by his *chaperon*.

Later on he is taken into the open air, fastened to a leather thong, when he is unhooded and shown the "pat" or alluring morsel which he is invariably made to eat upon the fist.

After acquiring himself of this exercise with the greatest submission, he is then taught to distinguish the "*leurre*" or decoy.

This decoy is a representative of his prey, a manikin covered with feathers to simulate a bird, and upon this is placed the meat with which the falcon is habitually fed.

This habit of taking his meal on the decoy tends to make the latter attractive, the use of which is also eventually resorted to whenever the flight of the bird carries him beyond moderate distance. The display of the decoy is always accompanied with a peculiar cry from the falconer.

The moment has now arrived to prepare the bird for the chase, and acquaint him with the game which he is destined to capture. It is optional to loosen him at small quadrupeds, such as hares, or large birds, as cranes or herons.

Chardin, in his essays on Persia, states that at the commencement of the 7th century, falcons had been trained to attack men and pierce their eyes.

It was in Asia, however, that the art of falconry was first introduced, thence it passed to Africa, whence it reached Europe towards the end of the Crusades.

Feudal Europe developed such a marvellous taste for the falcon chase, that even the sovereigns disdained not to train the falcons themselves.

Amongst the names of crowned falconers may be cited those of Frederic Barbarossa, whose passionate enthusiasm for this mode of chase was such that he indulged the sport in the very presence of the enemy; of his son Henry VI; of Reginald, Marquis of Este; of Manfred, King of Sicily; Edward III, of England; of Charles Quint, who ceded the Island of Malta to the Knights expelled from Rhodes, on condition that on each succeeding year, in acknowledgement of this favor, they should send him a white falcon; of Francis I; of the Landgrave Philip of Hesse, who exacted from all owners of dove-cots a tithe of their pigeons for the nourishment of his own falcons, etc., etc.

At the court of France in the 15th century, falconry numbered fifty falconers, exclusive of the grand master, assisted by fifteen gentlemen of the most approved titles. The whole costing the treasury on an average 50,000 *lucres* per annum, accounted a large sum at that period.

At this day, the art of falconry only exists in Flanders, Holland, and Iceland; but it is principally at Falkenwerth that it can be found with all the traditions of olden times, the best school of falconry.

The falconers of that country strike out to Norway and Iceland in search of their pupils. According to the Dutch General d'Ardesch, the following is the plan of capture:

A falconer, perfectly concealed, holds a string one hundred feet long, at the extremity of which is attached a live pigeon. At some forty steps from him, the string passes through a ring, near which is spread a net, connected with the falconer by means of a rope. When a falcon appears, the man jerks the string, whereby the pigeon is made to flutter, and in a moment the falcon swoops down upon and seizes him. At this juncture, the falconer steadily draws in both the pigeon and the falcon until the ring is reached, when suddenly the net is sprung over them, and the bird is captured.

The captives are taken to Flanders and Holland where they undergo their education aforesaid. When it is completed, they are sent to England, where they are usually bought by members of the Hawking fraternity. These are generally the proprietors of Heronries, such as Lord Lilford, the Duke of Bedford, Major Delme Radcliffe, Lord Berners, Captain Dunscombe, etc."—*Chicago Field*.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

"To Exchanges for Cash" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the *Exchange or Want* column.

No Exchange or Want will be inserted unless accompanied with 25 cents.

D. GREEN, Box 64, Baltimore, Md., offers to exchange an English Bull Terrier stud, one year old, in pup; a slut pup, 6 months old, a dog pup, 6 months old, for Black Hamburgs, Leghorns, Houdans, B. B. R. Game Bantams, or eggs of above varieties. What offers?

G. O. RUDIN, Freegreen, Ala., will exchange books as follows: "Photographic Shorthand Works," "Footprint of the Ages," "Wonders of the World," for B. B. Ited, and Duckwing Game Eggs, "Cooper's Game Fowl," or offers. Write for particulars. All letters answered.

HERMAN ROESCH, Kane, Greene Co., Ill., exchange Dahlias, Gladioli, Double Tuberoses, Hyacinths, Tulips, Crocus, Martha Grape Vines and Flower Seeds, for high class poultry of any breed, P. Cochins, Houdans, Creve Coeurs, and Pekin Ducks preferred, or for female Canaries. Don't all speak at once. First attentions to offers from Illinois.

L. H. TUNEL, Wooster, O., will exchange one coach dog, well marked and broken, for my imported pair of 10 month old, Himalayan and Angors, from imported pairs, for Pekin Ducks or Emblen Geese. Write.

O. C. BARROWS, Bristol, R. I., will exchange eggs from fine White Leghorns and G. S. Bantams, for a trio of Dark Brahmas or Partridge Cochins, or for eggs from same. Write.

H. M. FRENCH, Box 59, Holbrook, Mass., wants to exchange Silver Poland hens, for Fancy Pigeons—Nuns, Jacobins, or White Barbs preferred. What offers?

O. S. KEENE, Box 16, Auburn, Me., will exchange one pair Lops, 16 and 17 inch ears, from my imported pair of 10 month old, Himalayan and Angors, from imported pairs, for Pekin Ducks or Emblen Geese. Write.

D. GURDEN, P. O. Box 64, Baltimore, Md., will exchange English Bull Terrier dogs, for Lop-eared, Angora, or Himalayan Rabbits, Guinea Pigs, Maltese Cats, or offers.

F. A. PENNINGTON, Delaware City, Del., will exchange 1 pair of White Pouters, 2 pairs Black Trumpeters, for Black or Red Jacobins.

JOHN E. SCUM, 150 South Water St., Lancaster City, Pa., will exchange a good new Success Washing Machine, in good order; it will give satisfaction whoever gets it; 1 good male Canary bird, good singer; 1 good Seven-Shooter Revolver. What offers. Speak quick. All letters, &c., answered at once.

W. B. COCHRAN, 19 Commerce St., Baltimore, Md., wants to exchange 1 very fine Silver Owl cock, also 1 Yellow Owl hen. What offers?

E. L. LEWIS, Ansonia, Conn., has to exchange Plymouth Rocks, Brown Leghorns, two fine Brahma hens, Red Pyle and Derby Games, White Pouter Pigeons—all first-class stock—for a good double-barrelled shot gun, breech-loader preferred, or for other property.

A. B. SMITH, Worthington, Ind., will exchange eggs from L. Brahmas, W. Leghorns, Buff, White, and Part. Cochins, for B. B. R. Game, Black African, S. Sebright, and R. R. G. Bantam eggs.

O. C. BARROWS, Bristol, R. I., will exchange a new, nickel-plated, single-barrel, breech-loading shot gun, Stevens' make, never used, for Dark Brahma or Partridge Cochins fowls of good strains. What offers?

R. C. TOMPKINS, Trumansburg, N. Y., has to exchange 1 trio first class Buff Cochins, (Todd's strain), for one trio first-class White Leghorns, or White-faced Black Spanish. My Cochins are one year old and fine birds, and I wish fine ones in exchange.

W. C. POWELL, Findlay, Ohio, wants to exchange one pair of Silver Duckwing Games, for 3 (three) dozen Black Breasted Red Game eggs. Must be from good stock. No shysters need reply. Speak quick!

GEORGE F. SEAVEY, Cambridgeport, Mass., has Short-face Tumblers, Black, Agate, and Tortoise Shell, to exchange for Turbites, Black, or Blue-tailed and sold colors. Must be first-class.

ABM. V. N. DeFOREST, Metuchen, Middlesex Co., N. J., will exchange an ivory-handled, silver-shot, 43 inch black, 12 gauge, No. 4, Revolver, seven-shooter; "Bemet's Pouter's Companion," a 100 foot tape blue; a Hand Drill, and an Extension Bitt—will bore from $\frac{1}{4}$ to $1\frac{1}{2}$ inch hole—for offers; also Creve Coeur cock, for Pigeons.

BROSE, No. 27 Hand St., Rochester, N. Y., will exchange one choice pair of Red Snells, for one Yellow or Black Barb hen; also one White African Owl hen, one Blue Swallow cock, for Black Swallow cock, or Blue Jacobin cock. Only extra good birds will be received, as mine are very choice.

CHAS. F. THOMPSON, Wadley's Falls, N. H., will exchange White Cochins, Partridge Cochins, and Dark Brahma cocks, (good birds), for Brown Leghorn and Plymouth Rock eggs, or Poultry or Agricultural books. Will give one cock for one sitting of good eggs.

L. J. NEVHARD, Allentown, Pa., will exchange a fine Wire Trap Cage, can be used to trap Indigos, Goldfinches, Catbirds, Cardinals, &c.; also Bird Line, for Black, Blue, and Yellow Fantails, or a good Solid White Pouter hen, or a Blue Pied Pouter cock. Pouters must be large and heavy bodied.

F. HARDING, 5 Broadway, Cleveland, Ohio, will exchange new Buggy Harness, small Black and Tan Terrier pups, and Pointers and Setters, for Lop-eared Rabbits, or Ferrets. Send stamp for reply.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the *Exchange and Want* columns, will be placed at the head of *Exchange column*.

J. F. FERRIS, Hartford, Conn., wants a good Black Red Game Bantam cock in exchange for a choice selected nest of White Leghorn eggs, or eggs of any other variety.

P. O. BOX 689, Rockville, Conn., wants two or three white, or nearly white Houdans. Must be first class.

CHARLES D. PARKER, 308 Gay St., Baltimore, Md., wants consignments of Pigeons, Guinea Pigs, Rabbits, Maltese Cats, Dogs, and all kind of pet stock. Write before you ship, and give me a complete description of stock, and the price wanted. Commission, 20 per cent.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

PLYMOUTH ROCKS.—First and special premiums at Buffalo, 1876; first premium at Utica, 1876. Eggs, \$2.00 per 13.
No. 16 44 S. S. MORLEY, Clyde, N. Y.

J. H. SCHOCK, S. W. corner Tenth and Buttonwood Streets, Philadelphia, Pa., dealer in Segars, Weekly Papers, Stationery, etc.; will also supply Fanciers' Journal promptly by mail or at the store.

EGGS! EGGS! EGGS! I am now ready to fill orders for Eggs to hatch from 13 varieties of premium and imported Fowls, carefully mated for best results. Prices very reasonable for reliable stock. Send for full descriptive Catalogue and Price List. Address, A. M. CAREY.

SELINS GROVE, Pa.

POULTRY AND PIGEONS.

A breeder of high-class Fowls and Pigeons, retiring from the Fancy, has placed in my hands for immediate sale, his entire stock, including some pairs and trios of valuable Fowls, and 200 pairs of Fancy Pigeons, besides many odd birds. If you want Fowls, send for price lists; if Pigeons, write for what you want. Everything at bottom prices.

HOWARD I. IRELAND, Camden, N. J.

PEDIGREE A NO. 1.

I have shown L. and D. Brahmas, and Pea-Comb Partridge Cochins 17 times, and have won 16 first, "1" second, and two special premiums; stock from Felch, Williams, Hersteins, and Edmunds noted strains. Eggs, \$3.00 per 13.

H. FARHAM, Lima, O.

BLACK ROSE-COMB BANTAMS,
MY SPECIALTY.

Black African Bantams.

Fine Light Brahmas.

During the show season of 1876 my stock won ten first premiums. Having exhibited them myself at four exhibitions, winning six first premiums on old and young, some figuring as high as 37 points, this fact alone should be a sufficient guarantee of the purity of stock and perfection of markings. No birds to dispose of at present.

C. B. ELBEN, Pittsburg, Pa.

A New Large Finely Illustrated Monthly, devoted to Poultry and Pet Stock, in all their branches.

Edited by the eminent and experienced breeder and fancier, W. H. TODD, of Vermilion, Ohio, and furnished at the low price of

Fifty cents a Year!

And ten cents for postage. Practical, useful, and entertaining, it is worth many times its cost to its readers. Liberal cash commissions to agents. Sample numbers, 6 cents. Trial subscribers, 5 cents a month for two months or more. Circulation very large. Excellent advertising medium. Address

POULTRY NATION Co., Birmingham, Erie Co., Ohio.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

HARTFORD, MAY 29, 1876.

No. 20.

HOME.

There is a land, of every land the pride,
Beloved by Heaven o'er all the world beside;
Where brighter suns dispense sereener light,
And milder moons emparadise the night;
A land of beauty, virtue, valor, truth,
Time-tutored age, and love-exalted youth.

The wandering mariner, whose eye explores
The wealthiest isles, the most enchanting shores,
Views not a realm so bountiful and fair,
Nor breathes the spirit of a purer air;
In every clime the magnet of his soul,
Touched by remembrance, trembles to that pole;
For in this land of heaven's peculiar grace,
The heritage of nature's noblest race,
There is a spot of earth supremely blest,
A dearer, sweeter spot than all the rest,
Where man, creation's tyrant, casts aside
His sword and sceptre, pagantry and pride,
While in his softened looks benignly blend
The sire, the son, the husband, brother, friend,
Here woman reigns: the mother, daughter, wife,
Strews with rich flowers the narrow way of life!
In the clear heaven of her delightful eye,
An Angel-guard of loves and graces lie;
Around her knees domestic duties meet,
And fireside pleasures gambol at her feet.

Where shall that land, that spot of earth be found?
Art thou a man?—a patriot?—look around;
Oh, thou shalt find, how'er thy footsteps roam
That land *thy* country, and that spot *thy* home!

(For Fanciers' Journal.)

MEERSCHAUM AND AMBER.

"By the way you have colored your adored meerschaum, you seem to have worshiped it a long while, and must therefore know all about it. Tell me, of what it is composed?"

"Meerschaum? why it's the foam of the sea!"

Yes, that is the translation from the German, but, you know that sea foam cannot be transformed into such a solid material as that of which your pipe is made." I am afraid that there are very many engaged in coloring their meerschaums, who know but very little about the material so-called.

Meerschaum is a mineral of soft clayey texture, somewhat resembling chalk. It is found in Asia Minor, Spain, and several countries at the head of the Mediterranean, occurring in serpentine veins and in tertiary deposits. The best pipes are made in Pesth, (Hungary,) and Vienna, (Austria,) which cities were once very famous for working in meerschaum; but there is an artificial preparation, which is a *mere sham*, indeed, and for which there is no certain test by which it may be distinguished from the genuine—so after all you may be coloring a fraud. There must be an army of you engaged in the "coloring" business, for I find in a certain single year that pipes and cigar tubes to the value of \$200,000 were imported into the United States. But tell me of what is the mouth piece made?

"Of Amber to be sure!"

"Well, what is Amber?"

"Why, Amber is Amber, of course—That's all I know about it, though it does form the mouth piece of my "adored Meerschaum, as you call it, now, what is it?"

"Well it has been said to be several things. The ancient Greeks and Romans said it was the petrified tears of the Sisters of Phaeton, shed for the loss of their boasting brother, and which solidified as they fell in the sea. Some of the old philosophers believed it had a soul; this was on account of its electrical properties. These properties are spoken of as far back as 321 B. C., being at that time noticed by the Arabs, who called Amber by a name, which translated means "catch-chaff." We know now, or ought to know, that amber is a resinous gum, the produce of certain pine trees which existed many thousand years ago. Originally, this gum was in a liquid state—how we know that will appear directly—but age, and, perhaps, the elements, have hardened it to the appearance of stone. It is principally used for medicine, varnish, small ornaments, (necklaces, beads, &c.), cigar holders and mouth pieces for pipes. Only two hundred years ago, in Scotland, "Lammer" (amber) beads were held in a kind of superstitious reverence by the people, and doubtless there are still those who think they have a "charm" above that attached to other such trinkets.

Amber has been found in various places—in Africa, Russia, Sweden, Italy, in the Isle of Wight, the grand pits near London, in New Jersey, Maryland, and Massachusetts; but the richest find ever made has been in that part of Prussia called Samband, where, twelve miles distant from the Baltic was taken, from only a few feet below the surface of the ground, a piece of amber which weighed eighteen pounds.

Belonging to the Crown it was placed in the royal cabinet at Berlin, but when you visit the main exposition building—(grand centennial show, Fairmount Park, Philadelphia), in the Prussian department, you will find the above article, provided you can see anything so small in such a vast place, so thoroughly filled and crowded with wonders from all parts of the world.

The amber beds of Samband are quite valuable, as the fossil amber trees form a strata from 40 to 50 feet thick. From this source the Crown of Prussia derives a yearly revenue of about \$40,000.

Besides digging for it, amber is obtained by gathering it from the sea. After a storm the fishermen cast their nets for it as it is borne in shore, among the sea weed. Much is thus obtained, though it is not so valuable as that which is taken from the earth. The value of the specimens is but in proportion to their size, for, while a piece weighing a pound, might, perhaps, demand \$50.00, one of twelve pounds would readily bring \$5,000. There is the same infatuation about gathering it, as there is about gathering gold, the hope of making as much in an hour as can be made by saving the wages of some ordinary employment, for years. Pieces of amber containing good specimens of insects are very valuable, some pieces where the organic remains retain their

natural colors and delicate parts have been sold as high as \$85.00 per pound.

"Then 'flies in amber' is not a mere saying."

No, sir; it is a fixed fact—at least the flies were *fixed*, and that fixes the fact, that the material now looking so much like a precious stone, was once a liquid, and not only flies are found in it, but grasshoppers, roaches, beetle-flies, and in a piece of Sicilian amber a lizard was found, a scorpion in that of Prussia, and hosts of spiders in that of America. Bees, and wasps, too, appear as well as leaves of plants, all of which were incorporated in the substance when it was in a jelly state. It would seem that the insects must have been suddenly caught by the liquid resin as it oozed from the tree, and thus were they entombed alive. In some specimens it can be seen where the poor fly has stuck fast, and in his efforts to extricate himself, has lost his legs and left them behind, not far however, for a little farther on is found his lifeless body. Collections of insects in amber are found in London, Oxford, Berlin, and (in our Smithsonian Institute,) Washington. Some of the insects so found, agree with no living species, and of plants found numbers are extinct.

That amber contains a great amount of electricity is proved by the fact, that workers in it—thee-er putting it into selling shape, are affected with a nervous tremor to such a degree, that they are frequently obliged to change the pieces, that the electricity may be dispersed.

Yes, your Meerscham mouth piece may be a *mere-sham*; there are other kinds of resinous gum which much resemble amber, namely: Gum-copal, a gum of modern fur trees, and Gum-aneme, another modern secretion, forming even now. This gum exudes from the N. American Pine, and so closely resembles amber, that only a practiced eye can detect the difference. Each may, however, be chemically distinguished from one another. Thus, *Aneme* is very transparent, and Copal differs from both, that it possesses an opal, greenish, yellow tint, but as a positive test, if you are not afraid of an experiment, subject your "Amber God" to a heat of 300°, and if it does not soften, keep your soul in patience, if it does soften you have been taken in, but not like the poor fly—you have not been taken in by Amber.

HUON.

ORNAMENTAL HEDGES.

A hedge for general farm purposes is a very different thing from one for mere ornament. For the former we need above all a strong robust grower that would turn cattle almost without thorns, and at the same time a plant that will grow rapidly enough to make a good protection within a decent time. Thus osage orange, honey-locust and such strong growing things are for farm use only.

When people talk of ornamental hedges they have generally in mind evergreen hedges. Of these there is arbor vite, hemlock spruce, Norway spruce, and now and then other firs and spruces. But deciduous plants often are used for hedges of an ornamental character, and it is of these that we propose to treat to-day. They do not grow fast enough for an ordinary farm fence, and hence are not fit for protective fences, though many of them are by no means slow, but their beauty for division lines gives them a great advantage. Among the oldest hedge plants of this kind are the hawthorns, of which three have been in use—the English hawthorn, Cockspur hawthorn, and the Washington hawthorn. But in addition to their slow growth, suited only to the older countries, they are liable to blights and diseases, and worse than all, to the apple or quince borer, which makes an end of them about the time we commence to admire the hedge's beauty. The poets have a good deal to say about the hawthorn hedges of old England, their sweet white flowers and bright red berries, but these are only in neglected cases, as a hedge properly pruned and

kept in the right condition has none of these nice things and little to recommend it. Hawthorn hedges were very popular about here in the last century, when ideas like our forefathers' were freshly imported, but they have all gone out of existence now.

The buckthorn is another deciduous plant often used for hedges, but it does not do well in warm climates, and is not very popular south of Boston.

The berberry is also a popular hedge plant in the far north; south of this it is liable to rust, and this rust spreads to the wheat-fields, an idea by the way once laughed at by the intelligent, but now found to be true.

The beech and hornbeam are popular for ornamental hedges in the old world, and a few that we have now and then seen in our vicinity, occasionally, shows them to be good things for the Middle States. Of the hawthorns the European is usually employed, but a friend tells us the American is far preferable, as it grows much more rapidly, and then has beautifully colored leaves in fall. On the other hand the European beech is the more rapid grower than the American, and is the best for a beech hedge.

One of the most beautiful things for an ornamental hedge is the Japan quince, (*pyrus japonica*), the scarlet apple-like blossoms of which are now very well known. It is considered rather difficult to transplant, but if set rather deep it does very well. There need be no fear of injuring them even though several inches of the branches are buried in the ground. If to this the tops of these branches are clipped a little after planting, success is as well-assured as in any other plant. It grows slow, but is very beautiful when fully established.

There are other things coming into use, such as the silver thorn—a plant allied to the buffalo berry—and some others; but those we have named are the best known.—*Germantown Telegraph*.

A SPIDER IN CAMP.

'Tis quite refreshing and greatly relieves the monotony of a quiet, domestic life, to witness a woman, or a party of them, where a mouse, a snake, or a spider appears upon the scene. It was our good fortune to be present one day not long since, in a house where there were three women, two babies and one spider. The women were shelling peas for dinner, and the babies were amusing themselves by pelting each other with the shucks. One of the ladies we will designate as "grandma," the two others as Mrs. F. and Mrs. H. They had the peas in the sack, around which the trio were congregated on the floor. All went well enough till Mrs. H. put her hand in the sack for another handful of peas and brought forth a big black spider. She dropped the peas, spider and all, and then the performance commenced. The first thing in order were three agonizing shrieks. Then grandma mounted a chair, Mrs. F. jumped upon the table, while Mrs. F. dropped the pan of shelled peas and struck a tragic attitude on the sofa. The spider seemed to be making for the two babies on the floor. Maternal affection at once triumphed over fear, and the four feet of the two mothers were instantly planted, as they supposed, right on the top of the spider. But they didn't touch that spider at all. Mrs. F.'s left heel struck Mrs. H. on the right big toe, causing the latter to dance a jig in the most approved style, although she belongs to the church. They again kicked at the spider, but missed it, and kicked the babies instead. Then the music commenced in dead earnest—the two women shrieking and dancing about, and the babies howling for all that was out. We could have killed the spider, but we didn't want to, because it would have spoiled the fun, which was better than a circus. Meanwhile grandma had kept her position on the chair. The old lady's time had now come. She swung her arms to and fro, like the boys do at a jumping match, leaped over a sewing-machine, and landed right on top of the spider, crushing it to death. The fun then was all over, and calmness soon reigned again in that household. The three women took a drink of ice-water, fanned themselves a while, and then got the fire shovel and duster and carried the corpse of that ugly dead spider into the kitchen and cremated him in the cooking-stove. Casualties: Grandma, some loose teeth by jumping so heavily on the floor; Mrs. F. a sprained ankle; Mrs. H. a smashed toe, while one of the babies had a black eye, and the other a skinned elbow.—*Waverly*.

POULTRY DEPARTMENT.

(For *Fanciers' Journal*.)

THE CHICKEN FLOCKS IN JUNE.

BY SPANGLE.

"Now all cluck'd home, to their feather beds,
Are the lively chicks, with the downy heads,
In the old Dutch style—with the beds above—
All under the wings of hovering love;
With a few chinked in, as plump as wrens,
Around the edge of the ruffled hens."

Who that has his quiet, comfortable cottage home in the country, that is not gratified with the progress and development of the young pet stock he may have about his place? and who can find more to admire and enjoy the company of, among such pets, than in the pretty broods of early chickens, which in June dot the green sward around his cottage door?

In the happy sunshine, all day long they run hither and thither around the grass plot, deftly catching moth, insect, or tiny worm—meanwhile chirping merrily—busy as bees—continually pecking and flitting and peeping—too young yet to do harm in garden or flower-border, and devouring thousands of minute bugs and worms that would, if not thus destroyed, mature to injure vegetation and the flowers or small fruits we are so anxious to bloom or ripen in perfection.

These tiny creatures are a continual study and a continual joy to the younger members of the family, while the gentler sex take great pleasure—as a rule—in watching their pleasant ways, in feeding and caring for their comforts, and in rendering their condition enjoyable—at least in their juvenile days.

June is the "bright halcyon month" of chicken-hood. If the choice of the amateur fancier falls upon the diminutive Bantams, or the beautiful Spangled Hamburgs, for example: how delightfully will the women expatiate upon the charms of the "dear little creatures" that are seen flitting about the lawn, at this auspicious season of the year, and how ardently and lovingly do the children of the household join in their admiration of the "cunning wee things" in downy coats of white or golden fur, as they watch or tend the young birds, during these bright and cheery days.

And how appropriate is this occupation to *ladies*, who have the opportunity to devote a portion of their leisure to the pleasant task of rearing domestic birds? Surely no hands are so fittingly designed for this work, and no disposition is so aptly congenial to the employment, as is that of gentle, affectionate women—for, as a genuine author puts it, there is something in this business.

"There is a study in it; a subject for investigation; a delightful contemplation in natural history. These beautiful pets are a thing to love, to interest young minds, and old ones, too. They are among the things to make country life interesting, to attach people to their homes, and to make them pleasanter than all the world beside."

When we attend our poultry exhibitions that annually occur nowadays all over the country, and see the throngs of suburban, artisans, mechanics, farmers, and gentlemen, who flock to these shows of pet stock, and note the enthusiasm of the wives and sweethearts and children of these busy lookers-on, of every grade in society, all eagerly crowding their way among the aisles to gaze upon the coops and cages—day after day—we realize the fact that there "is something in it."

There is a great deal in this—in speculating upon the almost numberless varieties, their beauty, their harmonious plumage, their symmetry, and all the wonderful qualities they naturally possess, "They are a thing to love, by all who have enough of the natural left in their artificial thoughts to appreciate any thing."

"This disposition shows, too, that the world is growing better in domestic feeling, and home attachments. That little things are worth looking after, and, although of inferior magnitude, that one may better feel interested in a chicken, a duck, a pigeon, or a rabbit, than not be interested at all. And children, or young minds, if not amused by innocent things, are very prone to become interested in vicious ones."

At evening, when the master returns from his town or city counting-house or work-shop, the hen-mother has 'clucked the little ones home;' but how he enjoys a glimpse of the bright black eyes peeping like shining beads from the downy heads of the chicks that have been gathered "beneath the wings of hovering love," or that may be "chinked in, as plump as wrens—around the edge of the ruffled hens"—preparatory to the approaching night's repose.

Willie and Charlie, or Fauny and Daisie, anticipate the arrival of papa with daily recurring pleasure, for each has his or her fresh story to recount as to how nicely this or that brood, or the different members of each, are getting along, how this one is growing, how that one is thriving, how the other is improving. And all this tends to improve the young heart, to elevate the older mind, and thus through nature to lead the thoughts of both upward to nature's God.

And this is a rightful, goodly beginning. To breed a nice chicken, pigeon, or animal of any description, "requires feeling, thought, skill, observation, study, and genius,"—writes Allen.

Not so much perhaps as is demanded to accomplish the work of a finished sculptor or painter, yet "breeding perfect models in form, grace and plumage, even of domestic fowls, is an accomplishment in the fine arts, as well as it is to perpetuate their similitudes in marble, or fix them upon canvas.

We may 'teach the young idea how to shoot,' in chickenology, as in zoology, theology, or any other 'ology—at proper times and seasons, and in appropriate ways. Why should we not then more universally encourage this pleasing work among the many innocent, useful, or ornamental pets now current around us.

And why may we not with great profit and improvement to the young hearts and minds of our little ones, more earnestly and generally encourage our children, our wives, and our daughters, in the agreeable duty of cultivating these pretty and interesting pets?

NETTLES FOR LAYING HENS.

We have never tried administering *nettles* to hens, to stimulate laying, but noting the statement in a foreign (*Vienna*) Journal that "hens fed in winter with chopped and boiled nettle leaves or seed, or both combined, and kept in warm quarters, will continue laying the entire winter,"—we examined this statement with some interest.

The paper from which we quote affirmed that this experiment was tried upon observing how eagerly both domestic and wild fowl devour the nettle leaves and seeds, whenever opportunity offers. This proclivity is supposed to account for the fact that

while such an enormous number of seeds are produced by the nettle, so few plants are ordinarily grown.

In Denmark—so it is averred—both the seeds and leaves are fed to the cattle and horses, carefully, after drying and grinding. Thrice a week, a handful of this nettle meal (or dust) is mixed with the oats given; and this causes their hair to grow glossy, while the beasts become sleek and fat, perceptibly, by this style of feeding.

With fowls, however, we think their being kept in warm quarters in winter, has much to do with their laying well in cold weather. It may be that the stimulating pungent qualities of the nettle assist in hurrying up this process, nevertheless. And with plenty of nettles to be had in our American fields, and along the country highways—why will not some of our enterprising chicken fanciers try this experiment, and report results.

THE BATTLE OF THE ROCKS.

Judging from the contents of the journals for the past few months, the Plymouth Rock fowl seems to be attracting a considerable share of attention. During last year we wrote for these columns the first series of articles that found their way into public print, concerning the origin, history, &c., of this fowl. We have been pretty well noticed since then, both by anonymous writers, and by well known contributors, over their own proper signatures. In some instances, the accuracy of our statements have been questioned; in others, the integrity of our motives; and in still others, the correctness of our knowledge. The anonymous fellows are generally *mud-fingers*, who are either ashamed or afraid to sign their proper names to their articles, such as the "*Videttes*"—(by the way, where does Mr. Vedette find his authority for his orthography?) and the *Nod Pattersons*, and so on. These must be classed as literary guerrillas, or bushwhackers, and are out of the pale of true critics or inquirers after truth. Any man who has anything to say worth saying, should not hide himself behind a *nom de plume*. All true criticism is valuable, and is to be courted rather than shunned, and if "*bubbles*" are to be burst, the work may be done just as well if we know who is doing it. Moreover, if we have volunteer guards mounted on our out posts, the intelligence or information they bring will be quite as worthy if we know who our Vedettes are. Some bubbles wont burst worth a cent, and Vedettes may sometimes be mistaken in their observations and reports. But it is scarcely worth while to take up so much space discussing anonymous and therefore irresponsible writers. If they have disagreeable things to say, let them say them, but let them sign their names to them honestly.

Some writers try to pooh, pooh, the Plymouth Rocks, but they are now fairly past the point where they could be put down in any such cheap and contemptuous way. They have done what I claimed more than a year ago, they would do—worked their way to the front rank on their merits, and it does not require the gift of prophecy on our part, to predict that they will keep the place they have won. They are yet, of course, susceptible of much improvement, which they will assuredly undergo in the hands of their admirers. Ten years hence they will be the best large fowl for all purposes in the country, and will be as much sought after by Fanciers and Amateurs, as any breed known to the Standard.

Every good American will take a patriotic pride in a fowl which is clearly and exclusively a home production. And this the more especially, since the fowl, from its nativity, is adapted to all the uses for which we cultivate poultry.

At another time I will endeavor to give some of my questioners answers to the points they try to make against me.

A. M. D.

DOYLESTOWN, PA.

CHICKEN CHOLERA CURE.

This troublesome disease has very seriously operated to the disadvantage of western and southern fanciers, in the yards of several of whom scores of good birds have been destroyed.

This largely fatal affection does not appear to be very well understood—as to its treatment—and when it breaks out in the pens of inexperienced breeders, it is so sudden in its destructive results, that those who find it amongst their fowls, do not appear to have time to arrest the progress of the illness, before death occurs.

It is limited to certain States, however, away from New England and the Atlantic sea coast. How much climatic influences may have to do with this singular ailment of Poultry, we have as yet no means of deciding. But from all we have observed, we are inclined to the opinion that where continual and judicious care for fowls, upon dry locations, (at a distance from foul yards and malarious swamps) is exercised, this sickness will not be common. Among the cures for it, if it attacks the birds, the following is highly recommended, in an exchange.

Mix one tablespoonful to three pints of scalded meal, say of two ounces each of alum, ground Cayenne pepper, powdered rosin, and fine flour of sulphur. In extreme cases, give one-third of a teaspoonful in a pill, daily, to each affected bird—till cured. Meantime, place a small lump of alum in the water-vessel the birds drink from. In less serious instances, administer half the above sized pill, daily. This is said to be as effective a remedy as is yet discovered, by those who have tried it. A. M., M. D.

THE COMMERCIAL VALUE OF HEN MANURE.

MR. EDITOR:—I find the value of hen manure variously estimated, from the statement of Harris Lewis, before the Massachusetts State Board of Agriculture at Barre, that he "never used hen manure on the corn crop without having benefited it more than all the corn the hens ate," to so low an estimate as not to make any account of it. In a large part of the published statements of the profit on poultry, there is no mention made of the manure, but it is a very valuable fertilizer. The *American Agriculturist*, 1873, page 327, says: "Hen manure is almost exactly identical in quality and effect with guano, and may be used in the same manner. Its value, if free from foreign matter and dry, is \$50 a ton." The *Poultry World* estimates it to be "almost equal to guano in richness," and a correspondent of the same paper says: "I would rather have it than Peruvian guano." The *Live Stock Journal* estimates "that a hen will produce one bushel of manure in a year, which compared with the price of commercial fertilizers, is worth \$1.00. Lewis Dunbar, West Bridgewater, Mass., according to statements in Flint's report, 1871, values it at \$1.00 a bushel, and again in 1872, at 87 cents a bushel.

But let us see how much a fowl will eat in a year, and then find how much the manure from the amount of food would be worth. By statement of S. B. Bird, Framingham, for six months ending Sept. 20th, 1868, an average of fourteen bushels of grain or 1.4 gills each per day. By statement of Lewis Jones, Wayland, for ten months ending Sept. 1st, 1867, fifteen fowls ate twenty bushels of grain, or 1.2 gills each per day. By another statement of S. B. Bird, for eight months ending Sept. 15, 1867, sixteen fowls ate fifteen bushels of grain, or 1 gill each, per day. The writer found by experiment, that seventy fowls ate nine bushels of grain in twenty-three days, or 1.43 gills each, per day. I find an average of the four statements to be 1.25 gills per day, or 1.78 bushels per year for each fowl.

Prof. S. W. Johnson estimates the nitrogen in commercial manures to be worth thirty cents per pound, potash seven cents, and soluble phosphoric acid sixteen cents per pound. I find by

table in Flint's report, 1872, page 167, that, 1.78 bushels corn contain 1.8 pounds of nitrogen, which at thirty cents per pound, is worth fifty-four cents, 0.35 pounds potash at seven cents per pound, is worth two cents; 1.13 pounds phosphoric acid at sixteen cents per pound, is worth eight cents. Hence we find the fertilizing elements in 1.78 bushels corn to be worth seventy-four cents. Allowing ten per cent. for loss, we have sixty-seven cents, the value of the manure of one fowl for one year. I found that my seventy fowls in twenty three days, made five bushels of manure, which amounts to 1.36 bushels a year for each, consequently one bushel would be worth fifty cents. This is considerably less than some of the estimates I have collected, but I think it is very nearly correct. By feeding oats, bran and meal, the manure would be a trifle richer, but I think corn is the chief food given, and is a fair representative of the average quality of the food of poultry. Certainly the manure is too valuable to waste, and I think those farmers who have no place where they can confine their fowls, would find it to their advantage to build a good house and yard, and keep them in it most of the time, thereby saving the manure and their gardens too.—*New England Farmer.*

THE BULLETIN AND OUR STANDARD.

In the first place, Mr. Editor of the *Bulletin*, we must congratulate you on getting a front seat and free pass in the *FANCIERS' JOURNAL*, the express train of the Fanciers of America. In the second place, please have the goodness to inform us, why did you answer the subscriber of Lowell, saying he "would be safe" in entering his birds, *before* you read the courteous note from Mr. Felch, stating that *your opinion* was correct. Your editorial reply is enough to satisfy any sane man as to your gentlemanly ways. Now let us see how you pan out on veracity. You say distinctly the Standard does not say "the outer toes being well feathered to the ends thereof." Go to your coat-tail pocket and read for the *first time*, of the first variety mentioned in the Standard, under the heading, Legs and Toes. "Toes straight and strong, the outer toes being well feathered thereof." Is there anything even ambiguous in that expression in the disqualification clause, "Shanks not feathered down the outer sides, and to the extremities of the outer toes?" But you assert that the Standard says, "Shanks not feathered * * * to the extremities of the outer toes." Why did you take out those words, Mr. Editor, and thus change the meaning of the sentence, or is this given gratis as a specimen of your honesty? The manufacturing of one new sentence by you, from two distinct ones in the Standard, may suit your purposes. Again, as to "twisted wings," with your insisting precision of the use of the English language when you say "twisted wings," you may mean both wings twisted, and the whole twisted at the shoulder joints, as in your present mood, a part of one twisted wing would be no disqualification. But if you meant "twisted feathers in wing" (a common expression, by the way) let's get to business again and see what the Standard says. We read therein, *twisted feathers in wing* a disqualification in both varieties of the Brahma, and same disqualification for Buff, Partridge, White, Pea Combed Partridge, and Black Cochins. No need of guessing, Mr. Editor, *its all there*, your assertion to the contrary, notwithstanding; a lee-tle "thumbing" of even a few pages of that Standard might possibly give you a few (only a few) ideas of what is contained therein. Enough of this, now as to the value of your opinion. In the March 1876 No. of the *Bulletin*, you state editorially, under the heading, "Look out for Snow Water," that you have substantially neglected your fowls for twenty-five years in allowing them to drink all the snow water they wanted, and to revenge yourself on the drop faucet man (*we surmise*); because he *don't want you* as an agent for the sale of this useful article you are down on said drop faucet, and

advise us, as subscribers to the *Bulletin*, not to mind the snow water, as its good for 'em. Read on pages 29 and 30, Practical Poultry Keeper, by Mr. Lewis Wright, (Do you know who he is?) "Care must always be taken that snow is not allowed to fall into the drinking vessel. The reason has puzzled wiser heads than ours" (surely not *your* head, Mr. Editor) "but it is a fact that any real quantity of snow water seems to reduce both fowls and birds to a living skeleton." Can you estimate the value of your *opinion* (even in America) on this subject, in comparison with what Mr. Lewis Wright states as a *fact*, and in connection with the hideous ignorance you display on these subjects, you continue to promulgate yourself as an *authority* on Poultry Standards. Allow us to mildly urge, when you again recommend "medals made from asses ears" that you forward the material from your own individual supply, and before mutilation occurs just remember that those ears now scale just about 100 points.

Yours truly,

YOUNG BREEDER.

—It not unfrequently happens that birds make a partial or entire moult in the Spring. Such a thing is not to be desired, but when it comes it cannot be helped. Most likely he will not throw his tail or wing feathers. Do nothing to retard it, but rather encourage the moult. Do not fuss about with warm baths, but let him have all the cold water baths he will take, and let nature take its course.

SPORTSMAN'S DEPARTMENT.

A SHREWD CANINE.

This story of sharp practice by a brute, is told of an "educated" dog in the streets of Paris.

A fashionably dressed English gentleman was one day crossing one of the bridges over the Seine at Paris, when he felt something knock against his legs, and looking down, he found that a small poodle dog had rubbed against him, and covered his boots with mud. He was, of course, much annoyed, and execrated the little brute pretty freely; but when he got to the other side of the bridge, he had the boots cleaned at a stand for the purpose, and thought no more about the matter. Some days after this occurrence, however, he had occasion again to cross that bridge, and the same little incident occurred. Thinking this somewhat odd, he resolved to watch where the little dog went to; and leaning against the side of the bridge, he followed with his eye the movements of his dirty little friend. He saw him rub against the feet of one gentleman after another, till he had exhausted all the mud off his once white skin, then rush off down the bank of the river, and there roll himself in the mud collected at the side. Having thus got a new supply of dirt, the little animal ran up to the bridge again, and proceeded to transfer it to the boots of the passers-by, as before. Having watched his movements for some time, the gentleman noticed that on one occasion, instead of running down to the river, he went off to the proprietor of the stand for cleaning boots, at the other end of the bridge, who received

him very cordially. The truth then for the first time dawned on him, that the little animal belonged to the man who cleaned the boots, and was trained by him to perform these mischievous deeds, for the purpose of bringing in custom. Being very fond of dogs, the Englishman resolved to purchase this clever little fellow, and bring him back to England with him. When, however, he went to the dog's master, that person at first denied any connection with him, and only admitted the ownership when he was perfectly satisfied that his interrogator had no connection with the police. For some time also he refused to part with the little poodle, saying that no money could pay him for the loss of his dog, who really made his living for him. Tempted, however, by a very high price, he at last consented to sell the dog; and the gentleman, a few days afterward, brought him over to England, traveling via Boulogne to Folkestone. His residence in England was some thirty or forty miles from Folkestone, and to this place he brought his little purchase. He had not been many days in his new home, however, when the little French poodle suddenly disappeared. Search was made for him everywhere, but to no effect. His new master offered a reward for him, but with the same result; and he had at last made up his mind that the little fellow had been either poisoned or stolen, when one morning, about six weeks after his mysterious disappearance, the gentleman received a letter from a friend in Paris, telling him that his dog was back there again, and at his old trade of soiling boots in the interest of his former master. The little fellow, not liking the dullness of country life, had resolved to return to his former home, and had made his way to Folkestone; there, as the gentleman afterward ascertained, he had got on board a steamer going to Boulogne, and from Boulogne had found his way back to Paris.

[Continued from No. 19.]

THE GREAT SPRINGFIELD BENCH SHOW.

From Forest and Stream.

In the champion classes, Scout was placed first, and it is difficult to find fault with the decision, although some complaint was made that the judge was disinclined to allow due meed of merit to Norah, on the ground of her being a Gordon, but with Shamrock, Dick, Rock, and Mr. Delano's fine trio, Don, Adonis, and Charm, all to be passed upon, it was a difficult matter to decide. So also with the champion native setters. May being winner with 96 points to her credit, although pushed very closely by Mr. Salties' Dash. Pete was victorious as the champion pointer, as was anticipated. Pete is a very hard dog to beat, although his head is faulty.

In the special classes many of the awards were based upon the points gained in the previous competitions. In the setter braces Mr. Adams was again successful with Scout and Rock, and also in the best collection class, with Duke, Drake, and Dora. Mr. Schuchardt won for the best collection of pointers, and Mr. Hammond in the braces.

The awards will be found in full below. Take it altogether, and in spite of the fact that three day's work was crowded into less than two, the Rod and Gun Bench Show was a complete success, and there was less dissatisfaction expressed with the awards of the judges than we ever remember to have heard before. We desire to express our warmest thanks to the officers of the club and the various committees for courtesies shown, and facilities afforded during the show.

THE AWARDS.

CLASS 1.—Imported English setters, or progeny, that have never taken first prize at any Bench Show; Judge, N. Salties, Esq., Brooklyn.

Best dog, silver cup; Scout, Luther Adams, Boston. Second best dog, gold dog whistle; Charm, Geo. Delano, New Bedford. Third best dog, diploma; Blue-blood, W. F. Parker, West Meri-

den, Conn. Best bitch, silver collar; Peg, W. H. Balcom, Worcester. Second best bitch, silver dog whistle; Jessie, E. A. Herzberg, N. Y. Third best bitch, diploma; Doll, Geo. Delano, New Bedford. Best dog pup, diploma; Prince, Luther Adams, Boston.

CLASS 2.—Imported red or red and white Irish setters, or their progeny, that have never taken first prize at any Bench Show; Judge, W. H. Gibbons, Esq., Madison, N. J.

Best dog, silver cup; Dick, Wm. Jarvis, Claremont, N. H. Second best dog, gold dog whistle; Snipe, J. A. Barnes, Hartford, Conn. Third best dog, diploma; Jack, Max Wenzle, Hoboken, N. J. Best bitch, silver collar; Lill III, N. Salties, Brooklyn. Second best bitch; no award. Third best bitch; no award. Best dog pup, diploma; Duke, W. C. Harding, Stamford, Conn.

CLASS 3.—Imported black and tan and black and tan and white Gordon setters, or their progeny, that have never taken first prize at any Bench Show; Judge, Luther Adams, Esq., Boston.

Best dog, silver cup; Grouse, Jerome Marble, Worcester. Second best dog, gold dog whistle; Sport, Dr. A. Russell Strahan, N. Y. Third best dog, diploma; Monarch, Horace Smith, N. Y. Best bitch, silver collar; Lou, W. M. Tileston, N. Y. Second best bitch, silver dog whistle; Mab, Emerson Foote, N. Y. Third best bitch, diploma; Flash, S. T. Hammond, Springfield. Best dog pup, diploma; Rake, E. Orgill, N. Y. Best bitch pup, diploma; Ruby, E. Orgill, N. Y.

CLASS 4.—Native setters of any strain that have never taken first prize at any Bench Show; Judge, Wm. Jarvis, Esq., Claremont, N. H.

Best dog, silver cup; Don, Theo. Morford, Newton, N. J. Second best dog, gold dog whistle; Ned, J. A. Larkin, Westfield, Mass. Third best dog, diploma; Jim, Samuel Scranton, Providence, R. I. Best bitch, silver collar; May, Theo. Morford, Newton, N. J. Second best bitch, silver dog whistle; Dmitry, C. H. Raymond, Morris Plains, N. J. Third best bitch, diploma; Maud, John Nesbit, Cambridge, Mass. Best dog pup, diploma; Rab, Dr. J. M. Borland, Boston. Best bitch pup, diploma; Bess, W. H. Balcom, Worcester.

CLASS 5.—Pointers of 50 lbs. weight and over that have never taken first prize at any Bench Show; Judge, E. Orgill, Esq., N. Y.

Best dog, silver cup; Thom, F. Schuchardt, N. Y. Second best dog, gold dog whistle; Jake, H. C. Taft, Springfield, Third best dog, diploma; Mack, Jas. Warburton, New Britain, Conn. Best bitch, silver collar; Nellie, O. B. Cooley, Longmeadow, Mass. Second best bitch, silver dog whistle; Fan, F. Schuchardt, N. Y. Third best bitch; no award. Best dog pup, diploma; Ned, F. Schuchardt, N. Y. Best bitch pup, diploma; Flirt, Lewis Miller, Springfield.

CLASS 6.—Pointers under 50 lbs. weight that have never taken first prize at any Bench Show; Judge, N. Salties, Esq., Brooklyn. Best dog, silver cup; Grouse, W. E. Gibbons, West Hartford, Conn. Second best dog, gold dog whistle; Guy, J. N. Dodge, Springfield. Third best dog, diploma; Lex, H. S. Hyde, Springfield. Best bitch, silver collar; Whisky, Dr. W. S. Webb, N. Y. Second best bitch, silver dog whistle; Belle, Horace Smith, N. Y. Third best bitch, diploma; Daisy, Sanderson and Williams, Springfield. Best dog pup, diploma; Rex, F. Howe, Jr., Brooklyn, N. Y. Best bitch pup, diploma; Psyche, C. W. Hixon, Springfield.

CLASS 7.—Cocker spaniels; Judge, Theo. Morford, Esq., Newton, N. J.

Best dog, Smith & Wesson No. 3 revolver, value \$20.00; donated by D. B. Wesson, Springfield, Mass.; Snip, S. J. Bestor, Hartford. Second best dog, one keg (64 lbs.) Orange Ducking Powder; donated by Laffin & Rand Powder Co., No. 21 Park Row, N. Y.; Fat, Dr. J. M. Borland, Boston. Best bitch, fly-rod, value \$20.00; donated by J. C. Marshall, model and pattern maker, Taylor street, Springfield, Mass.; Fanny, Wm. Thornhill, Springfield. Second best bitch, one keg (64 lbs.) Orange Ducking Powder; donated by Laffin & Rand Powder Co., No. 21 Park Row, N. Y.; Juliette, S. J. Bestor, Hartford. Best dog pup, diploma; Skip, A. Bassett, Pittsfield, Mass. Best bitch pup, diploma; Cora, S. Scranton, Providence, R. I.

CLASS 8.—Clumber spaniels; Judge, Theo. Morford, Esq., For the best dog, split bamboo fly-rod, value \$25.00; donated by L. H. Mayott, dealer in sportsmen's goods 545 Main street, Springfield, Mass.; Max, Samuel O. Edwards, Florence, Mass.; no other awards in this class.

CLASS 9.—Retrieving spaniels; Theo. Morford, Esq., Best dog, American single-barrel breech-loading shot gun, value \$25.00; donated by Hyde & Shattuck, manufacturers of sporting guns, 293 Main street, Springfield, Mass.; Shot, J. M. Crosby, Jr., Enfield, Mass. Second best dog, camp lounge, value \$6.00;

donated by U. S. Camp Lounge Company, Troy, N. Y.; Prince, W. B. Morse, Indian Orchard, Mass.; T. M. Aldrich was awarded diploma for the best dog and bitch puppies.

CLASS 10.—Irish water spaniel; Judge, Theo. Morford, Esq.
Best dog, hunter's put rifle, value \$20.00; donated by a sportsman; Dandy, W. D. Stevens, Springfield, Mass. Second best dog, keg Orange Ducking Powder; Rover, R. W. Waterman, Athol, Mass. Best bitch, special prize, value \$20.00; Rose, W. S. Johnson, North Adams, Mass. Second best bitch, Floss, G. E. Law, Springfield, keg Orange Ducking Powder.

CLASS 11.—Fox hounds; Judge, E. S. Knowles, Esq., Worcester.

Best dog or bitch, double-barrelled breech-loading shot gun, value \$50.00; donated by J. Stevens & Co., manufacturers of sporting guns and rifles, Chicopee Falls, Mass.; Fan, Jerry Quirk, Worcester. Second best dog or bitch, 100 metallic shells, with loader and capper, value \$25.00; donated by Geo. S. Hart & Co., Newark, N. J.; Sport, W. L. Keyes, Springfield. Third best dog or bitch, keg of Orange Ducking Powder; donated by Lufin & Rand Powder Co., No. 21 Park Row, N. Y.; Whoop, C. H. White, South Hadley. Best dog or bitch pup, Smith & Wesson revolver, Judy, Geo. A. Edmunds, North Brookfield, Mass. Second best dog or bitch pup, camp lounge, value \$6.00; donated by U. S. Camp Lounge Co., Troy, N. Y.; Slick, H. C. Jones, Stockbridge, Mass.

CLASS 12.—No entries.

CLASS 13.—Dachshunds; Judge, E. S. Knowles, Esq.
Best dog or bitch, silver medal, Dachshund, Col. Clark, Manchester, N. H.

CLASS 14.—Deerhounds; Judge, E. S. Knowles.
Best dog or bitch, silver medal, Sir Walter, H. J. Bixby, Nashua, N. H. Second best dog or bitch, diploma, Spider, H. J. Bixby, Nashua, N. H.

CLASS 15.—Greyhounds; Judge, Ethan Allen, Esq., Pomfret Centre.

Best dog or bitch, silver medal, Fly, Mowry Bros., Wilbraham, Mass.

CLASS 16.—Newfoundlands; Judge, Ethan Allen, Esq.
Best dog or bitch, silver medal, Bruno, H. A. Phelan, West Springfield. Second best dog or bitch, diploma, Rose, Mrs. L. B. Merrill, W. Springfield. Best dog or bitch pup, diploma, Mrs. L. B. Merrill, West Springfield.

CLASS 17.—St. Bernards; Judge, Ethan Allen, Esq.
Best dog or bitch, silver medal, Major, E. Rockwood, Springfield. Second best dog or bitch, diploma, Honest, A. J. Marks, Chester.

CLASSES 18 and 19.—No entries.

CLASS 20.—Bull terriers; Judge, Geo. De F. Grant, Esq., N. Y.
Best dog or bitch, silver medal, Jessie, J. Higgins, Springfield. Second best dog or bitch, diploma, Fan, John Brainan, Springfield.

CLASS 21.—Collies or Shepherd; Judge, Ethan Allen, Esq.
Best dog or bitch, silver medal, Leo, J. J. Bliss, Longmeadow, Mass.

CLASS 22.—Dalmatian or coach dogs; Judge, Geo. De F. Grant, Esq.
Best dog or bitch, silver medal, Jewell, J. Harris, Williamantic, Conn. Second best dog or bitch, diploma, Sparkle, B. Hennio, Springfield.

CLASS 23.—Spitz; Judge, Ethan Allen, Esq.
Best dog or bitch, silver medal, Chub, C. W. Nutchell, Springfield.

CLASS 24.—Scott terriers; Judge, C. H. Raymond, Esq., Morris Plains, N. J.

Best dog or bitch, silver collar, Dixie, J. H. Damon, Springfield. For the best dog or bitch pup, diploma, C. L. Smith, West Springfield.

CLASS 26.—Skye terrier; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Chance, G. B. Bissell, Springfield. Second best dog or bitch, diploma, Buff, Gen. J. Watson Webb, N. Y.

CLASSES 26 and 27.—No entries.

CLASS 28.—Fug terrier; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Peg, C. W. Bliss, Springfield. Second best dog or bitch, diploma, Bounce, S. Hammond, Boston.

CLASS 29.—Black and tan terrier; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Jinks, S. E. Gray, Springfield. Second best dog or bitch, Silky, W. Noble, Springfield. For the best dog or bitch pup, diploma, Snip, S. H. Hindly, Worcester.

CLASS 30.—Toy terrier; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Tinnie, T. S. Eaves, Holyoke.

CLASS 32.—Blenheim spaniel; Judge, C. H. Raymond, Esq.
No Entries.

CLASS 33.—St. Charles spaniel; Judge, C. H. Raymond.
Best dog or bitch, silver collar, Sambo, Emerson Foote, N. Y. Second best dog or bitch, diploma, Lady, S. K. Hindly, Worcester; H. C. Charley, do.

CLASS 33.—Japanese spaniel; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Fuzzy, T. E. Gray, Springfield.

CLASS 34.—Italian greyhound; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Spottie, J. B. Shaw, Springfield. Second best dog or bitch, diploma, Dot, J. K. Scaver, Malone, N. Y. Best dog or bitch pup, G. B. Bissen, Springfield.

CLASS 35.—No entries.

CLASS 36.—Japanese or hairless; Judge, C. H. Raymond, Esq.
Best dog or bitch, silver collar, Gyp, W. L. Warner, Springfield.

CHAMPION CLASSES.

CLASS 37.—Champion setter class; Judge, E. Orvill, Esq.
Best imported setter dog or bitch of any strain, or their progeny, that has taken first prize at any Bench Show, including this silver cup, value, \$100, donated by *Spirit of the Times*, No. 4 Park Row, N. Y., the winner's picture to be published in that paper; Scout, Luther Adams, Boston.

CLASS 38.—Champion setter class; Judge, E. Orvill, Esq.
Best native setter dog or bitch of any strain that has taken first prize at any Bench Show, including this silver cup, donated by Chicago Field, May, Theo. Morford, Newton, N. J.

CLASS 39.—Champion pointer class; Judge, N. Sauts, Esq.
Best pointer dog or bitch that has taken first prize at any Bench Show, including this, double barrelled breech-loading shot gun, value, \$150; donated by Parker Brothers, manufacturer of fine guns, West Meriden, Conn. Pete, G. A. Strong, West Meriden, Conn.

SPECIAL CLASSES.

CLASS 40.—Best collection of setters (not less than three) owned by one person, the average number of points to decide the award: Rifle, value \$50.00; donated by Frank Wesson, manufacturer of breech loading rifles, Worcester, Mass.; Duke, Drake and Dora, Luther Adams, Boston.

CLASS 41.—Best collection of pointers (not less than three) owned by one person, the average number of points to decide the award: Green heart fly-rod, \$50.00; donated by J. B. Crook & Co., dealer in fishing tackle, No. 50 Fulton street, New York; Tom, Ned, and Fan, F. Schuchardt, N. Y.

CLASS 42.—Best brace of setters owned by one person, winners in Class 40 not to compete; Meerschaum pipe, value \$150.00; donated by *Forest and Stream*, No. 17 Chatham street, New York. Rock and Scout, Luther Adams, Boston. Judge, Dr. M. Goldsmith.

CLASS 43.—Best brace of pointers owned by one person, winners in Class 41 not to compete; Meerschaum pipe, value \$150.00, manufactured by Kaldenburg; donated by *Red and Gun* newspaper, No. 33 Park Row, New York. Shot and Ben, S. T. Hammond, Springfield, Mass. Judge, W. H. Gibbons, Esq.

CLASS 44.—Best setter dog pup, one water-proof canvas shooting suit, valued \$25.00; made to fit the owner; donated by Thompson & Son, 338 Broadway, New York, dealers in sportsmen's goods. Prince, Luther Adams, Boston.

CLASS 45.—Best pointer dog pup, one of Holabird's shooting suits, made to fit the owner, value \$20.00; donated by Dr. W. S. Webb, St. Luke's Hospital, New York. Ned, F. Schuchardt, New York.

CLASS 46.—Best litter of setter pups, silver cup, value \$25.00; donated by Luther Adams, No. 115 Broad street, Boston, Mass. John Nesbitt, Jr., Cambridge, Mass. Judge, N. Sauts, Esq.

CLASS 47.—Best litter of pointer pups, 500 paper shells, 100 metallic shells, value \$25.00; donated by Union Metallic Cartridge Co., Bridgeport, Conn. Dr. W. S. Webb, New York. Judge, E. Orgill, Esq.

CLASS 48.—Best setter bitch pup, a dog puppy by "Pride of the Border," out of "Dimity"; donated by Charles H. Raymond, 141 Broadway, New York. Ruby, E. Orgill, N. Y. Judge, A. F. Copeland, Esq.

CLASS 49.—Best pointer bitch pup, Smith & Wesson revolver, No. 38, value \$15.00; donated by D. B. Wesson, Springfield, Mass. Psyche, C. W. Hixon, Springfield.

CLASS 50.—For the largest dog, gold lined cup, value \$10.00. Rover, weight 181 pounds, M. B. Crane, Springfield.

CLASS 51.—For the smallest dog, gold lined cup, value \$8.00. Tinnie, weight four pounds, T. S. Davis, Holyoke.

CLASS 52.—For the best trick dog or bitch, gold medal. Guess, G. W. Rice, Springfield.

A special premium was awarded to Mr. W. L. Brooks, of Stamford, for his magnificent imported pointer dog Bingo.

EDITORIAL DEPARTMENT.

POWL FLESH PUTRIDITY.

The natural exhalations that issue through the skin-pores of poultry, are rankly putrid. When a few fowls (or many) are confined in a close apartment, without ample ventilation, the effluvia that gathers in the atmosphere of such an apartment is quite sickening—as may be determined by any one who will enter such room in the morning, for instance, after the birds have been at roost there over a single night, in any kind of weather, or at any season; and it is quite immaterial whether the fowls are in ordinary good health, or some of them be diseased. The result is the same.

The odor thus thrown off from their bodies is very offensive to the human senses, and it must assuredly be so proportionately to the birds themselves. If they are confined to closed quarters a few days in this way—be the weather cold or hot—they sicken, droop, and show signs of *roup* very generally. The air is befouled from their own bodies, and they cannot continue to breathe it, without becoming diseased.

No live stock needs fresh air or good ventilation more than does our poultry. And we should never so limit them that they can not enjoy this boon! If a flock of miscellaneous fowl be kept out of doors altogether,—night and day—where they are obliged to roost upon the trees, walls, or fences (when the weather is not too severe) they are a hundred per cent. better off than if they are cooped up at night in a perfectly close room.

It should therefore never be forgotten that free ventilation must be afforded them, if they are shut up, and this provision for their health and comfort is as necessary as is a supply of sound food and pure water.

CORRESPONDENCE.

INTERNATIONAL EXHIBITION.

UNITED STATES CENTENNIAL COMMISSION.
BUREAU OF AGRICULTURE.
PHILADELPHIA, May 1st, 1876.

SIR:—To properly illustrate the extent of the fisheries of the United States, both in fresh and salt water aquaria, it will be necessary to have one or more specimens of all fish used for food, oil, fertilizers, insglass, leather, bait and other purposes, in the arts or industries.

Naturalists will also be interested in many of those forms which although quite plentiful in certain localities, are seldom seen in market, on account of not being used as food, and as many private

individuals are desirous of making donations to this department of the International Exhibition, a list of species most desirable is herein enumerated. The Fish Commissioners of such states as choose to make an exhibit in the Centennial Aquaria will of course, send such specimens as they may deem most rare. The exhibition-tanks furnished by the Centennial Commission comprise thirty-five vessels of various sizes, and about equally divided in the fresh and salt water sections, each division having in circulation about ten thousand gallons of water, which will be properly filtered, circulated, and when necessary refrigerated. The largest fresh water tank is ten feet long by seven wide, and four deep. This will accommodate any fish found in our fresh water. The great salt-water tank is twenty feet long by seven, by four, and will hold an eight foot fish. In the fresh water tanks we especially desire sturgeons (not over six feet), salmon, the two great lake trout, the two pikes, (pickrel and muscallonge), white-fish and jecoes, the sawyer, all the bass and perch family, the great cat-fish of the Mississippi, one hundred pounds or more, as well as the smaller varieties, such as suckers, gars or bill-fish, and all water reptiles, invertebrates, mollusks, crustacea and aquatic larvae, upon which fish feed, at some period of their growth. Specimens of plants upon which the crustacea live, and which are suitable for introduction into fish ponds, will also be acceptable. In the salt water tanks almost any fish that will live there is requested, sharks, skates and rays, the angler or fishing frog, porcupine-fish, file-fish, pipe-fish, sea-horse, halibut, soles, flounders, eels, congers, seroid and lace-fish, lump-fish, flying-fish, sculpin, sea-robbers, red-fish, tautog, striped bass, or rock-fish of sixty pounds or upwards, mackerel, bonito, horse-mackerel, dolphins, blue-fish or salt water trout, drum, sheeps-head, red snapper, perch, angel-fish, hog-fish, devil-fish, lobsters, crabs, oysters, clams, sun-jellies, octopods, snails, conchs, shrimps, anemones, madrepora, and many others. All exhibitors or parties sending any specimens to the aquaria will receive full credit for the same, either upon the labels, or in the catalogue and reports or in both. Additions to the stock will be received at any time, though it is necessary full contributions should immediately be forwarded. Fish culturists are invited to send models of hatching apparatus, and all appliances used by them in propagating and transporting fish, also eggs of such fishes as may be in season. Implements used in the capture of fish are also requested, that the full extent of the fishing interest may be properly displayed.

Further information may be had by addressing the Bureau of Agriculture, International Exhibition, Philadelphia, Pa.

FRED. MATHER, Superintendent of Aquaria.
BURNET LANBRETH, Chief of Bureau of Agriculture.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—The best way to mark pigeons is to stamp with printer's ink on the flight feathers of the wing. (?)

—The Dragon was originally produced by crossing with carrier and a common or long-faced Tumbler. (?)

—When the skin of fowls is scurfy, or infested with parasites, the cure will be a dust bath, and anointing with sulphur ointment. (?)

—Black-caps, Robins, Tits, and egg-eating birds, too excessively fond of sweet almonds, bruised in a mortar, and either mixed with bread crumbs or given simple. (?)

—Bone meal (bones ground fine) is good only for chickens of large breeds, and not to them if there be a large range where they can get all they require. If not, it helps size, strength, and constitution. (?)

—Nightingales thrive best in a rather dark cage, with plenty of air, and as few dealers keep suitable cages for these charming songsters, it may not be out of place to give a description of how they should be built. They should be fifteen or eighteen inches

wide, nine or ten deep, and fourteen inches high; the top and half the sides should be of wood, and the remaining half and the front neatly fitted with cane or wooden bars. (?)

—TESTING EGGS. Put the eggs in water heated 105°, after being set not less than eighteen days. All the good ones will float, and begin to move. Some say they do it but once, but once we waited ten minutes, almost in despair, and found several kick at last. (?)

—LINNÆUS SAYS the cow eats 276 plants, and refuses 218; the goat eats 449, and declines 126; the sheep takes 387, and rejects 141; the horse likes 262, and avoids 212; but the hog more nice in its provision than any of the former, eats but 72 plants, and rejects 171.

—A CAT CLOCK.—Hue in his "Chinese Empire" says that the Chinese tell the hour of noon by the eyes of the cat. The pupils of their eyes grow constantly narrower until twelve o'clock, when they become like a fine line, as thin as a hair, drawn perpendicularly across the eye; after twelve the dilation recommences.

—EFFECT OF MUSIC ON A PIGEON.—Bingley gives a singular anecdote of the effect of music on a pigeon, as related by John Lockman, in some reflections concerning operas, prefixed to his musical drama of Rosalinda. He was staying at a friend's house, whose daughter was a fine performer on the harpsichord, and observed a pigeon, which, whenever the young lady played the song of "Speri-si," in Handel's opera of Admetus would descend from an adjacent dove-house to the room window where she sat, and listen to it apparently with the most pleasing emotions; and when the song was finished it always returned immediately to the dove-house.

—SHOOTING FISH.—Belong to the family *Chetodontidae*. The tubular snout of some is applied to an extraordinary use, that of shooting flies! The fish approaches under a fly which it has discovered, resting on a leaf or twig, a few feet above the water, taking care not to alarm it by too sudden a motion; then projecting the tip of its beak from the surface, it shoots a single drop at the insect with so clever an aim, as very rarely to miss it, when it would fall into the water where it is drowned. Being common in the Indian seas, it is often kept by the Chinese in vases, as we keep gold-fish, for the amusement of witnessing this feat. J. M. McCANN.

—COCK FIGHTING AT SCHOOLS.—Many years ago the scholars at the large English schools had regular cock fights, which were recognized as affairs of the school, the charges for which were defrayed by the parents. Sir James Macintosh, when at school at Fortrose, in 1776, had this entry in his account, in which books were charged at 3 s. 6 d.:—"To cocks-fight dues for 2 years, 2 s. 6 d. each, 5 s." Cock-fighting up to the close of the last century was a very general amusement. It entered into the occupations of old and young. Fifty guineas in the year 1760 depended upon the main or odd battle. This made the decision of a "long main" at cock-fighting an important matter. The church bells at times announced the winning of a "long main." Matches were sometimes so arranged as to last a week.

—WHITE CATS.—In a number of "London's Gardener's Magazine," it is stated that white cats with blue eyes are always deaf, of which extraordinary fact there is the following confirmation in the "Magazine of Natural History." Some years ago, a white cat of the Persian kind, procured from Lord Dudley's at Hindley, was kept in a family as a favorite. The animal was a female, quite white, and perfectly deaf. She produced, at various times many litters of kittens, of which generally, some were quite white, others more or less mottled. But the extraordinary circumstance is, that of the offspring produced at one and the same birth, such as like the mother, were entirely white, were like her, invariably deaf; while those that had the least speck of color on their fur, as invariably possessed the usual faculty of hearing.

—INSTINCT OF TURTLES.—Audubon, the naturalist, states that at certain places on the coast of Florida, sea turtles, those huge, stolid-looking reptiles on which aldermen are fed at the expense of tax-payers, possess an extraordinary faculty of finding places. Working their way up out of the reach of tide-water with their flippers, quite a deep hole is excavated, in which a batch of eggs are deposited, and then carefully covered up. On reaching the water they frequently swim three hundred miles out to sea, foraging for appropriate food. When another batch of eggs are developed after a lapse of about fourteen days, they will return unerringly in a direct line, even in the darkest night, and visit the buried eggs. Removing the sand, more are deposited and secured. Away they go again as before. They know instinctively the day

and hour when the young brood, incubated by the solar rays, will break the shell, and are promptly at the spot to liberate them from their prison. As soon as fairly out of the hole, the mother turtle leads them down the bank to the waves, and there ends her parental solicitude and maternal duties.

HOW A CRICKET SAVED A SHIP.—In Southey's "History of Brazil," he tells how Cabeza de Vaca was in a great ship going to South America with four hundred men and thirty horses; and after they had crossed the equator, the commander discovered that there were only three casks of water left. He gave orders to make for the nearest land, and for three days they sailed for the coast. A poor sick soldier, who had left Cadiz with them, brought a grillo, or ground cricket, with him, thinking its cheerful voice would amuse him on the long, dreary voyage, but to his great disappointment, the little insect was perfectly silent the whole way.

The fourth morning after they had changed the ship's course, the cricket, who knew what she was about, set up her shrillest note. The soldiers at once gave warning to the officers in charge of the vessel, and they soon saw high, jagged rocks just ahead of them. The watch had been careless, and the great ship in a few moments would have been dashed to pieces on the ledge if this puny creature had not scented the land, and told them of their danger. Then they cruised along for some days, and the cricket sang far every night, just as cheerily as if she had been in far-off Spain, till they got to their destined port, the island of Catalina.

—MANX CATS.—Editor of *Fanciers' Journal*:—I would be obliged to any of your learned correspondents in the animal kingdom for the origin, or original native place, of the Manx, or no-tail cat. I lately read of some of the oddities of Japan, one of which was no-tailed cats. I have a pair, and for intelligence and affection they are much superior to anything I ever observed in the ordinary cat. When "Nettie" was "on the fly" I shut her up with "Dick," the result of which proved three "cats," a real "Centennial," red, white and gray. "Nettie" herself is not ten months old. This species of cat is quite common in New England; but a tom without a tail is a very rare occurrence, some who have bred them all their lives never having seen one; and not more than one in three or four of a litter appearing without the usual appendage. I have never known of a full-bred cat before mine. "Dick" lacks about an inch to make things even, while "Nettie" has about that elongation. When I have been speaking about her, and casually mentioned her name, she has answered; and always does when directly spoken to. "Dick" received a trouncing one day, when he made his way out towards where I was, telling of his trials in a most lugubrious voice. I sympathized with him, when down he sat and went on in a manner that astonished as well as amused me, and then retired silently to his sanctuary under the barn. I repeated to myself what I had often heard a sprightly old maiden in Vermont exclaim, about her tabby: "He ain't cats, he's folks!"

It is really surprising how interesting, and apparently intelligent most animals can be rendered by kindness and interest, and last of all, with what love and confidence they repay us.

Linden, N. J.

P. WELCH.

—Among a collection of reptiles presented to the Academy at its last meeting, and brought by the donor from Guayaquil, was the blind, double-headed snake, which was formerly employed in primitive medicine as a catagmatic, from a fancy that it possessed the property of promoting the union of fractured bones. This superstition grew out of another notion that the snake was of a sort of magnetic boomerang temperament, and would re-union if cut in two. It was also supposed that the blind double-headed snake was exclusively an intratropical anomaly, but this is certainly a mistake. A specimen was captured about three years ago by a naturalist near San Jose, who, in the most beautiful manner demonstrated the sympathetic separative principle, or plastic force of the reptile. In length, the snake was about eighteen inches; the extremities were two well defined heads, with nostrils and mouth, but only the rudiments of eyes. Its mean thickness was an inch and three-quarters, slightly tapering from the heads to a common center. Its motion was compound, consisting of an undulatory retardation, followed by hoop-like springs; for as one had tried to advance, so did the other, and the result was an absence of locomotion, but a rapid wriggling of the interior body of the viper. The time of their intermittent evolutions was about one second, and the distance made by each spring was about thirty-one inches.

The gentleman who captured this double snake, did so by chipping it with a hoe into three about equal pieces, or about six inches to each head. To his great astonishment, the extreme fractions fled, but soon returning simultaneously, the two heads began swallowing

the interior section, and met half way, when in a sort of joint tenancy, they joined fangs over a morsel of themselves. To cap the climax of this anfractuous phenomenon, the truncated ends doubled up, united and healed, and the snake became a wreath, but soon died in that festering condition. The specimen was preserved in the owner's primitive museum, and afterwards found its way to the East, where, for some inexplicable reason, the scientific journals repudiated it.—*Alta California*.

SMALL PET DEPARTMENT

AND YOUNG FOLKES' CORNER.

(For Fanciers' Journal.)

PETS, AND THE FATE OF SOME OF THEM.

BY HUON.

NO. 1. THE PET SQUIRREL.

"For heaven's sake let's sit upon the ground
And tell sad stories of the fate of kings (pets?)
How some have been deposed, some slain in war
* * * * * Some sleeping killed,
All murdered!"—

Shakespeare—Rich'd II.

To distinguish man from the brute creation, he has been called a grumbling animal, and again, a cooking animal. He has another characteristic quite as distinctive; he is a *pet-loving* animal. It is true that, sometimes, this characteristic is shared by individuals of the brute creation. The empress at the Zoo, had her pet dog, the monkeys, in the same institution, have their pet cats, and we have heard of such odd friendships amid several varieties of the lower animals, but all appear to be circumstantial cases. The child, on the other hand, shows its petting instinct at the earliest age, and loves a woolly dog, or hairy cat just as soon as it knows what candy means.

That people do keep pets, and also that they do misuse them, is an unquestionable fact. Why they care for, and treat them thus, is a more difficult question. Some keep them because they have a dislike to take animal life. Bruce bred the spider, because it cheered his prison life, as well as gave him hope. Cardinal Bellarmine had a famous beard which he worshipped, but he would not disturb the fleas which made their home in it, for fear he would deprive them of their living! Cowper's pet hares are well known, also Mrs. Southey's pet toad; whether Burns made a pet of a mouse or not I cannot say, but he certainly wrote a beautiful ode to one. Carnet, that miserable butcher of the Reign of Terror, would one minute lavish the fondest caresses on his dogs, and the next give the order for a score of men and women to be slaughtered! Well then, what is the philosophy of all this? Why that a taste which is so peculiarly human, may be humanizing if properly directed.

What a dreadful history would the fate of most pets make! I think such a history would comprise more misery, in a small way, than is to be found in most of the minor incidents of life. Who that have "loved and lost" pets will not give their assent to this?

You remember seeing that sweet, sad, picture of a "funeral," where the "dear departed" is a pet bird, the hearse, a baby coach, and the chief mourners, a little girl and her brother? The Lilliputian grave digger stands beside the tiny grave he has made beneath a white rose-tree, while another boy follows the mourners carrying the empty cage, from which, but a few hours ago, poured forth such a gush of bird-melody. A sad picture indeed, and but one thing wanting, I think, and that is the execution of the cat which had committed the murder—But what if it were a pet too?—True, I had not thought of that! Let us proceed with our pets.

A friend and myself were walking one day, through a wood, when we picked up an almost hairless, bare-tailed little thing

having hardly shape or form, and which had evidently fallen from a nest made in some high tree. Home my friend took it, whatever it was, and in due time it put on a furry gray coat, a white vest, a bushy tail, and in short, became a bright-eyed, agile, graceful, and terribly mischievous squirrel, which his owner named "Skuridus." Soon, everywhere his master went Skuridus wished to go, making my friend's coat-sleeve shelter him and be to him house and home; thus traveling about with him on all occasions. One Sunday, my friend thought he might venture to take Skuridus to church, and with him snugly ensconced up his sleeve, he took his usual seat in the tabernacle, where all went well until the minister began his sermon, then Skuridus began to hiss and bark! There seemed some discordant note in the preacher's voice which he did not like, and finally he scolded so loud that his master, in the midst of the discourse, was obliged to leave the church. Skuridus never went to church after that.

My friend was a store-keeper in those days, and when Skuridus was not allowed to dwell up his coat sleeve, his greatest delight seemed to be to perch himself on the cornice which formed part of the store fixture and suddenly, from his "coigne of vantage," to spring down upon the head of some unsuspecting customer, generally a lady, that dear, delicate, creature, who is generally afraid as death of a rat, mouse, or other small vermin.

One day there were two ladies busy making a purchase of Berlin wool, or crochet cotton, when down came Skuridus plump among the "fixin of a love of a bonnet," causing its wearer to faint on the spot, and her friend, in the utmost fright and confusion, to rush into the street crying fire and murder, thus producing a general consternation all around! But, alas! and alack! for poor Skuridus, the innocent cause of all this dire fright and tumult; for in the melee, a dog from somewhere, which had come in somehow—none ever knew—seized the poor pet by the back of his neck, and in one "shake," he was a dead squirrel!

My friend had the satisfaction of giving Skuridus a burial under his apricot tree, but true to his first love, he will nevermore have a squirrel for a PET.

ITEMS.

They have found a petrified Mormon in Utah, and from the number of dents in the head, evidently made with a poker and flat-iron, it is judged that he had at least thirty-three wives.

A BROOKLYN man, who had the toes of one foot cut off by a horse car, sued the company for \$5,000 damages—\$1,000 per toe. The company denied responsibility *in toto*, but the jury awarded the plaintiff \$500 as a memento of the affair.

THE latest form of benevolence. "Why do you eat that beef, if it is so tough?" said Jones to his companion at a restaurant; "I want to prevent its appearing in some poor fellow's hash to-morrow," was his reply. "Do unto others as you would that others should do unto you."

LITTLE WILLIE having hunted in all the corners for his shoes, at last appears to give them up and climbing on a chair, betakes himself to a big book on a side table. Mother says to him:—"What is darling doing with the book?" "It ith the dictionary; papa lookth in the dictionary for things, and I'm looking in it to see if I can find my shoes."

A Chinaman who had never tasted ice cream, thought he'd try it. One mouthful went down nicely. He buttoned up his jacket and swallowed another mouthful. That settled it. He jumped up from the table and started to where the sun could shine on him, exclaiming:

"Whoops! Plenty damn cold grub! No cookee nuff! Fleeze belly all same like ice wagon!"

CHUNKS OF WISDOM, FROM JOSH BILLINGS.—Kontentment iz the simple science ov knoing when a phellow iz well off, and keeping still about it. The most lonesum bizness in this life, and thankless, too, is keeping a distrikt school! i had rather tend a mile stone. Joking iz a risky bizness; just for the sake ov a seckond klass joke menny a man haz lost a fust klass friend. The world iz so fond ov kritiseeing every boddie, that they mix faults and misfortunes together, and treat them both alike. Humility is a good thing, but the best plan iz, to be humble in private and keep a stiff upper lip in publik. We are told that "truth iz miety and will prevail," i am glad that this iz so, but, in the mean time, there don't seem to be eny end to thelies laying around loess. A pedant iz one who haz found out bi sum process that 2 and two always make 4, and then spends his time trying to prove it to the rest ov mankind.

TROUT FISHING EXTRAORDINARY.—Trouting in Connecticut is not altogether lost sport, but is reduced rather for success to the art of being first at the streams on the right day and of knowing how to beguile the experienced fish, for there still are trout in the waters of the State. Two gentlemen from this city, Saturday, caught about seventy of these fish with hook and line, one of the trout weighing a pound and a half, and at least twenty of them weighing a half pound each.

One of the gentlemen had a novel experience in trouting which is worth being told. As he was walking on the bank of a stream his attention was caught by something stirring in the grass. Thinking it might be a snake, he investigated, and found a live and very lively trout. It bore no mark whatever of being seized, and had not been brought to land by any prey, or by a hook. The cause for its promenade, which terminated in the fish basket, is left to conjecture. When found, the fish was unable to speak and explain its equivocal position. This is a true story without guile, and unsuccessful fishermen should read it and be cheered. It is a familiar fact that many green hands pick their first trout from trees—the alder being especially prolific of them—but this is the first case on record of a trout voluntarily surrendering at sight and laying itself at the feet of its approaching captor.—*Hartford Courant.*

THE DUTCHMAN'S CHEESE.—A German resident relates the following thrilling adventure.

"I goes to Utica last week, and I meets a friend, unt we talks and we talks, so we comes mit a grocery shstore, and my friend say he buy some limburger, and so I buy some two more as a pound. Well, I comes mit de depot, and shumps on the car, and I can't find no vells all the while, and I sits myself mit another feller.

Does car was very varn, and dot oder man he begins so sniff up mit his nose, and finally he raises der winder about an inch. Dot cheese it smells big, and I don't say nothings. Den dot oder feller sniff his nose up to himself some more, and he looks at me sorter queer like, you know, and he give dot vindy another hitch up. Den he got up and look all around dat seat, and in dot aisle, and before, and behind, and I say nothings. Den he look at me and say :

"My friend, you don't schmell nothings?"

"Und I say 'No,' unt I almost die mit myself, so he hitch dot vindy viny open, and shtick out his head and schwart mit himself like eferdyings. Ven we got to Rome, dot oder feller he foller me clear to der car door, and shtands on der platform and vatch me so long as I am in sight.

"Do you know, I makes up my mind dot feller he don't got no limburger whare he lifts when he is at home mit himself."

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

To Exchanges for cash! or "order checks," "wanted a purchase," or "wanted an offer," etc., etc., cannot under any circumstances be admitted to the **Exchange or Want column**.

No Exchange or Want will be inserted unless accompanied with 25 cents.

O. S. KEENE, Box 16, Auburn, Me., will exchange one pair Lops, 16 and 17 inch ears, from my imported pair 10 months old, Himalayas and Angoras, from imported pairs, for Pekin Ducks or Embra Geese. Write.

CHAS. W. GRANT, Attleboro Falls, Mass., will exchange one Beagle Hound Pup, 4 months old, for Brown Leghorns. Must be first-class. Write for particulars.

MRS. FRANK E. CLARK, Washington, N. J., will exchange a very fine second-hand Waters' Organ, for one pair of first-class Yellow Fantails, to be sent for inspection.

J. E. LLOYD, Baltimore, Md., will exchange a pure Angora Goat, (Buck), from imported stock, for Ferrete, Bull Dog, Maltese Cats, pair prize Blue Pouters, or others.

W. S. KEMP, Dayton, Ohio, will exchange 1 trio W. Leghorns, 1 pair W. F. B. Spanish fowls, and Fancy Pigeons of various kinds, for song birds, such as Finches, Keen-Breasted Grosbeak, Starling, Black Cap, Nightingale, Love Birds, &c., &c.

JNO. F. HOUSER, Tanqua, Pa., will exchange 1 pair solid Black English Pans, 2 Pouter cocks, 2 Blue Fan cocks, 2 Rabbit's hutches, 1 Fancy Squirrel hound, with large wheel attached; 1 good violin; 1 single Shot Gun, muzzle loader; 1 single Rifle, muzzle-loader; 1 French Pool Wheel, 2 Parrot Cages, 1 "Family Printer," 8 tons of Type, 1 hens and 1 cock, Light Brahmas, for Black Red Games, B. R. G. Bantams, cash, or offers.

C. S. LINCOLN, Warren, Mass., will exchange one cock and four hens, Light Brahmas, very large, bred by Philander Williams, for Carrier or Pouter Pigeons in pairs, if applied to soon—Black Carriers preferred. Will also exchange the lot for pair Standard Blue Games.

H. L. UNDERHILL, Croton Landing, Westchester Co., N. Y., will exchange sitting of Game Bantam Eggs, from 1st premium imported stock, for sitting Plymouth Rock Eggs, of first quality.

W. V. CONNOY, Troy, Perry Co., Ind., will exchange a Patent Lever Silver Watch, worth \$10.00, for a pair of White, or Brown Leghorns, Partridge Cuchins, or Gold Penciled, or Gold Spangled Hamburg fowls, or others.

S. B. HEATON, Monroe, N. Y., will exchange eggs from Houdans and Rouen Ducks, for mated Pouters, two Blue Pouter hens, mated Rabbits, mated Almond Tumblers, and one Almond Tumbler cock; also wants eggs from P. Rocks, Black Cochins, Black and Brown Leghorns, and Bronze Turkeys in exchange.

T. J. McDANIEL, Hollis Centre, Me., has one Lowe Printing Press, cost \$23; prints well a form 10x13; all in good order, which he will give for one trio of Brown Leghorns, one or two years of age. Must be good, of course, at such a trade.

J. G. MCKEN, South Acworth, N. H., will exchange eggs from S. & O. S. Hamburgs, from stock scaling \$6 to \$9 points, and winners of fourteen premiums, \$1.50 to \$2.00 per dozen, and 1 trio G. S. Hamburgs, bred by E. S. Ongley, for books—on Poultry, Agriculture, and Horticulture, preferred.

J. R. HASSON, Lochiel Drug Store, Harrisburg, Pa., will exchange a thorough bred English Fox Hound Gp, 2 years old, cannot be surpassed for Rabbit hunting, good nighter, will hunt Cocks and Peseums; also has on hand to exchange Game fowls, Houdans, and Partridge Cochins, for Fancy and Common Pigeons, or offers.

W. W. ELLIOTT, McEwensville, Pa., will exchange Aylesbury Ducks, (Todd stock), for a Mocking Bird and cage.

JAMES V. BORDEN, Box 306, Bridgeton, Cumberland Co., N. J., will exchange four pair of Angoras, from imported stock, the old one nearly full grown, also the mother, a better breeder no man ever owned; will send the lot for one good pair of Lops. Give length of ears, weight, color, &c., and speak quick.

JACOB SELAK, York, Pa., has one Buck and two Doe Rabbits, Yellow Barb hen, Yellow Carrier hen, and Black-Winged Swallow cock, to exchange for Fancy Pigeons, or offers.

GEO. H. NORTHOPE, Danvers, McLean Co., Ill., will exchange three fine Bronze Turkeys and Gobbler, all one year old, and Todd's stock, or a pen of fine Light Brahmas, for Baby's Buggy.

HARRY K. WELSH, York, Pa., will exchange one pair Pit Game fowls, B. R. Game cock, weight 5½ pounds, (willow legs), for one Blue Margie hen, one Yellow Tumbler hen, and Fantails. What offers? Speak quick.

O. S. KEENE, Box 16, Auburn, Me., will exchange Himalayan or Angora Rabbits, and three dozen fine Stereoscopic Views, worth \$10.00, for B. R. Game Bantams, Sebrights, Bronze Turkey Eggs, Aylesbury Ducks, Black, White, Partridge, or Buff Cochins, Golden Poldans, or eggs. Write.

E. HOMER CHAER, Bellevue, Queens Co., L. I., N. Y., has to exchange W. C. B. Poland, S. Poland, (imported), B. & P. Cochins, L. Brahmas, Aylesbury Ducks, (Todd's eggs or fowls), for F. Ducks, L. Brahmas, Game Fowls, Bronze Turkey, P. Rocks, B. Leghorns, eggs or fowls. Must be good. What offers? Plants or trees needed.

J. H. PHILLIPS, Coventry, N. Y., will exchange Patent Bee Hives, new, for G. P. Hamburgs, or Pyle Games. Nothing but finely marked stock wanted.

E. D. WITHERS, Ogdensburg, N. Y., will exchange 1 pair Silver Duckwing Game Bantams, 1 pair Ring Doves, 1 Black male Trumpeter, 1 Black Fan, 1 White female Turbit, for 1 pair Black Jacobins, 1 pair White Jacobins, 1 White male Turbit, very small. I want first-class birds, and I will give the same.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

W. J. STANTON, 12 Cortland St., N. Y., wants Black, Red, Blue, and Silver Beard Tumblers. Must have good beards, &c.

E. D. WITHERS, Ogdensburg, N. Y., wants 1 pair Black Jacobins, 1 pair White Jacobins, 1 White male Turbit. I want first-class birds.

W. J. STANTON, 12 Cortland St., N. Y., wants Black, Red, Blue, and White Highbirds; good birds only.

G. H. GOODRICH, Toledo, Iowa, wants a well-bred and well broken Setter, in exchange for thorough bred Berkshire Pigs, sire bred by one of the best breeders in England; imported in 1875. The Setter must be a good one. Write full description at once.

W. J. STANTON, 12 Cortland St., N. Y., wants Common Tumblers of all colors, as Splashes, Mottles, Agates, Almonds, &c., (not more than two pairs of blacks in a lot), and all be warranted to tumble.

P. O. BOX 689, Rockville, Conn., wants two or three white, or nearly white Houdans. Must be first-class.

W. J. STANTON, 12 Cortland St., N. Y., wants Magpies, (capped,) of all colors, and good birds only.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

NOT TOO LATE!!!

The advertiser having removed to Hartford, Conn., wishes to dispose of a large portion of his choice breeding stock, and offers

1 Trio Light Brahmas, \$7—One Trio, \$9.

1 Trio Dark Brahmas, \$9—One Trio, \$12

1 Trio Buff Cochins, \$6—One Trio, \$9.

1 Trio Partridge Cochins, \$12—One Trio, \$15.

1 Trio White Leghorns, \$10—One Trio, \$12.

1 Trio White Leghorns, \$15—One Trio, \$20.

Eggs From Selected Birds, \$3 Per 15.

Write for particulars.

"NOT FOR ITSELF—BUT FOR ALL."

VOL. III.

HARTFORD, JUNE 5, 1876.

No. 21.

—There is sweet philosophy in these pretty lines, entitled "We come and go:"

If you or I
To-day should die,
The birds would sing as sweet to-morrow;
The vernal spring
Her flowers would bring,
And few would think of us with sorrow.
Yes, he is dead
Would then be said;
The corn would floss, the grass yield hay,
The cattle low,
And summer go,
And few would heed us pass away.
How soon we pass?
How few, alas!
Remember those who turn to mold!
Whose faces fade
With autumn's shade,
Beneath the sodded church-yard cold!
Yes, it is so—
We come, we go—
They hail our birth, they mourn us dead;
A day or more,
The winter o'er,
Another takes our place instead.

THE BRIGHTON AQUARIUM.

Truth is stranger than fiction. It would be only another version of this familiar maxim to say that the domain of science and nature is more wonderful than the realms of the imagination. A visit to the Brighton Aquarium shows that all one has ever read in fiction or romance of the mysteries that "the deep unfathomed caves of ocean bear" is a truthful story. There one realizes that the fanciful pictures of Victor Hugo or Jules Verne are only photographs from nature. There one is enabled to visit comfortably, and without putting on a Boyton's patent diving dress, even without an umbrella—perhaps the only place in England that one can go without it—the mysterious chambers of Davy Jones' Locker, and return from that bourn alive and with dry clothes. But it was my intention to give you only some practical information about this magnificent aquarium, which ought to rank as one of the wonders of the world.

As long ago as 1866 the Brighton aquarium was proposed by Mr. E. Birch its engineer, he having seen a similar, but much smaller one at Boulogne. It is now the largest one in the world. But it was not until the autumn of 1869 that the work was entered upon. At Easter, 1872, it was provisionally opened, and in August of that year it was inaugurated with great ceremony on the occasion of the meeting of the British Association of Science at Brighton. Distinguished personages from the four quarters of the globe were present, including the ex-Emperor and Empress of the French, the King and Queen of the Belgians, the Japanese Embassadors, the Nawab of Bengal, the Patriarch of Antioch, the Bishop of Jerusalem, and many others,

showing the great interest that was taken in this novel enterprise. The aquarium is situated close to the chain pier at the end of the Marine Parade, or fashionable drive and promenade of Brighton, and is sunk much below the natural surface of the ground. Entering at the western end, through a beautiful gateway of Oriental architecture, above which is a tower with an illuminated clock, the visitor finds himself at the top of a flight of granite steps twenty feet in width, leading to the entrance court sixty feet by forty feet. The front elevation of the building is eighteen feet high, and consists of five arches with terra cotta columns and enrichments. On the frieze round the sides is this appropriate inscription. "And God said let the waters bring forth abundantly the moving creature that hath life." From this outer court the entrance hall, which is eighty feet by forty-five feet, is approached through three doors. This hall is furnished with reading tables, and is supplied with the serials, journals, and telegrams of the day.

The first sensation on entering this beautiful and spacious hall is the silence that pervades the place. All the familiar noises of the outer world have ceased. Long vistas stretch before the eye, walled by the pale green water of the sea, ending in rocky grottoes and cascades. To increase the bewilderment, strains of distant music fall on the ear, and at intervals the sharp bark of the sea lion is heard, and, were it not for the presence of a few visitors sitting about in this entrance hall, prosaically reading the newspapers, one might imagine he had suddenly plunged into the realms of old Neptune. The architecture of the interior may be said to be a composition of Italian and Oceanic. Strong iron columns support the structure, but there are many other columns of terra cotta, whose capitals are moulded with figures of mermaids, Naiads, dolphins, etc., and friezes and bands of shells and coral run around the sides. The roof is constructed of variegated bricks, is grained, and rests upon columns of Bath stone, serpentine, marble and Scotch granite. On each side of the main corridor the tanks, forty-one in number, are placed. These vary in size from forty to one hundred feet in height. The largest holds 110,000 gallons of sea water. The plate glass of the front is one inch in thickness. The sides and back of the tanks are formed of artificial rock work, but looking wonderfully real with its overgrowth of mosses, shells and aquatic plants. The bottom is covered with fine clean gravel. The light to the tanks is admitted from above, and is so disposed that the fish cannot see the spectator, and therefore is not disturbed by his presence.

The finny prisoner rests or swims near the glass wholly unconscious of the observation and criticism that he is undergoing, so that one sees the fish as he appears at his own fireside, so to speak. Thus a big codfish, or a huge conger eel comes swimming toward you as you stand looking into his tank, working his mouth in a most ominous manner, as if he was hungry and had predaceous designs on the end of your nose, when, in fact, he is not aware of its inviting proximity. Owing to the arrangement of the light, and partly to the obscurity of the water, there is a deceptive appearance of vastness to the tanks. They are in reality

about ten feet from front to rear, the rockwork drawing to a point at the back, but to the looker on they seem like the vast and mysterious caves of the ocean. The tanks are lighted by gas at night, by jets suspended over the water. At the end of the eastern corridor is a large conservatory, one side of which is composed of artistic rockwork, a fernery, and a picturesque cascade. Here, also, the band plays at times during the day. On one side of this conservatory is a large open tank in the floor, now devoted to seals, and on the other side are six octagonal tables, of elegant design, for the exhibition of some of the smaller and more rare marine animals; and at the eastern extremity apparatus showing the hatching and development of salmon and trout. In another place are a series of microscopes, under which are placed minute forms of marine life for observation.

(To be continued.)

POULTRY DEPARTMENT.

(For *Fanciers' Journal*.)

PRIZE AWARDS AT OUR SHOWS.

The system of awarding prizes at American Poultry Exhibitions, as conducted among us for the past dozen years, and the constantly multiplying of the *grades* of these premiums, has entailed a vast amount of unnecessary labor upon Judges—while the increase of the number of prizes for each class of both fowls and chickens from two or three, originally, to five and six, or seven, in later years—has caused great dissatisfaction among contributors, and at the same time has proved of no earthly advantage to breeders, owners, buyers, or societies.

In common with the majority of interested fanciers, we hope for a radical change in this management, at our future shows, everywhere; and for the following very good reasons.

The value of a prize gained fairly in the exhibition of samples of handicraft, live stock, inventions, or poultry, consists in the just award of such prize to the best and nearest to best of the article thus placed in competition. When the premiums extend beyond these two classes, as a rule, the merit of contributions receiving a lesser award, are inferior, and are comparatively inconsiderable. This result we claim to be natural, having in view the fact that the umpire is honest and competent, and that his decisions are just and equitable.

Therefore, even if a contributor who competes may have in such show almost, or (in his own esteem) quite as good birds, to which the umpires award a third or fourth or fifth premium, he thinks he is wronged; and when the report is published, his fine stock is injured for future sales, inasmuch as, according to the official account, he possesses only third, fourth, or fifth rate stock, any way. Thus this man is soured, and his beloved-to-be choice fowls are virtually condemned. If he receives but a fifth or sixth premium, so much the worse! And he at once exclaims "I had much rather they had not mentioned my birds at all."

Again, it is next to impossible, however well disposed may be the judges, for these men to arrive at any fair line of decision

upon the fowls that are so low down in the scale in merit, as that they should command only a fourth, fifth, or sixth prize. The umpires have not sufficient time allowed them, (in a large exhibition) to do this duty accurately and equitably. It is imposing upon the judges too much labor, and too great a measure of responsibility, to expect they will perform such an onerous amount of work and study, as is thus involved, except in a very general way. And the owners of fowls thus judged and passed upon, are sure to condemn the umpires, the managers, and the committees of the association, be they whom they may, or however honestly and well disposed.

The detailed reports of these shows occupy column upon column of the poultry journals, subsequently, of necessity. Every man who is awarded a "prize"—however insignificant it may be, and of whatever grade, for fowls or chickens—is terribly aggrieved if his name, his address, and his premium is not accurately set forth, or if a single letter is misplaced in the record. And all this (so much of which is both needless, and utterly valueless to the contributor,) adds vastly to the printers' and publishers' inconvenience and cost; while the mass of the subscribers and patrons of these publications, are in no wise interested in these long-winded, dry details, which occupy the pages of their poultry paper now-days for months, often to the exclusion of matter far more instructive, entertaining, and useful to all parties.

Individually, we offer no objection to the gratuitous publishing of the annual reports of the societies' shows, of course, in our magazine. This we shall very cheerfully do, so long as shows are held, and the associations desire it. But if the award of these useless *grades* and endless *numbers* of indifferent prizes be done away with, we sincerely think the public will be better pleased, in the end, and this reduction will relieve us and poultry magazine patrons of a vast deal of unnecessary work and unprofitable reading.

To effect this, and at the same time to do all hands exact justice, in this matter, as well also as to save time and labor to both judges and managers at our shows, hereafter, we propose that the premiums be henceforth limited to three grades, at the most:—first, second, and third—for "best" fowls or chickens, for "second," and for "third" best. Also, that "mention," "honorable mention," society's "diplomas," or committees' "certificates," be dispensed with, altogether. Also, that all society premiums be paid in *cash*, according to the announcements, or agreements, in their regular annual published official lists, or programmes made preceding the several shows.

This mode will in no wise interfere with the list of *specials* that may be offered, at any exhibition, where individuals may elect to give prizes of any description, in the way of plate, money or other valuables. But the plan will narrow the scale of society premiums to feasible proportions; and the three grades suggested, each for adult fowls, and for young stock of every variety, including optional "sweepstakes" for best, or largest *collections*, would be quite sufficient for the widest competition. And it would result in bringing to our shows the actually finest and best bred specimens, of all kinds, in every section of the country, undoubtedly—since each and every breeder would have something tangible to work for—and all would thus hopefully contribute their choicest samples, without fear of having their stock "damned with faint praise," for their pains, should they not succeed as first, second, or third best.

We offer these suggestions after learning the views of many of the most enterprising and ambitious breeders and fanciers in this country. And we seriously think—in the present advanced condition of the poultry interest in America—that it is quite time we should now come down to "hard pan" in this matter. By such sensible, judicious, fair, and economical method we may so adjust and arrange this affair of awarding prizes, that the *really* best

stock may win; and the indifferent, or fourth, fifth, and sixth-rate birds—which are not justly entitled to any competitive consideration—will be left out of the question, without damage to their owners' reputation, or constructive offense to their sensibilities.

By such means we may continue year by year to have finer shows of superior stock. The ambition will be to breed nearer "up to standard," in all cases. Domestic poultry will be continually more largely improved in size, symmetry, beauty, and genuine usefulness. Careless and poor breeding will be no longer encouraged. Good birds will be the rule, for the exhibition-rooms, and imperfect samples will be ignored, beforehand. The veritably "best" stock will win, and "fourth" or "fifth" rated men will not be mortified and disgusted with the decisions of judges, (often correct, but sometimes wrong) which include their names and their stock in a category among the "dead beats."

We commend these views to the earnest attention of officers and members of our poultry societies, everywhere, and shall be glad to learn the views of any of our advanced breeders, upon what we consider a very important topic, of universal interest to American Poultry Fanciers.

THE OSTRICH DOMESTICATED.

An English settler at the Cape of Good Hope gives this account of his ostrich stock in a private letter: "I have a flock, or herd, or covey, or whatever else you like to call it, of 27; they are perfectly tame, and will follow me all over the place; in fact, I feel sure that they were intended to be domesticated. I have only to get outside and whistle, and the whole troop comes as fast as their legs can carry them in hopes of getting some maize, which they are very fond of. They eat almost anything, but there is so much round the house and in the old lands that they scarcely require any artificial food; but I generally give them a feed of lucerne once a day, and they seem to relish it more than anything else. They are plucked first at about eight months old, and afterwards every seven months. The feathers are not of much value, but nevertheless return 25 per cent. per annum. The second plucking brings that up to 80 per cent., and the third about 110 or more. The feathers are then prime, and the yield from each bird, taking cocks and hens together, is about £9 or £10. The price of birds two months old is £9, and I intend to make up my number to 45 this season, and when they are full grown I expect to get £750 a year for their feathers alone, without counting increase. Wild birds are very scarce within the colony, and are only to be found in numbers far in the interior, where they are also rapidly decreasing. This accounts for the price of feathers. Of course, the demand is increasing throughout the world, so that it will be many years before the domesticated birds make any marked difference in the market. No stock gives so little trouble; they thrive where a donkey would find it hard lines to live."

(For Fanciers' Journal.)

IN REPRODUCING LIVE STOCK

Of any known species—whether it be cattle, horses, dogs, or poultry—the same laws of nature rule, and the same results follow, in all cases, the application of those laws. It may occur that a longer or shorter period or number of seasons will be required to reproduce from a given kind what is desired, from the fact that very few varieties of the kind experimented with come into the operator's hands perfectly pure-bred, in the first instance.

In consequence of this prior contamination in some small degree, perhaps quite unknown even to the original breeders, come the "sports," or imperfect specimens in color and formation of the progeny in new hands, frequently met with; which incidents or accidents are not readily explainable, at times.

But no breed of animals or birds continue uninterruptedly to

breed perfectly. Like produce like, as a rule. But every now and then with the best stock, and the most cautiously managed, manipulation, there crops out of all kinds of live stock imperfect examples, which show that the originals have in some degree been previously tainted, more or less.

The only mode yet discovered to reproduce good live stock, is to breed from the purest and best attainable, and to select from your young stock thus bred, the best and most perfect, every year, to go forward with. Through this management only, can the strain be kept from deterioration; for, do our best, with the choicest, there will always come indifferent samples; and continual selection alone will give us, after these, a near approximation to the superior originals.

It is a notable fact that the finest breeds of Short Horn cattle imported into the United States, within the last thirty years have strangely degenerated, and changed materially from what the originals were. Other stock has meantime been got out from abroad, and the admixture has kept up a breed of this stock that is very fine to day. But the blood of the first importations has about run out.

So we may allude to the Brahma and early Cochins, comparatively. We see very few such extraordinary birds nowadays of either of these varieties as were the first of the race, cultivated twenty to twenty-five years ago. There are many fine strains around, and these are perhaps quite as popular; but there have been wonderful changes since they were first bred among us, as we remember the originals in America.

VALUABLE THOUGHTS.

MR. WADE:

I don't agree with the writer of "Our Hens," (page 188, No. 16, Vol. III.) I think the nearer we imitate nature's ways the nearer we are to right. I think feed should be thrown upon the ground, that the fowls may take their "peck at dirt" with their peck at food. Does N. E. F., I wonder, have the gravel for his fowls washed, polished, and put into troughs lest it should be soiled—or are his birds too nice to have any? "Wasted"—scatter grain broadcast and see if a flock of birds will leave one grain to waste—unless the provider be too liberal—when the birds will prove wiser than we humans do sometimes—they will not eat more than they want, to keep it from waste or from spoiling. I do not believe they "consume less food when it is continually before them," unless it is because the sight of it has sickened them. If they do consume less, I call it the owner's loss. I claim that a certain amount of food is needed to meet certain requirements. If the supply does not equal the demand, then some part of the system ceases to call for it, and what would go for the production of eggs, or furnish material for growth, nature appropriates for the sustaining of life—repairing the waste.

As to fowls "stuffing themselves, and thereby impairing their digestive apparatus," I fail to see it. They may fill their crops full, but what are their crops more than reservoirs upon which the stomach calls for its supplies. And will the stomach call faster than it can pass on to the other organs of digestion? When the crops are filled, the fowls will doubtless "bask in the sun," drowse in the shade, or roll in the dust-bath. When the crop is emptied and the stomach calls, then the fowl will rouse itself, go to scratching, and go poking among the weeds and plants for seeds and bugs, giving a variety of food they will not seek if a "well-filled trough" be at hand. If the fowls be the phlegmatic Brahma, no nicer, easier way is there to fatten them, and render them good for nothing as egg-producers, than to keep that "well-filled trough" at hand. For the nervous, active Games and Leghorns it would not be so bad. Requiring more food to replenish the waste caused by their constant movement, and nerves requiring more food than material adipose, were they not sick-

ened by the sight of it they might eat and eat and no harm be done except to their owner's pocket.

N. E. F. has patience when he waits from 18 to 20 months for from six to eight pounds of Lt. Brahma weight. Feeding young birds *often*, just a little less than they would eat, so they are always ready for more, will make the weight in about half the time he gives. I think with our poultry and ourselves we would be wiser if we oftener remembered how the gifts of the good God come to us. Air is one constant need, and it is around us everywhere. Only by the hand of man are we deprived of it. Water is less often needed, so we find it here and there, but food we can remain longer without, and exercise is necessary for its perfect good to us, so we must obtain it by our efforts, "earn it by the sweat of the brow." PACIFIC.

MR. MINER BLOWETH HIS HORN.

He commences his gush with tears, Oh! ye tears! continueth with the reflection that there may be at least a few shots as bad as himself, and endeth with the proposition to buy our address with a dozen of eggs. Too thin! Too thin! Alas! Mr. Miner! it would not be to your pecuniary advantage to know us as we do not breed Games, neither would we accept as a gift, (if they answer to your description,) all your Brahmas and their eggs. What a magnificent strain of Brahmas you must possess; "Fly over fences?" Are you perfectly sure they do not *step* over? We recollect seeing once, somewhere, some very long-legged brutes which their owner called "Brahmas," but nowadays nearly every one wishes to own and breed Brahmas; as you are very candid, and speak of your's as "heads and necks" perhaps your's are the ones we saw. But it may be that your kind of feed makes 'em spry. It might be well for you to take out a patent on the fodder and call it "Miner's Invigorator." Again as we do not herewith send our address, we humbly confess that among other, many other matters, which we are as yet too young to be fully posted on, we have not yet arrived at that blissful epoch in the history of our hen fever when we can place our hand upon our heart and proudly, yes truthfully say rejoicingly, that *we know who you are*. Thusly do our accounts balance. However, at first opportunity, when time, space, and inclination permit, we faithfully promise to make inquiries. That affair of your Johnny Duckwing with the poor old Buff "the miserable Buff," was a "hummer," wasn't it? Now you go right on and keep Johnny Duckwing well "manured," (don't dissolve him) and in time he may be sufficiently invigorated to tackle some "average" Brahma. But if "the small boy" puts in an appearance, if you are not perfectly sure that your Johnny ate, at last meal, his full regulation dose of Invigorator, with thankfulness in his eyes, don't let him out unless you are sure there's a *Buff* in the bag.

You are correct, we never could hit a snipe or anything else; but trust "we may be allowed to surmise" from the squealing and squawking on part of you and some others, with piteous cries for Burleigh to come and help, that somebody had sent a small dose of No. 10s, to different back yards. Be assured it was not us, we never could hit anything. No! we do not "mean business," not even *advertising* or anything of the kind. It seems to be a common failing among "roosters," that they like to hear themselves crow; but until lately we never knew of one asking for assistance.

YOUNG BREEDER.

"Now, young people," said a professor of natural history to his class; "now, then, as to hens; a hen has the capacity of laying 600 eggs, and no more, and she finishes the job in just about five years; now, what is to be done with her after that?" "Cut off her head and sell her for a spring chicken," exclaimed an urchin whose father dealt in poultry.

TIM BUNKER ON PRINTER'S INK.

"Have you got a game ruster?" said Jake Frink to me one morning last week, as he came over to our house.

"No I haven't. What's up now?" I inquired.

"Why, you see, Squire Bunker, that boy of mine, up in the White Oaks, has got it into his head that if he can raise some game chickens, he can make his fortune in a short time—says he won ten dollars on a bet last week on a fightin' cock—at a little set-to some of his neighbors had in his barn-yard, and if he had some smart rusters that would stand steel every time, he could make more money in a cock-pit in one month than he could peddlin' charcoal in a hull year—and I guess he's rite. Says he's got two pullets that is all rite, and if he can git a ruster that is dead game, he would raise some chickens next season that would have the grit in 'em, and he would bet on the White Oaks agin the hull state of Connecticut. I knew you kept blooded fowls, and I didn't know but you might have some of that kind."

"No, I don't keep that kind. Why don't you use printer's ink?"

"Printer's ink!" exclaimed Jake, "I should like to know what that has got to do with it. I've heard of printer's ink for canker-worms, but I never heard of it for rusters—how d'y'e apply it?"

"Just put it in the Hookertown Gazette under head of Wants—like this, 'Wanted to buy a yearling cock, warranted dead game, Jacob Frink, Hookertown, Ct.'"

"Never did sich a thing in my life. Taint no use. I never read advertisements, and guess nobody else don't. They're pretty much all doctor stuff. Might be some use in it if I was a Steam Doctor."

"Just try it," said I, "and if you don't hear of roosters in less than a week, I'll pay the bill."

I didn't much think Jake would advertise, but the notion seemed to work, especially my paying the bill, and I guess the thought of getting that on to me had more to do with it than his faith in printer's ink. He made a straight wake for the Gazette Office, and told the printer to advertise for a Game Rooster as above, and send the bill to me. The Hookertown Gazette is printed on Thursday, and distributed to town subscribers by carrier, and the rest sent off by mail. Jake got his paper the same evening, and for the first time began to look at the advertisements. It was quite a while before he could find his rooster, and when he did, it only occupied the space of two lines, and seemed so ridiculously small, that nobody could notice it. He certainly would not have seen it, if he had not known it was there and been looking for it. He thought he had stuck Timothy Bunker this time, and would get square on the Horse-pond lot trade. Next morning Jake was waked just after daybreak by a loud knock on his door. Jake poked his head out of the chamber window, and shouted "who's there?"

Billy Peckham's voice answered from below, "I saw your advertisement in the paper last evening, Mr. Frink, and I thought I'd catch my rooster this morning before he got off the roost. He has licked in six fights, and will kill any rooster in town. He was a year old last spring, and cost me ten dollars. But if you want him for Kier you can have him for five dollars. If the White Oaks are goin' in to this business, I guess I'll sell out."

"Couldn't think of giving that," Jake answered, and shut the window in disgust. He put on his clothes, and while he was kindling his fire in the stove, another rap at the door. Ben Porter had brought up his rooster in a covered basket, said he saw the notice in the paper, and thought he would bring up his black-breasted red game, that he would warrant to stand steel, and lick all the roosters in town. The bird cost him fifteen dollars, and he had made a hundred on him, knowing just how to bet. He could have him for twenty dollars. Didn't care a cent whether

he took him or not. Two men were after the bird, and he only offered him as a matter of neighborly accommodation.

"Twenty dollars," exclaimed Jake, "that's all a feller can git for a two-year-old steer. I ain't a fool quite."

Jake started to milk his farrow cow, and on his way to the yard, he met a boy with a game Bantam cock under his arm, in earnest to sell. He admitted the cock was small, but he was true as steel, and had whipt Deacon Smith's Buff Cochins, five times his weight, in a pitched battle. He hated to part with him, but would sell for three dollars cash on the nail. When Jake had done milking, he found at the barn-yard bars two more boys waiting for him, one with a cock in a bag, and the other with a bird under his arm. They were only common roosters, and Jake declined to buy. As he came out from breakfast, and was going to yoke the cattle, Mike Flaharty met him with a dressed fowl in a basket—"and sure it was a dead-game rooster that ye were wantin'," and I thought Mistress Frink might be having company to dine, and I brought him up airy." Jake thought there was a difference between a dead-game cock and a cock dead, but failed to make Mike see it, and he went off in a pet. He now started on his sled for the wood-lot, and was hailed seven times on Hookertown street about that "dead game rustur." It seemed as if every man had rooster on the brain, and the boys rooster on the tongue. He began to think Hookertown had done nothing else but breed game birds for the last few years. Saturday he went down to the Grocery Store, where they keep the Post Office, for a jug of molasses, and Colonel Sizer, the postmaster, told him he had some letters, which was a very rare thing. He thought at once that some of his wife's folks must be sick or dead, especially as the letters were all post-marked Shadtown. He was thinking of a funeral when he opened the first letter, but there was nothing dead but that "game rustur." Every letter offered game birds varying in price from one dollar to twenty. As he opened the eleventh and last letter, and caught sight of that game bird, he dropped his spectacles, and made for the door. He did not stop until he reached the Gazette Office—where he offered the following advertisement for next week: "No more Game Rusters wanted, Jacob Frink."

Jake is converted to a firm faith in printer's ink, and there is not the least danger of his falling from grace. I wish we had more of these conversions. Not one farmer in ten pays out a dollar a year for advertising—either for what he wants or what he has to sell. He does not read the advertisements in his agricultural paper if he takes one—and if he ever ventures upon fine stock of any kind, he grudges a few dollars for printer's ink, and sells them to some middle-man who advertises and doubles his money. He thinks fine stock don't pay. Printer's ink would make it pay, and everything else worth raising upon the farm.

Yours to command, TIMOTHY BUNKER, Esq.

HOOKERTOWN, CT., Feb. 14th, 1876.—*American Agriculturist.*

SCABBY LEGGED CHICKENS.

Some chickens get a hard crust of scabs on their legs, which makes the legs sometimes double as thick as they ought to be from the knee joint to the toes. What causes it I cannot tell, but I concluded to soften them with coal oil as an experiment, so I soaked them with an old brush wherever there was any scurf, and in a few weeks the scabs were all peeled off and their legs smooth and clean.

Try coal oil; it will loosen more things besides the scabs on chickens' legs. If you want to unscrew tight burrs on bolts, apply a little coal oil, and it is good for loosening dirt on instruments, cleaning paint brushes, and many other purposes. But don't keep coal oil and butter very close to each other, if you don't want the butter tainted.

PIGEON DEPARTMENT.

(For Fanclers' Journal.)

PIGEON RACES.

I now send you an account of three interesting pigeon races, from Wilmington to Philadelphia, distance 28 miles, was flown on April 22d, for three money prizes,—first prize won by John Grist, time 43 minutes 30 seconds; second prize won by James Grist—time, 58 minutes 30 seconds; third prize won by Fred Woods—time, 59 minutes. Second race took place on April 29, from Newark to Philadelphia—distance 40 miles. First prize won by James Grist—time, 1 hour 90 seconds. Second prize won by Mr. Joseph Buckley, who entered one of Mr. James Grist's birds, time 1 hour 16 minutes 30 seconds. Third prize won by Fred Woods—time, 1 hour 22 minutes 30 seconds; the third was a very interesting race between Philadelphia and New York fanciers, which came off on May 6, in honor of the Philadelphia No. 1 Fourth Anniversary, for a beautiful gold centennial medal, and three money prizes, the Philadelphia birds flying 52 miles, New York birds flying 56 miles, and all three prizes were won by Philadelphia birds; first prize won by Mr. Jos. Buckley, with one of Mr. James Grist's birds, entered by Mr. Buckley—time, 1 hour 22 minutes 45 seconds; second prize won by Mr. John Grist—time, 1 hour 25 minutes; third prize won by James Grist, 1 hour 37 minutes 47 seconds; T. Grist's birds coming in 1 hour 48 minutes; Mr. Fassett's bird coming in 1 hour 55 minutes; New York birds coming in the following time: Mr. Van Opstal's bird, time 2 hours 25 minutes, Mr. John Van Opstal, Jr., time 2 hours 10 minutes. Mr. Husson, who entered one of Mr. Van Opstal's birds, time 1 hour 55 minutes, beating the New Yorkers' quickest bird by 30 minutes after allowing 4 miles of time.

T. GRIST, 2231 Master St., Philadelphia.

PIGEONS—OLD AND NEW TYPES.

Thinking over the recent papers in our Journal upon the shortcomings of some of our pets, caused by want of care, knowledge, or other mistakes made by the possessors of the ancestors of these birds, it often seems to me one had better let those matters rest as they are than to be worried as we sometimes are, and sometimes taunted as fault-finders—a character which I am sure none of us labor for. Like some of my friends I have been born into the "fancy," and, of course, cannot get out of it; and having supported it to the best of my ability all my life, I find I must support it still. So against all insinuations, and against all opposition, I intend to support it in its normal points only, which have not yet been improved upon in this country.

"WILTSHIRE RECTOR" tells us he has heard of a case where a former friendship had been broken over a difference of a "feather, or the shape or the color of a bird." Surely this is a false report. One can hardly credit that such could have taken place. I never heard of such a case, but melancholy things do take place among

men. I was told of a case only the other day of a lady and gentleman who had not been blessed with a family, but who started an argument as to how a family ought to be, or would have been brought up had they possessed one, and the intensity of the argument waxed so great that it ended in a separation. And once again: At the foot of my garden stands a Siberian crab tree. It was loaded and gay with bright red fruit a few months ago. Outside the railings stood two message boys looking at the tree. One said, "What beautiful cherries!" The other replied, "They are apples!" "No, they're cherries!" "No, they are apples!" And the debate ended in a stand-up fight.

A feather is a trifling thing, but a feather—one feather, will sometimes make perfection: hence the great amount of "fancy tailoring," as an ancient writer in this journal used to term it. "Perfection is made up of trifles, but perfection itself is no trifle;" and taking this view of matters in connection with our "fancy," I begin at the beginning.

Before proceeding further, however, I have somewhat to say to our friend "WILTSHIRE RECTOR." I give him all credit for his desire to cultivate kindness in our brotherhood, but why give us in the next issue an off-hand cut, when he knows how sensitive we are? In his report of the Pigeons at the Crystal Palace he says, in describing English Owls, "I think all, save the very prejudiced, must have owned," &c. There is a splendid breed of horses here known as the Clydesdale horse. Should any one rear a cross-bred animal between this and another breed of horse, surely I am not to be called "prejudiced" because I insist that the cross-bred animal is not a true Clydesdale. But I let this pass, and ask, Where did we get our standards? I do not think from Moore alone, though he is our oldest authority as the author of a history of fancy Pigeons. I believe the standards have been written by fanciers from time to time as the different birds were introduced into this country, and after Moore's time they were bred-up to the original type till within late years. No doubt there were always weeds to be found, and ever will be. "WILTSHIRE RECTOR's" portrait of the Jacobin of 101 years ago may be a fancy one for all that we know, and does not settle the question. I have been too long connected with the fine arts to put much faith in old drawings or engravings of natural history subjects; but it is not from descriptions given in old books or engravings that we take our stand, but from what we know and have seen.

"The parchment roll, is that the holy river
From which one draught shall slake the thirst for ever?
The quickening power of science only he
Can know from whose own soul it gushes free."

It requires a long experience and close study, not of books and pictures, but of the actual subjects themselves, their habits and general life, to portray fully and faithfully the various points required.

I need not again describe the Jacobin, the points of the true bird have already been set forth clearly; and wherever I am honored to act as judge at our shows, I shall certainly give the awards to the birds of the original type. It seems strange that so few take the trouble to favor us with their opinion publicly on matters of this kind. Were this more generally done I believe we would find the "minority" a large one. I had a good specimen of this at the late Kilmarnock Show; it was the talk of some dozen of fanciers. A single bird put into the selling class, as though unfit for the Jacobin class because she was of the old type, had so many claimants that she had to be put up at auction, and thus realized a sum three times the catalogue price, the fortunate purchaser refusing a tempting additional sum to part with her. This bird (a yellow) had one of the longest and best chains I have seen for years.

If fanciers will have the mane and rose, then they must do without the chain, one of the great beauties and destructive characteristics of the Jacobin. The chain must necessarily be suddenly

stopped short to create a perfect rose, and if only gradually shortened the rose must necessarily be oblong and imperfect. The mane and rose in the Jacobin are recent innovations. They suit the present taste, and go down with some judges at our shows, but that is no proof that they are the true characteristics which the bird possessed while in the hands of the earlier fanciers. Since the old Spitalfields weavers (the introducers of this and most of our fancy Pigeons) died out, this bird had gradually degenerated, gradually acquiring the Tumbler form of body, and unless some spirit is shown in introducing more original blood the true bird will be lost altogether.

The same style of degeneracy is going on in other birds. The so-called English Owl is but a cross bred bird, and until the true (African) bird was brought prominently forward, young fanciers would not believe what they now do. Many of these cross-bred birds are little better than fliers or racing birds; indeed, the latter is indebted much to the cross with the Owl for its high soaring and speed in flight.

The Barb is also going in the same way. The heads of many of them are wonderful, I should say improved, but it is no longer the Barb, it is a Tumbler with a Barb's head; with the exception of the head the other distinctive characteristics of the bird are lost. A friend of mine in Kilmarnock lately purchased what London fanciers would call a tidy bird. It was one of the new type. By-and-by it was allowed its liberty, and proved such an adept at tumbling that its possessor in disgust wrung its neck. This just shows the line the fancy is taking. What will stir us up? Oh, for the ghost of an old Spitalfields fancier!—JAMES HUIE, in *Journal of Horticulture*.

THE ALMOND TUMBLER.

I would advise those gentlemen who have had little or no experience in this particular variety not to be over-sanguine of reaching the goal of perfection without great care and patience. Their best judgment is needed in crossing the hard and soft-feathered Almonds, the Splashes, the Whole-feathered, the Agates, and the Kites, all of these being at times necessary to produce a properly marked bird. Now, let me call the attention of our younger members to the fact, that to breed an Almond Pigeon is one thing, and to breed an Almond Tumbler Pigeon is quite another thing. The plumage constitutes the first, which is pretty well known to most of you. The ground color of the bird should be of a soft yet bright tint, similar to the almond nut-shell, evenly broken all over with black of the jettest color; on the head there should be fine stencillings gradually increasing in quantity and size as the hackle is approached, there assuming a rich metallic luster; on the body they should become larger, and give the feather that spangled appearance which is so characteristic of an Almond. The more positive and marked the spangles are, the handsomer it will prove. The flight and tail feathers should each be marked with three colors—viz., almond, black, and white, these as distinct and varied as possible, by which I mean they should not be cut as it were by a bar uniformly across them. So much for this property of feather, and as the bird unquestionably derives its title from it, I have always considered and still maintain that this is its first and chief property; but whether the bird be then an Almond Tumbler or simply an Almond Pigeon depends on a variety of other properties. Let us examine the Tumbler pure and simple. Good shape and carriage are imperative. It should be small, but round and compact, with a broad full chest, holding its head proudly erect, sufficiently inclined backward to produce a slight curve in the neck, and drooping its wings gracefully. The head should be broad and high in the skull, yet at the same time round; without this it loses, to my mind, half its beauty. The eye should be as central as possible, by that I mean not too forward, neither too high; it should be of a pearl white color, rather

projecting than depressed, the pupil being very sharply and clearly defined. The beak should be short, but by no means thick or boxy; it should be light in color and project at right angles from the forehead, neither inclining upwards or downwards. The legs short, but not clumsy, and the feet small.

As I before mentioned, neither a bird possessing the feather without the Tumbler properties, nor one possessing the latter without the former, can claim to be designated an Almond Tumbler; it must possess both, and the more these points are developed the greater perfection it attains.—*Journal of Horticulture*.

SPORTSMAN'S DEPARTMENT.

(For Fanciers' Journal.)

A WONDERFUL DOG.

The admirers of the canine race, among your readers, will doubtless relish the following incident; none the less perhaps because it happened since the month of May, (1876,) came in and is capable of the strongest possible verification:

A gentleman who lives near our village owns a fine St. Bernard dog which, because of his immense size, beauty and friendly nature, is a favorite with all. On a late occasion he accompanied the hired man to a saloon in search of an evening's entertainment. Their efforts were eminently successful, and toward the "wee sma' hours" the party broke up and wended their several ways homeward. It subsequently appears that among the company was the usual young man on his first spree. His early departure and the absence of the dog were unnoticed by his companions. His latest recollection of the evening is, that he realized that he was becoming "under the influence," had better go home, and arose to start. From that time until aroused the next morning, existence is all a blank to him. He was found early the next morning by the Railroad Agent, lying in the public waiting-room at the depot, in a drunken stupor, with the dog close beside him. There was the dog's great and peculiar instinct most plainly exhibited. His manner to the Agent was, first, clearly a supplication for help; next a menace which plainly said "wrong him at your peril." He remained close beside his charge until the half-conscious boy was laid on a settee in a back room, when he exhibited the liveliest gratitude to the Agent and trotted off home. The vast reasoning powers of the dog brought into play on this occasion will be more readily understood by a few words of explanation. The intoxicated youth lived south from the saloon and would most naturally, under the circumstances, have started in that direction. The depot was north, and the place that he would have been most unlikely to go of his own accord. Those familiar with the whole transaction unhesitatingly say that the dog must have found the boy after the saloon was closed, and by some means brought him to the only available place of shelter. The dog and Agent are good friends, but the boy was a stranger to him. I have simply given the facts and the popular theory. For obvious reasons names and places are out of order.

ST. BERNARD.

ITEMS.

Purp-etual motion—the gambols of a restless young dog.

The old lady who said of one of her household pets, "She's such a feelin' cat," did not purr-pet-rate the pun purr-pass-ly.

"Fancy," said Sidney Smith to some ladies, when he was told that one of the giraffes at the Zoological Garden had caught cold, "a giraffe with two yards of sore throat."

An old farmer says the best way for a young city chap, who wants to become an agriculturist, is to hire out to some farmer for a couple of years, and then marry his daughter, who knows how to raise chickens and make pantaloons.

There is an improbable story that a New Jersey hen mislaid an egg, when another hen set on it, and the original hen recognized the chicken after it was hatched. The setting hen claimed a "fowl," but the umpire has not given his decision.

Greeley tells an inquirer that there is no trouble in raising geese for market if you don't wean them too young. Let them trot around with the old ewe till their bridle-teeth are grown, and you can then transplant them to the forcing frames without wilting.

It is related that when Beecher was in the country last summer he lost his hat, and found it in about a week in the barn where he had left it, but with four eggs in it. This is as it should be. Beecher had just written a eulogy on the hen; why shouldn't the Hen-reward Beecher?

An Indiana hen has adopted a brood of kittens—they have already learned to scratch, peck corn and run after grasshoppers, and one of them was heard the other day regretting that his mammy wasn't a duck, so that she might teach him to swim. (All after "kittens" is copyrighted.)

A smart boy in one of the public schools, having been required to write a composition on some part of the human body, expanded as follows: "The throat—A throat is convenient to have, especially to roosters and ministers. The former eats corn and crows with it; the latter preaches through his'n, and then ties it up."

A young lady at a ball was asked by her lover of serious poetry, whether she had seen Crabbe's Tales. "Why, no," she answered, "I didn't know that crabs had tails." "I beg your pardon, miss," said he, "I mean, have you read Crabbe's Tales?" "And I assure you, sir, I did not know that red crabs, or any other kind of crabs, had tails."

Some wags were watching around an agricultural implement store, and they chanced to see in the rear a dressed hog hanging by a hook to the wall. "Ha! ha!" cried the "smartest" one among them to the young man in attendance, "what sort of an agricultural implement do you call that?" "That," replied the attendant, "is a patent combined root-grubber, corn-sheller, apple-grinder, gate-lifter, double-action, back-spring sub-plow; but I guess you won't want one, for it takes a mighty intelligent man to manage 'em."

SCRUPULOSITY SHOCKED.

"Quashee," the madam said, "I cannot find Where all my ducks and geese and chickens stray." Thereon old Quashee's dark, suspicious mind Began to hint of darkies down the way. Those niggers there were very bad; he feared That was the route her fowls had disappeared. He preached a sermon; told with pious feeling How wrong and sinful he regarded stealing. Just then from hole in bag upon his back One of the ducks poked out and gave a long, loud amen "quack!"

EDITORIAL DEPARTMENT.

CORRECTION.

In the article on Aaron Burr, No. 19, Dr. John Maclean was the name intended. The correction is the more needed from the fact of the Dr's name being a "household word" at Princeton College.

The signature "Ervin" not Edward.

REMOVAL.

Mr. E. S. Ongley of Auburn, N. Y., has removed and permanently located at Worcester, Mass. We are pleased to learn that his fine flock of Hamburgs have been placed under the immediate care of H. S. Ball of Shrewsbury, Mass. In future, address all correspondence in reference to fowls to Messrs. Ongley & Ball, Worcester, Mass.

THE FANCIERS' JOURNAL.

All young people and many old ones take an interest in poultry, pigeons, rabbits, birds, and other pets of various kinds. The above-named weekly publication is a journal in which all such persons are interested, as it treats these subjects in a clear and practical manner, with a thorough knowledge of breeding, rearing, feeding, etc. Each number contains information of great value to poultry raisers, dealers and fanciers. It is published weekly at Hartford, Conn., and is furnished to subscribers for \$2.50 a year.—*Scientific American.*

AN IMPROVEMENT NEXT YEAR

May be made in the management of the premium lists at our poultry exhibitions, which it seems to us is now come to be greatly needed, and which will not only render our public shows more compact and more easily handled, but will prove quite as satisfactory to the mass of contributors to these fairs as has been the old worn-out plan in vogue for five to twenty years ago.

We suggest that the method of offering five or six different grades of prizes for each variety, young and old, has now got to be altogether too cumbersome, and too much of a good thing; while the lower grades—such as a society "diploma," "highly commended," or "honorable mention" is quite too insignificant nowadays to satisfy anybody who has taken pains to breed a coop or two of fowls up to Standard, to the best of his ability, for a twelvemonth. And besides this, it doesn't pay. The award

is not worth having, when given. And the man who receives it is actually more disappointed, as a general thing, than he would have been if he got nothing.

We have so frequently heard complaints touching this matter, and have been urged so often to take up the subject and suggest revision in the rules governing our American shows in this particular, that we deem it but fair that an expression of opinion of the majority of breeders for and competitors at these exhibitions should be listened to, and complied with, in the direction of improvement as suggested. Precisely *how* this should be done is not important. But the machinery of our shows has got to be too cumbersome. We have too many premiums offered, in too many grades, of too small a value—to prompt energetic emulation among farmers, in the year 1876.

Too many good fowls are nowadays raised in this country, and our poultry men have come to be too expert with their various favorites, which they put up to the finest condition and contribute to our shows, year after year, to be content with the mere "mention," the "commendation," or the paper "diploma" of a town or country society—in common with two or three hundred others at the same show who may be equally fortunate (?) in the opinion of the improvised "judges."

In another article, therefore, to which attention is called upon page 246 of the present issue, we have endeavored to point out what we consider a feasible and appropriate method, whereby the change hinted at will result in benefit to our cause, and to all parties concerned.

CORRESPONDENCE.

INQUIRY.

MONROE, N. Y., May 12th, 1876.

DEAR SIR:—

Will you be so kind, or some brother Fancier, as to give a description of the black East India Duck, through the columns of the *Fanciers' Journal*. Please state if their diminutiveness prevents their crossing with the larger varieties of ducks.

Yours,

S. B. HEATON.

COMPLAINT.

NEW YORK, May 17, 1876.

MR. J. M. WADE, —

DEAR SIR: I notice in the last number of the *Journal* that one Mr. T. W. Cox makes a complaint against Witzel of this city. I saw also, that one Brose, of this city offered to exchange in the *Journal*, Pigeons for Pigeons, and Bantams. I went to see what he had, and found out that it was this man (*Witzel*).

EGGS.

FRIEND WADE:

SIR,—I have got 17 Silver Penciled Hamburg Hens, that layed three hundred and eighty-three (383) eggs in the month of April, this is a little better than James Taylor's eighteen Golden Spangled Hens layed in the month of March.

F. TAYLOR.

"PETER PEPPERCORN."

EDITOR OF FANCIER'S JOURNAL:

I have read with interest Peter Peppercorn's able and convincing defence against the charge of plagiarism. *Multitudes of others have been subjected to a similar charge, and therefore he cannot be guilty.* It is not very evident to me that the extract from Burns has much to do with the matter. I do not care to discuss the question, for, of course, all the proof which I have that my opinion

is correct is contained in the verses themselves. Let any one who is interested carefully compare Tennyson's "Brook" with Peter Peppercorn's "Mountain Stream," and satisfy himself. They would look well printed side by side.

Yours respectfully,

WM. GARDNER BARTON.

SALEM, Mass., May 22, 1876.

CORRECTION.

FANCIERS' JOURNAL, Hartford, Conn.:

Please correct error in notice of our coming exhibition, published on page 217 of No. 18. I am made to say that the "contingency fund is inclusive of the premium list." In that case it could not be used for the purpose for which it was subscribed. The amount is exclusive of the premium list, and only to be used in case a contingency should arise. In making this correction, you will oblige,

Yours truly,

MAY 15, 1876. GEO. W. WHITE, Secretary.

INFORMATION WANTED.

MR. WADE:

You kindly invite us beginners to bring our doubts and perplexities to the JOURNAL for solving. What puzzles me is this: I read that "when eggs are broken under a sitting hen, if what remain are not cleansed from all marks of the disaster, they will not hatch, because the pores of the shell being closed, what is within dies for want of air." We also read—"Puncture the shell of an egg with the finest cambric needle, you admit the air destroying the vitality of the egg. It will not hatch." Viz., an egg will not hatch unless air be admitted to its contents, and it will not hatch if air be admitted.

Where's Sam?

PACIFIC.

CORRECTION.

FRIEND WADE:—

No. 18 received this day. So the Puma carries off little children and drowns them, does he?

From both reading and observation, I have been led to believe that, like all the cat tribe, he had rather a dislike to wetting his feet, but it seems after all that, like the "Snapping Turtle," he is an amphibious "critter." What would your compositors suppose to be his motive in drowning the innocents? Is he on friendly terms with the speckled trout in the mountain streams; and does he furnish them a young mountaineer occasionally?

Will Huon tell us what the authorities say on this subject?

I wrote "they will carry off and devour children if they find them in the thick woods unprotected."

Yours truly,

J. M. McCANN.

MAY 17, 1876.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—Why is the Moor-bass liked by some fanciers? because they think there never was a moor-capital pigeon. TERRE FILIUS.

—The chief point in Silver-gray Rabbits is that they be silvered all over alike, and not a dark head or light body. (?)

—Sulphur ointment is an excellent remedy for mange, as is also fish oil, with two per cent. of carbolic acid mixed with it. (?)

—The price of Dari, in England, is 20s per sack of 240 lbs. Dari is a white, or nearly white reed, somewhat resembling pearl-barley, but larger, and is a most valuable food for small and delicate varieties of pigeons. (?)

—An owl created quite an excitement in a fancier's coop the other day. It swallowed a Tumbler bald-headed and left Nun of it. I have heard of Ostriches eating glass, but a tumbler never. Just fancy what a barbarian it was. TERRE FILIUS.

—To breed Pouters successfully a large room or loft is absolutely necessary. They are birds that require a large amount of room during the breeding season; and space that would be amply sufficient for fifty pairs of any smaller variety, would barely suffice for ten pairs of first-class Pouters. (?)

Does J. M. McCann mean to say that the Beech-tree is a non-conductor? If so, it is not very recommendable to be planted around country dwellings. Trees around dwellings should be of the best conductors, and people in beautifying their homes with trees, can as well guard their dwellings against lightning by selecting good conducting trees. I have seen several houses saved by trees from lightning strokes in the small country town where I live, and think others have seen the same in their places. Is this not enough to convince everybody, and who would not rather see two trees fall than have his home once shattered by lightning. J. A. L.

—On the summit of Pike's Peak, over 14,000 feet above the level of the sea, where there is not a trace of any vegetation, or, indeed, any earth upon which shrubs or grass could grow, the mountain rat, an animal twice as large as a Norway rat, abounds in vast numbers, overrunning the United States signal station on the apex of the mountain. Last summer two terriers who had distinguished themselves in the rat-pits of Chicago and Denver were taken to the house and turned loose at night into the kitchen, but in the morning one was missing entirely, and only the skeleton of the other remained, both having been overpowered by superior numbers. Four huge cats have now been introduced, and it is expected that the number of rodents will soon be visibly diminished.

In the forests of Lower Canada and the New England States I have often heard in Spring a mysterious sound, of which, to this day, I know not the author. Soon after night sets in, a metallic sound is heard from the most sombre forest swamps, where the Spruce and the Hemlock give a peculiar density to the woods, known as the "black growth." The sound comes up clear and regular, like the measured tinkle of a cow bell, or gentle strokes on a piece of metal, or the action of a file upon a saw. It goes on, with intervals of interruption, throughout the hours of darkness. People attribute it to a bird, which they call the whetsaw; but nobody pretends to have seen it, so that this can only be considered conjecture, though a highly probable one.—*Romance of Natural History*, by Philip H. Gosse, page

Can any of the New England readers of FANCIERS' JOURNAL furnish any information concerning the author of these singular sounds? J. M. McCANN.

—ONE IDEA OF A PERFECT DRAGON.—The beak should be black, stout, about an inch and a half in length, and inclining downward, not straight or spindled; the head of a barrel form, raised over the eye, and prominent at the base, not round, as in the carrier; the wattle on the beak white, of a tilted, peg-like form; the inner margin of eye-wattle dark, approaching black, which should pervade its structure; the eye of a bright red color, prominent, intelligent, and watchful (not wild) but not so large in diameter as that of the Carrier; the neck about three fourths the length of Carriers, tapering and widening towards the breast, which should be full and prominent, with the shoulders well defined and forward; the wings long and pointing, and evincing a strong sympathy with the eye; the back rather hollow; the tail should not touch the ground, but be slightly elevated in line with point of wings; the legs stout and short, and about an inch from the backs to feet; the body nearly as large as the Carrier. (?)

—It is now no longer questionable that the "Paris Green" used so generally to destroy the "Colorado Beetle" is the poison that has injured so many persons who have eaten potatoes that have been "saved" from the ravages of this bug, through the application of this "remedy" for the evil. The question whether potato-bugs are poisonous or not, was discussed by Augustus R. Grote and Adolph Kayser, in a paper read at the Detroit meeting of the American Association for the Advancement of Science, and just republished in the Naturalist. The authors' researches were induced by the assertion that after coming into contact with the bugs, or inhaling the steam or smoke produced by burning or boiling them, persons have manifested symptoms of cutaneous or nervous disease. Experiments were made upon live frogs with a distilled liquid and a tincture made from the bugs, and the authors announced that their conclusion therefrom is unavoidable that the bugs are not poisonous. They are inclined to think that the cases of poisoning which have occurred were due to the presence of Paris green, or some other form of arsenic used to exterminate the insects. It is quite evident that the employment of this dangerous poison upon food-plants tends greatly to imperil life.

SMALL PET DEPARTMENT

AND YOUNG FOLK'S CORNER.

(For Fanciers' Journal.)

ZOO NOTES, NO. 21.

THE TIGER, (*Felis Tigris*.)

Quite an addition has been made to the Philadelphia Zoo's family of tigers during the past month, and the society now possesses the most magnificent specimens of that genus, the largest, strongest, and most active of all the cat tribe, and which is peculiar to Asia alone. "Bengal Bon," who has hitherto sat on the tiger throne in the Zoo, reigns supreme no longer, and the only consolation he may derive from the henceforth divided attention of the visitors, must be from the fact that the new comers are his own brother and his wife—which lady, by the way, seems to be on very bad terms with her husband; a case of incompatibility of temper, quite as evident as that of Mr. and Mrs. Chas. Dickens—Nor will Mrs. Jim agree to bump noses and be friends with keeper Nash; Not a bit of it; and that gentleman informs me that he is afraid he will never be able to place her on a friendly footing with either her husband or himself, nor any other animal or thing in the garden, save a fourteen pound piece of beef, which she, with terrible earnestness, demands every day at 3 P. M. Jim is about eight feet six inches long in body, with a tail of over four feet, and stands more than four feet in height on his pads. About the same dimensions describe his wife. Both are magnificent in color, and general appearance, bearing beautiful stripes from tip of nose to tip of tail.

In the Western provinces of the Indian Empire, which lie between the Ganges and the Soane, in the district of Mirzapore, standing in fear of but one enemy, (the Bison,) and monarch over every description of locality, roams the savage, and powerful *Bengal tiger*, the only species of the kind, and who gets the name of *Tigris regalis*, or Royal Bengal Tiger, because in that part of India called Bengal, the animal's beauty and ferocity has ever been the best developed.

Though limited to Asia, the tiger has a wide geographical range, being found from Ararat and the Caucasus on the West, through the whole length and breadth of India, and round by China and Mongolia into Persia! Even at considerable elevations on the Himalayas is the tiger found, one a few years ago being shot at an elevation of eight thousand feet above the level of the sea! In Siam, Java, and Sumatra also, is the tiger found, but, strange to say, neither it, nor any of the cat kind has been discovered as natives in Australia or Madagascar!

The tiger may be considered one of the most beautiful, as well as the most graceful of all the Felidae, and though he is nothing more than a huge cat, he is every inch a "King of cats." Having no mane, his appearance is more majestic than that of Leo, and his countenance, we must also admit, conveys an impression of wanton cruelty as well as treachery. His strength is really wonderful, being able, by reason of it, to carry off a buffalo, bodily, while the most powerful man would be as nothing in his jaws. And what a voice he has! Talk about "cat-awaulings on the house-tops, or in your back garden!" They are in comparison but as a tin whistle would be on the day of judgment to Gabriel's horn! Travelers in India have heard, while lying in their tents, the tiger calling to its mate in some neighboring jungle, when the night was made fearfully hideous by their demoniac amatory growls. Here is a short account given by a tiger hunter in India of one of these midnight serenades.

"A peculiar long wail like the long drawn out 'meow' of a huge cat, first rose from the river course a few hundred yards below my tent. Presently from a mile or so higher up the river came a deep tremendous roar, which had scarcely died away ere it was answer-

ed from behind the camp by another, pitched in a yet deeper tone, starting us from its suddenness and proximity. All three were repeated at short intervals, as the three tigers approached each other along the bottoms of the deep, dry water courses, between and above which the camp had been pitched. As they drew together, the noise ceased for about a quarter of an hour, and I was dozing off to sleep again, when suddenly arose the most fearful din near to where the tigress had sounded the first love-note to her rival lovers; a din like the cat-awaulings of midnight cats magnified a hundred fold. Intervals of silence broken by outbursts of this infernal shrieking and moaning, disturbed our rest for the next hour, dying away gradually, as the tigers retreated along the bed of the river. In the morning I found all the incidents of a three volume novel in feline life imprinted on the sand, and marks of blood with pieces of fur and skin, showed how genuine the combat part of the performance had been."

There is no particular season of the year when the tiger selects his "affinity," and goes to den-keeping, but in fourteen or fifteen weeks thereafter the lady presents her lord with a family, generally three in number—never more than five; and not until the end of three years does she repeat the process, owing to the cubs remaining with the mother until they are nearly full grown. As a curious fact, I may state that there are more females than male cubs found by hunters, and the natives say it is because father tiger roams round killing all the male innocents while they are young, just as though he had had an order handed down from Herod the Tetrarch.

Mother tiger takes entire charge of her young until they are two years old, keeping all that time as cross as a man in house-cleaning week, and terribly savage, defending her children with the most desperate courage; if robbed of them she is indeed fearful in her fury! Woe then to anything which comes in her way, or crosses her path. But who can tell of all the inconsistencies of the female sex? Even the tigress, with all her affection for her children, has been known to desert them, and if hard pressed by the pangs of hunger she will eat them body and bones!

When the young tigers leave the mother's apron-string, and start out to do business on their own account, they are far more destructive than their grown up parents or relatives; killing without judgment, merely for the pleasure of destroying life seemingly, perhaps for practice, they will kill three or four cows at a time, while the adult tiger will kill but one, leaving an interval of three or four days between that and the next killing time.

The prey of the tiger is multifarious, but cattle, deer and wild hogs form its principal food; when hard pressed by hunger he will stoop to carrion, but never will he taste such ignoble food if fresh meat can possibly be had. The habit of the brute is, when he has killed say an unfortunate bullock,—which is always done in the night—to lie by, feasting on it until the morning, sleep all through the following day, and then quit the place when the shades of night begin to fall upon him. The tiger is a good traveler, rarely doing less than his fifteen miles of walk in a night, sometimes double that distance, when he finds good reason for it. To show the power of endurance the animal possesses, I may mention the case of one that was shot at and had his forearm broken in the afternoon, yet he traveled thirteen miles to be again shot at and killed, that same evening.

"Does the tiger really love human flesh?" "No, Halchen Mio; not naturally, that is." It is one of the most curious, and at the same time well attested peculiarities of the tiger that he does not naturally possess, but that he easily acquires the love for human flesh—just as man does for that filthy stuff called tobacco. At first the tiger seems to bow to that instinctive dread of man which is natural to all animals, but when it has once tasted human flesh, the spell of man's supremacy seems to be broken, and ever after that, to man fatal taste, he prefers it is said the taste of human

flesh to any other "tap." Confirmed man-eaters, however, are generally old tigers whose failing teeth prevent them from attacking tougher game than a defenceless villager or an incautious Indian post-man, though if they could get hold of one of our genuine politicians they would find him tough enough.

"You would like to have one for a pet!"

No, my dear Pacific. As a pet, a tiger would not prove a success. You would not like him in that character, for there is nothing whatever of your name or nature about him, nor is there any fun in him after he is three months old. What little comedy there might have been in his nature, he loses about that time, changing into a full-blooded, embryo tragedian, with murder in all his thoughts, and ready to wade in blood deep enough to please Richard III, Lady Macbeth, or the King of Dahomy. From this time out to the end of his days, be they long or short, there is nothing lovable about the tiger, save his silky hide, powerful frame, and graceful agility, and if you must have a brute to love, my dear Pacific, sooner than you should take such an unmitigated one, why as Cardinal Richieu said to Louis XIII, "Your Majesty, love me!"

HICON.

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

For "TO EXCHANGE FOR CASH" or "GRANTEE'S," "WANTED A PURCHASER," or "WANTED AN OFFER," etc., etc., cannot under any circumstances be admitted to the **Exchange** or **Want** column.

No **Exchange** or **Want** will be inserted unless accompanied with 25 cents.

J. RANDOLPH MORDECAI, 45 S. Gay St., Baltimore, Md., will exchange two choice B. R. Red Game Bantam cocks, for hens or pullets of same kind, or Houdans. Stock offered is first-class, and only same is desired.

JAS. H. PHILIPS, Coventry, N. Y., will exchange one yard each of Buff & Partridge Cochins, (one cock and five hens each), 1 year old. Some of them premium birds: William's, Bradley, Van Winkle, and Pitman strains, for good track, skeleton, or light road wagon, or Parker Bros. breech loading shot gun.

GEO. SHIRAS & BRO., 13 Stockton Ave., Allegheny, Pa., will exchange their entire lot of Swallows, that were imported from Germany in '75; four Black, two Blue barless, one Blue, one Red, and one Yellow Swallow each, two Black, one Blue, two Red, and one Yellow Swallow each; also seven young Swallows, for trout flies, reels and 18 ounce rod, or offers.

HERBERT LODER, Box 638, Stamford, Conn., would like to exchange a few good White Leghorn eggs, for Plymouth Rock hens of same quality.

JOS. H. KRAFF, New Albany, Ind., will exchange one trio of Partridge Cochins, one trio French Houdans, one trio Golden Spangled Hamburgs, one trio B. R. Game Bantams, or Dark Brahma cockerels, for Webster's Unabridged Dictionary, W. L. Wright's Illustrated Work on Poultry, or cash. Satisfaction guaranteed in all the above birds. Speak quickly.

W. H. CUNNINGHAM, Chenango Bridge, Broome Co., N. Y., will exchange eggs from first-class White Leghorns, for eggs from Rose-comb American Dominique, or Duck's eggs, or Fancy Pigeons. Eggs will be fresh the day before shipping.

"FANCIER," Box 123, Metuchen, Middlesex Co., N. J., will exchange a Wire Bird Trap, a large Mocking Bird Cage, two Manx Kittens, and a hand Sroll Saw, for offers. All letters promptly answered.

T. D. ADAMS, Franklin, Pa., will exchange eggs from his choice Golden S. Hamburgs, (Ongley's strain), and 1 trio of Black Spanish, 1875 chicks, for eggs or fowls of Golden S. Bantams, or a Cocker Spaniel Bitch.

J. S. RUTER, New Castle, Pa., will exchange one Blue Red Game cock, one hen and willow legs, pit stock, and one seven-shooter, nickel plate, gun as new; also one single shot gun, for Pigeons, Turbits, Owls, or Ant-wipers, or offers on Pigeons. Write.

GEO. SHIRAS & BRO., Allegheny, Pa., will exchange one pair of Black Mottled Trumpeters, Arabangels, Crested Magpies, Blue Pouters, 1 Red Bald hen, 1 Blue Trumpeter cock, (imported), 1 White Owl cock, 1 Blue Cap Magpie hen, 1 Blue Antwerp cock, for 1 turtle-shape scales, 1 tobacco knife, about 100 Burial 3 basket bags, and about \$75 worth of demijohns, different sizes, for Lop-eared Rabbits, Angora Rabbits, Pouters, Jacobins, Tumblers, Antwerps, Ducks, Chickens, Geese, or Turkeys. What offers.

S. O. CHASE, Killbuck, Conn., will exchange a few first-class Partridge Cochins and Plymouth Rocks, hatch of 1875, for White Crested Calcuttas, Black, or Yellow Fantails, in pairs. Must be first-class birds.

L. R. SPONG, West Fairview, Cumberland Co., Pa., will exchange 1 cheese case (wire), 7 lb pepper, 2 lb. allspice, 1 lb. ginger, 3 lbs. cloves, lot of Connecticut made baskets (bushel), 1 turtle-shape scales, 1 tobacco knife, about 100 Burial 3 basket bags, and about \$75 worth of demijohns, different sizes, for Lop-eared Rabbits, Angora Rabbits, Pouters, Jacobins, Tumblers, Antwerps, Ducks, Chickens, Geese, or Turkeys. What offers.

FRANK JORDEN, Milton, Pa., will exchange 4 Tumbler cocks, 1 White Fan cock, 2 Mottled Fan cocks, 1 Red-wing Turbit cock, 1 Microscope, 1 Smith & Wesson 7 shot revolver, 1 pair White Leghorns, 2 Brown Leghorns hens, 5 D. B. hens, and 1 cock; want in exchange 1 Black Carrier hen, and offers in Fancy Pigeons.

E. S. ELLWANGER, Rochester, N. Y., will exchange 1 pair first premium S. S. Polands, and one Frizzle pullet, for Dogs, Pigeons, or Birds. Make me an offer.

E. BASSETT, Berlin, Wis., Box 441, will exchange a Squirrel Cage, (nearly new), made of tin and tinned wire, with galvanized iron trays in bottom, two wheels, and in every way desirable, size 40x20 inches and 3/4 inches high, for MacIntosh's tools, Taps and Dies, or Files—tools to be new. Cage to be boxed in good shape, and delivered here, value \$18.00. Send description and price of tools.

E. G. FLANDERS & CO., Manchester, N. Y., have to exchange 1 pair of Blue Bald-head Tumblers and the following odd cocks: 1 White Crested Bantam, 2 Hightys, 1 Red Tumbler, 1 Black Bald-head, also one Springfield Rifle, for Brown Leghorns, or offers. Must be A No. 1.

J. F. FERRIS, Hartford, Conn., would like to exchange a copy of Doyle's Illustrated Poultry Book, (280 pages, 40 illustrations, and colored plates), for a good pair of Partridge Cochins, not over two years old. Want good birds!

JOHN KNOX, No. 9, Pleasant St., Hartford, Conn., would like to exchange choice White Leghorn Eggs, for Eggs of some well-known reliable strain of Brown Leghorns.

H. J. HALL, Hartford, Conn., has a good Colt's Revolver, silver plated, seven barrels, any size; will exchange for a good double barrel gun—breech-loader preferred, or offers.

J. F. FERRIS, Hartford, Conn., would like to exchange a policy of Life Insurance in one of the best companies in the country, for a good horse and buggy. Write for particulars.

JNO. F. HOESER, Tamaqua, Pa., will exchange 1 pair solid Black English Fans, 2 Pouter cocks, 2 Blue Fan cocks, 2 Rabbit's hutches, 1 Fancy Squirrel house, with large wheel attached; 1 good violin; 1 single Shot Gun, muzzle loader; 1 single Rifle, muzzle-loader; 1 French Pool Wheel, 2 Parrot Cages, 1 "Family Printer," 3 fonts of Type, 7 hens and 1 cock, Light Brahms, for Black Red Games, B. R. G. Bantams, cash, or offers.

T. J. McDaniel, Hollis Center, Me., has one Love Printing Press, cost \$23; prints well a form 10x13; all in good order, which he will give for one trio of Brown Leghorns, one or two years of age. Must be good, of course, at such a trade.

E. D. WITHERS, Ogdensburg, N. Y., will exchange 1 pair Silver Duckwing Game Bantams, 1 pair King Doves, 1 Black male Trumpeter, 1 Black Fan, 1 White female Turbit, for 1 pair Black Jacobins, 1 pair White Jacobins, 1 White male Turbit, very small. I want first class birds, and I will give the same.

IRA C. KELLER, Box 867, Tiffin, Ohio, will exchange one extra fine pair of Light Brahms, and one pair of White Cochins, for Lop-eared Rabbits, or Himalayan Rabbits. Stock must be good; same given. One \$35 microscope, for offers, or dry goods.

LEO A. DOSCH, Brookville, Montgomery Co., Ohio, will exchange a pair of American Dominiques, (exhibition birds), Dark Brahma and Partridge Cochins, cocks and hens, all of 1875 hatch, good stock, for Singing Birds, Poultry Books, or other offers. Write what you have to exchange.

T. W. B. ALBANY, N. Y., will exchange a very fine B. B. Red Game Bantam cock, bay eyes, and willow legs, hatch of '74, for two parts of Wright's Poultry Book, or offers.

PHILIP ROGERS, Baltimore, Md., will exchange six or eight Light Brahma cockerels, last June's hatch, first-class birds, for pullets of same variety.

GEO. W. SCHEFFER, No. 21 South Second St., Harrisburg, Pa., will exchange 1 old Clock, size 30x16 inches, invented by Eli Terry, of Plymouth, Conn.; it is a relic, the frame is carved with Eagle on top; for Yellow Face Pigeons of any kind; also 1 pair of fine Poutercocks, and 1 pair of White Muscovy Ducks; will exchange or sell them. What offers?

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

31 CANTON ST., Hartford, Conn., wants offers of good fancy fowls at reasonable prices. Correspondence a pleasure.

W. J. STANTON, 12 Cortland St., N. Y., wants Black, Red, Blue, and Silver Bred Tumblers. Must have good beards, &c.

ROOM 7, P. O. Building, Hartford, Conn., would like some fine American Song Birds, or Canaries, with cages, in exchange for choice selected eggs of most any variety. Write on Postal Cards, or any other cards. Double quick.

W. J. STANTON, 12 Cortland St., N. Y., wants Black, Red, Blue, and White Highflyers; good birds only.

S. K. FERRIS, Stamford, Conn., wants nice fresh-laid eggs of Brown Leghorns or Game Bantams, in exchange for White Leghorn eggs from a nicely mated pen of choice birds.

W. J. STANTON, 12 Cortland St., N. Y., wants Common Tumblers of all colors, as Splashes, Mottles, Agates, Almonds, &c., (not more than two pairs of blacks in a lot), and all well warranted to tumble.

PIGEON FANCIER, Box 496, Hartford, Conn., wants Common Pigeons, good healthy birds, in lots of 30 pairs and upwards, at 25 cents per pair, or will exchange good thoroughbred fowls for same.

P. O. BOX 689, Rockville, Conn., wants two or three white, or nearly white Houdans. Must be first class.

J. F. FERRIS, 216 Main St., Hartford, Conn., wants Ground Bone, Crushed Oyster Shell, Beef Scraps, or Poultry Fixtures of any kind, for which I will send choice selected White Leghorn eggs of my well-known laying strain, at rate of \$1.50 per dozen.

W. J. STANTON, 12 Cortland St., N. Y., wants Magpies, (capped,) of all colors, and good birds only.

H. J. HALL & CO., Box 496, Hartford, Conn., wants some good serviceable Water Fountains for Poultry, different sizes, in exchange for eggs from a magnificent pen of prize-winning Dark Brahmas.

FANCER, Room 7, P. O. Building, Hartford, Conn., would like a nice sitting of Duckwing Game Bantam eggs, in exchange for other eggs of Leg-horns, Cochins or Brahmas.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

J. H. SCHOCK, S. W. corner Tenth and Buttonwood Streets, Philadelphia, Pa., dealer in Segars, Weekly Papers, Stationery, etc.; will also supply Fanciers' Journal promptly by mail or at the store.

EDIGREE A NO. 1.

I have shown L. and D. Brahmas, and Pea-Comb Partridge Cochins 17 times, and have won 16 first, "1" second, and two special premiums; stock from *Felch, Williams, Hersteins, and Edmonds* noted strains. Eggs, \$8.00 per 13. **H. PARHAM**, Lima, O.

THE JOURNAL can be had at any news stand. Or at Schock's Cigar and Stationery Store, Tenth and Callowhill Streets, Philadelphia. Price, 10 cents single copy.

IF YOU WISH TO EXCHANGE ANYTHING

THE POTENT LITTLE PEN.

Let warrior praise the sword and gun,
The powder and the ball;
But there is a little instrument
More potent than them all.
When by the skillful wielded,
It cuts both far and near,
And is dreaded worse by tyrants,
Than the sabre or the spear.
The bravest heart has trembled
At the power it has displayed;
For it has achieved more victories
Than the soldier's trusty blade.
It has overawed the monarch,
And has shook the papal chair
With a force more sharp and powerful,
Than the sabre or the spear.
Though rulers try to curb it,
Their efforts are in vain;
For it ever was too powerful
For an army to restrain;
And to touch it, there is danger,
As it often wounds severe,
And leaves a scar more lasting
Than the sabre or the spear.
But like the faithful sower,
It has scattered seeds around;
And wherever they have fallen,
They have fertilized the ground;
It has aided human progress,
Like the peaceful old plough-share;
And has done more good for nature,
Than the sabre or the spear.
It has been the faithful servant,
Of the beggar and the sage;
It has given us the record,
Of mankind from age to age.
It has preserved art and science,
And has taught good will to men,
May peace ever be the mission,
Of the potent little pen.

PETER PEPPER CORN.

From Forest and Stream.

THE BRIGHTON AQUARIUM.

Continued.

Just now the eggs of the octopus, or devil fish, may be seen in the various stages of incubation. And I may say here that the octopus is now one of the leading attractions, or "star performers" of the aquarium. The specimens here were taken off the coast of Jersey, and, therefore, may be supposed to be the little brothers of that giant devil fish which figures so largely in Victor Hugo's "Toilers of the Sea." In fact, Victor Hugo made the fortune of the octopus. But for him this marine curiosity might have dwelt in obscurity until now. The keeper kindly fed some of them for my benefit. Small crabs were dropped into the tank, and the little victims came tripping down through the water in their sidelong fashion, dancing to their horrid doom. As soon as the devil fish espied the crab he unfolded and stretched out his

horrible arms, drew it under his body, and sucked out its life. It was a sickening sight. The specimens here are not very large, their bodies being about the size of a man's fist, and their arms would stretch perhaps two feet across. One of these devil fish, placed in one of the octagonal vases for better inspection, sometimes escapes at night through the meshes of the wire netting over the top, a space only two inches wide. This would seem to be impossible, but the fact that these fish have only one bone in their bodies—it is in the head—and that one about the size of a nickel, explains how it may happen. The night watchman in his midnight rounds stumbles over something on the floor, stoops and picks up—a devil fish! The sea water is pumped by a steam engine directly from the sea into reservoirs constructed under the floor of the building, and thence conveyed to the tanks through pottery pipes by the same means. These reservoirs are capable of holding 500,000 gallons of water, which quantity can be pumped from the sea in about ten hours. The water in the tanks is constantly aerated and kept in motion by a stream of compressed air, supplied to the bottom of tanks through glass or rubber tubes. The circulation thus afforded is found to be preferable to the more costly system of pumping adopted by other aquaria, as it allows each tank to be heated independently of its neighbors. The whole of the tanks, forty-one in number, are numbered consecutively, and at the side is given the popular names of the fish, plants and zoöphytes which each contains.

I cannot attempt to enumerate here all the various fish and marine plants that this great aquarium contains. Some large tanks are given up to the zoöphytes, anemones, jelly fish, corals, sponges, and the like, of which there are most beautiful specimens. I saw a lovely tree coral from the Red Sea, and some of the beds of anemones look like a rich pasture of flowers.

And here were coral-bowers,
And grots of madrepores,
And banks of sponge, as soft and fair to eye
As e'er was mossy bed
Whereon the wood-nymphs lie
With languid limbs in summer's sultry hours.
Here too were living flowers,
Which, like a bud compacted,
Their purple cups contracted,
And now, in open blossom spread,
Stretched, like green anthers, many a seeking head.
And arborets of jointed stone were there,
And plants of fibres fine as silkworm's thread;
Yea, beautiful as mermaid's golden hair
Upon the waves dispread.
Others that, like the broad banana growing,
Raised their long wrinkled leaves of purple hue,
Like streamers wide outflowing.—*Kehama*, xvi, 5.

The most attractive and popular feature to the aquarium just now is the sea lions from California. They are two young ones, and were received about a month ago, two others having died on the journey. They are about half-grown animals, and now seem to be very healthy. Excursion trains run down from London, bringing large crowds to see them. They are quite docile, even affectionate, towards their keeper when he enters their cage, ut-

tering a sort of dog's bark of delight whenever he approaches them. They are fed upon herring several times each day. The department of crustacea, lobsters, prawn, shrimp, barnacles is very well represented, and the gentle ascidian, which, according to the evolutionists, was our early ancestor, is here to be seen struggling up—or down—into a member of Congress. The present curator of the aquarium, Mr. John Parnaby, formerly of the Trentdale fisheries in Cumberland County, is quite well known among our own fish culturists, having visited our country several years ago. I avail myself of this occasion to acknowledge his courtesy to me on my visit to the aquarium. He accompanied me throughout, showing me all its varied mechanism, and allowed some of the fish to be fed for my amusement. Mr. Parnaby is one of the best practical fish culturists in England. One of the most important facts connected with this enterprise is, that, as an investment of capital, it has proved a "good thing." Mark this, ye men of Wall street, it pays splendidly. The Brighton Aquarium was chartered by a special act of Parliament in 1868, and, therefore, does not require the inevitable word "limited" to be tacked to its title—with a capital of half a million dollars. It has paid ten per cent. to its stockholders, and the stock now stands at fifty per cent. premium in the market. The success of this one—the first in this country—has been so great that others are springing up, notably the Westminster Aquarium in London, near the Abbey of that name, which is to be on a very magnificent scale.

When it can be demonstrated that Aquariums pay so handsomely as a financial scheme it is probable we shall soon see one in Central Park or Boston Common. The Brighton Company is enlarging and improving its property in many ways. The roof of the aquarium has hitherto been laid out into a beautiful garden, replete with flowers and plants of every description, admitted to be the most delightful marine promenade on this coast, it being in full view of the sea; it is now undergoing a change. A large portion is to be converted into a skating rink, not of real ice, but of asphalt, to be used with the parlor skates, a kind of amusement that is very fashionable in England just now. A large café is to be fitted up on a portion of the roof for summer use. These extensive improvements involve a large outlay, and new stock has been issued to raise the money. This has been taken by the old stockholders, so that there is no question that such shows pay well in this country. The admission fee is one shilling. Shall we not soon see an aquarium like this in America?

(For Fanciers' Journal.)

GLEANINGS FROM A COUNTRY LIBRARY.

THE BOMBARDIER BEETLE.

The bombardier beetle (*Carabus Crepitans*) when touched produces a noise resembling the discharge of a musket in miniature, during which a blue smoke may be seen to proceed from its extremity. Rolander says that it can give twenty discharges successively.

A bladder placed near its posterior extremity, is the arsenal that contains its store. This is its chief defence against its enemies; and the vapor or liquid that proceeds from it is of so pungent a nature, that if it happens to be thrown into the eyes, it makes them smart as though brandy had been thrown into them. The principal enemy of the bombardier is another insect of the same tribe, but three or four times its size. When pursued and fatigued it has recourse to this stratagem: it lies down in the path of its enemy, who advances with open mouth to seize it; but on the discharge of the artillery suddenly draws back, and remains for awhile confused, during which the bombardier conceals itself in some neighboring crevice, but if not lucky enough to find one, the other returns to the attack, takes the insect by the head, and bears it off.

PRECIOUS STONES.

Incomparably the largest authentic specimen of the diamond ever yet discovered was that known by the name of "The Mogul." It was found in the mine called by the Persians, Coulour, seven days journey from Golconda, toward the year 1650. Weight, uncut, 787½ carats. The largest known emerald is the Devonshire, two inches in diameter, and of the finest color: not cut. It came from the Muyo mine, Santa Fe de Bogota.

The largest sapphire has got its name, "The wooden-spoon-seller's" from the occupation of the man who found it in Bengal. Lozenge-shaped, with six faces, 132½ carats. The largest pearl in the world is beyond all rivalry, the "Hope," weighing 3 ounces, and 2 inches deep, by 2½ in circumference at the larger end. It is pear-shaped, and of opalized hue.

The largest ruby ever seen in Europe, is that presented by Gustavus III. of Sweden, to the Czarina, during his visit to her 1777. It is equal in size to a small hen's egg, and is of fine color.

THE GREAT MOTHER.*

Garcilasso de la Vega relates that the chief deity worshipped in the city of Manta, Peru, was an emerald nearly as large as an ostrich-egg. The priests zealously inculcated upon her worshippers the belief that the most acceptable offering to this goddess, *Esmeralda*, were her own children in the shape of minor emeralds: whereof they themselves took good care. Upon the conquest these children fell a prize to Alvarado and to Vega, the historian's patron; who in this case also, like the followers of Cortez with their Mexican spoils, destroyed many splendid emeralds by subjecting them to the test of the hammer, as Garcilasso records. But the great Mother disappeared for ever; neither could any of her devotees be brought, either by threats or promises to disclose her hiding place.

The Bo tree (*Ficus religiosa*) is held sacred by the Buddhists, and planted close by every temple, attracting almost as much veneration as the statue of Buddha itself. The Bo tree of the sacred city Anarajapoor, is in all probability the oldest tree in the world, of which the age can be ascertained by historical evidence. It was planted in 288 B. C., and is therefore 2164 years old. Sir James Emerson Tennent, in his work on Ceylon, gives reasons for believing that the tree is really of this wonderful age, and refers to historical documents in which it is mentioned at different dates as 182 A. D., 223 A. D., and so on to the present day. This tree is invested in the estimation of the Buddhists, with wonderful sanctity. To it, says Sir James, kings have even dedicated their dominions in testimony of their belief that it is a branch of the identical fig-tree under which Gotama Buddha reclined when he underwent his apotheosis. Its leaves are carried away as treasures by pilgrims; but it is too sacred to be touched with a knife, and therefore they are only gathered when they fall.

THE KING'S COCK CROWER.

A singular custom, of matchless absurdity, formerly existed in the English Court. During Lent, an ancient officer of the crown, styled the King's Cock Crower, crowed the hour each night within the precincts of the Palace. On the Ash Wednesday, after the accession of the house of Hanover, as the Prince of Wales sat down to supper, this officer abruptly entered the apartment, and in a sound resembling the shrill pipe of a cock, crowed past ten o'clock! The astonished Prince, at first conceiving it to be a pre-meditated insult, rose to resent the affront, but upon the nature of the ceremony being explained to him, he was satisfied. It was afterward George II. Since that period, this silly custom has been discontinued.

J. M. McCANN.

*This is the only instance I have ever read of in the mythology of any nation where a precious stone was worshipped as a deity.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

WEEKLY vs. MONTHLY.

A poultry paper is in every sense of the word, a newspaper, conveying information pertaining to poultry and pet stock especially, together with general literature bearing upon that subject. Consequently in this advanced age of steam, telegraph, and printing presses, we cannot fail to look upon the FANCIERS' JOURNAL as being in the front ranks of this class of journalism. Brought to us as it is,—four numbers for a monthly's one, at about twice the price per year,—ought to endear it to every fancier, of shrewd business talents, throughout the length and breadth of this continent as well as in foreign countries.

Reports of exhibitions, conventions, societies, and matters concerning pet stock occurring almost daily, are of paramount importance to poultry-men every where, just as social and political news is to readers of daily newspapers.

How many hundreds of instances are there every winter, that owners send their pets to exhibitions, from twenty to five hundred miles distant, and in many cases, no friend or acquaintance to convey the news of the prize-winning bird. Some poultry societies certainly do publish a report inside of two or three months, which they send to each exhibitor at their leisure, (the Consolidated Exhibition at Springfield being an exception, where prizes were disbursed inside of a week). Now to fill this vacuum, and make up for the delinquencies of clubs, a weekly paper is a useful and a heartily welcomed visitor. No one knows the anxiety of the fancier, and his eagerness to obtain the latest news concerning the judgment of fowls, more than himself, and to a person in such an impatient state of mind, a week is a month, and a month is a year, seemingly; and without a scruple of a doubt, we predict that e'er long a semi-weekly will be published, at least six months in the year.

In addition to the usefulness of a weekly, in its being an expeditious servant to carry news, it is doubly useful in another point of view, and that is, as an advertising medium. We knew of a person who advertised in several poultry papers for one year, one was a weekly, two, monthly, and one a tri-monthly; he sold his surplus stock chiefly by means of the weekly before New Years, after that replies came in faster from the monthlies, and by the time enquiries from the tri-monthly notices commenced to trundle in, he was well on his way with another year's stock. This proves the weekly to be of inestimable value to men who wish to unload some of their large stock in the beginning of winter. Even a weekly agricultural paper, as an advertising medium for fanciers is not to be despised, and helps sometimes to introduce good thorough-bred stock among amateurs, and engendering in the minds of many young farmers a taste for something lovelier than a nondescript dunghill,—a taste more definite and exalting. We do not wish to be understood as casting any reflections, or to write disparagingly of the merits of a monthly or longer timed periodicals, for generally they are ably edited, with an immense amount

of labor; but the only thing we have to murmur at them is, that they are like angels' visits, few and far between. But angels' visits in the nineteenth century must be frequent to be appreciated.

A periodical of any character whatever, containing important articles, necessarily continued from one issue to another, to scientists, naturalists, and fanciers generally, needs to be issued at least once a week. It begets in the family a growing interest, which would be slackened by longer timed intervals. Then may the shadow of the FANCIERS' JOURNAL never grow less, but as it has planted a firm footing in the City of Insurance Companies, may its beacon light loom up more and more, to throw its radiant beams over the pet stock fraternity, yearly increasing, over this broad continent.

A READER.

PEKIN DUCKS—THE OTHER SIDE.

This duck question is becoming quite interesting, and I am highly pleased to see that they receive their share of attention. I hope their "Quack! Quack!!" will yet be heard "around the world."

Now there is always room for a word to be said on this subject. Most people will accuse a breeder of having an axe to grind, but, I will not acknowledge it in my case, nor will I turn the stone for another to sharpen up. Now all poultry raisers want facts, and I never will intentionally state anything which cannot be substantiated, and hope that all others will do the same. I would not willingly lead a party astray. Still we must always bear in mind that the experience of one is sometimes no criterion for that of another.

A great deal has been said pro and con as regards the Pekin, some claiming superior qualities over all, others denouncing them as another humbug. Now as far as I am concerned I would not exchange them for all the other varieties known. It is too easy to denounce—they have received only three seasons' trial, and I shall fail to do so with birds that, with me, have fulfilled all that I can require in a valuable breed.

The Pekin has created quite a stir, and the demand has, no doubt, caused many dishonest dealers to cross them with others, and impose upon the trade. Others have neglected to give that care which they—or in fact any variety demands—to receive favorable results.

I think as many instances of deterioration can be cited with the Rouen or Aylesbury as with the Pekin. I know one great objection raised is that they fall off in weight, but I hardly think it can be demonstrated that it occurs in more instances than with the others. Very few Rouens or Aylesburies will turn the scales at sixteen to twenty pounds per pair, and in the hands of the careless breeder ten to thirteen is the more usual result. I have tried the Rouens alongside of the Pekins, and I want no more Rouens on my place, when I have the other variety. Aside from weight the symmetry of the bird is a great point, and I know of no more showy or perfect-formed bird than they.

Another great point in their favor, with me, is their rapid growth. I can get six pounds at ten to eleven weeks; the same result I cannot realize on the Rouens.

I shall be able, at the end of this season, to state to an egg the exact product of my flock. This is the only way to determine this matter. "Figures won't lie," and from my experience I would bet on the Pekin for fecundity over all others. You can rest assured if there is more profit in any other breed, I shall soon learn the fact, and be the first to acknowledge it, as this is what I am working for. I don't raise ducks to look at, or for fancy. I want profit, and I argue that what is profitable for me is also for my neighbor, providing proper care is given and circumstances favorable.

Keep this duck question moving, Messrs. Editors, it won't hurt

any honest breeder. We all have our likes and dislikes. We cannot all be suited in one variety of ducks more than with another of our domestic fowl. Thousands admire the Brahmas with their ten to fifteen pounds weight, while others see no beauty in them, and prefer the smaller breeds. There is no accounting for tastes. Did we all think alike, poultry-raising would be robbed of the interest now attached to it, as we should all want the same strain of stock.—*Poultry Argus.*

(For Fanciers' Journal.)

WE CAN'T WELL HAVE EGGS,

And the formation of new feathers in fowls at the same time. The natural process of "moulting," or the dropping out of the old and the growth of new plumage, occurs once a year, commencing usually in the months of July and August, or later.

During this period—come when it may in the life of a domestic fowl, the laying of eggs ceases—since nature does not perform the two offices naturally at one time, of producing egg meat and fresh feathers.

When our birds are in their moult therefore, they should be more carefully attended to than at other periods, and fed more sparingly, but on good nutritious food for the time being.

The process is attended with more or less fever and debility. Fowls are never well at such times; that is, they are not in thrifty condition. And more old fowls, (say of from two to three years of age,) die off during this change in their existence than at other periods.

Immediately upon the forming and starting out of the new "pin-feathers," a fresh supply of eggs begin to come forward. This formation is slow in its progress, but by the time the new plumage is fully grown in the following winter, the new litters of eggs increase, and the hens begin to lay again. If we watch the conduct of our flocks, we shall soon learn that there is from two and a half to four months in every year when the birds do not lay. This is during the moulting or feather-shedding season.

(For Fanciers' Journal.)

PLUMED PARTRIDGE (OREORTYX PICTUS).

This beautiful bird inhabits the mountain ranges of California and Oregon, towards the coast, and is better known from its habits, by the name of mountain quail. The head has a crest of two straight feathers; much longer than the bill and head. The anterior part of the body is a plumbeous gray; the upper parts olive brown with a slight shade of rufus, this extends narrowly along the nape to the crest. Head beneath the eyes and throat orange chestnut, bordered along the orbits, and a short distance behind by black, bounded on both sides by white, having also a short line of white behind the eye. Posterior half of the body beneath white, with flanks and tibial feathers orange chestnut brown, the sides of the body showing black and white bands, the former color tinged with chestnut; under tail-coverts black, streaked with orange chestnut. Its length is about ten and one half inches; wings five inches; tail three and a quarter. An enthusiastic sportsman of Cumberland County, seeing some of these handsome birds in a case of California birds, conceived the idea that from their habits they would live, and propagate in the mountains of Cumberland valley. A friend going West, was instructed to send on a few pair if they could be had, and everything looked prosperous for a realization of his plans. In the Spring of sixty-seven, the birds arrived, five pair in all, and were immediately liberated on his land, lying at the foot of the south spur of the Blue Ridge mountains. In the fall but two small coveys of them could be found, one containing five birds, the other seven. As far as game was concerned they proved a failure, refusing to lie to the dogs, invariably running swiftly along before them until rounded too close, when weakly taking wing,

would alight immediately on the first bush, tree, or wall, in fact anything that offered a safe perch from the dogs. Unmindful of the approaching sportsman they would sit quietly, no doubt imagining themselves out of all harm. Disgusted with their want of gameiness they were not disturbed again that season. Whether they would have proved any benefit to the farmer in their insect eating capacity was never ascertained, for by the following fall all had disappeared, no doubt from their tameness a prey to hawks, foxes, and other vermin which infest this region, or else victims to the severity of the winter. O. D. F.

COUNTRY RAMBLES IN NEW ENGLAND!

BY OUR "STAFF CORRESPONDENT."

A short ride of fourteen miles through one of the most pleasant of Connecticut valleys, over the Hartford, Providence & Fishkill Railroad, brings us to the beautiful little village of Bristol. The first party for whom we make inquiry is the genial Secretary of the Central Connecticut Poultry Association, Mr. James Shepard, and are directed to a pleasant office, where we find him hard at work, his business (Solicitor of Patents) fully occupying his time, not so much so, however, as to entirely prevent his taking a great interest in his feathered pets, and this interest has placed him in the front rank of home Fanciers.

After the usual greetings, we accepted his kind invitation home, and at once paid a visit to his Poultry yards. We found him breeding his well-known favorites, Silver Spangled Hamburgs, and Golden Sebright Bantams, and the records of every show for years past bear witness to his many successes. A handsome brood of 17 little Bantams on his lawn could not possibly be passed unnoticed. In his Pigeon lofts we saw many fine specimens of Pouters, Fantails, Tumblers, &c., and his beautiful clutch of Lop-eared Rabbits excited our admiration to the extreme. A pair of Flying Squirrels were quite a curiosity, and a visit to the Manx Kittens on the stoop completed our tour of inspection.

We also note a fine coop of White Leghorns in the yard of Mr. Strong, adjoining, and the treatment they were receiving from their owner, clearly proved that he thought they merited a great deal of attention. He was giving them their "morning lunch," of finely chopped clover, and short grass, and we wished at the time, would that all fanciers were as thoughtful of the wants of their feathered friends.

After a short conversation on the "signs of the times," and a comparison of notes in the fancy, I bade him good-morning, and strolled through the village to the residence of Messrs. Mitchell & Dunbar. Their poultry house is a very fine one—built for comfort and convenience, as well as beauty and utility. We at once directed our attention to the fine yards of White Cochins owned by Mr. George W. Mitchell—and though we had seen many of his birds at the large shows of the past season, it was the first opportunity we had of seeing them in their own yards, with their "every-day-clothes" on—and were pleased to note that the winner of First Premium, at Springfield, looked equally well as he called his mates to "take a worm, my dear," or as he quietly escorted a madam to her nest to lay her tribute of gratitude for the kind care they are continually receiving. The handsome brood of young birds led us to think that breeders of White Cochins will have to "get up and dust," or Friend Mitchell will carry away the prizes and blue ribbons at our coming shows next season. Mr. Dunbar is known as a winner of premiums on Partridge Cochins, but is not breeding as extensively this season. We think we know a "good chicken" when we see one, and we can say with a truth that our Bristol friends know how to breed them, and upon this our first visit, demonstrated that they were pleased to illustrate the good old ways of Connecticut hospitality.

Bristol is one of the poultry-centres of Connecticut, and many prominent breeders reside here. Their shows of the past two seasons have been eminently successful, and all classes well represented.

In Brown Leghorns, at their last show, there were upwards of forty coops on exhibition, nearly all bred in that town—and yet there is not an advertiser of Brown Leghorns there—which proves that the larger part of the fine stock is bred for pleasure rather than profit.

At a future visit we shall take pleasure in calling upon other prominent breeders, and will try and learn something from them that will interest the readers of the FANCIERS JOURNAL.

HARTFORD, JUNE 5, 1876.

WARREN CONTROVERSY.

INDIANAPOLIS, May 18th, 1876.

JOS. M. WADE, Esq.:

DEAR SIR:—Some time last fall I wrote to A. D. Warren of Worcester, enclosing bank draft for \$25.00, and stated that I had some Black Red Games, of my own raising—that they were young, and small—that I was very anxious to take first premium at our coming State Fair; that competition would be close, and that unless he could send me a trio which he was well satisfied would take first premium, I wanted my money back. He sent me a trio of good birds, although a pullet of my raising was awarded first, over his, by a judge appointed by the "American Poultry Association."

They all had colds, from which the cockerel died some time in Jan'y. The pullets never recovered entirely, but still live, and are in good condition. On the 7th of Feb'y I wrote Mr. Warren, advising him of death of the cockerel, and asked him at what price he would furnish me another as good as the first one, and better if he had it. His reply was:

WORCESTER, Feb. 9, 1876.

DEAR SIR:—Yours of 7, at hand. In reply, can only send you a late hatched chicken which will be A. No. 1. price, \$12.00.

Y. truly,

A. D. WARREN.

What was the matter with yours?

I answered, stating that he died from the effects of the cold he had when received, and intimated that as he died before the breeding season had fairly commenced, I would like to buy another at less price.

I also asked him if the cockerel would be old enough to breed from, as that would make a difference in his desirability. His reply was:

WORCESTER, MASS., Feb. 18, 1876.

MY DEAR SIR:—

The cockerel I should send you would be all right for breeding. I am so short I cannot possibly spare any, less than \$12.00 each.

Very truly yours,

A. D. WARREN.

On the 22d of Feb'y I sent him my check on bank here for \$12.00, and Mar. 11th (nearly three weeks after) some time after my check had been paid, I received from him a cockerel with a wry tail, without either sickle feather, or sign of tail coverts, and whose secondaries were black with faint bay streaks on outside web, when they should be solid bay in that locality; who was so weak in his legs he could hardly stand up, and who had a thick matter discharge from his nose, which Messrs. Fry & Christian pronounced roup; to all of which I called the attention of W. H. Fry, Esq. (whose affidavit is annexed hereto) who advised me to return him immediately, and also to give him some roup pills, for fear he would die on the way back. Mar. 13th I returned him advising Mr. Warren of the fact, and enumerating the cockerel's defects. I waited two weeks without reply, and wrote him again

Mar. 27th, waited another week without reply, and drew on him through bank at sight, for \$12.00. After waiting two weeks more the draft was returned unpaid, without a word from Mr. Warren during the whole time. I then wrote him a sharp letter, stating that unless he righted the matter at once, I would publish him, which produced the following reply.

WORCESTER, Apr. 21st, 1876.

F. M. HERRON, ESQ., INDIANAPOLIS, IND.:

DEAR SIR:—Yours of the 19th inst. received, and carefully noted. I feel like expressing myself as you do in your beginning. I consider I am the one who has been aggrieved. You say my "failing to reply to any of my letters, etc., don't help your side much." I will simply say every letter of yours has been answered when I thought a reply necessary. I sent you one of my finest Beldons stags for \$12.00. You returned the same with complaints entirely false. I paid the express charges and the bird is here as I wrote you, subject to your order, for I pronounce him a first class bird. The bird is still in my possession ready to go to Chicago or Buffalo for examination. Now my dear fellow, do you think for \$12.00 I would undertake to rob you? Do you further think the style letter just received would have any impression on me? If so you do not know your man. I do not desire to make words with you but when you address me in a proper manner I will be happy to respond.

Respectfully yours,

A. D. WARREN.

I replied, and among other things stated that although I had made other arrangements, and did not now need a bird, still if he would send me express paid, a bird that judges here, or W. H. Todd of Vermillion, O., would pronounce first-class, I would be satisfied; otherwise I wanted my money back. I further stated that in the event of his failing to do either, I would carry my complaint before the American Poultry Association, besides publishing him. I received the following reply:

WORCESTER, May 1st, 1876.

DEAR SIR:—

Yours of 28th inst. received. My reply is the same as contained in my letter to you April 21st, with the addition that I shall not do what you demand of me. You have got so clear a case that you have been swindled by me, that I would not under any circumstances do as you suggest. Your money I do not wish. The \$4.20 paid for express [this was for one way only, F. M. N.] will leave you \$7.80, provided I choose to retain the bird, which I do or you may have another bird by remitting the \$4.20, or you may do as you suggest, which probably, under the circumstances will be the best, as you have the idea that you have been swindled.

Yours,

A. D. WARREN.

He still has both the bird and my \$12.00. I would be out \$4.20 besides, but that I arranged to have it shipped to me without charge.

Very truly yours,

F. M. HERRON.

INDIANAPOLIS, MARION CO., IND., }

May 20th, 1876.

Frederic M. Herron being duly sworn, says: That the foregoing statement is true in every particular, both as to occurrences and description of bird.

FREDERIC M. HERRON.

(For *Fanciers' Journal*.)

THE POULTRY QUESTION.

At the April meeting of the Solebury (Bucks Co.) Farmers' Club, Dr. A. M. Dickie, having been invited to address the Club on the poultry question, said he was glad that poultry raising was considered of sufficient interest to engage the attention of the Club; that it is to-day an interest in Bucks county exceeding in importance any other, with the single exception of the dairy; and that poultry-fanciers are regarded now in a very different light from that of a few years ago. He estimated the annual poultry product in Bucks county at \$2,000,000. He considered it as profitable as any other branch of farming, the profits varying from one to four dollars per fowl annually. The speaker asked what branch of the question the Club would like to have discussed. H. Wilman desired to know more about the gapes. The Doctor considers this a very important subject. More chicks are lost from gapes than from all other causes. He mentioned several cures, but thought removing the insects from the throat of the chicken with a timothy head (with the seeds rubbed off) the most effectual. Prevention, however, is better than cure. If chickens are kept away from the usual place of running, on fresh ploughed ground, they will not have the gapes. If kept in a building, saturate sponges with a solution of carbolic acid and six ounces of glycerine, and place in the pen or coops. A small amount of gum camphor and tincture of Cayenne pepper in the drinking water or feed was recommended. Winter chickens seldom have the gapes. For raising early chickens a dry place is necessary. He recommends a building facing the south, with a sash front. It must not be too cold, and plenty of sunshine is essential. The bottom should be covered with sand or gravel, three inches deep. This should be renewed every year, and well raked over every week. Winter chickens, he thought, with ordinary care are the most easily raised, and the most profitable. For breeding poultry he considered a closed yard best; size to correspond with the amount of stock desired to be kept. Half the yard should be seeded with buckwheat and grass in the fall or summer. The buckwheat will afford excellent food, and the grass will be ready for the next season. Fruit trees in the yard will be of advantage and profitable. The grass should be mowed often. Variety is essential in food. He would never feed new grain or whole grain. Meat, grass, worms, sour milk, with plenty of ground bone or cracked oyster shells are a good diet. For young chickens he would use a tonic: one teaspoon of tincture of iron

and the same of tincture of Cayenne pepper for fifty chickens. This is mixed thoroughly with food, and given twice a week in dry weather, and every other day in damp. To be successful in raising chickens, and to avoid disease, it is necessary for them to have variety and regularity in feeding; plenty of good pure water; a thorough cleanliness in their quarters; and to avoid overstocking. The canker or sore mouth may be cured by scraping off the excretion until it bleeds; then wash with vinegar and water, and sprinkle with burnt alum. The speaker closed his discourse by reading a scientific treatise on the chicken cholera.

RAISING EARLY CHICKENS.

Some skill and experience is required to make this business successful. Warm, dry coops must be furnished, and these should be set in sunny, sheltered places. The hen should be confined to the coop, while the chicks may be allowed their liberty to run about. The little things need to be fed several times during the day, but no more at once than they will clean up. If a person wishes to push his chickens, they should be fed at least once a day on hard boiled egg, broken up small enough for the chick to swallow. Their other food may be bread moistened with milk, or mush made of corn or oat meal. At ten days to two weeks old they may be allowed a little wheat or cracked corn.

Whatever young chickens are fed upon, it should not be given very wet; a moderate dampening is all that should be allowed. They do not like their feed so wet as to be sticky, and it is not so good for them when given in this condition. They may be allowed milk with a small quantity of bran or meal stirred into it for drink and food, but no such slops must be substituted to the exclusion of pure clean water at least three times a day.

Chickens thus furnished with warm, dry coops, properly and regularly fed and sheltered from storms and wind, will grow and thrive well even if the weather be cold.—N. E. Furmer.

QUERIES AND ANSWERS.

Canker and Roup.—H. E. M., Keithsburg, Ill.—The ulcers in the mouth and throat indicate canker, and in connection with this your fowls appear to have the roup. Although both of these diseases are considered highly contagious they seem, originally, to be brought on, the first by improper feeding, and the latter by undue exposure to cold and wet.

If fed on the ground where their food becomes tramped over and mixed with their own excrements, fowls are liable to suffer from cankered throat. Unless a nice, clean place can be found every day where they can be fed, shallow troughs should be used, and these so covered as to keep the fowls out of them. So much by way of preventive. To effect a cure remove the ulcers with a soft stick or piece of quill, then wash the mouth with chlorinated soda, and dust the exposed places with powdered borax. This should be done twice each day. For roup, wash the head and nostrils twice a day with chlorinated soda. Keep the affected fowls by themselves, and feed them on soft food, to which add a slight sprinkle of cayenne pepper. One part of carbolic acid to forty parts of warm water is said to be a good wash for the heads of roup birds, care being taken not to get any of it into the eyes.

To bathe the face and wash out the mouth and nostrils with warm water and good vinegar, using two tablespoonfuls of the latter to one half-pint of the former, and feed the patient as above-mentioned, will be found to be a simple and reliable remedy where commenced in time.

In cases of long neglected roup, the secretions often accumulate in the head, usually upon one side of the face, forming a mass of yellow, cheese-like substance beneath the skin. This should be removed by making an incision with a knife, and then bathing the wound daily with the diluted vinegar. P. M. T.

SPORTSMAN'S DEPARTMENT.

THE DOG-MAN.

We are quite in doubt whether we should feel obliged to Mr. Trollope for having introduced to us that most highly bred of all dog-men, Lord Chiltern. There have been many dog-men interspersed amid the personages of ancient and modern romances, so that the character of the sporting-man is by no means a novel one. Such creations, we regret to say, have been, for the most part, essentially low and vulgar, unsavory with the fumes of the stable, and redolent with the reek of the kennel. But Lord Chiltern, in *Phineas Redux*, aside from his title, though a dog-man, is a thorough gentleman. If life to him has no loftier aspirations than those which are compassed within the limits of the hunt, one feels assured that he does his work there thoroughly. Though Mr. Trollope spares us the recital of how the kennels were furnished, or of the shape, color, and general characteristics of the English fox hound, one can rest assured that when Lord Chiltern beats up the gorse in Thumpington Wood, if the fox is found, Reynard's death is a certainty, for with such a chief no hounds could run faster, more evenly, nor be stancher than those under the special supervision of the master of Harrington Hall. Yet, though Lord Chiltern may have been as profound as Mr. Maynell or Squire Osbaldeston, Mr. Trollope never makes him talk dog. Dogs are not with him the sole possible source of conversation. The Duke of Omnium or the Duke's steward may be indifferent as to foxes and the vested rights of hunters, and Lord Chiltern may have his grievance, but even then the dog is held in abeyance. If that clever and conscientious artist, Du Maurier, *Punch's* most brilliant illustrator, had undertaken to draw the semblance of Lord Chiltern, having cautiously studied the text, Mr. Du Maurier would never have brought the dog into too great prominence. Lord Chiltern's coat would never have borne a cut-away, nor would Lord Chiltern's malacca cane have borne a dog rampant for a handle, nor would his lordship's cravat have been passed through a ring with a dog's head engraved on it. There might have been, perhaps, a fine hound just sketched in the distance, an accessory to the picture, only indicating for the time being some possible connection between the dog and the man. Lord Chiltern must have, however, talked dog sometimes. But certainly it could only have been when he was in the Harrington kennels, and not in the drawing-rooms. Undoubtedly grooms and whippers-in had to look sharp, and the least mistake on their parts as to feeding, watering, training, or littering, was soundly rated. Once Lord Chiltern's duties accomplished, save when in the saddle, when the profundity of his dog theories were brought into practice. Lord Chiltern must have been silent on the canine topics.

In the United States we all of us are fast catching the dog epidemic. It may be roundly stated that since there are bibliomaniacs and melomaniacs, there are now kunomaniacs. As we have few fox hounds or greyhounds, by which at least, as in England, some diversity of dog-talk might be established, it is on the pointer and setter that our flood of words is poured. There are men now in our midst, who have arisen to the highest pinnacle of fame, who owe their lofty position to the possession of a dog. The man and the brute are inseparable in their fellow-being's mouths and minds. The two are in the closest conjunction, just as of old the cognomen of the rider and the name of the horse who won the laurel wreath at the Grecian games, thousands of years ago, have come down together to an admiring posterity. In a certain quaternary class, an introduction is given pretty much as follows: Allow me to present you to Mr. Smith, of 'Bingo,' and to Mr. Brown, of Ponto.' Such dogs are in

themselves the titles to distinction, and throw lustre on the ordinary names of Smith and Brown. Dogs confer the brevet of mobility. The rage for bric-a-brac, for China, for Pallissy, Majolica, Burslem, Chelsea, Sevres or Dresden, now pales before the dog. The proudest genealogy, where ancestral trees are carried through entangling branches, until they culminate at last in a living John Rodgers, are as naught when placed in juxtaposition with the pedigree of a dog. A De Rodgère might have come over as horse boy with William the Conqueror, but what is that, when a Mr. Laverack can show a dog of blue blood, "a pride of the Border," whose dog sires and great-grand-dog sires can be traced back a hundred years. Decidedly we will want a dog master at arms, and a canine Herald's College. Such things as kennel registers are but weak inventions, though there be now three or four in use. What is really required would be a book of gold, such as Venice used, to record her nobility, where on virgin parchment a modern illuminator might preserve for us the birth and history of the Blanches, Brunos, Busters, Bismarcks, Dashes, Dons, Jacks, Junoes, Fans, Flosses, Molls, Fantos, Plunketts, Rubies, Rocks, Tips, Toms, Trumps, Sans, and Sauchoes.

To the essentially dog-talking man the theme of conversation never ceases. He prattles of a "lemon dog" and of a "blue dog," when he really means a yellow or a black-marked dog. As the historical student looks to Macaulay, so does the dog-man to Macdonald, or as the essayist to Lamb, does the kunomaniac turn to Laverack. Idelton and Stonehenge are sacred names never to be mentioned save with reverence, and as for our home prophets, such authorities as Burgess, Taylor, "Mohawk," and Skinner carry a weight with them which is appalling. It is true that a certain philosophical calm does not, from the nature of the subject discussed, always pervade canine dissertations. Dog talk is acrimonious at times. But is it not enough to enrage any one who has even a superficial knowledge of the subject to hear a man assert "that in the marking of a Gordon setter the black on his head shall be carried clean down to his muzzle, and not end in a tan?" and is it not willful obstinacy on his part to take in no kindly way your own positive and final dictum "that had you a dog so marked you would consider it your imperative duty to end his existence, providing he was only worth the powder and shot necessary to kill him?" Good manners and patience may have their limits, still when such a paradox is boldly advanced, "that a red Irish setter may be white, or blue, or lemon," who so good tempered as to stand unmoved before so heretical an opinion? Think, too, of to how fine a point this dog subject has been drawn, when the want of "feather" in an animal is sufficient to damn him on the show bench, just as if a dog was an ostrich, and prized only for his plumage.

Still with all our distaste for the dog man, *per se* and his talk, what a fund of honest and kindly remembrances does not the dog call forth from ourselves. At the Springfield bench show look at that pretty spaniel, whose ancestors, may be, gambolled through the Lincolnshire fens in bold Hereward's time. She is all russet brown, her hair in silken curls, and she lies cosily in her comfortable blanket, with her litter of wee puppies nestling around her. As you gaze at her, she looks at you back again with her liquid brown eyes so searchingly, yet not anxiously, for she is too well bred for that—too much of the *grande dame* to think for a moment that you would harm her or her little white and brown pets. Her eyes are full of confidence, half human, and brimful of love and respect for you. She seems to say, "I and my race have served you and yours for thousands and thousands of years, and I love you. So in time my little sucklings will learn to love you and trust you. They will know that you are the master, and they your willing slaves. Pass on, when you have gazed your fill at me. It is your right. I do not consider it an intrusion, only please don't discuss me. Take me as I am. See, the prettiest of all my little ones has a white streak on his breast. I love him the best. Don't abuse me on account of him, and for mercy's sake spare his life, don't sacrifice him because he is off-color. I, as his mother, do not, cannot understand sterculence. Leave me all my progeny. I know you would, if it was not for that stupid dog-talk. Don't you think I will win a prize? I know I am very pretty, but did you only see me in the river, swimming after a wounded duck, diving into the chilly waters, and scrambling over the diffing ice, then you would be assured that I had the courage and perseverance of dogs of thrice my size. Now, pray pass on. I am not afraid of you. You might reach your hand into the basket and take away from me every one of my little children, and yet I would not hurt you. I might moan and cry, but still for ever and ever, come what may, for it is born within me, stronger even than material instinct, I would love and obey you." After all, then, why should not man talk about his dog and expatiate over him, and gloat on his beauty, and extol his instincts?

EDITORIAL DEPARTMENT.

THE FREQUENT VISITS

Of the FANCIERS JOURNAL to its patrons—ours being the only weekly publication of its class published in America—have proved very acceptable to the poultry and pet stock fraternity of this country, as we have good reason to know. Not a week passes that we do not receive more or less encouraging and complimentary missives from our friends. All these kindly messages are duly appreciated, and we should publish many of them, but that our space is better occupied with the discussion of topics more interesting to those who so liberally patronize us.

THE FANCIER.

To whom does the term Fancier apply? In the common acceptance, to one who keeps and cares for certain objects because he *fancies*—desires—their presence. But in its true signification it is broader. It refers to one who having certain *fancies*—ideas—experiments to carry them out. Conceiving a desirable object, he labors to attain to it; forming a theory, aims to prove it true.

From first to last the world has been benefited by the fancier. His achievements have not been accomplished suddenly and announced by fanfaronade, but they have been of slow growth, silently worked out, and scarcely appreciated until, in some moment of admiration at *perfection*, we compare it with the plan nature furnished. If we have the opportunity to trace the slow stages by which the height was attained, then, and then only can we realize the work, the patience of the fancier; work, sometimes generations long; patience, inexhaustible.

The place of the fancier in the world's economy is that of improver. He stands to the farmer, the horticulturist, and floriculturist as the inventor stands to the manufacturer.

He takes the rude outline of nature, re-fashions it to make it the most acceptable to the eye, and yet diminish waste material, and promote the qualities that are of the most benefit to mankind. Thus have they worked for the good of the world, while others have slept or worked for their own aggrandizement or gain.

Nor have the efforts of the fancier been confined to animals, flowers, fruits, and vegetables. We find his work in the methods for improvement in all the workings of agriculture. In the irrigating, draining, manuring, subsoiling, and in the rotation of crops. All these and many more *fancies* that the old time farmer scoffed at, have the fanciers proven to the farmers' acceptance.

But the work has not always been undertaken as work, but

often as a recreation. It has been the avenue in which the mind wearied with labor has turned for rest. Men of great conceptive powers—far seeing—have framed theories and have worked them out, the beauty of the proving compensating for the means used. Experimenting, more for the pleasure of experimenting, than that the world might be benefited. But the desired end attained, who so willing that the knowledge gained should be for the world's good, as the true fancier. When he recognizes in another, whether rich or poor, ignorant or educated, the spirit of the desire for investigation and improvement, his hand is always ready to assist and his word to encourage.

The FANCIERS' JOURNAL is the day-book of the true fancier. Its motto "not for itself but for all," is the true fancier's watchword. Let all unite, having faith in the purpose and goodwill to all, to make record upon its pages for the furtherance of all good.

CORRESPONDENCE.

INFORMATION WANTED.

I would like to ask through the Journal, some Fancier of Games who breeds for fancy feather, to give the definition of *Game* as applied to this breed, and oblige a
GREENBORN.

IMPORTATIONS.

I have this day received, per steamer "Atlas," my second importation of "Dark Brahmas," direct from Lewis Wright, comprising his entire breeding stock. All arrived in fine condition.

CHAS. E. PERRY.

WALLASTON, MASS., June 3d, 1876.

DOGS.

FRIEND WADE:

Your correspondent, Mr. Smith, evidently misunderstood my meaning. I stated "that dogs with white about the neck or body, invariably have white on the end of the tail." I meant that this was a rule of general application, *not* that in all the millions of "mongrels, puppies, whelps and hounds and curs of low degree," no single exception could be found. Dogs are not *invariably* born with tails, or eyes or legs.

Mr. Smith has placed the word *invariably* in *italics*, thereby changing its meaning and giving it an emphasis I did not intend. My observation has been that as a rule, dogs with white points have white tips to the tail; and cats so marked, just the reverse; there may be an occasional exception. Sometimes African parents, black as ebony, have children fairer than any city belle, and any fancier knows how difficult it is to breed true to color.

Truly,
JAMES M. McCANN.

INTERESTING LETTER.

CAIRO, April 2d, 1876.

MY DEAR FRIEND:—

I did not think when I wrote you the hasty note at Florence, in December, that it would be April before I would again find time to devote to you. But those last days in Europe made up of arrivals and departures, with sight-seeing between, passed so quickly I could scarce grasp time for thought from them, and in Egypt on the Nile, I found letter-writing an impossibility.

From Florence we went to Rome for the Christmas ceremonies, and while there I had an opportunity of paying a visit to Garibaldi, but I must leave the incidents and impressions of that visit, and the balance of my sojourn in Europe,—our hasty call at Naples to witness the eruption of Vesuvius (which as you already know failed to erupt), our charming tour through Sicily, with our armed

escort to guard against brigands. The magnificence of Etna, the activity of Stromboli, the interest I found at Syracuse from its associations with St. Paul. All these, and more, I must leave until I get beyond the maze, the witchery of this bewildering Orient. I feel bewildered. I do not realize myself. Everything is so different from everything that ever was for me before, I find it hard to recall, to realize matter-of-fact occurrences. Europe has nothing in common with its Eastern neighbors. Reviewing my years in Europe, and my weeks in Egypt, it is like turning from a chapter of history to the pages of a fairy tale. We spent two days in Malta, then sailed for Alexandria, for the ascent of the Nile.

Chartering one of the peculiar boats especially adapted to the Nile travel, we controlled its movements, stopping when and where we pleased, and moving on when we saw fit. A dragoman, three cabin servants, two cooks, captain, pilot, and fourteen sailors. In all we numbered about thirty souls. On this boat with this retinue I spent two months, the most wonderful of my life. When the wind filled our sails, the crew lay idly about harboring their strength against the time of calm, when they, harnessed in ropes, dragged our boat up stream, we the meanwhile lounging on shore under the palms, or visiting the Arab villages. On our downward trip we spent much of our time making excursions, and indeed you would have laughed at our cavalcade. Nine of us whites mounted upon nine donkeys, with nine white umbrellas covering nine precious heads. Nine puggeys' (long white scarfs) tied around nine slouching wide brimmed hats, and nine handkerchiefs of silk covering nine pairs of shoulders.

English, Scotch and Americans, with Dalmatian dragoman, Arab guard, and a gag end of servants, donkey-boys, and water-carriers. I look back upon it as a wonderful dream. I was heartily sorry to leave our airy state-rooms, commodious cabin and dining saloon, the table spread with luxuries only a palace hotel would attempt for Cairo, but I wanted to be here for the great religious festival which follows the return of the pilgrims from Mecca, to see with my own eyes if no one of the hundreds of fanatical Mussulmen that in some sort of ecstasy, prostrate themselves before the feet of the horse of an advancing sheik, was hurt. I was on horseback at the first hint of daylight, and soon on the way to meet the worn and travel-stained pilgrims, seven white faces, mine the only American, among the thousands and thousands of Arabs. It is very warm, the thermometer stands at 80° in my room. The Prince of Wales and the Grand Duke Alexis left the first of the week. The Khedive gave a grand ball, a concert, and a gala night at the opera house, but I had no share in it all, because, alas! my "store clothes" were in Italy. We leave for Jerusalem Saturday, and with good luck will arrive there the next Wednesday. Then will begin Syrian travel in earnest, from Jaffa to Beyrout, a month on horseback if we have no delays, then seven days by water to Constantinople, from there to Smyrna, Athens, then Italy. Wish that good fortune may attend us.

I will write you again from Nazareth or some place in the Holy Land.

An revoir, H. D.

WEEKLY GOSSIP.

Contributions to this department respectfully solicited from all.

—What pigeon sometimes breeds another variety than its own? The Carrier that breeds *Nun*. TERRELL FILIUS.

—Ten per cent. of meat in biscuits is quite enough for all dogs, except those which have severe exercise. (?)

—If you would have an egg-plant on the Fourth of July you should plant your hens about the first of June, advises a New York paper.

—For "going blind" in dogs, blow white sugar (powdered) daily into the affected eye, or eyes, and bathe daily with lukewarm water. (?)

—TO TELL THE SEX OF FINCHES.—Blow up the feathers so as to expose the vent. If this points rather forward, it is a cock; if rather backward, it is a hen. (?)

—The Taunton Gazette told a story about a webfooted family in that town, and the news papers have been industriously repeating it, not one of them "tumbling" to the fact that it was all about a family of ducks.

—DUCKS IN A VINEYARD.—It is mentioned in the *Grape Culturist* that a large vineyardist in Illinois keeps each season not less than 100 ducks constantly among the vines. He says it is wonderful with what diligence they dart after all kinds of bugs, thrips, flies, and small snails, and he considers them among the best of insect exterminators.

—SPIDERS.—The Fancier will be better served if Huon tells first of the spiders of the Middle States. Should species be common to both the Middle States and California, the Fancier would be defrauded, were the rough, uncultivated pen of Pacific to attempt that the grace and delicacy of Huon would have made so acceptable.

—A Dutch farmer in South Africa tells the story of a python attacking a Zulu boy while he was asleep and attempting to swallow him, beginning with one leg. Not getting on satisfactorily, and the unfortunate lad awaking to a "realizing sense" of his situation, the serpent tried to eject the limb, but the fangs were too deeply fixed in the flesh to render this an easy matter. The poor lad was obliged to make the best of this awkward situation till help came.

—One of the most interesting departments of the Hermitage at St. Petersburg is the gallery of Peter the Great. It is devoted almost wholly to objects connected with his memory. His image, dressed in the costume of his day, is seated in the center of the room, while around him are the tools he himself worked with, the iron cane he usually carried, statuettes and casts of his face, the stuffed bodies of the horse he rode and of his favorite dogs, his books, mathematical instruments, and countless other things.

—ROSE-BEAD NECKLACE.—Gather as many rose leaves as possible. Pound them up in an iron mortar with an iron pestle until reduced to a perfect pulp. Then shape into round balls the size desired for your beads. Pass a very large pin or needle through the middle of each, and expose to the sun on a board or dish. When dry they will be nearly as black as jet, very sweet, and ornamental in proportion as they have been neatly rounded and dexterously handled. They may be strung upon the finest wire, India rubber, or thread, as the wearer prefers.

—SEA-SICKNESS IN BIRDS.—Careful observation proves that many kinds of animals share in human diseases. Sickness and suffering are not confined to man; they belong to all life on earth. But it is a recent and curious discovery that birds are affected by sea-sickness. Some sailors on the Pacific coast were attracted by the strange appearance of nests on the rocks. They found a new kind of bird to them, very tame, and the nests glued to the cliffs, and proof against high winds. They took with them one of the nests, having in it two young birds, and returned to the ship in their boat. The swell was rolling high, and soon the birds began to show signs of genuine sea-sickness, and ended by throwing up their food, which was seen to consist of young minnows half digested. This fact may lead to the inquiry whether animals on ship-board are similarly affected.

—CONSERVE OF ROSE LEAVES.—Gather the leaves of fresh, full-blown roses in the early morning, while the dew is still upon them. Have ready provided equal quantities of cloves, mace, and nutmeg, sprinkle with salt, then with the spices prepared. Take a box of any kind that is rather shallow, place in the bottom a layer of rose leaves, sprinkle with salt, then with the spices prepared; then put in another layer of rose leaves, then spices, etc., until the box is filled. Lastly, tie on tightly a cover of sheer Swiss muslin, and expose to the sun until perfectly dry. You may then pack the conserve into pretty china bottles, with wide mouths but close stoppers, and you will be provided with a delicious perfume, whose sweetness will not evaporate for years. It is pleasant either to have on one's parlor mantel or chamber toilette-table. As a perfume for monchoir-cases or scent-bags it is unrivaled. Let the housekeeper also try laying to among the stores on the shelves of her linen-closet.

—A SPITTING SNAKE.—There is a dangerous snake, not uncommon about Bedjella, West Africa, called by the natives *na njene*, and by the Portuguese *cuspédia*. It is small in size, and remarkable from its habit of spitting when interfered with. The saliva is ejected to considerable distances, and is said to cause

blindness if it touches the eyes. One of the snakes was captured by natives, and brought to where some English miners were at work. It was teased by a miner who was standing over the cage, which was on the ground, and retaliated by a discharge of spittle. Some of the liquid entered the miner's eyes, and though the eye was immediately washed out with water, it was very much irritated for several days. The snake was killed before any experiments could be made with it by the scientific superintendent of the mine; he has, however, no doubt of the miner's statement and that of his companions, corroborated as it is by the testimony of the natives and Portuguese.

—A FEW "STATISTICS."—Hens' eggs hatch in from twenty to twenty-one days; turkeys' in from twenty-six to twenty-nine days; ducks' in twenty-eight days; Guinea fowls' in from twenty-five to twenty-seven days; pea fowls' in from twenty-eight to thirty days; geese's in from thirty to thirty-two days. Fresh eggs will hatch one or two days sooner than those two or three weeks old. The consumption of eggs in and around Mulhouse, in the manufacture of calicoes, is almost incredible. No albumen is equal to that contained in an egg—and it would consume the lay of 300,000 hens to supply one of the large calico manufactories in France. Great quantities of laying hens are therefore constantly cultivated, and made use of in the above districts, for this purpose, in addition to supplying the ordinary demands for eggs and poultry for consumption, the latter being very considerable; since the Frenchman is very fond of both his *omelet* and his *poulet*, when he can get them.

—FEATHER-EATING PARROT.—I have a grey Parrot which has the bad habit of eating his tail feathers, and as he is a very valuable bird for his talking qualities, I wish some of your correspondents could inform me of something that would cure him of this evil propensity. He has never had any animal food, but is fed on Canary seed, and occasionally bread soaked in tea or water.

—JOHN STUART.
[Should the bird's cage have a wire bottom, let it be taken out at once, and give the Parrot plenty of sand with some small stones in it, so that the bird may pick out some and swallow them, then give a change of diet; let the bird have some soaked Indian corn, and some fruit and green food, watercresses, &c. You are quite right in not giving it animal food; a piece of bread dipped into a boiled egg is an enjoyable morsel to a Parrot. If change of food and what we have recommended has no effect on the habit, then make what is called a "cradle" in the stable, and put it on the bird's neck until the bad habit is forgotten. The collar, or cradle, can be made either of leather or pieces of cane fastened with string. It will not in the least hurt the bird to wear it.]—*Journal of Horticulture*.

AND YOUNG FOLK'S CORNER.

(For Fanciers' Journal.)

ARRIVALS AT THE ZOOLOGICAL GARDEN,

Philadelphia, for the week ending June 4th, 1876.

- One Salt-water Terrapin (*Emys terrapin*). Presented.
- One Woodchuck (*Arctomys monax*). Presented by S. F. Platt, Norristown, Pa.
- One Horned Toad (*Phrynosoma cornuta*). Presented by J. Kauffman, Phila.
- One Pine Snake (*Pituophis melanoleucus*). Presented by Geo. Cranmer, West Creek, N. J.
- One Bald Eagle (*Haliaeetus leucocephalus*). Presented.
- Thirteen Horned Toads (*Phrynosoma cornuta*). Presented by R. R. Brown, Phila.
- Two Great Horned Owl (*Bubo virginianus*). Presented by Thos. Berstler, Doe Run, Pa.
- One Great Horned Owl (*B. virginianus*). Two Screech Owls (*Scops asio*).
- Two Crow Black-birds (*Quiscalus purpureus*). Presented.
- One Blacksnake (*Bascanion fremontii*). Presented.
- Two Blacksnakes (*B. constrictor*). Presented by Master H. L. Verts, Phila.
- One Patas Monkey (*Cercopithecus ruber*). One Green Monkey (*C. celidivus*).
- One Squirrel Lemur (*Sciurus sciurus*). Two Weeper Capuchins (*Cebus capucinus*).
- Two Brown Capuchins (*C. fatuellus*).
- One Guinea Baboon (*Cynocephalus sphinx*).
- One Spotted Cavy (*Corologys paca*).
- One Ocelot (*Felis pardalis*).
- Three Coatis (*Nassua nasica*).
- Two Collared Peccaries (*Dicotyles tajacu*). Presented.

ARTHUR E. BROWN, Gen'l. Sup't.

(For Fanciers' Journal.)

200 NOTES, No. 22.

THE MURRE RAZOR-BILL (*Alca tordo*).

One of FANCIER'S correspondents asks Huon what he knows about a bird called the *Murre*. Huon answers "not much." The bird belongs not to these latitudes, and but few persons save those who traverse the waters of the Atlantic or Arctic Oceans have ever seen a living specimen. But Huon has seen two of the *Murre*'s eggs, the only specimens to be found in America and which are the property of the Academy of Natural Sciences, Philadelphia.

There may be perchance some private collector in the U. S. who boasts he possesses a *Murre*'s egg. Perhaps he has one, perhaps not; for owing to the value attached to them there have been many forgeries committed in Europe, and thus bogus *Murre*'s eggs have been laid on the unsuspecting collector's table.

"You have been discussing the egg before you mentioned the bird save by its name!"

Yes. And ever since men could argue upon a subject, or debating societies have been in existence, they have been doing the same, dear reader. The question has been since the world began, "which was first, the egg or the chicken." It is not settled yet, so we will now to the bird.

The *Murre* belongs to that family of sea-birds known as the *Alcedae*, in which family it ranks No. 2; the Great Auk, *Alca impennis* (a bird supposed by some to be now extinct), stands No. 1, and these two are the only species the genus contains.

No. 2, the *Murre*, is best known as the Razor-bill (*Alca tordo*). It is only found in the northern latitudes, where it swarms in inconceivable multitudes during the breeding season. In the Arctic seas Dr. Kane, during his wanderings there, found the Razor of great service to him as food when other kinds had been exhausted.

The wings of the Razor-bill are but rudimentary, therefore useless for flight. They seem to have been given to the bird both as a pair of oars, and to help it to dive—which latter it does to perfection, and when it does undertake to "paddle its own canoe," it uses such power and velocity that it has been known to escape from a six oared barge pulled in pursuit of it, by the most vigorous oarsmen.

In general the *Razor* bill is dusky above and white below. The bill, which is black in color, somewhat resembles the falconine birds in shape, having a sharp hook at the end, and a denticulation at about two thirds of its length, to allow it to catch the fish which is its natural food. But one egg is laid per year; no two are ever alike, therefore one cannot say it is of this or that pattern as a general thing. The two in the Academy of Natural Sciences are about as large as a swan's, yellowish in color, dashed with black marks, which to the "outside barbarian" look very much like Chinese characters. Your correspondent is mistaken I think, as the *Murre* laying another egg if "her nest is robbed." None of the *Alcedae* lay more than one egg per year, which seems to be the true order of nature; for were these birds as prolific as the gulls, terns, or the domestic fowls, think of the result, when even under the one egg per annum rule the Arctic seas, and the rocky coasts of England swarm with the *Razor*-bill and its relations in countless millions. Travelers by sea along the rocky coasts of Great Britain are well acquainted with these "queer birds," as your correspondent justly calls them; seeing them sitting upright on the ledges of the crags in long horizontal rows which tower one above another looking like so many big bottles arranged shelf above shelf, a la apothecary shop.

As to the remarkable variability in the marking of the eggs as spoken of by your correspondent, I may mention the collection made of them by Mr. Champey, an English gentleman, which embraces no less than 500 distinct varieties! Perhaps the Esquimaux eat the eggs of the *Murre* though I have found no mention

of such, by either Kane, Hall, Hayes, or any other Arctic explorer. The flesh of the bird for food, and its downy skin for clothing however, are very valuable to that "peculiar people" as they place upon it their chief, if not their entire dependence for those particular uses.

HUN.

REPLY TO SCHONNY SPROAGLE.

I think, Schonny Sproagle, that Giraffe struck you wrong. The Giraffe may not be of "practical use," but if he takes one's thoughts up higher, as you must admit that he does, he certainly has a moral value.

Did you ever consider how it might have been that nature made the Giraffe? She was making elephants, rhinoceroses, hippopotami, and the like, when the thought occurred, "was there going to be feed enough to go round." "Anyway," she says, "It shan't be said that I wash more than I can hang out. I'll just lump the rest of this clay and and make a big one, one that can browse off the tops of trees. He shall have a field of his own." And the Giraffe was the result.

Yes, you'd make several "fortunes" "transmographing" thousand dollar Giraffes into ten dollar mules! Did you ever go to the "circus and menagerie combined," Schonny? Did it occur to you that the mule, the educated mule that nothing but a monkey could ride, represented the circus, while the stately, gentle Giraffe was the feature of the menagerie. Which, Schonny Sproagle, is the foolish piece of business, the circus or the menagerie? Here's a story about a mule. I'll take the Giraffe every time.

ZOOLOGICAL GARDENS.

The fast growing favor accorded to our Zoological Garden in the Park will give interest to a few brief notes respecting the London Zoological Society, which recently held its forty-seventh anniversary. Our Garden is but a few years old, and it would therefore be out of order to institute a present comparison, although our's has already so grand a collection. Yet one may "guess" what will be the condition of the Philadelphia Garden fifty years hence. The total number of living animals in the London menagerie was, at the beginning of the year, 2205. The "lion house" has 21 tenants: 6 lions, 2 tigers, 2 jaguars, 2 leopards, 3 pumas and one clouded tiger. The report from which our facts are taken does not specify the character of the other 2184 animals. The available assets of the Society are computed at about \$60,000; its liabilities at a little more than half that sum. The "assets," of course, do not include the value of the animals, and certainly not that of the buildings, for the lion house just erected cost nearly \$56,000.

The number of fellows and annual subscribers on the 1st of January, was 3241, the net increase of membership during 1875 being 44; not certainly a very fast rate of progress. In other respects there was an advance, the total receipts of the society in 1875 being \$143,690; more than the receipts of any previous year since the foundation of the society. The receipts of 1875 exceeded those of 1874 by about \$1500, while the number of visitors was less, being 699,918 in 1875, against 706,907 in 1874. The ordinary expenses of 1875 amounted to \$120,940, showing a net income of over \$22,000. The increase of receipts in 1875 over 1874, while there was a diminution in the number of visitors, arises from two sources, the interest of investments, and the receipt of donations and bequests. The reserve fund, \$48,965, is invested in Government three per cents.

Connected with the Society and constituting its highest claim as a scientific agency are a valuable library, the growth of half a century, and a publishing department, which adds constantly to the scientific wealth of the world. The publication of 1875 con-

sists of the usual octavo volume of "Proceedings," issued in four parts, and four parts of "Transactions." Besides these a Supplement has been added to the revised list of the vertebrate animals now or late in the menagerie. And, besides these official publications, it is to be considered that the unofficial periodicals devoted to natural history and science, and published by individual enterprise, draw largely upon the facilities afforded by public institutions. Constant aid is thus given to the researches of scientific men, and a constant popular interest is kept up in the fields of useful inquiry and investigation. For this reason Zoological and Botanical gardens and such institutions as the Academy of Natural Sciences deserve the support of an enlightened public. The same arrangement applies to the Fine Arts, to the Mechanical Institutes, and other sources and promoters of knowledge. The directors and members pursue a labor of love, rather causing expense to themselves than giving any pecuniary requital. They should be met and sustained in the same generous spirit.—*Phil. Ledger.*

EXCHANGES.

Advertisements under this head, of four lines, or forty-eight words describing and offering for **Exchange only**, will be allowed at 25 cents for each and every insertion. For every line extra 10 cents will be charged.

For "TO EXCHANGE FOR CASH" or "GREENBACKS," "WANTED A PURCHASER," or "WANTED AN ORDER," etc., etc., cannot under any circumstances be admitted to the *Exchange* or *Want* column.

No *Exchange* or *Want* will be inserted unless accompanied with 25 cents.

JOHN H. BISHOP, North Attleboro, Mass., Box 308, wishes to exchange 2 Dominique Leghorn hens (1st prize birds), and 2 Buff Cochins hens, for Poultry Books or Pigeons, Common or Fancy.

G. C. LEONARD, Elmira, N. Y., has one pair of fine Lop-eared Rabbits, 17 inch ears, nine months old, to exchange for offers. Letters answered promptly.

JOSEPH REBMEISTER, Batavia, N. Y., will exchange one pair Red Tumblers, also one Crested Male Fan Tail, one White female Jacobin, for one pair of Turbids. I want good birds.

W. F. MUEHMOORE, Basking Ridge, N. J., will exchange 1 new Remington silver plated chased pistol, \$18.00; 1 Quilting Machine, \$5.00; 1 two-wheeled velocipede, cost, new, \$90.00; 1 trio Light Brahmas, fair stock, \$8.00; for Lawn Mower, or offers. Above are retail prices.

H. O. LAMASON, Milton, Northumberland Co., Pa., will exchange one pair standard snow white Fantails, beautiful birds, and one pair English Cuckers, cock blue, hen red, for Fancy Pigeons.—Turbids preferred. Correspondence solicited.

R. HULSE, Box 23, Allentown, N. J., will exchange eggs from P. Rocks, W. Leghorn, Brown Leghorn, and S. S. Hamburg; Young Shepherd pups and Fancy Pigeons, for Gold and Silver Sebright Bantam eggs or Fancy Pigeons; one Shepherd Slut, in pup, to exchange for offers.

BOX 12, Winochboro, S. C., has an immense Eagle, believed to be Washington Eagle, to exchange for Hounds, Setters, Pigeons, or offers—supposed to have been on its way to the Centennial when caught, and is a splendid specimen of this rare and noble bird.

H. W. CONRAD, Berwynville, Berks Co., Pa., wants to exchange for Fancy Pigeons, a trio of Silver-Spangled Hamburgs.

C. M. BOYNTON, Concord, N. H., will exchange Buff Cochins and White Leghorns, in "trios or singly," for a Lawn Mower, or for Gas Fixtures, ornamental ones. Stock first-class. Address as above.

WARREN BECK, York, Pa., has to exchange three hens and one cock, Golden Polands, 3 pair Black and one pair Mottled Tumblers, one White Trumpeter cock, one Black Quaker cock, and one pair Reds, one Yellow cap Magpie cock, one White Fan cock, two B. B. Red Game hens, one Yellow wing Turbid cock, 3 Setter pups, pedigree given—for one Mottled cap Fan hen, one Silver Dun Carrier cock, or offers.

SCOTT BROS., Wrightstown, Pa., will exchange a pair of Black Quakers, pair Archangels, Red Swallow, White Fan, and Red Barb cocks, Yellow Owl, Mottled Tumbler, and White-capped Dutchess hens and Magpies, for White or Black Owls and offers; also pair B. B. Game Bantams, for pullets of same.

WILLIAM HUNT, Tivoli, Dutchess Co., N. Y., offers for exchange White Leghorn roosters, combs slightly frozen, Bantam roosters, 1 W. and B. Spanish hen, 4 fine Aylesbury drakes, for equally fine Aylesbury ducks—pedigrees given and required. Write.

DR. B. F. BEARDSLEY, Binghamton, N. Y., for want of room, will exchange a first-class trio of Pekin ducks, winner of first and special premiums. They are very large, fine birds, now laying. Make offers of anything useful that don't eat.

W. H. BUTLER, No. 291 Broadway, N. Y., will exchange W. C. B. Poland, Cochins (P. and B.) W. L. Aylesbury and Muscovy Ducks' Eggs, and Fowls (Todd's strain), for B. Leghorn, Pekin Ducks, Game, P. R. Eggs, or Fowls, Parrot, Pigeons, Birds, Grain. What offers?

R. H. NORTON, Newfield, Gloucester Co., N. J., has a new Lecheux six-chambered breech-loading pin-fire Revolver, to exchange for Brown or White Leghorns—good birds.

C. H. WILCOX, Earlville, Madison Co., N. Y., wants to exchange some of the following fowls for a pair of Ferrets, one year old, or Berkshire pigs, (pedigree stock), one trio B. R. Red Game, one trio Derby Game, one pair of Duckwing Games, one pair of Partridge Cochins, one pair Silver-spangled Hamburgs, four Duckwing Game Bantam cocks. Fowls one and two years old. Health, true name, and well marked.

GEO. W. DIXON, Box 188, Worcester, Mass., will exchange Buck, average 21x5 wide; Buck, 20x4; Doc, 20x4; Doe, 18x4; 1 pair of old Himalayan, one trio B. R. Red Game, one trio Derby Game, one pair white and colored Guinea Pigs, for Cigar Mould, Cigar Press, or Merchandise, or anything of value excepting live stock of any kind. Write quick for particulars.

O. C. BARROWS, Bristol, R. I., will exchange one "Earth Closet," made in best manner of black walnut and ash, for Dark Brahmas or Partridge Cochins.

JAMES Y. BORDEN, Box 306, Bridgeton, N. J., has three hens and one stag Silver-penciled Hamburg, chickens from G. Dillenberger's imported stock, to exchange for Golden-crested Sebright Bantams. I want none but the best, as I expect to give extra birds.

I. R. M., P. O. Box 305, Baltimore, Md., has two B. R. Game Bantam cocks, full brothers to the Cup Birds at last Baltimore show, to exchange for L. Brahmas or Houdan pullets.

C. M. BROOKE, Eagle Point, Ill., will exchange a pair of Faus, Antwerp cock, Tumbler hen, P. Cochins and D. Brahmas fowls and eggs; Cochins cock, the best Williams' raised in '75; Poland, China Pigs, for musical instruments, song and ornamental birds. Be quick and make me offers. Pigeon loft by Burpee, to exchange.

J. RANDOLPH MORDECAI, 45 S. Gay St., Baltimore, Md., will exchange two choice B. R. Red Game Bantam cocks, for hens or pullets of same kind, or Houdans. Stock offered is first-class, and only same is desired.

JAS. H. PHILIPS, Coventry, N. Y., will exchange one yard each of Buff & Partridge Cochins, (one cock and five hens each), 1 year old. Some of them premium birds: Williams', Bradley, Van Winkle, and Pittman strains, for good track, skeleton, or light road wagon, or Parker Bros. breech-loading shot gun.

JOS. H. KRAFT, New Albany, Ind., will exchange one trio of Partridge Cochins, one trio French Houdans, one trio Golden Spangled Hamburgs, one trio B. R. Game Bantams, or Dark Brahma cockerels, for Webster's Unabridged Dictionary, W. L. Wright's Illustrated Work on Poultry, or cash. Satisfaction guaranteed in all the above birds. Speak quick.

S. O. CHASE, Killingly, Conn., will exchange a few first-class Partridge Cochins and Plymouth Rocks, hatch of 1875, for White Crested Calcutta, Black, or Yellow Fantails, in pairs. Must be first-class birds.

JNO. F. HOISER, Tamaqua, Pa., will exchange 1 pair solid Black English Faus, 2 Pouter cocks, 2 Blue Fan cocks, 2 Rabbit's hutches, 1 Fancy Squirrel house, with large wheel attached; 1 good violin; 1 single Shot Gun, muzzle loader; 1 single rifle, muzzle loader; 1 French Pool Wheel; 2 Parrot Cages, 1 "Family Printer," 3 fonts of Type, 7 hens and 1 cock, Light Brahmas, for Black Red Games, B. R. G. Bantams, cash, or offers.

PHILIP ROGERS, Baltimore, Md., will exchange six or eight light Brahma cockerels, last June's hatch, first-class birds, for pullets of same variety.

WANTED.

READ INSTRUCTIONS AT THE HEAD OF EXCHANGES.

The name and address of any person acting dishonestly through the Exchange and Want columns, will be placed at the head of Exchange column.

W. J. EVENDEN, Williamsport, Pa., wants two Carrier hens, either Red, Black, or Willow; will give in exchange 1 pair of B. R. Game Bantams, 2 Red Carrier cocks, or 1 pair of Blue Homing Antwerps. Good Birds wanted, as mine are No. 1.

W. F. MUCHMORE, Basking Ridge, N. J., wants offers for a Camera, Box Lens, also Portrait Box, Stand, Bath Box and sundries. A rare chance for a Photographer.

CHAS. E. LONG, Lancaster, Pa., wants two pairs of pure bred White Calcutta Fantails, of good carriage and well spread tails, breeding birds, in exchange for other Fancy Pigeons.

J. F. FERRIS, 216 Main St., Hartford, Conn., wants Ground Bone, Crushed Oyster Shell, Beef Scraps, or Poultry Fittings of any kind, for which I will send choice selected White Leghorn eggs of my well-known laying strain, at rate of \$1.50 per dozen.

FANCIEE, Room 7, P. O. Building, Hartford, Conn., would like a nice sitting of Duckwing Game Bantam eggs, in exchange for other eggs of Leghorns, Cochins or Brahmas.

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 20 cents per line of about twelve words, each insertion in the wide column. Each number or initial will count as one word.

Transient advertisements, cash in advance; six to twelve months, quarterly in advance, or on presentation of the bill.

J. H. SCHOCK, S. W. corner Tenth and Buttonwood Streets, Philadelphia, Pa., dealer in Segars, Weekly Papers, Stationery, etc.; will also supply Fanciers' Journal promptly by mail or at the store.

PEDIGREE A NO. 1.

I have shown L. and D. Brahmas, and Pen-Comb Partridge Cochins 17 times, and have won 16 first, "1" second, and two special premiums; stock from Feich, Williams, Herstains, and Edmonds noted strains. Eggs, \$3.00 per 12. H. PARHAM, Lima, O.

A RAMBLE TO THE JERSEY MARL-PITS FOR FOSSILS.

BY HARRY A. SLOCUM.

Having thoroughly worked up the mineralogical deposits of the immediate vicinity of Philadelphia, my mind took a daring flight to the wilds of Jersey. Why not penetrate this wilderness of sand and pines? this land of hoop poles and cranberries, of which it hath been said that the provident crow carrieth three days rations in passing over? Why three days rations when its only about one hour's fly, I know not—but, behold me, one beautiful May morning, in company with my scientific and mineral loving friend F——, embarking at Market Street Wharf on board the good steamer, J. G. Shultze, bound for Spain, as the boys have it.

After a short and pleasant voyage of about ten minutes, we landed at the company's docks at Kaighn's Point, and then we were in Jersey. As we moved out on the road, visions of traps, spring-guns, and fierce dogs assailed our minds, and F—— suggested a ghastly picture of two youths, unknown to fame, laid out on two cold boards, victims of the tramp shooting mania. Our road took us through the pleasant towns of Gloucester, Woodbury, and Mullica, but nothing occurred worth noting during this part of our journey. It was not until near evening that we came upon the divergent road leading to the gravel-pits. We were tired and worn out, as it had been an exceedingly warm day, and a tramp of twenty miles on, or rather in Jersey sand, is not conducive to buoyancy of spirits. As we neared the pits, we beheld on the fence ahead, an object which started us into a trot, despite our weariness. A fine fossil no doubt placed there by some workman, ignorant of its value. As we neared it, however, our ardor diminished somewhat, for it seemed to take the form of something familiar, and when we finally came to a standstill before it, we occupied, relatively, about the position of the figures in the picture, "When shall we three meet again." And two of us felt that way, I know, for there, keeping solemn watch over shell road was the skull of an old horse. Thinking sadly of what might have been, we passed on to the pits. All along the sides in the gravel were fossils, cropping out abundantly, and way up near the top were some holes in the bank which we determined to examine.

As we proposed to pass the night here, we set about to build a shelter. Finding some water-logged wood, we leaned it against the bank, and covering it with willow boughs (in collecting which we broke our only weapon of offense and defense—a hatchet) we soon had a comfortable little shelter—barring we had a storm. After building a fire we scrambled up the bank and, poking our arms into the holes we had noticed, drew out a lot of young swallows, which appeared to be all mouth, and their song sounded like, more! more! As we had no use for specimens of this kind they were replaced, and we slid down again. We next caught a snake, which we tied by a string to prevent its escape, and placed in a pool of water near our shelter.

As darkness spread over the land, so likewise did the frogs, and such a din as they kept up during the night it had never been our misfortune to listen to before. As we were in a strange country, and unused to Jersey laws, we took watch and watch about during the night. I was the first to lie down, but not to sleep, for it commenced to rain and nearly extinguished our fire, to kindle which we had used our last match. The rain trickled down on my face, and the monotonous and discordant croak! croak! of the frogs, pitched in every key, jarred upon my nerves until I wished them all in Hell—Gate. I felt very much relieved when my turn came to watch. Both being very thirsty, and no soda-fountain convenient, we took a drink from a little pool outside our shelter, but were rather disgusted at finding, after we had assuaged our thirst that it was the same one in which we had tied our snake.

F—— laid down and I was quietly smoking my pipe and thinking of our route for the next day, when I was suddenly aroused from my reverie by a yelp and a flutter, and a sudden collapsing of our shelter. Visions of gigantic extinct Saurians arose in my mind, and so startled was I at first that if some antediluvian monster had come crashing over us I would not have been surprised. F—— silently emerged from the ruins, and, sitting down by the fire, quietly said, "I guess I'll not lie down, I'm not very sleepy." Upon investigation I found that a large snake had crawled over his face, and was the cause of all the disturbance. As we had interviewed no apple-jack distilleries during our tramp I was obliged to swallow the snake story.

At daybreak the frogs evaporated and the sky cleared and we were soon industriously at work. In the lower strata we found some very good specimens, which we recognized as being *Exogura Costata* and *Pycnonota Vesicularis*; the latter is a very common shell fossil, and is very plentiful there. Also some good specimens of *Terebratula Harlani*, and *Terebratula Glossa*. We were in hopes of getting some specimens of *Vivianite* which is hydrous phosphate of iron, generally found in Belemontes, but unfortunately, we were unable to find any.

We got some specimens of each kind, and set out once more. Passing some workmen, we asked if there were any other pits in the neighborhood, and were told the distance and direction of Marlborough. After tramping several hours under a hot sun, and through marl over the shoe-tops, we arrived at the marl-pits, and were told that some large bones had been found there a few weeks since, and had been removed to the house of the "Boss." We inquired the road to his house, and were told to "go 'long this 'ere road till you come to a white house, turn to the left, cross a creek, and go on till you come to a house with a slate roof, and that's it." We followed his directions with the exception that when we came to the "creek" we laid down under an apple tree and went to sleep, and rested an hour. And what a refreshing sleep that was.

When we reached the house it was noon, and the family were at dinner, but M—— kindly left his table, and going with us to the barn, said "Prof. ——— from Yale College had been there a few days before, and had taken the best specimens with him, but that we were welcome to what remained." We thanked him, and filled our respective bags, declined his kind invitation to dinner, and started for Pimman's Grove, where there was a railroad station. We need not tell how welcome was the sight of the train, as it came up and stopped for us, and as we moved away, we bid adieu to the place, and thought that despite the rain, bull-frogs, and snakes, we had really enjoyed our two days' ramble.

THE EXHIBITION DORKING.—No. 8.

BY T. C. BURNELL.

For the first fortnight of their lives chickens should be fed at least every two hours, and no amount of care and trouble expended on them will be too much if we wish to rear prize birds. Size is the principal point in a Dorking, and size is only to be obtained by breeding from the finest birds, and by feeding the chickens early and late on the best and most nutritious food. Chickens are awake with the lark; and as it is "the early bird which gathers the worm," we, too, must be up with the lark if we do not wish our chickens to be in the rear when the all eventful show-day comes. If we happen to have a poultryman who can be depended upon we are indeed lucky, but such are very few and far between, and far better will it be to pay for a little knowledge and become experienced in time than to go on paying high wages to one who very likely knows but little more than yourself, and who will certainly teach you nothing. Two guineas a week and more are now commonly paid to a first-class poultry manager, and there is but little doubt that if we can afford to keep a poultryman, the best are the cheapest in the end.
